MESSRS. CROSBY LOCKWOOD AND CO. announce the immediate publication of the following works:—*Continuous Railway Brakes*, by Michael Reynolds, author of "Locomotive Engine Driving"; *The Action of Lightning and the Means of Defending Life and Property from its Effects*, by Arthur Parnell, Major in the Corps of Royal Engineers; *The Boiler-maker's Ready Reckoner*, by John Courtney, edited by D. Kinnear Clark; *A Practical Treatise on the Joints made and used by Builders in the Construction of Various Kinds of Engineering and Architectural Works, &c.*, by J. W. Christy; *Hints for Investors: being an Explanation of the Mode of transacting Business on the Stock Exchange, with Comments on the Fluctuations, and Table of Quarterly Average Prices of Consols since 1750*, by Walter M. Playford, Sworn Broker; and *Mathematics as applied to the Constructive Arts*, illustrating the Various Processes of Mathematical Investigation by Means of Arithmetical and Simple Algebraical Equations and Practical Examples, by Francis Campin, author of "Materials and Construction," &c.

MR. J. BURKILL, of Otley, who is well known by his contributions to literature, will shortly publish *Reminiscences and Personal Experiences*.

AT the last meeting of the Historical Society of the Vaud, Abbé Gremaud, of Freiburg, read a paper on the foundation of the renowned hospice on the St. Bernard. It was long believed that the hospice was founded by Bernard in the year 982, and the belief was founded exclusively upon the Life of St. Bernard of Menthon written by a certain Richard the Archdeacon. This Life is now proved to be apocryphal, and was probably compiled in the thirteenth century, instead of the tenth. M. Gremaud brought forward proof that the very first authentic document in which the hospice is mentioned is dated 1125.

SIGNOR SEVERINO FERRARI is publishing, in monthly parts, a collection of early Italian literature, dealing specially with the earliest examples of the written language, under the title of "Biblioteca di Letteratura italiana" (Firenze: Tipografia del Vocabolario). The first part, which has just appeared, contains a selection of fifteenth-century Carnival masques.

MESSRS. S. W. PARTRIDGE AND CO. will shortly publish a pamphlet entitled *British Opium Policy, and its Results to India and China*. The work will be dedicated to Henry Richard, Esq., M.P.

MR. ERNEST RADFORD continues his Brownian searches, and has found the original of the poet's "Dramatic Idyl," *Ned Bratts* (1879). It is "The Story of Old Tod"—a thief who confessed his guilt, and was hanged with his wife—in Bunyan's *Life and Death of Mr. Badman*, and was told to the author by a "Relator that was at the same time himself in the Court, and stood within less than two yards of old Tod." Mr. Browning has borrowed the conversion of Ned Bratts and his wife from Bunyan's book.

THE *Historisk Tidskrift*, published by the Historical Society of Sweden, has now been in existence for one year. This Review replaced the *Historisk Bibliotek*, which was founded in 1875 by C. Silfverstolpe, and ceased to appear in 1880, after seven volumes had been published.

FOR some years past a society for the study of Swedish folk-lore has been recruited from among the students at the Universities of Lund, Upsal, and Helsingfors. This association now possesses an organ, which is published under the title of *Nyare Bidrag till Kännedom om de Svenska Landmålerna och Svenskt Folkklif* (Stockholm: Samson and Wallin), and is edited by J. A. Lundell.

WE learn that a society for the study of Spanish folk-lore has been founded by the exertions of Señor Machado y Alvarez. The programme of the society includes not merely folk-lore in the sense generally assigned to that term, but philology, archaeology, and all science that can throw light on the history of Spanish civilisation.

M. CHARLES DE RIBBE has published an interesting volume of selections from the family records of Jacques Grimoard de Beauvoir, a country gentleman of Provence, who traced his lineage to the family from which sprung Pope Urban V. The book is entitled *Une Famille rurale au XVII<sup>e</sup> Siècle* (Paris: Librairie de la Société Bibliogr.).

MR. DEMETRIUS BIKÉLAS will shortly publish a Modern-Greek version of "Macbeth" and of "Hamlet" (Athens: Coromilas).

A COLLECTED edition of the lyrical poems of Steingrund Thorsteinson, the Icelandic poet, has just appeared (Reykjavik: K. O. Jorgimsson), under the title of *Ljóðmoeli*.

MESSRS. HOUGHTON, MIFFLIN AND CO. are about to issue a companion series to the "American Men of Letters" in the shape of "American Statesmen." The first volume will be the Life of John Quincy Adams, written by Mr. John T. Morse, jun.

THE firm of J. C. B. Mohr, of Freiburg and Tübingen, are publishing, under the editorship of Dr. Alfred Holder, a series of original records having reference to the history of ancient and mediæval Germany, which will be called "The German Library." Every work is reprinted from a careful collation of the earliest known MSS., and the series is fittingly headed by the *Germania* of Tacitus.

IT is announced that M. de Cosnac has, by the publication of vol. vii., completed the first series of his valuable *Souvenirs du Règne de Louis XIV.*, bringing his story down to the siege of Bordeaux in 1653. This work contains many inedited documents of great value, especially as regards the history of the Fronde. M. de Cosnac will shortly publish the *Memoirs of the Marquis de Ponches*, and proposes to bring out a second series of the historical memorials of Louis XIV.

AN interesting essay on the condition of the estates of Picardy during the period of the League has appeared from the pen of M. F. Pouy, under the title of *La Chambre du Conseil des États de Picardie pendant la Ligue* (Amiens: Delattre-Lenoël). The essay is followed by an Appendix containing some inedited documents of distinct interest.

THE *Revue critique* publishes the following statistics concerning the four universities of Switzerland from 1876 to 1881:—The total number of students who entered the various universities was 1,058, 113 being students in theology, 188 in law, 288 in philosophy, and 288 in medicine. To Zürich must be credited 332 students, to Berne 320, to Bâle 204, and to Geneva 201.

## ORIGINAL VERSE.

CHRISTIANOS DOCT PAGANUS.—A.D. 384.

WE find the subject of our tale  
At Antioch, in Orontes' vale:  
A place resembling in the main  
The modern city on the Seine,  
Where airy crowd, whose equal bent  
Towards pleasure or devotion leant,  
Was ready aye, on alightest cry,  
To hoist sedition's flag on high.

Our story happened at the time  
The Faith had reached, some say, its prime,  
Had passed it, others.\* Pagan creeds  
Nigh ceased to serve for human needs—  
The gods of Hellas slowly died  
'Fore worship of the Crucified:  
And preached far-famed through north and south  
Saint John, he of the Golden mouth.

As happens oft, so fell it then,  
The seasons baulked the toils of men,  
For winter's frost and summer's rain  
Refused to fructify the grain;  
Hence famine. And the atheist † crowd  
At once began to murmur loud,  
As usual, 'gainst the Government  
As causing dearth and discontent:  
"Why should the bakers swell their store,  
And we are forced from door to door  
To beg the while? Come, pass a law  
To save us all from famine's maw!  
The bakers—or we'll all be dead—  
Compel to sell us cheaper bread!"

The bakers, frightened, shut their shops,  
Took, like the monks, to mountain tops;  
And soon 'twas found, when they withdrew,  
The famine hard and harder grew.  
"On with the torture!" fierce they yell;  
"Catch all the bakers! scourge them well!  
Force them disgorge their ill-got gain,  
And share with us the heaven-sent grain!"

Philagrius valued at small price  
The hunger-stricken crowd's advice;  
And, better skilled in nature's laws,  
He knew the bakers not the cause  
Of famine; but he held it sent  
As part of God's wise regiment.

The bakers he refused to scourge;  
The mob, suspicious, louder urge  
The torture: till at last they cry,  
"He's bribed! he shares their gains! that's why  
He spares them so!"

Like Pilate's choice,  
Philagrius, 'gainst conscience' voice—  
Better and worse before him laid—  
The better loved, the worse obeyed.

The seventh was scourged: when past there came  
Libanius of rhetoric fame.  
The man was old—three score and ten—  
Had seen faiths ‡ changed and changed again:  
Yet still amid that changeable scene  
Ne'er bowed he to the Nazarene;  
But worshipped aye the gods of Greece,  
Still hoped their worship would increase,  
And prayed, as only zealots can,  
"Oh for another Julian!"

Known to the crowd—he long held rule  
Chief sophist in their world-famed school—  
And, seeing with a pitying glance  
That sacrifice to ignorance,  
Through all their scowls the old man pressed,  
And to the Count § his suit addressed:  
Appealed to pity, common-sense,  
"Could scourging e'er prove innocence?"  
The Count with favour heard his plea,  
And ordered, "Set the prisoners free!"

Well done, Libanius! noble deed—  
To teach the Christians their creed!  
But learnedst thou from gods of Hellas  
To pity so thy human fellows?

\* Gregory of Nazianzus.  
† *ἀθεοί*. Libanius: used as a common name for  
Christians by the cultivated Greeks of the period.  
‡ Libanius was born in 314 and died in 395 A.D.  
§ Comes Orientis.

J. HUTCHISON,

## OBITUARY.

DR. LIMACHER, the editor of the *Bund* of Bern, died last week in the Victoria Hospital at that city. He had been confined to his room since the beginning of the year, and was removed to the hospital in order to undergo an operation. He passed away under the influence of chloroform. Limacher was a native of Flühli, in Luzern, studied jurisprudence and political economy at Heidelberg, and, after a short practice as a lawyer, became editor of the *Luzerner Tagblatt*. In 1868 he was invited to take charge of the *Bund*, the most influential and widely circulated of all Swiss daily journals. For a series of years he was the life and soul of the conflict which ended in the revision of the Federal Constitution of Switzerland in 1874.

THE death is announced, at the age of sixty-eight, of the well-known Paris bookseller M. Auguste Fontaine, of the Passage des Panoramas.

## THE STUDY OF FOLK-LORE.

WE have received the first number of a quarterly Sicilian Review for folk-lore, entitled *Archivio per lo Studio delle Tradizioni popolari*, and which is published at Palermo under the joint editorship of Signor G. Pitre and Signor Salomone Marino. Both these gentlemen have long been known as diligent workers in the field of folk-lore, and they have been fortunate in securing the support of some of the most eminent scholars in Europe. This opening number contains contributions of great interest by Reinhold, Köhler, Consiglieri Pedroso, Finamore, de Puymaigre, Gianandrea, Carolina Coronedi, Berti, Costa, Ferraro, and the two editors. The Review is prefaced by a letter from Prof. Max Müller addressed to the editor, Dr. Giuseppe Pitre, and published by him in Italian, of which we are enabled to give the original in English.

Oxford: October 19, 1881.

"MY DEAR SIR,—

"You ask me to send you a Preface to a journal which you intend to publish, with some friends of yours, and which is to form an archive for popular traditions in Europe. I confess I feel some difficulty in complying with your request. The study of the popular traditions of Europe and of the whole world has made such gigantic strides during the last twenty years that I have only been able, not possessing myself a pair of those famous 'Meilenstiefel,' to watch it from a very respectful distance. Years ago, when that study was, if not despised, at least ignored, I spoke out as strongly as I could against its detractors. Now that I begin to feel old and tired, I find the trees which I helped to plant growing into such forests that often I feel tempted to cry out, 'Enough! enough!'

"And really there is a danger in all scientific pursuits of doing too much, of gathering too much material, more, I mean, than we can classify and survey, or of losing ourselves in minute distinctions—too minute for any practical purposes.

"And this applies with especial force to the subject which we both have at heart, and in which you have proved yourself a real master—I mean the collection of popular stories. That there should be a recognised journal in which the best students of folk-lore should publish their best treasures is most desirable, particularly if that journal stands under the censorship of such scholars as you and some of your *collaborateurs* have shown themselves to be. But let the gate to your journal be a strait gate.

"To collect popular stories is either a most difficult or a most easy task. Everybody who finds nothing better to do thinks he is able at least to write down the stories which his nurse

has told him. But this, you know, is a great mistake. First of all, not every story that an old woman may tell deserves to be written down and printed. There is a peculiar earthy flavour about the genuine home-grown, or, if I may say so, autochthonic *Märchen*—something like the flavour of the dark-red wild strawberry—which we must learn to appreciate before we can tell whether a story is old or new, genuine or made-up; whether it comes, in fact, from the forest or from the hot-house. This is a matter of taste; but, as tasters of wine or tea will tell you, even taste can be acquired.

"Secondly, the same story should, whenever that is possible, be collected from different sources and in different localities, and the elements that are common to all versions should be carefully distinguished from those that are peculiar to one or more only.

"Thirdly, each collector should acquaint himself with the results already obtained in the classification of stories, in order to see and to say at once to what cluster each new story belongs. Hahn's classification of ancient myths, imperfect as it is, may give you an example of what ought to be done in order to arrive at a classification of modern myths. Here your archives might render very great service.

"Fourthly, wherever it is possible the story ought to be given in the *ipsissima verba* of the story-teller. This will be a safeguard against that dishonesty in the collection of stories from which we have suffered so much. It is quite true that a collector who trims and embellishes a story ought to be whipped; while a man who invents a story and publishes it as genuine ought to be shot. But, until such a Draconic law is carried into effect, your insisting on having in all cases the *ipsissima verba* will be a great protection against swindlers. Besides, it will have the advantage of making your journal not only an archive for stories, but also a treasury for the students of dialects. The study of dialects, I feel certain, is full of promise; and I still hold as strongly as ever that, in order to know what language is, we must study it in its dialects, which alone represent the real natural life of language. Only here again moderation is essential, as also is the practice of that art which is the secret of all true art and of all true knowledge—viz., the art of distinguishing what is really important from what is unimportant. Without that art, collectors of dialects and collectors of stories may fill whole libraries with their volumes; but real knowledge—the knowledge that gives us clear ideas, and strengthens and sharpens the mind for new work—will be impeded rather than advanced.

"The really essential points on which a scientific study of popular stories can, and ought to, throw light are not many. What we want to know is:

"(1) Whether these stories exist in many places, and are, therefore, a natural product of the human mind in its growth from savagery to culture.

"(2) Whether we can trace their history from modern to ancient times, and follow up their migrations from East to West.

"(3) Whether we can understand their origin or *raison d'être* by discovering their first formation in the mythopoetic stratum of human language and human thought.

"These are the three momentous questions; everything else is curious only, unless it serves directly or indirectly to throw light on them. To be able to suppress what is merely curious in order to make room for what is really important seems to me the test of the true scholar in every field of research. To do this requires great self-denial on the part of a student, and even greater firmness on the part of an editor of such a journal as you contemplate.

"As I take a warm interest in the success of

your *Archivio*, I thought I might venture to address these warnings to you, though they are meant much less for you than for some of your *collaborateurs*, to whom you might yourself perhaps hesitate to address them. From what I know of your own writings, I believe I have only been expressing your own convictions, and I therefore look forward with high expectations to the appearance of the first number of your *Archivio per lo Studio delle Tradizioni popolari* in January next.

"Believe me to be, with sincere regard and all good wishes,

"Yours truly,  
"F. MAX MÜLLER."

## CORRESPONDENCE.

"IT IS NO WONDER."

London: March 13, 1882.

In the review of my novel which appeared in your pages last week, the Rev. Dr. Littledale, in courteously pointing out some of the defects which marred what he was pleased to call my "genuine literary capacity," referred to the Italian phrases *buona sara* and *buona journa* which occur in the book. Will you have the goodness to allow me to state that I intended

the spelling of these words to indicate their pronunciation by the seamstress, Miss Banks? I thought this would have been sufficiently understood by the sentence in which the phrases occur, which I beg to give:—"Little Miss Banks always stopped the noise of her sewing machine to salute him through the open window with *buona journa* and *buona sara*, two phrases which he had taught her, and which caused her to be regarded by the street generally as a talented linguist."

J. FITZGERALD MOLLOY.

#### "LANINI" OR "LUINI."

Temple: March 13, 1882.

In reply to Dr. Richter's letter in last week's ACADEMY, may I say that I was not more able than he to discern the hand of Luini in the work under discussion? Of Lanini, indeed, I had not heard, and too hastily allowed myself to suppose that I had before me only one more instance of erroneous ascription, and careless printing. The general state of the Catalogue was such as to make any mistake credible, and to throw a would-be cautious critic off his guard.

ERNEST RADFORD.

#### JEWS IN ENGLAND BEFORE 1643.

Balliol College, Oxford: March 14, 1882.

The quotation made by Prof. Gardiner from Agostini's despatches for 1643 in the columns of the ACADEMY for March 4, proving the presence of Jews in England in that year, is an interesting confirmation of a conclusion to which I have been led by an investigation I have been of late years conducting into the obscure portions of Anglo-Jewish history. I have found so many traces of the presence of Jews in this country, whether as residents or as visitors, in the fourteenth, the fifteenth, the sixteenth, and the seventeenth centuries that I regard myself as justified in inferring that a considerable number of them lived in this country long before Cromwell attempted to give them the legal right of settlement, and that at no time were they wholly absent. In a paper of mine that appeared in the *Gentleman's Magazine* for February 1880, entitled "The Original of Shylock," I quoted several instances of individual Jews residing in England during Elizabeth's reign, based on evidence derived from the State Papers and other contemporary sources. Since the publication of that article, I have collected much more information on the subject, of both earlier and later date, and I believe that I may best answer Prof. Gardiner's question as to the appearance of Jews here after their expulsion in Edward I.'s reign, and best illustrate the significance of his quotation, by briefly summarising a portion of my information dating from the time of the Tudors.

Some of the direct historical evidence that I have gathered together (chiefly from State Paper Calendars or Privy Council Minutes), to little of which, I believe, has attention been called before, is as follows:—

1. Amador de los Rios, in his *Estudios históricos políticos y literarios sobre los Judíos de España* (1848), and in the elaborate and scholarly enlargement of the same work the last volume of which was published at Madrid in 1876, mentions that, on the expulsion of the Jews from Spain in 1494, many of them found their way to England, and established themselves and their synagogues at London, York, and Dover.

2. The Spanish ambassador in England, when negotiating with Henry VII. the marriage of Arthur Prince of Wales and Catherine of Arragon, complained to the King of Jewish exiles from Spain having taken refuge here, and conversed with him at length on the subject.

3. About 1543 the attention of the Privy

Council was directed to the presence of Jews in England, and a list of persons declared to be of the proscribed faith was drawn up.

4. In 1550 a doctor, stated to be a well-known Jew, was charged before the Lord Mayor with immoral practices, and ultimately banished.

5. In 1586 a Jewish doctor (Roderigo Lopez) was appointed chief physician to the Queen. (In the article to which I have already referred, I collected from contemporary authorities, I imagine for the first time, notices of Lopez's career, and of that of his family. Several of his intimate friends here were, I endeavoured to show, also of the Jewish faith. I have since found other contemporary references to support my conclusion. In 1594 Lopez was convicted, and hanged at Tyburn, on a charge of treason, amid great popular excitement.)

6. In 1589 a Jew was charged with blasphemy at Bristol, and sent before the Privy Council. (I have transcribed several interesting documents relating to this case now at the Record Office.)

7. In 1591 a Jewess and her brothers, who had been carried off from a Spanish vessel by an English man-of-war, came to London, and the lady was publicly received by the Queen. (A full account of these facts may be found in Kayserling, *Geschichte der Juden von Portugal*.)

8. In 1608 a Jew in high repute at Oxford was befriended by Casaubon, and a futile attempt was made to baptize him. (The present Rector of Lincoln has given an account of the circumstance in his *Life of Isaac Casaubon*.)

9. In 1625 Charles I. granted a Jew at Cambridge a pension of £40 a-year, presumably on conversion.

10. In 1627, among those who lent Charles I. large sums of money, the name of Abraham Jacob frequently occurs. (In Leti's *Vita di Ol. Cromwello* (Amsterdam, 1690) Charles is said to have borrowed at a later date 20,000 ducats from a Jew of Amsterdam. The passage is quoted in the notes to Kayserling, *Menasseh-ben-Israel*.)

11. In 1635 a woman described as a Jewess was imprisoned in Bridewell by the High Commission Court for refusing to eat meat killed in the ordinary way, and adhering to other Jewish customs.

These are some of the historical notes dated before 1643 that I can lay my hand on at this moment. I should add that the State Paper Calendars show that the English Levant Company transacted the greater part of its business with Jewish traders, and it is not, therefore, unreasonable to suppose that some Jewish agents resided here, or paid this country occasional visits. It should also be remembered that the Jewish Converts' House founded by Henry III. in 1233 was maintained until the eighteenth century, and that over 200 warrants of pensions, to be paid out of the exchequer to Jewish converts residing there, for various years from the date of the Jews' expulsion till the sixth year of James I.'s reign (1608), are still preserved at the Record Office, and that references to the house and its tenants are scattered—thinly, it is true—over the State Papers of the seventeenth century.

Notices of Jews, many of which bear all the appearance of referring to Jewish contemporaries in England, frequently occur in the literature of Elizabeth's and James' reigns. Several plays down to 1640 have Jewish heroes; and very few of the dramas of the day are without some reference to the Jews. In Webster's "Vittoria Corombona," for instance, Flamieo, after expressing a desire to turn Jew, complains that "there are not Jews enough, . . . for, if there were Jews enough, so many Christians would not turn usurers;" and numberless other instances could be quoted. A rare pamphlet, dated about 1640, and privately reprinted by

Mr. Halliwell-Phillipps, says:—"A store of Jewes we have in Englande; a few in court; many i' th' Citty & more in the country." From the opening of the seventeenth century, the prospects of the Jews as a nation were hotly discussed in the press. In 1621, Laud charged Finch before the High Commission Court with publishing a book on the subject of too Judaical a tone, and caused him to be imprisoned.

I have already trespassed too far on your space, but might I, in conclusion, ask readers of the ACADEMY to aid me in completing my investigation by sending me any occasional notices of Jews in England with which they meet in the literary or historical records of the period between their formal expulsion in 1290 and their formal return about 1656-57?

S. L. LEE.

#### THE BASQUE VERB.

San Remo: March 10, 1882.

After reading the last discussions about the Basque language in these columns, one is tempted to ask if they are of any use. Basque students know each other's theories as a whole, and the reader who is not very familiar with Basque will not be much interested in these details, though incidentally essential questions are touched. It is a kind of skirmishing above the heads of the general readers, who may feel perhaps interested in the language, and whom it would be desirable to win to Basque studies; the impression on them will remain what it was—i.e., that Basque is a very intricate language. But this notion is utterly false; for this reason, a condensed "aperçu" of the verb may perhaps help to eradicate this generally accepted opinion.

Two great errors originating in a period when philological studies were unknown have thrown an immense confusion over the theories of the Basque verb: (1) That the auxiliary verbs differed in nature from other verbs; (2) That the auxiliary verbs had only a conventional meaning—in other words, that they had no meaning at all. This is just the reverse of what facts prove and of what logical induction might have led us to suppose before any proof was given. The auxiliaries are (1) exactly like the other verbs, and like those of other languages; and (2) they have a meaning like any other verb.

The exploded theories of antiquated grammarians are still upheld, and the confusion is increased by the appearance of two new theories, according to which one auxiliary verb is explained as being a demonstrative pronoun, and the other as something metaphysical, which is not explained at all, or explained as the verb, the *logos* of Christian faith. This last theory being not in its place in a philological discussion, I do not more than point it out; the reader will see later on the value of the second one. According to the old theories, there are only two auxiliary verbs, "to have" and "to be;" and this distinction, though very rational, was corrected by later authors. Chaho and, in our days, M. Inchauspe consider "to have" as being a modification of "to be," or "to be" a modification of "to have;" the whole theory is so loose that I do not know how to put it. These unscientific dreams are often accepted as Gospel truths, because they are enunciated with a good deal of dogmatism and a certain kind of scientific apparatus; phonetic laws and permutation of vowels are talked of, as if anything was known about them when these theories were started. It is precisely the ignorance of the phonetic laws which makes these theories possible.

These two auxiliary verbs, however, are not the only ones. In Basque, as in English, there are many more, some of them in use for the tenses ("to have," "to be"); some others for the moods ("can," "may," "must," &c.); and all

are conjugated after one and the same method, which is a very simple one. The root remains as it is; the pronoun indicates the person—something like I know, we know, you know, &c. "I" is *t*, "thou" is *k*, "he" is always absent. Let us take *jakin* ("to know"). We have thus *dakit*, *dakik*, *daki* ("I know it," "thou knowest it," &c.). The initial *d* is the pronoun "it," *d-aki-t* ("I-know-it") reading from the end. This method is applied to all transitive verbs. *Egin* ("to do") gives *dagit*, *dagik*, *dagi*, &c. ("I do," "thou dost," &c.); and in the same way *iduki* ("to hold") is conjugated *dadukat*, *dadukak*, *daduka*—i.e., *d-iduk-t* ("I-hold-it"). The initial vowel becomes always *a*. *Iduki*, like the Spanish *tener* ("to hold"), is employed for "to have," and *dadukat*, which in some dialects loses its *d* and becomes *daukat*, loses, as an auxiliary, its *k*: *daut*, *dauk*, *dau*. Spanish *tengo* ("I hold") and Basque *daut* are thus identical expressions.

Another auxiliary is *eroan*, "to carry;" all the dialects have chosen it (except the Biscayan) when there is to be expressed what other languages call a dative (Basque has no cases); for instance: Thou hast (given) it to me. In this case the verb is *eman* and the auxiliary *daroadak*—i.e., *d-eroa-d-k*; *k* is "thou;" *d* is "to me;" *eroa* the auxiliary; *d* is "it." This *daroadak* becomes in some dialects *darotak*, or *derotak*, or *drautak*, &c. As these flections are in use, they are indisputable facts; and, as they are clearly derived from *eroan*, it is an error to think that they are variations of *daut*, "I have," &c., as Prince Bonaparte says: "En effet les *drauk*, les *drauk* du N.T. ne sont que les *daut*, les *dauk*, etc., d'autres dialectes" (see "Remarques sur plusieurs Assertions de M. Hovelacque," London, p. 20). This observation is etymologically wrong; I think I have proved it; and it is wrong in point of syntax. Nowhere *draut* stands for *daut*; the flections from *iduki* (*daut*, &c.) are always employed with one object only; the flections of *eroan* with object and dative.

Another entirely unknown auxiliary is *ezan*; it is, of course, conjugated like the others: *dazat*, *dazak*, *daza*, &c. This verb is only known as a compound of letters, in use for what the old grammarians (and all the later ones after them) called the subjunctive mood; but Basque, no more than English, knows of a subjunctive; *ezan* is employed like "may," and *egin dezadan* is "that I may do," and not French "que je fasse." *Dezat* is the first pers. sing. of the indic. pres., followed by *n*, "that;" and *dezat-n* is pronounced *dezadan*. The same ignorance prevails on the subject of *edin*, "can," auxiliary of the potential mood; but *edin*, like *ezan*, is a verb like the others; for instance, *Guztia daian Janngoikoa*, God who can anything. *Daian* for *dadian*, from *dadi*, "he can," followed by the relative pronoun *non*, contracted in *n*, "who." *Bekhatutan hil dadina*, "he who dies in sin." There we have the purer form *dadi* + *n* + *a*, "he-that-can." *Edin* is often, in older Basque, as in this case, the auxiliary of the passive form instead of *izan*, "to be." The initial *d* is consequently not the object, "it," but the subject, "he." All these verbs, auxiliary and others, form their imperative mood in the same way; for instance, the second pers. sing. of *jakin*, "to know," is *jakik*, "know thou;" of *egin*, "to do," *agik*, "do thou" (final *n* is always dropped); of *ezan*, "may," *ezak*, "may thou;" and of *iduki*, after having lost its *d*, *eukak*, and, after having lost its *k*, *euk*; and in some dialects *auk*, i.e., *au* + *k*, the verbal root followed by the pronoun. This is the reason why Licarague writes in his New Testament, *Paul*, *auc bihotz on*, "Paul, have thou good heart." The demonstrative pronoun has nothing whatever to do with the imperative; want of critical analysis, combined with the accidental homophony of the demonstrative pronoun and the

imperative, have started this theory, which makes the Basques say, "Paul, this thou heart!" And consequently, if *auk* is "this thou," then *daut*, "I-have-it," signifies "I-this-it!"

In Prince Bonaparte's letter on this point (see ACADEMY, February 11) there is not one argument to defend his thesis. What he appears to consider as such, No. 1, is not more than a statement, and No. 2 is an error; the direct regimen being always expressed in all active verbs by *d*—*dagit*, "I-do-it," as well *daut*, "I-have-it;" *au* explains here nothing, there is no *au* here.

The confusion about *au* is not an isolated fact; other verbal flections are considered as being a mere agglomeration of letters without any signification for themselves. M. Inchauspe says, "*dadin*, *dezan*, seuls pas de signification;" and Prince Bonaparte's notions about *edin*, "can," and also about *izan*, are of the same nature; as not one flection is analysed, he gives *liteke*, "he could," as a flection of *izan*, "to be;" but *liteke* for *laiteke* for *laditeke* from *l-adi-te-ke*, is the third pers. sing. of the optative mood of *edin*.

Which of the two theories is absurd (the favourite adjective of Prince Bonaparte when he speaks of others), we leave to the decision of the readers of the ACADEMY.

W. VAN EYS.

#### APPOINTMENTS FOR NEXT WEEK.

MONDAY, March 20, 5 p.m. London Institution: "Materials used for Paper," by Prof. B. Bentley.  
7.30 p.m. Aristotelian: Discussion, "Mind."  
7.30 p.m. Education: "When, and in what Order, should Subjects be Introduced?" by Mr. F. G. Fleay.  
8 p.m. Victoria Institute: "Climate Influences as regards Organic Life," by Surg.-Gen. Gordon.  
TUESDAY, March 21, 3 p.m. Royal Institution: "The Mechanism of the Senses," X., by Prof. J. G. McKendrick.  
7.45 p.m. Statistical: "Import and Export Statistics," by Mr. Robert Giffen.  
8 p.m. Anthropological: "The Relation of Stone Circles to Outlying Stones or Tumuli on Neighbouring Hills," by Mr. A. L. Lewis; "Excavations of Tumuli on the Braiding Downs, Isle of Wight," by Mr. J. E. Price and Mr. F. G. Hilton Price; "A Note on the Distribution and Varieties of a Fadlock," by Major-Gen. Pitt-Rivers.  
8 p.m. Civil Engineers.  
8 p.m. Zoological: "Hereditas as a Factor in Psychology and Ethics," by Mr. Sidney Webb.  
8.30 p.m. Zoological: "Some Points in the Anatomy of Pterocles," by Dr. Hans Gadow; "A Peculiarity in the Trachea of the Twelve-winged Bird of Paradise," by Mr. W. A. Forbes; "Lipotyses," by Mr. F. L. Solater.  
THURSDAY, March 23, 3 p.m. Royal Institution: "Resemblances of Sound, Light, and Heat," II., by Prof. Tyndall.  
8 p.m. Telegraph Engineers: "The Development of a New Telephonic System," by Prof. A. E. Dolbear.  
8.30 p.m. Antiquaries.  
FRIDAY, March 24, 7.30 p.m. Philological: "An Explanation of the Method of marking Pronunciation proposed for the Society's Dictionary," by Dr. J. A. H. Murray.  
8 p.m. Royal Institution: "Electric Railways," by Prof. W. E. Ayrton.  
8 p.m. Browning: "Childe Roland to the Dark Tower came," by the Rev. J. Kirkman.  
8 p.m. Quakett: "Fishes' Tails," by Mr. E. T. Newton.  
SATURDAY, March 25, 3 p.m. Royal Institution: "Volcanoes," II., by Prof. H. G. Seeley.  
8 p.m. Physical: "The Effect of Temperature on the Electrical Resistance of Mixtures of Sulphur and Carbon," by Mr. Sheffield Bidwell; "The Measurement of Curvature and Refractive Index," by Mr. O. Vernon Boys.

#### SCIENCE.

Hayman's *Odyssey*. Vol. III. (David Nutt.)

WITH this volume Dr. Hayman brings his great and learned edition of the *Odyssey* to a close. Vol. i. appeared in 1864, vol. ii. in 1873, so that no one can complain that the work is hasty or immature, so far as the rate of production can testify. A perusal of this closing volume will corroborate the presumption. On every page there is evidence of honest work, of careful and conscientious collation, of diligent cross-references, of honest and clear exegesis. No student can complain of finding difficulties overlooked; and the illustrations from modern poetry are often striking and instructive. So far, then,

Dr. Hayman has supplied the want of an English commentary on Homer's *Odyssey*, and his book will probably long remain the standard English authority on the subject.

But this would have been more decidedly the case had it been brought out in a somewhat cheaper form, and with more modern lights. Let us explain. The price of this last volume, by itself, is 24s.—a large sum for the student of *v-ω* only to pay; for though the printing (by Teubner, of Leipzig) is excellent, and the facsimiles of MSS. inserted very interesting, economy is but too necessary for many of Homer's most deserving readers.

The ignoring of recent Homeric literature in this volume is still more serious. The author has a very smart (though uncomplimentary) motto on his title-page: *αὐτὰρ ἐγὼ παρ' ἕσσιν ἀνθρώποις, οὐδὲ πόλιν δὲ ἔρχομαι*, which he weakens by renewed complaints in his Preface concerning his Rugby affairs (Pref. x, xi.). But these serve him in apologising for certain incompletenesses of collation, which no one would have noticed, and lead the reader to consider whether the leisure of a country living has not some counterbalancing advantages. The headmaster of a great school might surely claim even greater consideration. Still more, one is tempted to see whether the easily accessible books have been acquired and utilised by an editor who had certainly ample leisure for study. Now, although the older editions and scholia are thoroughly mastered, and the minute errors in La Roche's recension curiously exposed (the *editio princeps* being, however, strangely dated 1480 (!) on the first page), we are astonished to see Crusius' *Lexicon Homericum* cited, and no mention whatever of the work of Ebeling! Stranger still, if possible, is the complete silence on all the recent *Odyssean* criticism in Germany, Kirchhoff, for example, being totally ignored. This is another example of what I have elsewhere, in discussing this very question, called the national isolation in scholarship (*Hist. Gk. Lit.* i. 63), which seems to infect German work almost as much as English. Dr. Hayman gives us in this volume a new (and third) Preface of 150 pages, but it is almost all filled with a *réchauffée* of old articles refuting Mr. Paley's theory! When the second volume came out (1873), such a refutation was perhaps necessary, and was accordingly ably and fully supplied there. But why, in Heaven's name, are we to have the whole thing served up again now that the theory has been refuted over and over again, and does not count more than two converts? The refutation of Mr. Paley in this volume, as in the last, is indeed excellent, and no doubt it is a very satisfactory task to undertake. For, in the first place, Mr. Paley's temper is so good, and his calmness and gentleness so imperturbable, that he is the kindest of adversaries. Secondly, his arguments are so bad that one can feel perfectly content with the answers which suggest themselves, and have the satisfaction of demolishing an elaborate theory. But the students of the *Odyssey* in 1882 want something more. They want to know what recent criticism has done in explaining the structure and composition of the poem. Dr. Hayman is a most intelligent and

reasonable unitarian, and highly qualified to criticise the theories of Berk, Kammer, Kirchhoff, and the other Germans who have more or less disturbed the unity of authorship. But he has not deigned to study, or at least to mention, them. To judge from his silence as to the Abu-Simbel inscription, when treating of the age of writing, and his acquiescence in the now rejected hieroglyphic version of Achaean attacks on Egypt in the thirteenth century B.C., he has not provided himself with any philological journal which would have kept him acquainted with current criticism even in Lancashire. To those, however, if there be any, who desire further evidences of the real antiquity of the body of the Odyssey, his arguments against Mr. Paley, especially on linguistic grounds, are most convincing, and show a careful study, not only of the language of Homer, but of the other older poets. A perusal of Kirchhoff's *Studien* on the Greek alphabet renders all this kind of ingenuity subsidiary, if not otiose.

But all these criticisms only concern what Dr. Hayman might have done; what he has done, and chosen to do, is honestly and thoroughly done. And while neglecting the writers above named, it is fair to add in qualification that he has used the school commentaries of Faesi and of Ameis, embodying their best points in his notes. His careful statement of the action for each day will not, however, persuade sceptical readers that the plan of the poem is harmonious or undisturbed.

J. P. MAHAFFY.

#### OBITUARY.

SIR CHARLES WYVILLE THOMSON.

SIR CHARLES WYVILLE THOMSON, whose death on the 10th ult., at the early age of fifty-three, we have to record, was born at Boynside, Linlithgow. He began his medical training at Edinburgh University in 1845; and in 1850 held a lectureship on botany at King's College, Aberdeen, and subsequently at the Marischal College. His first published scientific paper appears to have been one on the application of photography to the compound microscope, which was read before the British Association in 1850. While at Aberdeen, he published papers on Zoophytes and Polyzoa. In 1853 he was appointed Professor of Botany and Zoology at Queen's College, Cork; and a year afterwards became Professor of Mineralogy and Geology at Belfast. While engaged at Belfast, he published his very important and well-known paper on the development of *Comatula Rosacea*. In 1869 he was elected a Fellow of the Royal Society; and in 1870 was appointed to the Chair of Natural History in Edinburgh, in the place of Prof. Allman. The great work with which Sir Wyville's name will for ever remain connected, and for which he received the Copley Medal of the Royal Society, is that of deep-sea exploration. It cannot be denied that the illustrious discoveries made by England in this province of science originated with him. It was during a visit paid to him by Dr. Carpenter in 1868, with a view of discussing investigations which both naturalists were about to make on recent Crinoids—Sir Wyville on *Sars Rhizocrinus* and Dr. Carpenter on the first specimen of a West Indian *Pentacrinus* ever obtained with its soft structures well preserved—that the idea of soliciting the Government to provide the means of deep-sea research was formed, and the result was the expedition of H.M.S. *Lightning* in

August, 1868, with its important results, its revelation of a vast unexplored deep-sea fauna, and the general awakening of public interest on the subject. The *Lightning* expedition was followed in 1869 and 1870 by the two expeditions of H.M.S. *Porcupine*, in which Mr. Gwyn Jeffreys was associated with Sir Wyville and Dr. Carpenter. The *Challenger* expedition, the successful directorship of which constitutes Sir Wyville's most distinguished claim to the front rank among men of science, originated in a letter written by Dr. Carpenter to the First Lord of the Admiralty in the summer of 1871, for in consequence of a favourable reply to this letter a committee of the Royal Society was constituted to draw up a scheme of operations, and to make a formal application to the Government. In the end, Sir Wyville undertook the directorship of the civilian scientific staff of the ever-memorable *Challenger* expedition, and, having made arrangements for the carrying on of his teaching work during his absence, he remained on board at his post during the whole of the three years and a-half occupied by the voyage. His enthusiasm with regard to everything connected with the dredging, sounding, and various physical and chemical operations carried on in the deep sea during the cruise knew no bounds. He spent hours on deck watching them, and waiting for the dredge to come up, and though, as time wore on, the interest of the seamen and naval officers in the arrival of the dredge or trawl at the surface failed, and that even of the remainder of the scientific staff flagged, he was never known to be absent at the moment it appeared at the ship's side, whatever the weather, but was to be seen peering down into the water, eagerly attempting to diagnose the contents of the net when it was still dipping in and out of the sea-surface as the ship rolled to and fro. When once it was on board, he would eagerly grope for treasures, squeezing each cephalopod between his fingers, always with a lurking hope to find a belemnite's bone in it, or expecting at last to grasp a trilobite. These never came, but there was an abundance of other wonders, the interest of most of which is only now becoming fully apparent as the various monographs composing the grand official work on the scientific results of the voyage, designed and edited by him, are issued by the Stationery Office. He had hoped to see the completion of this work, but he has gone when only three volumes have been published. His health on board the *Challenger* was not good. Before starting on the voyage he brought out his important work, *The Depths of the Sea*, and, after the return of the *Challenger*, his two well-known volumes on the Atlantic. He then busied himself with the preparation for the press of a narrative of the voyage, to appear in the official work, based on one drawn up by Staff-Commander Tizard, the senior navigating officer of the *Challenger*; but he had a serious and alarming attack, and it became apparent to his intimate friends that it could scarcely be hoped that he would do any more serious work. He seemed to be getting through the winter pretty well, and only three or four weeks before his death he was in communication with Mr. Herbert Carpenter about some *Pentacrinus* sections which he was cutting for him. He got severely chilled on a visit to Edinburgh about a fortnight ago, having remained a great deal in the open air, and had no strength to rally against this and the complications which ensued. Sir Wyville was an excellent lecturer, a most genial companion, and an excellent host. He was fond of amusements of all kinds, and was never happier than when he went on shore from the *Challenger* in some out-of-the-way island, with his gun on his shoulder, in pursuit of birds of Paradise or other treasures.

H. N. MOSELEY.

DR. JOHN MUIR.

THE death of Dr. John Muir will be felt by many who did not even enjoy his personal acquaintance. His help was ever ready to be extended to struggling scholars as well as struggling causes, though it was but rarely that the world heard of the unostentatious act of generosity. Sometimes even the recipient of the gift hardly knew whom he had to thank for it. To a wide and varied circle of friends Dr. Muir's loss will be still greater. Those who have enjoyed an evening at his house in Merchistoun Avenue, while his sister was still alive, will not readily forget the genial hospitality of the host, the pleasant and instructive conversation of which he was the centre, and the congenial circle of friends he gathered round him. Born at Glasgow in 1810, he went to Bengal in the service of the East India Company in 1828, and remained in India for twenty-five years. While there, he interested himself keenly in the moral and religious welfare of the natives, and for this purpose published in Sanskrit more than one work designed to convert the Hindus to Christianity. In pursuance of the same idea, he also offered a prize of £500 to the University of Cambridge for a treatise pointing out the errors of the various systems of Hindu philosophy, and setting forth the principles of Christianity in a form suitable to the attention of learned natives. Dr. Rowland Williams's well-known *Dialogue of the Knowledge of the Supreme Lord* was the result of this. Subsequently, Dr. Muir's own religious views underwent considerable modification, and he threw himself, with his accustomed energy and thoroughness, into the study of the critical theologians of Germany and Holland. But it is as a Sanskrit scholar that he will be longest known and honoured. In this department of learning his chief work is his "*Original Sanskrit Texts on the Origin and History of the People of India, their Religion and Institutions*," collected, translated, and illustrated, in five volumes." The work is indispensable for the student of ancient Hindu life and thought, dealing principally, as it does, with the Vedic period of Indian literature. The first volume discusses the legendary accounts of the origin of caste; the second, the primitive home of the Hindus; the third, the opinions of Hindu writers on the Vedas; the fourth, the contrast between Vedic and later Hindu theology; and the fifth, published in 1870, the cosmological and mythological conceptions of the Indians in the Vedic age. Of late years Dr. Muir has confined himself to printing, for private circulation among his friends, translations in verse of extracts from Hindu authors bearing upon moral and religious questions. His object in this, as he once told me, was "to supply illustrations, in however humble a way, for the student of the comparative science of religion."

A. H. SAYCE.

PROF. STEPHAN BORN, of Basel, in an interesting obituary of his friend Prof. E. Desor, who died at Nice on February 24, states that he was a descendant of a member of the old Huguenot colony which settled at Friedrichsdorf, near Frankfurt. In 1811, the year of Desor's birth, the French language still retained its predominance in the family, the school, and the church. E. Desor passed from the local school to the Gymnasium at Hanau, and afterwards studied jurisprudence at the University of Giessen. In 1832 he went to Paris, and, under the influence of Elie de Beaumont, turned from law to geology. He contributed towards the cost of his education by translating Bitter's *Erdkunde* into French. Prof. Born observes that the international character of modern science was illustrated in Eduard Desor, who was French by ancestry, German by birth and culture, and Swiss by deliberate choice. He

went from Paris to Bern, where he lived with Prof. Vogt, and formed a close friendship with his eldest son, Karl Vogt, by whom he was introduced to Agassiz. It was under the direction and help of the latter that Desor began his geological Alpine journey, and his researches into the nature of the glaciers. After a journey to the Scandinavian "Alps," with a view to the observation of their erratic phenomena, he accompanied Agassiz in 1847 to North America, where he was employed in the coast survey. His discovery that Agassiz would not recognise him as an independent researcher, but chose to regard him simply as the pupil and assistant of earlier days, led to a separation between them. After fulfilling an appointment in the State of Pennsylvania as geological surveyor of the mineral districts and the primeval forests, Desor returned to Switzerland in 1852, and settled in Neuchâtel. Four years later he inherited a considerable property through the death of his brother. His election to the Ständerath and Nationalrath interfered with his scientific labours, for he was an eager and prominent politician. While in America he had formed a close friendship with Theodore Parker, and he devoted himself with characteristic energy to the study of religious problems both abroad and in his native land. Prof. Born remarks that those to whom Eduard Desor was known as one of the greatest of Swiss scholars in geology and primitive culture-history had little conception of the width and range of his pursuits. "To extend light in all directions," he observed, was the task of his life.

#### NOTES OF TRAVEL.

M. CH. RUELENS, Keeper of the Royal Library at Brussels, has submitted to the Antwerp Geographical Congress a notice of a curious document preserved in the MS. Department in the shape of an autograph MS. volume, addressed in 1613 to Philip III., King of Spain and Portugal, by an official *descubridor*, and treating of the Malay Peninsula, Java, China, and the ancient geography of Asia, in which mention was also made of a Southern India, supposed to be Australia. This work bore the name of Emmanuel Godinho de Eredia. M. Léon Janssen has lately succeeded in reproducing the Portuguese MS., with facsimiles of its fifty-nine maps, plates, and drawings, and has added a French translation and notes. Only 120 copies of the work have been struck off, and, of these, only twenty-five were for sale. The work is entitled *Malaca, l'Inde méridionale, et le Cathay*, and has an Introduction by M. Ruelens. Among the curious illustrations in it are detailed maps of Malacca and its environs, of the Sunda Archipelago, and of the land which Godinho calls Southern India, supposed to be Northern Australia, topographical plans, portraits of several viceroys of the Indies, in addition to those of St. Francis Xavier and the author himself, drawings of natives, animals, &c.

THE King of Italy has lately presented a gold medal, accompanied by a complimentary letter, to Mme. Carla Serena for her services to ethnography by the researches she made during her well-known travels in the Caucasus.

At the last meeting of the Italian Geographical Society, Prof. F. Minutilli read a paper on Africa, considered from the points of view of science, civilisation, and commerce.

DURING his recent journey in Abyssinia, M. Achille Raffray visited the town of Lalibéla, and spent a week there for the purpose of investigating and making drawings of its ten churches cut out of the living rock, from which they are separated by trenches. They were built, or rather cut out of the rock, about the begin-

ning of the fifth century by 400 or 500 workmen whom King Lalibéla had procured from Jerusalem and Alexandria. From an archaeological point, M. Raffray's discovery of these monolith churches, as he terms them, is considered most important, for previously there was only a rumour of the existence of such monuments. Before going to Lalibéla, M. Raffray visited the lofty mountain plateaus on which are found the sources of the River Gulima, which, flowing to the east, sends its waters down to the deep depression of Lake Aussa, and of the Taccazé and the Tellaré, which eventually unite, and flow into the Nile. In the course of his travels, M. Raffray has also made some interesting discoveries in the departments of zoology and botany.

IN consequence of Mirambo, the Wanyamwezi chief, having seized all the roads through Unyanyembe, and thus prevented communication with the Belgian station on the eastern shore of Lake Tanganyika, an armed body of men is said to have been lately despatched by the Sultan of Zanzibar, with instructions to force their way to Karema, and ascertain the safety of M. Ranaeckers. Altogether, the position of affairs in East Central Africa is by no means satisfactory.

FROM the opposite side of Africa, the Rev. W. W. Bagster, of the American missionary expedition, writes that, in his opinion, their main station must be at Bailundo, fifty miles short of Bihé, and that from it they will be able to move on the country to the north and also to the north-west of Bihé, where the language is half Ganguela and half Ambunda, and afterwards into Ganguela and the region beyond. The expedition will thus traverse the highlands in perhaps their greatest length inland, and will be on the line of the densest population towards the centre of Africa. A not unimportant fact is that the Ganguela language would take them almost across the continent, as they would follow the trade of these people.

#### SCIENCE NOTES.

*The Discovery of the Pouched Marmot in Pre-glacial Beds.*—Near Mundesley, on the coast of Norfolk, there occurs a deposit called the "Arctic Freshwater Bed," discovered a short time ago by Mr. A. Nathorst. This formation is of considerable geological interest, inasmuch as it is supposed to offer the earliest indications of the advent of Arctic conditions in that area. Mr. Clement Reid, of the Geological Survey, has obtained from this bed a few teeth and bones, which are the first vertebrate remains yet unearthed from the deposit. These remains have been studied by Mr. E. T. Newton, of the Museum of Practical Geology, who refers them to the pouched marmot (or *Spermophilus*), and has described and figured them in a recent number of the *Geological Magazine*. Remains of the *Spermophilus* of any age are so exceedingly rare in this country that the discovery is welcome to British geologists; but it is especially interesting as showing that the pouched marmot lived in East Anglia at the beginning of the Glacial period, and prior to the deposition of the Till, or Lower Boulder Clay.

AN anthropological society has been founded at Brussels, M. Vanderkindere, Rector of the Free University, having been elected president.

#### PHILOLOGY NOTES.

At the Philological Society's meeting on Friday, March 17, Dr. Murray explained the system on which he proposed to mark the pronunciation of words in the society's English Dictionary, and defended his plan, on practical grounds, against the objections of the strict phoneticians.

MR. KARL BLIND's essay on "New Finds in Shetlandic and Welsh Folk-Lore" will be concluded in the April number of the *Gentleman's Magazine*, when, besides a number of Sea-Sprite and Fish-Man tales recently discovered in South Wales, the Kymro-Silurian origin of the Welsh people and the question of the Fianna and other semi-mythical and historical invading races of Ireland will be touched upon.

THE Imperial Academy of Austria has just published at Vienna vol. v. of the "Corpus Scriptorum Ecclesiasticorum Latinorum," containing *Orosius*, edited by Prof. Zangemeister, head librarian of the University of Heidelberg. During the Middle Ages the History of Orosius was the favourite text-book. Its abridged translation into Anglo-Saxon, ascribed to Alfred the Great, is a proof of its popularity in Britain. It is noteworthy that no critical edition has yet proceeded from England. In 1738 the Dutchman Havercamp published the first fairly readable edition, and this edition has been reprinted since without any material deviations. Owing to the great popularity which Orosius enjoyed with the clergy, we possess a great number of MSS., and among them one as old as the sixth century, and one dating from the eighth. Prof. Zangemeister gives the readings of the MSS. deserving authority in a very full critical apparatus; and he also gives references to the writers used by Orosius, as well as to those who have quoted from him. The volume contains, in addition, the "Liber Apologeticus," a portion of which, written by St. Augustine himself, was in former editions included in the text of Orosius, and not marked as an interpolation. The value of this edition is greatly enhanced by five exhaustive Indexes.

MR. W. A. CLOUSTON, of Glasgow, is about to reprint, by subscription, Sir William Ouseley's Persian text and English translation of the *Bakhtyar-Nama*; or, the Story of Prince Bakhtyar and the Ten Viziers, which was published in 1801, and has now become of great rarity. This new edition will be accompanied by an Introduction and notes, and the price to subscribers will be 6s. 6d.

MESSRS. WILLIAMS AND NORGATE have published the fourth volume of Prof. Oldenberg's edition of the Pāli text of the *Vinaya Pitaka*.

THE first part of Dr. Morris's edition, for the Pāli Text Society, of the *Anguttara Nikāya*, consisting of the *Eka-nipāta* and the *Duka-nipāta*, is now passing through the press.

PROF. HERMANN JACOBI, of Munich, is editing the *Ācāranga Sūtra*, one of the sacred books of the Jains, for the Pāli Text Society.

#### MEETINGS OF SOCIETIES.

ARCHAEOLOGICAL INSTITUTE.—(Thursday, March 2.)

SIR J. FIBBALD D. SCOTT, BART., in the Chair.—Mr. Somers Clarke, jun., read a paper on the remarkable sculptured font in the church of St. Nicholas, Brighton, giving a careful description of the subjects represented, and specially referring to the scenes in the life of St. Nicholas.—Mr. E. T. Newton read a paper on the discovery in 1879 of a Romano-British cremation urn in Cheapside at a depth of eighteen feet below the pavement. Among other evidences of cremation were two pieces of the *humeri* nearly surrounded by green glass, which must have been in a state of partial fusion when it became pressed round the bones.—Mr. J. O. Scott exhibited a cast of the upper portion of an effigy of a civilian from North Curry church, and portions of delicate plaster figures of cows and other animals found walled up in the chancel of that church.—Mr. Micklethwaite was disposed to think that these might be votive objects.—Mr. A. E. Griffiths exhibited a fine example of a

British urn, full of ashes and bones in an undisturbed state, found at Hampton Wick.—Mr. R. S. Ferguson sent three examples of funeral chalices and patens discovered in Cumberland, and contributed some notes upon these relics.—Mr. E. T. Newton laid before the meeting the urn and bones forming the subject of his paper.—Mr. J. A. Spurnell Bayley exhibited a collection of rubbings of brasses of ecclesiastics from Essex, which were commented upon by Mr. Micklethwaite.

PHILOLOGICAL SOCIETY.—(Friday, March 3.)

A. J. ELLIS, ESQ., President, in the Chair.—The paper read was "Old-English Contributions," by Mr. H. Sweet. The paper dealt chiefly with the influence of stress in Old-English sound-changes. Such forms as *eam*, *heara*, were explained as the unemphatic duplicates of the emphatic *com*, *heora*, &c. Similarly, *all* was explained as the generalised weak form corresponding to the strong *eall*, even West-Saxon preserving unaccented *a* in such words as *Oswold*, *hláford* = *hláf-word* = *ward*, where it was rounded by the *w*. *Bint* was shown to be the weak form corresponding to *bindeð*, and to have arisen from earlier *bindit*, which, again, is a modification of *bindid*, in accordance with the general law by which unaccented final *d* became *t*, as in *sint*, *weorðmynt*, &c. By Verner's law, these two forms point to an earlier distinction of accent, the same verb having the accent sometimes on the root, sometimes on the ending, the latter having been the emphatic form, and given rise to such forms as *bindeð*, the former having been unemphatic and produced *bint*, &c.

ANTHROPOLOGICAL INSTITUTE.—(Tuesday, March 7.)

MAJOR-GEN. PITT-RIVERS, President, in the Chair.—Mr. E. T. Newton exhibited a Romano-British burial urn, containing human bones, found in Chesapeake, about eighteen feet below the footpath, in 1879. Two of the bones are encrusted by molten green glass.—Mr. E. H. Mann read the first part of a monograph on the aboriginal inhabitants of the Andaman Islands. Many points regarding the physical characteristics of these savages on which misapprehensions have hitherto existed were noticed. The latter portion of the paper was devoted to a description of the tribal communities and the peculiarities connected with the subdivision of the same among inland and coast men; and reference was made to the system of rule and the power of the chiefs, and various details connected with manners and customs were illustrated.—Dr. J. G. Garson exhibited an Andamanese skeleton, recently presented to the Royal College of Surgeons by Mr. W. Beatson, of the Bengal Medical Service.

FINE ART.

*Geschichte der griechischen Plastik.* Von J. Overbeck. Dritter Halbband. (Leipzig: J. C. Hinrichs.)

THE lapse of ten years or more which has called into existence a third edition of Overbeck's *Greek Sculpture* has at the same time brought to light a mass of new material to alter old opinions. It is characteristic of Prof. Overbeck that almost nothing that is new escapes him, whether it be sculptures recovered by excavation, or conclusions arrived at by fresh trains of argument. In the present edition, however, it is more with newly found sculptures that he has to deal. We have already had the figures from the Temple of Zeus at Olympia and the statue of Nike to serve as a basis for our knowledge of Alkamenos and Paeonios. Now we have the Hermes as a standard by which to measure the style of Praxiteles, if not to show the splendour he had attained in other works with which the ancients were more familiar. Since the days of the Apollo Belvidere no statue has occupied so much of

public attention as the Hermes. There is no charm it has not been found to possess if we could really admit as charms qualities that belong to effeminacy. In this respect Prof. Overbeck is guiltless. He, in fact, bestows a little space on playful excerpts about the subject. The main question for the moment is how to restore the statue, and on this we get no very decided opinion. From analogy it is admitted that Hermes might very well have held up in his right hand a bunch of grapes to tempt the young Dionysos. The action of the child would then be to reach forward towards the grapes with his left hand, and to steady himself with his right, resting on the shoulder of Hermes. But it is objected that in such circumstances Hermes would necessarily be looking direct at the child. This, however, is not the case. His look is, in fact, fixed between it and the object in his right hand; and in a restoration lately made in this country the interpretation which has been adopted is that Hermes was represented in a moment of divided attention, such as may be seen any day under similar circumstances. He tries to look at once at the grapes and the infant Dionysos. Overbeck takes it for granted that Hermes had originally a metal wreath on his head; and there are certainly several small holes which might well be explained as having been meant for the attachment of a wreath. But the author does not suggest what the wreath had represented—whether vine or ivy, to suit the character of Dionysos, or simply laurel, to give dignity to Hermes himself. The hair is roughly treated, producing an effect of contrast with the finely modelled face, which it bounds and defines very decisively over the forehead and temples.

For the Aphrodite at Knidos, Overbeck accepts the type on the coins of that town, confirmed by existing statues in marble. As Michaelis showed, the goddess stands holding with her left hand, which is extended sideways, the end of a piece of drapery as if just on the point of letting it fall altogether. Among the known statues of this type there is none of extraordinary merit. We want to see one from the hand of a Greek, if not from that of Praxiteles himself. There is in the British Museum a now famous bronze head of, I believe, Aphrodite. With it was found a hand holding the end of a piece of drapery. Both head and hand clearly belong to the same statue; and, if they are compared with the acknowledged copies of the Aphrodite at Knidos, they will be seen to agree distinctly in action, while, to a great extent, the type of face is the same. The statue had been of colossal size, and must have been the work of a master in the art of sculpture. So that Engelmann (*Arch. Zeit.*, 1878, p. 150) was amply justified in treating it as possibly a work of Praxiteles himself, rendering in bronze, with perhaps no great variation, the ideal of Aphrodite which he made for Knidos. It was, in fact, a happy thought of Engelmann to point this out, and it is particularly strange that Overbeck should ignore it.

The sculptures obtained in the excavations at Ephesus occupy considerable space in this new edition. Not that there is anything much to be made of them. They cannot be made to fit in with the character of Scopas. Even the

best piece among them does not meet with much approval. As to Scopas, nothing certain has been found in recent years except the fragments at Tegea, where he built and adorned the temple of Athena Alea. There can hardly be a doubt of these remains being from his hand, and it is a matter of regret that they have not yet been published in any form which would make them intelligible. As regards the Attic school of this period, it is another source of regret that Prof. Overbeck has not given a series of illustrations from the statues and reliefs of the Nereid monument, as it is called. It is clear that in many respects he appreciates them highly. They have been well published by Michaelis in the *Monumenti* of the Institute at Rome, but they deserve to be known far beyond the circle of those who have access to that work.

It might be said that the demand for a third edition is, in itself, a sufficient recommendation of Overbeck's *History of Greek Sculpture*. But, while general utility might bring about this result, we may be allowed to say here that it is also a work possessed of qualities which render it indispensable to students occupied with minute enquiries into the history of Greek art. A. S. MURRAY.

MR. COX'S EXHIBITION.

THE Conduit Street Galleries have not often been so well filled as by the pictures of deceased masters of the British school which Mr. Cox has withdrawn from his stores of works of art. They comprise several works of importance—Turner's early "Battle of the Nile" (129), for instance, formerly in the possession of Mr. Woolner, which was exhibited in 1799, a very astonishing work for a man of four-and-twenty. In loveliness nothing here equals Etty's "Bather" (45), from the Gillott collection. It was by pure accident, as we learn from Mr. Cox, that Etty obtained the exquisite model; and mindful of his pictures from the "Coral Finders" to "Joan of Arc," and of the many fine studies of female figures now hanging on the same walls as "The Bather," we are struck with the potency of chance on painters so highly gifted, but so little imaginative, as Etty. By sheer industry, by skill in painting, and sense of colour and harmony of line, he attained fame; but how much more swiftly would he have acquired, how much more surely retained, it, if he had painted this woman as often as Romney painted Emma Lyon! He could not select beauty; and a highly refined type seems to have come in his way once only.

Another picture of importance is Sir Edwin Landseer's "Savage Lion" (254)—said to be the "Sir William Wallace" of Exeter Change—painted in all the strength and seriousness of the artist's youth. These early studies of Landseer are often grand; and this is one of the grandest of them. No one, except Rubens, painted lions so well. Our national collections contain many fine examples of his later "veins," but we have no specimen of the unique and splendid genius of Landseer's wild youth, untamed by society, unsophisticated by sentiment. The young Landseer was not so poetical as the old, and we have no reason to regret that the painter of "Nero" and "Sir William Wallace" developed into the Landseer of "Night" and "Morning;" but both were great, and we should like this magnificent brute hung in the same room with "Suspense" and "Alexander and Diogenes."

Mr. Cox has, and has long had, another picture which, though scarcely important, is

nationally] very interesting. It is called "Sir James Thornhill's Academy" (191), and attributed to Hogarth. We have good reason for doubting both the title and the ascription, and still better reason for our conviction that both cannot be correct. If it be "Sir James Thornhill's Academy," it is very unlikely to have been painted by Hogarth, as that academy was probably closed before Hogarth had attained sufficient skill as a painter to execute this work. It more probably represents the academy in St. Peter's Court, St. Martin's Lane, set up by Hogarth himself after his father-in-law's death. But, all doubts apart, it is a clever picture in Hogarth's style, representing one of the earliest of those drawing-schools in London which preceded the establishment of the Royal Academy.

Of the numerous portraits here by Reynolds and Gainsborough we have no space to give a detailed notice. Though others by the former artist, such as that of "Horace Walpole," may have greater interest, there is none to compare in vigour of design with the masterly head of "Lord Lifford," Lord High Chancellor of Ireland (28). In the same way the portrait of "Abel," musician to H.R.H. the Princess Charlotte (180), seems to us the finest Gainsborough, although those of "George III.," "Garriek," and "Sterne" have more historic attraction.

The strength of the exhibition—with the foregoing exceptions, a very clever scene from *Tristram Shandy* by Philip Reinagle (25), and three of Poole's grandest compositions—lies in the landscapes. Of Wilson there are several small specimens of a high quality. Turner is represented by a few unimportant examples besides that already mentioned; Muller, by one large and grand work; and there is a great gathering of the works of William Linton, including a fine moonlight scene. More interesting than these are some examples of Gainsborough, including his "Broken Egg" (24), a replica of "The Market Cart" (6), and a beautiful little picture called "Studious and Idle Boys" (116). The Norwich school is very well represented. By "old Crome" there are twenty-seven pictures. One, a "View near Bury St. Edmunds" (4), is a fine and curious early work; most of the others, views on the shores and in the lanes of Norfolk, are in his more mature style, mellow and rich in colour, and "racy of the soil." Of Ladbroke, his brother-in-law, there is a fair example, by Stannard two and by Stark one, which call for no particular notice. It is different with the Vincents and the Cotmans. By the former there is a large view of the Thames from the Surrey side of Waterloo Bridge, painted in 1820 (98), and a "Landscape with Cattle" (115), one of the most charming of the small landscapes in this collection. Of Cotman, who, if he could not beat Crome in his own line, was a far more original and versatile genius, there are several works of great beauty. The most perfect in tone and the simplest in design is "Wherries on the Yare" (103). It is admirable in colour, with its gold-bronze sails against the soft gray sky of its low white clouds, and rich harmonies of sombre browns and greens in hull and water. Not less noble and simple in colour and design is the view of "Merton Hall, near Norwich" (32), with its excellent groups of figures, slight in execution, but solid in effect. Fineness of finish and boldness in colour are the characteristics of another scene by the same hand (106), in which a gravelly road dips from the foreground to travel through an undulating country to the sea-shore. In the distance are pinky banks of clouds on a primrose sky, cut off by a brilliant band of blue sea; these are separated by brown-green woods and hedges from the bright, almost metallic green of fields of young corn, and these are contrasted with the blue-green of

grass-land in shade. Almost equally to be admired is another scene on the Norfolk coast (95).

Of James Ward the collection contains several capital works, including a fine sketch for his gigantic Derbyshire landscape now in the National Gallery (242); and we must not conclude this imperfect account of an interesting collection without mentioning Romney's very sweet portrait of "Mrs. Camden" (85), or a beautiful landscape by Richard Westall—"Twilight" (109), one of the most "unexpected" sights in the gallery. COSMO MONKHOUSE.

#### ARCHAEOLOGICAL NOTES ON THE TERRA D'OTRANTO.

##### I.

THE chief object of my second visit to Southern Italy was to study the ancient topography and historical monuments of the province of Lecce or Terra d'Otranto. This province, known in antiquity under the name of Calabria—which was transferred in the Middle Ages to an altogether different country—comprises the territories of the Messapians, Iapygians, and Salentini. From the archaeological point of view, it constitutes a very clearly defined district, the monuments of which possess highly original characteristics of their own, wholly distinct from those of the monuments of Apulia, although the latter borders upon it, and was inhabited by populations of identical race and language, but much more completely Hellenised in manners.

To the antiquaries of England and France, and even of other parts of Italy, the Terra d'Otranto is practically a *terra incognita*. It is almost wholly unvisited, and scholars have but very imperfect ideas of the archaeological wealth which it contains. This state of things is rendered more remarkable by the fact that the inhabitants cannot be reproached with indifference to their country's antiquities. There are few places in the province where there are not one or more amateurs who superintend the local archaeological "finds," collect and preserve them with due care, or even devote their time and energies, more or less successfully, to their study and interpretation. There are several private collections in the district, the most important of which are those of Signor L. de Simone, at Villa Sant'Antonio, near Lecce (containing the most extensive series yet brought together of Messapic inscriptions); of Signor Nerregna, German consul at Brindisi (consisting principally of medals and painted vases); and of Signora Scarl-Colucci at Fasano (composed wholly of objects from the ruins of Gnathia). The collection formed by Signor L. Maggiulli at Muro-Lecce has been generously presented by its proprietor to the Museum of Lecce, in which he still continues to deposit objects dug up year by year from the ruins of the ancient city, the name of which is still unknown, but which has been succeeded by the village of which Signor Maggiulli is syndic. The cities of Brindisi and Taranto, and even the little town of Ostuni, have established in their public buildings the nucleus of a museum of inscriptions which will be developed by further discoveries; to the municipal libraries of Oria and Gallipoli, founded by bequests from private individuals, small archaeological collections are attached which already contain various objects deserving of attention.

But at Lecce especially the Archaeological Commission of the Terra d'Otranto has formed, in the last few years, a collection which is, unfortunately, stowed away in a very insufficient room at the prefect's residence, but which even now deserves to take high rank among the most important museums of Italy. Everything, indeed, in this museum is

not of equal interest; a sufficiently searching criticism has not always been employed in the acquisition of the monuments which it contains, and it will be necessary later on to eliminate a certain number of obvious forgeries. But even with these weak points, which are, after all, but few, the collection is highly valuable and interesting. The series of vases and of terracottas are particularly magnificent; among the bronzes and engraved stones there are likewise some first-class specimens; and, finally, the medals, which were without exception found in the country, are well classified and numerous. This last, however, is probably the department in which there will be most forgeries to be thrown out whenever the final revision of the collection takes place.

Justice, then, should be done to the generous efforts of the antiquaries of Lecce. They have done, and are doing day by day, all that is in their power to preserve, collect, describe, and classify the monuments of their province; and it is earnestly to be desired that the same should be done in every province of Italy. The archaeologist who visits the Terra d'Otranto does not find himself, as he might imagine beforehand, in a wild and unexplored country. Even in the smallest towns he is tempted to say, like the Greek shipwrecked mariner who espied geometrical figures drawn on the sand of the shore on which he had been cast up by the sea: "Courage! I see traces of men." Nor is it only vestiges of the dead past, that will meet him; he will find himself among living scholars who will receive him with the most gracious and thoughtful hospitality; who will put themselves at his disposal so absolutely as even to embarrass him by that refinement of kindness which the Greeks so well called *φιλοξενία*; who will vie with one another in doing him the honours of the country; who will escort him with delight to all that he has to see because they know it beforehand. In a word, he will everywhere find abundant preparations for his task; and all he has to do is to entrust himself to their conduct in order to gather in, even in a hurried tour, a rich harvest of facts and observations which he has merely to contrast and to combine.

##### MEGALITHIC MONUMENTS.

One of the points which most strangely distinguish the Terra d'Otranto from the other parts of the mainland of Italy is the great number of megalithic monuments, or, at least, of a certain class of such antiquities. I allude to the species of *menhirs* which present most analogy to the *Stantare* of Corsica and the *pedras fittas* or *pedras longas* of Sardinia, and which are called by the inhabitants of the country *pietre fitte* or *Sannà*. Native archaeologists have noted their existence at Muro-Lecce, on the road from Lecce to Merine, as well as near Carpignano, Corigliano d'Otranto, Santa Lucia in Martano, and Palazzano, a few miles from Taranto. In the course of my own tour, I observed others near Giurdignano; near Supersano, between Maglie and Ruffano; near Ruffano itself; close to the Specchia di Santa-Teresa, on the high downs above Ruffano; and, lastly, as you enter the village of Patù, near the Capo di Leuca.

It is noteworthy that no monument of this class exists in the districts of Fasano, Ceglie, Oria, and Brindisi. With the exception of that of Palazzano, which is in the *circondario* of Taranto, they are entirely confined to the extremity of the Iapygian peninsula, beyond a line drawn from sea to sea, between Lecce and Gallipoli.

The *pietra fitta* near the Specchia di Santa-Teresa is the only one which presents to a certain extent the shapeless aspect characteristic of our *menhirs*. All the rest have the appearance of long beams of stone, narrow and less thick than they are wide, squared with a certain

amount of care, and hewn on the precise spot on which they stand from the banks of soft white limestone flush with the surface of the soil. They are fixed at the lower extremity into a socket formed at the surface of these same banks of stone. In some cases the original builders so arranged that the natural rock in which they were planted should form a kind of square pedestal, roughly shaped by the hand of man.

If the *pietre fitte* of the territory of Otranto must necessarily be compared with the *menhirs* of Western Europe, although denoting a more advanced stage of industry in their execution, the same province—so far, at least, as I am aware—contains nothing similar to the *dolmens* and covered ways. But it is probably allowable to classify with the megaliths, though it is obviously of natural origin, the remarkable rocking-stone of the neighbouring village of Giuggianello. This is a block of limestone in the shape of an oval lens, measuring 15·60 mètres in circuit, 5·70 mètres at its greatest diameter and 2·85 mètres at its smallest, and 2·30 mètres at its greatest thickness. With the point of rock which holds it in equilibrium, it presents very much the appearance of a mushroom on its stalk, and a very gentle touch is enough to set it in motion. This stone is called "*La furticiddhu de la vecchia de la Manni*," and it is invested with a sacred character in the eyes of the peasants of the neighbourhood, who perform pilgrimages to it. But what gives it a peculiar interest from the archaeological point of view is that, as recognised by Signor L. de Simone, who was the first to call attention to it, it is scarcely possible to doubt that it is alluded to in a passage of the treatise *περί θαυμασίων ἀκουσμάτων*, falsely attributed to Aristotle. This runs as follows:—

"In the remotest part of Iapygia there is a stone so huge that it would be almost impossible to carry it away on a chariot. But Herakles raised it without an effort, and threw it behind him; and it so poised itself that it can be moved merely by touching it with the finger."

FRANÇOIS LENORMANT.

#### NOTES ON ART AND ARCHAEOLOGY.

WE understand that de Neuville's great picture "*The Cemetery of St. Privat*" will be exhibited during the coming season by Messrs. Dowdeswell at their gallery in New Bond Street. The incident represented is the last desperate resistance made on August 18, 1870, in the churchyard of St. Privat by the French, consisting of the 9th battalion of Chasseurs and the 4th, 10th, and 12th regiments of the Line—who were left in the burning village to cover the retreat of Marshal Canrobert—against the Royal Prussian Guard, the Prussian Corps, and the Saxon Corps. Overpowered by the numbers which poured through every inlet into the churchyard, the last of the French, defending their ground inch by inch, were either killed or taken prisoners.

THE Queen, before her departure for Mentone, acknowledged in a gracefully worded letter the pleasure it has given her to receive a special large-paper copy of Mr. Tuer's *Bartolozzi and his Works*.

A COLLECTION of original drawings, made for Dalziels' Bible Gallery, is now on view at the Fine Art Society's Rooms, in New Bond Street. There are nine works by Sir F. Leighton, three by Mr. G. F. Watts, eleven by Mr. E. J. Poynter, and works by Messrs. Holman Hunt, E. Armitage, F. Madox Brown, F. Sandys, F. R. Pickersgill, and other artists of distinction. Some of the works have a special interest from the fact that they are drawn on wood.

THE building which has been erected by Miss Marianne North just inside the northern entrance of Kew Gardens is fast approaching completion, and will be opened to the public on May 15. The structure (from a design by Mr. J. Fergusson) is externally very simple, and is surrounded by a verandah, under which seats are placed for the convenience of visitors. The gallery within is finely proportioned and well lighted, and the walls are surrounded by a dado of wood-panelling, every panel being a specimen of the choicest wood of one or other of the tropical countries, the scenery and vegetation of which are represented in the paintings with which the walls are lined. These beautiful and instructive oil studies, some 1,200 or 1,500 in number, represent the labour of eight or ten years, and were all painted from nature by Miss North in Brazil, Japan, Borneo, Java, the West India Islands, Australia, New Zealand, India, Ceylon, &c., &c. The whole of this precious and original collection will, on May 15, be presented to the nation by Miss North, together with the building which she has erected at her own expense to contain them.

M. ODILON REDON, the exhibition of whose sketches at the office of *Le Gaulois* is now creating a great sensation, has published (Paris: G. Fischbacher) a collection of lithographic designs inscribed to Edgar Allan Poe. A French critic, reviewing M. Redon's work, has truly characterised this artist by saying that to him, more suitably even than to Beaudelaire, might be applied Victor Hugo's apophthegm, that he has created *un frisson nouveau*. The originality and power of the sketches gathered into this album cannot be gainsaid; they are replete with imagination; but they lack the element which is the soul of art—beauty. Lord Verulam's dictum, that there is no beauty without strangeness in its proportions, would appear to have become distorted in M. Redon's eyes into—strangeness only is beautiful. Despite their intensely horrible grotesqueness, they possess a weird fascination, nor, once examined, will they be readily forgotten.

A SECOND edition of Leonardo da Vinci's *Treatise on Painting*, from the well-known old MS. in the Vatican Library, has just been published by the German painter, Herr Heinrich Ludwig. The first edition (which is very inaccurate) was edited by Manzi in 1817. In Herr Ludwig's new edition the Italian text is accompanied by a German translation, and by an extensive commentary, which, however, does not refer to the striking differences between the MS. in the Vatican and the still existing MSS. in Leonardo's own handwriting.

WE are to have another book about Millet. M. Amiot, of Cherbourg, has collected photographs of all Millet's early works (mostly portraits) which he could find in the neighbourhood, and proposes to publish them with such information as he can gather about the artist's early life and struggles.

THE appearance of Mr. Hamerton's splendid new volume on *The Graphic Arts* (Seeley) is in every way worthy of its subject, the author, and the publisher. The greatest care has evidently been taken with the illustrations, which are exquisitely printed, most of them from plates produced with the assistance of photography, by one or other of the new "processes." Excellent are the imitations of charcoal designs by Messrs. Goupil, of woodcuts by Messrs. A. and W. Dawson, and of etchings by M. Armand Durand, but perhaps the most wonderful facsimile of all is that of a lead-pencil drawing by Turner, executed by M. Dujardin.

M. CAMILLE LÉCUYER, whose magnificent collection of Greek pottery formed one of the attractions at the Trocadéro in 1878, has begun

the publication of a series of portfolios illustrating the choicest specimens. The first of these (Paris: Rollin and Feuardent) contains twenty-one plates, with descriptive text by MM. de Witte, Fr. Lenormant, and others. The price is thirty francs.

M. VACQUIER, the architect recently charged by the municipality of Paris with the duty of supervising all demolition and digging from an archaeological point of view, has justified his office by finding and preserving an old Roman bas-relief near the Boulevard Saint-Marcel. Unfortunately, the inscription has been obliterated. Similar remains have been found on the site of the Roman road which passed right through the *cité*, or *île de France*.

A LITTLE pamphlet has been published at Liège by M. A. de Ceuleneer upon the ancient Christian tomb discovered near Tongres in January of last year. The tomb is a double one, constructed for the most part of bricks. Some bones, gold and glass beads, and the remains of other ornaments were found inside. But the main interest of the discovery lies in traces of fresco painting, and of an inscription, which can be seen on the partition wall. M. de Ceuleneer is disposed to assign the date to the beginning of the fourth century, before the Teutonic invasions.

IT is stated that Dr. Isidoro Falchi, inspector of excavations for the Campiglia Marittima, has discovered, on the hill of Colonna, the site of an ancient city, which he identifies, on the evidence of some coins and other relics, as that of Vetulonia, an important city of Etruria.

THE *Revue critique* states that a Catalogue of the objects preserved in the Tchinitli-Kiosk Museum of Antiquities at Constantinople has been prepared by a student at the *École française* of Athens, and will shortly be published. The collection in question has been arranged by Hamdi-Bey, who is Director of the Turkish School of Fine Art.

#### THE STAGE.

##### "ROMEO AND JULIET" AT THE LYCEUM THEATRE.

EVEN if the production of "*Romeo and Juliet*" should add little to the reputation of Mr. Irving as an actor—a point as to which, notwithstanding some disadvantages on the actor's part, I am considerably doubtful—it will be found to have afforded another instance of his sagacity as a manager. There was an old-fashioned idea that in many of the arts a high standard of taste was sure to be costly to its possessor; there was an impression, even until quite lately, that an insensibility nearly as strongly marked as the insensibility of the general public was a quality indispensable for the man who would cater for the public wants. But this somewhat cynical belief has of late suffered certain rude shocks. In journalism the sensational leader, in picture dealing the profuse recommendation of tawdry and impudent design, and in theatrical management the proved capacity to out-do your professional brother in the depths of an ungainly realism have, in conspicuous instances, failed of the success that has somehow come to those caterers for the world who have known how to be a little in advance of the world, and who have dared as public persons to exercise the taste which they possess in private. In a word, it is beginning sometimes to be successful to look at your enterprise—whatever your enterprise

may be—from a high and liberal standpoint. The intelligent newspaper manager of the day presses literature into journalism; the intelligent picture dealer ceases to recommend the vulgar and commonplace—nay, very possibly prides himself a little too much on his appreciation of the eccentric and his insight into the odd; and the intelligent director of theatres brings general culture and artistic taste to bear upon matters from which a dozen years ago culture and taste were generally divorced. One of the pleasantest things to remember in connexion with this Lyceum revival of "Romeo and Juliet" will be the evidence it has afforded of the employment of knowledge, skill, and artistic sensibility.

No single performance in "Romeo and Juliet" can be selected as a great piece of acting, though there are many good bits; but the *ensemble* is excellent. The hero and heroine, the pair of star-crossed lovers, play their part in the midst of the broils of two great families and of the splendour and gaiety of Italian life—a life still not devoid of just those sudden contrasts of fortune which it is the habit to associate more particularly with the conditions of modern existence. Perfection of accessory, an unremitted beauty of scenic effect, have been attained. Not only money, but high taste and the thoughts of instructed people, have been lavished on the surroundings of the persons of the drama. In itself, this is obviously to be praised—it is to be recognised with cordiality. I think, nevertheless, that the degree to which the elaboration of the setting has been carried weakens rather than strengthens the illusion which the play should produce. It is an instance of true commercial, as well as general, intelligence: the scenery and appointments are such that they would draw the public for several months even if the Romeo and the Juliet were little short of ludicrous, or if, with a tolerable hero and heroine, the cast were generally weak. But neither of these things happens. The most popular actor and one of the most popular actresses of the day are in the leading parts—they have their shortcomings, as we shall immediately hint, but they are too skilful to be ludicrous; the general cast, instead of being weak, is, save in one or two cases, almost as strong as it is nowadays possible to make it. But yet it is the scenery that dominates; the "warmth, life, and romance" are communicated, it may be, but in unaccustomed ways. When the visit has been paid, and this and that vision of

"Fair Verona, where we lay our scene,"

has passed before the eye, what is it that the eye most retains and the mind most remembers? Is it—to put the thing in that interrogative form which commended itself particularly to Mr. Chadband in his discourses—is it the course of the story? Is it the personality of the lovers? Or, is it not rather this gesture of chivalry and that of grace, and the remembrance of moonlit gardens, of a street fight (organised by Angelo), of a dance performed exquisitely, and of a gathering crowd on the deep stairs of the Capulet's vault? And yet the acting is not insignificant. But—and here is the

point we must needs insist upon—it would have taken not only genius, but faultless genius, to dominate over such surroundings. The surroundings are now and then a splendid encumbrance. The preparation of them involves long waits, in which the interest of the story must necessarily seem to wane. The presentation of them continually invites the attention to new beauties of detail, and the necessary business of the play suffers meanwhile. At least that is how I feel it—that there is a point beyond which scenic perfection only arouses a disturbing curiosity; people are intrigued to know what is the last thing ingenuity has devised. The profound impression created by Mr. Irving in Hamlet—I am not at all sure he would have created it had "Hamlet" been mounted with quite the magnificence of the present play.

There is little reason to find fault with Mr. Irving for not attempting to look like a smooth and comely lad. His judgment is displayed by his very avoidance of the effort. You must take a man as he is—the manliness and energy of early middle age must atone for the absence of a softer charm. Elaborate making-up will only make him look older, and, as in the case of Delaunay at the Français, you think a man really older than his years when you see him engaged in a fruitless design to compass the graces of adolescence. Mr. Irving's complete activity and alertness, his picturesqueness of aspect, and his continual intelligence of the character, do not allow him to be an absolutely ideal Romeo; but they allow him to be a Romeo of impulse, fire, and passion. And how about Juliet? Fire and passion are her requisites likewise—they are her requisites above all—and fire and passion are conspicuously missing in the Juliet of Miss Terry. In the balcony-scene she is satisfactory; in the potion-scene and in the vault-scene she is inefficient; that is to say, the Juliet that she represents is fascinated, but not consumed. In the ball-scene, the actress makes welcome display of all her familiar graces; in the balcony-scene, she is genuinely suggestive—her Juliet is under the necessary spell. No little art is shown in her winsomeness with the Nurse; and her single line of quiet reproach to the Nurse, later on, "You have comforted me marvellously," is said with a significance strongly marked, and a reality happily found. But the latest scenes are wanting in the imagination of tragedy. Nothing is called from out of the depths. The actress deals with tragedy like an eighteenth-century portrait-painter—like Romney, for instance. The first word is grace—but so is the last.

Of the remaining performances, that of the Nurse by Mrs. Stirling has been most praised. It is a remarkable character-picture; and, were it not for a certain under-lying coldness which I seem to trace always in Mrs. Stirling's emotion, it would be wholly delightful. The under-lying coldness may, I allow, in the present circumstance be exactly appropriate—it suggests well enough the unconscious selfishness of the old, in whom the sources of feeling run dry. The person here suggested is not bad-hearted, or without some moderate share of feeling for others; but she and her own dullish interests are

the centre of the world, and to anything approaching a passion of affection she is—simply inaccessible. Miss Louisa Payne's Lady Capulet is a sensible representation of a youthful matron—"much on your years," she says to Juliet, who was fourteen, "was I a mother made": Lady Capulet is much younger than her lord. Miss Payne represents her elegance well, and also that polite indifference to her child which Shakspeare, with prophetic eye, discerned in the typical woman of society. Mr. Terriss is a spirited and noisy Mercutio of the accepted fashion, delivering with only too much zeal to the audience, instead of to the stage, his speech about Queen Mab. The enthusiasm of his description carries people with him; but his own enthusiasm is in excess of his judgment. Mr. George Alexander is excellent as the Count Paris; and Mr. Mead is perfect as the Apothecary, the brief scene between this actor and Mr. Irving being one of the most telling and vivid in the play. I often like Mr. Howe, but I know no reason why Capulet should be suggestive of a strong English Conservative, deeply charged with the peculiar sacredness of vested interests.

FREDERICK WEDMORE.

## MUSIC.

### RECENT CONCERTS.

On Monday evening last week Mdme. Schumann made her first appearance at the Popular Concerts, and played Schumann's fantasia in C (op. 17), dedicated to Liszt. Mdme. Schumann's playing, whether from an intellectual or poetical point of view, has lost none of its power and charm; it is, of course, only natural that she should every year lose rather than gain in physical strength, but her store of vigour and energy is by no means exhausted, and she must still be regarded as one of the greatest of living players. The public applauded not only the player, but also the noble work which she chose for her *début*. It is one of Schumann's most elaborate compositions for the pianoforte, and a truly inspired work, not containing a single uninteresting bar from beginning to end. Schumann has prefixed to this fantasia a short motto from Schlegel, but we think his original idea was still more appropriate. The work was to be called "Obulus," and the three movements were to be named respectively "Ruinen" (Ruins), "Triumphbogen" (Triumphal Arch), and "Sternenkranz" (Crown of Stars). Perhaps from a feeling of modesty, Mdme. Schumann has hitherto refrained from playing very much of her husband's music; but, as Robert Schumann is now universally appreciated and admired, and as Mdme. Schumann stands unrivalled as an exponent of his works, we hope that this season she will not fail to draw largely from that source. If she should give a pianoforte recital, why should it not be a Schumann recital? The programme included Beethoven's quartett in E minor (op. 59, No. 2), magnificently played by Herren Joachim, Ries, and Straus, and Signor Piatti.

Last Saturday afternoon Mdme. Schumann made her second appearance at St. James's Hall, and gave a most impressive rendering of Beethoven's sonata, "Les Adieux, l'Absence et le Retour." Max Bruch's Hebrew melody, "Kol Nidrei," played a short time ago, was also repeated, with the addition of the harp accompaniment (Mr. Putman). We think the organ might also have been employed as a substitute for the orchestral accompaniments.

On Monday evening Mdme. Schumann performed Beethoven's sonata in E flat (op. 27, No. 1). Her rather hurried tempo of the *andante* movement was certainly open to exception. A very interesting feature, however, of the programme was the first performance at these concerts of Schumann's *Fantasia stücke* (op. 88) for piano, violin, and violoncello. The four movements of which this work is composed, although by no means elaborate, are full of grace and humour; the second and fourth (*humoreske* and *finale*) in particular are lively and characteristic.

At the third concert of the Philharmonic Society last Thursday, the programme contained no less than four novelties. Mr. F. Corder most satisfactorily conducted his concert-overture, "Ossian," originally intended as the prelude to a grand opera on the subject of "Fingal." His themes are somewhat peculiar, but are treated in a clear and skilful manner; and the orchestration is most effective. The next novelty produced, written for chorus and orchestra, was Brahms' cantata, "Nanie." The music is both interesting and full of ingenuity, but comes as a disappointment after the charmingly original and poetical setting of the same words by Hermann Goetz. The latter felt his subject intensely, and every note of his music breathes the spirit of the words. The ecclesiastical strains of Brahms are, however, unsuitable to the poem, and leave the listener frigid and unsatisfied. The performance of this by no means easy work was good. The other two novelties do not require any detailed description; the one was a youthful work by Mendelssohn—a *scena* excellently sung by Mdme. Patey—and a solo and chorus, "The Water Nymph," of Rubinstein. Herr Joachim played Mendelssohn's concerto in his accustomed unapproachable style. The programme included Beethoven's "Eroica" and Spohr's "Jessonda."

J. S. SHEDLOCK.

Now ready, in super royal folio, half-bound in russia or morocco, with gilt titles and edges, price £8 6s.

## THE STATISTICAL ATLAS OF ENGLAND, SCOTLAND, AND IRELAND.

Edited by G. PHILLIPS BEVAN, F.S.S., F.G.S., &c.

The Work is divided into Fifteen Groups, each group including Three Maps with small Plans of the Capitals, one for England, one for Scotland, and one for Ireland (on the same scale), the whole Atlas thus containing Forty-five Maps. Each Group is accompanied by copious Letterpress, bringing its Statistics up to the latest date. The following subjects are treated upon:—

- |                            |                                    |
|----------------------------|------------------------------------|
| 1. RELIGIOUS.              | 9. LEGAL.                          |
| 2. EDUCATIONAL.            | 10. RAILWAY and TELEGRAPH.         |
| 3. INDUSTRIAL.             | 11. SANITARY.                      |
| 4. CRIMINAL.               | 12. GEOLOGICAL and MINING.         |
| 5. POOR LAW and PAUPERISM. | 13. HYDROGRAPHICAL (WATER SUPPLY). |
| 6. MARINE (COMMERCIAL).    | 14. POLITICAL.                     |
| 7. AGRICULTURAL.           | 15. POPULATION.                    |
| 8. MILITARY and NAVAL.     |                                    |

No efforts have been spared to make the information reliable, and as full as is compatible with clear delineation; and it is confidently hoped that the result is an illustrated compendium of British statistics which will form a unique work of standard reference.

"It is evident that an atlas of this kind, under such competent editorship as that of Mr. Bevan, will prove of service for a great variety of purposes."—*Times*.

"The work will be a valuable assistance to those who desire, as everyone should, to know the real condition of their own country."—*Economist*.

"When complete, this series, which has so far been compiled with great care and attention, will form a valuable work of reference."—*Globe*.

Prospectuses on application.

## LITERATURE.

*Eighth Report of the Royal Commission on Historical Manuscripts.*

IN issuing its Eighth Report the Royal Commission on Historical Manuscripts prides itself upon having examined some five hundred collections since its first appointment. This in itself is good work. If it had done nothing else, the Commission would be entitled to the praise of having awakened the interest of owners who may have thought little, if they thought at all, of their MSS. and papers. We shall hardly ever again hear of diplomatic or domestic correspondence being sold for waste paper after lying for years, forgotten, in garrets or outhouses; nor again of glorious bonfires of dust-gathering old letters lighted up during some energetic spring cleaning. We may rather expect to see the other extreme—papers, merely because they are old, indiscriminately laid up in lavender and treaded with a superstitious reverence and an exaggerated idea of their importance. But better this than careless indifference.

The successive Reports have, in the nature of things, gone on steadily increasing in bulk. The present issue runs to three volumes—the first, with its large Appendix and Index, containing nearly 800 pages; the second, 166 pages. The third volume (issued since this article was written) deals with Lord Ashburnham's famous collection.

Now it is in no mere spirit of fault-finding that we say that to us this Report seems unnecessarily long. Making every allowance for difficulties which all who have had to do with cataloguing and calendaring of papers know to be inevitable, one turns over many of these pages with a sigh for an editor's trenchant pen. No one will grudge the space filled by copious extracts from interesting papers which are in private hands, and are therefore not always accessible. For example, the fluent letters of Charles O'Connor of Belanagare, and the valuable historical and social letters in the possession of Lord Denbigh will be read with interest and profit. But it is in dealing with the more ancient documents, usually deposited in public or corporate libraries, that the qualities of the cataloguer are tested. The art of sifting the wheat from the chaff is not so easy as might appear; and in some of these pages we are regaled with an amount of chaff which we would gladly have seen blown to the winds before the press fixed it where it is. What, for instance, we may ask, is the historical value of lengthy descriptions of fines and recoveries, with repetition of all their wearisome verbiage? If it is the business (which we doubt) of the Commission

to chronicle such small beer, let the brew at least be a short one which will not flood its pages with "abovesays" and "aforesays," and curiously exact descriptions of those not very rare devices, notarial marks. A single example is enough to show what we mean.

"17 June, 27 Elizabeth.—Final concord, made in the octaves of the Sacred Trinity, at Westminster, before Edmund Anderson, Francis Wyndham, and William Peryman, justices, and others of the Queen's lieges there, between Thomas Walmesley, serjeant-at-law, plaintiff, and George Earl of Cumberland and Francis Clifford, esq., deforciant, respecting the manor of Cowthorpe alias Cowlethorpe with its appurtenances, and respecting sixteen messuages, twenty tofts, two dove-cotes, twenty gardens, three hundred acres of arable land, a hundred acres of meadow, two hundred acres of pasture, a hundred acres of wood, two hundred acres of moor, fifty acres of turbary, sixty acres of scrub and briery, and rent of twenty shillings, with appurtenances in Cowthorpe alias Cowlethorpe, Byckerton, and Hunsynore, and concerning the advowson of the church of Cowthorpe aforesaid, co. York: by which fine the said deforciant acknowledges the right of the premises to be in the said plaintiff."

Nor is it pleasing to meet in a publication of this nature the attempts at fine writing which crop up in certain of the reports in the Appendix. The language has hitherto been generally sober enough; and we may hope that in future it may be so maintained, particularly in a work which is in a great measure intended for historical students.

In the present Report the Commissioners have dealt with some twenty collections in England, four in Scotland, and five in Ireland. The first collection which is noticed is the large one at Blenheim, chiefly consisting of the papers of John, Duke of Marlborough, and his son-in-law Charles, Earl of Sunderland. The late Mr. Horwood, who reported on the collection, evidently felt at a loss how best to handle such an enormous mass of material, and he has therefore selected for fuller illustration those portions which have a literary interest. Hence we have our attention called to the letters which passed between Queen Anne and the Duchess, touching on the differences which separated "dear Mrs. Freeman" from "unfortunate Morley;" and to some score of letters from Pope to the Duchess. With regard to the latter, Mr. Horwood observes that they are written "in such terms that it seems impossible that Atossa, in Pope's *Epistle on the Characters of Women*, can be meant for the Duchess." But we know from Mr. Courthope's recent volume of the new edition of Pope's works that Atossa was meant for the Duchess, and that Pope meant to publish it, but with such disguises that the character might be taken to represent another person. There are also printed at length three letters of Defoe, written in 1708 when on his political mission in Scotland. Attached to one addressed to Godolphin, his new patron, is a curiously worded postscript referring to private difficulties. "I have layn," he says,

"at the pool for deliverance a long time, but have ever wanted the help needful when the moment for cure happen'd. I most humbly seek your Lordship's help, which with the

breath of your mouth can restore the distresses of your faithful servant."

In the Earl of Portsmouth's papers we are introduced to a great man in an unexpected situation. Sir Isaac Newton, no longer resting at his ease in his garden and philosophising on the falling apple, is here hard at work, not to say drudging, in his office at the Mint. As the Report says:

"the notion that Sir Isaac Newton's successive offices in the Mint were places of easy employment, allowing him abundant time for his scientific pursuits, is strangely irreconcilable with the revelations of MSS. that prove him to have been a painful toiler at petty and un congenial tasks;"

but we are inclined to doubt whether Sir Isaac was really called upon to write so many painful drafts of so many official letters. It is more probable that he had the failing not uncommon in active-minded men—over-anxiety to have a thing done, and unwillingness to depute matters of detail to others. And we think we see an excuse for him in thus personally discharging "the literary functions of an office that made him a frequent correspondent with the Treasury." We have known heads of departments equally fidgety, and spoiling quite as much paper when addressing My Lords of that autocratic Board. Apart from this personal interest, the papers are very valuable for the history of the coinage and minting of the period, and generally deserve the full notice which they have received. We have no space to go into Sir Isaac's troubles with clipped coin and Wood's halfpence (which, like many English things much decried in Ireland, proved to be of unusually good quality); nor can we more than refer to the work he had with the Alva Silver Mine, near Stirling. The connexion of a German name (that of Dr. Brandshagen, who was sent down to examine the ore) with precious metal to be extracted from Scottish soil irresistibly recalls the figure of Dousterswivel in *The Antiquary*. We may, however, stop to recommend to the notice of those who are answerable for the poverty-stricken designs of our present bronze coinage an ingenious scheme of some unknown projector—"That the copper coin be henceforward a series of events of history, commencing [of course] at the glorious Revolution of 1688."

After describing the MSS. of the Earl of Jersey, the most important of which is a political treatise on the social state of England at the close of Henry VIII.'s reign, the Commissioners print the calendar of documents in the House of Lords, from 1666 to 1670-71. Among these papers they direct attention to the minutes of the committee, in 1669, on the fall of rents and decay of trade. The evidence of the well-known Josiah Child enumerates the depressing causes to be, among other things, taxes on home manufactures, export of coin, bad poor-laws, scarcity of labour, the fire and plague, "usual plenty of corn," and "the improvement of Ireland, which exports to the colonies in Dutch ships." Yet he thinks that "perfect free trade is an advantage." Another interesting document is the draft of a Bill "for punishing and suppressing of atheism, profaneness, and profane cursing and swearing." The scale of fines for bad language runs down the ranks of society

from the peer at 20s. to the "any other person" at 1s., and impartially includes the clergy, "a dignified clergyman under the degree of a bishop" being rated at 10s. The documents connected with absolutely private interests are not so valuable as those calendared in the last Report. Here, however, are to be noted, among attempts for social improvement, Bills for stopping duels, against transporting English subjects beyond seas, to prevent stealing and transporting children; and pointing in the same direction is the petition of the poor distressed debtors, December 12, 1670, whose hard treatment is shown in the cruel proverb, "That they will make dice of their bones." We should also mention that those who wish to read the arguments in Skinner's case can now do so in the printed decipher of the expunged entries in the Journal.

The Annals of the College of Physicians begin in the year 1518, and contain much that is interesting for the history of manners. It is a satisfaction to find that quacks so often met their due, even in spite of great people's interference, as when Lord Hunsdon tried to beg off Paul Farfax, who had been caught administering "celestial water." Still, in these days we must not say that the College was right in imprisoning a lady for practising medicine. But, after all, she was but a weak sister, who promised not to do it again. Among the records of the plague in London in 1563, it is told that, after a whole family had been swept away, three dogs of the household died; so it was ordered, somewhat illogically, that all dogs and cats should be destroyed, to prevent spread of infection. We are glad to see that in 1591 one Roger Powell was cited for posting on the walls certain "bragging bills," which we take to be the forerunners of those advertisements of miraculous cures which adorn the walls of our railway-stations and the covers of our periodicals. In 1605, the College foolishly doubted whether they could elect a Scotchman. The King, of course, thought otherwise; so elected he was.

The letters of the seventeenth and eighteenth centuries in Lord Denbigh's collection, the greater part of which were catalogued in the last Report, are, almost without exception, worth reading. The new ones include additional letters to Dykevelt, and, at the end, several ladies' letters, written in a lively strain. We may quote a specimen from one of Lady Westmoreland's, written from London in 1745:—

"No news is come of the surrender of Carlile and Mr. Wades marching towards the rebels. Everybody is full of anxiety for the events of their meeting, as the late bad weather must have harass'd our troops extremely in their march. If he is not successful, we must expect the utmost confusion here, and indeed everything bears a dismal aspect. If the rebels shou'd come southward sure you won't think it advisable to stay in the country, since I am told they would probably come by Coventry, tho' I must own nothing but fear wou'd drive one to this town, for I never knew it half so disagreeable, and in fine days have repented leaving the country twenty times."

Turning to what may be called the archaeological side of the Report, two ancient collections come under notice—viz., the muniments

of Magdalen College, Oxford, and the Cathedral Library at Canterbury. The short abstract describing the former supplements the one which appeared in the Fourth Report of the Commission. Printed *in extenso* is a declaration of the grounds of the insurrection in Kent in 1450, drawn up in English in a rustic style (and for this reason of linguistic value), the importance of which as the "first open manifestation of Yorkist sympathies" is noted by Mr. Macray.

The MSS. of the Dean and Chapter of Canterbury which are here described are the registers of Christ Church, the original charters having been already examined. But, first, Mr. Sheppard gives us an account of the MS. known as the Kentish Domesday of the monastery, written early in the twelfth century. The differences, chiefly of omission, from the text of the King's Domesday can be seen by the specimens which are printed; and the variations in the spelling of local names should be remarked. The registers Mr. Sheppard divides into three classes:—

"1. The Cartularies. 2. The Records of the Acts of the Prior and Chapter acting as Custodes Spiritualitatis, sede vacante. 3. The ordinary conventual registers, written up from day to day by the Cancellarius of the monastery, and chiefly occupied by matters connected with the domestic discipline of the convent, but also containing frequent notices of secular matters here and there interspersed;"

and he leads us, by careful analysis, through the contents of about half their number.

The largest collections of municipal archives reported on are those of Chester and Leicester. The former city can boast of documents as early as the twelfth century, the first being a licence to the citizens from Henry II. The total number of charters is, however, small—a deficiency which is compensated by upwards of five hundred books and a nearly equal number of letters and papers. The sheriffs' Year-Books begin in the reign of Henry V., and are cited as containing important information on the internal affairs of the city. But these are only briefly noticed, and the chief attention is directed to the charters and correspondence. Some social restrictions are curious, one of which we may quote:—

"Order, made 32 Henry VIII., for correcting and putting an end to irregularities amongst women in the wearing of caps, kerchiefs, and hats; whereby it is ordained, 'That after the eighth day of September next comyng, no maner single or unmarried woman within the saide citie shall were upon her hede eny whyte cap or of other colour under payne of ii.s. for every tyme so offendinge, nor that eny wyfe, wedo, or other woman or mayde wythin the same citie after the daye aforesaid shall weare eny hatt of blacke or other colour oneles it be when she rydes or els goith on walking abroad into the feldes or country under payne of iij.s. iijj.d.' &c.

And might we recommend the following good practice for imitation by some of our London vestries?—

"The R<sup>t</sup> Hon<sup>ble</sup> the Mayor and the Worp<sup>th</sup> the Justices of the peace of this Citty will from tyme to tyme walk personally through the severall streets and lanes in this city, and take notice where the same are foul and dirty."

In the Leicester collection, the most interesting documents are a record of early inquisitions on the origin of bridge-silver and pontage

before the end of the eleventh century, and the charter in French of Edmund Crouchback, of 1277, which has been long mislaid. Both are printed in full, and of the latter there is also given an English version of the fifteenth century. The curious story of the origin of the taxes, as told in the first of these documents, is too long to be quoted here; and we must refer the reader to the Report, where he will find a trial by wager of battle in which the combatants fought "from the first hour even to the ninth," and even at that late hour kindly warned each other against impending harm. Without irreverence, we may confess that the reading of this duel recalls to us another famous one which Alice witnessed in the looking-glass.

Several other charters of this collection are also printed in full—in some instances, we think, rather unnecessarily; but in such documents we generally find something to please us in the names of witnesses, to which the eye naturally turns. We are glad to note such names as Alexander le Deboner, John Fridaylein, Simon Curlevache, and Symon Sixeandtwenti; but we are inclined to doubt the accuracy of the reading of "Guidone de Leziman, fratre nostro" in a charter of Henry III. as representing the name of Gui de Lusignan, the King's half-brother.

Space will not allow more than a brief reference to a few of the remaining collections; but we should not dismiss the English portion without a word for the records of the Ewelme Almshouses, which, though few, are calendared in a way to bring out interesting points of local custom. A delightful piece of canine Latin appears under date of 1637, when an unhappy poacher was fined 16d. for shooting a hare "cum bombardo."

We have already referred to the excellent letters of Charles O'Connor of Belanagare. These are by far the most readable of the Irish papers before us. The portion of the Ormonde collection here reported on, which consists entirely of petitions, is rather disappointing. Lord Talbot de Malahide's papers, on the other hand, relate to the well-known and interesting period of the Revolution, and it is to be regretted that they are so few and in such bad condition. Among them is an account of James's private estate in Ireland.

Mr. Gilbert continues his catalogue of the MSS. in Trinity College, Dublin, and prints some full extracts from interesting personal narratives of the period of the Civil Wars, including the curious "Aphorismical Discovery of Treasonable Faction," an account of Irish affairs from 1641 to 1652.

The papers of the Duke of Manchester, which form the subject of the second volume of Appendix, have been deposited by his Grace in the Public Record Office. They cover the period from the reign of Henry VIII. to the beginning of this century; and also include the collection of the family of Rich, Earls of Warwick, with which the House of Montagu was allied. Among the latter are papers relating to the early history of the colonies in Virginia and the Bermudas, those of Virginia being of special interest as showing the cruelties and miseries to which emigrants were subjected. A large part of

the Montagu collection consists of the diplomatic correspondence of Charles, the first Duke of Manchester, from 1688 to 1708, which has been used in various historical works. A very accurate account of the whole collection has been drawn up in an exhaustive calendar and report by Mr. Pike, of the Record Office.

E. MAUNDE THOMPSON.

"Classical Writers." Edited by J. R. Green. *Demosthenes*. By S. H. Butcher. (Macmillan.)

THIS is an admirable little book. Mr. Butcher has brought his finished scholarship to bear on a difficult, but most interesting, chapter of Greek literary history, and only those who have some previous acquaintance with the ground can appreciate the amount of labour and of original criticism which he has condensed into 172 pages. The result is as fresh and attractive in form as it is ripe in learning and thorough in method. Greek literature, above all others, exacts a true feeling for language as the first condition of its successful treatment. The Greek masterpieces, alike in verse and in prose, are works of art which at no moment lose their contact with nature; and no one can be in full sympathy with them whose trained instinct cannot follow the free play of the living speech. It is here that the scholarship sometimes described as "verbal" asserts its indispensable value for the higher criticism. Such an intimacy with classical Greek as is implied in the power of writing classical Greek prose is an invaluable source of insight into the style and tone of a master like Demosthenes. Mr. Butcher's primer forcibly illustrates the sense in which the best Greek scholar is the best critic of Greek literature.

The first chapter, on the "Age of Demosthenes," is a pregnant sketch of Greek politics and manners in the fourth century B.C.; the last, on "Demosthenes as a Statesman and an Orator," will probably be its rival in general interest. But the intermediate chapters, dealing with the particulars of biography and work, will certainly not be less attractive to students of Demosthenes; and there are not many students, it may safely be said, who will not learn something new from them. The analyses of the speeches are remarkably well done—being readable in themselves, and at the same time directly helpful for the study of the Greek text. I am not satisfied that the slightness of the reference to Philip in the speech for the *Rhodians* is an adequate reason for shifting its date from 351 to 353 or 352 B.C. (pp. 43, 44). There are some good observations at p. 139 on the danger of pressing purely stylistic evidence where it is doubtful whether a speech was written by Demosthenes or by a contemporary of competent rhetorical training. In some such cases, as in those where critics differ regarding the precise lines of suture in the Homeric poems, demonstrative proof is beyond the reach of modern criticism. In the Homeric problem we have to allow for a traditional epic style. So here we must allow, not merely for common rhetorical formulas and topics, but also for a special disturbance of the "personal equation"—viz.,

the well-known freedom with which even the best writers of Greek rhetorical prose directly borrowed or adapted passages from each other. I am glad to notice that Mr. Butcher recognises the *ἄλογος αἰσθησις* of Dionysius as a test of *idiom* presumably finer than moderns can be sure of possessing.

Mr. Butcher's view of the Harpalus affair is that Demosthenes was, perhaps, really guilty, but may have taken the money with the purpose of forming a nucleus for a national defence fund. It is quite true that the political morality of ancient Greece distinguished between the traitor who took a bribe against his country and the patriot who took a bribe in its interests. The evidence for this obscure affair does not appear sufficient to decide the fact. So far as it goes, however, I still incline to believe, as I have said elsewhere (*Encycl. Brit.* vii. 71), that there is the strongest probability in favour of Demosthenes having been innocent. The concurrence of two powerful influences would have sufficed to procure his condemnation by an Areopagus which, in those days, cannot have been inaccessible to either. One was that of the Macedonian party; the other, that of the "young Athens" party, who resented his successful opposition to the desperate and interested advice of Harpalus that Athens should at once rise against Alexander.

The use of modern illustration for classical history and literature demands much tact. It may be desirable to indicate an analogy where it would be quite misleading to institute a parallel. Mr. Butcher is within the proper limit when he suggests a resemblance between ancient Macedon—the northern and half-barbaric power, ambitious of touching the Mediterranean—and modern Russia; between Philip's emphasis in disclaiming designs which he was eagerly prosecuting, and the same characteristic in Napoleon. The more detailed comparison of Demosthenes to Burke is duly guarded, and is justified by several traits, particularly by the way in which both orators develop principles from facts. The points of personal likeness, we might add, bring into stronger relief the contrast between the conditions of political and social life with which the two men had to deal. I have no doubt that this excellent sketch will greatly serve the intelligent study of Demosthenes in England. Primers like this deserve the praise, *βαυὰ μὲν ἀλλὰ ῥόδα*.

R. C. JEBB.

*Calendar of Home Office Papers, 1770–1772.*

Edited by R. A. Roberts. (Longmans.)

THE month of January in the first of these years was a troubled period in English history. A majority of the House of Commons had just affirmed the incapacity of Wilkes to sit in Parliament, and declared Col. Luttrell the duly elected member for Middlesex; but the members of the Ministry, in their alarm at the re-appearance of Lord Chatham in political life, began to entertain doubts about the wisdom of the conduct they had themselves advised. One after another of these perplexed politicians retired from their posts; the freeholders of the various counties sent up indignant remonstrances to their members

and prayed for a dissolution of Parliament; and, at last, the Prime Minister himself felt that he could retain office no longer. He pleaded the "constant fatigues of his office" as his excuse, and surrendered his place to the more pliable Lord North.

A far larger portion of this volume devoted to Irish affairs than to any other subject. Lord Townshend, the Viceroy, sought and obtained the permission of the Cabinet for the dismissal from their appointments of some of his prominent opponents, and for the removal of others from the ranks of the Privy Council. One of these gentlemen, before throwing himself into opposition, had, if the statements of the Viceroy can be trusted, offered himself with obliging courtesy for the post of Chief Secretary, and when that was declined had expressed his willingness to vacate his seat in Parliament in favour of a viceregal nominee on condition of receiving a peerage. The striking of this high-minded patriot out of the list of Irish privy councillors had such an effect upon the Duke of Leinster that he asked for a similar "favour" to be conferred on himself. In due course the favour was granted, and the Duke's letter (p. 42 of Calendar), thanking Lord Townshend for his trouble in the matter, is as fine a specimen of Irish sarcasm as can be desired. These measures did not smooth the path of the Viceroy, and not a post passed without his transmitting to England the particulars of the intrigues in which he was involved and the harassing difficulties of his position. More than once he sent to the Secretary of State a list of the members who had passed over to the opposition, with the details of the preferments which they had received or coveted. These greedy placemen clamoured for peerages for themselves, preferments for their brothers, and pensions for their friends. A more painful picture of Irish corruption at this epoch could not be painted than is contained in these letters of the Viceroy. The difficulties of his position were enhanced by the fact that the Ministry continued to grant to their supporters large pensions on the Irish Civil List. The most flagrant instance of this kind was the pension of £1,000 a-year conferred on "Jerry" Dyson during the lives of his three sons. When it was first announced to the Viceroy he had predicted that a "most disagreeable address" would be carried against it, and his prophecy was not falsified. The pension came under the notice of the House of Commons, and was condemned by a majority of twelve votes.

During this same period affairs in Jersey were disturbing the repose of the Secretary of State. Some of the inhabitants had broken out into open riot, and could not be pacified until the special commissioner pointed out to them the proper course which they should adopt for obtaining a removal of their grievances. After a critical examination of the complaints of the islanders, he arrived at the conclusion that the people were sincerely attached to their Sovereign, and that the fault lay with the governing body of the island. Like most other reformers, the commissioner speedily incurred the displeasure of partisans on both sides. On the one hand, the lieutenant-bailly

defended himself persistently until he tired out the patience of the Secretary of State and brought down on his own head a sharp rebuke for the impropriety of his conduct. On the other, a "low, caballing pamphleteer, pensioned by Government," called Dr. Shabbear—this must be the notorious doctor whose pension was one of the gifts bestowed by Lord Bute on literature—published and sent to every member of the Privy Council a work traducing and vilifying the character of the commissioner. These disputes dragged on for years, and are left unsettled at the close of the volume. During these unhappy years Jersey had become an asylum for abandoned characters from the neighbouring districts of France; but the attempts of the lieutenant-governor to banish them from the island were thwarted by the lieutenant-bailly.

If any further proof were needed of the eagerness with which George III., when a weak Ministry was in office, kept in his own hands the disposition of any piece of preferment which might become vacant, it would be found in one of the earliest entries in this Calendar. This is an unofficial letter sent to inform the Viceroy of Ireland, in explanation of an appointment to the colonelcy of a regiment, that Lord Weymouth received from the King the first intimation of the vacancy, and, at the same time, instructions of the manner in which it should be filled up. One of the papers described by Mr. Roberts is a memorial to the King from Mrs. Cornelys for support in continuing the performances in Carlisle House, Soho Square, which she had established under the patronage of the Duke of York. The unhappy woman met with no encouragement from George III., and, after passing through many vicissitudes, ended her days in the Fleet Prison. Among the petitioners to the Secretary of State will be found the name of Sir John Hawkins, the biographer of Dr. Johnson. His first anxiety was lest he should be dispossessed from his post of chairman of sessions; his second was that he might receive the honour of knighthood. In this volume, as in its predecessors, there are published many appalling lists of convicted criminals. Indeed, it must be confessed that the pictures of English life presented in its pages are not flattering to the age.

W. P. COURTNEY.

*The Postage and Telegraph Stamps of Great Britain.* By Frederick A. Philbrick and William A. S. Westoby. (Sampson Low.)

THIS book consists of two distinct parts—a succinct history of the growth and development of the postal service of Great Britain, and an elaborate catalogue of all the stamps which have hitherto been issued under the authority either of the Postmaster-General or of private telegraph companies. When we bear in mind the important part that postal labels now play in the life of civilised nations, it is easy to understand why grave men should make a serious study of their classification and history. If coins facilitate the exchange of commodities, postage stamps are hardly less useful in rendering easy and

expeditious the interchange of thought. The study of coins is a recognised science under the title of numismatics; while outside a small circle the very idea that used-up stamps can serve any other purpose than to amuse the play-hours of school-boys would be generally derided. But seeing that postage labels are likely in the future to be of great value to the historian and archaeologist, it is surely not too much to ask that the Trustees of the British Museum should acquire while there is yet time a really comprehensive and representative collection of postage stamps. We say while there is yet time, for it is evident, considering their perishable nature, that stamps which are rare to-day will, not many years hence, have totally disappeared, or will be only procurable at a wholly disproportionate outlay. It is doubtful whether even now a really first-class collection of stamps could be bought for less than £2,000; it is certain that thirty years hence double or perhaps treble that sum will not purchase the same collection. We may add that Germany has already recognised the value of a national stamp collection, inasmuch as the Berlin Post Office contains a museum of all material having any relation to the different postal services of the world in ancient or modern times, including a well-selected and extensive assortment of postal labels, envelopes, and cards.

To some readers the most interesting portion of the book under review will be the lucid summary which the authors have given of the growth and development of the modern postal system. As far back as the reign of King John, entries are to be found of payments to *nuncios* for the conveyance of Royal despatches; in the days of Edward I. stations similar to the *posita* of the Roman Empire were established where these messengers might procure relays of horses for hire. But it does not appear that the posts were employed for other uses than the conveyance of Governmental despatches; and it was only by slow steps, which are not always easy to trace, that private persons were enabled to avail themselves of their services. It is certain that early in the sixteenth century a post existed for the conveyance of letters from England to the Continent; and we learn from Stow, in his *Survey of London*, that the Flemings, or Flemish merchants, claimed by prescription the right of appointing a master of the strangers' post. But this privilege was challenged in the year 1558; and, the dispute being referred to the Privy Council, that body finally decided, in 1581, that for the future the master of the posts should have charge of both the English and foreign posts under the title of "Chief Postmaster." In the middle of the seventeenth century the Corporation of London tried to set up a rival Post Office for inland letters; but, on the then Postmaster appealing to the Privy Council, it was held that "the office of Postmaster is and ought to be at the sole power and disposal of Parliament." The status of the Post Office, as well as of the chief official appointed to superintend it, were more clearly defined by a statute passed during the Protectorate, and re-enacted by the 12 Car. II. c. 35, which provided that

there should be one Post Office, and one officer styled "The Postmaster-General for England and Comptroller of the Post Office." In 1710 the whole law on the subject was remodelled by the Act 9 Anne, c. 10, which made elaborate provisions for the despatch of letters beyond the seas, and also for the establishment of branch offices at Edinburgh, Dublin, New York, and in one of the Leeward Islands. This Act continued to be the basis of all further legislation until the year 1837.

The great struggle between the advocates of cheap postage and the official classes commenced about the year 1833, and was practically terminated in favour of the former when the Parliamentary Commission, appointed in November 1837 to consider the feasibility of Rowland Hill's scheme of a uniform and cheap postal scale, reported in March 1839 in favour of Hill's proposal recommending a uniform twopenny rate. Sir Rowland Hill's great discovery was merely an application of common-sense principles to the conduct of the business of the State. In those days postage was charged not by weight, but according as the letter to be forwarded was written on one or more sheets, and according to the distance it had to travel. Thus the labour of examining each letter at the office of receipt for the purpose of taxing it was considerable; and when it is added that the burden of payment generally fell on the receiver, and not on the sender, it will be evident that another source of serious delay and needless labour was caused by the collecting of the rate due when the letter had reached its destination. Such an impression had Hill's exposure of the absurdity of the above system, as embodied in his celebrated pamphlet, entitled *Post Office Reform: its Importance and Practicability*, published in 1837, made on the public mind, that the Government, on the presentation of the Report of the Commission, resolved to go beyond its recommendation, and introduce a uniform penny rate. A Bill providing for this great reform received the Royal assent on August 17, 1839. Its provisions were only temporary; but in 1841 they were made perpetual, and at the same time authority was given to the Lords of the Treasury to introduce, by means of Royal warrant, such further changes in the postal rates as they might from time to time deem advisable.

As a catalogue and history of English postal labels, the book before us is thoroughly exhaustive. No peculiarity of engraving, of colour and shade, of perforation, of paper, of watermark, or even of gumming, has been passed over by the authors. In a word, Messrs. Philbrick and Westoby have done as much for the lover of English stamps as Brunet has done for the lover of books. English postal franks fall into four clearly marked divisions—adhesive stamps, stamped covers and envelopes for enclosing correspondence, newspaper wrappers and post-cards. It is in the above order that the authors present the postal and afterwards the telegraph stamps of Great Britain; and within these limits, and those imposed by certain subdivisions, the chronological order of issue has been carefully preserved. By far the most important class of English postal stamps

are the adhesive labels, which come under three distinct heads—line-engraved stamps, stamps embossed in relief, and type-printed stamps. The adhesive embossed stamps, which were prepared at Somerset House, never met with any large amount of popular favour, probably on account of their inferior adhesive properties, but the line-engraved and type-printed classes demand some attention. In line-engraving, the lines which are to appear in colour are cut into the plate in *intaglio*, whereas in type-printing the reverse is the case, the lines being cut in *cameo* or relief. Of the former class, the dark-red penny, which was superseded at the end of 1879, is a well-known example, while the latter is represented by the Venetian-red penny which took its place, and indeed by all the adhesive labels now in use. As a work of art, we imagine few persons will give the palm to the present penny stamp over the line-engraved label, which, prior to its supersession, had been in circulation for all but forty years. We must console ourselves with the reflection that, as more than 2,000,000 penny stamps are used every day, it was in the highest degree important for the authorities at St. Martin's-le-Grand to be supplied with a label that can be produced at a cheap rate. There is no reason why the art of engraving dies for printing postage or any other kind of stamps should not stand on the same level as that of casting coins and medals. The work produced by the American Bank Note Company is of high artistic excellence; take, for instance, the labels lately supplied by this firm to Brazil, bearing the likeness of the ruler of that country, which is equal to a good photograph.

The critical portion is concluded by a descriptive catalogue of various trials, essays, and proofs which have been made since the passing of the Act of 1859, as well as of telegraph stamps, both official and private. It only remains to add that, as regards paper and printing, this book will be an ornament to any library.

ARTHUR BARKER.

*Bristol Past and Present.* By J. F. Nicholls and John Taylor. In 2 vols. (Bristol: J. W. Arrowsmith; London: Griffith & Farran.)

IN these two handsome volumes we gladly welcome a well-directed attempt to make accessible and attractive to the public the most permanent results of laborious research in special departments of history. Such labours, so indefatigably pursued and so clearly described, fully entitle this work to rank among the most important contributions to local history which have for some time been printed; and, indeed, it must be regarded as something more. It is a storehouse of curious and erudite learning, such as only born antiquaries could have accumulated during long lives of intelligent and minute study.

The form and spirit of Messrs. Nicholls and Taylor's civil and ecclesiastical History of Bristol places it far above all preceding topographical publications dealing with a city which, previous to the era of railways, ranked perhaps as third in importance in the kingdom. Both authors and publishers

have been unsparing of labour in their endeavours to supply a desideratum in topographical literature. It is seldom that biblioplists of the present day are so enterprising as to venture on *éditions de luxe* in the shapely but nearly obsolete size of quarto. In such form, however, is this well-arranged publication of Mr. J. W. Arrowsmith, of Bristol, issued, each separate volume being the work of distinct authors, who have undertaken what everyone will acknowledge to have been an interesting but, at the same time, a difficult enterprise.

The civil history of Bristol, comprised in the first volume, is due to Mr. J. F. Nicholls, chief librarian at the Bristol Free Library. Its ten chapters are devoted to tracing the origin and growth of Bristol and its development as a maritime port in the prehistoric, Roman, Teutonic, and Norman periods, together with the more generally interesting eras of Plantagenet, York and Lancaster, Tudor and Stuart. The second volume, dealing with the ecclesiastical history, is from the pen of Mr. John Taylor, librarian at the Bristol Museum and Library, who has chiefly confined his labours to the annals of the cathedral, the various churches and their original muniments, and other curious information and incidents connected with parish affairs. It would be impossible to give our readers any adequate idea of the extraordinary minuteness with which these several portions of the work have been carried out by their joint authors. All sources of information seem to have been laid under contribution. There is hardly a book referring at Bristol from which they have not made illustrative extracts; and the result is that the volumes are the most attractive that could well be compiled on such an interesting subject. The task, though difficult, has been well and laboriously executed. Everyone who has proposed to himself the task of describing a place such as Bristol, or any large portion of a county, must acknowledge how anxiously he has enquired for every scattered notice, however brief, of anything relating to it. Letters, documents, or books are greedily searched; and, while much has to be passed over as scarcely worth the reading, something is to be learned, or a hint gained, where no better information can be obtained. The most determined writer of notes and keeper of commonplace books must be shocked in his purpose of making the world wiser by his remarks when he finds every place of likely interest pre-occupied by rival historians.

But Messrs. Nicholls and Taylor, by the manner in which they have treated their valuable History of Bristol, raise themselves very far above the level of common hand-book compilers. They have gathered their materials with care, and put them together with skill. There is method in the arrangement and clearness in the succession of the narrative. They might, without doubt, have rejected many an old and uncertain fact; but they seldom introduce new ones unless they be worthy of record. In short, the work certainly supplies a want, inasmuch as, previous to its publication, anyone desirous of obtaining information upon the subject was compelled

to have recourse to various works, some of them difficult of access, and most of them out of date.

In our very high commendation of these volumes we are bound to notice the admirable manner in which they are printed. It is a source of regret, however, to find the wood-cut illustrations so unequal; with the exception of some facsimile engravings representing curious objects, out-of-the-way places, and plans or maps, they fall far short as works of art of those usually found in the most ordinary publications. The authors have hardly been discreet in depending upon friends for the loan of blocks and engravings, many being little better than rough diagrams, poor in art, and quite unworthy of the general get-up of the work. With these exceptions, the volumes before us are fully entitled to the praise of diligence, care, and good sense—qualities sufficient to make any book valuable. Little is left for any future historians to tell of Bristol; the subject seems almost exhausted by Messrs. Nicholls and Taylor.

LEOPOLD CHAS. MARTIN.

*Jus Primæ Noctis: eine geschichtliche Untersuchung.* Von Dr. Karl Schmidt. (Freiburg im Breisgau: Herder'sche Verlags-handlung.)

BEFORE we say anything as to the subject of this book, a word of praise is due to its complete and methodical appearance. It is well printed, and in Roman letters, instead of the alphabetical nightmare which too many Germans still affect. The Preface, which gives a list of those with whom the author has been in correspondence, is followed by a table of contents, from which we can at once perceive the elaborate manner in which the different portions of the subject have been classified and arranged. We have then a list of books cited, with an indication of the era of the authors. This extends to thirty-one pages, and, although we shall indicate some trifling omissions, it is certainly the most exhaustive bibliography of the subject that has yet appeared. That of Léon de Labassade is mere child's-play in comparison. The text of the book, carefully arranged, concludes with a recapitulation, and is followed by capital chronological, topical, and personal indexes. These may appear trifles, but it is the want of such methods and appliances that hinders the usefulness of many otherwise meritorious books.

The real or supposed existence of the *droit de seigneur* is known to most lovers of literature. It is the motive of a play by Beaumont and Fletcher, and it is the foundation of a once well-known English comedy. There are many allusions to it in Voltaire's polemical writings, and he has also made it the subject of a trifling dramatic work. In the recent national exhibition at Milan there was an oil painting by Signor A. Ferraguti, which was supposed to represent a victim of this infamous law.

And now Dr. Schmidt calmly assures us that this law or custom, cited a thousand times to prove the brutality of the Middle Ages and the abject slavery of the poor under the feudal system, never had existence, and that the belief in it is merely "ein gelehrter

Aberglaube." The superstition, if not killed, will certainly be scotched by Dr. Schmidt's vigorous attack. His examination of all the evidence usually relied upon shows that it is quite inadequate to support the vast superstructure which has been reared upon it. Hector Boëthius appears to be the originator of the belief. In his account of the mythical King Evenus, the contemporary of Augustus in Scotland, he says:

"Fecit ad hæc plura, relatu indigna, leges tulit improbas omnem olentes spurcitiam: ut liceret singulis suæ gentis plures uxores, aliis sex, aliis decem pro opibus ducere. Nobilibus plebeiorum uxores communes essent, ac virginis novæ nuptæ loci dominus primam libandi pudicitiam potestatem haberet."

Boëthius died in 1550, and there is no earlier testimony as to the existence of the *jus primæ noctis* in Scotland. That law, which is believed to have extended over a large part of Europe, has left no evidence of its existence in laws, charters, decretals, trials, or glossaries. It is inconceivable that it should have been left undenounced by the preachers and unsatirised by the poets. But if this utter silence is conclusive against the existence of such law or custom, how shall the general belief at a later date in its existence be explained? Various causes contributed. There was classical witness to ancient traditions of tyrants who had distinguished themselves by proceedings of the nature which the *jus primæ noctis* was supposed to legalise. From various parts of the world came reports of travellers as to tribes among whom defloration was the privilege or duty of kings, priests, or other persons set apart for the purpose. Finally, the existence on the part of the feudal lord of a claim to a determining voice in the marriage of his vassals, and to receive a payment at the ceremony, is undoubted. To this *mercheta mulierum*, the fine paid for permission to marry, a grosser meaning has been attached than the words will warrant. Dr. Schmidt has given every passage that is usually cited in proof of the reality of the *jus primæ noctis*, and his criticism upon them seems to us to be as successful as it is destructive.

To the vast array of authorities cited by Dr. Schmidt, we may add that the Pascual de Andagoya is very explicit as to defloration by the priests of Nicaragua—*cf.* Schmidt, p. 358; Andagoya, *Narrative*, p. 33 (Hakluyt Society, 1865). Some analogy may be found between the *mercheta* and the tax known as *Bhet marocha*—the money given to the zamindar in Lower Bengal on each marriage among his ryots. It is still paid, though now regarded as a voluntary gift (*Mookerjee's Magazine*, September 1872, p. 146). Finally, we may call Dr. Schmidt's attention to the curious tract published in 1714 (there were earlier issues) under the title of a *Modern Account of Scotland*. It was issued without author's name, but is known to have been written by Thomas Kirk, of Leeds; and on p. 19 there is an unequivocal reference to the existence of the *jus* in Scotland at that date. Kirk travelled in North Britain in 1677; and a MS. of his notes of travel, the material from which he constructed his bitter attack on all things north of the Tweed, was published in 1832 as an appendix to

Thoresby's Letters. A perusal of it does not give one a favourable impression of its writer, and it contains no reference to the *jus primæ noctis*. That was an additional insult thrown in when he compiled his "Modern Account."

WILLIAM E. A. AXON.

#### MINOR VERSE.

*The Odyssey.* Rendered into English Verse by Gen. Schomberg. (Murray.) The Cave of the Nymphs is as much the test-piece of a translation of the second half of the "Odyssey" as the Ship or Scylla is of the translation of the first. Let us hear Gen. Schomberg.

"A haven in the land of Ithaca  
There is, called Phorceys from a seagod old;  
And from this haven jut two promontories  
With rugged cliffs, which on the harbour side  
Slope gently down, but break without the wave  
Raised by the blustering winds; unmoored,  
within  
May lie the high-decked ships, when they have  
reached  
The tranquil bounds of that safe anchorage:  
And at the haven's head an olive-tree  
Its leafy branches spreads, and near to it  
There is a shadowy cave, a lovely nook,  
Shrine of the Nymphs whom men call Naiades:  
Within, the rocks are moulded into shapes  
Of basins and of double chalices;  
There hive the bees, and there are shafts of  
stone  
Which spring aloft, on which the Naiads weave  
Their azure garments wondrous to behold;  
And there perennial waters ever well:  
And double is the entrance to the cave;  
The one for mortals slopes down to the north;  
The other, hallowed to the gods, looks south;  
On it no mortal man may dare to tread,  
For the immortals is this path reserved."

This is, on the whole, a better translation than the ordinary verse-translation of the classics, and its length in proportion to the original (23:17) is not, perhaps, excessive, considering the relative capacity of the hexameter and the English heroic. But Gen. Schomberg seems to have constantly made Homer say what he may possibly have meant, but does not say. He does not say that the haven was "called Phorceys" from the god; he does not say that the ships are high-decked; the bounds tranquil; or the anchorage safe. The original does not say that the rocks are "moulded," &c., but merely "there are inside stone bowls and jars." So also the direct sense of *lótoí* is evaded by "shafts." "Perennial waters ever well" is tautological. Nor is there anything about mortals "daring to tread," the simple word *εὐρύχωρος* rather suggesting that the way is either unknown or inaccessible to men. Gen. Schomberg is not specially to blame for these slips. They and their likes are the inevitable result of verse-translation.

*Translations and Original Pieces.* By the late C. G. Prowett. Edited by C. H. Monro. (Deighton, Bell and Co.) This, though the actual value of its contents is not of the greatest, is an interesting book. The author, who died six or seven years ago, a little less than sixty years old, was a fellow of his college at Cambridge, and a barrister, but by predilection a newspaper editor and contributor to *John Bull*, and a cultivator of elegant literature—not so easy to cultivate now as it once was in the days of close fellowships and easy public appointments. Mr. Monro has, therefore, not done ill to collect his "remains," though we are not sure that the plan of "silently correcting" mistranslations is quite justifiable. If it was done at all how is it that a note on the phrase "turned from life's banquet as one satisfied" has only a reference to Horace? Surely the "plenus vitæ conviva" of a poet earlier

and more than head and shoulders taller than Horace might have been added.

*English Work and Song.* By An Englishman. (Sampson Low.) We have read better books from the literary point of view than this, but rarely one that invited greater sympathy with the mood of its writer. He is, by his own showing, a colonist in Victoria, who has been there since his childhood, but who calls himself (as he has a right to do) an Englishman. He thinks his new country "the most English offshoot of the parent stem," but sees certain drawbacks in her which he thinks study of good literature in a patriotic spirit likely to cure. The book contains a long dramatic romance on Hampden; another called "A Sabine Wedding," with Virgil and Horace figuring as characters; and some historical ballads. Perhaps some people may wonder whether the peculiar dangers of Victoria, as indicated in the Englishman's own Preface, are likely to be modified by the holding up of Hampden as a special patriot, but that is no business of ours. The book is a healthy and a well-intentioned book, and its healthiness and goodness of intention are not marred by any fatal faults of expression.

*The Flying Dutchman, and other Poems.* By E. M. Clerke. (Satchell.) This little book chiefly contains historical ballads of the stirring and heroic kind. They are not easy things to do, and Miss Clerke has not made her task any easier by fixing on subjects which inevitably invite comparison with certain very well-known masterpieces. That comparison is not favourable, and sometimes the yawning gulf of bathos swallows up this lady's work with a terrible devouringness. But she has a certain command of good noisy expression, as, for instance, in the following stanza:—

"The void profound was stirred with sound,  
And, quick with stings of fire,  
And echoing far from star to star  
Pealed heaven's tremendous choir.  
Those flaming shafts whose torment wrung  
All secrets from the dark,  
Pierced not the shield of shadow flung  
Around the fated bark."

We do not know that this is exactly our favourite style of poetry, but "in Ercole's vein—a tyrant's vein—a vein to tear a cat in—to make all split" Miss Clerke may be acknowledged to have a certain facility.

*Lyrics and Ballads.* By Zeta. (Provost and Co.) "Zeta" informs us that he or she "once was like the blithesome lark"—a condition which, if it be authentic, must be allowed to be something of an excuse for publishing poetry. The utterances of the lark-stage of Zeta's existence do not, however, seem to have found a home here. Many of the separate statements in the volume are undeniable, such as

"The sky is blue, the sea is bright;"  
while to others, such as

"You are in love with Caroline,"

it is impossible for anyone who is not in possession of fuller information than the ordinary critic enjoys to oppose a serious denial. But, speaking generally, the positions advanced are not interesting, which is a drawback.

*Fancy, and other Poems.* By John Sibree. (Tribner.) This is, apparently, a re-issue of a small volume of poems which first appeared a year or two ago. Some of them have considerable merit, especially "Fancy" and "How Lord Archibald sought the Grail." The additions are mostly devotional. The whole book contains but a few score pages, but in thought and imagination it is much superior to most minor poetry. The author's command of expression is less decided.

*Rip Van Winkle, and other Poems.* By A. R. Grote. (Kegan Paul, Trench and Co.) The

sole *differentia* that we have been able to discover between Mr. Grote and hundreds of other minor bards is that he prints only on the obverse of his pages, which are very nice *papier vergé*. Did he never hear of Rivarol's terrible joke on Florian? That amiable fabulist was (like a very different person, Heine) fond of half-titles, fly-leaves, &c., and somebody was once complaining of this before the spiteful Gascon. "Oh!" said he, "I'm sure the blank pages are much the best." It is barely possible that what Rivarol said in jest might, in Mr. Grote's case, be said in earnest, by some unkind people.

*Translations and other Rhymes.* By F. C. Lea. (Philadelphia: Privately Printed.) These translations (prettily printed in a small quarto shape which seems to be common in America for poetry, and which is well suited to it) are fair, if nothing more. They follow Mr. Longfellow often in style, and sometimes in choice of subject. Mr. Lea should not say offhand that the "cruel lady of Thibaut de Champagne's love" was Queen Blanche, for it is more than doubtful, and, as she was thirty years his senior, he is not very much to be pitied if she was. To speak of "Guillaume" de Poitiers seems unscholarly; he should be either Guillem or William. Mr. Lea, like his betters, has tried the *Ballade des Dames de Villon*, and has failed, like them, but more unpardonably. It is inconceivable that even a translator should think the utter feebleness of

"And Joan of Arc, whom, in despair,  
At Rouen burned the English foe,"

a tolerable equivalent for the strong and perfect original

"Et Jehanne la bonne Lorraine  
Qu'Anglois brûlèrent à Rouen."

So, again, the rendering "in the old time" for Marot's "au bon vieux temps" argues an insensibility which is a little wonderful.

*Poems.* By Arthur Bridge. (Bentley.) When Mr. Bridge calls the present Poet Laureate an "adder of sweetness" there is a delightful Scandinavian sound about the phrase. Unluckily, however, Mr. Bridge is not enigmatic, and means by adder one who adds. Mr. Bridge is dreadfully afraid of the critic, whom he evidently feels inclined to call an adder in the other sense. The present viper will not bite Mr. Bridge much. He is rather voluminous, and his volume is not of great value, but he is tolerably harmless, and, being evidently very young, may improve.

*Don Pedro the Cruel.* By James Prior. (Hamilton, Adams and Co.) This historical tragedy on a well-known subject, the fate of Blanche of Castile, is like a good many other historical tragedies, rather better than most of them perhaps, and distinguished by no very glaring defects of language or versification, but hardly remarkable.

*Three Vows, and other Poems.* By W. B. Greene. (New York: Putnam's Sons; London: Sampson Low.) Mr. Greene, in his Preface, makes a sort of apology for "roughness." He may well do so. For our part we are contented with expressing an absolute refusal to consider as poetry either this:

"The time, the day, the hour, has now come,  
And Isabel's black eyes shone 'neath a radiant  
Wreath of orange-white. The doctor was not  
there;"

or this:

"London, of restless life incarnate  
For multitude compact, but one might seem  
One vast arch-monster murmuring through the  
night.  
Take a hansom with a flying cob  
Bob-bob, hob-nob, and bob,  
A sixpence extra on the job,  
Bob-bob, hob-nob, and bob,"

The poet in Mr. Greene is like the doctor at the wedding—he is not there.

*Raolo: a Drama.* By A. B. (Aberdeen: Avery and Co.) *Raolo* has one great virtue—it is a drama in three acts, not in five. As the three appear to contain about a thousand lines apiece, it may be feared that the usual number would have proved too long for representation. "A. B." is a more complete master than any we have met for some time of the peculiar variety of blank verse which was practised between Ford and Dryden, as, for instance:

"What's the matter? Don't gape and stare so  
wild,  
You look as you'd been bit by a mad dog.  
You can't always win, you must lose sometimes;  
Drink this and it will cool you, drink it all,  
That's right. You feel better now, don't you?"

This is the grand simplicity of passion and nature.

*The Temptation of Job, and other Poems.* By Ellen Palmer. (Philip.) Miss Palmer's poems are not all sacred in subject, but there is a sufficient number of such pieces to bring the whole under the benefit of the rule that sacred poetry, unless very bad, is safe from hostile criticism, and unless very good does not need or deserve praise.

*Poems.* By Mrs. C. B. Langston. (F. V. White.) This is a nice little book, with nice gold edges, and a great many nice little poems of the domestic affections, as thus:

"TO A PARROT.

"Beautiful stranger, what Nature can do  
Comes home to my mind when I look upon you."  
"To a Butterfly," "To My Soul," "To Lucy Bell," &c., &c., are Mrs. Langston's themes; we do not care to pick to pieces the work she has embroiled on them.

*Lyrische und epische Gedichte.* Von F. Roeber. (Berlin: Janke.) *Das Mürchen von König Drüsselbart.* Von F. Roeber. (Iserlohn: Bädker.) Comparatively little is read or known in England of contemporary German poetry. Those, however, who take an interest in the subject will be glad to make acquaintance, if they have not done so already, with Herr Roeber. His dramatic *Mürchen* strikes us as better than his ballads. For he has a distinct grasp of dramatic verse, though, perhaps, like many of his countrymen, he rather abuses the redundant syllable. In the ballads his chief technical fault is a lumbering in his anapaests. As that precious foot is the wonder and despair of all non-Teutonic nations in these days when quantity has disappeared, a Teutonic poet should be very careful of it, and by no means give occasion to the enemy to blaspheme.

#### NOTES AND NEWS.

WE are informed that the first instalment of Mr. Froude's *Life of Carlyle* (Longmans) will be published on the 31st inst. The work, which is complete in itself, consists of two octavo volumes, with two portraits and four views, all being etchings. It is a history of the first forty years of Carlyle's life, and we understand that it may almost be considered of the nature of an autobiography, as it contains much of Carlyle's own writing. Some very interesting letters from Goethe and Edward Irving will appear; but no letters will strike the reader with more force than those from the pen of Mrs. Thomas Carlyle.

MESSRS. LONGMANS AND CO. will also publish volumes iii. and iv. of Mr. Lecky's *History of England in the Eighteenth Century*, during April. These volumes will embrace the period 1760-80.

THE April part of *Gleanings from Popular*

*Authors* will be of special interest, among the contents being Mr. Robert Browning's fine ballad, "Heroé, Riel;" Mr. H. J. Byron's "Showman's Song;" and one of Thackeray's "Yellow-plush Papers."

THE second edition of Mr. Furnivall's *Browning Bibliography* has just been issued, "newly imprinted and enlarged to almost as much again as it was," as N. Ling said on the title-page of the Second Quarto of *Hamlet*.

WE are glad to hear that Messrs. Macmillan and Co. promise to follow up their "people's edition" of *Tom Brown's School Days* with two series of selections from Washington Irving's *Sketch Book*. The one will be entitled "Old Christmas," and the other "Bracebridge Hall;" and each will be illustrated with upwards of 100 original illustrations by Mr. Randolph Caldecott, engraved by Mr. J. D. Cooper. They may be expected in the autumn. How it may be in America we know not; but we incline to fear that Washington Irving's reputation in this country needs some fillip of the kind.

THE series of *Modern School Readers* published by Messrs. Cassell, Petter, Galpin and Co., and adopted by the London and numerous provincial School Boards, has been introduced at the Patna College, the teachers in which are preparing a translation, with notes, to meet the requirements of Indian students.

THE Wyclif Society has, besides its London and General Committee, an Oxford Committee, a Cambridge Committee, and a Yorkshire one. The committees are finding that, though everyone acknowledges England's debt to Wyclif, and thinks that it is a plain duty to print the great Reformer's works, yet almost everyone is convinced that it is somebody else's business to pay the debt and do the duty, their own task being only to contribute words and sentiments, but by no means guineas. Still, the society slowly grows. Subscriptions and donations should be sent to the hon. secretary, Mr. J. W. Standerwick, General Post Office, E.C.

A NEW edition of *Cassell's Illustrated Bible* is about to be issued in serial form, for which a series of original paintings has been prepared by the following among other artists:—M. L. Gow, G. L. Seymour, H. M. Paget, H. C. Selous, M. E. Edwards, Towneley Green, W. J. Morgan, and C. Gregory. These designs will be carefully reproduced in the best style of chromolithography.

MESSRS. KEGAN PAUL, TRENCH AND CO. will shortly publish a volume upon *The American-Irish and their Influence on Irish Politics*, by Mr. Philip H. Bagenal.

ON Tuesday next, March 28, the first number of a new weekly satirical journal, price one penny, entitled *The Fool*, will be published. Some original features will be introduced, including a caricature double-page portrait upon a new principle.

MR. DAVID BOGUE announces for early issue *Clever Things said by Children*, by Mr. Howard Paul, and *Country Sketches in Black and White*, by Mrs. J. E. Panton.

MR. ALFRED H. HUTH has lent the copy of his late father's unique MS. of a unique version of the French *Merlin* to Prof. Gaston Paris for his series of articles on the French Arthur Romances now appearing in the *Romania*. Prof. Paris intends to examine closely the relation of the English Arthur Romances to the French versions.

MR. C. S. LOCH, secretary of the Charity Organisation Society, sums up in the current number of the *Sanitary Record* the conclusions which he has drawn from the prolonged investigations by committees of that society of

the working of the Industrial Dwellings Acts, and the desirable means of remedying their defects.

We hear that Mr. J. S. Fletcher is engaged in the preparation of a new volume of poems.

HER MAJESTY THE QUEEN has accepted a copy of the "Biography of Prince Leopold, with Selections from his Addresses and Speeches," which forms the third volume of *Talks with the People*, published at "Home Words" office.

THE City of London Publishing Company will issue on May 1 the first number of a new shilling monthly, entitled the *S. Peter's Magazine*. This periodical will be edited by Mrs. Marion Drake.

MR. HARRY BLYTH is writing for Messrs. Cassell, Petter, Galpin and Co. a work of fiction under the title of *A Romance of Love and Marriage*.

MR. WILLIAM ANDREWS, of Hull, has commenced in the *Leeds Express* a series of papers dealing with local history, biography, folk-lore, &c., entitled "Echoes of Old Leeds."

MESSRS. W. WALKER AND SONS, of Otley, will have ready at an early date an important addition to Yorkshire literature, called *On Foot through Wharfedale*, by Mr. Fred Copley, a favourably known local author and antiquary. The volume will include descriptive and historical notes, legendary and traditional lore, of the towns and villages of Upper and Lower Wharfedale. Numerous full-page illustrations and maps will be furnished.

CAPT. DUMARESQ DE CARTERET BISSEON is engaged in passing through the press the following works:—*Our Schools and Colleges*, seventh edition, vol. i., for boys, vol. ii., for girls; *Julius Caesar*, being the First Part of the Dumaresq Series of Shakespeare's Plays; *The Oxford and Cambridge Certificate and Local Examination Record*, vols. i., ii., iii.; *The Drama as an Element of Education*. These three last works are almost ready, and will be published immediately.

MR. RICHARD HERNE SHEPHERD has in preparation, and will shortly issue, *The Bibliography of Tennyson: a Bibliographical List, arranged in Chronological Order, of the Published and Privately Printed Writings of Alfred Tennyson, D.C.L., Poet Laureate, from 1827 to 1882*, uniform with his Bibliographies already published of Ruskin, Dickens, Thackeray, and Carlyle. It is on a totally distinct plan to *Tennysoniana*. Mr. Shepherd's earliest contribution to Tennysonian bibliography appeared sixteen years ago in the columns of *Notes and Queries*. Subscribers and correspondents are requested to communicate with Mr. Shepherd at his private address, 5 Bramerton Street, King's Road, Chelsea, S.W.

THE inedited writings and letters of Manzoni are being prepared for publication by Signor Bonghi, who will gladly receive any original letters (or copies of them), directed to him at Via Vicenza, Rome.

AMONG Messrs. Sonnenschein's list of forthcoming works we notice: *The Best Books: a Classified Bibliography of the Best English Books in all Subjects, together with their Sizes, Prices, Dates, and Publishers' Names*, compiled by J. Jacobs; *Common Sense about Women*, by T. Wentworth Higginson; and *Epics and Romances of the Middle Ages*, adapted from the work of Dr. W. Wagner, by M. W. Macdowall, and edited by W. S. W. Anson.

THE first number of the *Scottish Review*, to be published by Mr. Gardner, of Paisley, may be expected to appear in October. Considerable

space will be given to "Contemporary Science" and "Contemporary Literature," and to "summaries of the best articles appearing during the quarter in the leading Reviews and periodicals, both at home and abroad." Articles of a political or controversial character in the *Scottish Review* will bear the names of their authors.

THE concluding volume of the new edition of *Jamieson's Scotch Dictionary* may shortly be expected. The delay in the publication is due to the pains taken in the work of revision.

MRS. MORTIMER COLLINS has a new novel in the press, entitled *A Broken Lily*, which will be brought out in three volumes by Messrs. Hurst and Blackett during the course of next month. The same firm will also issue in April a new novel, in three volumes, by Mrs. Randolph, called *Iris*.

*Flirting made Easy* is the title of the twenty-third volume of "Judy's Shilling Books," and will be issued on Friday, March 24. It is written by C. H. Ross, and illustrated by Dower Wilson.

MR. ST. JOHN BRENON, the author of *The Tribune Reflects*, *The Witch of Nemi*, &c., is about to publish a tragedy entitled *Cesar Borgia*.

IN the *Indien Spectator* (February 26) we read:—

"His numerous Indian admirers will be interested to hear that Prof. Max Müller has just finished a translation of Kant's *Critique of Pure Reason*, we believe the greatest philosophic work of Germany. It was published exactly a century ago, and is still unsurpassed in its field. The time will come when Indian students will read that book with admiration, and they will be surprised then at the light weight of what is called modern philosophy as compared with Kant. True it is that froth floats on the surface, pearls lie at the bottom."

ULRICO HOEPLI, of Milan, will commence forthwith the publication of a *Universal History of Literature*, which it is hoped to complete in the course of two years. The book will be edited by Signor Angelo de Gubernatis.

THE first volume has appeared (Rome: E. Loescher) of a series of essays on classical and mediæval Rome, under the title *Roma nella memoria e nelle immaginazioni del medio evo*, by Prof. A. Graf. The second volume is in the press.

THE Berlin Academy has resolved upon publishing the entire series of Greek Commentaries upon Aristotle as a supplement to its edition in five volumes of the philosopher's works. The collection will comprise about twenty-five volumes, of which two volumes are in the press, and will be ready very shortly.

OR the many sixpenny editions that are now littering the bookstalls like annuals in winter time, none is more welcome than *Tom Brown's School Days* (Macmillan). Not only is it the one book by which its author will be remembered, but it is also the one book about boys which boys and grown-up men alike care to read. What the verdict of women is we are not quite so sure. At the worst, this book will preserve an idealised aspect of public-school life to generations that may have devised something better for themselves. Messrs. Macmillan have reproduced the illustrations by Mr. Arthur Hughes and Mr. Sydney Prior Hall, which, we confess, never entirely satisfied us. We should have preferred no illustrations, and double, instead of treble, columns of text. It is very rarely that illustrations really help a good book. But this is a "people's edition," and the publishers may be trusted to know what the people want.

# ORIGINAL VERSE.

## THE TAY BRIDGE DISASTER.

(7.15 p.m., December 28, 1879.)

AN eerie winter night!—with souls fourscore  
Freighted, the steam-spiced cars still northward  
pass'd,  
Fulfilling their dread doom; unreck'd the roar  
Of boding blast.

Above the furious frith the haught bridge hung,—  
Bridge men deem'd should for aye its proud  
place keep:

Loud laugh'd the gale, broke haught bridge,  
doom'd cars flung  
Down to dark deep.

Alas for grief-rent heart, for death-reft home!  
Where lusty lads, sweet maidens, children gay?  
Dead in dark deep, beneath the wind-whirl'd foam  
Of storm-toss'd Tay.

JOHN HOSKYNs-ABRAHALL.

# MAGAZINES AND REVIEWS.

*The Antiquary*. March 1882. (Elliot Stock.) This is a very satisfactory number of a magazine which is becoming an important feature in our historical literature. The present instalment contains but little padding, but we may perhaps be permitted to point out that the article on "Early Books on the Gipsies" certainly falls under that head. Mr. Fergusson's "Notes on the Names of Women" is a remarkable paper. We do not agree with some of his conclusions, but the few columns he has given us on the subject show wide reading and sound scholarship such as we should naturally expect from the author of *The River Names of Europe*. Mr. Hewlett's "Gleanings from the Public Records" form an interesting sheaf, but they would have been more useful if exact references had been given in every case. There is a horrible entry from the *Coram Rege* Rolls of Henry III., which we commend to the study of those who consider "the ages of faith" as wiser and better than the distracted time in which our own lot is cast. A certain William le Sauvage took prisoner three persons, two men and a woman, whose only offence seems to have been that they were aliens. One man died in prison, the other lost a foot by putrefaction, and the woman seems to have lost both her feet from the same cause. At length it occurred to their captor to take these poor wretches to be tried in the King's court. When they arrived there, the court refused to try them, for the very good reason that they were not charged with "any misdeed for which they could suffer judgment." They were therefore permitted to depart; but we do not hear that even the mildest censure was passed on William le Sauvage. Mr. J. H. Round gives some valuable notes on ancient land tenures recorded in Domesday. The time has not yet come when a history of land-holding in England can be written, but papers of this stamp are very useful in paving the way for such a work. Mr. G. Laurence Gomme has an article, written with much knowledge and care, on "The Communal Habitations of Village Communities."

THE *Scottish Celtic Review* has now reached its second number, which, besides a substantial kernel of Celtic philology, contains a tale called "The Muileartach," with notes and translations by J. G. Campbell, of Tiree; it is a very curious, weird story, which Mr. Campbell refers to the war of the elements, Muileartach being, as he thinks, a personification of the Western Sea. Mr. Alfred Nutt contributes valuable notes on the story of the Tuairisgeul Mor, that appeared in the previous number, in some of which he has been anticipated by a review of that number in *Nature*. The present number closes with the words and music of "Macrimmon's Lament."

## LITERATURE IN RUSSIA.

WE reprint the following letter from this month's number of *Le Livre*:—

St. Petersburg: February 1882.

In speaking of Russian literature it is necessary to discuss the politics of to-day. The reader may look far and wide for a book containing no allusion to one or other of those burning questions which now absorb every Russian who reads, writes, or thinks; he will find none, except it be a cookery book or some technical treatise. Again, the commercial conditions of literature in this country are such as to account for the complete absence of those trashy productions with which the book markets of other countries are flooded. Nor do our journals think themselves bound to amuse their readers; hence the *feuilleton* novel after the style of Bouvier, Belot and Co. is almost unknown. We have no publisher whose special business it is to diffuse the sale of such stories by reprinting them in book form. In a word, literature in Russia has not yet reached that stage in which the tradesman robs the author of his great and noble mission, and literature becomes a mere caterer for the baser appetites. In this country, every book, whether devoted to fiction, science, history, education, or jurisprudence, makes its first appearance in some one or other of the Reviews, which are more numerous here than anywhere else. Each Review has its distinct political colour, and this of course is an omnipotent factor in the shaping of the literature the magazine provides. At this moment a warm controversy is being carried on between the Slavophil party, towards which the Government leans, and the European party, which finds its ideal in the political life and literature of England, France, and Germany. Assuredly, M. Veselovski, who is now publishing in the *Messenger de l'Europe* a most interesting work on the influence exercised by Western civilisation upon Russian literature, has been inspired by this controversy. As yet the author has only reached the reign of Catherine II., but he has promised to trace before long this influence in the nineteenth century. Let us look back for a minute at the period of Catherine II. M. Veselovski clearly shows that all the more eminent writers of her reign were inspired by the poets and philosophers of France, England, and Germany. Catherine herself, in her political, literary, and educational reforms, was but the echo of Western ideas. Thus her well-known address to the Legislative Commission only welded together the humanitarian principles preached by the thinkers of that day—Montesquieu, Voltaire, and Beccaria. The Empress's views on education were those of Locke, of Montaigne, of Diderot, and of the new German school. She herself admitted that in her dramatic compositions she copied Shakespeare. Again, the first satirical Review to appear in Russia, which she secretly patronised, followed in the footsteps of Addison's *Spectator*. As regards the other authors of that day—Novikoff, for example, who was an enthusiastic exponent of science, drew all his materials from European sources. Raditcheff inscribed in his political programme the freedom of the serfs, the liberty of the press, religious liberty, and trial by jury—all reforms borrowed from the philosophers of the eighteenth century. His *Journey from St. Petersburg to Moscow*, which caused his exile, was copied from Sterne's *Sentimental Journey*. To give a complete list of all the Russians who were disciples of the philosophers would fill too much space, and the Slavophiles can only ignore the progress made by Russia under the influence of Western culture by dint of firmly shutting their eyes. Another question which sharply divides the two parties is the liberty of the press. The

Slavophiles argue that he who urges the freeing of the press is no real friend of the people, because in Russia barely ten per cent. of the population can read. The advanced party, while admitting the fact that the masses cannot read, maintain that the press is still a friend to the man who is unable to profit by its teaching; for it is only by the voice of the press that abuses can be brought to light, humanitarian schemes ventilated, and reform accelerated. Nor can it be denied that the voice of Russia would have more weight in Europe if it was felt to be the voice of a free people.

When we consider the existing condition of Russian literature, it will not be difficult to imagine the astonishment generally felt by Russian journalists on the appearance, a few months since, of Tourgueniev's *Song of Love* in the *Messenger de l'Europe*. Love has always held a very insignificant position in Russian literature; if a writer touched this question, it was invariably in the style of Tchernichewski in his novel, *What is to be done?* or of Herten, in his first tale, *Whose Fault?* The passion was always treated from its psychological aspect; and yet, at this time of trouble, M. Tourgueniev gives us a love idyll. Not unnaturally the question was asked whether any of the hopes and fears by which the soul of every Russian is now consumed can find an echo in the breast of the great novelist. What would France have said had Victor Hugo warbled of Psyché and Daphnis during the terrible year 1871? I imagine she would have felt what Russia feels to-day. A German literary journal has stated that Tourgueniev was only induced to publish his *Song of Love* by the repeated and urgent instances of M. Stasionlevitch, who is editor of the *Messenger de l'Europe*. If this be the case, the latter rendered his friend a poor service. This work had scarcely faded from recollection when the papers announced the forthcoming publication of another story by the same author. On seeing the intended title—*The Forlorn*—readers concluded that they would be treated to a study from real life, and rejoiced at the thought that the great artist was about to draw in his bold and graphic style the portraits of the men who have kept our country in a state of terror for many years. Still a few voices whispered doubts as to the realism of this last work of Tourgueniev, who has not resided in Russia for some years. One paper published in its column of jests the following pleasantry:—"What Russian author has attained to an advanced age?" The answer was, "Tourgueniev, because he has left Russia." To appreciate this joke it is necessary to know that nearly all Russian authors have died young. At last the book began to appear in the pages of the *Messenger de l'Europe*, which usually publishes M. Tourgueniev's works. And again the hopes of readers were disappointed, for the story possesses no actuality. *The Forlorn* has nothing in common with the men on whose photographs the public had hoped to gaze; it is a story of a feather-brained hero, or rather of a lunatic. Nor is the study so finished as to have been able to command success had the book been published forty years ago, when it would have possessed some living interest. To console us, we have only the hope of reading before long in the *Pensée Russe* five new stories from the pen of the novelist Tolstoi. We learn from the author's friends that the first of this series has been completed; and it is said that Tolstoi himself was unable to contain scalding tears as he read aloud a touching description of the misery of the peasantry. Here is a most characteristic anecdote of this author. It so happens that a census will shortly be taken in Moscow. M. Tolstoi has thought this a golden opportunity for seeking out those parts of the town where misery has made itself a home;

and, not content with securing for himself the office of census-taker, he has published an eloquent address, earnestly recommending all who would study the sufferings of the poor in this great town from the life to follow his example. He believes that after such a diagnosis of the disease it will be easier to find a remedy.

When I inform you that one of our foremost dramatists, M. Ostrovski, has just placed on the boards a new play, *Actors and Audiences*, I have told you nothing, for, notwithstanding his undeniable ability, M. Ostrovski is unknown in France. And here I may as well notice the little account which your papers and Reviews make of Russian literature. M. Ostrovski is well known in Germany; and the *Rivista Europea* has just published an Italian translation of *The Storm*, one of his best dramas. Yet French readers take an interest in the manners and customs of foreign nations. We Russians are grateful to you for having given us from the pen of M. Elisée Reclus, the eminent geographer, studies of Russian life which defy competition. M. Rambaud's *History of Russia* is also a work of a very high stamp. But I cannot say as much for the pictures of our social life drawn by your novelists. Leaving aside M. Tissot (the depth of whose ignorance is truly appalling), I will mention the novels of Mme. Henri Gréville, who has taken rank as an authority on things Russian. Yet I do not hesitate to say that French literature would have been the gainer, and French readers would have formed a much truer conception of the period described by Mme. Gréville, had this writer contented herself with translating the works of Gontcharoff, Dostoievski, and Ostrovski—works that will ever remain as a living witness to the memory of the time which gave them birth. Ostrovski's literary career now spans thirty years, but he has lately abandoned the subjects in which he most excelled, and by which he made his name. That is to say, the delineation of lower middle-class Russian life, composed of shopkeepers and small Government clerks—in a word, of that life which the Russian critic Dobroulioboff has called "the unknown land." In his last work Ostrovski has tried to paint the trials of a young and beautiful actress. In spite of her genuine talent and love of her profession she can only command success by becoming the mistress of a wealthy patron of the drama, who, after a time, abandons her to a dissolute nobleman. The struggle of the actress against a remorseless fate is drawn with a power and truth which render it not only a work of art of absorbing interest, but an eloquent sermon on the vanity of life. M. A.

## AN ORIGINAL LETTER OF ST. GEORGE ASHE.

THE following letter from St. George Ashe—Swift's tutor in Trinity College, Dublin, and afterwards Bishop of Clogher—which, it is believed, has not hitherto appeared in print, contains some passages of historical interest:—

"Vienna Dec 1<sup>st</sup> 1690.

"I will not tell you with what extreme joy and content I received your Welcome Packet of November the 24<sup>th</sup> because who are always among your friends, Books, and acquaintance cannot conceive the satisfaction there is for a melancholy, banished man to receive valuable communication at a 1000 miles distance, and to find he is so affectionately remembered by those he loves, neither am I at all surprised at the indefatigable care you have taken to advance my fortune, because 'tis just the same that I would do (were it in my power) to serve you and what is the duty of every sincere Friend: But as for the favour the Bishop of Oxford hath shew'n me, I have herewith (as you ordered) acknowledged it, and desire you to deliver, or send my letter: I am sorry my

Musick and other things I sent a while ago did not please, but 'twas not fair in you or your freinds to alight them because they were not excellent, would you refuse, or despise a present Indian or Chinese Coyne, because not so fine as your Mill'd Mony, you should therefore in Justice consider the Country from whence they come, and the different genius, and on that score be satisfied, and grateful for them; however I am promised by Sign. E. Draghi (the Celebrated Imperiall Chappell Master) some very extraordinary pelces, and even Compositions of the present Emperor, and if Cæsarean Musick will not please you I must despair. as to the account you give me of my Country 'tis extremely melancholly, and I am sorry our present circumstances here on the Turkish side, will not permit me to show you a pleasanter prospect, we have Tartarian Rapparios also, and German Torcos too, that plunder, and spoyle y<sup>e</sup> poor Hungarians more cruelly then they. I lately saw a memoriall of the Coun<sup>t</sup> Palatine of Hungary presented to the Emperor, where all their late 7 Years miseries are pathetically described, and thence it is demonstratively shewne, that, that unhappy Country has all along suffered incomparably more from the Imperialists then the Turks (this paper is part of the Collection of publick accounts which with many others I have made, all which at my returne, I will communicate tho' by no means vye with you. I could be even with you too for your simile's of the Pelican, and the Phoenix, but that I have another that runs almost as strongly in my head, and that is of a Watch, or Clock, whose spring is broke, you know in such a case with what violence the wheels run downe and all goes back againe; 'twas just so here upon the Death of the late Duke of Lorraine (that maine springe, and primum Mobile of the German Clockwork) whose warlike stirring genius and French Activity, gave all the force to their slow heavy counsellors, and upon whose loose, all the mighty progresse he had made, all those 200 leagues of Conquered territory, and numberless Forts and Townes which were wound up, and added to the Imperiall Crown by his Victorious arme suddainly ran down againe, and in 4 months time from talking, and boasting to beselge Constantinople, we were reduced to the second dread of a seige of Vienna. Prince Lewis of Baden too (the Heroe, our other good Genius) is almost disgusted and weary of the service, being generally thwarted in all his Noble Designs and Projects by Cabinet Ministers men that never saw war, but in History and can scarce distinguish a pike from a Musket; one instance hereof I'll give you, (which however is a secret) that in the year (89) when this Prince, with 15,000 men only, over-run 3 or 4 Intire Provinces, gained two pitched battles, against twice his number, took Nissa, Pyrot, Widen Semandria, Pristena &c. and made the Turks tremble even at Adrianople; at his returne, instead of deserved Laurels, and Tryumphs, he mett with a severe reproof at home, for dangerously exposing the Emperors troops, and all his successes were attributed to rashnes and folly, but the beginning of this year when they againe courted him to take the Command of the Imperiall Forces, he modestly excused himself, saying that now indeed 'twould be inexcusable rashnes (when there was no Army nor preparations) to expose his handfull of men to 150000 Turks; yet they forced him to accept the hazardous employ, and tho' he has saved them Transylvania, they ungratefully impute their other losses to his Mismanagement; before he begun the Campaigne, he presented to the Emperor a very handsome souldierlike account of the present state of those Fronteer Provinces, of the Want of sufficient Garrisons, Subastances, Troops &c. and a plaine Prophecy of all the Misfortunes that have happened, A copy of which Paper I have. Methinks indeed we are fain into a wonderful pleasant scene of affaires which would make even a Stoick laugh, an Emperor who understands Letters, and a Book much better then a Sword, and can Manage Beads, and the Breviary, more dexterously then Generalls Truncheon, had yet by great chance, like to have been the greatest Conqueror of his age, till by as odd a whimsey of fortune another Souldierlike Genl (for such is the Grand Visier, a meer Book-worm, and one who never saw a seige 'till that of Nissa) unravell'd all againe the most Christian King, eldest son of the Church, and Scourge of Hereticks, is in strict

brotherly alliance with the Turks and Algereens, the sworn Enemys of Christianity; and all other Catholic Princes and even our good Emperor himself (who sett up to be a Saint for Bigottry) united with the Arch Heretick K. William, the support, and restorer of our sinking reformation; to consider all this impartially wou'd almost tempt a man to be of Machiavel's opinion, that in Statesmen and great persons, Interest, and Religion, are often but two spetious names for the same thing. But 'tis quite out of my province, to pretend to Politicks, however to make an end of this head, you must know, that at present the Elector of Bavaria is here, and assiste daily in the Councils of War, where great preparations are making for an Early Campaigne, that all Military action upon the Frontiers is at an end, except Prince Lewis's expedition to intercept (if possible) a considerable party of Turks, and Tartars, who designed an irruption into Transylvania, that Genl Healler, depositing 2300 Ducats for caution of his returne, is expected here every day from Teckeleys Camp, which is now in Valachia, near the passe of Cronstatt. And now to come to matters of Learning (according to old Cedant arma togæ) I heartily thank you for S<sup>r</sup> W. P.'s [Petty's] Pol. Arith. which I will carefully peruse, tho' I have not been wanting to take care of laying in a Stock of the like observations here, having drawn up Queries of all sorts (the most pertinent I could think of) and sent them about into several parts of Germany, Transylvania, &c. to the learned men, in hopes to procure satisfactory Answers, some I have got and more I expect, and tho' I do not propose to have leisure here to reason upon them, to compare Phenomenas, and deduce Consequences, yet such provision perhaps of fitting materials may be made as may probably in time produce somewhat.

"I had lately a letter from the Professor Sturmius, containing an account of a new perpetual motion, which I have not had opportunity yet to examine; one Dr Wagensell likewise of the same University has lately invented an Hydraspisor Engine safely to passe all waters of which I have the description, Mr Warhelbaur of Nuremberg has sent me his observation of Mercury's passing the Sun the 30<sup>th</sup> of last October (which I will speedily communicate to Mr Flamsteed) and Sig<sup>r</sup> Magliabecke (the Duke of Florences Library-keeper) has sent me a very particular account of all the new Books and Virtuoso transactions of Italy, in returne to which I must intreat you to let me have a list of our New valuable Books and what the R. Soc is doing. I got so far into the good graces of the Emper<sup>r</sup> Library Keeper that he freely communicates what Books and Maps I please to my Chamber and I hope to returne with the Gleanings of what is best and most Curious in that inestimable Collection. I have made a tolerable Collection of ancient and Modern Medalls to entertaine our Freind Dr Madden, and to shew you how far my Correspondence is extended I have settled a Commerce of Letters with a Celebrated Russian Bishop Counsellor to the Czars, and chiefs of their Ecclesiasticks, by which means perhaps some better accounts may be had of that almost Terra Incognita.

"I herewith inclose a project of an Historicall Society to be founded in Germany of which my Freind Mr Job. Ludolf is named President, and now I think I have sufficiently tyred both you and myself therefore (dear George) adieu give my service particularly to all Freinds, let me hear from you frequently, and largely while I stay, and get me soon (if you can) a Creditable call to return home.

"Pray let me hear how and where Dr Willoughby is. "Y<sup>e</sup>"

##### CORRESPONDENCE.

A PICTURE BY ROGER VAN DER WEYDEN AND ONE BY DIERICK BOUTS.

London: March 21, 1882.

It is well known to all students of Flemish painting that the great artist of Brussels, Roger van der Weyden, painted a "Descent of Christ from the Cross," which, in its day, was one of the most popular pictures of the Northern school. Its popularity is sufficiently attested by the fact that it was copied, and again copied, by pupils and admirers; and, if we are to believe Mr. Weale, the painter manifested his own satisfaction with the work by himself reproducing it. In the Escorial, in the S. Trinita Museum at Madrid, in the Museums of Berlin and Cologne, and in the gallery of the Liverpool Institution, not to mention plenty of other places, copies more or less accurate may be seen: see Crowe and Cavalcaselle (German translation), p. 240; also *Jahrbuch für Kunstgeschichte*, i., p. 46. The copy at Cologne is of particular interest, because it is one of the few dated (1480) works by the very interesting master called "of the Lyversberg passion;" and also because it connects him directly with the central master of the school of Brabant.

According to Crowe and Cavalcaselle, the middle picture of the original altar-piece is now in the Museum del Prado at Madrid. Of the original wings they say nothing. The wings of the copy at Cologne bear representations of the apostles Andrew and Thomas; but they are introduced as the patron saints of the donors, so that nothing can be learned from them of the originals. Having a few moments to spare the other day at Liverpool, I hurried into the gallery of the institution to have a glimpse at the copy preserved there. Happily, this is still in possession of its original wings, and these bear representations of the two thieves on their interiors; the exteriors I could not see. The style of the painting is poor enough; but at present we are only concerned with its subjects. As fortune would have it, only a few weeks before I had spent some days in the gallery of the Städel Institute at Frankfurt, and had been particularly interested in a tall panel, upon which is painted one of the two thieves on the cross. At the bottom of the panel are seen the heads of the Centurion and another, who are looking upwards towards the right and out of the picture. The figures are painted on a gold ground. It is noted in the Catalogue that the panel is clearly the left wing of some triptych or other.

The moment I cast eyes on the little Liverpool copy of the "Descent," it became evident that the Frankfort picture was a wing either of the original or of one of the copies of Roger's picture. So far as size goes it might very well form a panel of the left wing of the original, and the style of the workmanship is so remarkably fine that it is hard to believe the painting was done anywhere but under the master's eye.

A further link in the chain of evidence has recently been brought to light by M. Hymans, the well-known director of the Print Room at Brussels. In an article recently contributed to the *Bulletin des Commissions royales d'Art et d'Archéologie*, accompanied by an excellent reproduction, he describes an engraving by the "Master of 1464," which is nothing else than a copy of Roger's "Descent from the Cross." He points out that every figure in the engraving corresponds to one in the picture, the only noticeable difference being that on either side of the central cross are the crosses bearing the dead bodies of the thieves.

M. Hymans says:—

"Dans la gravure la composition se présente en hauteur. Non seulement la croix a été de beaucoup élevée, mais on voit aussi, à droite et à gauche, les deux larrons crucifiés, l'un de dos, l'autre de face, à peu près comme dans l'estampe du maître à la Navette."

He adduces this alteration as confirming his opinion that the engraver was no servile copyist, but may quite well have been Roger himself. Whether that is the case or not, the fact remains that these two thieves are the same as those on the wings of the Liverpool copy.

Further arguments might be brought forward, if need were, to prove the identity in subject between the Frankfort panel and the left wing of Roger's original painting; but it seems that enough has been said. It may be remarked that the panel was bought at Mannheim in 1840. Height, 1'33 m.; breadth, 0'91 m.—see Städel Catalogue, 1879.

While on the subject of Flemish painting, I may point out the authorship of a picture preserved in our own National Gallery (No. 774). It represents the Virgin seated on a throne with the Child in her lap, St. Peter and St. Paul kneeling on either side, the one holding the Virgin's open book, the other offering a pink to the Child. At present it is attributed to Hugo van der Goes. With this attribution Crowe and Cavalcaselle disagree, and they incline to refer it to some pupil of Memling's. As a matter of fact, it is

an undoubted work of Dierick Bouts, the meritorious town painter of Louvain. If anyone will compare the heads of the two saints with those of the two apostles sitting on the right hand of Christ in the picture of the Last Supper in St. Peter's Church at Louvain, he will find that they are taken from the very same models. If further confirmation is required, it may be found in the peculiar drooping form of the eyelids and the slight woodenness of the expressions, as well as in the hardness of the colouring and the weakness of the drawing about the knees.

Considering that the very fine picture of the "Exhumation of St. Hubert" is certainly not a work of Bouts', it is pleasant to find that our National Gallery does possess one genuine painting by that artist.

W. M. CONWAY.

#### PROPOSED CORRECTION OF PUNCTUATION IN A PASSAGE OF BARNABAS.

Laverton Rectory, Bath.

I propose to call attention to a passage in chap. xiii. of the Epistle of Barnabas, the meaning of which seems greatly marred (even in the most recent editions) by an erroneous punctuation. Some minor faults in the punctuation of the passage (both in the Greek text and in the Old-Latin version), as given in the early editions, have already been corrected (without remark) by various editors; but the one which seems to me the most important of all has been allowed to remain.

In all the editions which I possess (except Dressel's, of which I shall speak presently) the passage is thus punctuated:

καὶ συνέλαβεν. Ἔτα καὶ ἐξήλας κ.τ.λ.

Some editors, in accordance with the Sinaitic MS., omit the second καὶ. The omission in no way affects the subject of my letter. Dressel (in accordance, he says, with three MSS.) gives the strange punctuation:

καὶ συνέλαβεν ἔτα. Καὶ ἐξήλας κ.τ.λ.

and translates accordingly. The punctuation which I propose is:

καὶ συνέλαβεν. Ἔτα. Καὶ ἐξήλας κ.τ.λ.

putting a colon after Ἔτα, and printing the second καὶ with a capital, so as to mark the beginning of a fresh quotation. The passage will then consist of two distinct quotations, the second being introduced by Ἔτα, as in chap. vi., § 3. The first quotation (beginning at Ἐδεῖτο) is from Gen. xxv. 21, the second from vers. 22 and 23, the greater part of ver. 22 being omitted. The second quotation is inaccurate, καὶ ἐξήλας being substituted for ἐπορεύθη δέ.

It is singular that such a simple correction seems to have escaped all the editors. This is still more strange in the case of Dressel, who quotes from one MS. substantially the same punctuation which I propose, and one nearly the same from another. Apparently he did not see that the punctuation of those MSS. was intended to show that ἔτα was used to introduce a new quotation.

It is by no means improbable that Ussher thus exhibited the text in his edition (Oxford, 1642), and that if that edition had ever been published this punctuation would have been adopted by all subsequent editors.

The minute collation which I am now making of various editions shows more and more plainly what a serious loss was probably sustained by the unfortunate destruction of Ussher's edition in the fire of October 6, 1644. Unfortunately, the copy which I discovered in the Bodleian (and which I hope to reprint at the Clarendon Press in the course of the present year) breaks off abruptly in the middle of the words ἡμῶν and "quomodo," near the beginning

of chap. ix., so that it throws no light upon the present passage.

If my view is correct, the translators, from Cotelierius to Sharpe, are all more or less at fault in the matter, none of them having seen that ἔτα is here used to introduce a new quotation. The word is omitted entirely in the Old-Latin version, and wrongly represented by Fell and Reithmayr in their additions to that version.

J. H. BACKHOUSE.

PS.—With respect to the mistake ἐν ἰσχυρί (near the beginning of chap. vi.), which I pointed out in a former letter, I can now add to the editions which I there mentioned as exhibiting the mistake, those of Galland (1765), Hefele (1842), and Migne (1857). It occurs also in a transcript (in an unknown hand) preserved at Dublin among Ussher's papers. But, as I stated in my previous letter, Ussher's own text gives the correct form, being (I believe) the only edition, except those of quite recent date, which does so.

There is a similar, but still more inexcusable, error near the end of chap. xii., where διαρρήξω (for διαρρήξω) is found in Menard, Voss (1646, but not 1680), Mader, Cotelierius (1672 and 1698, but not 1724), and Le Moyne.

With respect to ἐληλυθῆναι (for ἐληλυθῆναι), near the beginning of chap. vii. of Polycarp's Epistle, the correct form is given in Pearson's *Vindiciae* (both in the original edition and on p. 504 of A.O.L. reprint), and in Galland's *Bibliotheca*. Thus Routh's and Jacobson's notes are still more incorrect than I stated them to be. On the other hand, ἐληλυθῆναι is given, not merely in Ittig's edition (the text of which might have been printed from some previous one), but on p. 186 of his *De Haeresiarchis*, and in Le Moyne's notes (ii. 401), as well as in his text. It is also twice given in Tentzel's *Exercitationes* (pp. 158 and 162).

#### RESEMBLANCES BETWEEN THE SHETLANDIC SPEECH AND THE GOTHIC.

Glasgow: March 13, 1882.

Mr. Laurenson need not go so far afield as the Gothic in search of parallels to his Shetlandic words. Some of them are evidently borrowed from Scotland. This is clearly the case with *ere-oy* and *du-oy*, which are respectively the Gael. *iar-ogha*, a grandson, and *dubh-ogha*, a great grandson. The former is from *iar*, after, and *ogha*, son; so that the *ere-oy* (the *ier-* of *ier-oe* used by Scott) has nothing to do with Goth. *airiza*, E. *ere*. And surely the Shetlandic *gang*, *loof*, *rinse*, *meat*, have not either in form or meaning "a clear resemblance to the Moeso-Gothic" rather than to the Icel. *ganga*, *löfi*, *hreinsan*, *matr*, or the Eng. (or Scotch) *gang*, *loof*, *rinse*, *meat*.

C. ANNANDALE.

Oxford: March 13, 1882.

I hope that Mr. A. Laurenson will before long give us some more specimens of the interesting Shetland speech. I do not think, however, that there is anything remarkable in his Shetland words in regard to their resemblance to the Moeso-Gothic of Uphilas. Where the words he cites are not Icelandic, they may be explained from Anglo-Saxon.

A few mistakes in Mr. Laurenson's letter may be pointed out. Go. *sprauto* is not cognate with Sh. *sprit*, Eng. *sprit* = Icel. *sprettr*, a spring, bound, run; nor with *sprightly*, which is from *spright*, *sprite* = Lat. *spiritus*. Go. *kasja* (gen. *kasjies*) is the rendering for "a potter," from *kas*, a vessel, pot, and has nothing in the world to do with our romance word *case* = O. Fr. *casce*, Lat. *capsa*.

For the Shetland *pu* is compare the Rushworth Gospels, Luke xix. 21, where *tu es* is rendered *pu is*.

A. L. MAYHEW.

## THE BASQUE VERB.

6 Norfolk Terrace, Baywater, W.: March 20, 1882.

Mr. van Eys (see ACADEMY of March 18, 1882) says that Basque initial *d* is the pronoun "it," or the direct regimen always expressed in all active verbs, and upon this egregious grammatical blunder he bases one of his reasons against my verbal theory. Every tyro knows that initial *d* is not always "it;" and, if want of philological sense and complete ignorance of the Basque verb did not prevent Mr. van Eys from seeing the truth, he would certainly admit that all the past and conditional tenses of the transitive voice, which constitute more than half of the Basque verb, present no such initial *d*. How, then, can this letter represent "it" in *nuen, zenduen, zuen, genduen, zenduten, zuten*. "I had, thou hadst, he had, we had, you had, they had it," or in *nuke, zenduke, luke, genduke, zenduke, lukete*, "I should, thou wouldst, he would, we should, you would, they would have it," and in the immense number of their derivatives? If Mr. van Eys has no better argument against my theory, this certainly has nothing to fear from his misrepresentation of the part played by initial *d*.

Another argument of Mr. van Eys in favour of his very curious *eroan* hypothesis is also based upon another grammatical error. "Nowhere *daut*," says he, "stands for *daut*!" If Mr. van Eys were possessed of any knowledge of the Labourdin verb, he would not ignore that *daut*, in this dialect, in which no *eroan* exists, does not mean in the least "I have it," but only "he had it to me," neither more nor less than the archaic Labourdin *draut* of Liçarrague's N. T. *Daut*; on the contrary, when it represents the original form of Biscayan *dot*, generally in use, it has no other meaning than that of "I have it," while in *draut* I see the demonstrative *aur*, a perfect synonym of *au, hau, haur, gau, kau, kaur*, without finding in this terminative the least trace of the factitive verbal noun *eroan*, the *a* of which, as it belongs to the root *joan*, "gone," cannot so easily be suppressed as Mr. van Eys seems to think.

That I give *liteke* ("he could") as a flexion of *izan* ("to be") is only true in Mr. van Eys's imagination. This terminative, when it occurs among the terminatives of the type *izan* ("to be"), is given in my *Verbe* in italics in order to show, as it is explained by a note, that it belongs to a different type (*adi*) and replaces in Labourdin: *litzake, Guipuscoan; litzateke, Biscayan; lizate, Souletin*, which are printed in roman as all the other terminatives of the *izan* type.

Mr. van Eys's letter contains other grammatical errors, which I cannot enumerate for want of space. Those I have pointed out are more than sufficient to prove that the mistakes he thinks he finds in me are, I am sorry to say, to be found in him. I say "sorry," for it is sad to see grave errors and misrepresentations systematically replacing scientific arguments. I shall avoid in future any further discussion with Mr. van Eys. L.-L. BONAPARTE.

## A GREEK EPITAPH AND WORDSWORTH'S "LUCY GRAY."

Combe Viarage, near Woodstock: March 20, 1882.

Some time ago I was reading in Kaibel's *Epigrammata Graeca ex Lapidibus collecta* (Berolini, 1878) the following:—

"572. Romae. C. I. 6273.

Θ(ε)ῖς κ(αταχ)ονίς).

Εἰκοσι με ἔψαυτα καὶ ἑπτὰ μόνους ἐνιαυτοὺς

Παυλείων γαῖη δέξατο νεκρῆν.

καὶ μοι ἀδελφεὶ κείτῃ νῆν ἐγγυρὺς Ὑγελή

ἐπταέτης· τῆς δ' ἦν οὐτὶ γλυκεῖον.

M. Julius Epictetus filius suis et sibi et Magiae Nice coniugi. I vel II saec.—4 pulcerrime hoc dictum.

The fourth Greek line—deservedly eulogised

by Herr Kaibel—reminded me of the latter half of this second stanza of Wordsworth's "Lucy Gray":—

"No mate, no comrade, Lucy knew;  
She dwelt on a wide moor—  
The sweetest thing that ever grew  
Beside a human door."

JOHN HOSKYNs-ABRAHALL.

## APPOINTMENTS FOR NEXT WEEK.

MONDAY, March 27, 8 p.m. Society of Arts: "Hydraulic Machinery," by Prof. John Perry.  
8 30 p.m. Geographical: "Merv and its Surroundings," by Mr. Edmond O'Donovan.  
TUESDAY, March 28, 8 p.m. Royal Institution: "The Mechanism of the Senses," XI., by Prof. J. G. McKendrick.  
8 p.m. Civil Engineers: "The Design of Structures to resist Wind Pressure," by Mr. Charles Bender; "The Resistance of Viaducts to Sudden Gusts of Wind," by M. Jules Gaudard.  
WEDNESDAY, March 29, 8 p.m. Society of Arts: "A New Antiseptic Compound, and its Application to the Preservation of Food," by Prof. Barff.  
THURSDAY, March 30, 8 p.m. Royal Institution: "Resemblances of Sound, Light, and Heat," III., by Prof. Tyndall.  
8 p.m. Antiquaries.  
FRIDAY, March 31, 8 p.m. Royal Institution: "Electric Discharge in a Magnetic Field," by Mr. W. Spottiswoode.  
SATURDAY, April 1, 8 p.m. Royal Institution: "Volcanoes," III., by Prof. H. G. Seeley.

## SCIENCE.

*Le Livre de Sibawaihi, Traité de Grammaire arabe par Sibouya, dit Sibawaihi.* Texte arabe publié d'après les Manuscrits du Caire, de l'Escurial, d'Oxford, de Paris, de Saint-Petersbourg et de Vienne, par Hartwig Derenbourg, Professeur d'Arabe littéral à l'Ecole spéciale des Langues orientales. Tome premier. (Paris: Imprimé par Autorisation du Gouvernement à l'Imprimerie nationale.)

THE publication of this book at the Imprimerie nationale reflects the highest credit upon the French Government. Its appearance is a happy augury that, true to its traditions, that Government still fosters the study of Oriental literature, especially of Arabic. Equally auspicious is the circumstance that a work of so much intrinsic merit as the Grammar of Sibawaihi, and withal so voluminous—the part under review consists of 460 closely printed small folio pages—should have met with a most painstaking, indefatigable, and competent editor. Although M. Derenbourg promises a memoir of the author in the next and concluding volume, a brief sketch of his history will not be out of place here. Abu-Bishr (or, as some style him, Abu-'l-Hásan, and others, Abu-Kathir) 'Amru-bin-'Uthmán-bin-Kánbar, al-Báry, al-Háritby, was surnamed Sibawaihi (from the Persian *Sibayah*) on account of his predilection for the fragrance of apples, or because of his fair skin and rosy complexion. He studied grammar under the famous Khalil, and was regarded as the most illustrious grammarian of his time, inasmuch that his work generally went by the name of *al-Kitáb*, or The Book, κατ' ἑξοχὴν; "for when it was said at al-Bárah that such an one had read The Book, the Grammar of Sibawaihi was indicated thereby." Having had a dispute with the eminent al-Kísá'iy on a point of grammar, the matter was referred to the Khalifah Harún-ar-Rashíd, who decided in favour of al-Kísá'iy, which so much disgusted Sibawaihi that he retired to Shiraz, where he died A.H. 180 = A.D. 796, having given directions before his decease that his Grammar should be buried with him. Akh-fash, however, who had taught him rhetoric,

succeeded in having the MS. disinterred by his heir, from whom he purchased it for thirty dinárs of gold. M. Derenbourg in his Preface gives a minute and most interesting description of the different transcripts of the work consulted by him, including those still extant at Paris, at St. Petersburg, at Cairo, at the Escurial in Spain, and at the Bodleian. The prolegomena, marginal notes, and colophons attached to these MSS. bear the most ample testimony to the high esteem in which the author was held by native Arabic scholars through successive generations. Al-Mubárrad, as quoted by the Mulla Kátib Chálaby, says of the Grammar under review: "No such work as this was ever written heretofore. All other works on science require the aid of other books to elucidate them, but this is complete in itself." The same author—I mean al-Chálaby—gives a list of no less than thirty-two commentators on the Grammar between A.H. 284–776 = A.D. 897–1374.\* Their Commentaries, which sometimes consist of annotations on the entire work and sometimes on a section of the same—as those of az-Zamákhsary on the poetry quoted therein—frequently appear under different titles, whereby the name of the original author is often eclipsed. Nevertheless, after the lapse of ten centuries the pre-eminence of Sibawaihi is still recognised by the erudite among the Arabs, who may well boast that at so early a period the rules of their grammar were formulated with a fullness and accuracy unparalleled in the language of any other people on the face of the globe.

De Sacy, it appears, was unacquainted with this great work when, in 1810, he printed the first edition of his *Grammaire arabe*, except through the numerous quotations therefrom occurring in the writings of later authors. M. Quatremère having subsequently called his attention to the MS. of the *al-Kitáb* preserved in the Bibliothèque nationale, he introduced thirteen chapters of the book, seemingly selected at random, into his *Anthologie grammaticale arabe*, first printed in 1829. Another step in the same direction was taken by the present editor, who in 1867 published his *De Pluralium linguæ arabicæ et æthiopicæ formarum omnium generis origine et uolulo scripsit et Sibawaihi capita de plurali*. The above limited essays comprised, as far as I am aware, all that had been done towards bringing Sibawaihi into more general notice until the last-named accomplished Orientalist imposed upon himself the arduous task of reproducing the original work in its entirety.

A detailed analysis of the Grammar will be more in place on the publication of the second volume. Suffice it to say here that the arrangement of the different parts of speech, including their inflections, under separate heads serves to facilitate its study by relieving it, in a measure, of the intricacy common to similar works of ancient date. These headings are, for the most part, concise abstracts

\* As M. Derenbourg may not have seen the work of al-Chálaby, I take the liberty of mentioning that its title is *Kashfu-ḥ-Zhuhán 'an Asmí-'l-Kutub wa-'l-Funán*, printed at Cairo, A.H. 1297 = A.D. 1879, in two volumes. The list above referred to will be found in vol. ii., pp. 151, 152.

of the contents of each *Bâb*, or chapter; and M. Derenbourg deserves credit for having indexed them at the end of the volume. The prose and poetical illustrations introduced by way of example under each article are numerous and apposite, and constitute, in my opinion, the most valuable part of the work. The principal objection to the Grammar, as a whole, is its bulk, and that, doubtless, has been the main reason of its having fallen into general disuse, even among Arab-speaking peoples. One has often to wade through long paragraphs to ascertain how a verb is conjugated, or a noun or a pronoun declined—all which inflections might be far more clearly set forth in paradigmata arranged in a tabular form. A well-digested abridgement of Sibawaih drawn up on that plan would be a great boon to native students; and a translation of the same into one of the Continental languages would rival the best Arabic Grammar in Europe.

GEORGE PERCY BADGER.

#### CURRENT SCIENTIFIC LITERATURE.

*The Bible and Science.* By T. Lauder Brunton, M.D., F.R.S. (Macmillan.) Dr. Brunton is evidently bound on astonishing us all. He was one of the editors of a famous vivisectionist handbook which scandalised many good people. He is, as everybody knows, our leading toxicologist, and he has somehow got himself mentally identified with the "advanced" scientific party. Yet here he positively writes a work on apologetics—a harmony or compromise between science and religion. It is a little of the nature of a patched-up peace, we must admit—that is common enough in this kind of temporary armistice; but the wonder is that Dr. Lauder Brunton should think it worth his while to tread in the well-worn steps of Hugh Miller and Prof. Hitchcock. The book begins with a little talk about Egypt and the Exodus; it then diverges into a long and generally able *résumé* of the theory of evolution, which is purely scientific in spirit; and it finally returns to apologetics in the few last chapters, which are meant to show that the theory in question is not necessarily Atheistic, nor anti-Christian, nor unbiblical. So long as Dr. Brunton sticks to science his work is excellent. He tells the lay-reader as much evolutionism in a small compass as such a person is likely to care about swallowing whole; and he tells it pleasantly and well. Moreover, he gives plenty of wood-cuts, familiar enough to readers of scientific literature, but fresh to the general public—the Darwinian coral islands, the dimorphism of primroses, *compsognathus* and *hesperornis*, *amphioxus*, the ascidian larva, and the tadpole, the mammoth of La Madelaine, embryo dogs and embryo tortoises, the development of the horse's hoof, and so forth; all of which are excellent in their way. It is when he comes to apologetics, however, that Dr. Brunton begins to surprise us. To say the truth, he seems to reason like a man who does not quite believe his own argument, but thinks it will be nearly good enough for other people. We have all the old compromises refurbished once more—the seven days of creation to be taken as seven epochs; literal interpretation impossible; Paradise just in the place where the human species must have been evolved; the flood due to a local submergence; the ark drifted by currents to Mount Ararat; the sun standing still upon Gibeon merely the record of a total eclipse; and all the rest of it. We do not for a moment mean to suggest that Dr. Brunton is disingenuous in any of his explanations, but we are quite sure that he would not

accept such hypotheses as sufficient if the matter in hand were purely scientific. He seems to have been led away by his desire to smooth matters over, and to show the orthodox that their fears of danger from evolutionism were exaggerated, until, in his anxiety to calm them, he has admitted many rather wooden reconciliations which his maturer judgment will surely show him to be untenable. The conflict between two great schools of thought cannot be set at rest by easy suggestions as to how the ark might have reached Ararat; Dr. Brunton must go many levels deeper than that if he wishes really to touch the roots of the question.

*Koumiss, or Fermented Mare's Milk.* By George L. Carrick, M.D. (Blackwood.) The favourite beverage of the nomad Tartars who inhabit the great plains of South-eastern Russia was first made known to Western Europe by William de Rubruquis in the thirteenth century; but its medicinal virtues seem to have remained unnoticed till John Grieve, a Scotch surgeon in the Russian Army, sent a communication on the subject to the Royal Society of Edinburgh in the year 1784. No marked impression was produced, however, by this or subsequent publications till 1858, when the first regular establishment for the treatment of wasting diseases by fermented mare's milk was opened near the town of Samara. The very considerable success achieved by its founder has stimulated others to follow his example; and at the present time nearly fifteen hundred patients annually resort to the koumiss establishments in the neighbourhood of Samara alone. Most, if not all, of these patients are Russians; but the author of the present work appears to think that existing facilities of communication may attract wanderers in search of health from this country. He tells us that Orenburg may be reached from London with but thirty-three hours (and these not consecutive) of railway travelling. He adds a map to show the best route. A journey of nearly three thousand miles, however, and residence in a country so little familiar to Englishmen, will prove somewhat repugnant to nervous sufferers. Of the benefits to be derived from koumiss in appropriate cases there can be no doubt. The air of the steppes, the outdoor life, the freedom from habitual anxiety and wearing labour, must, of course, contribute largely to the favourable result. Dr. Carrick's treatment of the subject deserves high praise. His book is written in a thoroughly scientific spirit; he has repeatedly visited the steppes; he has observed cases subjected to the koumiss treatment for considerable periods of time, and he has availed himself of the information lying buried in Russian pamphlets and medical periodicals. As physician to the British Embassy at St. Petersburg, his opportunities of observation have been of a most favourable kind, and he seems to have availed himself of them to the full. His book will probably be, for many years to come, the standard work on the subject of which it treats.

*The Perfect Way in Diet.* By Anna Kingsford, M.D. (Kegan Paul, Trench and Co.) This is a digest of facts in favour of the adoption of a purely vegetable diet. The facts are collected from a great variety of sources, and differ widely in their relative weight. It is hardly too much to say that some of them are quite unworthy of being included in a work which seems to have been, in the first instance, presented to the Paris Faculty as a thesis for the doctorate. Those who are enthusiastic in the cause of vegetarianism will find much in the book to confirm them in their views. It may be doubted, however, if it will convert any large number of carnivorous persons; unless, indeed, it succeed in doing so by filling them with disgust at the needless sufferings inflicted on the lower animals in the process of fattening, conveying, and slaughtering them for the market.

*Tables of Qualitative Analysis.* By H. G. Madan. (Oxford: Clarendon Press.) Here are twenty leaves (printed on one side only) of chemical tables for laboratory use. Mr. Madan is right in strongly urging upon teachers and students of practical chemistry the advantage of manufacturing their tables at home. But he is right also in acknowledging the necessity for a short synopsis of directions to aid the analyst in acquiring a general grasp of the course of work and of the sequence of operations. The characters by which Mr. Madan's twelve tables differ from other sets are by no means pronounced, nor are such generally accepted improvements as the blow-pipe tests with an aluminium plate and with hyposulphites introduced. We note, moreover, a few statements that require revision. For example, it is affirmed on p. 2 that oxalates become charred when heated. Again, the directions in some places have been too highly condensed, essential particulars having been omitted. On p. 13, for instance, the "pouring of boiling water over" a precipitate of the mixed chlorides of group i. will not, or may not, effect the complete removal of the lead chloride, and may lead to perplexing difficulties in the after-treatment of the insoluble residue.

*Descriptive Account of the Incised Slate Tablet and other Remains lately discovered at Towyn.* With Plates. By J. Park Harrison, M.A. (Quaritch.) The attention of our readers was directed, some months ago, to the interesting discovery of this tablet, and to Mr. Park Harrison's ingenious attempts to interpret the various outlines which are engraved upon its surface. It is consequently unnecessary in the present instance to do more than state that Mr. Harrison has diligently prosecuted his study of the slate, and has published his results, not as a paper contributed to any of the learned societies, but as an independent publication, amply illustrated. Without acquiescing in all the writer's identifications, it is a pleasure to acknowledge the patient ingenuity which he has expended upon the subject. At least twenty-five distinct figures may be traced in these incised outlines; some being regarded as celts, others as urns and baskets, while others again are said to represent a tunic, a chiton, and a helmet. The writer suggests that the slate may contain a funeral list of objects required by a deceased chieftain. The excellent autograph which forms the frontispiece speaks for itself, and enables the reader to form his own opinion as to the validity of the suggested identifications.

*Geological Survey of Newfoundland.* Alexander Murray, Director; James P. Howley, Assistant. (Stanford.) For nearly eighteen years Mr. Murray has been officially engaged in working out the geology of Newfoundland. His periodical *Reports of Progress* have been so highly valued that many of them are no longer to be obtained, and he has consequently been led to republish the whole series in a connected form. It was his first intention to prepare a condensation of the Reports, illustrated with a small-scale geological map, with plates of sections and with figures of fossils. Such a work would have been highly acceptable; but failing, through lack of time, to accomplish this task, he has contented himself with reproducing the official Reports, revised and modified where the progress of our knowledge rendered revision necessary. While acknowledging the great value of the volume, we may express a hope that Mr. Murray will yet see his way to do for Newfoundland what Dr. Dawson has so admirably done for Nova Scotia in his well-known *Acadian Geology*. As for the volume before us, we need merely remark that it is brimful of solid matter, and must become the standard work to which reference will always

be made when studying the geology of Newfoundland. But it sadly wants an index.

*The World's Foundations*: or, Geology for Beginners. By Agnes Giberne. (Seeley, Jackson and Halliday.) Encouraged by the generous reception accorded to her little book on astronomy, Miss Giberne has now ventured to try her hand on a popular work on geology. The result is not altogether unsatisfactory. Her compilation is professedly intended only for beginners, and it would therefore be unfair to expect any display of profound scientific knowledge. The book is written in a simple strain, and its pages are freely sprinkled with Scriptural quotations.

*A Pocket Guide to British Ferns*. By Marian S. Ridley. (David Bogue.) Miss Ridley claims as the special feature of her little book the plan of tabulating by words without figures such features as alone are absolutely necessary to identify a fern. The forms she has adopted for this purpose, her introductory chapters, and her explanation of terms are likely to render her guide very useful to beginners.

#### NOTES OF TRAVEL.

NEW ZEALANDERS are not given to mountaineering, and, consequently, several of the highest peaks in the islands have never been trodden by human foot; still it is surprising, as the *Colonies* remarks, that English mountaineers have never done the work for them, and that it should have been left to an American to scale the precipices and examine the crater of Tongariro. It is satisfactory, however, to learn from our contemporary that Herr Emil Boss, accompanied by several members of the Alpine Club, has reached Melbourne on the way to New Zealand, and that they are determined to ascend all the principal peaks and explore the vast glaciers surrounding Mount Cook. They have with them Kaufmann, a well-known Swiss guide, and their leader has had great experience in the Andes and Himalayas, as well as in Switzerland. After concluding their work in New Zealand, the party propose to go to New Guinea for the purpose of exploration, and they will probably ascend Mount Owen Stanley.

ABOUT two years since a portion of Père Depelchin's expedition at Gubuluwayo, in Matabele Land, started for Umzila's kraal to establish a mission, and much interest was taken in their journey, as no white man, we believe, had ever attempted it before. The chief's kraal was eventually reached, but the party had had to abandon their wagon, and arrived in a state of great distress. Père A. H. Law, who had proved himself an accomplished geographer, soon died, partly, it is feared, from hunger. Père Wehl afterwards succumbed to fever at Sofala; but Frère Desadeleer, we have just learned, succeeded in carrying supplies from that place across Umzila's country to Umgau, where the wagon was in charge of Frère Hedley. These two men, after paying Umzila, succeeded by sheer pluck in making their way back alone with their wagon to Gubuluwayo.

In his account of his expedition to Stanley Pool, Père Augouard mentions that, after passing Manika, Mazinga, and Kikai, he marched for two hours through a slightly undulating plain, and then arrived at a great market where eight roads met, and just beyond which he reached the banks of a considerable river. This river, which was then over eighty feet broad, is named the Eluala, and is not marked on Stanley's map; but then it must be remembered that that traveller came down the river in boats and canoes. During the rainy season, the Eluala is said to be some thirty or thirty-five feet deep. Père Augouard appears to have been the first to

travel by this route, as the most intense curiosity was exhibited at the appearance of a white man. He had the same difficulty as some of his predecessors in finding Manyanga.

A TELEGRAM from Irkutsk states that Mr. Jackson and his companion, to whose journey we have already alluded, were to leave Yakutsk on March 12, accompanied by a sailor of the *Jeannette* and an interpreter. Their destination will be the mouth of the Lena, whither Mr. Melville, the engineer of the ill-fated vessel, has already gone to commence a careful search for De Long and the other survivors of the expedition, as well as for the records which they have hidden from time to time. Lieut. Danenhauer, who has suffered terribly in his eyes from snow-glare, was to leave Irkutsk on March 14 on his homeward journey.

PROF. HACKEL reports from Ceylon that he has finished his zoological work on the south coast of the island, and that during February he intended to visit the virgin forests of the interior, in company with Dr. Trome, the botanist.

THE Royal Agricultural Society of British Guiana are about to publish, under the editorship of Mr. E. F. im Thurn, a half-yearly *Journal*, for the record not only of their proceedings, but of papers and notes on matters connected with the agriculture, commerce, geography, meteorology, chemistry, botany, ornithology, entomology, and anthropology of British Guiana. The editor already has a number of papers at his disposal, and others are in active preparation.

#### SCIENCE NOTES.

*Geological Society of France*.—This society has just issued an unusually thick number of its monthly *Bulletin*, amply illustrated with maps and sections, and containing a record of its autumnal meeting—the *réunion extraordinaire*—which was held at Semur, in the Department of Côte-d'Or. The granite, granulite, and other crystalline rocks of the Morvan offered an interesting field of study to the petrologist; while the Liassic and Oolitic formations furnished the palaeontologist with an ample series of fossils. The principal contributors to the present *Bulletin* are M. Collenot, the president of the session, and MM. Michel-Lévy and Ch. Velain, who acted as secretaries. In this country the nearest approach to the pleasant geological gatherings herein described are the excursions of the Geologists' Association; but, although these are admirably organised, they are not generally productive of such valuable Reports as those just published by the French society. It is to be regretted, however, that the Report of the Semur meeting, held in 1879, has not appeared at an earlier date.

MISS E. A. ORMEROD's lecture on "Injurious Insects" lately delivered at the Royal Agricultural College, Cirencester, has been reprinted in a pamphlet form by Messrs. Sonnenschein.

#### PHILOLOGY NOTES.

In spite of the sad condition in which Ireland is plunged, the patriots who feel an interest in the continued life of the Irish language are still active and successful. A budget of little books issued by them has just reached us. The Gaelic Union has got printed within the last few years the following cheap books:—*Irish Grammar Rules*, by John Nolan; a First and a Second Book of Lessons in Gaelic, by the same; *The Youthful Exploits of Fionn*, edited by David Comyn, with an English translation and glossary; *The Lay of Oisín in the Land of the*

*Young*, similarly edited by Mr. Comyn; Keating's *History of Ireland* (book i., part i.), with an English translation and glossary by P. W. Joyce, LL.D. With these may be mentioned, though published independently of the Gaelic Union, Mr. Joyce's *School Irish Grammar*, which is the most handy and accurate work of its kind in existence. The publishers of all these books are Messrs. Gill and Son (Dublin), with the exception of *Oisín*, which was published by Chamney (Dublin). They range in price from 6d. to 1s. 4d.

AMONG the numerous recent contributions to Zend and Pehlevi philology we may note the following:—Dr. Bartholomæi's first volume of *Arische Forschungen* is mainly concerned with miscellaneous difficult questions of Zend phonetics, and with the critical restitution and interpretation of some of those sections of the *Zendavesta* which are supposed to have been metrical compositions at the outset, though their metrical character has been obscured in the MSS. The question as to the best method for transliterating the Zend characters into Roman ones, which is treated incidentally in Dr. Bartholomæi's book, has been discussed with much detail in two recent papers by Profs. Pischel and de Harlez, and formed the subject of an animated debate in the Aryan section of the Berlin Congress of Orientalists, where it was resolved to entrust a committee with the task of working out proposals for a uniform system of Roman equivalents for the Zend characters. M. de Harlez's new work, entitled *Introduction à l'Étude de l'Avesta et de la Religion mazdéenne*, goes over the whole ground of Zend philology. This is a very readable book; and, though many of the conclusions which the author has arrived at are likely to evoke contradiction from more quarters than one, it must be owned that he has brought together much useful information in a narrow compass, and has not endeavoured to veil existing difficulties, as is often done in works destined, like the one under notice, for the general reader rather than for the specialist. On most controverted points, M. de Harlez's views coincide with those of Prof. Spiegel, of Erlangen, who has contributed to the last number of the journal of the German Oriental Society an interesting paper on the place and time of the composition of the *Zendavesta*. The gist of Prof. Spiegel's paper consists of an elaborate refutation of all the reasons which have been adduced in favour of the alleged Bactrian origin of the *Zendavesta*. The Bactrian theory has for some time been the received one; and Prof. Spiegel himself in 1867 styled his *Grammar of the Forstan language an Old-Bactrian Grammar* (*Grammatik der altbaktrischen Sprache*). The veteran scholar now contends for the Median town and province of Rai as having the best claim to be considered as the original home of the Zoroastrian movement. The readers of the ACADEMY will remember the letters on the same subject by Mr. Sayce, and by M. Darmesteter and M. de Harlez, which appeared in these columns in August last year. It is much to be regretted that the origin of one of the purest and most interesting religions of the world should continue to be involved in obscurity even after a century of patient research; and it only remains to hope that successful excavations in the ancient seats of Zoroastrian civilisation may some day remove the mystery. The small number of printed works in Pehlevi is receiving an important addition in the steadily progressing Bombay edition of the Dinkard, which has now arrived at the third volume. The Dinkard is the most bulky Pehlevi work which has come down to the present time; and its importance, both from an historical and linguistic point of view, is on a par with its size. The edition of the Pehlevi text and a Guzerati translation has been pro-

pared by Peshotun Dustoor Behramjee Sunjana, and an English version has been added by Ratanshah E. Kohiyar. Dr. West, the eminent Pehlevi scholar, has published in M. de Harlez's new periodical, the *Muséon*, a notice on an ancient MS. of the Sassanian Farhang, which differs considerably from the printed text of that work. We will not omit from our list, though it appeared as far back as December 1880, Prof. Darmesteter's highly suggestive paper on *Les six Feux dans le Talmud et dans le Bandehesh*. The existence in the Talmud of religious notions borrowed from the Parsees seems now fairly established. Prof. Spiegel's standard work on the Old-Persian cuneiform inscriptions, the language of which is so closely allied to Zend or Avestan, has gone through a new edition, in which it has been thoroughly brought up to date. Prof. Hübschmann is engaged in writing both an Iranian and an Armenian Grammar for the series of *Indo-germanische Grammatiken*.

### MEETINGS OF SOCIETIES.

#### PHILOLOGICAL SOCIETY.—(Friday, March 7.)

A. J. ELLIS, Esq., President, in the Chair.—Dr. J. A. H. Murray explained the system on which he proposed to mark the pronunciation of the catchwords in the society's English Dictionary. He thought there were five pronunciations in use, which varied in distinctness—(1) the musical, that used in singing; (2) the rhetorical; (3) the cultivated, used in reading aloud to a friend; (4) the familiar, of ordinary speech; (5) the vulgar. He proposed to adopt a system like Smart's, that would show the familiar as well as the cultivated pronunciation, marking the slurred vowels of error, dollar, father, say, with a short mark, which, while it showed that they were all slurred into the same sound in familiar speech, would still denote what they developed into in more distinct utterance. He had been obliged to give up the "glossic" of Mr. Ellis, which was founded on a purely English basis, as well as the "palaeotype" development by the same gentleman of Mr. Sweet's "narrow romic." As almost all English vowels were wide, as in "pitiful," he would reverse Mr. Sweet's notation, and use roman type for wide vowels and italic for narrow ones, marking length by —. Dr. Murray then gave practical illustrations of his system of notation.—Mr. Ellis, on the whole, declared himself satisfied with this scheme; but Mr. Sweet and Mr. Lecky strongly recommended a less complicated plan, suggesting Mr. Sweet's broad romic as an alternative, and doubted the wisdom of employing symbols having a definite value among scientific pronouncians in a directly opposite value in the Dictionary.

#### ROYAL HISTORICAL SOCIETY.—(Thursday, March 16.)

JAMES HEYWOOD, Esq., in the Chair.—The following papers were read:—(1) "The English Acquisition and Loss of Dunkirk," by the Rev. S. A. Swain. The paper mentioned the Flanders campaign of 1657 as presenting great interest and importance, and dwelt on Cromwell's projects for the good of the nation, his intentions in seeking to get possession of Dunkirk, choice of instruments, Sir W. Lockhart, alliance offensive and defensive with France, the English contingent of 6,000, the taking of Mardyke, Falconberg's visit to France, the capitulation and occupation of Dunkirk, the treaty for the sale of Dunkirk to Charles II. and its subsequent chequered history.—(2) "The Emperor Frederick II. of the House of Hohenstaufen," by the Rev. Canon Pennington. After referring to the paucity of information concerning this noble character which was available to English readers before Dean Milman wrote his *History of Latin Christianity*, the lecturer spoke of the family and birthplace of Frederick II., and referred to his election to be Holy Roman Emperor. He then drew attention to his great intellectual powers and linguistic accomplishments, his artistic and scientific tastes, and, above all, his solicitude for the internal

regulation of his kingdom. He directed each town in his kingdom to send two deputies to an assembly summoned to regulate the ways and means of raising the supplies. But his marvellous powers were wasted on an age not ripe for them. A description was then given of the conflict with the Popes in the thirteenth century for the supremacy in Europe, in which he was beaten, partly because he held in too great awe the Papacy, which lay like a leaden weight on the minds of the inhabitants of Europe.

#### ROYAL ASIATIC SOCIETY.—(Monday, March 20.)

SIR E. COLEBROOKE, M.P., President, in the Chair.—Dr. R. G. Latham read a paper on "The Date and Personality of Priyadarai," an amended form of a paper, with the same title, read before the Asiatic Society by him twenty-three years ago, and published in the society's *Journal* for 1860. The argument of this paper was that Priyadarai was contemporary with several kings or magnates with whom he made several compacts—one in the tenth and another in the twelfth year of his reign. With four Sovereigns—viz., Ptolemy, Alexander, Antigonus, and Magas—he appears to have made supplementary compacts in the twenty-seventh year of his rule.—Mr. Arthur Lillie read a paper on "Buddhist Saint-worship," in which he pointed out that there were really two Buddhisms, or forms of Buddhism, one of which proclaimed the annihilation of the saint or Buddha at his death, while the other supported the Buddhism of the rituals with temples, where the dead saints were invoked and asked to forgive sins, &c. Representations of the latter form are, he thought, sufficiently apparent on the well-known sculptures from Amravati and Bharhut.

### FINE ART.

*Die Ruinen Roms.* Von Dr. Franz Reber. Zweite Verbesserte Ausgabe. (Leipzig: Weigel.)

DR. REBER has visited Rome twice since the first edition of his excellent book in 1862–63, and has been able to share in the results of the excavations made on the Palatine, the Forum (scarcely a third of which was previously opened up), and the northern hills, which have so largely modified the views of writers on the antiquities of Rome; while, at the same time, the literary sources of our knowledge have undergone a thorough sifting at the hands of Jordan and others, which has made the researches of Bunsen and Becker antiquated. The discovery of a new inscription often throws an unexpected light on some obscure passage. We may instance Mommsen's application of an inscription recently found by the Ponte San Sisto to illustrate the doubtful passage of Ammianus Marcellinus, 27.3.3, which speaks of the Bridge of Symmachus. The same number of the *Hermes* which contains this discussion (xv., 2, 1880) also contains Klügmann's instructive enquiry as to the two lists annexed to the Description of the *Regiones*.

The order of Reber's book is unchanged, as the description of the ruins in a sort of natural succession is useful to the visitor as well as to the student. In most instances the ancient state of things is noticed before the actual ruins are described so as to make the present condition of the city more comprehensible, while a valuable Introduction is prefixed to the whole, which contains a history of the art of architecture in Rome. The illustration is good. There are thirty-seven lithographed plates, seven plans, a plan of the city, and seventy-two wood-engravings

inserted in the text. A comparison of the restoration of the Forum with that contained in Mr. Nichols' useful book, *The Roman Forum* (1877), will show that we still have to trust largely to conjecture; and, in general, it is a pity that what is tolerably certain is not more clearly distinguished in our books from what is only probable conjecture. In 1876 Mr. Burn issued an Appendix to his *Rome and the Campagna*, noticing the new points of interest; and it is useful to compare his conclusions with those of Reber. The fragments of the Capitoline marble plan of the old city require to be arranged before they can be used as authorities, and here there is room for discussion, as is manifest from the re-arranged plan given opposite (p. 16). The marble plan was set up perpendicularly on a wall, and Reber maintains that therefore the writing on it must have been legible by the passers-by. The fragments, therefore, must be so arranged as to make this possible. This necessitates several differences of arrangement from that given in Jordan's *Forma Urbis*. Sometimes the modern city corresponds to the old; thus the Piazza Navona corresponds to the Stadium (p. 566). But this is rare; and the streets now cut across the old buildings, and this further causes much difficulty about the old gates (see as to the Porta Chiusa, p. 574). There are, however, sufficient remains of the Servian wall to guide us safely on the whole, and we can see that at the mouths of the valleys it curved inwards so as to allow the gates to be guarded by a flanking fire. Part of the wall has, unfortunately, been destroyed by the new railway-station, but the piece which has been cut through makes a great impression on the visitor. The new northern quarter of Rome has required such an alteration of the levels that it is now above the old surface in some, and below it in other, parts; and further identification of the remains is here no longer possible (p. 572). The most remarkable thing is, perhaps, the way in which the magnificent series of Fora of Trajan, &c., have been destroyed, cut across, or altered, as will be manifest by a glance at the plans (pp. 160 and 176).

Reber's primary object is to describe the ruins, not to give a complete topography, of the ancient city; but his book is not merely popular, like Ziegler's *Illustrations*, good though these are; he also appeals to the scholar. We could have wished, however, that he had given the quotations from ancient authors in full, instead of merely referring to them. The full quotations are an important advantage in Nichols' book; and, further, Reber gives no index—the fear of the Index Society has apparently not yet penetrated to Germany. His introduction on the architecture and on the building materials is especially good. The building materials used were, of course, different at different times. The old volcanic tufa of the Campagna, the polygonal basalt (silex) with which the Appian road was paved, the limestone, the peperino from Alba in the Agger—all these are carefully described. While the tufa splits in parallel lines, the limestone splits angularly, and this, of course, determines the character of the walls. Wherever limestone has to be used, the walls must have the so-called cyclopean character. Later on, the splendid brickwork and perfect

mortar enabled such buildings as the vast amphitheatres and baths to be constructed with great rapidity. Reber's remarks often take a wider range. He notices how the mixture of arable with pasture land in the Campagna made that dense population possible which characterised the early ages of Roman history; while the agricultural produce that came down the Tiber from Etruria ("sic fortis Etruria crevit") found its natural outlet in Rome. We now look to the sea as the great channel of civilisation; but the rivers played this part in early times. Along them alone was a large market for produce possible, which would bring about an extensive division of labour. Reber has translated Vitruvius, and his comparison of Greek and Roman temples is instructive. Nothing is more curious than the way in which the early Greek styles passed into orders of architecture. The Roman material was not good until marble was procured; but the Roman peculiarity was construction. The wall and the arch were, with them, all-important. The Basilica has influenced us more than the Parthenon. The account of painting and of art till its downfall after Marcus Aurelius, perhaps in consequence of the great plague which so thinned the educated and artistic classes, is good. The book is very instructive reading throughout; and its wealth of illustrations makes it also suitable to lie on the drawing-room table.

C. W. BOASE.

#### ART BOOKS.

*Biographical Catalogue of the Portraits at Longleat, the Seat of the Marquis of Bath.* By Mary Louisa Boyle. (Elliot Stock.) This very handsome little quarto, with its thick hand-made paper, beautiful type, pretty borders, initial letters, and vignettes, is not unworthy of the old family of the Thynnes or their splendid seat in Wiltshire. It is, nevertheless, a book which it is very difficult to review, as the portraits are treated with regard to the position which chance or convenience has assigned to them in the house, without respect either to chronological sequence or historical importance. Thus we leap from Fair Rosamond to the first Earl and Countess of Carnarvon (temp. Charles I.), from them to Tintoretto, and from Tintoretto to the present Marquis of Bath. This is no doubt an admirable arrangement for visitors whose desire for knowledge is excited by a picture *in situ*, but it makes it very difficult for the reader to obtain a comprehensive view of the collection. It pretends, however, to be nothing more than a catalogue, and we have seldom seen one on which so much care has been expended. The numerous biographies are written in a clever and agreeable style, and, as far as we have tested them, appear accurate as well as interesting. An Index to the portraits at the end makes the book valuable as a work of reference, and we trust that the example of the authoress will not have been set in vain. Catalogues of this kind for all the "great houses" full of "family portraits" are much to be desired. They would not only be a great boon to casual visitors, now too often at the mercy of ignorant housekeepers, but be useful to the student both of history and art. Although, however, this book may be taken in many respects as a model for imitation, we would suggest to anyone who undertakes a similar work that it would be better to preface the catalogue with a sketch of the family, introducing the needful references to

the portraits of the members mentioned. This would reduce the bulk of the catalogue itself, and prevent confusion. The index at the end should give dates as well as names. These modifications and additions would greatly alleviate the inconvenience of a collection of biographies arranged without regard to dates. An index to the painters should also be given.

*Des Précurseurs de la Renaissance.* By M. Eugène Muntz. (Paris: Librairie de l'Art.) This volume is worthy to inaugurate the splendid series of the Bibliothèque internationale de l'Art, the issue of which has already been announced in these pages. Although the author in his Preface modestly asserts that the book is not a history of the gestation of the Renaissance, but that to retrace some of the episodes which best characterise the revival of classical studies has been his sole ambition, his work, dealing, as it does, in a learned and brilliant way with all the most important Tuscan artists and patrons of art that prepared the way for the triumph of the sixteenth century, will be most useful to the general reader, than if it dealt minutely with every detail of the development. Beginning with Niccolò Pisano, that strong uncouth herald of the change that was yet to be so long in coming, M. Muntz shows how the interval between the classicists of the thirteenth and fifteenth centuries was filled up with the labours of archaeologists and epigraphists, who prepared the way for the application of ancient principles of art based on larger and more accurate knowledge. The special value of the volume may be said to be the fullness with which M. Muntz has dealt with those aids to the development of the second Renaissance—the archaeologist, the collector, and the patron. Petrarch, Biondi, Forzetta, Dondi, come in for their share of attention no less than Donatello, Masaccio, and Squarcione. In his sympathy with the classical spirit, M. Muntz goes so far as to pity the ignorance of Botticelli, Filippino Lippi, Perugino, and Pinturicchio, as compared with the knowledge of Mantegna, a little forgetful for the moment, we think, of the important part which the growth of naturalism played in the great development of art from the thirteenth to the sixteenth centuries, and the peculiar interest which attaches to work in which the two spirits are imperfectly harmonised. At all events, the "ignorance" of these artists constitutes no small part of the pleasure of their work to us. It is only in their modern imitators that it becomes unpleasant and ridiculous. The text of M. Muntz, however, precludes him from dwelling on the development of naturalism, and it is the great merit of his book that he adheres to his text and does not diverge into irrelevant discussions or comment, however enticing. The first half of the essay—for such it is, though a long one—is a constant analysis of the art-work of the "Précurseurs" for the discovery of their classical elements. Donatello, Ghiberti, and the rest of them pass through his critical crucible, and even the pious Fra Angelico is found to yield some grains of pagan gold or dross. The newest, and as a contribution to art-knowledge the most important, part of the book is that devoted to the Medici and their marvellous collections. Inventories hitherto inedited have enabled M. Muntz to tell us more of the contents of the great palace in the Via Larga than we knew before. The author's learning and clear style are seen to advantage in the distinctness with which he draws the characters of the several Medici as patrons of art. The work concludes with an admirable account of Savonarola and his attitude towards art. The abundance and excellence of the illustrations add greatly to its value.

#### THE DUDLEY GALLERY.

THIS exhibition is always a pleasant one, and seldom much more, but this year it is duller than usual. Ordinary work by good artists and good work by ordinary artists crowd the walls; and, though there are few of the drawings that would not make a small room brighter and prettier, they are a little wearisome taken altogether. We also regret to say that the hanging is little improved. Merit, apart from reputation, is apparently unrecognised as a claim to good position; but there are two screens instead of one, and for this, at least, we are grateful. As far as we can judge from the obscurity with which it is surrounded, Constance E. Howell's "A Little Lady" (455)—a very pretty drawing of a Persian kitten in a basket—deserved a far better place than it has; and so, if we mistake not, did Mrs. H. Champion's "Lisette" (469); while Edith Capper's "Hard Life" (16), a serious study of an old woman with a bundle of faggots, fine, but not forced, in expression, and strong both in design and modelling, is pinched into a corner of the room. Even Mr. Ruskin, whose elaborate drawing, "In the Pass of Killiecrankie" (511), is placed in the centre of one of the screens, has reason to complain of the hanging of his other drawing, "Study of Box," which, though on a screen in the middle of the room, is too high for its accurate and minute workmanship to be seen without trouble.

Of Mr. Ruskin's drawings it is useless to say much. We all know how patient and careful they are, and how little beauty of composition or truth of aerial perspective they give us. In "The Pass of Killiecrankie" these virtues and defects are striking, but in the little "Study of Box," the perspective does not matter, and the drawing is almost perfect in its small way. The place of honour is occupied by a large and effective drawing by Joseph Knight, called "Lingering Light," which, in spite of the skill with which the rose-lit summits and the green twilight of the valley are rendered, does not please us so much as some other less ambitious effects of his in this exhibition—viz., his "A Breezy Day" (91) and "The Cotter's Field" (111).

To distinguish with anything like accuracy between the merit of the various landscapes and sea views here would need a very large extension of the existing vocabulary, and we shall therefore confine ourselves to a simple notice of such as caused us more than usual pleasure. Among these were J. O'Connor's "Evening on the Thames" (32), "Sandhill, North Wales," by Edwin Ellis (38), and "Oh Pleasant Eventide" (40), by F. Hamilton Jackson. On the whole, perhaps the most serious and successful endeavours not only to sketch, but to paint, a difficult effect is Arthur Severn's "Ice on the Thames" (186), and the cleverest and strongest of the more sketchy views are A. B. Donaldson's "Murano and San Cristoforo" (245) and "Rome from the Piazza of the Pincio" (368). J. H. Leonard's "In Carmarthen Bay" (396) is fine in effect of light and colour, and has more feeling than most of the drawings here; and W. G. Addison's "Apple Blossom" (322) gives not only the colour and lightness of the blossom, but also the depth of the long grass full of flowers, so that it seems as though you could bury your arm and pick. The slightly tinted sketches of "Limehouse" (301) and "The Thames off Rotherhithe" (602) by W. T. M. Hawkesworth are clever, and Arthur G. Bell is broad and simple in his treatment of such seaside studies as "Unloading the Fishboat" (285). "The Blind Arched Gateway" (73) is the most agreeable drawing by Frank Dillon that we have seen of late years, and reminds us, by its breadth of treatment and clearness of light, of those scenes from Egypt which once used to delight us at

the Royal Academy. Alfred Parsons, Percy Tarrant, J. W. B. Knight, T. J. Soper, J. Talmage White, John M'Dougal, R. Phené Spiers, and C. R. Aston also contribute charming little works; and we must not omit to mention that Henry Moore and H. M. Marshall send drawings worthy of their reputation.

Of the exteriors and interiors of buildings there are some choice drawings, notably one by A. H. Haig—"In the Castle of Gropsholm, Sweden" (179)—perhaps, on the whole, the most masterly piece of work here; but John Evans is almost as sure of hand, and has a refinement of his own. His views in St. Mark's, Venice (346, 507, 528, and 604), are all very delicate and sweet in colour, and deft in imitation. Luther Hooper's "Staple Inn, Holborn," is also very good in light and colour, and a good, careful piece of sympathetic work.

With the exception of some charming little cottage scenes by Joseph Clark and J. Hayllar's "The Highest Bidder" (353) there is little worth notice among the figure subjects except J. H. Henshall's "Aumeris" (122) and those we have already alluded to; but Linnie Watt's "Far from the Madding Crowd" (258) is good as far as it goes, and B. W. Allan's "Fish Stall in Venice" (310) and "Seville Market" (22) are evidence of a strong and original painter.

Of "still life" there is a remarkable drawing by B. Spiers, called "A Bit of Wadour Street" (510), but it is remarkable chiefly for care and skill thrown away upon a number of ugly articles arranged in a very ugly manner. Far more effective and beautiful is Millicent Gros's "Souvenir of Algeria" (197). Helen Thornycroft's refined studies of flowers and glass, Victoria Dubourg's "Roses," Mrs. Rosset's "Birds," and other studies of the same kind by other hands show the popularity of this branch of art.

F. Calcott's statuette, called "A Mother's Love," is full of natural grace, and is another welcome instance of the new vitality of modern sculpture. COSMO MONKHOUSE.

## ARCHAEOLOGICAL NOTES ON THE TERRA D' OTRANTO.

### II.

#### "SPECCHIE" AND "TRUDDHI."

THE neighbouring *pietra fitta* of the Specchia di Santa-Teresa associates a megalithic monument with a specimen of another class of monuments belonging to a very early period—I might almost say *prehistoric* without the common abuse of this vague term—which are, on the Italian mainland, peculiar to the Terra d' Otranto, where they occur in considerable numbers. I allude to what are popularly called *specchie*, which are commonly supposed to be the remains of watch-towers similar to those with which all the coasts of Southern Italy were studded in the sixteenth century for the purpose of watching the sudden descents of the corsairs from Barbary, and of offering a refuge to the peasants when surprised in the fields. But, before speaking of the ancient *specchie* of the Terra d' Otranto, it may be well to mention a peculiar usage still kept up by the inhabitants of the two provinces of Bari and Lecce, in accordance with a tradition undoubtedly of the highest antiquity, which has faithfully preserved its details through the lapse of ages.

The traveller who visits these provinces, starting from a line drawn diagonally across the country from Trani on the Adriatic to Taranto on the Ionian Sea, cannot fail to be struck by the fact that almost all the fields, and especially those occupied by thickets of ancient olive-trees, are enclosed with walls of uncemented stones; and that in each there is a round construction exactly reproducing, though on a smaller scale, the type, arrangements, and mode of building

which characterise the *nuraghi* of Sardinia, the *sesi* of the Island of Pantellaria, and the *talayots* of the Balearic Islands. This kind of construction is called in the country *truddhu*, an alteration of the Latin *trullum*, in conformity with the phonetic laws of the local dialect, which approximate closely to those of the Sicilian.

Like the *nuraghe*, the *truddhu* is a kind of massive conical tower, formed of a pile of uncemented stones very slightly hewn, with an outside casing of somewhat more careful, though still irregular, workmanship. Inside this mass of stones is a round chamber, shaped like a *tholos*, the conical vault of which has been formed by a succession of circular courses overlapping one another. A low door with a stone lintel gives access to this chamber. In most cases there is only one—in the lower part of the solid portion of the tower. Sometimes, however, when the *truddhu* is of unusually large dimensions, a second chamber of the same shape is built over the first, forming an upper story, and approached by a narrow flight of steps running along the side of the tower—steps which, it should be added, are always set in the outer casing even when there is no second chamber, for, forming a spiral round the *truddhu*, they lead to the paved platform which forms the top of the building, and gives it the shape of a truncated cone. This platform is not always absolutely horizontal, but sometimes forms a kind of circular roof, very gently sloping, with a boss in the centre. It should also be remarked that, when the execution of the *truddhu* is especially careful, the sides of the cone are not in one continuous slope, but there are two or three slightly retreating stages—another point in which their construction resembles that of the *nuraghi*.

The *truddhu* serves as a shelter against bad weather, and as a dwelling-place by night during the agricultural season. It is rendered necessary by the peculiar habits of the people. Here, as throughout the South of Italy, the peasants do not live, as in Western Europe, in villages and hamlets scattered over the face of the country. They herd together in populous cities or in large towns situated at a distance of five or six leagues, or even farther, from one another. In the provinces where insecurity is the permanent condition of things, like Basilicata and Calabria, the labourer, to avoid being robbed by bandits, is compelled to waste several hours every day in walking out to his farm and home again. Sometimes the peasants travel in large bands for mutual defence; they march like a regiment to the ground where they are to work or to gather in the crops, and bivouac on it for two or three days with only the branches of trees for shelter. In the provinces of Bari and Lecce brigandage has always been unknown; the property is more divided, or at least more habitually parcelled out, in the hands of small freeholders. The peasant cultivates his field by himself, or merely with the help of two or three labourers. The use of the *truddhu*, in which he can sleep in perfect security, relieves him from the grievous loss of time caused by the daily return to the town, and, by furnishing him with a temporary dwelling, allows him to live in the field as long as it is necessary to do so. Sometimes, indeed, though very rarely, this kind of construction is changed into a permanent home. For instance, there is a village in the mountain above Fasano, which I visited, called Alberobello, which consists wholly of houses shaped like *truddhi*, called in this district *caseddhe*—i.e., *caselle*. There is another of the same kind which has grown up within the last few years on the estates of the Prince of Frasso, about five miles to the west of San-Vito de Normanni, in the province of Lecce. The modern employment of the *truddhi* at the South-east extremity

of the Italian mainland will probably have to be taken into account, at least for purposes of analogy, in the still keenly controverted question of the real purpose of the mysterious *nuraghi* of Sardinia. It is a powerful argument in favour of the opinion that they were intended for human habitation.

It would be impossible even to attempt to establish a chronology and to assign dates to the *truddhi*, hundreds of thousands of which cover the plains of the two provinces to which their use is limited. I have seen some built with my own eyes. On the other hand, a very large number have long been deserted, and are fast crumbling away, their very site being now indicated merely by a shapeless heap of stones. But they are built in conformity with a tradition which is so universally established, as regards the choice of materials, and the shape and arrangement of the building, that there are no means whatever of distinguishing those which are really ancient from those which were made but yesterday. They are of no particular epoch. It is, however, beyond a doubt that a practice at once so foreign to the other Italian populations, as well as to the various civilisations which, since the first arrival of the Hellenic colonists in the country, have successively made their influence felt, and so thoroughly in conformity with the vestiges of their manners and industry which the earliest inhabitants of certain of the islands of the Western basin of the Mediterranean have bequeathed to us—it is, I say, beyond a doubt that the origin of such a practice must be traced to a past anterior to written history; and that, handed down from generation to generation by the force of habit, it goes back to the primitive manners of the Iapygo-Messapian populations, before they were Hellenised by contact with the Tarentines and the traders who frequented their coasts. For it is certainly a fact by no means without significance that, on the side of Apulia, the limit of the actual employment of the constructions here spoken of precisely corresponds to what formed in antiquity the ethnographical limit between the Messapians and Apulians.

These observations on the mode in which the use of the *truddhi* has been perpetuated to our own days may be of some interest in themselves. But it seemed to me more particularly that they would form an almost indispensable introduction to what I had to say of the ancient monuments commonly known as *specchie*. In fact, the first impression produced on the spectator's mind by the sight of these *specchie*, which, both in dimensions and in appearance, are singularly like large *nuraghi*, is that they are simply *truddhi* of more ancient date and of colossal size.

So far as can be judged from their present half-ruinous condition, the *specchie* are likewise masses of rough-hewn stones without mortar, in the shape of truncated cones, with an outer casing more carefully executed than the rude masonry of the interior, but always irregular in character. Their structure is precisely similar to that of the modern *truddhi*, and their materials are identical; but they are on a much larger scale.

Many circumstances attest the very high antiquity of the *specchie* of the Terra d' Otranto—their distribution, independent of the sites of the historic towns of the country, the walls of which show in their construction unmistakable tokens of Hellenic influence; their ruined state, which often dates ages back, for the scholars of the early Renaissance, like Galateo, saw them as we see them at the present day; and, finally, the popular accretions and legends which cluster round them. The peasants cannot approach them without strong feelings of dread. They were built, as they will have it, by the Devil himself; he

buried treasures beneath them over which he keeps watch with jealous care; and he would strangle the bold seeker who should come in quest of these treasures. When you visit the *specchie* of a parish, your guides suspect you of being a bit of a sorcerer without confessing it.

I know not whether it is these popular superstitions that have defended the *specchie* against the enterprising curiosity of the archaeologists. To the present day not a single one has been ransacked. A few years ago Signor L. de Simone undertook the exploration of that of Calone, one of the most gigantic of all, which is to be seen about half-a-mile from the coast as you go from Lecce to Otranto. It is 256 mètres round at its base, and its height on the side which is best preserved is still above 17 mètres. It is said to have remained intact till the period of the First Empire, when an English frigate cannonaded it for several hours, and partially demolished it, taking it, from the sea, for a formidable military work. But Signor de Simone was soon compelled by malaria to abandon the works before any result had been obtained. This absolute freedom from investigation prevents any certainty as to whether the resemblance between the ancient *specchie* and the modern *truddhi* is purely external and fortuitous, or amounts to a complete similarity—whether the former enclose within their mass of stones a chamber like that of the latter. We have as yet no certain data to settle the hotly controverted question as to the real nature and purpose of the *specchie*. Opinions equally varied with those which prevail on the subject of the *nuraghi* of Sardinia have been put forward by local antiquaries on these enigmatical buildings. In these, as in those, some scholars recognise forts and watch-towers; others, ornamental tombs; and a third school, dwelling-places. Of these three explanations, the first appears to me the least probable; I am most inclined to the third, relying especially on their analogy to the *truddhi*. Meanwhile, until regular excavations are undertaken, the opinion which attributes to the *specchie* a funerary character must not be too absolutely rejected. And in case of its being found true, Signor de Simone, who hesitates, like myself, to decide the question in its present position in the affirmative, justly points out that the *specchie* of the old Iapygo-Messapian territory may be compared with certain tumuli in the Isle of Symé, which are formed by heaping together large stones, instead of piling up earth.

FRANÇOIS LENORMANT.

#### ART SALES.

A SALE of modern pictures more important and interesting than any that have lately fallen under the hammer took place on Saturday last at Messrs. Christie, Manson and Woods'. The canvases had formed the collection of Mr. Burnett, of Phillimore Gardens. They comprised water-colour drawings and oil pictures, the work both of foreign and English artists. But, while the water-colours were generally not remarkable, the oil pictures were on the whole very noteworthy; and, while the foreign paintings included but two or three by artists of high merit, the English pictures were mainly the work of eminent men. One very noticeable feature in the collection was a picture which has been described as having made the reputation of its painter, Mr. E. J. Gregory, one of the most brilliant members of the Institute of Water-Colour Painters. But Mr. Gregory's work in Mr. Burnett's collection was a work in oils, and remarkable as much for insight into character as for its victory over certain of the technical difficulties of painting. It is called "Dawn," and it represents an ordinary modern drawing-room—the corner of it near to the windows, by

which stands a grand piano. The morning is early, or the night late; a dance is not yet quite over, but the yellow gas-light will not be able to struggle much longer with the gray blue flood of dawn now penetrating into the chamber. At the piano, and still faithful to the keyboard and the task, sits an exhausted paid musician, too weary not to yawn, and too polite to yawn except in secret, and at the curve of the instrument stand two figures, the leading ones of the story, such as it is. The one is a beauty who has already been the recipient of many admirations; the other, an idler who has flattered so much that it has become a too laborious business to flatter with any symptom of sincerity. The delusion of his earnestness can hardly be maintained. A thorough student of character is revealed in the author of this picture, but the success of the labour that has been bestowed on the execution shows us likewise an artist for whom painting, and not literature, is the proper medium of expression. The sum of £430 was realised for this canvas at Saturday's sale. Mr. Hook's pictures all of them realised still higher prices. One of the finest of these was his "Gathering Seaweed, Coast of Brittany," a picture remarkable for having preserved to its completion the unity and harmony of the original conception; noteworthy likewise as an instance—and instances are not too frequent even in Mr. Hook's admirable canvases—of the due relation of the figures to the landscape. This picture realised £913. Another work of Mr. Hook's, "A Sailor's Wedding Party"—a canvas, like the last, dating from about eighteen years ago—realised £1,060; while a third, "Home with the Tide," exhibited at the Royal Academy only about one year since, fetched no less a sum than £1,333. Of other contemporary work by English painters there was little demanding record; and though the foreign work contained at least one example by Jacquet, an artist recently notorious, the best French picture was by Jules Lefebvre, and it was not without offence. Rarely has a more debased type of the female figure been studied with greater devotion or a more curious accuracy. Rarely has such well-considered draughtsmanship been lavished on a theme so empty of inspiration. The work was very tiny, and the amusing price obtained for it—£38—expressed not the French appreciation of the artist, but the English estimate of his theme. Pierre Billet's masculine brush is better understood; his two pictures sold respectively for £472 and £525. The remaining work worth notice was earlier work. Among the water-colours, "A View of a French Town," by Cotman—fairly but not finely representative of his architectural draughtsmanship—sold for £52 10s.; a Dewint distinctly ugly in composition, but with the excellent tonality of the master, fetched £63; and a drawing by William Hunt, comparable only with his very finest productions, and so justifying in a measure the fame by which his more insignificant drawings profit, realised £105. Among earlier English oil paintings, we must note a somewhat sketchy picture by Constable, interesting both by its treatment and its theme—"The Opening of Waterloo Bridge." It scarcely reached £100. By William Müller, who understood the landscape of the East much more completely than the landscape of England, there was one somewhat important example. It was a view in Wales, and it sold for £572, the artist's scanty understanding of the sentiment of British landscape having apparently done little in diminution of a fame really due to brilliant handiwork.

THE sale of Lord Beaconsfield's remaining art treasures, which took place at Messrs. Sotheby's on Monday, included very few objects of real artistic interest. Some Blakes his lordship had probably inherited from his

father. A daily contemporary would probably decline to plead guilty to exaggeration in having hinted that Lord Beaconsfield's taste in portraiture was confined to the desire to multiply examples of the portrait of Mr. Wyndham Lewis. Certainly Lord Beaconsfield's collection was not that of a typical collector.

#### NOTES ON ART AND ARCHAEOLOGY.

THE interesting frescoes by Botticelli, recently removed from the Lemmi villa, near Florence, have been received at the Louvre.

MR. WALTNER, who has of late etched so much and so unequally, has etched nothing better than the plate he has lately finished for Mr. Arthur Tooth—"The Besieged," after Frank Holl. The original artist is not a colourist, but he is "a tonist;" and it is, perhaps, to his skill in dealing with gradations of black and gray, in masses well distributed, that we owe to him so many of the lugubrious themes the choice of which some have associated with his own sentiment. Be this as it may, Mr. Holl's painting is, from its avoidance of colour and its preference for light and shade, peculiarly fitted for the facile translation of the modern etcher. And Mr. Waltner has done his work with freedom and dash. The subject may yet be in the memory of our readers, who have probably seen the exhibited canvas. The time chosen is some moment late in the siege of a city; the scene, some humble interior, in which a mother and two children await the event. The mother is a square, bared-armed woman of between thirty and forty. She gazes anxiously, with worn face, out of the window, past which troop a company of armed men. Her hand is round the shoulders of her elder child, and the child is herself aware of their critical condition—like her mother, the look of starvation has settled on her face. The third person of the group—the unconscious three-year-old baby—is seated alone at the table, and takes her morning meal (a bowl of food the others have spared for her) with perfect contentment and unconsciousness of ill. Mr. Waltner has retained in his plate the melancholy interest which belongs to the first design.

THE *Great Historic Galleries* for March has an excellent photograph of Mrs. Hope's Metzru—"A Gentleman Writing"—which was exhibited at Burlington House last winter. The other illustrations are from miniatures by Cosway, including three of the beautiful Duchess of Devonshire, which belong to the Queen.

M. MASPERO has been lately at work upon the small pyramid of El-Koôla, situated about half-way between El-Kenân and the ruins of Hieraconopolis. The pyramid is somewhat roughly and irregularly constructed of limestone blocks, the base being about fifty feet square, and the height between thirty and forty feet, though it must originally have been about fifty feet from base to apex. The work of investigation has, in this instance, proved fruitless, neither entrance passage nor inner chambers of any kind having been found, notwithstanding that the pyramid has been nearly destroyed in the attempt to extract from it a secret which it would appear never to have enshrined. The pyramid seems, in fact, to have been only a solid superstructure. Probably, if it were levelled to the ground, a subterranean excavation of the kind found in the valley of the Tombs of the Kings might be discovered in the rock upon which it is elevated.

THE *Portfolio* contains a very fine piece of etching by Ludwig Otto, after a head by H. von Angell.

THE *Gazette des Beaux-Arts* opens this month with an important article by M. Lenormant on the terra-cotta statuettes, &c., found at Tarentum. M. Charles Ephrussi describes the drawings of his de la Salle collection in the Louvre, and several excellent reproductions of these are given. Louis Knaus is reviewed by M. de Lostalot; and our last Royal Academy exhibition of "Old Masters" is highly praised by Louis Gonse, who acknowledges that "les Anglais sont passés maîtres en matière d'expositions de tableaux anciens."

*L'Art* for the 12th inst. contains two etchings of high merit. One is by P. Teyssonnières after a picture of the Piazza of St. Mark's, Venice, by Guardi, which admirably preserves the breadth of light and the animation of the figures; the other is by L. Delrosses, after "Les Lavandières," by Boucher, a rich composition abounding in artifice and grace. In the fourth part of the study of David d'Angers we are given some more samples of his medallions. That of Marie-Anne-Agathe Arago, an old lady in a French cap, is very fine.

Of the first exhibition of the New York Etching Club now being held, a very pleasant and certain assurance of its interest and merit has come to us in the shape of an illustrated Catalogue containing no less than eight etchings. F. S. Church leads the way with one of his individual fancies, a drawing of a witch's daughter, seated quite comfortably on a moon, and taking counsel of an owl. The others, with the exception of a head by F. Dielman, are bits of landscape by Henry Farrer, M. N. and Peter Moran, Stephen Parish, Kruseman van Elten, and J. M. Falconer.

M. ANTONIN PROUST has the approval of the President of the French Republic for the appropriation of the old "Cour des Comptes" and the cavalry barracks on the Quai d'Orsay for the Musée des Arts décoratifs. The sum wasted to make the necessary alterations and additions to the existing buildings is, according to the present proposal, to be raised by a lottery.

ANOTHER supplement has lately been issued of Seemann's *Kunst-historische Bilderbogen*. This time a short explanatory text accompanies the sheets of illustrations. The supplement is valuable as illustrating mediæval miniature painting and early Italian sculpture.

AN important archaeological discovery has been made close to Liège on some property belonging to M. Emile de Laveleye. A score of antique bronzes, including two statuettes of women and three heads of Mercury, have been unearthed in excellent preservation. They are thought to have formed part of a large fountain, and to belong to the beginning of the third century.

THE Société d'Emulation des Côtes du Nord has begun the publication, in parts, of an album, which will contain reproductions of the most interesting objects of antiquity found in Brittany, with notes upon the circumstances of their finding, &c., and upon the museum in which they are now to be seen. One part has already appeared (Saint-Brieuc: Guyon), containing three plates; and there will be ten parts in all, issued at the price of seven francs a part.

PART III. of *American Etchings* contains a very beautiful work by Henry Farrer.

It is proposed to convert the Château of St-Cloud and part of the park into a place of recreation like the Crystal Palace.

WE learn that the student of the Ecole française at Athens who has prepared the Catalogue of the objects preserved in the Constantinople Museum is M. Salomon Reinach, who has been employed during the last two

years in superintending the excavations at Kyme and Myrina. We omitted to state that the Catalogue would appear in Turkish and French.

*Correction.*—Last week we inadvertently spoke of Miss North's collection of pictures of tropical scenery and vegetation, which she proposes to present to the nation at Kew, as numbering "some 1,200 or 1,500." The actual number, we understand, is about 600.

### THE STAGE.

MR. TOOLE's theatre is one of the few playhouses of London at which, in these days of frequent change of aim on the part of our managers, it is still easy to be sure of the intentions of a new piece. Like the Criterion, Mr. Toole's theatre is devoted to noisy fun. At the one playhouse the minor deceptions practised by men upon their female belongings, and the consequences these entail, form the basis of a comedy through which Mr. Wyndham hurries and bustles. At the other, Mr. Toole is certain to illustrate, with a superfluity of "gag" and of caricature, the troubles of a quite unimpeachable member of the lower middle class. Mr. Byron's new piece, "Auntie," fits Mr. Toole's theatre. It is not, or it does not seem to be, very carefully considered. Throughout its course, the probabilities are now and again cheerfully violated; and it hardly pretends to serious interest. But Mr. Byron is an observer and a wit, and he would find it difficult to complete even one of his lesser efforts without betraying the intelligence of his manner of studying commonplace humanity and his faculty of sharp and pointed repartee. The character that gives the name to the present production is a relative who has every disagreeable quality that it ever occurred to the satirical dramatist to bestow upon a mother-in-law; but who is without any shadow of a mother-in-law's claims upon our indulgence. The principal sufferer from the persecutions of this relation is represented by Mr. Toole, who, under a new name, offers us his ancient effects. In Miss Eliza Johnstone, who acts the Aunt, the theatre has an actress of humour, and in Miss Emery and Miss Liston it has actresses of charm. An audience unwilling to be critical will find in the whole performance some excuse for being entertained.

### MUSIC.

THE performance of Berlioz's "Faust" at the Albert Hall last Wednesday evening attracted a large and enthusiastic audience. The brilliant Hungarian March, the delicate Ballet of Sylphs, and the characteristic Mephisto Serenade were rapturously applauded and encored, and the general reception of the whole work showed how well it is understood, and how popular it has become. In so wide an arena as that of the Albert Hall, it is, of course, impossible to get an entirely satisfactory rendering of the soli parts, but the artistes did their best, and contributed much to the success of the evening. Mme. Marie Roze was the Margarita, and interpreted her share of the music with much feeling; she pleased especially in the "King of Thule" ballad. Mr. Vernon Rigby took the important part of Faust, and, with the exception of the beginning of the trio in the second part, sang with great care, and acquitted himself most creditably. Mr. F. King gave an effective but at times slightly overmarked rendering of Mephistopheles; and Mr. Henry Pratt sang in his usual style the "Brander" music. Mr. J. Barnby deserves great praise for the effective choral singing.

IN consequence of the success attending the Thursday evening concerts at the Royal

Victoria Hall, it is proposed to give an additional concert in the week. A series of Monday evening concerts will be started, and the programme will consist of concerted and instrumental music, interspersed with recitals in costume.

THE dates of the fifth season of the Richter Concerts are announced as follows:—May 5, 8, 15, 22; June 2, 5, 12, 19, and 26. The programmes will include several interesting novelties. At the first concert, Brahms' new concerto for piano and orchestra will be given; and at the third, Liszt's "Graner Messe." This latter work, one of Liszt's most important compositions, was noticed in these columns on the occasion of its performance last year at the Antwerp "Liszt Festival." At the fourth, we shall have Sucher's cantata, "Das Waldfräulein," for solo and chorus. We are also promised a new symphony in D by Dvorak (dedicated to Herr Richter), and other important works which will be duly announced. All the Beethoven symphonies, with the exception of the first and second, will be given, and also the "Missa Solemnis." Herr E. Schiever will be leader, Herr Frantzen chorus director, and Herr Hans Richter conductor. We are sorry that at the first concert, on Friday, May 5, Brahms' second concerto for pianoforte and orchestra is announced to be performed for the first time in England by Mr. Eugene D'Albert. The above-mentioned date is also fixed for the "Rheingold," the first night of the "Ring des Nibelungen" at Her Majesty's Theatre. As the "Ring" will of course demand the attention of the press and attract many of the musical public, we would suggest the advisability of deferring, if possible, the performance of the concerto to a later date.

THE first season of the Grand German Opera and Wagner Cycle will commence at the Theatre Royal Drury Lane on May 18, with "Lohengrin." There will be two series of performances, during which "Lohengrin" will be given four times, "Tannhäuser" three, "Fliegende Holländer" three, "Meistersinger" four, "Tristan und Isolde" three, "Fidelio" three, and "Cosi Fan Tutte" and "Euryanthe" each twice. The artists engaged for these performances are chiefly from the Hamburg Opera House. The chorus has been selected from the best voices of the Royal Opera Houses in Hamburg, Hanover, Schwerin, &c. The *mise-en-scène*, costumes, &c., designed and executed in Germany, are said to be of the most complete description. The orchestra will be that of Herr Franke's "Richter Concerts," and Herr Hans Richter will conduct all the performances.

MESSRS. SCHULZ-CURTJUS announce the fourth season of "Symphony Concerts" at St. James's Hall on the following dates:—May 1, 12, 18; June 8, 15, and 22. Mr. Charles Hallé will be conductor, and Mr. Ludwig Straus leader. Prof. A. Wilhelmj has promised to make his first *entrée* in London at these concerts after his long absence in America and Australia. The programmes will be composed of standard works. The proceeds of these six symphony concerts will be devoted to the funds of the Royal College of Music.

MR. GANZ announces his usual series of five orchestral concerts, to commence on Saturday, April 22. We are promised as novelties F. Liszt's symphony to Dante's "Divina Commedia" for orchestra and female chorus, and a new symphony in D by Sgambati in five movements. Berlioz's "Symphony fantastique" will be repeated, and possibly a performance of Gluck's "Iphigenia in Tauris" will be given.

MR. WILLIAM CHAPPELL is preparing a new and much enlarged edition of his well-known *Popular Music of the Olden Time*.

## William Blackwood &amp; Sons' List.

This day is published.  
**THE FIXED PERIOD: a Novel.**  
 By ANTHONY TROLLOPE.

## LITERATURE.

*Descriptive Sociology*; or, Groups of Sociological Facts, Classified and Arranged by Herbert Spencer. "French." Compiled and Abstracted by James Collier. (Williams & Norgate.)

THIS large folio is the eighth, and, we regret to add, the last, instalment of Mr. Herbert Spencer's great compilation, *Descriptive Sociology*. The work has to be brought to a premature end because of the pecuniary loss involved in the undertaking. In its incomplete state it consists of eight parts—four dealing with uncivilised societies, two with civilised societies extinct or decayed, and two with civilised societies still flourishing. Mr. Collier, who compiled the volume on "England," is also the compiler of this volume on "France." By means of extracts and abridged quotations, classified under a variety of headings, the book undertakes to exhibit the structure of society and the development of civilisation in France from times previous to the Roman occupation of Gaul down to the middle of the present century. Few men would be willing to undertake the work, and still fewer be able to execute it so well as Mr. Collier has done. He has had, so far as was possible under the conditions allowed him, to place before the student a connected account of the division and regulation of labour, filial and marital relations, government and administration, ecclesiastical affairs, habits and customs, moral sentiments, religious ideas, the growth and diffusion of knowledge, and, finally, the material condition of the country and of its inhabitants. The result of his labour is a volume of carefully assorted facts and anecdotes, from which considerable knowledge may be obtained of the condition of French society at any given epoch, and of the general course of French history, at a comparatively small cost of labour. The book is preceded by twelve tables, which contain in a condensed form, and classified on the same system, the statements made in the extracts. These are intended to exhibit not only the connexions of phenomena existing at the same time, but also the connexions of phenomena that succeed one another. By reading horizontally, Mr. Spencer says, across a table at any period, there may be gained a knowledge of the traits of all orders displayed by the society at that period; while, by reading down each column, there may be gained a knowledge of the modifications which each trait, structural or functional, underwent during successive periods.

The best and most interesting section of the book is the fullest, headed "Regulation of Labour." Many monographs have been written on the subject, and Mr. Collier has, therefore, been able to bring together a large mass of useful information respecting the condition of the lower classes, especially during the Merovingian and feudal periods. Most sections in comparison with this are meagre, and of small interest. Mr. Collier accounts for their deficiencies by remarking that histories of the professions, of funeral rites, of the sentiments, and of many other classes of social phenomena have yet to be written. The apology is sufficient, since it is not Mr. Collier's business to write history. Closer acquaintance, however, with his subject would, we suspect, often have enabled him to make his account fuller and more instructive. For instance, under the head "Funeral Rites," between 1789 and 1815, Mr. Collier gives a short account of the worship of Marat, taken from Capefigue's *Déeses de la Liberté*, a book of very inferior merit, and tells us, quoting from Goncourt, that funerals were hasty, that mourners wore a red cap, and that the mortcloth was tricoloured. He would have found material more suitable for his purpose in Schmidt's *Pariser Zustände während der Revolutionszeit*. The connexion, of course, ought to be shown between the worship of Marat and the Atheistic movement of which the Commune was the head, and also between the new mode of burial and the theories of Chaumette and Clootz. This would have been done by some mention of the orders of the Commune, which not only replaced the pall by a tricoloured cloth, but prohibited all signs of mourning, and caused the coffin to be preceded by a standard inscribed with the words, "The just man never dies; he lives always in the memory of his fellow-citizens." "We belong to earth, not to heaven," said the Atheist Clootz; "and the more we attach ourselves to the earth, the better citizens we shall be."

Everyone will condole with Mr. Spencer for having to abandon the continuation of his enterprise because it is commercially a failure. The expenses have amounted to £4,425 15s. 7d.; the returns to only £1,054 12s. 1d. But how a costly work of this description could be expected to repay the capital expended we are at a loss to understand. It is, Mr. Spencer himself states, "intended to supply the student of social science with data standing towards his conclusions in a relation like that in which accounts of the structures and functions of different types of animals stand to the conclusions of the biologist." This is as much as to admit that the public to which it appeals is composed of excessively few persons. No one doubts the value of Mr. Spencer's studies; but it does not therefore follow that general interest will be taken in the materials from which he draws deductions. That these materials are historical matter makes little difference in the case. Most of those who open the book will probably turn over the pages for an idle half-hour, amusing themselves by picking out such anecdotes as happen to have special interest for them; but very few will

care to peruse for long a mass of undigested facts. To the student of history a compilation can be but of small value. He likes to select his own materials, not to have them selected for him. Mr. Spencer ascribes the small sale of the work to general contempt for the instructive facts of history; but this is dealing hard measure to the general reader; and he forgets that what is gold for one may, after all, be dross for another. The student of manners and customs can gain exceedingly little from what Mr. Collier has collected under that head; and the general historian assuredly will not class among the instructive facts of history that "the mode of dressing the hair, which had remained low since 1714, began to ascend again after 1750." Moreover, the historical student requires strict accuracy; and to ensure this it would be necessary for the book to be the work, not of one, but of many compilers. It is beyond the power of any one man to illustrate every side of a growing and complex society for a long period of time without making errors and oversights.

If, for instance, we study what Mr. Collier has to say on the Revolutionary period between 1789 and 1815, we find that the authorities quoted are generally to be trusted, and that the main features of the Revolution are brought prominently forward, but that none the less many inaccuracies have crept in, and that phenomena are passed over which those who are interested in history cannot possibly afford to overlook. Thus, among various errors, we are told that France was divided into eighty-three departments almost equal in population and extent. This, of course, was not the case. If equal in extent, the departments could not be equal in population, as was fully recognised at the time; and, in fact, their population varied from 170,000 in the Ariège to 586,666 in the Pas de Calais. So, again, we are informed (p. 71) that the King could suspend laws for four years, but only financial ones. Every reader of the history of the Revolution knows how, when the mob broke into the Tuileries on June 20, the demand pressed upon the King was that he should give his consent to decrees relating to the formation of a camp, and the treatment of non-juring priests. Mr. Collier has reversed the true state of things. Decrees relating to public charges, but these alone, were not to be submitted to the King's sanction. In table xi., 1793 is given as the date of the execution of Hebertists, Dantonists, and Robespierre. A more serious error is the startling statement that primary instruction was universally established and organised between 1789 and 1795. The fact that laws are made does not necessarily imply that they are put into execution; and the general establishment of educational institutions was, in reality, incompatible with the condition of the country at the time. Mr. Collier gives (p. 103) the contents of various laws relating to education passed by the constituent Assembly and the Convention, but he evidently, in this instance, does not know his subject. He omits to mention the two most important laws relating to primary instruction which the Convention passed—

that of December 19, 1793, which was in a special degree the work of the Mountain, and that of October 25, 1795, which characterised the Convention after the Thermidorian reaction. The one made attendance at school compulsory, and provided that teachers should be paid by the State; the other abandoned the principle of compulsion, and left the teachers dependent on the pupils' fees. Not the slightest hint is given in Mr. Collier's account of the questions at issue between the contending parties. The financial and industrial system of the Terror was in many ways remarkable. Mr. Collier has left it entirely in the background. The reader who knows no more than what he can here learn will never realise how distinct the policy of 1789 was from that of 1793. We are informed that between 1792 and 1795 industry was declared free; that commercial companies were forbidden and associations of capitalists suppressed; and that in 1795 the system of assignats came to an end. But these disconnected statements give no adequate idea of what the internal policy of the Terror was. The fixing of a maximum price for labour, and the manner in which workmen of every class were impressed for the service of the State, are, one would have thought, facts deserving the notice of the student of social science. The introduction of the system of assignats is not mentioned; and in table xi. the column under the head "Exchange" is nearly blank, which cannot be excused on the ground of paucity of material. Another feature of the Revolution important to the historian, which Mr. Collier barely mentions, is the rapid acquisition of authority by Jacobin clubs. The extent to which decentralisation was carried is indicated, but not the means by which the dominance of Paris over the Departments was nevertheless maintained.

It may, however, perhaps be said that such defects as have been pointed out do not militate against the usefulness of the book for those for whose service it has especially been compiled. Of this there is no such competent judge as Mr. Spencer himself; and if he has over-estimated the value of the book to the world at large, there is no doubt that all students of social science are much indebted to Mr. Collier for having executed as well as is possible what must have been a most difficult and laborious task.

BERTHA M. CORDEY.

*Familiar Studies of Men and Books.*  
By Robert L. Stevenson. (Chatto & Windus.)

IN this collection of reprinted pieces—from the *Cornhill*, from *Macmillan*, and from the *New Quarterly*—there is included not a little very admirable work. Mr. Stevenson is not less himself—is not less humorous, perspicuous, original, engaging—when he is critical of character and literature than when he takes to discoursing to bachelors and maids, or playing at travel on Flemish rivers, or trudging, whimsical and adventurous, behind a she-ass in the Cevennes. He has most of, if not all, the qualities that make the

critic: an impartial, yet sympathetic, intelligence; a fresh and liberal interest in life and art and man; a student's patience; an artist's fine perceptiveness; a passion for all forms and aspects of truth; a frank, whole-hearted courage; a good method of analysis; rare distinction of style; and singular powers of felicitous and appropriate expression. That this is so the present volume proves abundantly. It is not of equal and unbroken excellence. In places it seems mistaken, and in places it is tedious; it is capable of making you nod, and it is capable of making you swear. But its good matter is good indeed; its bad is only bad in comparison with its best. Its purpose is serious and critical; and it achieves its purpose admirably. But, for all that, it has something of the chief characteristics of its author, it is touched with something of the fresh and happy grace, the bright, humane fancy, the engaging originality, that made such pleasant reading for so many of the *Inland Voyage*, of the *Travels*, and—as I like to think—of the *Virginibus Puerisque*.

The *Studies* are nine in number. They are sufficiently varied in manner and matter. They range from the fifteenth century to the present time, from the France of Villon to the Japan of Yoshida-Tjraoiro, from Knox at Holyrood to Pepys at Whitehall, from Hugo's novels to the love-letters of Sylvander and Clarinda. It is much the same with the style in which they are written and the spirit of their utterance. Something of the heaviness and sententiousness of John Knox's prelections seems to have crept into Mr. Stevenson's account of them. In his charming note on Charles of Orleans he now and then seems trifling with his subject, much as that subject trifled always with the Muse. The Yoshida-Torajiro is merely a piece of plain storytelling; the principal quality of the "Gospel According to Walt Whitman" is a kind of luminous thoroughness; the manner of the study on Villon is one of picturesque and intelligent contempt, not without hints and suggestions of an acquaintance with Carlyle. In his discourse on Hugo's romances, Mr. Stevenson is young, and as yet not altogether a man of letters; in his essay on Thoreau he carries mere literary skill—mere mastery of diction, phrase, and sentence—to a higher point, I think, than he reaches elsewhere in any one of his works. Variety indeed is a principal attribute of the book. It appears not only in the material and style, but in the temper and tone. Mr. Stevenson's regard for those "qualities of human dealing" with which he has chosen to concern himself is uniformly clear-eyed and independent; in honesty of purpose, in sincerity of insight, he seems incapable of change; he is at all times equable and temperate. But he appropriates his humour to his theme; he alters his tone as he changes his subject. He is scornful with Villon and genial with Pepys; he is happily generous with Whitman as he is sorrowfully just with Burns. He thinks critically and dispassionately; he writes as his thoughts have made him feel. He is solemn, or sententious, or cheerful, just as the study of his author has left him. Each of his essays is the expression of a fitting and peculiar mood of morality and intellect. He repro-

duces his impressions in effects. He is a critic in method and intelligence, and an advocate in manner and temperament; and he makes you glad or sorry as—with his reflections and conclusions—he has made himself before you. If his criticism were less acute and methodical than it is, the accent and the terms in which it is conveyed would sometimes get it mistaken for an outcome of mere aesthetic emotion. As it is, the critic is equally apparent in it with the man; you can see that the strong feeling has come of clear thinking, and what is purely intellectual is rendered doubly potent and persuasive by the human sentiment with which it is associated. It is possible that this fact will ultimately militate against the success of Mr. Stevenson's *Studies* as criticism; for criticism—a science disguised as Art—is held to be incapable of passion. I cannot but think, however, that it will always count for a great deal in their favour as literature, and that meanwhile it clothes them with uncommon interest and attraction.

Of the *Studies* individually, I have left myself no space to speak. The least interesting—out of Scotland at all events—are certainly the two essays on "John Knox in his Relations to Women;" the least literary is probably the note on "Victor Hugo's Romances;" the least strikingly satisfactory, the story of Yoshida-Torajiro. Better than any of these, I think, is the critical biography of Charles of Orleans, which is charming as reading and unexceptionable as criticism. The note on "Some Aspects of Robert Burns" is one of the most powerful and original of all; it can hardly be neglected by anyone who is interested in its subject; it is worthy (to say the least of it) of association with Carlyle's famous essay. The paper on Walt Whitman is, in its way, as good as the "Aspects;" that on Thoreau, admirable as a piece of writing, is cold and negative in its effect, mistaken in its conclusions (as Mr. Stevenson, in his pleasant and ingenious "Preface by Way of Criticism," has taken care to own), and somewhat too obviously elaborate in method. The "Pepys," on the other hand, is not less admirable than it is delightful; while as for the "Villon," it is in some way the most remarkable work of all. Mr. Stevenson's Villon is not by any means the "Postlethwaite with a jenny," with whom we have got to be familiar. He is—with the addition of genius and an admirable gift of style—the *mauvais pauvre* of Hugo, a variant on the Rogue Riderhood of Dickens; a man utterly heartless, miserably depraved, and absolutely insincere. He is said to sit "in the narrow dungeon of his soul, mumbling crusts and picking vermin;" and his "Large Testament" is described as "one long-drawn epical grimace, pulled by a merryandrew, who has found a certain despicable eminence over human respect and human affections by perching himself astride upon the gallows." He is a fearful creature indeed; and he is so horribly like his poems that it is not easy to disbelieve in him, or to doubt that he is in very deed the Villon of Noël de Joly and Colin de Cayeux, the poet of Fat Maggie and the gibbet, the greatest singer and the sorriest scoundrel of mediaeval France.

W. E. HENLEY.

*Nordenskiöld's Voyage Round Asia and Europe: a Popular Account of the North-east Passage of the "Vega."* By Lieut. A. Hovgaard. Translated by H. L. Brækstad. (Sampson Low.)

THE translator of this book very justly observes that "for Englishmen, whose forefathers were the first to attempt a solution of the problem, Nordenskiöld's discovery of the North-east passage must always have a special interest;" and Lieut. Hovgaard has undoubtedly given us a very agreeable popular account of the *Vega's* voyage, which is all that he professes to do. It is doubtful, however, whether the masterly and exhaustive narrative of Baron Nordenskiöld himself is not too complete and satisfying to leave room for an independent work on the same subject. Apart from this consideration, Lieut. Hovgaard may be fairly congratulated on his able treatment of a subject brimming with interest. The Introduction contains a brief historical review of previous attempts to discover a north-east passage to "Far Cathay," and shows how, "inch by inch, and after continuous struggles against ice, cold, and darkness," the north coast of Asia was at length explored and mapped, and the way prepared for one of the most memorable deeds that mark the progress of geographical exploration. Considering that the practical utility of Arctic research is sometimes called in question, while "the greedy desire which our country hath to a present savour and return of gain" is certainly not less strong now than it was in the time of Frobisher, Lieut. Hovgaard aptly recalls the remark with which Pigafetta, Magellan's secretary, concludes the account of the first circumnavigation of the world:—"This voyage is so difficult and dangerous that it is not likely it will ever be attempted again." He adds that we now speak of the North-east passage as Pigafetta did of the circumnavigation of the world, "but we know not how it may benefit future generations."

The actual narrative begins with a review of Nordenskiöld's former voyages, and biographical notices, accompanied by portraits, of the scientific staff and officers of the expedition. The plan of the expedition and the building and equipment of the ship are also given in some detail, and several chapters are devoted to the voyage of the *Vega* along the northern shores of the Old Continent from Tromsø to Behring (or, as Lieut. Hovgaard spells it, Bering) Strait. There are also some specially interesting sketches of the little-known, and too often disastrous voyages initiated by Peter the Great; and the results obtained by the Russian explorers, in spite of their miserably frail boats and imperfect equipment, bear eloquent testimony to their heroic courage and devotion. All this, however, is now a more than "twice-told tale," having been anticipated not only by Baron Nordenskiöld's official record, but also by the innumerable despatches, articles, and reviews which have appeared during the last three years in our own journals and periodicals, and in various Continental languages. The most original, and perhaps the most generally interesting part of the present work will be found in the accounts which Lieut. Hovgaard gives of his own experiences

among the Chukches during the *Vega's* compulsory imprisonment in the ice. Dr. Rink and some other writers refer the Chukches and Eskimos to the same origin, but the Swedes found that there was a great difference between the two languages. On the other hand, there was a striking correspondence between the household furniture of the natives on both sides of Behring Strait, even in the most minute particulars. There was also a resemblance in many other points. For instance, Lieut. Hovgaard mentions a Chukch device for killing wolves, which is almost identical with that used by one of the Eskimos who accompanied Lieut. Schwatka in the Hudson's Bay territory. A piece of whalebone, sharpened at both ends, is bent into a ring, and kept to that shape by pouring water over it till a crust of ice is formed. The bait is then rubbed with blubber, laid out, and eagerly devoured. As soon as it is swallowed the ice melts, and the whalebone opens out in the animal's intestines, producing an agonising death. Other examples might be quoted, but at present the north-eastern part of Siberia is an ethnographic maze, and Prof. Dall, who does not agree with Nordenskiöld's conclusions, declares that until some competent philologist devotes a year or two to this wild region, the points at issue will not be satisfactorily settled. Lieut. Hovgaard questioned one of the Chukches about the way in which they treated their dead, but this individual was persistently reticent about anything concerning their faith. They are probably too ignorant to have any consistent or fixed appreciation even of their own forms of superstition or belief, which, indeed, they sometimes treat with scant respect in the persons of their shamans or wizards. The inland excursions were made chiefly with native dog-sledges—an expeditious, but most uncomfortable, and even painful, method of travelling. Lieut. Hovgaard particularly notices the remarkable powers of endurance displayed by the Chukches and their dogs. During one journey, which lasted twenty-one hours and a-half, Menka's servant ran continually in front of the sledge, and even when the travellers rested he was at work seeking out the track, tending the dogs, &c. On arriving at the camp he took no sleep, and yet was equally fresh the following day. During the journey he was not given any spirits, by the express command of Menka, the chief of the Chukches, who explained that otherwise he would not be able to hold out to the end. But he indemnified himself for this deprivation by chewing an amazing quantity of tobacco. All this time the dogs were not unharnessed for a moment, and in the morning they lay sleeping in front of the sledge, half covered with snow. They had no food but the frozen excrement of foxes and other animals, which they snapped up while running; and yet, even towards the end of the excursion, which lasted three days and a-half, their strength had not perceptibly diminished. Lieut. Hovgaard speaks warmly of the innate kindness and hospitality of the Chukches, and their willingness to do any kind of work. In fact, the various collections of the expedition were greatly increased by them; and among other curious objects brought to light was an old suit of ivory armour, a relic from the times when their

warlike ancestors inspired the neighbouring tribes with fear. They also contributed a great deal towards the winter amusements, lending their sledges for drives on the ice, &c. He adds, "They were always friendly, obliging, and hospitable, and we were fain to forgive them their constant, and often tiresome, begging."

In concluding this notice, a word must be said in praise of the translation. Mr. Brækstad has already distinguished himself in the same field by his attractive version of Norwegian folk and fairy tales, and the present work is thoroughly creditable to him. He has, however, kept rather too closely to the Danish idiom in his wish to preserve the author's style; and there are occasional slips, such as calling ships' tanks "cisterns" (p. 31), which might have been avoided. The maps, showing the track and winter quarters of the *Vega*, are excellent; but there is no index, and the illustrations are somewhat disappointing. An able writer has remarked that, though the whole world reads nowadays, it reads hastily, and likes to have the knowledge provided for it served up in fresh and attractive guise. As fulfilling this condition, and as a "condensed popular account" of the North-east passage, Lieut. Hovgaard's handsome volume may be highly commended.

GEORGE T. TEMPLE.

*The Decay of Modern Preaching: an Essay.* By J. P. Mahaffy. (Macmillan.)

WHENEVER Prof. Mahaffy writes we may count on the clear, direct, and vigorous exposition of the writer's judgments; and, like everything else from his pen, the little essay now before us is bright and entertaining.

If it were not foreign to the character of the ACADEMY as a critical journal, one might be tempted to join issue with Prof. Mahaffy on his representation of certain positions in dogmatic theology on which he expresses himself with less reserve and caution than the subject would seem to demand. But, for the main purposes of his argument, these utterances of his may be regarded as little more than *obiter dicta*, affecting very slightly, if at all, the general results at which he arrives. And if any clerical readers may object that the tone of the essayist is that rather of a layman and man of the world than an earnest priest, I would make answer: If this be so, it is a characteristic that should enhance the value of Prof. Mahaffy's judgments in the eyes of all thoughtful ecclesiastics who honestly desire to see themselves as others see them. I do not believe that Prof. Mahaffy's strictures on the faults of modern preaching are unjustly severe. He hits hard, but he is not without an appreciation of the difficulties of parish clergymen, over-worked and over-burdened with multifarious duties, in their attempts to fulfil the requirements of the pulpit; and thus he so far disarms prejudice that I cannot see why his remarks should not obtain a patient hearing from those whom they most directly concern.

When we except the influence of some very few distinguished preachers in every generation, it would be no easy task to institute a

just comparison between the general power of the pulpit at any two epochs in the history of the Church of England during the last 350 years. The evidence for forming a judgment is not readily producible. That there was in every past age a vast abundance of stupid preaching there cannot be a doubt; but we have not to listen to it on Sundays, and so it does not oppress our drowsy spirits like the nightmare of our own present-day sermons. Yet, so far as I can venture on forming a judgment, I am disposed to believe that the preaching generally throughout the English Church at the present time would stand comparison in interest and general merit with the preaching of any period for the last three centuries. In this estimate I, of course, discount something for such interest as was extrinsically imparted to preaching at certain great crises of political and religious excitement. Again, I am unwilling to give entire assent to the proposition that "among the better classes, and with educated congregations, the day of preaching has gone by." Let effect be given to Prof. Mahaffy's own suggestions as to the careful preparatory training of the clergy, and much will be done towards remedying the more serious of the defects which he indicates. And though, among the great body of men following any profession, mediocrity will be the rule, I should be surprised if there were not to be found men of more than average ability and excellence sufficient in number to occupy the pulpits of all the principal churches of our cities and large towns. The preacher, however, must be relieved from many of his distracting secular and semi-secular engagements; and therefore the revival of an effective diaconate is essential if preaching is to occupy a place of respect in the estimation of the educated laity.

One naturally looks in Prof. Mahaffy's essay for some expression of opinion on the very interesting question of the influence of the pulpit at the universities; and the words in which the volume is dedicated to one of the most distinguished preachers of his own university further rouses expectation; but, to our regret, the subject is not touched. Notwithstanding all the secularising tendencies of nearly every recent change at the universities, the pulpit is still, I believe, a moral and religious power of an efficiency much more considerable in degree than is commonly supposed.

Many of Prof. Mahaffy's remarks have been obviously suggested by the prevailing characteristics of preaching in the Church of Ireland; but there are few of them which, after some slight modification, do not apply with equal, or sometimes with even greater, force to preaching on the east of St. George's Channel.

JOHN DOWDEN.

#### POPULAR POETRY OF SPAIN AND GASCONY.

*Poesía popular Española y Mitología y Literatura Celto-Hispanas.* Por Joaquín Costa. (Madrid.)

*Poésies populaires de la Gascogne.* Par J. F. Bladé. Tome I.: Poésies religieuses et nuptiales. (Paris: Maisonneuve.)

THE former of these two books is greatly

spoiled by the author having endeavoured to weld two almost incompatible subjects into one. The volume really contains two treatises of very unequal worth. The first 200 pages are an essay on the origin and development of Spanish poetry and prosody through the successive forms of the Refrain, the Romance, the Epic, and the Drama; but, mingled with this, is an attempt at deducing the evolution of legal institutions from the evidence of these poems. This last would be a most interesting study; but it is never really achieved by our author. As it seems to us, he simply repeats over and over again in more diffuse terms the enunciation of his problem, and never marshals in order the facts, or the reasoning wherewith to prove it. The latter half of the volume is far more valuable. It forms an important treatise on the archaeology of Spain, interrupted only towards the close with some remarks on the prosody of mediæval Latin and Celtic verse.

In both portions the author shows signs of extensive reading. Not only most of the best classical, Spanish, German, French, and English authorities seem known to him, but he has also laid under contribution much of what has been published of late years in Wales, Scotland, or Ireland on Celtic texts and studies. Even in the first part we find many most suggestive remarks for the student of Spanish history. *E.g.*:

"Generally the primitive chronicle offers only the skeleton or the external envelope of life; in vain we strive to find there the genius of the people, to listen to the palpitation of civil life, or to question it on the intimacies of the hearth. This sphinx is almost always mute, like a dead man who has left behind him a writing which cannot be deciphered."

There is justice, too, in his rebuke of those German critics who would fain be *Hispanis Hispaniores*. He points out the popular aspiration (which explains much in Spanish history, especially in ecclesiastical history) to make of Spain a political counterpoise to Rome, and for this purpose not to hesitate at the humiliation of the Pope himself.

The second portion of the work is founded almost wholly on classical and monumental evidence. No one, that we are aware of, has made more thorough use of vol. ii. of Hübner's *Corpus Inscriptionum Latinarum*. This work and Padre F. Fita's *Restos de la Declinación Céltica y Celtibérica en algunas Lápidas Españolas* furnish the data for most of the arguments adduced. We are compelled, however, to notice in this essay a similar defect to that which we remarked in the preceding one. Incompatible theories are held, as it were, side by side, dovetailed into its pages, but never worked up into a consecutive or logical whole. Thus, at the opening of the treatise, the "totem" theory and ancestral worship, and the works of Maine, Lubbock, Fustel de Coulanges, &c., seem accepted as the key to unlock the mysterious stores of ancient myths and institutions; but some fifty pages farther on we suddenly find ourselves using the solar linguistic hypothesis and the works of Max Müller and Cox as if they were the successful clue. According to the exigencies of adverse theories, the same passage (*e.g.*, *Silius Italicus*, *Punic*, iii., pp. 230-96) is rejected

or adopted on different pages. The argument of our author and of Fita (p. 86, *Restos*, &c.) of an unknown god YVN, based on IVNo of two inscriptions, Hübner, 430, 2409, the latter dated 159 A.D., seems to us most uncertain. So, too, the elevation of Magno, which Hübner (734, 3061) treats as a proper name, into a hero. In this connexion we are surprised that our author does not notice the evidence that Dozy and Gayangos have alleged from Spanish, Arabic, and Norse authorities to prove that the columns and huge bronze statue of Hercules existed at the entrance to the port of Cadiz down to 1134. A friend last year examined for us the particular *Toro de Guisando* (see note p. 322) which Señor Zobel (*cf.* Hübner, 437) believes to be a boar, and he assures us that both this and all others which he saw were boars, and not bulls. The fact is determined by the widely different position of the scrotum in the two animals, however rude the sculpture may be otherwise. If this be the case, the whole argument of Señor Costa (322 *et seqq.*) on the bulls of Geryon falls at once to the ground. We have in our possession a tracing of the original sketch of the *Idolo de Miqueldi* (*cf.* Trueba, *Capítulos de un Libro*, p. 271), and we are convinced that the rude likeness to an animal has arisen simply from the cutting out of three circular grindstones from the lower part of a huge block. Where we now reside we see the process going on daily. The remnants of the stones thus treated are left on the hillside, and, once weather-stained, it is difficult to determine their age within centuries. It were greatly to be wished that, instead of laboriously endeavouring to show that Spanish myths or early institutions are Aryan (many of them might more justly be said to be universal under like conditions), native archaeologists would endeavour first to separate clearly the undoubted Celtic and Roman elements in Spanish archaeology; to show by what counteracting influences Druidism failed to obtain among the Spanish Celts, while it reigned so absolutely in Gaul and Britain; to distinguish between the importation of Isis and other Oriental worships second-hand from Rome, and those which may have come in earlier times directly from Egypt and the East. When these points are cleared up, then we may attach the residue, and endeavour to disentangle Iberian from Celtic, and assign each to its proper tribe. On the whole, this work, with its wealth of data gathered with immense pains, is, we sadly fear, of the class which will mainly serve as a rich storehouse for pillage by unscrupulous successors, and will bring but small profit to its learned author.

M. Bladé is compelled to use the term "Gascogne" in a somewhat restricted sense; for, in this series of "Les Littératures populaires de toutes les Nations," out of the province usually designated by that name Prof. J. Vinson will deal with "Le Pays basque" and M. Lespy with Béarn. His work, too, differs somewhat from most of its companions, in that it deals exclusively with Christian traditions. These curious versified prayers—the Noël's, baptismal, funeral, and nuptial songs—are all of mediæval origin. In a few there seem to be traces of early heresies, but most are orthodox. In some respects this work

and that of Señor Costa (reviewed above) may be used to complement each other. The "Aurosts" and "Cris d'Enterrements" of M. Bladé's volume are the legitimate descendants of the "tripudia" and "Hiberæ noeniae" and "carmina funebria" of the ancient Iberians collected in the other's. M. Bladé is, however, mistaken in thinking that "the Calvinists always held aloof" from these practices. On the contrary, the last and cleverest of the "Aurost" composers was a Protestant—Marie Blanc. Unless, too, M. Bladé has purposely reserved his notes for another volume, it is singular that many curious practices relating to marriages and funerals common in Béarn and the Pays basque should be unknown in the conterminous district. The notes on dialectic differences are most useful; but we have remarked several negligences in the French translation—e.g., the last lines on pp. 240:

"Toco tous boûs, boû diligent,  
Tout çò que portes hau argent,"

cannot mean

"Touche tes bœufs, bœuvier diligent,  
Avec ton aiguillon d'argent."

M. Bladé surely does not intend the autobiographical romance which he has attached to his Preface to be taken *au grand sérieux*. Its insertion we think much to be regretted, as it casts an air of doubt over a volume the whole value of which lies in its strictly literal accuracy. He may indeed allege the example of M. Fr. Michel in his anonymous *Romancero basque*; but the latter writer kept this play of fancy quite apart from the serious studies contained in his work *Le Pays basque*.

WENTWORTH WEBSTER.

#### NEW NOVELS.

*In Maremma.* By "Ouida." In 3 vols. (Chatto & Windus.)

*Schloss and Town.* By Frances Mary Peard, Author of "The Rose Garden," &c. In 3 vols. (Smith, Elder & Co.)

*Dorothy's Venture.* By Mary Cecil Hay, Author of "Old Myddelton's Money," &c. In 3 vols. (Hurst & Blackett.)

*Owlet Ash.* By Monica. In 3 vols. (Marcus Ward & Co.)

*In the Distance.* By G. P. Lathrop. In 2 vols. (Sampson Low.)

*Genji Monogatari.* Translated by Suyematz Kenchio. (Trübner.)

THE new story by "Ouida" is very striking. As its title implies, the scene is fixed in a well-known district of Italy—well known, at least, geographically speaking. The writer's touch is as vigorous and powerful as ever, while she is not quite so Ouidæque in warmth of sensual passion. There are three characters of singular individuality in the novel—Musa, the fiery and beautiful child of Nature, who cannot be tamed into civilised life; Este, one of her lovers, who sprang from "a branch of the Este of Ferrara, the great Este—the mightiest lords there were ever, save the Gonzaga and the Montefeltro;" and Sanctis, her other lover, who exhibits a noble devotion,

and sacrifices his life in the service of the heroine. Musa is the daughter of the famous brigand Saturnino; she showers all the wealth of her love upon the aristocratic libertine Este, with the result of showing in her case, and that of others, that human love apparently, when genuine, means anguish, suffering, and woe. There are strong and brilliant passages in this novel, although it is not free from the author's besetting sin of extravagance; but the story is unquestionably very readable.

Miss Peard has written a clever and agreeable story of Bavarian life; and if in the outset things look as though they would be rather too quiet, the later portion of the narrative more than compensates in interest. The author quotes, by way of introduction to the first volume, Dr. Johnson's famous *dictum* with regard to marriage, viz., that marriages would in general be as happy, and often more so, if they were all made by the Lord Chancellor, upon a due consideration of the characters and circumstances, without the parties having any choice in the matter. The novel opens with an attempted forced marriage. The Schloss, which overlooks the town of Lauterthal, is occupied by the noble but impoverished family of the von Tellenbachs; and in the town itself resides the plebeian but enormously wealthy ironmaster, Herr Meyer. Now Herr von Tellenbach has an only son, the Baron Rudolf, and Herr Meyer has an only daughter, the beautiful Wanda. These two are the hero and heroine of the story. Their first introduction is very unconventional. We frequently meet with the hero who rescues his fair one from grave perils; but in this case it is the heroine who fishes Baron Rudolf out of the river when he is in danger of being swept away by the torrent. Wanda's father hankers very much after family distinction; and, as he knows of the pecuniary difficulties of the von Tellenbachs, he suggests a marriage between Rudolf and Wanda—the former will bring nobility, and the latter the substantial dowry of 500,000 marks. But the young couple, who were otherwise disposed to like each other, fly asunder as soon as they learn that their union has been arranged. The fathers have the good sense not to force the will of their children, and the marriage negotiations are broken off. But, after some bitter and terrible experiences, that which the old people had planned comes about quite naturally; I will not reveal the circumstances, merely remarking that it was a perfect love-match. Wanda is a delightful heroine. The author appears to be quite at home in depicting the German scenery in the midst of which her story is fixed. There are many admirable bits of description, and a snowstorm in the forest is very graphically represented.

The third volume of *Dorothy's Venture* is very good reading, but the first and second are too heavy and too long. The author might well have omitted, say, a couple of hundred poetical and prose quotations, and certain witticisms which, from their age, reminded us of the utterances of the late Mr. Joseph Miller. But, as might naturally be expected from Miss Hay's previous stories, the novel has many good points, and is in

parts undoubtedly clever. The course of poor Dorothy's love, much tried as it is, is worth tracing; and the plot in some respects is quite new.

"Monica's" novel is certainly a very extraordinary one. It has a heroine, Dolores Streatham, and two heroes, Harold Burton, an artist, and the Rev. Croydon Adair. But such heroes! Surely the like were never seen before in fiction. Burton is the first one Dolores sees, and she immediately capitulates. But how could she help it, when "Women were subdued by his haughty patrician beauty and the gentle expression of voice and manner which lured so many to their destruction"? He was an Adonis, his beauty was divine; but

"Nero playing on his harp on the walls of Rome, in harmony with the flames that shrouded the city in a ghastly winding-sheet, was not more cruel than Harold Burton, whose false heart, like the waves of a turbid stream, paid passing homage to Dolores Streatham."

We will not stop to inquire how the waves of a turbid stream can pay homage of any kind, but pass on to note that on the very first occasion upon which the "godlike" but ungrammatical Burton and Dolores hold conversation together he goes as far as kissing her hand. After this, we are not surprised to learn that on the second occasion he took her into his arms, and "pressed clinging tender kisses" on her lips. But she distrusted him, even while she lay passive in his arms. The lovers were, of course, married; and in a few weeks or months the diabolical nature of Harold Burton began to manifest itself. Dolores, having lost his love, buried her only child, and discovered that her husband had betrayed her dearest friend, Emily Wybrant, leaves his roof for ever. She wanders about, passing through many deep trials, but at last settles down at Owlet Ash. Here she meets hero No. 2; and, notwithstanding that her husband still lives, she allows the Rev. Croydon Adair to fall madly in love with her, and reciprocates his passion. Croydon's beauty is equally divine with Harold's, but, being a clergyman, we suppose he is a better man. The susceptible Dolores is again completely conquered, and, as she herself says, "our lips met in a long, lingering kiss; I felt his heart beat in wild tumultuous throbs against my own." The nice question of morals which arises from a married woman thus acting is satisfactorily disposed of. Harold Burton appears on the scene, and, divining the position of affairs, he considerably puts a bullet through his head, thus clearing the way for Dolores to marry Croydon. Such a course of acting is diametrically opposed to all the ideas of his base and selfish character inculcated by the author; but that is nothing.

*In the Distance* is an American story, which flows quietly and smoothly, without begetting violent emotion of any kind in the reader. It is not too strongly imbued with local colour to be uninteresting to English people; and, in fact, with very slight alteration, it might easily be transformed into a story of life in the mother country. The first volume is not

very exciting, and the absence of notable incidents is not compensated by anything very original in the way of reflection or comment on the part of the author. There are some love affairs, of course, which are developed in the course of the second volume, and it may be found interesting to trace these to their satisfactory and legitimate termination.

The Japanese language not being so familiar in the West as Japanese art, we can only say of *Genji Monogatari* that it is very entertaining in itself, and that the translator shows a remarkable command of English. The work now given in an English dress is the most celebrated of the classical Japanese romances, and its author was evidently gifted with unusual powers of description and observation, and a plastic imagination. As regards Mr. Kenchio, it may be stated that he has filled several high offices in Japan, and that he is now attached to the Japanese Legation in London. He will deservedly receive commendation for devoting his leisure to such literary undertakings as the present.

G. BARNETT SMITH.

#### CURRENT FOREIGN LITERATURE.

*Molière's Leben und Werke.* Vom Standpunkt der heutigen Forschung. Von B. Marchenholtz. (Heilbronn: Henninger.) Molière literature has of late years become so abundant that a handy treatise resuming its results is by no means undeserving of welcome. We are afraid, however, that Herr Marchenholtz has undertaken a rather too ambitious task, and has executed it with too little care. He speaks with much disdain of the work of a Moliériste of the last age as being "kritiklos der ersten besten Quellen nachgeschrieben überdies ungenau reproducirt und chronologisch verworren." That is a good round condemnation. But we turn the page and we find "Sir Martin Marall" set down to (Dryden, 1631-1701, and Newcastle, 1694-1768). It surely might have struck Herr Marchenholtz that it was odd that Dryden should choose a collaborator who was but seven years old at the time of his own death, and who, we may add, was not born till some thirty years after "Sir Martin" was produced. The confusion between the Cavalier general Cavendish and the Whig Prime Minister Pelham is of course obvious, but it certainly might be described as "chronologisch verworren." So again Herr Marchenholtz makes Otway translate the "Fourberies de Scapin" many years after his death, and puts the date of the "Quinze Joyes du Mariage" at 1620. Now, there certainly was an edition of that charming little book in 1620, but it is no more the date of the work itself than the date of the last Paris edition of "Tartuffe" is the date of that play. The "Quinze Joyes," as everybody who writes about French literature ought to know, was written early in the fifteenth century. All this can only come of the bad habit of writing after the "ersten besten Quellen" which Herr Marchenholtz reproves so sternly in poor Mouhy. When he himself, as he generally does, follows trustworthy guides he is useful enough, and his book is of real value. But the detection of such blunders as those we have mentioned—they struck us in turning over the pages almost at random—makes the reader rather uncomfortable about any statement which is out of the range of his own knowledge. Now, it may possibly be contended that these are just the statements which one would like to be able to take on trust.

*Emek Habakha, ou la Vallée des Pleurs.* Par Joseph Ha-Cohen. Traduite par Julien Sée. (Paris: Chez le Traducteur.) M. Julien Sée seems to be about to publish a series of Jewish chronicles, and if they are all as handsomely got up and as interesting as this they will make a not inconsiderable contribution to historical libraries. *Emek Habakha* (the author of it was a Jewish physician, who wrote it in 1575, and it has previously appeared in the original Hebrew and in German, but not, it would seem, in any other language) is a chronicle of the persecutions of the Jews from the days of Barchochebas to those of Joseph Ha-Cohen himself. It is not of great length, and is written with brevity and little indulgence in rhetoric, but it tells, forcibly enough, about as ugly a story as exists in the records of the world. M. Sée has prefixed an Introduction of an expository character, and has affixed some notes which are useful, as Ha-Cohen is apt sometimes to refer to events with almost too great conciseness.

M. HENRI BELLE, in his *Trois Années en Grèce* (Paris: Hachette), has given a lively and interesting account of his travels in that country. In the course of various journeys he visited the greater part of the kingdom of Greece, excluding Thessaly, which, at that time, was not included in it; and some of the places which he describes, such parts of Maina and the town of Coron in Messenia, notwithstanding their curiosity, are not often seen by travellers. Though his book does not profess to embody either much learning or the result of scientific research, yet it is the work of a cultivated, well-informed, and observant man, and is written with that pleasant facility which characterises French books of travel. It is illustrated with numerous wood-cuts representing the principal places, the remains of ancient buildings, and the costumes of the natives. The present population has attracted much of his attention, and, without being a partisan of the Greeks, he fully appreciates their good qualities, especially their sobriety, and notices the advances they have made and their promise for the future. He rightly observes that what Greece especially needs is the development of her agriculture, and acquits the Greek peasantry of complicity with the brigands, with which they have often been unfairly charged. A great variety of questions, ancient, mediæval, and modern, relating to the country will be found discussed in his pages. On some of these it is natural that his readers should disagree with him. We cannot think, for instance, that celibacy is what is especially needed to raise the Greek clergy; nor do we think that he is right in depreciating the idea of a railway route for traffic between Western Europe and the East by way of Vienna, Salonica, and the Piræus, which would certainly involve the shortest sea passage. If von Hahn, who was the original advocate of this plan, may be suspected, as an Austrian, of wishing that the proposed route should pass through his country, it is possible that a Frenchman, when he extols the advantages of a sea-transit, may have an eye to Marseilles. M. Belle deserves all praise for investigating many of the sites connected with the Frankish occupation of Greece subsequent to the Fourth Crusade. Thus we find in his volume descriptions of the Monastery of Daphne between Athens and Eleusis, of the castle of Boudonitza behind Thermopylae, and of those of Mistra, Calamata, and Caritena, in the Morea. The events connected with several of these form an integral part of French history, and contain many romantic and interesting episodes.

*Die Götterdämmerung und die Goldtafel des Idafelds oder die Teutoburger Schlacht in den Liedern der Edda.* Eine Streitschrift über die

Heimat und Bedeutung der Edda-lieder. Zur Widerlegung der neuerlich darüber veröffentlichten Ansichten des Prof. Bugge und Dr. Bang dienend. Von G. Aug. B. Schierenberg. (Detmold.) The last mediæval editor of Snorri's Edda had a theory of the Teutonic mythology which he unfolds in several chapters that are found sandwiched into the MS. texts of the Edda, and have been suffered, by the misplaced energy or ignorance of scholars, to appear mixed up with the original work in the printed editions. This Icelandic theorist held that the story of Thunder and the Earth-Serpent, for instance, was a vision of the struggle on the plains of Troy between Hector and Achilles; he further identifies Volucrontes with the ox whose head Óku-Thór (Hector) used as bait, recognises Róddries (Patroclus?) in Ymi the unlucky giant, Hellenus in Ali, Pyrrhus in the Fenris-Wolf, and holds that the Ragnarök and Swart-Flame, or final conflagration, are the overthrow and burning of many-towered Ilium. These theories are entirely worthless, but they show that their author had thought over his subject, and felt difficulties which really exist, and one has a certain respect and sympathy for his failure. Similar feelings are roused by the brochure of Herr Schierenberg. Its author sees problems in the Old Northern poetry which are yet unsolved, and tries to find a key—an effort for which he is surely more worthy of respect than the herd of sheeplike editors and commentators who go on with their eyes shut to such glaring facts as the corruptions and dislocations of their texts, and the foreign element in the mythology of many of the poems. But though Herr Schierenberg's ingenuity, earnestness, and modesty make one wish to agree with him, it is impossible to do so. Briefly put, his theory is that from an examination of Völuspá, Vafþrúdnismál, and Grímnismál it is possible to gather that,

"der *Blutstein* bei Horn und der *Baller-born* bei Altenbeken, als die Haupt-Culturestätten in Norddeutschland, vorzugsweise die *Græco-städte* sind, auf welche sich jene Lieder beziehen indem dort *Asgard* und das *Idafeld* war, und der Schauplatz jener Begebenheiten die den Inhalt der Lieder bilden."

This, and the idea

"that the battles which the Romans under the early Emperors fought in Germany, especially in the country of the Cherusians, are the historical foundation upon which these songs and stories have grown up, wherefrom by repeated transformations the German Nibelungenlied has arisen,"

are supported by identification of the mythical spots in the poems with towns and villages in North Germany. Loki is Segestes, Byleist his brother is Germanicus, the monster Eormengand is the Roman army, &c. Such preposterous etymologies as Ygg=league+dra=tree, +ail=pillar—i.e., the pillar of the tree of the league—for the well-known Woden's steed—i.e., gallows—show the standpoint of the author. "In magnis soluisse sat est," quotes Herr Schierenberg; and though there is much consolation in Cicero's remark, it is still painfully true that good-will and zeal will not save a man or book from the "limbo of the lost," which the Italian poet has cruelly located in the moon.

DR. ADOLF FREY (son of the late popular Swiss novelist, Dr. Jakob Frey) has published a collection of *Schweizer-Sagen* (Leipzig: A. Dürr), and a second collection, by Rector H. Herzog, has been issued contemporaneously by Sauerländer, of Aarau. Dr. Frey only gives thirty *Sagen*. He has excluded all which are not peculiar to Switzerland, and has included only such as contain, in his own words, "tüchtiger ethischer Gehalt." Rector Herzog's collection, 246 in number, is the sequel to an earlier volume. It has been specially prepared for the young. Both writers are natives

of the Canton of Aargau, which has been described as "the nest of Sagen." E. S. Rochholz, the Sagen-meister of Switzerland, may be said to have founded a guild of Sagen collectors in the canton. When he was teacher of the German language and literature in the cantonal school at Aarau he used to dismiss his scholars before the holidays with a charge to come back again to school with a sackful of legends and tales from their own villages. It is reported that some of the clever youths executed this pleasant holiday task only too well, and that not a few "Sagen" of the teller's own invention were imposed upon the eager teacher and accepted by him as old and genuine. Dr. Herzog's collection is divided into sections, each of which is introduced by a preface. Among others we find "Alpensagen," "Hortsagen," "Gewässer," "Steinverwandlungen," "Untergegangene Orte," "Das Nachtvolk," "Das Todtenvolk," "Die Nornen," "Die Feen," "Die Zdiwerge," "Die Riesen," "Pflanzen," "Thiere," "Rechtsagen," &c.

FULL of interest for the insight into modern Hungarian history as were the first two volumes of Francis Pulezky's *Meine Zeit, mein Leben* (Pressburg and Leipzig, 1880 and 1881), the third volume, issued in the present year, is the one that will, perhaps, have most attraction in this country where so many yet remember the enthusiastic awaiting and reception of Kossuth, and took part in the active sympathy shown to him and his friends. Dealing with the years 1850-59 the author describes the Hungarian refugees and the difficulties of providing for them, the weary steps that led to Kossuth's being set free, his reception in England, his journey to America and the enthusiasm in that country, and his subsequent attempts to aid the cause through Napoleon and the Italian War. Some correspondence between Pulezky and Deak closes the volume, which we presume is not the last. Several chapters on "Our English Friends" and "English Customs and Peculiarities" sketch men and manners in a shrewd and sprightly style, generally just, but always with a high and grateful sense of English kindness and friendship. Among those who figure in these pages may be mentioned Lord Lansdowne, Cobden, Lyell, the Horners, Toulmin Smith, James Yates, the Hills, F. W. Newman, &c.; while among foreigners who took part in political disturbances there is scarcely one who is not touched upon. As a record by one who first followed Kossuth and afterwards Deak, and has played no unimportant part himself in Hungarian affairs, these volumes are of great interest and value.

*Alle Französische Volkslieder.* Übersetzt von Karl Bartsch. (Heidelberg.) Dr. Karl Bartsch is well known as the author of some excellent "Ochestomathies" of Provençal and early French poetry, and of other collections of early mediæval ballads both in French and German. In the present volume he offers us a translation of ballads and songs taken in part from his own *Altfranzösische Romanzen und Pastourelles* (Leipzig, 1870), partly from the *Französischen Volkslieder* of Moriz Haupt (Leipzig, 1877), and the rest from a MS. in possession of Dr. Kayser, of Elberfeld. The majority of the old French romances are anything but Volkslieder in the true sense of the word. More conventional poetry, or poetry more divorced from real life, the world has seldom seen. Nothing can be more monotonous than the incidents of these ballads. They sing almost wholly of sensuous love; there is not the slightest attempt at idealisation of the theme, nor at delineation of character; Aiglentine is exactly like Yolanz, and Yolanz like Yzabel; Raynauz is undistinguishable, except by name, from Henri, Geraïrs, or any other of his peers. And when the "trouvère" descends from these

"châtelaines" to less exalted spheres of life his shepherds and shepherdesses become more impossible creatures still, and are utterly unlike any peasants that have ever existed. The interest of these productions consists in their value to the philologist, and in the dainty charm and music of their language and expression. Unreal, and almost wholly animal, they are yet seductive as the Sirens' songs, and if we yield to their subtle sweetness we forget for a while the outer world, and the cares and business of men; oblivious of morality or immorality, we listen till our ears are cloyed with the too luscious melody. It must then be a bold act in literature to render verse of this kind into another idiom—a *tour de force* which most of those who are capable of performing it would hardly think it worth the while to perform. This task Dr. Bartsch has, however, essayed, and wonderfully well he has achieved it. He has kept, in most instances, the same rhymes and, as far as the different idioms will allow, the same rhythm as the original; and Germans who have not the opportunity of studying the old French romances have here something as nearly like them as it is perhaps possible to give in Teutonic speech. Something of the perfume of the wine may have escaped in its transfer to another vessel, but the liquor is genuine and unadulterated, and sparkles bright as ever. Even in this we perhaps hardly do justice to Dr. Bartsch; but a reviewer is somewhat at a disadvantage with a work of this kind. It should be read leisurely, and not more than one or two pieces at a time, and those from different parts of the book; but the critic must toil through both the book and its originals as quickly as possible, and the result is that, musically sweet as these dainty conventionalities are, he puts them aside at last with a feeling of relief as he gets back to the world of reality:

"'I am half sick of shadows,' said  
the Lady of Shalott."

*Ecos del Rin.* Por Francisco Sellen. (New York.) This is a collection of translations from the lighter lyrical poetry of modern Germany. The pieces of each author are preceded by a short biography and a catalogue of his works. Probably owing to the great amount of translated literature in the language, and to their consequently extensive practice, Spanish writers seem to us eminent in this department. Macpherson's translation of Shakespeare into Spanish is decidedly above the average, and few versions into a foreign language have pleased us more than Arane's translations from Tennyson into rhythmical prose. The present volume is no exception to this general rule. We have amused ourselves with comparing these "Ecos," not only with the original, but with all the English translations which we had at hand; and the brothers Sellen (for Antonio as well as Francisco Sellen signs some of the poems) bear the comparison very well. They excel in all lighter, and especially in love-songs; if they comparatively fail it is in rendering the masterpieces of Goethe and of Heine. Very rarely have we fallen on that great stumbling-block of translators—a rendering for the full or rapid comprehension of which we have to turn to the original. We congratulate all Spaniards unacquainted with German on the opportunity here given them of forming some idea of what modern German lyrical poetry really is.

#### NOTES AND NEWS.

WE are glad to hear that Mr. J. R. Green is now at work upon a volume to be called *England and the Northmen*, and which is to complement his excellent work on *The Making of England*. Part of this book is already in the press, and it is hoped that it may be published

by Messrs. Macmillan and Co. during the present year.

PROF. JEBB's volume on Bentley, in Mr. Morley's series, "English Men of Letters," will be published on Monday, April 3.

THE Syndics of the Cambridge University Press have in preparation *Demosthenes Against Androtion and Against Timocrates*, with Introductions and English Commentary by William Wayte, M.A., late Professor of Greek, University College, London, formerly Fellow of King's College, Cambridge, and Assistant-Master at Eton. The text is that of Dindorf, with the various readings of the principal critical editions. In the commentary, while no difficulties of criticism or interpretation are left unexplained, especial prominence has been given to questions of Political Economy, and, above all, of Greek Constitutional and Criminal Law. The latest authorities on these subjects are referred to; and points of general scholarship are discussed in the notes as occasion offers. Of the two speeches included in this volume, the only separate edition of the Androtion is that of Funkhaenel, with Latin notes, published exactly half-a-century since. The other and longer speech, the Timocrates, has never yet been separately edited either in Germany or in England. The Syndics will publish shortly *Aristotle's Psychology*, with a translation, critical and explanatory notes, by Edwin Wallace, M.A., Fellow and Tutor of Worcester College, Oxford. They have also in preparation a work by the Disney Professor of Archaeology containing the substance of his *Lectures on Greek Coins*. The book will be in large quarto, with sixteen full-page autotype illustrations presenting facsimiles of Greek, Roman, Sicilian, and Asiatic coins.

THE same body also announce that the *Sarum Breviary*, edited by Mr. Christopher Wordsworth, containing the "Calendar and Temporale," is nearly ready for publication. The second volume, containing the "Psalter and Commune Sanctorum," has been already published; and the third volume, completing the work, is in the press. The speech of Cicero pro Sulla, edited by Mr. J. S. Eisd, Fellow of Caius College, is in the press, and will be published shortly. It is prepared on the same plan as his editions of the *De Amicitia* and the *De Senectute*. The second volume of *A Selection of State Trials*, by Prof. J. W. Willis Bund, in two parts, bringing the trials for treason down to the end of the Popish Plot, and the second volume of *Theodore of Mopsuestia's Commentary on the Minor Epistles of St. Paul*, edited by Dr. Swete, completing the work, will soon be published.

WE understand that the volume on Shaftesbury and Hutcheson, which has been written for Messrs. Sampson Low and Co.'s series of English Philosophers, by Prof. Fowler, the recently elected president of Corpus Christi College, will appear shortly. Among its more distinctive features will be a much more complete Life of the third Earl of Shaftesbury, and a more detailed account of the history of his writings, than have hitherto been published.

MESSRS. W. H. ALLEN and Co. will publish, in the early part of next week, the second volume of Mr. Demetrius Boulger's *History of China*. This volume closes with the abdication of the Emperor Keen Lung in the year 1796; and in a third volume, which the author hopes to finish within the next twelve months, the events of the present century will be described in considerable detail. Mr. Boulger has had original MSS. placed in his hands for that purpose by Col. Gordon and other Chinese authorities.

AMONG the recent publications of the Cambridge University Press we notice a new and revised edition of the *Agamemnon* of Aeschylus, with a translation in English rhythm, and notes

critical and explanatory, by Dr. Kennedy, Regius Professor of Greek; and the *Oedipus Tyrannus* of Sophocles, treated in like manner by the same editor, who recently prepared the *Theaetetus* of Plato, with an English translation and notes; a work on the *Growth of English Industry and Commerce*, by W. Cunningham, M.A., late deputy to the Knightbridge Professor, with maps and charts illustrating the comparative value of the precious metals, the increase in the revenue and the debt, the population of England and Wales, &c.; and a new edition of Pearson's *Exposition of the Creed*, revised by Mr. R. Sinker, librarian of Trinity College. The text and notes of this edition have been carefully collated with the third folio edition of 1669, which appears to have been the last to receive systematic revision at Bishop Pearson's hands. The *Book of Judges*, by the Rev. J. J. Lias, has been added to the Commentaries already published in the Cambridge Bible for Schools series; and it is stated that the *Book of Micah*, by the Rev. T. K. Cheyne, will be shortly published in the same series.

MRS. SUTHERLAND ORR has undertaken to write both a *Browning Primer* and an Introduction to Mr. F. May Holland's *Stories from Browning*. Both books will be published by Messrs. George Bell and Sons. We have seen some advance sheets of the *Stories from Browning*, and find that those of the "Blot on the Scutcheon," "Balaustion's Adventures," "Aristophanes' Apology," and "The King and the Book" are admirably told.

THE Oxford Committee of the Wyclif Society is a strong one, thanks to the energy of Prof. Burrows. It comprises four Heads of Colleges—University, Lincoln, Trinity, and Hertford; four Professors—the Principal of Wycliffe Hall, Sir Wm. Herschel, Mr. Boase, and several other leading names. The Cambridge Committee is at present much weaker, consisting only of the President of Queens', Prof. Mayor, the Librarian of Corpus, and Mr. Oscar Browning.

WE believe that "Twelfth Night" will be the next play edited by Mr. Aldis Wright for the Clarendon Press Series.

MR. EDWARD PEACOCK has edited a reprint of a tract published in the year 1825 by the Rev. John Mackinnon, and entitled an *Account of Messingham in the County of Lincoln*. It is intimated that Mr. Peacock may possibly, at some future date, rewrite the annals of this parish, and supplement from the public records now accessible to students, the details given by Mr. Mackinnon, who, to a great extent, was obliged to content himself with what was to be gleaned from tradition.

AT the meeting of the Clifton Shakspeare Society on the 25th inst., reports in connexion with "Twelfth Night" were presented from the following departments:—Puns and Jeets, by Mr. U. P. Harris; Biblical and Religious Allusions, by Miss Florence W. Herapath; Animals, by Dr. J. E. Shaw. Mr. Francis F. Fox read a paper on "Malvolio."

THE Hibbert Lectures will this year be delivered by Prof. Kuenen, of Leyden, who has chosen as his subject "National Religions and Universal Religions." They will be delivered in English at St. George's Hall, and without any charge. The tickets will be sent, as usual, by Messrs. Williams and Norgate to applicants before April 8. Prof. Kuenen has consented to deliver the same lectures also at Oxford. The first lecture in London will be on April 25.

MR. D. H. EDWARDS is preparing for the press a fourth volume of his *Modern Scottish Poets*.

PADRE F. FITA sends us the first sheets of *The Inedited Acts of Seven Spanish Councils from*

1282 to 1314, in course of printing by Maroto, Madrid. This indefatigable student has also just discovered the authentic Acts, hitherto entirely unknown, of the process against the Templars of Castile and Leon. These he will, perhaps, give to the world in a volume entitled *The Trial of the Templars in the Iberian Peninsula, from Original Documents*.

MR. T. FISHER UNWIN, who will be known to many in the publishing and bookselling trade as connected with and representing Messrs. Hodder and Stoughton, of Paternoster Row, during the past eighteen years, has purchased the business of Messrs. Marshall, Japp and Co., of 17 Holborn Viaduct, relinquished through the continued ill-health of the responsible head of the firm. Mr. Unwin will carry on the business of a publisher and export bookseller under his own name, and, for the present, at the old address. We may mention with satisfaction that it is Mr. Japp's intention to co-operate with Mr. Unwin in the way of literary assistance. Among the works already announced, and which will be completed by the new firm, is one by Miss Helen Zimmern, entitled *The Epic of Kings; Stories Retold from the Persian Poet Firdusi*, with Prefatory Poem by E. W. Gosse, and etchings by L. Alma Tadema, R.A. The series of half-holiday hand-books, of which eight are already published, will also be continued and extended.

WE learn from the *Allgemeine Zeitung* that a munificent donor, who is to remain anonymous during his lifetime, has presented to the Municipal Library of Berlin a collection of books relating to the March of Brandenburg, the value of which is estimated at about £7,500. Special works on this subject are becoming extremely rare in the book-market, and the demand for them since 1870 has rapidly increased.

A BROWNING Reading Club, in connexion with the Browning Society, is being formed at Bradford.

DR. BELLESHEIM, of Cologne, is engaged on a History of the Catholic Church in Scotland after the Reformation. He has made extensive researches in the chief libraries of Rome, as well as in the British Museum; and he claims to have discovered in the archives at Florence, among the reports of Count Alfonso Montecuculi, first grand-ducal envoy at the Court of St. James, conclusive evidence that Anne of Denmark, Queen of James I., was a convert to Catholicism.

MESSRS. FIRMIN-DIDOT announce as in preparation, under the title of *Est-ce la peine de vivre? an authorised translation of Mr. Mallock's 'Is Life worth Living?' by M. l'Abbé F.-R. Salmon, of the diocese of Paris*.

M. LAUNETTE, of Paris, is preparing for publication, under the editorship of M. E. Blemont, *Le Livre d'Or de Victor Hugo*. The idea of the book was suggested by the *fête* of February 26, 1881; and it will contain, besides a history of the *fête*, a selection of the most important letters addressed to the poet on the occasion, and other literary matter, a series of photogravures from original compositions by the chief contemporary artists of France.

H.R.H. THE PRINCESS LOUISE (Marchioness of Lorne) has accepted the dedication of the *Dictionary of Needlework*, which is the joint work of Miss Caulfield and Miss Seward.

M. OSCAR VALLÉE has published a book entitled *Les Manières d'Argent* (Paris: C. Lévy), which will be read with interest by those who wish to be instructed concerning the effect of stock-jobbing upon the shaping of recent French politics.

M. E. DUOËRÉ has published at Bayonne

*L'Armée des Pyrénées occidentales: Eclaircissements historiques sur les Campagnes de 1793-4-5*. The work is a full and accurate account of campaigns which have been strangely passed over by general historians.

THE Boston *Literary World* (U.S.A.) of March 11 is quite a Browning number. It contains no less than nine Browning articles—1. A short biography and bibliography of the poet and his works; 2. An account of the Browning Society, by F. J. Furnivall; 3. An abstract of the society's prospectus; 4. "Browning as an Interpreter of Browning," by H. E. Scudder; 5. "Browning in the United States," by L. L. Thaxter; 6. "Browning Before and After 1861," by F. May Holland; 7-9. "Robert Browning," by (a) H. B. Carpenter, (b) C. R. Corson, (c) N. H. Chamberlain.

IT is stated that the second volume of M. Ch. Thurot's last work, *La Prononciation française*, will be published by Hachette during the course of this year. The author was able before his death to correct the proofs of the first portion of the second volume.

ACCORDING to the *Revue critique*, the essays and other works of the late M. de Longpérier, which are at present scattered through the pages of various archaeological and other learned journals, are to be collected into five volumes. M. G. Schlumberger has been entrusted with the duty of editing these remains.

M. ROTHAN's diplomatic reminiscences on the Luxemburg difficulty, which so nearly forestalled the actual pretext of the Franco-German War, have been rescued from the obscurity of the files of the *Revue des Deux-Mondes*, and published in one volume under the title *L'Affaire du Luxembourg* (Paris: C. Lévy). The same publisher has issued an interesting relic of the time immediately preceding the Revolution in the shape of a hitherto unpublished diary of a visit to Paris by three provincial Frenchmen in 1787, which is entitled *La Vie parisienne sous Louis XVI.* The writer was evidently a man of intelligence, and the book will form another link in the long chain of semi-historical French memoirs.

THE first two parts of the bibliographical dictionary of Belgian authors, *Bibliographie nationale*, from 1830 to 1880, has just appeared, and includes the letters A to C.

A SPANISH translation of Daudet's *Le Nabab*, from the pen of Señor Juan Sarda, has appeared under the title *Biblioteca, Arte y Letras* (Barcelona: Domenech). The book is illustrated by fifty drawings furnished by Pellicer.

SIGNOR GIUSEPPE DE LEVA has published the fourth volume of his *Storia documentata di Carlo V. in correlazione all'Italia* (Venice: Sacchetto).

THE *Bibliothèque Slave Elzévirienne* (Paris: A. Leroux) has been enriched by another volume—*La Sorbonne et la Russie (1717-47)*—by P. Pierling.

DR. A. SCHRÖDER, of Vienna, has just seen through the press his annotated edition of Bishop Bale's "Comedy concerninge Thre Lawes of Nature, Moses, and Christ, corrupted by the Sodomytes, Pharisees, and Papystes most wycked, 1538." Besides notes, Dr. Schröder has added to his edition a literary Introduction and a treatise on the metre of the drama.

MR. BLYTH wishes to state that the serial entitled *The Romance of Love and Marriage*, to be published by Messrs. Cassell, Petter and Galpin, and mentioned in the ACADEMY for March 25, is not "a fiction," but a compilation dealing with the romantic attachments of celebrated men and women, and with remarkable marriages in all times and countries.

Correction.—By a printer's error, the date 1859

appears instead of 1839 in the last paragraph of the review of *The Postal and Telegraph Stamps of Great Britain* published in the ACADEMY for last week.

#### A TRANSLATION.

##### THREE TUSCAN "RISPETTI."

1.

THE lily gave her tint to you,  
The rose on you bestowed her blushes,  
The pink hath lent its waxen hue,  
The jasmine-bloom its fragrance luscious.  
So I, to give my heart am fain  
To that sweet face where love doth reign;  
So I my heart must fain surrender  
In homage to that face so tender.

2.

Now would to Heav'n that love were judged by weight,  
And who were short of love should pain endure,  
For that such sentence ne'er should be my fate—  
Unless the scales were false: I then were sure—  
Unless the scales were false, and gave no sign  
Unto which side the balance did incline.  
Unless the scales were false and crooked quite,  
And none should know how love to weigh aright.

3.

Did I but think my love could list to me,  
With lary voice then would I shout and sing;  
But sundered by hills, vales, and mounts are we,  
Nor can my voice to such far distance ring;  
We're sundered by the leaves of cornfields green,  
He cannot hear me with such space between;  
We're sundered by the leaves of trailing vine,  
He cannot hear me from his house to mine;  
We're sundered by the leaves of poplars tall,  
He cannot hear me, he is out of call.

E. M. CLERKE.

#### OBITUARY.

##### PROF. T. H. GREEN.

THE death of Prof. T. H. Green, at Oxford, on March 26, came as a sad surprise even to those who had noticed his evident ill-health. To many, there as elsewhere, it was the loss of a friend whom they had long looked up to, sympathised with, and counted upon. It closed the career of a citizen of Oxford devoted with singular candour to what he believed the highest interests of his adopted city; and for the intellectual world it brought to what seems a premature termination an enquiry, finely conceived and untiringly pursued, into the questions lying at the very foundation of theory and practice.

Thomas Hill Green was born in 1836; and, after his school-time at Rugby, came up to Balliol College, where, in due time, he was elected to a fellowship. A friend who used to meet him about this period seems to have been specially struck by the decided interest he showed in religious questions, particularly on the practical side. Then, as always, he was also a keen politician. He was one of the original members of a society known as the "Old Mortality," which included the names of Bywater, Dicey, Pater, Swinburne, and of Profs. Bryce, Caird, Holland, Nettleship, Nichol, in its early and subsequent fraternity. Green's essays were remarkable alike for their power of thought and their distinctive stamp of expression. At the Union Debating Society he was a weighty speaker. A contemporary tells of a speech in which, defending Republican institutions from the blame of a slave system, he laid the guilt on "a slave-holding, a slave-hunting, and slave-burning oligarchy, on whom the curse of God and humanity rests."

Shortly after taking his bachelor's degree (in 1859), he began to study Hegel, and gave a good deal of attention to the Tübingen school, especially Baur, some of whose works he had

thoughts of translating. Among the fruits of these studies were two essays on the "Development of Dogma," read to the "Old Mortality." But theory and action were, in his case, never far apart. During this same period he was one of a small knot of young men who co-operated in writing on the subject of University Tests. The volume in which these essays were to appear was rendered unnecessary by the passing of the University Tests Act of 1871. His range of reading during the years of the Civil War in America was summarised by the late Prof. Conington as varying between Hegel and the *Morning Star* (one of the few British newspapers which espoused the side of the North in that contest). He was then, as he always was, an earnest, active, and believing member of the party of progress; and while in later years he sometimes seemed more disposed to get the best out of existing institutions, such as the Established Church and the "College System," he was in the beginning of his thirties more distinctly anti-ecclesiastical and radical in his Liberalism. But in essentials the aim of his political convictions probably remained the same.

For a short time he was engaged in a special inspection of schools in connexion with the Endowed Schools Act; but from 1868, as Ethical Lecturer, and subsequently as tutor at Balliol, his main function was that of a university teacher. In 1878 he was elected to the office of Whyte's Professor of Moral Philosophy, and shortly after resigned his tutorship. The last sixteen years of his life possess, therefore, a general uniformity. His lectures as tutor and as professor could not be styled popular, but they attracted, even from the first, many of the most thoughtful students in a way that few lectures now do. For those who could pass over a want of fluency in delivery, an occasional abstruseness of thought, and a certain impracticality (as examinees must judge it) in his mode of treatment, there was a strong fascination in the compact reasoning, the high-toned ideas, and evident enthusiasm of the lecturer. At one time it almost seemed as if he might have formed a school of metaphysicians; but there is little risk of that in the present day. To those who, as college pupils, came into closer contact with him he appealed even more memorably by the simplicity of his life, his unaffected kindness, and the deep and perfectly unforced religiousness which spoke from his heart.

During the latter years he was a member of the town council of Oxford. Some of us, perhaps too selfish or too cynical, sometimes thought he was wasting his energies on the petty disputes of local politics. His own argument for the step was that it enabled him more effectually to promote social amelioration—particularly in education. The Oxford High School for Boys was largely due to his untiring advocacy, and, it may be added, largely indebted to his liberal hand. It was from the same belief in the efficacy of political power as an organ of progress that he took a leading part in political struggles, and supported with all his might the party which might be expected to give speediest effect to schemes of social and economical reform.

To the world outside Oxford he was best known as a philosophical writer. If we except his essay on an "Estimate of the Value and Influence of Works of Fiction in Modern Times," which gained the Chancellor's Prize in 1862, he first appeared as an author in two essays which were published about 1866 in the *North British Review*, on the "Philosophy of Aristotle" and on "Popular Philosophy in its Relations to Life." His main work followed in 1874, as part of a new edition of Hume's works by Green and Grose, in four volumes. The first two volumes, including the *Treatise on Human Nature*, were prefaced by lengthy introductory

dissertations: one dealing with the theoretical philosophy of Locke, Berkeley, and Hume; the other with the ethical views of these writers and their contemporaries. The former is a probably unequalled piece of minute and at the same time comprehensive criticism of the origins of current English philosophy. In December 1877 Prof. Green began in the *Contemporary Review* a series of papers on "Mr. Herbert Spencer and Mr. G. H. Lewes: their Application of the Doctrine of Evolution to Thought." These papers did for the modern representatives of English psychological method what the Introduction to Hume did for Locke. In the present year two articles in successive numbers of *Mind* have entered upon the discussion of the problem, "Can there be a Natural Science of Man?" Nor must it be forgotten that in several short reviews published in the ACADEMY he has made contributions of permanent value to the literature of philosophical criticism.

Green, as has been said, began his study of German philosophy with Hegel. To call him, in the obvious sense of words, a Hegelian would be a mistake. But he learnt, as many others have learnt, from Hegel the exceeding breadth and depth of the problem of philosophy, in a way which makes it impossible, for anyone who has learned it, ever again to return to the philosophic caves where psychology is kept clear of metaphysics, logic barricaded from theology, and faith forbidden any intercourse with morals. Such good Hegel has done to many who have scant sympathy with the rationality of the actual; so with the dialectical *rapprochement* between being and not being. But *il faut reculer pour mieux sauter*, and from Hegel Green went back to Kant. The return, almost always inevitable, has special uses for an Englishman. For Kant, while he takes up the disputes raised by Hume, supplies results which, when disguised, make up a considerable part of the assumptions of the empirical metaphysicians. To interpret and supplement Kant was, superficially described, the aim of Green's later teaching.

It would not be going far astray to say that from his essay on Aristotle to his latest words in *Mind* he was engaged with the same old question between what the schools call the sensible and the intelligible world. If in the earlier papers the discussion is more involved, it is also lighted up by characteristic gleams of picturesque phraseology; in the later, if the style is more monotonous and subdued, the drift of the argument is more distinct. Not, indeed, that it is ever possible to master the meaning by glancing rapidly over his pages. His eye was fixed on the main and supreme questions; the details always retained their subservieny to, and coherence in, the mass; he did not break truth up into manageable fragments, but kept it whole and indivisible in its every part. His style, in short, was characteristic of the man. There was the same weight of centralised purpose in both.

With all his realism, or perhaps because of his honest and unembittered realism, he was an idealist—one of the few who, now as always, refuse to abandon the cause of what may, for want of a better name, be called metaphysics. He sought to set before those who ignore philosophy, or who identify it with one or more of the sciences, the consideration that there are a few presuppositions still unanswered and apparently unanswerable by scientific methods. No doubt empiricism does not much mind what is said of its presuppositions, for prescription has given it such a hold on the mind that, with or without foundation, it manages to hold well together, and to rear its psychological towers into mid-air, and then asks if the magnificence of the superstructure need not excuse from further enquiry into the question of foundations.

In undertaking this discussion, Green started from Kant. But whereas the neo-Kantians usually develop the empirical side of Kant, he tried to emphasise the tendencies which come especially to the front in the Kantian ethics. He sought to complete the *disiecta membra* of the critical philosophy by reducing the separation between feeling and understanding to its proper amount in comparison with the more stupendous interval between phenomena and noumena. "Every object we perceive," as he says in his last published page, "is a congeries of related parts, of which the simplest component, no less than the composite whole, requires, in order to its presentation, the action of a principle of consciousness not itself subject to conditions of time." If this be true of nature in general, then, in reference to physiology of mind, it follows (to quote his earlier words) that "we cannot naturalise the 'human mind' without presupposing that which is neither nature nor natural, though apart from it nature would not be—that of which the designation as 'mind,' as 'human,' as 'personal,' is of secondary importance, but which is eternal, self-determined, and thinks."

W. WALLACE.

#### H. W. LONGFELLOW.

HENRY WADSWORTH LONGFELLOW, who died on March 24 at the ripe age of seventy-five, obtained during his lifetime a larger share of good fortune than is given to most true poets. If the voice of the people were the ultimate standard of literary fame, his reputation would rank second to that of none of his contemporaries. Judged by the number of persons who can repeat them from memory, his "Village Blacksmith," his "Psalm of Life," his "Wreck of the Hesperus," may be classed among the most popular pieces in the language.

While the news of his death is still so fresh, it would be premature to attempt to assign Longfellow his due place among the classics of English literature. But it is worth while to consider some of the causes which conduced to his immense popularity. He revealed no new world of passion, like Byron or Shelley; he discovered no fresh way of looking at the past, like Scott, or of looking at nature, like Wordsworth; he did not even invent a style and a rhythm, like our own Laureate or Mr. Swinburne. He expounded no original theory of poetry, and he has left no school of imitators. Yet his works, as we have said—or, at least, many of his works—are probably as widely known as those of any other writer of English. The main cause of this is, no doubt, the appeal which he made, in the simplest and purest of language, to the many millions of ordinary people who now constitute the reading public. To that innumerable class whom Carlyle despised, and who have never quite understood Mr. Tennyson, Longfellow was the household poet just as *longo intervallo*—Dickens was the household novelist and Macaulay the household historian. What critics are wont to call sentimental and even commonplace is just that which comes home most directly to the average Anglo-Saxon family. What the half-educated man or woman can entirely understand on a first reading, what children lisp at home as well as at school—this is the literature of the masses; to have written this is to have attained popularity.

But Longfellow was a great deal more than a metrical Mr. Tupper. To a genuine gift of song he added the moral robustness of a New Englander, and the trained capacity that comes of a cultured life. He had travelled much on the Continent, and nearly all his days were spent in the academic shades of that other Cambridge which is no unworthy rival to its original. As Professor of Modern Languages at Harvard, he followed Ticknor, and was himself succeeded by Mr. Lowell. We have not heard

that any of his lectures were ever printed; but the fruit of his studies is shown not only by the subjects of several of his poems, but also by the grace and polish of his literary style. In what the common people read and liked there was little that the critic could take offence at.

One consideration more must not be overlooked. It cannot be disguised that Longfellow owed half his popularity in this country to the absence of international copyright with the United States. If the account between authors and readers on the two sides of the Atlantic could ever be settled, we incline to think that the sum due by us to Longfellow would outweigh that which any single English writer could claim from the Americans. For the volumes of his collected works we trust that he received some "courtesy" payment; but who can estimate what he owes to him for the reprints of his best poems which form such a prominent feature in all our *Selections*? Is it yet too late to repay part of this debt?

THE Rev. Thomas Francis Knox, for many years a member, and of late years the head, of the Oratory at Brompton, died on March 20. He was the eldest son of Mr. John Henry Knox, M.P., and was born on Christmas Eve in 1822. The founder of the Irish branch of the family settled at Dungannon in 1692, and ever since that time his successors have rejoiced in the possession of bishoprics and archdeacons in the Irish Church. Mr. Knox was, it is almost unnecessary to say, brought up in its principles. He was sent to Trinity College, Cambridge, and graduated in 1845, taking a first class in the classical tripos. In the same year he edited the first edition of Mr. Whytehead's *Letters on College Life*. Shortly afterwards he passed into the communion of the Roman Church, and became one of the learned and enthusiastic converts who were obedient to the rule of F. W. Forster. Several sermons and some translations of Lives of the Saints from foreign writers were published by Mr. Knox, but his chief contribution to English literature consisted of a reprint, with an interesting preface, of the *First and Second Diaries of the English College at Douay*. The history of the Roman Catholics in the reign of Queen Elizabeth has yet to be written; but when the historian arises to undertake the task he will not fail to consult, and to acknowledge the value of, this admirable record of their chief collegiate institution on the Continent. Mr. Knox was also the author of a short Life of Bishop Goldwell of St. Asaph, which appeared originally in the *Month*, and has since been reprinted.

#### MAGAZINES AND REVIEWS.

In the *Revista Contemporanea* of March 15, Gen. Pavia, under the title of "El Caciquismo," depicts the selfish political immorality of his countrymen as the root of nearly all the evils from which Spain suffers. He traces its effects in the "confeccion" of Cortés, and thence in all other political, financial, administrative, and military life, showing its prejudicial effect also on the existing Government, whatever that may be. In concluding his present instalment, he appeals to the patriotism and disinterestedness of all to combat this gigantic evil. A pseudonymous writer, D. A. Ubique, calls attention to the valuable MSS. in the Chapter of Toledo describing particularly two folios of Mozarabic Offices of the tenth century, and the missal of Card. Quiroga, in ten volumes folio, of the sixteenth century, with drawings and miniatures signed by Ambrosio and Juan Salazar. There is also a very spirited Ode, by Suarez Capalleja, written for the O'Connell commemoration in Dublin, August 1875. In a note the author seems to confuse

Londonderry with London, and November 5 in the latter with July 12 in the former. Tinajero Martinez in this number concludes his series of historical reviews called "Polystoria," and E. Mourelle resumes his interrupted essay on "Mechanical Chemistry."

THE *Theologisch Tijdschrift* for March contains an excellent article on Friedrich Delitzsch's recent work on *The Site of Paradise* (a not very accurate title) from the competent pen of Dr. Tiele. Without attempting a minute criticism of details, such as was offered lately in the *Revue critique* for December by M. Halévy, Dr. Tiele points out various difficulties in the theory of Dr. Delitzsch which localises Paradise in Babylonia, and altogether questions whether Cush really meant Babylonia, and whether the district in which Babylonia lies was ever called Kardunias. He thinks himself that Pishon and Gihon are primitive Semitic equivalents of the Persian names Euphrates and Tigris. Dr. Tiele is sceptical as to the correctness of the new explanation of the name Yahveh from an Accado-Assyrian syllabary. Dr. Oort reviews Mr. Deane's useful edition of the *Book of Wisdom*, which hardly takes up the subject at the point which current criticism has reached. Dr. Loman hazards a question as to the genuineness of the epistles admitted to be Pauline by F. C. Baur. Dr. A. H. Blom writes on the relations of St. Paul and Barnabas.

## CORRESPONDENCE.

BLAKE'S "MARRIAGE OF HEAVEN AND HELL."  
 London: March 28, 1882.

Readers who are interested in the niceties and variations of W. Blake's colour-printed and illuminated books may care to note the following peculiarity in the *Marriage of Heaven and Hell*, No. 61 of the Beaconsfield Engravings Catalogue, sold on March 20, it is stated, for £50.

This book, which I believe to be among the *rarest* even of Blake, as well as the most interesting in its text after the two sets of songs, is described by Gilchrist, in his *Life of Blake*, as consisting of twenty-four leaves. Gilchrist notes three copies of the book, but does not specify which of them he himself collated. The Beaconsfield copy contains twenty-seven leaves (each printed on the obverse only), the last three being entitled, on p. 23, "A Song of Liberty." This song ends with a chorus beginning, "The Eternal Female groand" (*sic*), the final line at the bottom of p. 27 being one eminently characteristic of the writer: "For everything that lives is Holy."

These three pages doubtless were missing from Gilchrist's copy or copies. They seem, in fact, to form a sort of appendix to the *Marriage*, and are less elaborately decorated, having only a few ornaments and slight figures interspersed in the text.

F. T. PALGRAVE.

## SPEDDING'S "EVENINGS WITH A REVIEWER."

Park House, Maitstone: March 28, 1882.

THE ACADEMY of the 18th contains a review by Mr. Gardiner of "*Evenings with a Reviewer*," by James Spedding; with a prefatory notice by G. S. Venables. In the course of his remarks Mr. Gardiner takes exception to a statement occurring at p. 21 of the prefatory notice. His words are: "It is not necessary to adopt Mr. Venables' wild statement that the plan of Carlyle's *History of Oliver Cromwell* was borrowed from the cumbrous arrangement of the *Life of Bacon*—which was in reality published many years after it"—in order to acknowledge that the close juxtaposition of text and comment is no slight assistance to the true understanding of both. Those who know Mr. Venables will not readily believe that he would venture any "wild statement" which a simple comparison of dates might at once have shown to be erroneous. The statement on which Mr. Gardiner comments, if understood as the writer meant it, is strictly true; it might perhaps have been worded in a manner less open to possible misapprehension. If, instead of "borrowed from the cumbrous arrangement of the *Life of Bacon*," Mr. Venables had written "borrowed from the plan which Spedding had early conceived, had communicated to Carlyle, and afterwards carried out in his *Life of Bacon*," the averment would have been unimpeachable. Mr. Venables was intimately acquainted with both, and has been told by Spedding over and over again that the plan of Carlyle's book was professedly taken from his, as a circumstance in which Spedding took some pride. He thinks, but cannot state positively, that Carlyle told him the same thing. I have this information from Mr. Venables himself.

If a criticism impugning the accuracy of

another writer, made by so high an authority as Mr. Gardiner, can be shown to rest on a misapprehension, the sooner the right explanation can be made known the better.

E. L. LUSHINGTON.

THE "KASHF UZ-ZUNÜN" OF KĀTĪB CHALABY.  
 British Museum: March 27, 1882.

In his interesting review of M. Derenbourg's edition of the *Kitāb Sibawaih*, the Rev. G. Percy Badger refers to the *Kashf uz-Zunūn* of Kātib Chalaby as a work which the learned editor "may not have seen." Mr. Badger may rest assured that the *Kashf uz-Zunūn* is an old and familiar friend of M. Derenbourg. Ever since the days of d'Herbelot the vast bibliographical compilation of Kātib Chalaby, better known as Hājī Khalīfah, has been the *vade mecum* of every student of Mohammedan literature. Its use has been much facilitated by the excellent edition of the text published, with a Latin version, by the late Prof. Gustav Flügel, and printed in Leipzig at the expense of the Oriental Translation Fund, from 1835 to 1858.

CH. RIEU.

SPANISH AND PORTUGUESE "-EZ," "-ES."

Villa Adalina, San Remo: March 18, 1882.

In the ACADEMY of March 11, Prince L. L. Bonaparte continues his polemic, in which (even though my name has been again mentioned) I have, perhaps, less interest now than before, especially as the Prince appears to consider the assertion of Larramendi's views and similar statements to be equivalent to proof. I regret I cannot find in his letters any of the proofs I so much desire to see.

I may state that I never said or insinuated that "all that Germany has done for science" consists in the solution of the origin of the Spanish-Portuguese "-es" and "-ez." This is a forced construction to put on a plain sentence. If the Prince will look again at his first letter, he will see that he says of Larramendi's dictionary that it is "a work in comparison with which all subsequently printed lexical performances are, without any exception, nothing more than despicably abortive attempts." Surely this is to attempt to sweep away everything done in respect of the Basque language in later times by German and other scholars, by the mere mention of Larramendi's name.

As regards Larramendi's statement of his opinion concerning the origin of the Spanish-Portuguese "-es" and "-ez," it seems that the Prince has (p. 122 ACADEMY of February 18) quoted from memory, for he has left out much which shows how fantastic Larramendi's opinion is, and which Dr. v. Reinhardtsoettner quoted correctly. On p. 11 of the original (1729) edition of the Grammar of the "Learned Jesuit" (who was a theologian) he says that the Basques did not use patronymics in "-ez," but adopted the Spanish "de" (!). Therefore, if Larramendi is correct, the Basques invented a form which they never used, but exchanged with others!! Larramendi (as his absurd title of his Grammar, "*El Imposible Vencido*," shows) should be classed with the equally erudite (though often crazy) theologian—the Jesuit Kircher. Explanations of linguistic facts must not only be possible; they must be probable.

The Prince's discovery of other traces of Basque in Spanish and Portuguese I must leave to philologists. Prof. W. D. Whitney, *e.g.*, has lately written a most charming essay, "On Mixture in Language," and could decide the matter for good.

Again, can the (so far as I know them) special essays of Coelho and others be compared with so full a treatise on the whole subject as is Dr. v. Reinhardtsoettner's Grammar?

Lastly, to follow the Prince's example, I must say that I have not the honour to be acquainted with any of the scholars whose names have been mentioned. In the little town where I now chiefly reside I cannot even refer to their works, even if in Italian.

A. BURNELL.

## APPOINTMENTS FOR NEXT WEEK.

MONDAY, April 3, 5 p.m. Royal Institution: General Monthly Meeting.  
 7.30 p.m. Aristotelian: Discussion, "Consciousness."  
 8 p.m. Victoria Institute: "Materialism," by Mr. O. W. Richmond.  
 TUESDAY, April 4, 8 p.m. Shorthand: "The Principles of Legible Shorthand," by Mr. E. Pecknell.  
 8 p.m. Civil Engineers: "The Theory of the Gas Engine," by Mr. Donald Clark.  
 8 p.m. Anthropological Institute: "The Papuans and Polynesians," by Mr. C. Staniland Wake; "Rites and Customs in Old Japan," by Mr. C. P. Stoddard.  
 8.30 p.m. Zoological: "A New Species of Tortoise from Sam," by Dr. A. Güther; "The Unconvoluted Trachea of Two Species of Manidae," by Mr. W. A. Forbes; "The Eggs of Some Scarce Wading-Birds from Madagascar," by Mr. J. E. Hartner; "A Description of a New Species of the Genus *Tyras*," by Mr. E. P. Ramsay.  
 WEDNESDAY, April 5, 7 p.m. Entomological.  
 8 p.m. British Archaeological Association: "A Tonsure Plate formerly used by the Ecclesiastics of St. Paul's Cathedral," by the Rev. Dr. Sparrow Simpson; "Wyddleton Towers," by Sir Lewis Wincopp Jervis.  
 THURSDAY, April 6, 8 p.m. Mathematical.  
 FRIDAY, April 6, 8 p.m. Linnean.

## SCIENCE.

*Das Werkzeug und seine Bedeutung für die Entwicklungsgeschichte der Menschheit.*  
 Von Ludwig Noiré. (Mainz: I. Diemer.)

"MAN," says the author of *Sartor Resartus*, "is a tool-using animal. . . . Nowhere do you find him without tools; without tools he is nothing, with tools he is all." Anthropologists will hardly be disposed to carp at this definition of man. It is true that an ape may occasionally use a stone to crack a nut-shell, or a stick for the purpose of scratching his back or for hurling at an enemy; but it has been held, with fair show of probability, that such acts as these, simple as they seem, are purely imitative, and are never performed unless the animal has had an opportunity of witnessing human actions. But, even allowing that natural objects are occasionally used as tools by the anthropoid apes, there can be no manner of doubt about the distinctively human character of the *manufacture* of a tool—the shaping and fashioning of an object into a desired form for effecting a specific purpose. In a remarkable lecture on "The Evolution of Culture," delivered at the Royal Institution a few years ago by Col. Lane Fox (now Gen. Pitt-Rivers), he remarked that "the conception of man, not as a tool-using but as a tool-making animal, is clear, defined, and unassailable."

The great importance of studying the origin and development of tools as an aid in tracing the evolution of humanity did not escape so keen-sighted and deep-thinking a philosopher as the late Lazar Geiger.

"Der Gebrauch von Werkzeugen, die er selbst bereitet hat, ist unterschiedener als alles Andere ein augenfälliges, unterscheidendes Merkmal für die Lebensweise des Menschen. Aus diesem Grund ist die Frage nach der Entstehung des Werkzeugs ein Gegenstand von der höchsten Wichtigkeit für die menschliche Urgeschichte."

Prof. Ludwig Noiré, an ardent disciple and admirer of Geiger, has placed these words of his master's upon the forefront of the work which is the subject of this review,

The volume is put forth as a necessary supplement to his earlier work, *Die Ursprung der Sprache* (see ACADEMY, November 23, 1878). There is, in fact, so intimate a relation between words and tools that the origin of the one helps us towards that of the other. Human intelligence manifests itself in speech and in work; and as words are the representatives of thought, so tools are the material means by which his activity is exercised. Prof. Noiré has thus been led by his philological studies to address himself to the philosophy of tools.

The activities of an animal are dependent upon the organs with which he is naturally furnished; but man, providing himself with artificial organs in the shape of tools, determines at will the direction and extent, within certain limits, of his own activities. The animal is the slave of his organs; the man the master of his tools. If a knife is grasped by the hand it becomes, for the time being, a part of the organism, and may be used as though it were a natural cutting organ. But it has this obvious advantage, that when the cutting is no longer required it can be detached and replaced by another tool designed for some other object. It is this principle of substitution that confers such enormous importance upon tools.

Geiger concluded, on philological grounds, that man must have possessed language before he possessed tools. Every activity which is carried on by means of implements is said to possess a name indicating that a similar activity was originally exercised simply by our natural organs; hence the obvious conclusion that the primitive word must have been in use when the natural organ alone was used. In this view Geiger is closely followed by Noiré. In like manner elsewhere the disciple generally treads near to the master; but a radical difference between them becomes evident when the two thinkers deal with the mimetic principle. Prof. Noiré is no more disposed to account for the origin of tools by a reference to the imitative instinct of primitive man than he would be to seek the origin of speech in the bow-wow theory. Nature's teachings may have been great, but man has not gained his knowledge of tools by imitating the use which animals make of the natural organs with which they are endowed. It would be futile to deny the power which the imitative principle exercises over man; witness, for example, the involuntary effects recorded in dancing epidemics. But our author holds that Aristotle's famous definition of man as an imitative being has been productive of a flood of erroneous consequences. Even Geiger went the length of explaining the origin of fire as a result of imitation. From the apparent diurnal motion of the sun, the idea of revolution became imported into certain primitive forms of cult, and perhaps at the present day this notion survives in the use of the rotating prayer-wheel of the Buddhists. It is conceivable that the discovery of fire by friction might have been accidentally made during the rotation of one piece of wood upon another as part of a religious ceremony, and in direct imitation of the great celestial movement.

Prof. Noiré's volume is divided into two parts—the first being philosophical, the

second technological. In the latter part he traces the origin and evolution of the various types of implement and weapon, and incidentally argues in favour of an age of wood having preceded the period at which stone was first utilised. It is difficult to give an analysis of so interesting, comprehensive, and suggestive a work. To most readers, however, it would have been more acceptable if it could have been condensed, and we are certainly inclined to think that it hardly needed 400 pages to set forth the author's views on this subject.

In this country we are fortunate in having access to the unique collection of tools and weapons arranged by Gen. Pitt-Rivers on the principle of development, and exhibited by him at South Kensington. A visit to that collection and a perusal of Noiré's volume will convince anyone that more is to be learnt from an intelligent application of the principles of evolution to the study of tools and weapons than was ever dreamt of in the philosophy of our forefathers.

F. W. RUDLER.

## TWO BOOKS ON BIRDS.

*The Ornithological Works of Arthur, Ninth Marquis of Tweeddale.* Edited and Revised by Capt. R. G. W. Ramsay, F.L.S., &c.; together with a Biographical Sketch by W. H. Russell, LL.D. (For Private Circulation.) In Dr. Russell's interesting sketch of the Marquis of Tweeddale's life (better known to ornithologists as Lord Walden), the devotion of an ardent spirit, first to the profession of arms and then to the study of ornithology, is conspicuously displayed. It is remarkable how the capacity of taking a wide view of a subject and the precision of judgment which are seen in Lord Arthur Hay's letters from the Crimea developed, after the return of peace, into that scientific discrimination and wide glance over bird-life which assured so great a reputation to the Marquis of Tweeddale at his lamented death. Oriental ornithology appears to have specially fascinated him. The editor, Capt. Ramsay, had sent him a unique collection of birds from the Andaman Isles, Birmah, and India. Adding to this his own contributions to his favourite science, and those treasures which collectors whom he sent out to the Philippine and Malay Archipelagoes secured for him, the Marquis gathered together an excellent museum of birds. In the pages of the *Ibis*, the *Transactions* of the Zoological Society, and other scientific magazines, he year after year described the rarer specimens. The portly volume before us holds these contributions to the knowledge of Eastern bird-life from 1868 onwards, till death deprived science of a distinguished student. Naturally, these papers are too technical to be here spoken of at length; but they impress us strongly with a sense of the author's judgment and knowledge, and must form a valuable storehouse of facts for the future. One short account of the large Indian boa, written when the author was in his twenty-third year, shows peculiar powers of observation. No fitter memorial to a great ornithologist could have been devised than this which he raised for himself.

*Love's Meinie:* Lectures on Greek and English Birds. By John Ruskin, LL.D. Lecture III.—The Dabchicks. (Allen.) To one who knows anything of birds, whether scientifically or as they exist in nature, this lecture is ornithology bewitched. For the sake of the pupils of St. George's Schools primarily, and then of boys and girls in general, Mr.

Ruskin deliberately upsets the recognised scientific nomenclature and classification of birds, and announces a brand-new fantastic arrangement drawn from his own inner consciousness. Thus the dipper (*Cinclus aquaticus*) finds itself classed along with the rails and phalaropes, simply "because they are the true link between land and water birds, and best show what I mean by broad principles of grouping." Anatomical considerations are gloriously ignored. Would any ornithologist like to hear the names by which his old friends are to be known in the paradise of birds? Here are some: the spotted crane (*Rallus porzana*) becomes *Allegretta nymphaea*, the lily ouzel; and the red-necked phalarope (*Phalaropus hyperboreus*), *Titisia arctica*, the Arctic fairy. Mr. Ruskin cannot even away with the accepted terms for describing a bird's plumage; neck-feathers and under-plumage are always to be in his system "chemisette" and "bodice." Of course, this lecture contains much that, to ordinary minds, scarcely seems to belong on any system of arrangement to ornithology—e.g., remarks on men spitting in the choir of Bouen Cathedral, or the manner in which we now "send out our cavalry regiments to repetitions of the charge at Balaclava without horses at all;" on Pegasus, Joseph's chariot, and Dandie Dinmont—but this we expect from Mr. Ruskin. A question was lately raised in the ACADEMY on the word *cotile* or *cotyle* as applied to the scientific name of the sandmartin: "we will be troubled no more" with questions of this kind, says this new ornithologist; they only "enable ornithologists to become further unintelligible." We see that the lecturer (following Richardson) connects "meinie" with "menial." Blackstone hits upon a truer derivation in applying the latter word to those who live *intra moenia*, domestic servants. It is marvellous to an Oxford man of the past days, when Alma Mater had some regard for science, to find that these lectures on "Familiar Birds" could be gravely delivered before academics. And we are lost in amazement that one who has observed and travelled so much as Mr. Ruskin could first of all lecture about so common a bird as the dipper, and then write of it, "I am sixty-two, and have passed as much time out of those years by torrent sides as most people, but I have never seen a water-ousel alive."

## NOTES OF TRAVEL.

A PARLIAMENTARY paper of great importance has just been issued, containing the text of the Russo-Persian treaty on the boundary between the two Powers, fixing its position from the Caspian Sea to about 160 miles west of Sarakhs. It would seem that the former Power has not succeeded in extorting from the latter the cession of so much territory as she at first laid pretensions to. What, we suppose, must by courtesy be called a map accompanies the State Paper, and it is on the face of it drawn at the Intelligence Department of our War Office. Either the map is simply a reproduction of the Russian original, or some curious blunder has been committed here, as Askabad is, roughly speaking, thirty miles out of its true place. If the map be simply a copy, surely this extraordinary misrepresentation ought to have been prominently noticed.

We hear that Dr. J. R. M. Robertson, who has already been engaged in scientific exploration in Queensland, will leave England almost immediately for the Gulf of Carpentaria, with the view of making an extended exploration in that region and Northern Australia generally.

News has been received from Mr. J. M. Schuyler, dated Agoldi, January 6, by which

we learn that he has determined the position of the Yal tributary of the Nile, and has solved the peculiarity of the Sobat and Yaboos having their sources in the same lake, the explanation being that there are two rivers bearing the latter name, of which one is an affluent of the Blue and the other of the White Nile. The word Yaboos, it seems, is a common term for a running stream, so that the confusion which has arisen is no matter for surprise.

IN a brief review of what has been done during the year which has passed since the three pioneer American missionaries arrived at Benguela, West Africa, the Rev. W. W. Bagster says that they have collected about 1,300 words of the Ambunda language, and tested them by constant trials; and they have obtained a fair idea of the mode of inflection. They have also adopted so good a mode of transliteration that, when Mr. Saunders sent down 150 carriers from Bailundo to Benguela, every man readily answered to his name when it was called over by Mr. Bagster. The most recent news respecting this expedition is that Mr. Bagster had at length reached Bailundo with four other missionaries on November 29.

WE understand that the Italian Geographical Society have just conferred their two medals for the year on Dr. Nachtigal and Major Serpa Pinto for their great journeys in Africa; and we are glad to hear that in so doing they have followed the almost invariable rule of our own society, and have made the award, not for the explorations alone, but also for the published accounts of the same.

A CONTEMPORARY considers it "a singular coincidence that the news has reached us from Boston, U.S., that the American Board" (which also sent out the Bihé expedition) has established a mission at Umzila's, in South-east Africa. The information which has reached our contemporary is singularly out of date, as it was given even more fully two months ago in the *Monthly Record of Geography*, and was most probably received by way of Mozambique.

IN our note last week respecting mountaineering in New Zealand we find we were led into a slight error by our contemporary, the *Colonies*. We understand that it is the Rev. W. S. Green, a member of the Alpine Club, who is about to make the explorations alluded to, in company with the guides Emil Boss and Ulrich Kaufmann, of Grindelwald.

#### SCIENCE NOTES.

*Double Refraction in Diamonds.*—An interesting collection of photographs illustrative of microscopic petrology and mineralogy is being issued, in instalments, by Prof. Cohen, of Strassburg. In the last part of the series, which has lately been published, are some notable examples of double refraction displayed by crystals belonging to the regular system. It appears that in the diamonds of South Africa double refraction is so common that a perfectly isotropic crystal is almost exceptional. This anomalous behaviour may frequently be referred to the presence of enclosures. The so-called "glassy stones with stony corners" exhibit unusually strong double refraction, and give such brilliant colours in polarised light as to resemble an aggregate of quartz granules. Such diamonds have a marked tendency to split spontaneously when extracted from the earth, and it is consequently suggested that they are subject to a state of tension comparable with that which obtains in Prince Rupert's drops.

MR. E. RAY LANKESTER has been nominated by the Crown—i.e., by the Home Secretary—to the Professorship of Natural History in the

University of Edinburgh. He succeeds Sir Wyville Thomson, who resigned through ill-health last December, and whose death we recorded only a fortnight ago. This is perhaps the most important and, at the same time, the most lucrative chair of biology in the kingdom, owing to the position it occupies in the curriculum of the Edinburgh School of Medicine. When Sir Wyville Thomson was away on board the *Challenger*, his place was filled by Prof. Huxley. The new Professor has proved his ability for teaching at University College, London; and he will take with him the good wishes of many friends in this larger field of labour.

IT is an open secret that the chair at Edinburgh was first offered to Mr. F. M. Balfour, of Cambridge. His refusal of the honour was probably not unconnected with the scheme that has now been made public for founding, at his own university, a professorship of animal morphology, in which department of science he has himself attained such high distinction. The proposal is otherwise interesting as the first definite step to establish a temporary post for a special occupant, and also because "the advancement of knowledge" is mentioned as one of the express duties not less than teaching.

ON March 28, at a crowded meeting of members of the medical profession held at the Royal College of Physicians, it was resolved to establish an "Association for the Advancement of Medicine by Research." While we cordially support both the express and the implied objects of this undertaking, we may express a regret that it was not advocated and organised on the wider basis of the advancement of biological science.

THE *British Quarterly Review* for April contains an article by Mr. Henry Larkiu, entitled "Astronomical Explanations of the Force of Inertia," being an attempt to explain and develop Newton's remarkable postulate respecting the "perseverance" of all bodies in their given states until "compelled by force" to change.

THE first meeting of the Anthropological Society of Belgium was held on Monday, March 27, in the University of Brussels.

THE French Ministry of Marine intends to apply to the Chambers for a vote of £32,000 for the equipment of a meteorological expedition which is to proceed to the Antarctic regions in accordance with the scheme of the International Polar Commission.

#### PHILOLOGY NOTES.

PROF. PAUL MEYER has found a short Anglo-Saxon passage in a MS. of the tenth century, which originally belonged to an English monastery, thence found its way to the Abbey of Fécamp, in Normandy, and is now in Rouen Cathedral Library. Prof. Meyer has kindly undertaken to superintend the copying of the short Wyclif MSS. in the Paris National Library for the Wyclif Society.

PROF. ZUPITZA has sent to press the first part of the transliteration of the unique Cotton MS. of *Beowulf* and his notes on it, to accompany the autotypes of the MS. which were made two years ago for the Early-English Text Society by Mr. Praetorius.

MR. JAMES BRITTEN has undertaken to edit the volume of early treatises on Plants and Herbs, which the Early-English Text Society has long had on its list.

THE grammars of the Russian, Polish, Servian, Bulgarian, and Greek languages in the new series of "Simplified Grammars," in course of publication by Messrs. Trübner and

Co., will be written by Mr. W. R. Morfill, of Oxford.

THE Académie des Inscriptions et Belles-Lettres has published the first number of its new journal, the *Corpus Inscriptionum Semiticarum*.

A NEW French and Danish dictionary is being published in parts under the title *Dansk-norsk—Fransk-Ordbog*. It is edited by M. Thos. Sundley and E. Barnel, and has already reached the word *Hindet*.

M. BARBIER DE MEYNIARD is publishing in parts, under the auspices of the École des Langues orientales, an important lexicographical work, entitled *Supplément aux Dictionnaires turcs*, which is remarkably rich in various Turkish proverbs and idiomatic phrases commonly used in the vulgar speech, but which have been neglected by the authors of Turkish dictionaries. Two parts have appeared, bringing the work down to the third letter of the alphabet, and the author has promised to furnish his first volume, when completed, with an introduction in the shape of a history of the Turkish language, and a bibliography of all European works having any relation to its elucidation.

#### MEETINGS OF SOCIETIES.

CAMBRIDGE ANTIQUARIAN SOCIETY.—(Monday, March 13)

THE REV. R. BURN in the Chair.—Mr. Marshall Fisher exhibited and described a vase of red terra cotta, 6½ in. high, together with other Roman pottery in fragments and horse-bones, from Downham Field, about a mile and a-half to the north of Ely Cathedral; the vase was discovered about 18 in. below the surface during drainage operations on land in the occupation of Mr. W. Pate.—Prof. Hughes described some fragments of Roman pottery and other objects exhibited by Mr. W. W. Courdeux, which had been found at the depth of 3 ft. in Humber deposit at Great Oates in North-east Lincolnshire by workmen who were under-draining old pasture-land. Along with the pottery were sawn bones, pieces of glass, and some very curious tube-like formations in considerable masses, which Prof. Hughes explained to have been produced by concretionary action around roots of plants, also shells of the common cockle. Beds of ashes were also passed through, but these may have been of more recent date. The field, known by the name of the "Little Nooks Close," adjoins the bank of a very old drain, called the "Old Fleet," which formerly, as now, received the drainage of some portion of the Lincolnshire Wolds. At the time this pottery was in use, the drain must have been a large creek with sloping mud banks, bordered by "fittie" lands (a local term for land beyond the sea-embankments overgrown with sea-living plants and occasionally flooded at high water), for such was once the condition of much of the lowlands in this district bordering the sea. The Romans no doubt used this creek as a convenient harbour up which to run and beach their vessels, and disembark their cargoes for transport to the nearest station at Stallingborough, distant as the crow flies a mile and a-half, whence the goods could be further transported inland to the different settlements and camps on the wolds. The author did not think that the fragments discovered belong to pottery made on or near the spot, but were probably the refuse of cargoes thrown overboard as rubbish. Stallingborough was a third-rate Roman station, and Roman coins have been found there. We know that Offa there held his court, and that it was a place of importance in the palmy days of the Mercian kingdom; and if it was a place of importance in those days, the probabilities are that it was a Roman station, since the old English preferred to occupy Roman settlements rather than to found fresh places for themselves.—Mr. Reade made some remarks on the Minster-Church at Aachen. This church was in historical interest quite unrivalled by any building north of the Alps, and as an architectural landmark stood

alone, having been completed in the year 804. Its prototype must be looked for in the churches of the Ex-robate, and particularly in the church of S. Vitale at Ravenna. There is no doubt that it was largely the work of Italian artists. The architect was probably Ansizis, Abbot of Fontenelle, near Rouen. In general design it bears a considerable resemblance to S. Sepulchre's Church, Cambridge, which was built 300 years later; but it is designed on a far larger scale. The whole of the interior was covered with mosaics, which were destroyed in the great fire of 1656. Mr. Reade exhibited an interesting engraving made before the fire, showing the then disposition of the exterior. The tall fourteenth century choir was added by the Burgomaster Gerhard Chorus, and is a work of great lightness and bold design. The octagon is surrounded by small chapels, and Mr. Reade gave detailed information as to the original destination of these. He also exhibited "restorations" of the original work given to him by Mr. Rhoen, architect, of Aachen, who had presented him with some of the original mosaic cubes used by Charlemagne's artists, which he had the pleasure of showing to the society. The bronze doors and railings to the triforium were at least as old as the building itself. The temples of Italy had been laid under contribution, and had supplied this church with many polished marble columns of beautiful workmanship. The church was formerly connected with the palace by a vaulted arcade. The great emperor, Karl, who founded the church, was buried within its precincts, but the precise spot is unknown. In the year 1000 A.D. his tomb was opened by Otto III., but Mr. Reade gave strong reasons for the belief that the poetical description of the opening of the tomb is incorrect. The Emperor's bones were exhumed 352 years after his death. Much of the furniture of the cathedral is of extraordinary interest, particularly the marble throne, upon which thirty-seven emperors have been installed; the pulpit, which was a gift of Henry II., and is one mass of gold, jewels, and antique ivory carvings; and the coronas, given by Frederic Barbarossa, which is richly gilded and enamelled. The whole church was deserving of far more careful study than it had yet received.—Prof. Clark observed that he could confirm Mr. Reade's remarks as to the structural resemblance between this church and that of S. Vitale at Ravenna from his recent studies at both places.

#### ANTHROPOLOGICAL INSTITUTE.—(Monday, March 21.)

MAJOR-GEN. PITT-RIVERS in the Chair.—Mr. Worthington G. Smith exhibited a measured transverse section through 300 ft. of the palaeolithic floor of the Hackney Brook, near Stoke Newington Common. He also showed a collection of ovate-acuminate implements, scrapers, flakes, and nuclei from the same spot, all the objects being lustrous and as sharp as on the day they were made.—Gen. Pitt-Rivers exhibited and described a large collection of padlocks, showing that the same type had been used in civilised countries from the earliest ages.—Mr. A. L. Lewis read a paper on "The Relation of Stone Circles to Outlying Stones or Tumuli or Neighbouring Hills." The author, from an examination of eighteen stone circles in Southern Britain, showed that their builders had in various ways made special references to different points of the compass, but most particularly to the N.E. He then argued from a number of independent sources, ranging from the Prophet Ezekiel down to a foreign correspondent of the *Daily News*, that other ancient structures had similar references, known to have arisen in connexion with times and seasons and various forms of nature worship; that practices connected with such worships, and especially with sun and fire worship, have come down, even in this country, to the present time; and that circular buildings and open circles have been and are used for worship of this kind; and inferred from these facts that the British stone circles were used for sun worship probably in the Druidic period. He then dwelt on the references to the N. and E. in the orientation of English churches, which he thought to be derived from the references to those quarters in the circles, as the Papal churches, whether in Rome or London, are

not so placed, and he gave some curious details on this point; and he concluded by drawing attention to the firm root taken by Christianity in the Druidic countries of Gaul and Britain, and the great influence exercised by those countries in the later Roman Empire, and especially in the establishment of Christianity as the State religion.—A paper was read by Mr. J. K. Price on "Excavations of Tumuli on the Brading Downs, Isle of Wight," by himself and Mr. F. G. Hilton Price.

#### ROYAL SOCIETY OF LITERATURE.—(Wednesday, March 22.)

SIR PATRICK COLQUHOUN in the Chair.—Mr. Robert N. Cust read a paper on "Athens and Attica," in which he described the different routes which could be followed, and the pleasure to be derived from a visit to so celebrated a city. He then gave in detail a notice of the remarkable views still to be seen on the Acropolis, with the Temple of Theseus, the Lantern of Demosthenes, &c. He further drew attention to the remarkable spots which have been identified, such as the Areopagus, the Pnyx, the Academy, and the Sacred way leading to Eleusis. Mr. Cust added that, in his judgment, there was no future for Modern Greece, and that little progress had been made since he was in Greece thirty years ago.

#### BROWNING SOCIETY.—(Friday, March 24.)

THE HON. ROSEN NOEL in the Chair.—A paper on "Childe Roland to the Dark Tower came" was read by the Rev. Joshua Kirkman. The writer pointed out that in two of his most brilliant and characteristic poems Mr. Browning had "burst into a flame at the spark of" two "thoughts" taken from Shakespeare: the most uncultured style of human thought during life in "Caliban," and the quintessence of cultured thought in death in "Childe Roland." The latter poem, which is a supreme work of genius, deserves special study, and may be considered both as a romance and an allegory. In the romance we notice a remarkable subtle consistency and the essential sequence of each verse, the poem being free from any trace of incongruity. The resemblance to a dream occurs to us all, and the very tissue of this poem is "We are such stuff as dreams are made on, and our little life is rounded with a sleep." A threefold harmony is to be discerned in the work—(1) the consistent structure as the romance of "Childe Roland;" (2) the strict naturalness of the sequences, from any one to the next sensation, as in a dream or allegory of some sort; (3) the fitness of each emblem as obedient to the key-note of the whole. There are overwhelming reasons for concluding that this poem describes after the manner of allegory the sensations of "a sick man very near to death," the Dark Tower being death itself. Mr. Browning, who has thrown his whole individuality into so many varieties of human life and development of souls, here throws himself into the final stage of human development. There is a close resemblance between "Prospect" and "Childe Roland." Mr. Kirkman drew a comparison between this poem and the "Dream of Gerontius," and illustrated his view of its meaning by copious references to Chaucer, Spenser, Bunyan, and others.—In the discussion which followed, Mr. Furnivall, Mr. Matthew, Mr. Nettleship, Miss Drewry, Mr. Sargent, and Mr. Radford took part. Mr. Furnivall said that Mr. Browning had told him that he had not written the poem as an allegory; it was a romance which had been suggested by the figure of a gaunt red horse on a piece of tapestry in Mr. Browning's house.

#### FINE ART.

##### PROPOSED EXCAVATION IN THE EGYPTIAN DELTA.

WE have great pleasure in announcing that the long-desired Society for the Promotion of Excavations in the Delta of the Nile has at last been constituted under very favourable auspices. The scheme of exploration has, up to the present, received the approval of the Archbishop of Canterbury, the Bishops of Durham, Lincoln, and Bath and Wells, the

Chief Rabbi, Archdeacon Anson, Mr. Robert Browning, the Earl of Carnarvon, P.S.A., Canon Cook, Mr. Jas. S. Cotton, the Dean of Manchester, Miss Amelia B. Edwards, Mr. A. W. Franks, V.P.S.A., Prof. Gardner, the Hon. and Rev. E. Carr Glyn, Miss J. E. Harrison, Mr. B. V. Head, Prof. Huxley, F.R.S., Mr. Constantine Ionides, Mr. Stanley Lane-Poole, the Rt. Hon. Sir A. H. Layard, G.C.B., Prof. Legros, Sir John Lubbock, Bart., M.P., Sir Theodore Martin, K.C.B., Prof. Max Müller, Mr. A. S. Murray, Mr. John Murray, M. E. Naville, Prof. Newton, U.E., Prof. Owen, C.B., Mr. R. A. Proctor, Mr. Reginald Stuart Poole, Prof. Sayce, the Hon. J. Villiers Stuart, M.P., Mr. W. Spottiswoode, P.R.S., M. Terrien de La Couperie, the Rev. G. T. Tomkins, Sir Erasmus Wilson, LL.D., F.R.S., &c.

A meeting in furtherance of the objects of the society was held on Monday last (March 27), at which Sir Erasmus Wilson took the chair, supported by the Hon. J. Villiers Stuart, M.P., and Prof. Sayce. A provisional committee was then formed, Sir Erasmus Wilson accepting the post of hon. treasurer, and Miss Amelia B. Edwards and Mr. Reginald Stuart Poole those of hon. secretaries. The society is in correspondence with M. Maspero, with a view to beginning excavations as soon as sufficient funds shall be provided.

It is proposed to raise a fund for the purpose of conducting excavations in the Delta, which, up to this time, has been rarely visited by travellers, and where but one site (Zoan-Tanis) has been explored by archaeologists. Yet here must undoubtedly lie concealed the documents of a lost period of Bible history—documents which we may confidently hope will furnish the key to a whole series of perplexing problems.

The position of the Land of Goshen is now ascertained. The site of its capital, Goshen, is indicated only by a lofty mound; but under this mound, if anywhere, are to be found the missing records of those four centuries of the Hebrew sojourn in Egypt which are passed over in a few verses of the Bible, so that the history of the Israelites during that age is almost a blank.

Pithom and Rameses, the "treasure" or store-cities built during the oppression, would richly repay exploration.

The sites of the cities of the Hyksos, especially Avaris, would yield monuments of no less interest, bearing on Phœnician as well as on Hebrew history.

It must not be forgotten that Naukratis, the primitive Greek emporium in the west of the Delta, promises as ample a harvest to Hellenic archaeologists as Goshen to Semitic scholars. The period which would there be illustrated is one of the most interesting in the development of Greek art, and is at the same time one of the most obscure.

Besides the sites connected with Hebrew, Hellenic, and Phœnician history, the Delta is rich in mounds of famous Egyptian cities, as Saïs and Xoïs—this last being the capital of an early dynasty (the XIVth), which is as yet wholly without written history. Yet more, it abounds in nameless tumuli and in enclosures of unknown origin, surrounded by massive walls, in the thickness of which sepulchral chambers are known to exist.

In order to examine these sites, it will, in the first place, be necessary to raise a sum of money for the purpose of making a tentative exploration. Should this sum suffice, the two sites of Goshen and Naukratis could be simultaneously excavated; otherwise Goshen would have the preference.

THE SOCIETY OF BRITISH ARTISTS.

THIS exhibition is decidedly encouraging. Despite the absence of some of the best members, such as Mr. Bartlett and Mr. Dendy Sadler (not to mention the few Academicians whose names are still to be found in the list), there is more of individual effort and style than usual, and the number of altogether inconsiderable contributions is very few compared with former years. There is life in the young art; and, if its direction is not always right, it is moving, and that is much. The impulse is most seen in landscape and sea views, and the latest tendency is to strong colour and plenty of it, broad style and splashes of paint. What this will lead to in the hands of weak men is appalling to conjecture; but in the hands of such artists as Edwin Ellis it gives new and delightful sensations of open-airiness and strength of sun. "Bringing in the Fish, Yorkshire" (266), tends to intemperance with its deep greens, and purples, and oranges clashing together, but if Mr. Ellis pushes his colour somewhat far, he has it in hand, and his skies are tender and luminous. In "The Morning After the Storm" (453), the sky is particularly fine, the azure of space and the blue of the lower clouds, so like and yet so different, are rendered with great truth and boldness. Strong coast scenes are also sent by J. Buxton Knight, Stuart Lloyd, Gustave de Bréancki, and others. Much to be praised is John Reed's forcible "Sunlight," and both beauty and originality mark two landscapes by H. Charles Fox, strongly drawn and true in colour (197 and 201). Miss Kate Amphlett also shows evidence of fresh study and sense of design in her "Source of Gentle Waters," with its well-drawn tree roots and charming effect of green light through an irregular stretch of palms. Her "Willows" is also a luminous and pretty study (333). If these and Mr. Wyllie's finely composed and painted picture of barges on the Thames, "Towing over the Tide" (483), exhaust the list of scenes from nature which struck us as most uncommon as well as clever, the room is filled with pleasant and accomplished views with and without figure, by Ph. Pavy, G. S. Walters, Dan Fisher, W. J. Cooper, J. J. Baunatyne, Theodore Hines, Vincent Yglesias, Horace Cauty, and others too numerous to mention.

In figure-painting pure there is nothing astonishing, but W. Christian Symonds' "Polly my Wife and Polly my Ship" (230) shows a good deal of misdirected cleverness. John Barr's "The Village Barber" is good, and the Ludovischi send some clever pictures. Mr. Logedail shows his gift of colour in an unpleasant picture of a seller of pumpkins (282), and Mr. Hayllar's terrestrial globe in "The Highest Bidder" (257) is painted almost to deception. Thorough in execution, and with much cleverness of design and expression, but rather tame withal, is Mr. L. C. Hentley's "Private View in a Monastery," and among other of the less ambitious efforts we noticed a well-drawn and painted study called "Polly," by Rebecca Mocatta (188), F. Everett's careful "Study from the Antique" (328), A. Harvey Moore's pretty and tenderly coloured head of a girl (375), and a clever study of a laughing face by firelight, by Frederick Brown (503). There are several good bits of still-life, but none much better than that by Anna M. Grace (86) and Melicent Grose's "Souvenir of Kabyle." The latter is one of many excellent water-colours. Mr. J. Edwards Goodall's "A Breton Home" (707) is the best *genre* picture, whether in oil or water, and Max Ludly's "Young Lambs—Evening," is not only very true and pretty, but excellent and original in design. Edith Pradey sends a very strong drawing of the interior of a church

at Rome (701), and there are many other drawings above the ordinary average.

Of sculpture there is one notable work, a plastic statuette called "Charming," by F. Innck, and charming it is. COSMO MONKHOUSE.

MR. WILLIAM L. THOMAS' SKETCHES IN SWITZERLAND.

"TEN Years' Holidays in Switzerland" is the title of the catalogue, and it is the holiday spirit which is reflected in these gay and clever drawings. The manager of the *Graphic* does not come before us for the first time; and his sense of colour, his versatility, and dexterity as a painter in water-colours are known. There is nothing here that is likely to damage his reputation, and one or two of the drawings show a grasp of mountain form which will probably add to it. More especially we may allude to his two views of the Matterhorn in the rosy morn and gray eve (16 and 23). Though not very strong generally in his drawing, his skill in this respect is quite adequate to secure satisfactory records in the shape of pretty pictures of nearly all the pleasant incidents of a tour. In his "Return Home" (69), with its little school girl on its back, the sense of the swinging motion of decent is well conveyed; and the group of lovers in the "Boat on the River Thun" (107) is charming. In other drawings he gives us "Monks in their Sunny Garden" (76) and an old priest rolling in his cask of wine (67), while his children sledging are full of vigour and fun (33 and 86). He is, however, mainly a landscape artist, and his feeling for the grandeur of Alpine scenery and the beauty of its effects of light and colour has inspired his most successful efforts. Though Mr. Thomas has made larger and more important drawings, he has done nothing more complete than "The Bridge of the Dance of Death" (17) and "The Old Religious Houses at Interlaken" (30), which belong to the Queen. As a painter of flowery foregrounds, Mr. Thomas is very skilful, and his snow is nearly always good.

O. M.

NOTES ON ART AND ARCHAEOLOGY.

THE Hogarth Club held their annual *conversazione* at their new quarters in Albemarle Street, when the members showed their pictures of the year, which included a portrait by Alma Tadema and female figure by G. A. Storey, and some beautiful works by Herbert MacCullum, Dendy Sadler, Colin Hunter, Seymour Lucas, W. L. Wyllie, and others. Some unusually good music closed the evening.

MISS CONSTANCE PHILLPOTT and Messrs. R. Beavis, C. Gregory, S. J. Hodson, and J. J. Hardwick, have been elected Associate-Exhibitors of the Royal Society of Painters in Water-Colours.

A PICTURE by Mr. Edwin Long, R.A., which will hardly fail to be a principal attraction at the Royal Academy, has been suggested by the line in the fifth chapter of Judges—"Why do his chariots stay?" The mother who makes, in the anxiety of one waiting, the inquiry that is thus formed, sits, in Mr. Long's picture, within sight of the road that leads homeward, and watches the road as yet empty. The sentiment of most anxious waiting—of a waiting already far too prolonged—is expressed with complete force, both in the face and attitude of the principal figure, and it is expressed again, or echoed, in the faces and gestures of the women who wait with her. One is nearer than the others to the lattice, and those without direct view catch the news or no news from her who can observe the best. One or two of the younger figures are as fully endowed with the

beauty of youth, colour, and contour as is the elder woman with the beauty of age in forcible and passionate expression. The hues of the picture are for the most part subdued. The decoration is Assyrian, and one of the most prominent of its subjects is that of the cruelty of a king who, with his own hands, put out the eyes of a captive. This suggestion of brutality—a suggestion with which the watchers in the chamber are necessarily familiar—bears, of course, upon the question of the moment, and offers ground for despair at the delay of "his chariots." In many points beside this one that we have indicated, Mr. Long has known how to enrich his theme, and to strengthen the impression which his treatment of it makes. The picture is one of the most serious and best-directed efforts of an artist who has never trifled with his subjects, though his conception and execution of them have been liable to many variations of excellence. Last year, for instance, his "Christ and Diana" was, as a whole, more acceptable to the large public than to students who considered the great demands of such a theme. This year the recognition of Mr. Long's success will, we doubt not, be most cordial among the best judges.

MR. PETTIE will send three pictures to the forthcoming Academy. One of them is on the most important scale he has thus far adopted; nor is the size of the canvas likely to be exceeded. Its subject is a Palmer's Tale of the Holy Land. He tells it by a Northern heart, he seated on one side, and his listeners—all one family—on the other. His hands are extended towards his audience, in the excitement of the narration of the tale. He is worn, weary, and sufficiently full of years. The family within whose gates he is the visiting stranger includes a young man of marked character and intellect; his wife—young, like himself, but with less of individuality and attractiveness; and the two children of whom these are the parents. Connoisseurs and artists, while they cannot omit to recognise the well-directed study that has gone to the making of this picture, may yet possibly find more delight in one or other of the two smaller canvases. Of these, one represents Eugene Aram telling the story of his crime to the little boy. The scene is a sunny glade of a wood in summer time, and in the foreground Eugene Aram stands well away from the child to whom he must pour out his story. The subject is a fine one for Mr. Pettie, for this cause, if for no other—that it allows him to include as his only characters two persons of types of course utterly opposed, but into both of which his art has before now shown special power of entrance; that is, a boy in whom the quality of gentleness is particularly marked, and a man of more than middle age upon whom painful thought and anxiety have especially told. The third picture represents the prayer of the Duke of Monmouth to James II., when a prisoner, likely to die, he was brought to the monarch after the defeat of Sedgemoor. In the expression of Monmouth, who grovels on the floor, we read little confidence—only the most forlorn hope; and in the curled and cruel face of the bigoted Sovereign we read the destiny of Tower Hill and the block. Characters here represented in the stress of critical action—terror so abject that there can be no further humiliation, and the base resolution for effectual revenge—demand in their surroundings some elements of acceptable beauty. Without these the work would hardly be artistic, so purely miserable would be the impression of inhumanity and distress. Thus we are glad that Mr. Pettie, while preserving a courageous truth to actual character, has allowed a full play to his sense of duty in all the accessories of the scene. These are indeed simple, but they are at the same time exquisite; the colour of the audience chamber, its walls, its

floor, and its hangings being of an harmonious richness and fullness characteristic of Mr. Pettie at his best. The colouring is indeed of so distinguished a beauty that it would by itself suffice, were there no historical incident, to clench in the popular mind the recollection of the artist's work.

MR. ALFRED HUNT's landscapes for the Royal Academy are both elaborate records of the scenery of the Thames. One is the village of Sonning in the glow of full summer-day light; the other, a backwater hazy with the mists of a morning in early June, a wide landscape, with a pure pale-blue sky over a company of gray-green willows, and the quiet stream just shot here and there with rose colour. To the exhibition of the Royal Society of Painters in Water-Colour Mr. Hunt will likewise send studies of the same neighbourhood of exceeding freshness and delicate charm.

MR. J. D. LINTON—who sends to the Grosvenor Gallery, we believe, a single figure, that of the lover of Hero in "Much Ado about Nothing"—will contribute to the Royal the third finished picture of the set of "Incidents in the Life of a Warrior." The incident this time selected was as agreeable, no doubt, two hundred years ago in a South German Court as we know it to be in London to-day, for the banquet, missing the presence of the Lord Mayor and of a staff of newspaper reporters, was graced nevertheless by the distinguished; and in front of the board, full in view of the youthful and honoured guest, an Eastern girl executed slow and graceful dances. She is posing herself in the centre of Mr. Linton's beautiful design, draped in white and in yellow, tall, slight, airy of movement, and the eyes of the great rest upon her with approval in the intervals of the feasting. At the left there are musicians with viola and violin. The banquet is celebrated in the open courtyard of a palace; the chief guest, and those who entertain him, are under a high canopy. Flowers are scattered on the table; fruits and cool vessels for chosen wines wait below and at the side. A few words of description would be unable to convey any real sense of the skill of the composition or of the sensitiveness to harmonious and wealthy colour which the artist has displayed. Rich and sober as are many parts, the whole effect is of lightness and brilliancy, such as are demanded by the conditions of the picture and by its theme—the open air and an occasion of frank though of stately festivity.

MR. LEGROS has now all but ready for the casting the plaster "proof" of the bas-relief which is to appear in bronze at the forthcoming exhibition of the Grosvenor Gallery. The work will be entitled "La Source." It is the figure of a very young girl, viewed from the front, and bending sideways, her body swayed to the right by the weight of the great water vessel which discharges its contents at her feet. The work is in very low relief, so that strict adherence to the real proportions of the figure, its thickness and depth—which only work in the completed round can fully retain—has necessarily been sacrificed, and for it there has as necessarily been substituted some of that conventionality which draughtsmanship employs in larger measure. The best success of the artist is thus far reached in the treatment of the body. The simple head—of a type which Mr. Legros has more than once given us—lacks, at present, the full youthfulness which the frame exhibits, and, for the moment, justifies more, perhaps, than it is intended to do the sentiment of the American poet, that the body is so much more beautiful than the most beautiful of faces. But the entire figure, from face to foot, is conceived in that spirit of poetic realism which is really the characteristic of Mr. Legros at his best. In

it are united a poetry which does not shrink from the employment of familiar themes, and a reality which is unwilling to dispense with the refining touch of imagination. The eye sees that which it is qualified to see, and the eye of Mr. Legros is qualified to see beauty when it escapes the rougher observation. But a theme more avowedly imaginative has been worked out by its artist in a plaster proof of "La Mort et le Bucheron," not yet to be cast in bronze, but to be shown at the Grosvenor Gallery as it at present appears. The noble and pathetic fancy of death and the wood-cutter has more than once occupied Mr. Legros's mind, but hitherto it has been wrought out solely in etching. The theme is now rendered afresh, or rather with such variations as are compatible with the continual presentment of the cowed and crouching figure of the person summoned, and the gaunt and ghastly contours of the being who calls him from his hard life and humble task. Both these works, even though they be found to reveal some want of familiarity with the medium of expression employed, are likely to increase the reputation of the artist, and are certain to be accepted as fresh evidence of an artistic energy never satisfied with its bygone achievements.

MESSRS. MOSS AND JAMESON will sell by auction on Wednesday, April 5, at 48 Chancery Lane, a valuable collection of works of art and decorative furniture. The sale will include several choice specimens of Dresden, Sèvres, and Chelsea ware, some inlaid Chippendale cabinets, and a Louis XVI. cylinder writing table.

WE regret to see that the "Cour d'appel" has substantially maintained the decision of the Civil Tribunal of the Seine, by which M. Edouard Véron, manager of *L'Art*, was fined on account of an article which appeared in that periodical in May last year commenting with severity on some etchings which eight artists had contributed to illustrate a catalogue (Catalogue Beurnonville). The writer stated his opinion that if, as the artists alleged, the pay was bad, it was still their duty not to dishonour their art by signing scandalously bad plates, "témoignages implacables de leur extrême élasticité de conscience." The conscience here spoken of must, as M. Véron points out, be the artistic conscience, and it appears to us an undue restriction of the critic's function to render him liable to a fine for denouncing as artistically shameful the practice of lowering the "quality" of etching in accordance with the price paid for it. "Shoddy" in art ought to be denounced, not only for the sake of the public, but for the sake of the artists who manufacture it. The decision not only reduces the critic to a mere "expert," but the artist to a mere "tradesman."

THE *Madras Mail* states that the discovery of the new Buddhist Tope, at Jaggaipattā, on the Krishnā river, which Mr. Sewell announced to Government last September, has proved to be of even greater importance than was at first imagined. Dr. Burgess has been hard at work there for the last fortnight, and proclaims it to be not only a veritable tope (or *stupa*), but a tope of very great antiquity, preceding that at Amarāvati by several centuries. The latter tope is supposed to date from some few centuries after the commencement of our era. But Dr. Burgess declares that the new Jaggaipattā tope dates from Maurya days, about B.C. 200, and is as old as the Vihāra at Pāṭalīkharā, or the Bharhut *stupa*; almost as ancient, that is, as the age of King Asoka. It was repaired, it seems, by one of the early kings of the Andhra Dynasty, according to an inscription found on the spot. Dr. Burgess further seems to be now of opinion that the Amarāvati tope itself was merely an enlargement, or reconstruction by

one of the Andhras of a far earlier Buddhist shrine, dating perhaps from the period of the newly discovered place of worship. It is difficult to overrate the interest and value of this discovery, both historically and from the point of view of archaeology, as it connects the banks of the Krishnā historically with one of the earliest monarchs known in India. The Archaeological Survey of Southern India has begun well.

WE have received from Herr E. Seemann, of Leipzig, the tenth number of Woltmann and Woermann's *History of Painting*. In this number, the excellent account given of German painting during the first half of the sixteenth century is brought to a close with Holbein and his followers. The painting of the Netherlands is then continued with Lucas van Leyden, Quentin Matsys, and Jan Gossaert; while the last few pages begin the history of the blooming time of Italian art with Lionardo da Vinci. We are not sure that this arrangement of the subject into contemporary schools, instead of into the art of various countries considered separately, as is the usual method, is altogether satisfactory. It seems somewhat awkward, for instance, to jump, with no other division than a heading, from Jan Swart, of Groningen—a weak Netherland Italianiser, who is at best known only to a few students—to the world-famous Lionardo. The number is full of illustrations, many of them from the drawings as well as the paintings of the masters noticed.

## MUSIC.

### RECENT CONCERTS.

MENDELSSOHN first performed his G minor concerto in England at the Philharmonic Concert on May 28, 1832, and last Thursday week, at the fourth Philharmonic Concert of the present season, Mdme. Schumann played the same work, thus celebrating the fiftieth year of its production. This gifted lady has stated that she shall never forget the impressions made upon her by the beauty and grandeur of Mendelssohn's playing; and on Thursday evening she certainly strove in her admirable rendering of the concerto to do honour to a composer whom Robert Schumann was never tired of praising, and who, in former days, had been the friend both of herself and her husband. At the close of the performance Mdme. Schumann was recalled twice, and she must have been greatly impressed by the hearty and enthusiastic reception accorded to her. Mr. C. V. Stanford conducted, for the first time in London, his overture of "The Veiled Prophet." We noticed this work on the occasion of its production at Sydenham a few weeks ago. It was well received at the Philharmonic, and the society may be congratulated on the encouragement which it has given this season to native composers. The programme included Beethoven's symphony in C minor. Mdme. Kufferath and Mr. Maas were the vocalists.

Mr. Walter Macfarren gave the third and last of his orchestral concerts last Saturday evening at St. James's Hall. Miss Cantelo, a pupil of the Royal Academy, made her first appearance, and performed Schumann's piano-forte concerto in A minor. This young lady possesses a nice touch, and plays with much vigour and dexterity, but she was scarcely wise in choosing for her *début* such a difficult and exacting work. Schumann's concerto demands very great mechanical ability and intellectual and poetical gifts of the highest order. Herr Joachim played Beethoven's violin concerto, and it is quite unnecessary to speak in detail of his marvellous performance. The programme included Mendelssohn's "Ruy Blas" overture, and Mr. W. Macfarren's overtures, "Hero and Leander" and "King Henry V." (repeated by

desire). The "Ruy Blas" was played with marked precision and energy, and, in accordance with the wishes of the audience, was repeated. The other two overtures were admirably interpreted, and seemed to give great satisfaction. Spohr's "Power of Sound" was included in the scheme. Mr. W. Macfarren may be justly proud of the great success of his undertaking, and deserves special praise for the able and energetic manner in which he has fulfilled the duties of conductor during the series of concerts just brought to a close.

The last but one of the Monday Popular Concerts deserves special mention. Mozart's beautiful quintett for stringed instruments was magnificently interpreted by Messrs. Joachim, Ries, Hollander, Zerbini, and Piatti; and Herr Joachim performed, in masterly style, several movements from Bach's sixth sonata in E. Mme. Schumann was again the pianist, and we do not ever remember to have heard her to greater advantage. She played Brahms' Rhapsodie in G minor (op. 79), two studies in canon form from op. 56, by Schumann, and, for an *encore*, the "Traumes Wirren." Let us quote once more from her recollections of Mendelssohn's playing:—"Of mere effects of performance he knew nothing; he was always the great musician, and in hearing him one forgot the player, and only revelled in the full enjoyment of the music." No sentence could better describe Mme. Schumann's mode of interpreting the works of the great masters. She will play for the last time this season at the last Popular Concert, next Monday. The concert concluded with a first performance of Schumann's "Spanisches Liederspiel" (op. 74), for four voices, with pianoforte accompaniment. The vocalists were Mdle. Friedländer, Mdme. Fassett, Herr von zur Mühlen, and Mr. Pyatt; at the piano, Miss Zimmermann. The music is very quaint and charming, but it certainly contains, especially in the solo numbers, far more of the German than of the Spanish element. As representing national music, the two quartetts (Nos. 5 and 9) are, perhaps, the most successful. All the nine numbers were sung with much taste and feeling, and Miss Zimmermann added considerably to the general effect by her neat and crisp rendering of the difficult accompaniments. The hearty reception given to this "cyclo" will perhaps induce Mr. Chappell to give us next season the second one, entitled, "Spanish Love-songs," with a pianoforte duet accompaniment.

J. S. SHEDLOCK.

#### MUSIC NOTE.

THE dates of the four cycles of the "Ring des Nibelungen" at Her Majesty's Theatre are fixed as follows:—first cycle, May 5, 6, 8, 9; second, May 12, 13, 15, 16; third, May 19, 20, 22, 23; fourth, May 25, 26, 27, and 29. The rendering of this work, so unique and in every way remarkable, has been entrusted by Herr Wagner to Angelo Neumann. Herr Anton Seidl, of Leipzig, has been announced as conductor. Eminent German artistes will take part in the grand performances, among whom we would mention the celebrated Herr Heinrich Vogl and Frau Therese Vogl, of Munich, opera-singers to H.M. the King of Bavaria. Hans von Wolzogen's guide through the music of the "Ring" will shortly be published in English. This little book should be studied previous to the performances by all who desire to understand and appreciate this great German work. It will enable them to follow with comparative ease the intricate story, and such preparation will at any rate greatly enhance their pleasure at the time of performance. Herr Neumann has received permission from the King of Bavaria to use all the splendid scenery, the costumes and armour, which were employed in 1876 at Bayreuth.

#### A GENUINE BUNYAN MEMORIAL. Crown 8vo, morocco, Elstow oak sides, price 10s. 6d. THE "ELSTOW EDITION"

#### OF THE PILGRIM'S PROGRESS. BY

JOHN BUNYAN.

Containing, in addition to the usual text, a carefully compiled Memoir and Bibliography, a complete Index, and numerous illustrations.

#### A HANDSOME SOUVENIR OF THE LAKE DISTRICT. Super royal 8vo, cloth elegant, sunk centre, price 12s. ENGLISH LAKE SCENERY.

A SERIES OF TWENTY-FOUR PLATES  
In the highest style of Colour Printing, from Drawings by A. F. Lydon. With Descriptive Letterpress.

#### A CAPITAL BOOK FOR PRESENTATION. Crown 8vo, cloth elegant, price 5s. STORIES OF LONG AGO.

Re-told by ASCOTT R. HOPE.  
With a Hundred Illustrations by C. O. Murray, Engraved by R. Paterson.

#### NOVEL AND ELEGANT PRESENTS. Royal 16mo, red line borders and gilt edges, price 3s. 6d. THE RIBBON SERIES.

- With Hand-painted Designs on Cover.

#### BLACKIE & SON'S PUBLICATIONS.

Now ready, Vols. I. and II., imp. 8vo, cloth, 25s. each; or half-morocco, 31s. 6d. each.

#### OGILVIE'S IMPERIAL DICTIONARY OF THE ENGLISH LANGUAGE.

New Edition, Revised and Largely Augmented.

EDITED BY  
CHARLES ANNANDALE, M.A.

Illustrated by above 3,000 Engravings.

\* \* The Third Volume will be published on 1st July, and the Fourth Volume, completing the Work, on 1st November.

From the SPECTATOR.  
[Second Notice.]

"Of the second volume of the new edition of this great dictionary, which has been so thoroughly revised as to be really a new work, it is practically sufficient to say that it presents the same features as the first—scientific accuracy of definition, wealth of quotation, and reliability as an authority in etymology."

#### OGILVIE'S MINOR DICTIONARIES.

THE COMPREHENSIVE ENGLISH DICTIONARY: Explanatory, Pronouncing, and Etymological. Illustrated by above 800 Engravings on Wood. Large 8vo, cloth, 25s.; half-morocco, 32s.

THE STUDENT'S ENGLISH DICTIONARY: Etymological, Pronouncing, and Explanatory. With about 300 Engravings on Wood. Imp. 16mo, half-roan, 7s. 6d.; half-calf, 10s. 6d.

DR. OGILVIE'S SMALLER DICTIONARY: Etymological, Pronouncing, and Explanatory. Abridged from the "Student's Dictionary" by the Author. Imp. 16mo, cloth, red edges, 2s. 6d.; half-roan, 3s. 6d.

DESCHANEL'S NATURAL PHILOSOPHY: an Elementary Treatise. Translated and Extended by J. D. EVERETT, D.C.L., F.R.S., Professor of Natural Philosophy in Queen's College, Belfast. Illustrated by 783 Wood-engravings and Three Coloured Plates. Sixth Edition, Thoroughly Revised and Enlarged. Medium 8vo, cloth, 18s.

Also separately, in 4 parts, limp cloth, 4s. 6d. each.  
Part I.—MECHANICS, HYDROSTATICS, and PNEUMATICS. Part II.—HEAT. Part III.—ELECTRICITY and MAGNETISM. Part IV.—SOUND and LIGHT.

"Systematically arranged, clearly written, and admirably illustrated, it forms a model work for a class in experimental physics."—*Saturday Review*.

#### THE UNIVERSE; or, the Infinitely

Great and the Infinitely Little. A Sketch of Contrasts and Creation and Marvels Revealed and Explained by Natural Science. By Professor F. A. FOUCHE, M.D., of Paris. Illustrated by 273 Engravings on Wood, of which Fifty-six are Full-page size. Sixth Edition (Twenty-third Thousand). 550 pp., medium 8vo, cloth, gilt edges, 7s. 6d.

"We can honestly recommend this work, which is as admirably as it is copiously illustrated."—*Times*.

#### THE TWO HEMISPHERES: a

Popular Account of the Countries and Peoples of the World. By GEO. G. CHISHOLM, M.A. Illustrated by more than 300 Wood-engravings. Demy 8vo, cloth, 16s.

"A valuable book of reference, written in a popular style, and bountifully illustrated, the volume provides a concise account of the chief physical features of the countries of the globe, their inhabitants, products, forms of government, &c., and will admirably answer the purpose of a handy gazetteer."—*Graphic*.

London: BLACKIE & SON, 49 and 50, Old Bailey.

## LITERATURE.

*Immanuel Kant's Critique of Pure Reason.*

In Commemoration of the Centenary of its First Publication. Translated into English by F. Max Müller; with an Historical Introduction by Ludwig Noiré. In 2 vols. (Macmillan.)

THE interest in the philosophy of Kant, if that interest may be gauged by the entries on the publishers' lists, has been steadily growing in England since the appearance of Prof. Caird's work in 1877. In 1879 a small, but valuable, volume by Prof. Adamson, of Owens College, helped considerably to widen the English view of Kant's enterprise. In a series of four lectures it presented a masterly sketch of the problem of philosophy as it appeared to Kant, of the salient points in his criticism of speculative reasoning and moral sentiments, and of the relation between him and the neo-Kantians. Scarcely less characteristic of the work was the abundant critical apparatus included in the Appendix, containing an amount of erudition that might easily have filled several volumes. In 1881, three works of goodly size came out on the same subject. With two of these—Prof. Watson's *Kant and his English Critics* and Dr. Stirling's *Text-book to Kant*—we are not here concerned. The third—a translation of the *Kritik* by Prof. Max Müller, along with introductory chapters by Prof. Noiré—is not only the biggest book of them all, but, as specially connecting itself with the centenary of the publication of the first edition of the original work, and as otherwise interesting by the nationality of the writers, seems to call for special notice.

To those whose acquaintance with Prof. Max Müller is confined to the works which have placed his name in the first rank of European philologists, the announcement of his intention to give a new translation of Kant may have been a surprise. The well-known versatility, indeed, which has made him known in wider fields than the linguistic, lessened the seeming novelty in his change of sphere. In an interesting Preface he has chosen to explain the reasons which have led him to this new ground. One of them is no secret to a few who can remember the felicity of illustration with which, as Taylorian Professor of European Languages at Oxford, he infused a concrete life into the abstract language of Kant. He translates Kant, he says, as a monument of piety from a pupil to a master from whom he has learnt to find the sure road of science.

"Kant's Critique has been my constant com-

panion through life. . . . My first literary attempts in philosophy, now just forty years old, were essays on *Kant's Critique*. Having once learnt from Kant what man can and what he cannot know, my plan of life was very simple—namely, to learn, so far as literature, tradition, and language allow us to do so, how man came to believe that he could know so much more than he ever can know in religion, in mythology, and in philosophy. This required special studies in the field of the most ancient languages and literatures. But though these more special studies drew me away for many years towards distant times and distant countries, whatever purpose or method there may have been in the work of my life was due to my beginning life with Kant."

Another reason Prof. Max Müller assigns is the inadequacy of the existing translations by Haywood and Meiklejohn. As he shows by a few specimens, they are guilty of several sins against idiomatic correctness. And there can be no doubt that the present translation is a decided advance upon its predecessors. It sets before itself the principle that the words to be rendered should have a reasonable and consistent meaning—a principle which it may seem superfluous to note, were it not that so many translators seem to treat their problem as merely to find phrases in one language moderately equivalent to phrases in another. He has found it necessary in consequence to look into the received text—a task which is not rendered superfluous even after the publication of three collected editions of Kant's works. For Kant himself seems to have fancied his part was done when he had handed his somewhat illegible "copy" to the printer; press-correcting was very much left to look after itself, and punctuation was practised on pepper-box principles. Among those whose labours in the textual field call for notice, Benno Erdmann stands foremost; certainly Paulsen's work on the early philosophy of Kant need scarcely have been mentioned in such a connexion. As for the emendations themselves, it is difficult for the corrector to satisfy everybody. I am inclined to think that Erdmann's suggestion (adopted in ii. 195) is unnecessary if "these" (*sic*) be referred, not to concepts, but to the possibilities of things (notwithstanding the change from singular to plural by association with "things"); and that the suggestion of Hartenstein (adopted in ii. 670) of *reine* for *keine* is doubtful in point of idiom and of context, the views in question being explained to be *hypotheses*, and not private opinions.

Of the Preface we need not say much. It contains a genial commendation of Kant to the modern world as corrective of the errors in over-confident Darwinism. Two of the statements on p. 26 seem open to cavil. It was scarcely worth while to revive the legend that Kant was acquainted with Hume's Treatise, unless on more pertinent authority than a note of Hamann's. And it is certainly going beyond a fair interpretation of Berkeley to represent him as holding "that truth exists in the ideas of the pure understanding and of reason only." It may be doubted, indeed, whether Berkeley was more to Kant than a specimen of the "psychological idealist." Certainly, the historical connexion between them is slight.

The translation, which presents for the

first time in English a version of the edition of 1781, is, on the whole, a worthy piece of work. Its language is generally vigorous and direct; and it preserves a considerable fidelity to the turns and structure of the original. That it is at all equal to the occasion cannot be said. But it may convey to English readers, in a way that few translations from the German do, a real idea of the original work. It will bring them nearer Kant's own thought. They will be able to compare, if they wish, his first utterances in his rapid five months' labour with the alterations which five or six years' reflection suggested, with a view to being better understood and accepted.

The difficulties of a translator of Kant may be classed under three heads. These are, first, those due to his involved sentences, to anacoloutha and inexact references (like those in Thucydides) which force the reader to puzzle over the right correlative. There are, secondly, the difficulties arising from technical terms of psychology, where one language hardly ever squares exactly with another. And there are, thirdly, difficulties where the full meaning of a passage can only be caught from a general understanding of the Kantian standpoint—where an apparently trivial phrase involves some of the main issues. For these reasons a satisfactory translation would require not merely a thorough and idiomatic mastery of German, but a remarkable skill in the adjustment of philosophical nomenclature, and a mind deeply imbued with the principles of Kant. These are three requisites which, it need hardly be said, are only to be hoped for in a rare conjunction of talents.

On the first score there is a fair amount of success. But as regards the second there is room for doubt whether Prof. Max Müller has always hit the right word. It would have been desirable to get rid of the ugly word "critique" and substitute, as in other cases in the book, the word "criticism;" while for "reason" the better term seems, on many grounds, to be "reasoning." *Anschauung* is translated *intuition*, which has, no doubt, been the conventional term. But so long as that term marks for the English readers a mysterious power of divination contrasted with experience, it seems better to use "perception," which, though not unobjectionable, still keeps more in sight the connexion with the senses. The awkward rendering of *Vorstellung* by "representation" is also traditional; but in nine cases out of ten no risk would arise of confusion if it were translated "idea." Two other terms call for remark for special reasons. As Kant used no adjectival form of the phrase *a priori*, it is often extremely difficult for the learner to know with what word it is to be construed; and the translation here scarcely gives all the help needed. The term *Grenze*, when translated *limits*, causes inevitable mistake (as may be seen, *inter alia*, vol. ii., pp. 650–52) by the confusion with *Schranke* and its derivatives. The former is a mere scientific term; it denotes that one region ends and another begins; it is a mere boundary-line. The latter is a positive barrier—a military frontier or check.

A few slips which occur seem to be due to difficulties of the third order. Thus, in

i. 368, beginning "Reason, holding in one hand its principles, according to which concordant phenomena alone can be admitted," should read, "principles with which phenomena must accord in order to be admitted," &c. In ii. 22, 23, "If there were not infinity in the progress of intuition, space as a concept of relations could never contain the principle of infinity," should rather run somewhat in this way: "were it not for the absence of terminus to the progress of sense-perception, no [intellectual] concept of relations would ever carry with it a principle of their infinite application." And in ii. 159 (first correcting the punctuation of the original), the sentence, "these principles will therefore authorise us only to connect phenomena, according to analogy, with the logical and universal unity of concepts," &c., should read, "these principles—but only according to analogy with the logical and universal unity of concepts—authorise us to bring phenomena into interconnexion," &c.

It is now time to leave the translator and turn to his *collaborateur*, Prof. Noiré. His "Historical Introduction," as it is styled on the title-page, is more correctly described in the body of the work as an illustration of the *Kritik* "by a sketch of the development of occidental philosophy." In other words, it is a retrospective review of the salient features of the philosophical epochs from a standpoint which is in part that of Kant. The sketch, which, beginning with Heraclitus and Democritus, carries us with rapid strides through the mediæval schoolmen to Descartes and Leibnitz, reminds one irresistibly of those Histories of England which thought it necessary to begin with the creation of the world; and it may be doubted whether the information gained in a review of what Prof. Noiré calls a "naïvely objective" antiquity, or of Erigena and Occam, throws much light on Kant. Between Leibnitz (with whom Prof. Noiré ends his account of the German predecessors) and Kant there is a considerable interval. It would have rendered a real service to the history of thought if we had the true matrix of Kantism exposed—that modified and mixed metaphysics which prevailed in Germany between the departure of Leibnitz and the advent of Kant. "The celebrated Wolf, the greatest of all dogmatic philosophers," should not be passed aside as a mere stop-gap; and those minor philosophers whose names Herr Zart, in a recent *brochure*, has brought into connexion with English thought we should be glad to know more about. Passages in the sketch (e.g., p. 128) show in their unfulfilled promises that, as hinted in Prof. Max Müller's Preface, the essay was intended to conduct us to the fated era of 1781. We could well have missed the earlier chapters could we have got in their stead a vivid picture of German philosophy between 1700 and 1780.

The course which Prof. Noiré has actually followed suffers from another inevitable defect. There is a temptation to see Kant everywhere; to find foreshadowings and hints of the truths which were hereafter to be revealed more clearly; to see in Aristotle and Descartes mere foils to set off the grandeur of the Königsberger. Great as Kant is—and Prof. Noiré describes him in hyperbolic enthusiasm

as "the greatest philosophical genius that has ever dwelt upon earth," and as "the hero of thought who has plunged into the obscurest abysses of the human mind, and with almost superhuman calm has succeeded in emerging with the key to the mystery in his hand"—it is painful to see the great names on the philosophical roll turned into mere fore-runners and antetypes of the coming philosopher. This method of examination at once presents the great minds of the past in a false light, and contributes little to the elucidation of Kant.

It must be said, however, that, notwithstanding this fundamental irrelevancy, Prof. Noiré presents many views of interest and importance. He has been unfortunate in his translator, and it is not always easy to reconstruct his meaning from the English words. But the chapters on Spinoza and Leibnitz are well worth reading for the suggestive, though confused, interpretations which they offer. He has been largely influenced, however, by Schopenhauer and Lange; and both of these writers, though brilliant, are far from trustworthy guides. Prof. Noiré, himself, has two pet topics in his philosophic creed—or, rather, one view, which appears sometimes in its general, sometimes in a special, phase. He is under the influence of an idea that the philosophy of the future will be a philosophy of language. Antiquity, he tells us, failed to recognise any distinction between words and ideas; Descartes and Spinoza shared the general belief that thought is antecedent to speech; and "down to the second half of the present century we meet with no trace of a perception of the dependence of thought on language." Language and thought are declared to be one and the same thing, only viewed from different sides. Prof. Noiré is already known as a writer on the philosophy of language, with views partly adopted from L. Geiger. Language, he tells us, is the body of thought, which, like other *souls*, is always and only found in association with its body. It is to this view, applied on the widest field, that he proposes to appropriate the term Monism, as against the creeds which insist on the radical separation between mind and matter, as well as against the creeds which swallow up mind in matter or matter in mind. Monism preaches the "golden mean" that "body and mind are one; they are a *monon* which our thought grasps by abstraction, now on one side, now on the other." And of course this view is not restricted to any special kind of bodies; it must be believed of all bodies. The votaries of natural science, it is said, will only lift the veil from the great secret of nature when they have overcome the inveterate prejudice of distinguishing between an animate and inanimate nature—when, in short, they have ascribed consciousness, feeling, and will to all other existing things (i. 198). Verily, it appears that truth lay round the infancy of our race; we have only to resume the "animistic" and "fetichistic" habits of our rude ancestors, and then, instead of a brutally materialistic science, we shall have a revelation of the inner life of nature. All this is interesting; it is even within the range of legitimate hypothesis; but it is a long way from "the steady walk of

science." Kant would have shuddered at the mysticism which breaks down the partition between the mechanism which we know and the teleology which is our hypothesis.

Still less would Kant have sympathised with a search in language for the secret of thought. The study of languages undoubtedly liberates the mind from the fallacy of identifying the forms of any language with universal forms of thought. It clears away some rubbish from the courts of logic. It helps us to a higher grammar than the old Alexandrian one, and to one founded on a wider examination of instances. An old word is, no doubt, the body of thought; but so is an old hat and a steam-engine; so is a picture and a song. Human reasoning develops in and along with the material world; its existence is scientifically verifiable in language—which is, perhaps, all that is meant by the identity of language and thought.

W. WALLACE.

*Irish Essays, and others.* By Matthew Arnold. (Smith, Elder & Co.)

THIS volume contains essays on subjects of such varied interest that it would be impossible to do justice to all in the limits of a short review. It is sufficient to say that the author here touches with a master's stimulating hand some of the most interesting topics of the day, from poetry and the drama to the question of the education and elevation of our middle classes, while dealing principally with the solemn and mournful subject of Irish politics.

It ought to render the Irish more patient when they learn that in England an increasing number of persons may be found who, though keeping quietly in the background, are awakening to a sense that the question of England's failure in the government of Ireland is a moral rather than a material one, and this class have now found an able spokesman in Mr. Matthew Arnold. He would seem to ask, indeed,

"Canst thou not minister to a mind diseased:  
Pluck from the memory a rooted sorrow?"

and tells us very plainly that our business now with this brainsick people, "ever ready to react against the despotism of fact," is not only to *do* something different from what we have hitherto done, but to *be* something different also. "English opinion," he says, "attributes Irish misery to the faults of the Irish themselves;" and holds that it is in curing the faults of the Irish, not faults of our own, we are to seek the remedy. But where a moral grievance has existed, it can only be wiped out by direct moral satisfaction; and he urges our statesmen to see that, especially in the land question in Ireland, we have not only to redress our own injustice, but also to make the Irish see that we are doing so. The measures he proposes are that the Government should execute justice upon such landlords as still represent to the Irish mind the old system of oppression, appointing a commission to draw up a list of such offenders, and passing an Act of Parliament to expropriate them, giving due compensation at the same time. The second measure he advocates is to elevate the tone of the

middle-class English—that class who are thrown most in contact with the Irish people—so that they may present to this people an attractive form of civilisation. And the means by which he would carry out his measures are to reform the public schools for the middle classes in both countries, and to advise that the Executive Government in Ireland should endeavour more than it has hitherto done to develop and dignify the national life, and to use every means to give effect to the aspirations of this national life for developing and raising itself, instead of merely governing the country in compliance, as far as possible, with English ideas.

As regards the first proposition, the Land Act having now been passed, which has entirely altered the conditions of the landlord's tenure, a full compensation, rated at the former value of the property, should be given to every landlord who desires to surrender his land to the State. If, in a plausible or conventional spirit, the Englishman declines to adopt the measure of expropriation of the landlords, on the plea that such would be an act of robbery, he forgets that the owner of part of every estate over which a railway or canal runs is liable to the same condition. Unless some such course is followed as that here proposed, the Irish Land Act can hardly prove a healing measure. It only establishes tenant right throughout Ireland by a scheme which is a miracle of intricacy and complication, inviting the most contentious and litigious people in the world to try conclusions with their landlords as to the ownership divided between them; and worse than that, the natural result will be that the tenants who will, by the Land Act, have come into possession of portion of the landlord's property, are in no wise prevented or deterred from subletting this property at worse terms than the landlords had done before.

With respect to the question of the elevation of the middle classes in both countries, no one has a better claim on our attention than Mr. Matthew Arnold, himself a school inspector under the Committee of Council on Education. The problem still present to his mind is how to get Ireland to acquiesce in the English connexion as cordially as Scotland, Wales, or Cornwall—how to render our civilisation attractive to the Irish. He reminds us how little the Irish, as a nation, are brought into affectionate or intimate connexion with that aristocracy of England which, as Carlyle has well said, "with its perfection of human politeness, its continual grace of bearing and of acting, steadfast honour, light address, and cheery stoicism, if you see well into it, is actually yet the best of English classes." What the Irish do come across are the English middle class—and English civilisation as visible here presents no attraction to them; it is wanting in courtesy and graciousness, has no enjoyment of life, has the curse of hardness upon it, and has turned our religion, full of grace and truth, into one of hardness and misapprehension. But, he adds, our serious middle class "is not doomed to lie in its present dark obstruction for ever." The reform of the public schools for the middle classes, as advocated by Mr. Matthew Arnold

and Prof. Mahaffy, must, if carried, prove a means of good. The civilisation of England and America, he tells us, is still wanting in lucidity of mind and largeness of temper; and he urges the rulers of these countries to free themselves from stock ideas and stock phrases, to rate clap-trap and catchwords at their proper value, and, impelled by that faith in the purity of their own objects which burns through all convention, to cast in their lot boldly with the sages and the saints. There are factors of civilisation which have been held back too long from our Irish countrymen, and one of these is the power of social life and manners—the true life of gentlefolk, to which the Irish are peculiarly sensitive. "There are forces," as George Sand says truly and beautifully—"there are forces of weakness, of docility, of attractiveness, or of suavity which are quite as real as the forces of vigour, of encroachment, of violence, or of brutality." But these very forces can never have steady play so long as the practical result of our policy is by each successive step to render Ireland more and more insecure for the higher classes to settle in and form such centres of elevating influence as the homesteads of any persons of gentle breeding must prove in the wild and desolate regions with which the country abounds.

MARGARET STOKES.

*Goethe's Faust: the First Part.* The Text, with English Notes, Essays, and Verse Translations. By E. J. Turner and E. D. A. Morshead, M.A. (Rivingtons.)

MESSES. TURNER AND MORSHEAD have met what has for long been a want in our higher educational literature, and they have met it successfully. They have produced a thoroughly adequate edition of Goethe's masterpiece, and the best English introduction to that difficult poem. For, unlike an ordinary drama, *Faust*, in order to be understood, demands a kind of knowledge which most readers do not possess. In it the author has gathered up the experience of the ages, and the past lives again in the present. Side by side with fragments of mediæval lore are glances at contemporary manners and opinion, sometimes hidden under a dark allusion, sometimes veiled under subtle irony; while the abrupt transitions through which the poet's fancy takes his readers, and the new and unexpected forms which at every turn he brings before them, constitute a scene as bewildering as it is unique. The secret clues which bind together the several parts of this motley whole, and impart to each its true significance, are revealed in the volume before us. Certainly, the curious may still find what will repay perusal in the notes appended to the translations of Hayward, Bayard Taylor, Birds, and Webb; but the present edition contains more than enough to satisfy all ordinary requirements, besides a great deal not contained at all in the notes alluded to. Nor is it our desire to say a word in disparagement of the useful edition of Dr. Sells, which appeared independently about a year ago. The criticism of different English translations given by Dr. Sells in his Introduction is at once entertaining and instructive; his notes also elucidate the principal difficulties pre-

sented by the text. But Messrs. Turner and Morshead's method is more comprehensive; and to the appreciative reader the style of treatment adopted by them will, we are sure, prove more stimulating and suggestive.

A few words will describe the plan of the book. Prefixed to each scene is a well-designed outline of its drift and purport. In the notes, passages of doubtful interpretation are discussed, obscure expressions and allusions are explained, the historical and biographical interests which attach to this poem in a remarkable degree are fully developed. The frequent literary illustrations, derived sometimes from Goethe's own works, sometimes from other sources, and always apt (e.g., the quotation on Prel. 108), should here be specially mentioned. The editors have an eye also to features which might easily pass unnoticed; for instance, they call attention (p. 240) to the wonderful manner in which, throughout the poem, the metre varies with the thought, and reflects the changing emotions of the different characters. It will be apparent from this sketch how much of independent interest the notes contain, and how widely they are removed from the level of mere grammatical annotations. The essays are brief, the most important being one on the character of Mephistopheles. The translations (which, however, are confined to a few selected passages) deserve high praise. They have all the ease and grace of native English poetry. In the "Dedication," for example, there is not a word to betray that it is a translation. We wish the selection had included the beautiful lines of the Prelude in which the poet lingers on the memory of his youth. The least successful appears to us to be the song of the Erdgeist, in which the characteristic rhythm of the original has somehow quite disappeared.

Messrs. Turner and Morshead have given us so much that is good that we are tempted to regret that they have not given us more. We will venture, therefore, to offer one or two suggestions in the hope that they may be able to utilise them in a second edition. We presume that their book is designed not merely to assist the study of *Faust*, but to promote at the same time a sound knowledge of the German language. It seems to us, therefore, that, especially in the earlier parts, the grammatical notes might have been slightly more numerous, and accompanied, perhaps, with references to some standard Grammar. Occasional gleanings also from books not likely to be in everybody's hands, such as the new edition of Grimm's great *Wörterbuch*, now publishing, or the volume in which Dr. Lehmann, with true German industry, has analysed the peculiarities of Goethe's style, would have formed a welcome addition. The form *Jungens*, 1484 (cf. 3174), for example; *Dust*, 763; *Halt*, 2476; *Kriskskrabs*, 2917; *bass*, 4001, could have been illustrated from these sources. The notes are carefully written; but, Prel. 61, in *der Breite* surely cannot mean "by sheer diffuseness," but refers (as the context also shows) to the wide range of interest which the poet may secure by obeying the directions prescribed. On l. 681, 2949 sq., the citations in Grimm strongly support Dr. Sells' view, as on 2507

they do that of Düntzer. At 2491 the note should have rather been on *strich . . . ein*; and on 788 and 3988 (perhaps elsewhere) the editors would doubtless have condescended to a word of caution had they not supposed (of course, rightly) that *Faust* could present no attractions for the simple-minded. Lastly, passages such as the following appear to us (for different reasons) to call for additional explanation:—Prel. 87, 181; Prol. 94, 100 sq.; L. 225, 231, 264, 825–28, 1432, 1446 sq., 1961–63, 2276, 2294, 2388–90, 2480–83.

To all desirous of assistance in studying the First Part of *Faust*, this volume may be warmly recommended; and we hope that the editors may one day find themselves able to supplement it by a similar edition of the Second Part.

S. R. DRIVER.

*Sweden and Norway.* By the Rev. F. H. Woods, B.D. (Sampson Low.)

SUMMER after summer a larger number of English appear to cross, like Sir Patrick Spens and his company, "to Norway o'er the faem," and year after year Guides and books of Norwegian travel pour from the press. This season has produced an abundant crop already, beginning with M. de Chaillu's work. Undeterred by his numerous competitors in surveying the Scandinavian peninsula, Mr. Woods comes forward with a manual which is at once both exhaustive and comprehensive. It forms part of the series which seeks to describe tersely foreign countries and the British colonies by writers personally acquainted with each country. Mr. Woods has taken extreme pains with his subject, and the result is a little volume which will form a delightful companion to anyone visiting Norway. Mr. Woods' account of the physical geography, history, and political characteristics of Scandinavia leaves little to be desired. Its fauna and flora are described at some length; but we are unreasonable enough herein to ask for more. It is seldom that the completion of a project answers to its design so well as does this little book. Every tourist in Norway this summer will find it to his profit to balance Murray and Bennett in one coat-pocket with the book before us in the other. Great as is the virtue of compression in packing up for Norwegian travel, it would be a mistake to leave behind a book which forms so excellent an introduction to the Guide-book proper.

Although Mr. Woods traces the history of the peninsula from the rude times of the extinct Lappish inhabitants to the present day, the most interesting, and certainly the easiest, mode for an Englishman to learn it is as connected with the history of his own land, and especially with the memorials which the Northmen have left imperishably stamped upon the place-names, territorial divisions, and language of this country. Unfortunately, the traces of Norse beliefs and superstitions are rapidly fading out from our rural districts. Thanks, however, to such collectors of Northern folk-lore as Atkinson, Henderson, and Napier, many evanescent customs and modes of religious thought introduced by the ancient Norse invaders have been caught and safely detained for all future students of national mythologies. For many generations

the fierce Northern vikings wrought the same atrocities upon Saxon civilisation which the Saxons had inflicted upon the Roman and Celtic populations of our islands. It was a true inspiration which led Charlemagne to shed tears on beholding the first of these hardy Norsemen penetrating the Mediterranean as he thought of the woes which would befall his empire. Burning, slaying, and harrying wherever they landed, from 787 to the middle of the eleventh century, when we hear the last of them in those who were bribed by Duke William to withdraw from York and their support of Edgar, it is no wonder that distinct traces of their footsteps yet remain in North-eastern Anglia and Scotland. The dweller in North Lincolnshire—where every other village name terminates in *by* and frequently perpetuates the fame of some fierce viking or Norse god, Thor, Sweyn, or Grym (as in Thoresway, Swinhope, and Grimsby); where (as in Cleve) the very stones of the churches are yet red in places from the fires they kindled; where every rustic drops distinctively Danish words almost every time he opens his mouth, such as *lig* (lie), *stee* (ladder), *kroo* (fold-yard), *bairn*, *foreman*, *beck*, *lathe* (barn), and the like—can certainly never cease to look with interest across the German Ocean to men and dialects so exactly like his own neighbours and tongue, men who are indeed his own kith and kin. The great missionary kings of Norway, Olaf Trygvason and Olaf Haraldsson, the Saint as he is specially called, owed their own Christianity to England. One of the latest, and certainly not the least picturesque, foray of vikings has cast a halo of fame round Stamford Bridge, in other respects the dullest of Yorkshire villages, where Harold Hadrada was killed while fighting on the bridge against our own Harold Godwinson just before the Battle of Senlac, and (according to the Orkneyinga Saga), "the same day and at the same hour as King Harold fell, his daughter Maria died, and it is said that they had but one life."

Fascinating as the history of Scandinavia must always be to the Englishman, it is time to turn from skald and saga to fjord, fjeld, and fœ. In this book a handy coloured map shows these physical features of the country at a glance, and Mr. Woods enlarges upon them district by district. No country is more easily comprehended than Norway when the character of its mountain scenery is once seized. The huge mass of rock fronting to the west is broken down by old glaciers into fjords; while towards the south, below Trondhjem, the great central mass of mountains circles round the *fonds*, or snow-fields, some of which extend for many miles, as the Jostedal Fond, which is more than ninety in length. The rivers on the western side are not nearly so broad or important as those which braw down the other slope and run through the fertile lowlands of Sweden, with a gradual trend to the south, culminating in the Glommen, the largest, as well as the most southerly. The flora is in the main of the same character as ours, but contains several Alpine forms, such as *Saxifraga aizoon* and *Ranunculus glacialis*, and many marsh plants which we do not possess. A good many of our favourites, such as the primrose and wild hyacinth, do not occur at all; while many others, such as

ivy and sweet violet, are only found in the south. Most people will remember Linnæus's delight at first seeing the furze in England; and the dog-mercury which he planted as a rarity at his farm of Hammarby is still shown as a curiosity. Birch and Scotch fir in many places clothe the country. The wych elm, as with us, is the only indigenous elm. Norway is far richer in plants than Sweden. The fauna of the peninsula also much resembles what that of North Britain was within historic times. Bears and wolves are rapidly diminishing. Polar bears and walrus do not come south of Bear Island. The sea-serpent can still only be found in the pages of Bishop Pontoppidan. The Norwegian ptarmigan is undoubtedly one and the same species as our own, though some of the former may occasionally seem a variety. As for sport, Mr. Woods is not very distinct on the matter; but the trout-fishing, as a rule, is everywhere free, while the salmon rivers must be rented, and that far up into the Arctic Circle. Mosquitoes in the North are the bane of fishing. For shooting, especially large game, and for a synopsis of the Norwegian fishing laws, Prof. Friis's *Sport in Norway* may be named, which Mr. Woods has omitted in his list of useful books in the Appendix.

Merely to touch on the church architecture of Norway would far exceed our space. Mr. Woods gives a capital account of the ancient wooden churches, which are so characteristic of the country, illustrated by specimens. Of these, Hiterdal and Borgund are the finest. The *klockstaplar*, or detached bell-turrets of some Swedish churches, may be paralleled with a small group of similar churches in our own Herefordshire, such as Yarpole and Pembridge. By the side of Tidemand, the Norwegian painter, Mr. Woods might have placed Gude and Bøe, some of whose works, it may be remembered, were seen in England in 1862. Christiania and Trondhjem, like St. Petersburg and Moscow, are the civil and religious capitals of Norway. The former dates from the beginning of the seventeenth century, is the chief place of export for the timber and iron trades, and now numbers 95,836 souls. The outskirts of the city are beautiful with rocks and woods and distant views. The viking's ship discovered in 1880 is also to be seen here. Its northern rival, Trondhjem, is much older, and abounds in memories of early Christianity. Modern kings have always been crowned in its fine cathedral. Besides its quaint domestic architecture, Bergen is celebrated as being the place whence the proceeds of the Lofoten fisheries are exported. On the different industries of the two countries Mr. Woods is commendably full. He also dwells on the kindness of the people and their love of pleasure, but especially on their lack of energy. This is what the active English tourist can never understand, and gives point to the favourite Norse joke that an Englishman knows only two words of the language—*hest* and *strax*! ("horse" and "look sharp!")

M. G. WATKINS.

*Histoire de Charles VII.* Par G. du Fresne de Beaucourt. Tome I.: "Le Dauphin, 1403-1422." (Paris: Librairie de la Société bibliographique.)

M. DE BEAUCOURT'S work is one that at once awakens the reader's respect by the traces which it bears of thorough research and conscientious labour. The author tells us that it is the fruit of the study of twenty-five years; but he speaks of it with the profound humility of a true student who knows only too well how much he has been unable to do. M. de Beaucourt is profoundly impressed with the importance of his subject. He is dealing with a great crisis in the history of his country, a crisis in which the real elements of the national strength first arose to self-consciousness. He feels that the true meaning of this period has been hitherto overlooked because the character of the chief actor has been misrepresented and misunderstood. He wishes to examine, fairly and impartially, the part taken by the King in the national revival. He claims for Charles VII. the merit of having reconstituted France when it was in its lowest abasement. The central point of his work is to be found in the sentence:—

"Au dauphin Charles revient l'honneur d'avoir par son énergique résistance sauvegardé l'indépendance nationale, offrant ainsi la démonstration de cette vérité, attestée par toute notre histoire, que le salut de la France est dans la fidélité au principe de la monarchie traditionnelle."

It is not necessary to discuss the exact limits of the opinion expressed in the end of the above sentence. It is enough to recognise that till the time of the Revolution the history of France is mainly the history of its monarchy. In the case of other countries the personal character of their kings might be of more or less importance; in the case of France it was always the most important question of all. M. de Beaucourt is amply justified in assuming that a careful and detailed study of everything that Charles VII. did from his earliest days is of vital consequence in the history of France. The character of the King reflects the meaning of the events.

Taking the person of Charles as his centre, M. de Beaucourt proceeds to a careful examination of details. His method may be judged from his own explanation:

"L'histoire n'est pour nous ni un plaidoyer, ni une apologie; c'est un jugement. Et nous ajouterons que ce jugement, il n'appartient pas seulement à l'auteur de le formuler; c'est au lecteur à se constituer lui-même juge, de telle façon que la voix de l'historien ne soit en quelque sorte que l'écho du sentiment public, et que la conclusion se dégage d'elle-même, vivante, irrésistible, de la marche du récit et de l'enchaînement des faits."

M. de Beaucourt's Introduction certainly contains much valuable matter; not the least valuable is his collection of the judgments of his predecessors on the character of Charles VII. A glance over this long array of extracts, arranged in chronological order, gives a curious lesson of the way in which the decisions of history are formed. The sober accounts of contemporaries are embellished by pictorial additions. The picturesque touches of some fanciful writer are

unsuspectingly reproduced by a sober successor. A legend once set on foot gains slight additions each time it is repeated. There is need of a careful monograph from time to time to bring back the truth of fact, and clear the groundwork of the historic building from the fantastic ornaments of subsequent generations. There is a general complaint that monographs are always rehabilitations; that a biographer becomes so interested in his hero as to lose his moral judgment in reviewing his acts. No doubt there is a temptation to exaggerate the importance of that over which you expend much labour; still, no one who comes into contact with actual achievements can find the man who wrought them entirely worthless. The thing done corresponded to some genuine want of a large body of men, and he who found the means to satisfy that want did so always by wisdom, sagacity, self-restraint, and prudence which he alone can see who traces the process. No man who has ever accomplished anything the memory of which still survives can either be passed over as contemptible or condemned as wholly vile.

Of the probable success of M. de Beaucourt's attempt to exhibit clearly the character of Charles VII. and the events of his reign we can judge but slightly from the volume before us, which only deals with the life of Charles up to the time of his accession to the throne at the age of nineteen. It might be supposed that little could be said of the doings or character of a youth of nineteen; but events early urged Charles into prominence. With a mad father and a notoriously profligate mother, he had little care bestowed upon his education in his early years. The death of two elder brothers unexpectedly put him into the position of Dauphin in 1417; and the boy of fourteen became at once a political personage of the utmost importance. Charles VI. was hopelessly incapable; the late Dauphin had shown himself favourable to the Burgundian party, and his death dashed their hopes of succeeding peaceably to power. The Dauphin Charles was in the hands of the Count of Armagnac, and round him gathered the chief officials of the Crown. The Queen joined the Burgundian party and claimed to act as Regent, while Charles was the nominal head of the party that may fairly be called national.

In the years which M. de Beaucourt's first volume covers, Charles can claim no merit beyond that of lending himself to the policy which struggled to avert the disintegration of France. The plans of the Duke of Burgundy were selfish, and he was willing to use the advance of the English arms as a means of securing his own position. M. de Beaucourt can justly claim our sympathies for those who strove to preserve the royal power and resisted England and Burgundy at once. But the question still remains what were the means by which they strove to gain their ends. The murder of the Duke of Burgundy at Montereau, in 1419, was worse than a crime; it was a serious political blunder. It removed from the head of the Burgundian party one who was beginning to weary of incessant struggles, and brought into his place a young man full of force and ambition, who felt that he had a great wrong

to avenge. It alienated popular sympathy, and gave a powerful handle to Burgundian diplomacy. This M. de Beaucourt does not attempt to extenuate; he confines himself to an endeavour to discover the actual facts of the murder, and the degree in which Charles can be held responsible for the deed. M. de Beaucourt points out with some force that, if the murder had been premeditated, the conference held at Pouilly in July 1419 afforded a more favourable opportunity than did the bridge of Montereau in September. As regards the policy of the Duke of Burgundy, M. de Beaucourt is convinced that his object was to entice Charles into the neighbourhood of his father, and then make himself master of his person. He credits him throughout with the intention of playing a double game by negotiating with England and with the Dauphin at the same time. Such, at all events, was the opinion of the partisans of the Dauphin; and when, on the bridge of Montereau, words passed between the boy of sixteen and the powerful Duke, it is not wonderful that passionate feelings were at once kindled on both sides. A Burgundian lord laid his hand on the Dauphin's shoulder, and said, "You must come to your father." The Duke of Burgundy put his hand on his sword. "Dare you put your hand on your sword in the presence of the Dauphin?" exclaimed Robert de Lairé. The Dauphin's followers hurried their master through the gate; armed men rushed in with the cry, "Tuez, tuez!" and the Duke of Burgundy was killed—probably not by Tanguy du Chastel, as is generally believed. M. de Beaucourt finds no evidence to show that the murder was planned; nothing was to be gained by it; nor was the opportunity used to march against Troyes, where were the King and Queen. The movements of the Dauphin afterwards show that if the murder was deliberate it was certainly of no political use. M. de Beaucourt believes it to have been the result of a quarrel provoked by the insolence of the Duke of Burgundy, which, in the suspicious condition of men's minds, easily brought into the foreground thoughts of vengeance which had only too good a ground for existence.

The other matter by which the Dauphin's government did much to awaken alarm and discontent was the arrest of the Duke of Brittany in 1420. For this, M. de Beaucourt can find little extenuation. He throws the blame on the President Louvet, and remarks:—

"Dans cette circonstance, comme dans beaucoup d'autres de la période qui va suivre, le Dauphin paraît avoir cédé à des influences funestes, auxquelles il était trop accessible, et qu'il subissait parfois avec une regrettable facilité."

M. de Beaucourt does not attempt to make of Charles an immaculate hero; it was only too natural that a youth of his age should be under the influence of an unscrupulous man such as was Louvet.

The most valuable part of M. de Beaucourt's present volume, viewed as a justification of the government of the Regent, are the chapters in which he surveys the diplomacy and administration during this period. The task

was difficult to constitute a government and to obtain allies. It is something that Charles succeeded in raising money, in introducing some sort of order, in dealing wisely with the provincial states, in securing the alliance of Scotland and Castile, and disarming the hostility of Pope Martin V. Everything had to be done; and the counsellors of Charles at least deserve the credit of doing fairly well a laborious and ungrateful work which was to be productive of results only in the future. History in the hands of M. de Beaucourt loses much of its picturesqueness as it loses its passion; but it gains the details of administrative capacity by which, rather than by striking actions, the fortunes of nations are determined.

We have spoken of M. de Beaucourt's merits; but we must add that his book has a few defects. It is by no means a model of clearness and arrangement. A book on such a scale needs an introduction to show the general situation of affairs as it appears to the author. M. de Beaucourt, however, follows only the order of his subject. He begins with the birth of Charles, and only speaks of the policy of the Duke of Burgundy when he comes to the murder of Montreuil; while the general position of France is not mentioned till chap. viii., which treats of the "Diplomacy of the Dauphin." We have to pick up gradually the author's general view of affairs, and find modifications here and there introduced. Moreover, M. de Beaucourt has confined his minute study, as well as his general sympathies, solely to his hero and to France. He makes no attempt to survey European affairs as a whole. He has no sympathy with Henry V., which is excusable in a French writer; but M. de Beaucourt has not even tried to understand his position. It is allowable to regard him as the foe of France, but it is at least desirable to form a view of his general policy. Moreover, it is instructive to see how M. de Beaucourt, while attacking the legendary account of Charles VII., repeats the legend about Henry V.: "C'était un prince âgé de vingt-et-un ans, adonné jusque-là à tous les excès et ayant fait parade des plus ridicules excentricités; mais, dès qu'il fut parvenu au trône, il désavoua les folies de sa jeunesse et se montra un homme nouveau." Similarly, M. de Beaucourt has no sympathy with the Emperor Sigismund; he looks on his endeavour to mediate between France and England in 1416 as simply a feint, and he does not consider the work of the Council of Constance as worthy of his attention. Yet it seems most probable that Sigismund was genuine in his desire for peace, and that Henry V. was willing to accept a truce till the Council had fulfilled its labours. France, as is too frequently the case in French history, regarded French interests as supreme, and would entertain no other considerations.

M. de Beaucourt's work has all the merits of a laborious monograph; it has also the defects inseparable from a too rigid attention to one particular aspect of a subject to the exclusion of everything else.

M. CREIGHTON.

#### SOME BOOKS ON INDIA.

*The Finances and Public Works of India from 1869 to 1881.* By Sir John Strachey and Gen. Strachey. (Kegan Paul, Trench and Co.) Englishmen in India are condemned not only to banishment from their families, but also to an almost complete ignorance of their services on the part of their countrymen at home. The history of Indian wars, narratives of travel in India, even a sketch of the native religions, may be made interesting; but it is beyond hope that anyone shall succeed in writing a popular account of the actual work of our Indian Administration. By most Englishmen, we fear, Sir John Strachey is known only as an unfortunate Finance Minister; and he is regarded probably as a creature of Lord Lytton. It is right that they should learn that he has been the virtual Prime Minister (at least as regards internal affairs) under two Viceroys; and that to him, together with his brother Richard, India owes more than half the administrative changes that have been effected since 1869. For, though both the Viceroys whose right-hand men they were ranked as conservatives, it is as radical reformers that the two Strachays will ever be known in India. We need not here enquire into the advisability of all the measures they proposed (and what they proposed they usually succeeded in carrying into effect), nor into their general doctrines of administration. Suffice it to say that they devoted their energies to moulding the machinery of government to carry out what they believed to be right. The decentralisation of provincial finance, the systematic promotion of public works, the equalisation of the salt duties, are some of the measures they have seen carried into execution. Even as regards the abolition of the customs duties on cotton goods, the re-imposition of an income-tax, the adoption of a gold standard and of a metric system of weights and measures, it is probable that they are only in advance of their time. [This was written before the last Indian Budget.] The Strachays have not always been popular in India, and it is certain that they never went out of their way to court popularity. Sir John, but a short time ago, was one of the best abused men in England. In this volume we have their justification, written by themselves. There is a good deal in it with which we cannot agree, both in statement of principles and in inference from facts. But if the government of India is to be regarded from the point of view of the efficiency of the central machine, we do not know where a more able exposition of that efficiency is to be found. Put at its highest, the position of the English in India is that of benevolent despots. We may be sure that intelligence went hand in hand with goodwill when the Strachays had their way.

*Thirty-eight Years in India.* From Jagannath to the Himalaya Mountains. By William Tayler. With a Hundred Illustrations by the Author. Vol. I. (W. H. Allen.) Mr. Tayler belongs to an older and a very different type of Anglo-Indian; and he has written a very different kind of book. He also has suffered under an imputation which we are very well disposed to believe unjust. But in the present volume we only find the premonitory foreshadowing of a wrong which finally drove him from the service. In Mr. Tayler's days the government was a despotism which doubtless meant to be kind, but did not always succeed in being wise. And Mr. Tayler's book faithfully represents his days. With him the natives form a background, like the crows, the mosquitoes, and the "tattoos," which lend themselves to pictorial description, but are only incidents in the real life of social gaiety and—we fear it must be added—official jobbery. He writes as an old Indian for

old Indians, just as his chief occupation seems to have been to draw caricatures or take a part in private theatricals to while away the monotony of Presidency and Mofussil life. We do not complain that such a book should be written; we only desire to characterise the type. The high spirits of the author, preserved to a ripe old age, do him infinite credit. We have derived much entertainment both from his anecdotes and from his illustrations, though we find ourselves unable to look at the position of the English in India with the same eyes. The following story is capital (pp. 189, 190):—

"It was the first day on which the train was to leave Burdwan, on, I imagine, an experimental trip. . . . The signal was given, and the doors opened; in the youths rushed, helter-skelter, till the principal carriage, a sort of saloon, was crumpled, all standing up huddled together. . . . Suddenly a feeble melancholy voice was heard from the centre of the crowded mass; it cried out, in plaintive tone, 'Let us out! Let us out! We suffer inconvenience. Biting dogs are here!' And, true enough, a bulldog had got into the carriage, and, as the pressure increased, was taking liberties with the uncovered calves of the native crowd."

*Ashé Pyee, the Superior Country; or, the Great Attractions of Burmah to British Enterprise and Commerce.* By Col. W. F. B. Laurie. (W. H. Allen.) The author is, we believe, a retired member of the Madras Artillery, who served through the second Burmese War. The enthusiasm of Lord Dalhousie is still upon him; and, like that great Governor-General, he tempers his faith in annexation only by a greater faith in the beneficence of British rule. Perhaps no country in the world has advanced so rapidly in the externals of prosperity in the last quarter of a century as British Burmah. But to draw any analogy from this as regards Upper Burmah, which is still independent, would be like arguing from Bengal to Assam, from the Punjab to Afghanistan. The trade route into China via Bhamo and Yunnan has always seemed to us one of the greatest delusions of modern times. Col. Laurie appears to cherish the idea that the hill tribes of Shan race will before long come and throw themselves upon British protection. Can he find a single instance of such a step in the whole history of the British in India? The Coorgs are not a case in point, for they fought first. We have confined ourselves to commenting upon some of the topics suggested by this book, in preference to commenting upon the style and arrangement. These it would be easy to criticise, but the manifest sincerity of the writer has driven away the words that came to our pen. Burmah is his first love; literary composition is a later acquired art by which he seeks to advertise the world of her charms.

*The Military History of the Madras Engineers and Pioneers.* From 1743 up to the Present Time. Compiled by Major H. M. Vibart. Vol. I. (W. H. Allen.) Of this book we regret that we can say nothing favourable. Regimental histories cannot be expected to be interesting, but we have never come across one so absolutely unreadable as this. It is not so much a history as a chronicle of petty facts, arranged in short sentences throughout 600 pages. The Madras Engineers are (or were) a distinguished corps, though it is possible that history will make most of the irrigation works carried out by some of the members. They took part not only in the wars of the South from the earliest time, but also in several foreign expeditions. These wars have often been told before, nor are they particularly interesting. Major Vibart has decided to tell them all over again, with special reference to the part played by the

Engineers. He has produced a book which no human being could read for its own sake, and which must remain useless for reference until the Index that, we trust, the second volume will bring. For our own part, we have derived most instruction from the nominal lists of officers in Appendices I. and II. If Major Vibart had contented himself with these, and merely stated the facts about their services, without attempting a general military history, he might have produced a book of real value. Whether the maps are new or not we cannot say. Their source ought to have been indicated.

*Indo-Aryans: Contributions towards the Elucidation of their Ancient and Mediaeval History.* By Rājendralāla Mitra. In 2 vols. (Calcutta: Newman; London: Stanford.) Mr. Rājendralāla Mitra's position among Oriental scholars is assured. He combines the hereditary traditions and local knowledge of a native with the enquiring spirit and fairness of mind of a Western professor. To say that he stands on the same level with the greatest Englishmen or Germans would not be true; nor would it be true to say that his literary style does not betray the foreigner. But in both respects we are bound to recognise his extraordinary talents. He has here collected a number of essays, written at various dates, chiefly from the *Journal* of the Asiatic Society of Bengal. Into his controversy with Mr. Fergusson about the origin of Indian architecture we do not propose to enter. There is hardly a third man living who would care to mediate between the two. Nor have we the knowledge to criticise his papers upon Sanskrit and the derivative dialects. Perhaps the articles most generally interesting, and most characteristic of the author's literary power, are those in which he reconstructs the social life of the primitive Aryans of Upper India, and tells us how they ate beef, drank intoxicating liquors, and practised human sacrifice. For ourselves, we have been most struck with the essay on the Pala and Sena Dynasties of Bengal, which is a model of close reasoning from scanty data about a subject which has hitherto had very little consideration. The early history of Bengal yet remains to be deciphered.

*A Political and General History of the District of Tinnevely.* From the Earliest Period to its Cession to the English Government in 1801. By Bishop Caldwell. (Madras: Government Press.) The missionary bishop of Southern India and the grammarian of the Dravidian languages has here added to his services by writing a short history of that tract of country where he lived long, and where his name will ever be held in remembrance. Tinnevely is the southernmost district of British India, for Cape Comorin—the extreme point of the peninsula—happens to lie within the native State of Travancore. Strictly speaking, it has no history of its own, though it contains several historic sites. Like the departments of France, many of the Indian *zilas* or administrative districts owe their origin and their boundaries only to the accident of official requirements. Historically, Tinnevely is a portion of the great kingdom whose rulers had their capital at Madura from primitive times. The story of the early Rajas of Pandya and of the later dynasty of Nayaks has never yet been written. All Bishop Caldwell has attempted to do is to describe some of the events that can be localised within the existing limits of Tinnevely. As everywhere in the East, these events centre round a sacred river—the Tamraparni—which is the one source of irrigation, and therefore of life. Near the mouth of this river is a site which the Bishop identifies with the Kolkhoi of Greek geographers. From this sea-port, he

suggests, came the Tamil names for Indian products that are found both in the Hebrew Bible and in Greek. Along the coast facing Ceylon there used to be an important pearl-fishery. In modern times, there is nothing to tell of Tinnevely beyond the self-denying labours of Jesuit and Protestant missionaries, and the sharp guerilla fighting in the polegar wars at the close of the last century. In no other part of India did the English encounter such fierce opposition from the tillers of the soil. We have heard that Bishop Caldwell's acquaintance with Sanskrit is not at first hand, and that his informants are not always trustworthy; but that he is inspired at any rate with the catholic spirit by which alone our knowledge of things Indian can be advanced is evident from the following quotation:—

"The study of the history, ancient literature, and archaeology of the country will never reach anything like completeness of development or realise results of national importance till it is systematically undertaken by educated natives. Learned natives of Calcutta and Bombay, trained in European modes of thought, and vying with Europeans in zeal for historical accuracy, have already made a promising beginning in this department of research. I trust that the native scholars of the south will resolve that they will [shall?] not be left behind in the race."

The book has a good Index, but sadly lacks a map.

*Handbook of the Collection Illustrative of the Wild Silks of India in the Indian Section of the South Kensington Museum.* With a Catalogue of the Collection and Numerous Illustrations. By Thomas Wardle. (Eyre and Spottiswoode.) We have carefully read this Handbook, and we have examined with its aid the collection of "wild silks" at South Kensington which it illustrates. While admitting that the years of attention that Mr. Wardle has devoted to the subject deserve the highest praise, we are constrained to say that we do not believe in the commercial success of his enterprise. The story of British capital in India is chequered with many failures; and of these failures silk is one. At the present time India annually imports more raw silk from China than she exports to foreign countries. All credit to Major Coussmaker, of Poonah, and to others who are striving to encourage the culture of the wild silkworm. But, apart from other considerations, the example of the lac industry is enough to show that jungle products cannot be fostered. For certain subordinate purposes—such as the plush which Mr. Wardle writes about—*tasar* waste may continue to be used; but we cannot convince ourselves that it will ever grow into an important article of trade. The future of Indian commerce lies in the development of her raw products of agriculture—her cotton, jute, oil-seeds, rice, and wheat.

*Christianity and Hinduism Contrasted.* By Sir Charles Trevelyan. (Longmans.) Though but a pamphlet, this deserves some words of notice as illustrating a certain old-fashioned view about the people of India which we are surprised to find entertained by such a man as the writer. The main substance is a reprint of an article on Thuggism, contributed more than forty years ago to the *Edinburgh*, and still well worth reading. But the point of the whole lies in an introductory paper, delivered the other day as a lecture at Newcastle, which identifies the religion of all Hindus with Thuggism, and then proceeds to expatiate upon the comparative superiority of English Christianity. Can this be the most valuable lesson Sir Charles Trevelyan learned from his large Indian experience? Bishop Caldwell could teach him better.

JAS. S. COTTON.

## NOTES AND NEWS.

PROF. SKEAT will publish shortly, with the Delegates of the Clarendon Press, the Gospel of St. Mark in Moeso-Gothic, with outlines of Moeso-Gothic Grammar and a Glossary.

It is stated that Prince Frederic of Schleswig-Holstein-Augustenburg, cousin of Prince Christian, who died on last Christmas Day, has bequeathed the greater part of his valuable library of Oriental books and MSS. to the University of Cambridge. Prince Frederic took a great interest in India, which he visited three times. Under the *nom de guerre* of "Onomander," he published an account of his travels in 1859—*Altes und Neues aus den Ländern des Ostens* (Hamburg). In 1880 appeared the first volume of a History of Akbar, upon which he had been long engaged—*Kaiser Akbar: ein Versuch über die Geschichte Indiens im sechzehnten Jahrhundert* (Leiden: Brill). On this occasion he used the name of "Graf F. A. von Noer," which title had been conferred upon him by the King of Prussia.

PROF. SKEAT's Preface to Dr. R. Morris's *Specimens of Early English*, part i., "Old English Homilies" to "King Horn," A.D. 1150-1300, is now all in type, and the book—of which the new edition has been so long expected—ought to be out in a fortnight or so.

THE most noteworthy event of the Ouvre sale, at which a number of English poetical and dramatic rarities, mostly in poor condition, were disposed of, was the competition for the first and third Shakespeares, both of which fell to Mr. Quaritch at prices which clearly show that copies of the Folios will rise in time to a fabulous value. The set of Quarto reprints (by Mr. Halliwell-Phillips) was acquired by the same purchaser for £176.

MRS. HAWES is writing an article on Chaucer for *Belgravia*. She has been to the Record Office to see the Customs rolls passed "per visum et testimonium Ealfridi Chaucer, Contratulatoris," and the other documents and seals there relating to the poet, under Mr. Walford D. Selby's charge.

*The Russian Empire: its Origin and Development*, by S. B. Boulton, is the title of the new volume of "Cassell's Popular Library," to be issued on the 25th inst. The work will be furnished with an historical map of the Russian empire from Ivan the Great, showing the successive enlargements of the empire to the present time.

A COMPANION volume to *From Log Cabin to White House*, by W. M. Thayer, will be speedily issued by Messrs. Hodder and Stoughton, entitled *The Pioneer Boy, and how he became President: the Story of the Life of Abraham Lincoln*. The same firm will also publish in a few days a new work by the same author, entitled *Tact, Push, and Principle: a Book for those who wish to Succeed in Life*.

MR. WILLIAM BLACK will shortly contribute to *Harper's Magazine* a paper on "West Highland Folk."

A NEW volume of Messrs. Sonnenschein's "Library of the Fairy Tales of All Nations" has been published this day, *Hiawatha, and other Legends of the Wigwams of the Red American Indians*, edited by Mr. Cornelius Williams. The next volume, to appear on April 15, is the new edition of the late Mr. Crofton Croker's *Fairy Legends and Traditions of Ireland*, by Mr. Thomas Wright.

*Faith, Hope, and Charity* is the title of a new novel by Anna Lisle, the author of *Self and Self-Sacrifice*, &c., which will be published shortly by Messrs. Groombridge and Sons.

MR. WALTER RYE is engaged on an article, "Amy Robsart's Murder: the Case for the Prosecution," in answer to Canon Jackson,

ON March 30, the Académie française constituted its bureau for the current quarter. M. A. Mézières, the author of *Shakespeare et ses Contemporains* (which has just reached a third edition), was elected director; and M. Sully-Prudhomme, the newest and also youngest member, chancellor. It will fall to M. Mézières to prepare the annual report upon the *prix de vertu*. The reception of M. Pasteur, in the room of Littérature, has been fixed for April 27. As we have before stated, M. Pasteur will be received by M. Renan.

MR. ERNEST RADFORD will shortly publish a volume containing translations from Heine, and other verses.

AT the late session of the Historische Verein of the city of St. Gallen, Dr. H. Wartmann laid before the members the third volume of the *St. Gallen Urkundenbuch*. It contains the documents of the years 920-1360 inclusive.

IT was announced some time since that MM. Erokman-Chatrian were about to write a new romance under the title *Le Blocus de Huningen*; they visited Huningen, and collected much material in Basel and the Swiss borders of Elsass. Their secretary now informs the *Basler Nachrichten* that they have given up the plan. A complete German translation of their romances, under the editorship of Ludwig Pfau, is advertised by Rieger, of Stuttgart.

THE following are the lecture arrangements of the Royal Institution after Easter:—Mr. E. B. Tylor, four lectures on the "History of Customs and Beliefs," on Tuesdays, April 18 to May 9; Prof. A. Gamgee, four lectures on "Digestion," on Tuesdays, May 16 to June 6; Prof. Dewar, eight lectures on the "Chemical and Physical Properties of the Metals," on Thursdays, April 20 to June 8; Mr. F. Pollock, four lectures on the "History of the Science of Politics," on Saturdays, April 22 to May 13; and Prof. D. Masson, on "Poetry and its Literary Forms," on Saturdays, May 20 to June 10. The Friday evening meetings will be resumed on April 21, when Prof. Dewar will give a discourse on the experimental researches of Henri St. Claire Deville.

THE Rev. Dr. Geikie's new volume of *Hours with the Bible* (from Rehoboam to Ezekiah, with the Contemporary Prophets), will be published by Messrs. Hodder and Stoughton next week.

M. F. VIEWEG has undertaken the publication of a "Mediæval French Library" under the superintendence of MM. Gaston Paris and Paul Meyer. The first volume is part i. of a collection of French Motets of the twelfth and thirteenth centuries, edited by M. Gaston Raynaud, with a study on Music in the Age of St. Louis by M. H. Lavoix fils. The second volume is in the press, to be followed by *Alexandre le Grand*, edited by M. P. Meyer, and *Le Peautier de Metz*, edited by M. J. Bonnardot.

THE valuable library of the late Prof. Bruhns, Director of the Leipzig Observatory, has passed into the hands of Messrs. Weiss and Shack, of Leipzig. A catalogue will probably be issued shortly.

THE firm of Henninger Bros., of Heilbronn, are about to publish a German dictionary, under the title *Orthographisch-orthoeptisches Wörterbuch*, which will give all German words in general use in the usual spelling, and also in a strictly phonetic spelling, which latter will show the correct pronunciation as observed on the stage, &c. The work will be edited by Dr. W. Victor.

MESSRS. HACHETTE have just published, in their "Library of the Best Foreign Authors,"

a translation, by M<sup>me</sup>. Letorsay, of Miss Austen's *Persuasion*.

M. L. CONQUET, 5 Rue Drouot, Paris, announces for speedy publication, by subscription, *La Chanson des nouveaux Epoux*, by M<sup>me</sup>. Edmond Adam (Juliette Lamber), illustrated with a portrait by Burney, and ten etchings from large compositions by Constant, Doré, Detaille, Laurens, Le Matte, Le Roux, Lefebvre, Morot, Munkacsy, and Toudouze. The etchers have been in each case selected by the artists themselves, and the engraving has been executed under the superintendence of M. Laguillermie.

M. ERNEST RENAN's long-promised work—*L'Ecclesiaste traduit de l'Hébreu, avec une Etude sur l'Age et le Caractère du Livre*—has recently been published by M. Calmann Lévy.

AN association has been formed at Dusseldorf, in Rhenish Prussia, which has for its objects the diminution of the number of school-hours and the introduction of English outdoor games.

THE King of Italy has presented Gen. di Cesnola with a superb gold medal of honour, bearing on its obverse side the royal effigy in relief, and on its reverse side the following inscription:—"To General Count Louis Palma di Cesnola, Discoverer and Illustrator of the Cypriote Antiquities." The medal was designed by Signor Speranza, is two-and-a-quarter inches in diameter, and weighs four-and-three-quarter ounces. In the official letter of presentation, it is expressly stated by the Prime Minister that the King has caused this testimonial to be designed and executed in recognition of "the honour and lustre" which Italy, his native country, has derived from Gen. di Cesnola's efforts "in the field of science as well as in the battle-field."

#### A TRANSLATION.

##### THE DREAM OF THE ROOD.

(From the English of Cynewulf.)

Lo, I will tell of the best of dreams, which I dream'd at deep midnight,  
When men were lying at rest; meseem'd I saw the blessed Tree,  
The loveliest Tree, the Tree most good, uplift and girt with light,  
And flooded with gold; and precious gems at its foot were fair to see,  
And five bright stones on the shoulder-span shone out full gloriously.  
All the fair angels of the Lord gazing beheld it there;  
'Twas not the rood of the sin-steep man, the cross of the ill-doer,  
But holy spirits lookt thereon, and men of mortal breath,  
And all this mighty universe; and the rood of victory  
Was blessed, and I was deep-defil'd, sin-wounded unto death.  
Bedeckt with royal weeds I saw it shine full splendidly,  
And jewels of uncounted cost blaz'd on the wondrous Tree.  
Yet, thro' the sheen of gold I saw the mourners' bitter woe,  
The blood ooz'd out on the right side first for the strife of long ago:  
Stricken and smitten with grief was I, afraid for that lovely sight:  
I saw the beacon set up on high, rich-rob'd in royal blue,  
Anon all wet, defil'd with blood, anon with gold most bright:  
Long, while I lay, laden with grief, beheld the Saviour's Tree,  
Until I heard the Blessed speak; these words it spake to me.

"It was long ago, I mind it yet, I was hewn in the heart of the wood,  
"I was out away from my standing-place; the strong fœes took me there,  
"And brought me for a sight and show, ordain'd me when I stood  
"To lift their evil-doers up, their law-breakers to bear.

"They bare me on their shoulders strong, upon a hill they set,  
"And made me fast, a many fœes; then saw I mankind's Lord  
"With mighty courage hasten Him to mount on me, and yet  
"Tho' all earth shook, I durst not bend or break without His word;  
"Firm must I stand, nor fall and crush the gazing fœes abhorrd.

"Then the young Hero made Him dight, the Mighty God was He,  
"Steadfast and very stout of heart, mounted the shameful tree;  
"Strong-soul'd, in sight of many there, mankind He fain would free.  
"I trembled sore when He claspt me round, yet durst not bow or bend,  
"I must not fall upon the earth, but stand fast to the end.

"A rood I stood, and lifted up the great King, Lord of Heaven;  
"I durst not stoop; they pierced me thro' with dark nails sharply driven,  
"The wounds are plain to see here yet, the open wounds that yawn,  
"Yet nothing nowise durst I do of scathe to any-one.  
"They put us both to shame, us twain; I was bedrencht in blood  
"Shed from the spearborn heart of Him, when His Soul was gone to God.

"Oh, grievous was my cruel fate on the hillside that day;  
"I saw the mighty God of Hosts stretcht out in dreadful wise;  
"The darkness veil'd its Maker's corpse with clouds, the shades did weigh  
"The bright light down with evil weight all wan beneath the skies.

"Then did the whole creation weep and the King's death bemoan.  
"Christ was upon the rood. Then came where He did hang alone  
"Those noble ones; I saw it all; afflicted sore was I,  
"Yet bow'd me to their faithful hands humbly with courage high.

"They lifted up the Almighty God after that torment dread;  
"They left me standing, drencht with gore, with arrows sore wounded;  
"They laid down the limb-weary One, and stood about His head,  
"Gaz'd on Heaven's Lord who, weary now after the Mighty fight,  
"Rest'd Him there a little while. Then, in the murderers' sight,  
"The men began to make His tomb, of white stone carv'd it fair,  
"And laid the Lord of Victory within the sepulchre.  
"Then sang they sorrow-songs for Him, mourners at eventide,  
"When, weary, they were fain to go from the great Prince's side:  
"There did the mighty Lord of Hosts with never a host abide.

"Yet for a space we stood there still, weeping full bitterly;  
"The sound of the warrior's voice went up; chill waxt that fair Body;  
"Then did they tell us to the earth: Oh, awesome fate to dreē!

"In the deep pit they buried us; yet the Lord's servants, they  
"Who are His friends, have joy'd in me, and made me fair to-day,  
"With silver and with gold adorn'd, and beautiful array.

"Now may'st thou hear the tale, O man. O life and dear, the tale  
 "Of that sore sorrow I have borne, sore sorrow and bitter bale;  
 "But the time is come that, far and wide, they honour me alway,  
 "Men, and the whole great universe, and at this beacon pray.  
 "On me God's Son His anguish took, so, glorious, towering free,  
 "I stand 'neath heaven, a healing made for whoso honoureth me.  
 "Once I was sorest pine and shame, sharpest and bitterest then  
 "Ere I had open'd life's true way unto the sons of men."

E. H. HICKEY.

## MAGAZINES AND REVIEWS.

THE April number of the *Cornhill* is full of excellent articles. R. L. S. is almost too brilliant and vivacious in his character-sketches entitled "Talk and Talkers." G. A. continues his defence of British and Roman antiquity in English history against the exclusively Teutonic view of Messrs. Freeman and Green. In an article on "Casters and Chesters," he gives us in an easy way a great deal of interesting information on local etymology. A Neapolitan sketch—"Peppiniello"—draws with sympathetic realism a picture of the life of a street-boy in the city of the *lazzaroni*; the darker side is admirably indicated by touches of genuine pathos. The "Rambles among Books" have extended to the State Trials, from which judicious extracts are made to illustrate the life of the past. Under the title "A Port of the Past," we have a pleasant account of an expedition to Ostia, and the fate of that once famous place in the Middle Ages. Mr. R. A. Proctor consoles the timorous about "The World's End," and does his best to dispel their fears of a comet. A poem by Mr. Gosse, "The Church by the Sea," draws a moral from Erasmus's visit to Walsingham; the moral, however, seems to be tacked on for the sake of the poem. A new story is begun by an anonymous, and apparently a new, writer; "No New Thing" is certainly written with vigour; but we wish that bishops and deans and cathedral cities could be banished from fiction for a few years.

*Macmillan's Magazine* has also some good articles. The best is by Mr. C. E. Turner on "Tourgenieff's Novels as interpreting the Political Movement in Russia." Mr. Stuart-Glennie contributes what he calls "Traditional and Personal Memorials" of James and John Stuart Mill. The personal memorials are scanty compared with the traditional; and we scarcely want an account of the history of Avignon à propos of J. S. Mill. Lady Harberton advocates with good sense and moderation the cause of "Rational Dress Reform." Her reply to the ladies' argument, "The men won't like it," is much to be commended; she delicately insinuates that, if they surveyed the various fashions which have prevailed during the present century, they might justly conclude that the men had admired them in spite of, not in consequence of, their dress. A contribution to the history of the future, "The Story of the Channel Tunnel, told by our Grandchildren," is greatly to be commended for its very ingenious account of the Tunnel's fate. We will not spoil its interest by any indication.

We doubt whether the bitterest enemy of the *Bibliographer*—if it have any enemies—could accuse it of being unreadable. We are sometimes almost inclined to complain that it is possibly a little too readable; but the charge is not a very serious one, and we must admit that this magazine is, as a rule, peculiarly successful in giving us at once matter of

scientific value and of general interest. Mr. Pocock, on the Bishops' Bible, and Mr. W. M. Conway, on the Woodcutters of the Netherlands, have given us really valuable contributions to bibliography; and the editor does well in recalling the attention of literary men to Prof. Arber's Transcripts of the Registers of the Stationers' Company, which constitute the greatest of that indefatigable scholar's many claims to the gratitude of all lovers of English literature. Mr. M. H. Towry's note on Spenser's Twenty Lost Works is enough to make the mouths of all hunters of old book-stalls and little-frequented libraries to water. But the gem of the April number is undoubtedly the inedited letter of Christopher Plantin, communicated by Mr. W. H. James Weale, wherein the great Antwerp printer gives an account of his four daughters, their childhood and bringing up. What wonder that Marguerite, the eldest girl, who had been reading proofs in all manner of languages when she ought to have been at play in the nursery, contracted at the age of twelve "une débilité de veue telle qu'impossible luy eust esté de voir escrire deux ou trois lignes continuelles"? The letter leaves a strong impression of the self-respect, strength of character, and professional judgment and rectitude of the founder of the great printing-house whose history of 300 years closed only the other day.

THE *Revue historique* has an interesting document published by M. Livret in an article on "Le Père Malgrida." Malgrida was a Jesuit, who was put to death on the charge of complicity in a conspiracy against the life of King Joseph I. of Portugal in 1758. He was kept three years in prison, and the justice of his sentence has been doubted by some writers. M. Livret discusses the matter impartially; but an appendix to his article publishes an interesting Latin poem—"Loyolidum circa facinus in regis Lusitaniae vitam pie conceptum vindictiae"—from the Jesuit archives at St-Omer. The poem is an apology for regicide, and is interesting whether it be regarded as an impression of the opinions of the Jesuits or as a satire upon them. Besides this, the *Revue* has an article by M. Sorel on "Le Comité du Salut public et la Question de la Rive gauche du Rhin en 1795," which is a careful study of diplomatic history. M. Stern continues his valuable contribution to bibliography by an account of the works relative to the history of the Reformation which have been published in Germany during the last few years.

## CORRESPONDENCE.

## THE DESTRUCTION OF ANCIENT MONUMENTS IN ITALY.

London: April 3, 1882.

An eloquent appeal has just been addressed by the Cav. Tito Paravicini, a distinguished Milanese antiquary, to the Society for the Protection of Ancient Buildings for support and assistance in his struggles against the many acts of wanton destruction now being perpetrated in Italy.

The fine old mediaeval towers on each side of the Porta Ticinese in Milan have been pulled down. The high altar of S. Ambrogio, to which belongs the magnificent Paliotto d'Oro, the work of a ninth-century jeweller, has been moved from its original position; and it is now proposed to pull down the fine columned portico which was added by Bramante on to the north side of S. Ambrogio—the object being to rebuild the whole of the northern façade in the style of the ninth century. Perhaps the saddest item in the Cav. Paravicini's list of destruction, accomplished and threatened, is the fact that Signor Colla, a Milanese architect, has received

a gold medal for his scheme of reconstructing the entire outside of S. Maria delle Grazie in new stone-work which is to take the place of the fine red brick and delicate terra-cotta which give to this old monastic church its great charm. The church of S. Babila has been pulled down, and nothing but its plan preserved. S. Maurizio, S. Maria Incoronata, and S. Calimero are now threatened. S. Giovanni in Conca, one of the earliest and most interesting churches of Milan, is being pulled down. In Pavia and its neighbourhood a rapid destruction of old buildings is being carried on. The fine early Lombardic church of S. Pietro in Ciel d'Oro is being rebuilt, with a façade of entirely new design. Frescoes have been white-washed over, and a fine old mosaic pavement of terra-cotta has been replaced by a new one, in the Certosa near Pavia. These are a few samples out of the long list of acts of destruction perpetrated in and near Milan during the past year, or threatened in the future.

The Cav. Paravicini complains that his attempts to save works of art in Italy from destruction or falsification bring down upon him only ridicule and abuse from his fellow-countrymen; he appeals, therefore, to the English nation to assist him by making energetic protests against such deeds as these. It is to be hoped that his appeal will not be in vain.

J. HENRY MIDDLETON.

#### LOW SUNDAY OR WHITE SUNDAY.

Newton Abbot: March 31, 1882.

In Sir H. Ellis's edition of Brand's *Popular Antiquities*, i. 271, 272, we have a brief article on "Low Sunday," taken from the *Literary Gazette*, in which we read:

"A curious volume of sermons, printed in 1652, is entitled '*The Christian Sodality* . . . by F. P.' The author, in his sermon for *White or Low Sunday*, the first Sunday after Easter, thus writes:—'*This day is called White or Low Sunday, because, in the primitive Church, those neophytes that on Easter-Eve were baptized and clad in white garments, did to-day put them off, with this admonition, that they were to keep within them a perpetual candour of spirit*,' &c."

The writer in the *Literary Gazette* then proceeds to criticise the paragraph of which the foregoing forms a part, and adds: "It may be, too, that the Sunday in question was never actually called *White*, but *Low Sunday*." Strange to say, the *Clavis Calendaria* does not give the alternative name of *White Sunday* when treating of Low Sunday (i. 316, third edition, 1815), but merely states that

"*Dominica in Albis* is also a further title of this Sunday, which took its origin from the chrisoma, or white robes, considered as emblems of innocence and purity, having been then laid aside, which had been placed upon those christened on Easter-eve."

Under *Whitunday* (i. 376 *et seqq.*), however, it is remarked that this Sunday was called the Day of Pentecost, "a name it still retains, though its more common appellation is *Whit-Sunday*—*Dominica in Albis*—one of the ancient names, also, of Low-Sunday, as explained p. 316."

From the remarks which the same writer makes a little farther on, it is evident that the similarity in the names of *White*- and *Whit*-sunday has been the source of great confusion. I wish here to point out that I have just come across an interesting proof of the fact that the name *White Sunday* for *Low Sunday* must have once been a popular name, at any rate in Devonshire. A week ago, while walking from Chudleigh to Newton Abbot, I came across a number of full-blown flowers of the stitchwort (*Stellaria holostea*), and enquired of my

companion, a native of the place, if he knew any local name for them. He at once replied, "I have always heard them called *White Sundays*, or *Whit Sundays*." It was remarked that they came so long before *Whit Sunday* that they could hardly be named from that day, as the anachronism even in a season when flowers are very late in blossoming would be very considerable. Besides, the delicate white flowers, so like a pure chrisom, would admirably suit the explanation of the name of *White Sunday* as given by the author of the sermon already quoted. Yet in the alternative name of *Whit Sunday*, given by my friend as the name of the flower, we at once see where the difficulty of keeping the names of the two days distinct would creep in. This fact, however, seems to me to be certain, that the name of the flower points to *Low Sunday*, or *White Sunday*, and the white robes then put off by the neophytes; which naturally leads to one other conclusion—viz., that the name must at one time have been popular in these parts, in order that it might be impressed so indelibly upon a common wild flower. In my forthcoming work on *Flower Lore*, recently announced by Messrs. W. Swan Sonnenschein and Co., I have collected a number of other facts of a similar nature, showing how such a study as that of plant-names may often teach us important historical facts. Perhaps other of your correspondents will be able to give the subject further illustration.

HILDERIC FRIEND.

#### SPANISH "-EZ."

6 Norfolk Terrace, Baywater, W.: April 10, 1882.

Notwithstanding the reasons I have given in favour of Larramendi's excellent arguments supporting the Basque origin of Spanish *-ez*, Dr. Burnell persists in asserting (see *ACADEMY* of April 1, 1882) that I have stated no reasons, but have been simply satisfied with pronouncing (*as if they were a talisman*) the unproved statements and views of the learned Jesuit, who was a theologian. A theologian indeed he was, and an excellent scholar too; but this does not prevent him in the least from being at the same time the first Basque lexicographer and connoisseur or master of his native language. I can only, then, again invite Dr. Burnell to give his reasons against Larramendi's and mine, instead of introducing into the discussion on the origin of Spanish *-ez* other elements with which this origin has nothing whatever to do.

That Dr. Burnell infers, exclusively from Larramendi's views on the Basque origin of Spanish *-ez*, that anyone partaking these views must necessarily believe that all that Germany has done for science is reduced to nothing appears so evident to anyone who reads what Dr. Burnell has said on this question, the only one of which we are treating, that I can hardly believe in the possibility of finding any other but himself capable of seeing in my reply a forced construction. And, when he says that my estimate of Larramendi's Dictionary sweeps away everything done in respect of the Basque language in later times by German and other scholars, he only shows that, in his opinion, all that can be done in respect of a language is to be found in its Dictionary. I leave entirely to him the responsibility of this opinion.

That I do not quote from memory, contrary to what Dr. Burnell gratuitously supposes, is shown by my having scrupulously followed the old Spanish orthography of Larramendi's time; and, if I did not quote his passage relating to the Spanish origin of the preposition *de*, often used by Basques in their proper family names, this was because I considered it my duty not to speak of a subject having nothing to do with the Basque origin of Spanish *-ez*.

This silence of mine, however, will not be considered, I hope, by sober-minded philologists as a want of correctness in my quotation. But, as it seems that Dr. Burnell wishes to involve two different subjects in a discussion which at first related only to one, I shall avail myself of this occasion for saying to him that the Basques have always used, as they do now, *-ez*, with all their nouns indistinctly, but borrowed, in modern times, from the Spaniards a custom which was not their own; while the Spaniards, from the oldest times, when the Basque language was much more widely spread over the Peninsula, have kept the suffix *-ez* in patronymic names. This interchange between the two languages cannot surprise those who, far from being fantastic or crazy, know how to compare them critically. In fact, there are Spanish or other neo-Latin words which have replaced the original Basque, while the latter have ceased to be Basque and become Spanish. I shall only quote *zanahoria* or *azanoria*, the only words in this last-named language for "carrot," which are nothing else than Basque *zananoria*, meaning also "carrot," and explained very naturally by *zai*, "root," *hori* or *ori*, "yellow," and *a*, "the," or "the yellow root;" while the Spanish word *pastinaca*, "a kind of carrot," and the Provençal *pastenarga*, "carrot," correspond to the Labourdin *pastanagre*, the usual name for the same root in this Basque dialect.

I shall conclude these remarks with a final and last observation, at least as far as I am concerned. It is once more to invite Dr. Burnell to become acquainted with Prof. d'Ovidio's criticism, as I suppose he does not expect his avowed ignorance of it is to be accepted as evidence in favour of the merits of Dr. von Reinhardt's Portuguese Grammar.

L.-L. BONAPARTE.

#### THE SATOR-AREPO CHARM.

St-Jean-de-Luz: March 28, 1882.

Dr. Reinhold Köhler, of Weimar, has kindly sent me an extract from the *Verhandlungen* of the Berliner anthropologischen Gesellschaft, containing a communication by him, on October 15, 1881, on the "Sator-Arepe-Formel," in which he traces its existence from Roman times, in various European countries, and also in Brazil, used as a curative charm in fever for men and cattle. The paper concludes with these words: "meines Erachtens bis jetzt weiter nichts feststehet, als dass Sator, Tenet, Opera und Rotas bekannte lateinische Wörter sind, Arepe dagegen nicht lateinisch und überhaupt noch nicht befriedigend gedeutet ist."

Yet it seems to me that an explanation is sufficiently simple. The charm is written as follows:—

S A T O R  
A R E P O  
T E N E T  
O P E R A  
R O T A S

Now, many of the magic charms are simply prayers read backwards. The underlying idea seems to have been this. If the prayer or formula, when read the usual way, pleased or propitiated the good powers, the contrary way of using it must please or propitiate the evil powers. The mediaeval witches used the Lord's Prayer thus; also some of the Doxologies and formulae of the Trinity, sometimes Arian or heretical ones. I cannot now give references, as I am away from all books except my own.

The key to the above formula lies in observing that *Tenet* reads the same from right to left as from left to right; therefore, in printing or writing, it was not necessary to repeat it; the other lines read alternately left to right, right to left, horizontally or perpendicularly. *Arepe* = *Opera*, *Rotas* = *Sator*,

I should suppose that originally the formula was used thus:—

S A T O R  
O P E R A  
T E N E T  
T E N E T  
A R E P O  
R O T A S

to propitiate both good and evil powers, and bind them both to aid in the cure. Then it would soon be seen that Tenet is the same each way, and was not repeated; and, lastly, some clever magician discovered the quadruple acrostic as above, made by interchanging the second and fourth lines, and preserving the sense by reading from left to right and right to left alternately, either perpendicularly or horizontally.

If I may conjecture, I should imagine that the original was the burden of some ritual harvest-song of pagan Rome; which was afterwards adopted by Christians as a magic formula with regard to men as well as to cattle. The ritual and formulae of any past religion easily become the magic rites and incantations of its successor. An aged Roman Catholic priest told me that he himself in Devonshire, and his fellow-priests in Yorkshire, were frequently applied to for "magic water" to cure diseases of cattle, the applicants being Protestants, and meaning "the holy water." Through an equivocal use of "she" applied to a dying cow, a Yorkshire priest quitted in haste a dinner-table, rode ten miles over a moor on a winter's evening, to find himself ushered into a cowshed where lay the patient for whom his magic services had been sought by a Protestant farmer.

WENTWORTH WEBSTER.

#### "BEWRAY."

Oxford: April 2, 1882.

What is the parentage of this word, familiar to most of us, I suppose, as occurring in Matt. xxvi. 73 (A.V.), "thy speech bewrayeth thee;" in the Vulg., "loquela tua manifestum te facit;" in the Gr., ἡ λαλία σου δηλὸν σε ποιεῖ?

The common account of "bewray" is that it means "to disclose," but that its proper primary meaning is "to accuse," the verb being derived from the A.-S. *wrēgan*, to accuse, with prefix *be-*. So the Dictionaries of Richardson, Wedgwood, Webster-Mahm, Skeat, and the editors B. Morris (Chaucer), Lumby (More's *Utopia*). As far as the form goes, this derivation appears to be unimpeachable. It is difficult, however, to be quite satisfied with it as an etymology, if we attach due importance to the difference of meaning of *bewray* and A.-S. *wrēgan*. *Wrēgan*, as well as its congeners, Gothic, Icelandic, German (see Skeat's Dict., s.v.), means "to accuse, slander, defame, betray, censure;" whereas *bewray* means simply "to disclose, discover." This is the invariable use of "bewray" in Shakspeare (see Schmidt). In Palsgrave we see the ordinary English use of the word:—"I bewray ones counsaile or his secretes. Je retrais. . . . I bewray, I utter or shewe ones counsaile. Je descouuere, je detecte, je diuulgue, je retrays."

So *wrēgan* and its cognates seem to be always used in a bad sense, denoting slander and accusation, whereas "bewray" is morally colourless, and simply means "to uncover, to reveal."

May not the words *bewray* and *wrēgan* be distinct in origin? An English scholar, in a talk with me lately, suggested that we have in *bewray* a derivative of A.-S. *wreōn* (*wriōn*, *wrihan*), *tegere*, *celare*, *velare*, with *be-* privative (as in *behead*), the modern form being influenced by *wrēgan*. It may perhaps be somewhat against this view that *biwrithen* occurs in M.E. (see Stratmann) with the meaning "to cover," not "to uncover;" cf. also Grein (s.v.). But there are cases of the same prefix being used

before the same verb in more than one sense; compare A.-S. *be-bāgan*, (1) *declinare*, (2) *circumire* (Grein), where the prefix *be-* is (1) privative, (2) = *circum*. A. L. MAYHEW.

#### "SIB-BRED."

Tonbridge: March 30, 1882.

The appended advertisement was cut from the *Live Stock Journal* of the very day on which the first notice of Mr. Laurenson's comparison of certain Shetlandic words with the Moeso-Gothic of Ulphilas appeared in the ACADEMY. As the language of the advertisement will possibly be more obscure to some of your readers than that of Ulphilas, it may be well to explain that it relates to certain varieties of canaries which are bred by enthusiasts for exhibition at bird-shows. The term *sib-bred* means that the bird to which it is applied is the result of pairing together for many generations birds closely related to each other. The word probably comes from Durham or North Yorkshire, as the special qualities of the birds so described are believed to have been discovered by breeders in those districts.

W. O. HUGHES-HUGHES.

"I have six splendid evenly marked Mulling Hens, *sib-bred*, 20s. each; also a nice lot Clear Yellow and Buff, *sib-bred*, 8s. each; and some of the best Goldfinches that can be got for mulling, including one Cheverial; some grand Crested and Crested-bred cocks and hens; also a surplus lot for aviaries or cage-birds, or fosters, suitable for dealers; £6 for 20 pairs, or 8s. the single pair."

#### APPOINTMENTS FOR NEXT WEEK.

TUESDAY, April 11, 8 p.m. Civil Engineers.  
WEDNESDAY, April 12, 8 p.m. Royal Microscopical.  
THURSDAY, April 13, 8 p.m. Telegraph Engineers.  
FRIDAY, April 14, 8 p.m. New Shakspeare: "Shakspeare's Characters contrasted with those of Scott and George Eliot."

#### SCIENCE.

ELLIS'S EDITION OF THE "IBIS."

*P. Ovidii Nasonis Ibis ex nouis codicibus edidit scholia uetera commentarium cum prolegomenis appendice indice addidit R. Ellis.* (Oxford: Clarendon Press.)

THOSE who, like myself, have long had the *Ibis* among their *legenda* will welcome Mr. Ellis's edition. Perhaps the *plenus lector*, with the usual ingratitude of repletion, may wish sometimes that Mr. Ellis had sown with "the hand rather than with the whole sack." But the most niggardly in commendation will not deny the importance of Mr. Ellis's contribution, and the probability of his remaining for a long time to come the editor of the *Ibis*. The quality of Mr. Ellis's work is now well known to scholars—his minute and many-sided learning, his frequent felicity in emendation, his almost miraculous industry. They are also acquainted with the occasional fits of weakness which make him, especially in a conflict of evidence, an unsafe or uncertain guide. Instead of collecting all his strength into a well-directed blow, and driving the nail home into the wood, Mr. Ellis is apt to apply to it a gentle and equable pressure from all points of the compass. He treats alternative explanations and emendations altogether too tenderly, forgetting that they are by nature cannibals, and that, like their originators—alas! too often—they live by preying upon their kind. Like good Father Aeneas in Virgil, though he cannot make all the

candidates victorious, he would gladly find a place and a prize for each. This habit makes less difference in the *Ibis*, as its student may be supposed capable of estimating the materials before him, and will not be sorry to see a commentary upon it turned into a repertory of various learning. Still, even here some judicious pruning would strengthen the book and give relief to the reader.

The editor's work has been conscientiously done from beginning to end. He has collated several new and not unimportant MSS., such as G in Trinity College Library, Cambridge; P at Cheltenham, and T at Tours; and he has also used the Gallic and British *Deflorationes*, and Conrad de Mure's *Reperitorium Vocabulorum Exquisitorum*, 1273. He has given us the Scholia in *extenso*, with a full critical apparatus. In the *Prolegomena* he treats very amply of these and other preliminary questions, among which is the cause of Ovid's banishment, which he attributes to an adventure in the temple of Isis, and in favour of which he spins an ingenious web of argument—alight, it is true, but all tending to one point. The text is commented on in eighty-four pages of notes and an excursus of eighteen more; and a full *index verborum* completes the book. The critics who do not admire the *Ibis*—and, in spite of earlier anticipations, I am afraid that I am one—must marvel when they see its 320 inconsiderable couplets thus enshrined, and perhaps may be tempted to think of Pope's straws in amber—"The things we know are neither rich nor rare, But wonder how," &c. In spite of some tolerably vigorous rhetoric at the beginning, the *Ibis* is dull; and Niebuhr only told half the truth when he said, "There is not much poetry in it, but a good deal of wit." When it is amusing, it is only by its false sentiment and exaggerated language, as in the line about Empedocles,—aut ut Trinacrius salias super ora Gigantis, which reminds us of "The cow jumped over the moon."

Its obscure and recondite imprecations do not seem to me to be the natural expression of the resentment of one who had been so deeply injured as Ovid. The writer himself is conscious that he is not writing in the usual Ovidian style, verses 57–60. Though it contains a good many of Ovid's phrases, its style and rhythm both lack the unmistakably Ovidian ring; and it is at least remarkable that there is no ancient reference to it earlier than Eutyches, who lived after Priscian. If not spurious, at least it is interpolated, and cannot have come from Ovid as it stands. First, there are numerous repetitions in it (Ellis, p. xlviii.), which have already been a stumbling-block to scholars. Besides these, there are some suspicious couplets. Thus, 557, 558—utque *duobus* idem *dictis modo* (the two first Glauci mentioned) nomen habenti *præfocent animæ* Gnosia (so we should read) mella uiam—can hardly be from Ovid. On 576 Mr. Ellis says himself: "*Argolicis* pro *Argiuis* quod uereor ut Latinum sit." So *Puniceus* for *Poenus*, 282. In 508 the editors have tampered with the MS. reading *frigia* (Phrygia), which is necessary to agree with *pinus*, the possibility of the false quantity having never crossed their minds. The most remarkable case is 465, 466, where

the death of a Gothic king, Theodatus, mentioned in Procopius (Ellis, p. 53), must be referred to. And Alcibiades' explanation of 517 as referring to the Sophist Peregrinus Proteus, satirised in Lucian, who burnt himself to death in A.D. 167, is, I believe, after all, correct (Ellis Exc., p. 183). Other passages, such as 131-34, 431-32, 623-26, are also open to suspicion. Still, whether it is by Ovid or not, the *Ibis* was, without doubt, composed in classical times, and by someone who possessed a very unusual knowledge of history and mythology; and, though scholars may not be attracted by its style, they will never be able to dispense with its learning.

To return to Mr. Ellis. His treatment of the materials furnished by the MSS. can only be properly estimated by referring to his book. While disposed to follow him in the main, I think that he sometimes gives too much weight to Conrad de Mure and too little to codex P. Thus, in 515, 516, *Astacidaeque modo, defixa cadauera trunco digna feris hominum sit caput esca tuum*, he reads *sunto* (Conr. *stuto*). But the obvious correction is *trunci*. Compare for the acc. Sil. 9. 400, *truncam Jovina frontem*, and 569 *elusus guttur*. In 48, *uelitis* (P. Merkel) is clearly right, *militis* being a gloss. Among Mr. Ellis's restorations I must specially mention the neat emendation of 413, *quem mentis iustissima deuouet ira for meritis iustis mea etc.*, and *Dexiones*, 470, from G. I should prefer *Athenim*, 523, to his *Athenas*; and in 145 *nolim* (Merkel) is absolutely necessary, as the event is still possible. Mr. Ellis's examples for the imperfect prove nothing. As for the Commentary, it always gives us enough light, but sometimes too many cross-lights. Thus, on 291, "utque parum mitis sed non impune Prometheus," undoubtedly the correct reading, Mr. Ellis should have suppressed everything except the reference to Aeschylus. It is clearly to be explained by Prometheus's *αἰθαδία* (τέγγει γὰρ οὐδὲν οὐδὲ μαλθάρσει κέαρ λιταῖς, Prom. 1008), and the punishment which it brings down on him from Zeus.

I must now part from Mr. Ellis and his *Ibis*, which, I trust, will gain from scholars the recognition which it deserves. Perhaps he will turn his attention to the *Metamorphoses*. There is no English edition; and he would find the work congenial. If he does, I hope that he will induce his publishers to put it into a less exasperating binding. J. P. POSTGATE.

#### SOME BOOKS ON PHILOSOPHY.

*Der Optimismus als Weltanschauung und seine religiös ethische Bedeutung für die Gegenwart.* Von Julius Duboc, Dr. Phil. (Williams and Norgate.) According to the author of the above work, the religious consciousness takes two directions, the one (practical) developing into a creed calculated to relieve the burden of life, and console human sorrow; the other (aesthetic) weaving an inner world of beauty, unrelated to sordid cares and needs. The anthropomorphic theology which is the fruit of the former tendency, it is alleged, is condemned by the unbiassed reason, but the brilliant colouring of reality due to the latter impulse may remain as the mind's permanent possession, even when the heaven of early belief has vanished into fable. To make good the assertion that the

glory has not vanished from the earth, notwithstanding the prevailing materialism, is, in brief, the object of the present work. Dr. Duboc, in fact, is not afraid to avow himself at once *atheist* and *mystical idealist*. While declining to leave the solid ground of experience, he is equally loth to starve the emotions of wonder and awe. The most comprehending grasp of science, he holds, leaves still a mystery unseized, and imagination will always demand untrammelled exercise, however strict the canons of positive truth. The first chapter is styled "The Shattering of the World Beyond," and is occupied with showing how the thoughts and interests of men in the present day are becoming ever more concentrated on life this side the grave, to the explicit or tacit ignoring of an ultra-mundane sphere. As a last expiring effort to retain faith in other-worldliness, Dr. Duboc cites the Spiritistic movement. While disapproving of the rough-and-ready logic of many impugnors of the Spiritist position (the attempt, for instance, to dispose of alleged facts by *a priori* argument), the author shows clearly the thinly veiled motive to the passionate embrace of this comforting creed by the unheeding supernaturalist. In the second section, "The Optimistic Interpretation of Existence," the Pessimistic creed, chiefly in the form presented by Dr. Eduard von Hartmann, is vigorously assailed, and the endeavour after happiness is characterised not only as a primordial impulse, but also as the sole sufficient foundation for social morals. Then follow some excellent reflections on life and death, under the heading "The Surrender of the Individual in the World Process;" and a brief examination of "Conscience," with special reference to a thoroughgoing Optimism, closes the book. The author accordingly leaves untouched no problem of first-rate importance. His work will well repay perusal, being suggestive where not profound. His faith in human progress is so considerable as to lead him to deprecate all attempts to draw the portraits of our remote descendants. That the future will resemble the past is an unreliable axiom in the logic of historical inference.

*Einfluss der englischen Philosophen seit Bacon auf die deutsche Philosophie des 18. Jahrhunderts.* Von der Königlich Preussischen Akademie der Wissenschaften mit einem Preise ausgezeichnete Untersuchung, von G. Zart, Dr. Phil. (Berlin: Ferd. Dümmler.) Dr. Zart shows himself, in this erudite volume, a highly appreciative student of our seventeenth- and eighteenth-century philosophers. At a time when some restless spirits at home are turning away with scorn from the unpretentious productions of their native country, and vaunting the vast superiority of certain alien growths, it is consolatory to find a member of the philosophic nation *par excellence* writing as follows:—

"No foreign mode of thought has exercised so lasting, so stimulating, and varied an influence on the intellect of our nation as the English, and no other has so considerably furthered and enriched it both formally and materially. Add to this, that the English philosophy is more vast and impressive than that of modern Continental nations, because it has developed almost continuously, organically, and consequentially. There were undoubtedly experimentalists previously, but nowhere a theoretical system based on experience, and there never has been produced anywhere else an ethic or aesthetic on an empirical foundation."

Of all our writers Locke is especially instanced as the one who has done most to mould the reflective minds of Germany. "Altogether," says Dr. Zart,

"the influence of Locke in England, Germany, France, and America has been so vast that it can only be compared with that of Aristotle in the Middle Ages, or that of Kant on the German philosophy of the nineteenth century."

The writer reviews the speculative achievements of thinkers, both great and small, from Leibnitz to Kant, pointing out in each case the peculiar influence exercised by earlier or contemporary English thinkers. It will doubtless surprise most readers to find a considerable influence attributed to one writer who is probably merely a name to all but a few students of the present day—viz., Home.

*Kantian Ethics and the Ethics of Evolution: a Critical Study.* By J. Gould Schurman. (Williams and Norgate.) This is an able dissertation, printed by the Hibbert Trustees, being the fruit of the studies of one of its travelling scholars. Kant's *Practical Philosophy* and Mr. Spencer's *Data of Ethics* are examined in turn with considerable critical acuteness, and both are found incompetent to afford a scientific morality. Kant is pronounced right in his conception of the moral problem, but one-sided in his view of the moral nature of man in exalting the reason to a height which permitted no contact with the common human impulses; while Herbert Spencer is put out of court for misapprehending the cause to be tried; the modern evolutionists having superseded the formalism of Kant by a material treatment, which yields, perhaps, an applied sociology, but no genuine ethic. The present notice, whose end is served by calling the reader's attention to a carefully written book, allows no room for detailed criticism of this indictment of two powerful thinkers. We find ourselves more at one with the author in his criticism of Kant than in his estimate of the evolution philosophy, dissenting, however, from him in his difference with Kant on the subject of volitional freedom. The failure of so profound a thinker to make good his position on this subject was, we venture to think, no failure of logical procedure, but a failure due to the nature of the principle to be established. Kant saw clearly enough, what we are not sure Dr. Schurman does, where the stress of the problem lay; and the position of the latter (if we interpret it rightly), we submit, has been in advance adjudicated upon in Schopenhauer's inimitable *Preisschrift über die Freiheit des Willens*. Alluding to the *Data of Ethics*, our author says:—"Denial of freedom and of personal identity, and the extension of causality to mind—which is only the other side of that denial—lead inevitably to the annihilation of all morality." Dogmatism may be met with dogmatism, and Dr. Schurman must not be surprised if the evolutionist pronounces a like *ex cathedra* dictum, with a trifling qualification, "all [pseudo] morality." A morality which must wait upon the acceptance of a disputed metaphysic is not the "morality" which the modern man at least has in view when he is taking counsel with himself in respect of his obligations. Dr. Schurman demands, as a condition precedent to theory, "that the facts of morality shall be studied as Darwin studied the facts of life." Yes, truly; but let us have no mistake about the "facts." Many so-called facts turn out to be concretions of fiction, and, among the fallacies of simple inspection, the illusions of self-consciousness find a conspicuous place.

*Definitions and Axioms of a Future Science of Existence or Ontology: a Study.* By Karl Friedrich Fröbel. (Williams and Norgate.) Although containing some useful hints for self-culture, this must be pronounced a very unreadable book. It is strange, indeed, that a writer who possesses not a little insight into the true method of education should have sent into the world such a mechanical mixture of thoughts and theories as is contained in his so-called "Study." Elementary mathematics, dubious metaphysics, and theology are jumbled together in an altogether perplexing fashion.

The main purport of the book, we gather from the polemical tone which ever and anon jars upon the reader, is to justify a belief in certain categories of thought usually ignored by the Positivist or Agnostic evolutionist. "The most striking error of the greatest consequence for the destiny of mankind," we are told, "is the confounding of 'reality' and 'existence' and 'being' or 'to be';" and this error is supposed to lie at the root of all the intellectual aberrations of the present day. Should the import of this declaration not be at once grasped, light may be thrown on the subject by the following explanatory remarks:—

"Now, 'existence' is the chosen sign for one of three intimately related notions, the plainest of which is 'form,' the next is 'motion,' and the third, including both, is 'existence.' What has form need not move, what has motion need not exist; but what exists must be moveable, and what is moveable must have form or position, the element of form."

Reality, then, we conclude, is what has motion, but yet is non-existent. The would-be reader may easily surmise that his path will be a thorny one.

*The Critical Philosophy of Kant*: being an Introduction to the Study of the "Critique of Pure Reason." By Archibald Weir. (W. Swan Sonnenschein and Co.) This will be found a useful little guide for anyone making a first acquaintance with the critical philosophy. We are, indeed, surprised that so much has been accomplished in so small a compass. Mr. Weir has evidently been no merely passive student of the *Critique*, and is capable of forming an independent opinion with regard to the corrections or expositions of the commentators. Lucid, however, as his account is, we should not advise a novice to attempt its perusal apart from the work of Kant himself. We doubt if any second-hand statement of the speculative philosophy of the great Königsberg thinker will ever be intelligible by itself. Perhaps, however, the "Prolegomena to every future metaphysic" will be found more serviceable to a beginner than the *Critique* itself.

*Materialism, Ancient and Modern*. By a Late Fellow of Trinity College, Cambridge. (Macmillan.) To discuss ancient and modern materialism in the space of forty-three short pages is an attempt that cannot lead to much that is satisfactory; and in the little book lying before us there is little that is either novel or valuable. We are desirous of paying all respect to a quondam Fellow of Trinity College, Cambridge, but we cannot frame any hypothesis compatible with such a sentiment adequate to accounting for the publication of a string of rather commonplace arguments. Perhaps, however, the essay owes its publication to the indiscriminating admiration of a deceased friend. We prefer to believe not, for by no stretch of language can it be termed a contribution to philosophical literature.

W. C. COUPLAND.

#### NOTES OF TRAVEL.

SINCE Mr. Carl Bock suddenly left for Siam some time ago, nothing, so far as we know, has been heard of his movements, but we now learn that he has left Bangkok for the Chinese frontier for purposes of scientific investigation, and that he is believed to be in the employ of the Siamese Government.

BARON DANCKELMANN, a German meteorologist of repute, has been sent out by the International African Association to join Mr. H. M. Stanley on the Congo. He has taken a very complete outfit of meteorological instruments; and we may hope, therefore, to have before long climatological data of the highest

value. This department of science has unfortunately hitherto been far too much neglected both on the Congo and in other parts of Africa, and to this undoubtedly is largely due the loss of so many valuable lives.

LIEUT. GAUTHIER left Saigon early in the year on an expedition into the interior of Indo-China, which seems likely soon to be much better known, thanks to the various expeditions engaged in exploring its different parts. Lieut. Gauthier's intention is to travel northwards to the latitude of Hué, thus traversing to a great extent an unknown country. He will then make for the coast and return to Saigon by sea, as French expeditions very often do.

THE Baptist Missionary Society announce the publication of a large map of the central zone of Africa, showing not only their own stations at Cameroons, but those of all societies in connection with the Congo. The routes of Livingstone, Stanley, Thomson, Cameron, de Brazza, and Serpa Pinto are also laid down. The same society have received a second donation of £1,000 from Mr. Arthington, of Leeds, to cover the cost of their Congo steamer.

In its issue of last week a contemporary makes the statement that "M. de Brazza had not been heard of for nearly a year, and it was feared that some fatal disaster had happened to him in the interior." So far is this from being true, that a letter from him, written from the Upper Ogowé station on November 8, 1881, reached Paris on March 10, and was communicated to the French Geographical Society at their last meeting. M. de Brazza had then recently returned from a journey of exploration on the banks of the Congo, and re-affirms his first belief that the country from the Upper Ogowé to the Alima affluent of the Congo was quite practicable for beasts of burden and even for a light railway. He further announces his intention of shortly returning to France.

THE April number of the *Monthly Record of Geography* contains three papers of more or less interest, the first being Mr. O'Neill's account of his journey in the Makua and Lomwe countries behind Mozambique. The second deals with the new Russo-Persian frontier, and is illustrated by a neat page map, reduced from the Russian original, as given by the Intelligence Department of the War Office, attention being duly called to the absurdities in it, to which we alluded last week; while the third paper is a translation from the Russian of an account of Lieut. Kalitin's journey across the desert between Geok-tepe and the Khivan oasis. In the Geographical Notes some information is given, on the authority of Mr. J. T. Last, about the Masai people and their country. M. de Brazza's treaty of annexation made with the chiefs at Stanley Pool in the latter part of 1880 is printed at length, and accounts for all the trouble lately experienced there by Mr. Stanley and various missionaries. Some particularly interesting details are afterwards furnished on the best possible authority regarding the meteorological expeditions which the Danes and the Dutch are about to send to Godshaab, West Greenland, and the mouth of the Yenisei respectively. Mr. A. B. Colquhoun's gallant attempt to penetrate through South China and the unknown parts of Indo-China to Rangoon is again referred to, with fuller details of his route. Lastly, we have a *résumé* of Lieut. Hammer's explorations in West Greenland.

#### SCIENCE NOTES.

*The Permians and the Trias*.—The Rev. A. Irving, of Marlborough College, has contributed to the April number of the *Geological Magazine* the first part of a paper in which he discusses "The Classification of the European Rocks

known as Permian and Trias." It has been suggested that geologists should revert to the old method of classification, and group the Permian and Trias together under Conybeare's name of the *Poikilitic* system. But against this course there are palaeontological objections of much strength. Whatever be the case in Britain, it is certain that in Germany there is a well-marked *Dyas*, or double rock group, below the true *Trias*. Mr. Irving, therefore, does not propose that the two formations should be blended, but he argues against Murchison's tripartite division of the British Permians. Thus he objects to the St. Bee's sandstone being regarded as Upper Permian, and, in fact, stoutly rejects the notion of a *palaeozoic Trias*.

ON April 4, M. Paul Bert was elected a member of the Académie des Sciences.

THE Third Series of *Alpine Plants Painted from Nature* by Mr. J. Seboth, with text by Mr. A. W. Bennett (Sonnenschein), has just been issued. This volume contains the same number (100) of coloured plates as its two predecessors.

DR. CLEMENT, author of *Symbolic Chemistry*, has published a very useful little geological guide for the use of students, entitled *Tabular View of the Geological Systems*, with their Lithological Composition and Palaeontological Remains.

#### MEETINGS OF SOCIETIES.

CAMBRIDGE ANTIQUARIAN SOCIETY.—(Monday, March 20.)

THE REV. R. BURN in the Chair.—Mr. J. Willis Clark delivered a lecture on "The Description and History of the Site of Trinity College," illustrated by diagrams made by the late Prof. Willis. At the outset, Mr. Clark pointed out that the last in the series of Prof. Willis's diagrams represented the buildings of Trinity College as at present arranged, with the date of the commencement of each portion so far as it could be ascertained. The second diagram represented the earliest condition of the sites of the buildings and the date of their acquisition. The third represented the arrangement of the site before Trinity College was founded. On the north was King's Hall, and immediately south of this was Michael House. The whole site was bounded on the east by what used to be called High Street, but is now Trinity Street. On the north was St. John's College, which always occupied precisely the same amount of site with the exception of one little piece. The south boundary of the college was originally called Michael Lane, but is now known as Trinity Lane. Trinity Hall abutted upon what was originally known as Milne Street, a street which extended right across the site of King's College into Silver Street. A fragment of Milne Street still remained in Queens' Street, and a theory had been started that it once ran right across to Bridge Street, but this was mere conjecture. On the west the site was bounded, not by the river, but by a ditch which, with the river, enclosed what was then known as Garyte Hostel Green, now forming part of the college walks. The site was divided longitudinally by a lane running from near the present great gates in the direction of the river. This lane was known as King's Tudor Lane, and was crossed at right angles by Foul Lane, which ran into Trinity Lane, or St. Michael's Lane as it was then called, at a point where the present Queens' gate is situated. They knew that exactly, from a description given by Dr. Caius, who says it ran from that point up to the gate of King's Hall—that was, the Tower of King Edward III., which had now been removed. The authorities for the arrangement of the other portions of the site were old leases and covenants relating to them, and an exceedingly valuable map said to have been drawn by John Hammond, and which was the authority for a good many other maps. Michael House was situated on the west side of Foul Lane. This house was founded by Harvey de Stanton in 1324, and his first care was to buy a house large enough to contain the scholars of his college. He purchased from Richard de Boncourt a piece of ground, which was

described as bounded by the highway on the north, Milne Street on the south, Foul Lane on the east, and by a running water on the west. This latter evidently meant the ditch previously referred to, and not the river. The next acquisition was a piece of land immediately to the north, but this was not secured for some time. These two pieces were sufficient for the accommodation of the pupils for some ten years. In subsequent times there was built on the north side of Michael House a hostel called Gregory's Hostel. It was also called New-market Hostel, but they knew nothing more concerning it than that. These hostels belonged to some particular college, and were managed by some man who paid rent to the college. They were absorbed as the colleges became larger, and so were taken into the colleges or else pulled down; Michael House contained twelve chambers, eight on the north side and four on the south. It had a tower-gate near the point of intersection of Milne Street and St. Michael's Lane, and it also had a hall on the west side. On the side next to Foul Lane the late Prof. Willis was of opinion that there was merely a wall. The executors of the founder subsequently acquired two pieces of ground immediately to the south of Michael House, and known as Ovens Inn and Garyte Hostel; and he might mention that, in the opinion of Prof. Willis, Garyte signified a high tower, and was the origin of our present word "garret." The history of both these places was exceedingly obscure; but there was evidence that there had once been a lane to the north of Garyte Hostel and another bounding it on the south. Immediately to the west of Michael House was a large piece of ground, which was afterwards added to the college property, and now formed the college walks. The way in which it was acquired seemed to be as follows:—As soon as Trinity College was founded, the authorities saw the importance of obtaining the ground to the west of them. They seemed to have been pretty certain of securing it, because they had almost from the first treated it as if it were their own. They would probably have got it at once had it not been for the opposition of St. John's College, the authorities of which laid some claim to the ground under their statutes. But after what almost came to a downright quarrel between the two colleges, the Archbishop of Canterbury decided against the claim of the authorities of St. John's, who then yielded possession for a time. But not before they tried to make conditions. They first wanted a money consideration; they then tried to make conditions with the town that they should have an exchange of land; and they also wanted to make it a condition that they should have the use of the Trinity conduit. They eventually succeeded in obtaining their bowling-green from the town, and that silenced them. Trinity College obtained its walks, and gave the town in exchange what it had no right to give—viz., the piece of ground now known as Parker's Piece. To the east of Michael House there was a tract of land, bounded on the west by Foul Lane, on the east by High Street, on the south by St. Michael's Lane, and on the north by King's Tudor Lane, and this land was occupied by several hostels—namely, Phiswick's Hostel, St. Margaret's Hostel, St. Catherine's Hostel, and Tyler's Hostel. To the north of that portion of the site already dealt with was King's Hall, and the facts concerning this portion were comparatively simple. The first part of this property was purchased in 1337 from Robert de Croix, by direct order of Edward III., and the adjoining houses were obtained shortly afterwards. All these various pieces were gradually acquired, and the great gate was begun in 1519 and completed in 1535. Michael House and King's Hall and various hostels were forced to surrender to the general body, and Phiswick Hostel was taken from Caius. The architect employed upon the new buildings was Ralph Symonds, who had already made himself famous by building the second court of St. John's, and it was pretty certain that he utilised a considerable portion of Michael House. The masonry opposite Trinity Lane was of quite a different character from the other, and there was every reason to believe that this portion was part of old St. Michael House.

## FINE ART.

*L'Asclépieion d'Athènes d'après de récentes découvertes.* Par Paul Girard. (Paris: E. Thorin.)

WHEN Chremylos, in the *Plutus* of Aristophanes, consults with his friend Blepsidemos how best he may restore his eyesight to the blind God of Riches, it is suggested by the latter worthy that he should call in some physician: "Why no," says Chremylos, "for what physician, I should like to know, is there now in the city; for neither is the fee nor the profession good for anything: no—but, by Zeus, 'tis far the best to take and lay him on a couch in the temple of Asklepios." It is on the site of the very temple of Asklepios—the Ἀσκληπιεῖον τὸ ἐν ᾧ ἄσκει, situated on the southern slope of the Athenian Akropolis—that the Archaeological Society of Athens entered upon some important excavations in the early part of 1876. It is true that those excavations have resulted in no discoveries which could be termed sensational in interest; the explorers have not been fated to unearth another statue of Praxiteles, or even a perfect transcript of the Sophoklean hymn to Asklepios. Yet the gold of that land is always good; and these recent finds have rendered a substantial, if unostentatious, contribution to archaeological science. The accounts of the various monuments brought to light have been examined with interest by archaeologists as they have from time to time appeared, principally in the *Bulletin de Correspondance hellénique* and in the *Mittheilungen des deutschen Archäologischen Instituts*. Some of these objects have been published by M. Paul Girard, the writer of the interesting and lucid monograph which lies before us. Although the archaeologist is primarily concerned with the study of minute details, he is glad to be sometimes enabled to view his subject more broadly as a whole, and to have the results of learned research summarised in a clear and readable manner. And the subject of M. Girard's essay—like almost everything, indeed, which relates to the deity Asklepios—is one which should appeal not only to specialists, but to all who take an interest in the history of ancient medicine, and in the conditions of moral and religious life among the Greeks. "I have endeavoured," says M. Girard, "to make known the organisation and character of the Asclépieion at Athens":—

"Après nous être efforcés d'éclaircir la topographie du sanctuaire, de reconstituer par l'imagination l'ensemble des monuments qui le remplissaient, nous avons énuméré les différents fonctionnaires civils et religieux qui y étaient attachés; nous avons passé en revue les fêtes et les cérémonies diverses que le prêtre y célébrait au nom de l'Etat; nous avons cherché à nous rendre compte de la manière dont les biens sacrés y étaient administrés. Puis, considérant la pieuse multitude qui venait chercher auprès du dieu un remède à ses souffrances, nous nous sommes demandé quels rites spéciaux, distincts des rites publics, étaient accomplis par elle dans le temple; nous avons essayé de pénétrer parmi cette foule, d'en distinguer les éléments; nous avons examiné les vœux adressés par ces suppliants au dieu guérisseur, ainsi que les offrandes consacrées par eux pour se concilier la faveur d'Asclépios ou pour le remercier de ses bienfaits" (p. 124).

As we have already indicated, the writer has arranged his material (nearly all of which is provided him by the recent explorations) in a skilful and orderly way; and such students as have had occasion to make a special study of this very class of monuments will, I think, agree in pronouncing his work to be thoroughly and accurately done.

With regard to one or two points in this monograph, there will, of course, be grounds for differences of opinion. I cannot, for instance, accept the theory which M. Girard supports—that the Athenian temple of Asklepios contained a plantation, or even a limited number of trees. The evidence in favour of such a view is of the very flimsiest description; while all that we know of other Asklepieia—of Titane, for example, and Epidaurus—would lead us to suppose that any such verdure as the Attic temple may have boasted consisted in a grove within which the sanctuary itself was situated. At the same time, it must be admitted that M. Girard's contention is not like the monstrous assertion of the writer in Daremberg and Saglio, who tells us that the Epidaurian temple of Asklepios contained, among other things, a *theatre*.

In dealing with the series of bas-reliefs representing a banquet scene, our author maintains, as I think, with reason, that those exhumed upon the site of the Asclépieion were not sepulchral, but destined for votive offerings to Asklepios and Hygieia. It is strange that under this head he should have omitted to bring forward a very remarkable piece of numismatic evidence—evidence, moreover, which tells strongly in favour of his own view. I allude to the curious "Medallion" of Bizya (published in the *British Museum Catalogue of Greek Coins*, "Thrace," p. 90, No. 10), which has been almost conclusively shown by von Sallet, and, more recently, by Dr. Weil, to portray an *ex-voto* to the divinities of healing. The explanation offered of that puzzling detail, the horse's head—that it is a symbol of some primitive equine sacrifice to Asklepios—has surely but little evidence to support it; and I much prefer the theory formerly advocated in the *Bulletin* by M. Girard himself, that the horse is present "à titre de suppliant," both man and beast being represented as if approaching to propitiate or to express their gratitude to the God of Medicine and his daughter. Besides an account of the reliefs, there is a good notice of the other offerings dedicated to the Athenian Asklepios. We could almost wish, however, that M. Girard had found room to reprint as an appendix the ancient Inventories of offerings deposited in the sanctuary of the god; in which case, besides, he would have brought prominently before the reader one or two noteworthy entries which I do not find alluded to in his essay—items, for instance, like τέτραρχα ἀντιγονία.

Our space will not allow us to embark upon a discussion of the various interesting questions suggested by the Athenian finds; and I can only remark, in conclusion, with regard to two frequently debated points, that, in the first place, these finds contribute no evidence which goes to prove the existence of that sacerdotal trickery which modern writers, taking the author of the *Plutus* too literally,

have sometimes been inclined to assume. Nor, again, do these discoveries reveal anything which should induce us to insist more strongly than hitherto on the comparison so often drawn between the modern hospital and the ancient Asklepieion. To say nothing of the lack of testimony to show that the patients made anything more than a merely temporary sojourn in the buildings attached to the Asklepieion sanctuary, it would seem that the priests (at least at Athens) were only by exception professional physicians: a certain tincture of medical skill they doubtless acquired (the Athenian temple seems to have specially tended ophthalmic diseases), and a certain number of rational remedies they undoubtedly administered; but, after all, the great fact still remains that in the temple of Asklepios it was *religion* that dominated over medicine; nay, it was in a great measure the religion which was the medicine. To the mind of those simple worshippers, their midnight Vision of Healing was sent by the divinity of healing; the cures which they obtained for themselves and for their children were operated not at the hands of man, but of God—"clamaverunt ad Dominum cum tribularentur; et de necessitatibus eorum liberavit eos." WARWICK WROTE.

## ART BOOKS.

*A Primer of Art.* By John Collier. (Macmillan.) This interesting little book should rather have been called a primer of painting, if indeed it has any right to be called a primer at all. Of the other arts it says little, and what it says is not particularly useful or satisfactory. In the matter of decoration Mr. Collier is a heretic, if not an ignoramus; to him the art of conventional design is evidently contemptible, the formation of patterns nothing but "degradation" of natural forms. It is seldom we have read such a thoroughly bad attempt at elementary education as is found in the following sentence:—

"As we hear a great deal about decorative art nowadays, it may be as well to enquire if there are any great principles of decoration. Is there any rule to which it must conform? There is only one—it must be beautiful, it is subject to no other law. Beauty is that which pleases the eye. If ornament is pleasing it is good, if not it is bad. As to what is pleasing, that each person must decide for himself."

Shades of Owen Jones and Charles Blanc, can a man who writes like this deserve an audience? Not on the subject of decoration, at all events. But Mr. Collier's book nevertheless deserves, and will repay, a good deal of attention. He is a good painter, and has studied as well as drawn. As a guide to overcome the obstacles in the way of a close imitation of nature by means of pigments he is no mean authority, and we cordially endorse all he says as to the importance to artists of mastering thoroughly all technical difficulties at the outset. Unless a man trains himself rigorously to copy truly and easily, his hand will never be the perfect servant of his mind. We think that Mr. Collier exaggerates the closeness with which it is possible to imitate nature; but that is a venial error in a primer whose right object is to inculcate the duty of close imitation; and the section in which he shows (with the help of Prof. Helmholtz) how it is possible to present satisfactorily to the eye both moonlight and sunlight, in spite of the humble scale of light and shade at the painter's

disposal, should destroy the effect of a great deal of nonsense which has been written on the subject. Indeed, throughout the book, wherever Mr. Collier is drawing upon his own experience for the benefit of others, he is clear and sound. The charge of Mr. Collier against artistic literature generally—viz., that nothing is ever stated plainly in it—will never be brought against this "Primer," which is really a collection of very short lectures on painting as a science. Mr. Collier defines art at the commencement of his book as "a creative operation of the intelligence;" but with art in this sense his book has little to do.

*The Portfolio of Indian Art.* Parts I.-XI. *The Portfolio of Spanish Art.* Parts I.-VIII. *The Portfolio of Russian Art.* Part I. *The Portfolio of Persian Art.* Parts I. and II. *The Portfolio of Italian Art.* Part I. (Produced and Published for the Committee of Council on Education by W. Griggs.) No sooner has the unfortunate periodical called the *South Kensington Museum* come to an end, with its feeble representations of ill-chosen specimens of our great national collection of decorative art, than another and more satisfactory attempt of the same kind is started. The present venture, a glorified phoenix of the old, possesses nearly all the qualities which were absent from its predecessor. The use of photography (never better employed than in copying works of art) ensures perfect resemblance in shape and surface; the scale is sufficiently large to do justice to boldness of design and delicacy of ornament; the art of one country is kept distinct from that of another; and, finally, there is colour, full and accurate, a property important enough in bronzes like the beautiful medallion of the fourteenth century figured in the one part at present devoted to Italy, but indispensable in pottery and tissues. What is more, Mr. Griggs appears to have an unusually good eye for colour; the peculiarly vivid "blue and white" and not less remarkable soft plum-coloured lustre of Persian *faience* are rendered by him with the same perfection as the red of Spanish silk and the many colours of Russian enamelling. Mr. Griggs' gallant "venture" would have something of national importance if only regarded as a testimony of British skill in artistic chromo-photo-lithography. Messrs. Sotheman, when preparing the exquisite illustrations to Messrs. Audsley and Bowes' *Keramic Art of Japan*, called in the aid of the famous French house of Firmin-Didot et Cie., and the skill of Messrs. Bauer, Jetot, Chataignon, Langlois, Sigogne, Audet, Durin, Dulong, and Lestel, to produce the coloured pictures with which that famous work is made beautiful; but Mr. Griggs' present publications, as indeed some other recent works, such as Mr. Cutler's *Grammar of Japanese Art* (Batsford), show that there is no occasion to go out of the country for workmen capable of executing fine colour-printing. Such imitations as those of Mr. Griggs are almost as beautiful and as useful for study as the objects themselves; indeed, in the *Portfolio of Indian Art*, at present confined to reproductions of Mr. J. L. Kipling's series of drawings illustrating the native arts of Hindostan, there is little to choose between the copies and the originals. In the *Portfolio of Spanish Art* Mr. Griggs has seized the opportunity of the late remarkable loan collection at South Kensington to retain in England authoritative copies of some of the most elaborate of those gorgeous old church embroideries which may never be seen here again. Luckily, our own possessions in the way of Spanish and Portuguese art are so numerous and valuable that there will be no difficulty in continuing the series if it have the success it deserves. It is to be hoped that there can be no doubt about this success. The intention of the publication may be fairly considered as patriotic, and it is for the interest of manufacturers as well as

artisans, of commerce as well as the pleasure of England, that decorative taste should be stimulated and directed by the study of the best examples of ornamental art of all sorts and of all ages. For the first time, Mr. Griggs has made it possible that such study should be both easy and cheap. One shilling for two large and highly finished plates is a price that cannot "pay" without a very large circulation—a circulation "devoutly to be wished."

THE first part of the fourth volume of the *Jahrbuch der königlich preussischen Kunstsammlungen* (Berlin: Weidmann) contains some important papers on the excavations at Pergamos, by O. Humann, Richard Bohn, and Alexander Conze, accompanied by plans of the Acropolis and the Temple of Athena Polias, and a view of the latter as it must have appeared when perfect. The part also contains articles on Italian wood-engraving in the fifteenth century, by F. Lippmann; on the works of Jacob Cornelis, or Corneliszoon, of Amsterdam, by L. Scheibler; and on the Italian medallists of the fifteenth century, by J. Friedlaender. The last is illustrated with some excellent heliogravures of medals by Antonio Pollaiuolo, Bertoldi, Filippino Lippi, Francesco da Sangallo, and Francia.

*Michel-Ange, Léonardo de Vinci, Raphael.* Par Charles Clément. (Paris: Bibliothèque d'Education et de Récréation.) The brilliant and learned essay of M. Charles Clément has been so long before the world that a few words only are necessary to welcome the present beautiful edition, on which no pains have been spared either by author or publisher. The former has made use of the additional light which recent researches have thrown upon his great subjects; the latter has beautified and illustrated the text with a great variety of well-selected engravings of picture, statue, and sketch. The work of M. Clément has stood the test of time, and, though since its first appearance other studies of the three great artists have appeared more minute in detail, it still remains a masterpiece of its kind.

"The Great Artists," *Meissonier.* By John W. Mollett. (Sampson Low.) Mr. Mollett has treated his subject in an original way, which, we think, is also a very good one in the case of a living artist. Instead of attempting to pass judgment himself, he has collected the different opinions which have been expressed by other critics, and, with extracts from published notices more or less biographical, arranged rather than written a very amusing book. It is, as it were, a succession of pictures of the great little artist, taken at different points of his career by different hands, accompanied by a panorama of his works. Of the latter, the review is very complete, and at the end of the book is a list not only of his paintings, but also of his book-illustrations. Mr. Mollett has spared no pains to make the little volume a perfect handbook for the study of his subject. The illustrations would be excellent if some were a little brighter. We cannot help thinking that it was a mistake to print them in a pale tint; the softness of tone which is got by brown ink on cream-coloured paper is not worth the sacrifice of brilliance and distinctness—nay, of air and light—which it involves.

*Murillo.* By Ellen E. Minor. Except that the authoress uses much the same vocabulary in speaking of Murillo as she might properly apply to Raphael, and does little to help the reader to appreciate the peculiar characteristics of his style and feeling, we have nothing to say against this careful history of his life and work. It is written in a pleasant and simple manner, and will be of much value as a book of reference. The volume concludes with a very full list of the works of the artist in

England and on the Continent, and another of all the pictures attributed to him which have been publicly exhibited in England during recent years.

*A Short History of the British School of Painting.* By George H. Shepherd. (Sampson Low.) This is a very useful little book. The history is, indeed, a short one, but it takes, on the whole, an accurate, if slight, view of the course of English art, and contains a great deal of information about the different painters founded on the best authorities. With regard to living artists, such judgment as is expressed appears to us to be generally sound, if not deep, and the Index at the end makes reference easy. Not one of the least recommendations of the book is that it mentions a great many artists not generally known.

*A Few Words on Art.* (Gladwell Bros.) "A Few Words on Printers and Their Tricks, by One of Them," would have been a better title for this book. It is partly an advertisement, partly what the author calls a *resumo* (sic) of the history of the Printers' Association, and partly a warning to purchasers of prints. From whichever side it may be looked at, it is instructive and amusing, and well worth a shilling to all those who, having neither experience nor prints, would prefer to buy the latter without the former.

#### OBITUARY.

MRS. ADOLPHE SMITH, the daughter of Blanchard Jerrold, and grand-daughter of Douglas Jerrold and Laman Blanchard, who sometimes adopted the *nom de guerre* of "Corisande," died in the prime of life on the 17th of last month, at Hyères, in the South of France. For many years her health had been a subject of great anxiety to all her friends; but extreme delicacy did not prevent her from exerting herself bravely and brightly to the last. Her sketches of society and scenery contributed to the *Graphic*, the *Liverpool Courier*, and other papers were always full of life and light, as sweet and bright and pure as her own self. To those who did not know her this may be ambiguous; but all who witnessed the constant activity of her good-will, her devotion to those she loved, her cheerfulness, unclouded by the known proximity of death, her entire unselfishness, will recognise it as a high, but only just, testimony to her literary gifts. Her last novel, *A Woman of Mind*, showed that she might have made a reputation as a writer of fiction if her life had been prolonged.

#### ARCHAEOLOGICAL NOTES ON THE TERRA D'OTRANTO.

##### III.

##### SITES OF CITIES.

NOT every ancient site in the Terra d'Otranto possesses above ground any considerable vestiges of its prosperity in the period preceding the Roman conquest. Especially where a town or hamlet of some importance has succeeded an ancient one, and has maintained its existence through the Middle Ages down to our own times, the result is perceptible which has followed elsewhere in similar cases—the more modern buildings have swallowed up all the materials of the ancient structures, which have been utilised as quarries.

It is only in a few spots long ago abandoned, and left in desolation for centuries, that the traveller still meets with the walls, not wholly destroyed, of cities belonging to the age when the inhabitants of the country still maintained their independence, while acknowledging the

preponderating influence of the Greek cities of the neighbourhood, particularly of Tarentum, which, after the end of its great wars with the Messapians, appears to have exercised a practical hegemony over all the natives of the district. Such are the walls of Oeglie, near Brindisi, the Caelia of the Messapians, which does not, however, seem to have been the Caelia situated towards the South-east extremity of Italy, of which coins are known to us; of Rugge, in the near neighbourhood of Lecce, the ancient Rudiae; of Muro-Leccese, the ancient name of which is unknown; of Vaste, corresponding to the Basta of the Itineraries; of Baleso, the ancient Baletium or Balesium; and, lastly, of the ancient Veretum, on a deserted height overlooking the villages of Path and Giuliano, at no great distance from the Capo di Leuca.

In all these cases the plan of the ancient Messapian, Iapygian, and Salentine towns is nearly identical. It is possible to trace almost uninterruptedly the sites I have just named, although often the fragments of the walls which still remain are reduced to a few courses, and do not rise to the height of more than a yard or a yard and a-half above the soil. The design is invariably that of a parallelogram, with sides of varying length, perfectly regular, and sometimes enclosing a very considerable area. The construction of these town walls, which belong to nearly the same period, is excellent, and of a purely Hellenic type. They consist of equal courses of great blocks of the stone of the country, the soft white calcareous tufa, called *pietra leccese*, which throughout the province lies close beneath the surface, only covered with a thin layer of soil. The blocks are cut with great precision in large parallelograms perfectly regular in shape, and carefully dressed without mortar, just as in purely Greek constructions. Herein the natives took lessons of their neighbours, so much their superiors in civilisation, or possibly borrowed their engineers.

But by far the most important and most perfect of all the city walls of the district are those of Gnathia, situated on the coast, on a wholly uninhabited site, almost half-way between Fasano and Monopoli, at the place now called Torre d'Anazzo. In their stately solitude these ruins are hardly ever visited, so that my driver, by way of apology for his imperfect knowledge of the road, told me that he had not driven three strangers there in the last fifteen years. Yet they are far from deserving such neglect; and in the whole of Southern Italy beyond Paestum there is no ancient site which preserves such extensive remains of its vanished splendour, and furnishes more abundant materials for study. The outer wall of Gnathia exists without a break through its whole length, with the site of its various gates perfectly recognisable. It is nowhere less than from a yard and a-half to two yards high, and in many places more. On the north side, where the fortifications abutted on the sea, the double wall of perfectly regular Hellenic construction, forming an outer and an inner parapet with a massy bank of earth between, still rises to a height of thirty feet over a length of more than fifty yards, protected by a wide and deep moat with vertical walls, cut in the solid rock. The plan of the city is a parallelogram, one of the long sides of which is flanked by the sea. Near the shore, on a slight eminence, equidistant from the two short sides of the parallelogram, and consequently in the heart of the city, was built the acropolis, the walls of which are still in as good a state of preservation and as distinctly marked as those of the outer line of the city. This fortress commanded and protected two small square harbours, partly dug out and improved by the hand of man, between which it

stood, one to the north and the other to the south of the hill. The divisions between the various docks are partially preserved, and are still distinguishable beneath the surface of the water. The entire space included within the city walls is filled with rubbish. Here are masses of Roman masonry, there a few courses, still unbroken, of Hellenic work. Almost at every step a hollow in the soil indicates the place once occupied by a cistern (these were very numerous in a town which was naturally supplied only with brackish and unwholesome water), or by underground chambers intended for the storage of provisions or merchandise. Lines of walls just showing above the soil in the midst of fields planted with cotton and tomatoes enable the visitor to follow the direction of all the important streets of the city, and to recognise its open spaces. An architect might thus still draw up in a few days a singularly complete ground-plan of ancient Gnathia. Such a sketch would be extremely instructive, for there is no other town of the same period and in the same district all the arrangements of which can be so unmistakably recognised. This is a genuinely typical example, and it is of great importance that it should be placed at the disposal of archaeological science. But what is done must be done quickly. The ruins of Gnathia form a quarry which is being actively laid under contribution by the inhabitants of the neighbouring towns, and every day some fragment of antiquity disappears. When I paid my visit, labourers were engaged in demolishing one of the gates, which had till then remained standing, for the sake of the stones of which it was built.

One of the peculiarities of the ruins of Gnathia, which is most directly opposed to the ordinary habits of the ancients, and in which we must doubtless recognise a special custom of the natives—unless, indeed, we are to trace it to Spartan influence introduced through the medium of Tarentum—consists in the fact that the tombs, even of the bestepoch, are numerous within the city as outside its walls. They are recognisable along all the principal streets, and many are to be traced on the sea-shore scattered over the whole space unoccupied by the quays of the two little ports near the acropolis. These tombs generally consist of a large square sarcophagus, cut in the rock, or, when that was impossible, formed of slabs of tufa, in which the body was buried (without having been previously burnt), together with vases, jewels, and the like. Two or three large slabs covered the sarcophagus, and above this covering was placed a second similar one, or else a little shrine was built above the surface of the soil. Sometimes the tomb was more elaborate, and we have an underground chamber, either square or shaped like a *tholos*, to which access is gained by a door with almost invariably a Messapic inscription on its lintel. I succeeded in copying two such inscriptions, which are still inedited, over the entrance of tombs recently opened; and the peasants told me of several others which were covered up again after being accidentally unearthed, but which it would only require a few hours' labour with the spade to restore to the light.

##### TEMPLES.

The chief temple of the district, the national sanctuary common to the semi-Hellenised natives and the Greeks of Iapygia and the country of the Salentines, was the famous temple of Athéna Leucadia on the Iapygian Promontory, now Capo di Santa-Maria di Leuca, which forms the extreme south-eastern extremity of Italy, and marks the point of demarcation between the Adriatic and Ionian Seas. It is important to avoid confounding—as some modern geographers, including

Mazocchi, have done—the site of this temple and the Graeco-Salentine town of Leuca, which adjoined it, with the neighbouring Roman city of Castrum Minervae, the site of which is still marked by the modern hamlet of Castro, a few leagues to the north.

Of the temple of Athēna Leucadia no vestige remains, only the platform on which it was built, artificially improved and levelled. A church now stands on the spot, several times rebuilt in the course of ages, which succeeded the ancient sanctuary, and contains an interesting Byzantine *Panaghia*, painted on panel; and in front of the church, on the very edge of the cliffs overlooking the sea, is a fine lighthouse, built by the Italian Government within the last few years. But the site is still interesting to study, and in its arrangements shows a remarkable analogy to that of the sacred buildings on Cape Sunion in Attica. Like that of Athēna Sunias, the temple of Athēna Leucadia was built on the highest point of the headland, which formed a natural substruction, with its rocks peaked like bastions, the appearance of which has been so admirably hit off by Virgil in the phrase *turriti scopuli*. Again, at the foot of these cliffs, in a hollow in the flank of the promontory, a spacious grotto, called Grotta della Portinara, opens upon the sea, like that of Poseidōn Suniaratos. This, too, was a sanctuary; and on the walls there are still discernible a considerable number of petitions, here inscribed in Latin, which were written in ancient times by sailors who came, before putting to sea, to implore the protection of Jupiter Optimus Maximus and of Fortune, to whom the grotto was consecrated. These inscriptions are extremely difficult to decipher on account of the uneven surface of the rock. I had neither time nor materials to take rubbings of them. But I was able to convince myself that the old copies which we possess of some of them, and which have found a place in Prof. Mommsen's great collection of *Inscriptiones Regni Neapolitani*, require very careful revision.

The sacred grotto of which I have just spoken looked out on the Port of Leuca, which was situated below the cliffs crowned by the temple of Athēna, on the south side. The city itself stretched in the same direction along the margin of the bay, with its peculiarly graceful sweep, where, within the last few years, a new Leuca has been built, composed of elegant villas, in which the wealthy landowners of the country round take up their abode during the bathing season. The cliffs of the double promontory which bounds this little bay and of all the neighbouring coast are, it should be added, pierced with numerous caverns opening on the sea. Several of these contain bone-beds which would interest the geological student; and in one of them, called Grotta del Diavolo, there have been discovered many traces of the handiwork of the men who inhabited it during the Stone age—flint and bone weapons and implements, coarse earthen vessels, and signs of the use of fire. With regard to the spring in the Leutarnian country, near the cape in which Iapygia ended, of which Strabo speaks where he says that the mythological legend attributed the peculiar smell of its waters to the poison mingled with them from the blood of the giants on their expulsion from the Phlegraean Fields of Campania, when they were pursued by Hercules and slain by him in this place, it is probably to be recognised in the sulphurous spring of Santa-Cesaria, which is at no great distance.

The most perfectly preserved, and likewise the oldest and most curious, of the sacred buildings of ancient Calabria, the archaeological marvel of the province of Lecce, is that called "Le Cento Pietre," close to the village of Patù, in the valley at the foot of the hill which is crowned by the ruins of Veretum. Its

resemblance to the primitive sanctuary on the summit of Mount Ocha, in the Island of Euboea, is very striking, both as regards the shape and the mode of construction.

The building forms a parallelogram of 7.25 metres by over 2 metres, and 2.60 metres high, its greatest length being from north to south. It is built of large blocks of limestone, roughly squared, and laid on one another without mortar in irregular courses, the stone being laid contrary to the grain. The roof has a double incline, and is formed of large sloping slabs of stone, the shape and size of which resemble those of the covering of the dolmens. The ancient door, which is of no great size, opens in the middle of the east side of the building. The door which is to be seen on the shorter north side was made by demolishing part of the wall, when the old sanctuary of paganism was transformed, at the Byzantine epoch and about the tenth century, into a Christian chapel dedicated to St. Seminianus. The temple then underwent a kind of rude restoration, besides being appropriated to a new use. For the ill-formed pillars, probably more or less square, which were intended to support on the inside the slabs forming the roof at the point where they met on the summit of the temple, small columns of parti-coloured marbles were substituted, with incongruous capitals of Roman work, on which, again, were laid fragments of the architrave of a Greek Doric temple of limestone, all the materials being brought from the neighbouring ruins of Veretum. At the same time, the inside of the walls of the building was covered with mortar, on which large figures of saints were painted, of stately aspect, accompanied by Greek inscriptions, fragments of which are still recognisable, though encrusted with damp and smoke.

The archaeologists of the Terra d'Otranto have written at considerable length in the last few years on this curious building; and the majority of them, to do them justice, have recognised its clearly pre-Hellenic character, pointing out its analogy to the temple of Mount Ocha. Some, however, have allowed themselves to be misled by the fantastic inscription in Latin verse engraved in 1523 above the door looking toward San-Giovanni, an inscription which forms a worthy pendant to that of the Chapel of the Holy Cross at Montmajour, near Arles. This inscription represents the temple of Le Cento Pietre as the triumphal mausoleum of a nameless Italian general who perished there in a great battle with the Saracens, who had landed at Capo di Leuca under an Emperor Charles (Charlemagne or Charles the Bald), who was present at the battle, and that at a date which, however understood, is absurd, as it can only be translated by 617 or 906 of the Christian era. This worthless legend—a curious echo of the popularity which the fictions of our Carolingian epic cycle had attained in Italy—could only have been formed and localised at the ancient temple, the origin of which was forgotten, at a time when it was no longer remembered that the Terra d'Otranto, like the neighbouring provinces, had never formed part of the Western Empire, but was dependent on Byzantium in the time of the emperors of the family of Charlemagne, none of whom ever set foot in these regions. But, even if it had been able to bear a moment's examination, it would have been instantly disproved by a glance at the building to which it was applied, and at its construction, which bears so unmistakably the stamp of an epoch prior to the establishment of the Greek colonies in the country, or at least to the diffusion of their influence among the native populations of Pelasgic stock and Illyrian origin. FRANÇOIS LENORMANT.

### SOCIETY OF LADY ARTISTS.

Mrs. ANDERSON's study of "Some Mediterranean Fish" (257) is the strongest piece of painting here, but for cleverness there is nothing to equal Clara Montalba's "London Bridge" (262). Several of Linnie Watt's graceful landscapes with figures, and a contribution by Mrs. Alma Tadema, "A Breath of Spring" (247), almost exhaust the interest of the oil pictures. But a word must be said for Mrs. Whitelaw's "Trespassing" (237), a delightful study of a field of deep grass under a gray sky, pleasant in tone and colour; and Bertha Newcombe's "Flirtation." Among the water-colours we noticed some of K. Macaulay's bold drawings of bright sky and strong reflections, some promising half-length and life-size studies of "the figure" by Katie Sturgeon, a number of delicate drawings of the Naftel School by Mrs. Paul Naftel, Maud Naftel, and Grace Hastie. Other drawings by Emily Macirone, Melicent Grose, Fanny Currey, Miss Beresford, Louise Bayner, A. Sorel Laverty, Elizabeth Petrie, Marion Paton, Alice Manley, Helen Maguire, Helen O'Hara, Ellen Partridge, Helen Thornycroft, Caroline Williams, E. H. Sharp, C. D. Loch, Annette Ellis, and Rose Welby deserve mention.

### NOTES ON ART AND ARCHAEOLOGY.

THE *Magazine of Art* for April gives a full-page wood-engraving of the original drawing by J. F. Millet for his celebrated "Angelus." It has been faithfully executed, and preserves much of the spirit of the original. Mr. Andrew Lang contributes a clever first article on "The Art of Savages," and Mrs. Comyns Carr writes very sensibly on "The Artistic Aspect of Modern Dress," and sensibly suggests that the picturesque local costumes of Europe might yield hints for "fashions" more beautiful than the fancies of Parisian *modistes*.

"A WINTER EVENING," etched by F. Slocombe for the *Portfolio*, is a very good example of this artist's careful and picturesque studies of leafless trees. The oak, which stretches its long, sinewy arms against the sky, is finely felt, and the light is admirably managed. The sentiment of Mrs. Allingham's "Knitting," etched by L. J. Steele, is true and gentle; but her drawings are not forcible enough either in line or light and shade to make effective subjects for etching.

THE sale of the very interesting collection of pictures and objects of vertu made by the late Francis Grant, Esq., prior to 1818, and by his sons, the late John Grant, Esq., of Kilgraston, Perthshire, and Sir Francis Grant, the late President of the Royal Academy, is announced by Messrs. Chapman and Sons, of Edinburgh, for the 15th inst. Several of the pictures have been exhibited at the winter exhibitions of the Royal Academy. Among them are some fine portraits by Sir Joshua Reynolds, and good examples of Rubens, Salvator Rosa, and van der Helst. The most important is a grand picture by Guercino of "San Luigi di Gonzaga," which has been twice exhibited in London—once at the British Institution, and once at the Royal Academy in 1872. It was purchased by the late Mr. John Grant at Milan, about the year 1818. It took his fancy so much that, as though it were a "pearl of great price," he sold all that he had with him at the time, two horses and some pictures previously bought, in order to secure it. The collection contains some choice pieces of china, and some rare Italian bronzes of the fifteenth and sixteenth centuries.

THE *Magazine of Art* for May will contain articles by the Rev. Mandell Creighton, Mr. A.

Egmont Halse, Mr. Wilfrid Cripps, Mr. Grant Allen, and Mr. Andrew Lang. The frontispiece to the part will be an engraving of "Alone," from the painting by Josef Israels.

LAST week's *L'Art* contains the beginning of a study by René Ménard on Théodore Carnelle d'Aligny (born 1798), an almost forgotten French landscape painter. It is illustrated with facsimiles of two of his sketches, which, with others that have recently appeared in the same periodical, show a remarkable power of suggesting the main features of a landscape with a few bold, free, but scientific lines. He would appear to have been a true *précurseur* of naturalistic landscape in France.

SOME drawings by Vittore Pisano (Pisanello), the famous medalist of the first half of the fifteenth century, and an artist of whose rare paintings the National Gallery possesses an interesting specimen presented by Lady Eastlake (No. 776), form the subject of an article in *L'Art* for the 19th of last month. They prove him to have been a draughtsman of the first order, and have been reproduced in the pages of our contemporary with great skill. Till recently, these drawings, discovered in the Louvre in 1856, were attributed to Lionardo da Vinci. The mule on p. 229 is a masterpiece of accurate modelling and graceful design, and is so purely naturalistic that it seems to belong to the nineteenth rather than the fifteenth century. In another, an allegorical composition, the Renaissance feeling is very strong. It reminds one of Donatello, Mantegna, and Botticelli at the same time.

A GENERAL exhibition of the products of agriculture, industry, the industrial arts, and ancient arts is to be opened at Bordeaux on June 1 next.

It is reported at Venice that the Italian Government proposes appointing a commission to see that, in future repairs of St. Mark's, the old work shall not suffer alteration.

A BI-MONTHLY *Bulletin de Correspondance africaine*, dealing with Libyan, Punic, Greek, and Roman antiquities, is published at Algiers by the Ecole supérieure des Lettres. The Paris agents are Messrs. Baer and Challengel aîné.

*Art and Letters* for this month is, as usual, well printed, well illustrated, and well written. The principal articles are on "Henri Regnault" and "Masterpieces of Tapestry;" and the story of "Summer Madness," by the author of "Whom the Gods Love," is exciting.

J. O. NICOLL AND C. A. PLATT have etched the plates for the fourth and fifth numbers of *American Etchings* respectively. "Burnt Pines," the subject of the former, is an almost ideal subject for etching, as the whole effect is dependent upon, for the most part, straightish lines. The difficulty lay in making an interesting plate out of such simple and, in themselves, such unbeautiful elements; but Mr. Nicoll has done this by preserving the character of the trees in spite of their "charred" state, and imparting a sense of devastation. Mr. Platt's "Shanties on the Harlem" shows a true etcher's sense of the capacity of his materials. He has evidently studied both nature and Rembrandt, and has the gift of picturesque composition.

A CORRESPONDENT informs us that he has received a letter from the Rev. S. D. Peet, editor of the *American Antiquarian Journal*, stating that the inscribed stone from Wilmington, in Ohio, of which an account was given in the last number of that periodical, has been proved to be a forgery. A full exposure will be made in the July number.

M. E. BERTRAND has printed his thesis for the *doctorat es lettres* at the Sorbonne. The subject he chose was "Philostratus and his School;" and he argued that Greek painters, though absolutely ignorant of *chiaroscuro*, successively attempted landscape, still-life, and genre.

DR. HENRY SCHLIEMANN hopes to finish his work of excavation in the Troad by August next.

## MUSIC.

### RECENT CONCERTS.

THE London Musical Society gave its first concert this season at St. James's Hall on Thursday, March 30. The programme commenced with an interesting selection from Handel's "Theodora." This oratorio was especially valued by the composer, although it was unfavourably received when produced in 1749. Handel considered the chorus, "He saw the lovely youth," at the end of the second part, far superior to "the grandest chorus in the 'Messiah.'" The soloists at this concert were Miss Clements, Miss Wakefield, Mr. Charles Wade, and the Hon. Spenser G. Lyttelton. Miss Clements, who possesses a clear and sympathetic voice, undertook to sing, at a very short notice, in place of the Viscountess Folkestone. Considerable allowance must, therefore, be made for the rendering of the songs taken by this lady. The second part of the programme opened with Brahms' "Nanie," which was immediately followed by H. Goetz' musical setting of the same poem. These two works were placed in juxtaposition evidently for the purpose of comparison, and it was both interesting and instructive to hear the singularly contrasted conceptions of these two great modern composers. We see no reason to modify our already expressed opinion that the setting of Goetz, through the close connexion of the words and music, secures far greater sympathy, and produces a more satisfactory impression on the mind of the listener, than that of Brahms. The composition of Brahms, considered as abstract music, is very beautiful; but its solemn and austere strains carry us in spirit to august Rome rather than to the scenes and events of the Greek myths. The last piece performed was Gounod's clever and effective setting of the 130th Psalm. The choir sang throughout the evening with much precision and energy, and Mr. Barnby conducted in a highly efficient manner.

The last Monday Popular Concert of the season (April 3) was in every respect a great success; and Mr. A. Chappell has much reason to be satisfied with the great series of musical performances just brought to a conclusion. Novelties have certainly not formed a feature of the present season; but the works chosen have all been of a high order, and the magnificent performances of M<sup>me</sup>. Schumann and Herr Joachim have rendered the concerts since Christmas especially attractive. On Monday the programme included Brahms' great sextett in B flat (op. 18), admirably interpreted by Messrs. Joachim, Ries, Straus, Zerbini, Pezze, and Piatti. M<sup>me</sup>. Schumann played Schumann's novelette in F and Chopin's nocturne in D flat and valse in A flat. The great pianist was received with the utmost enthusiasm, and recalled to the platform three times after she had played. It is reported that M<sup>me</sup>. Schumann is not likely to visit this country again: if such should be the case, these closing performances must long remain memorable in the annals of music. We see, however, no reason why this lady, for whom all who know her entertain more than respect,

should not again delight us with her fine playing. Her hand has not lost its cunning. The pathos and energy of her style are not extinguished. Long will she be remembered, and be followed wherever she may go with the sincere and hearty good wishes of an admiring public.

M<sup>me</sup>. Sainton gave on Thursday week, at the Steinway Hall, the first of a series of three subscription concerts. The programme was entirely vocal, the performers consisting solely of talented pupils (present and past) of M<sup>me</sup>. Sainton Dolby's academy. Mrs. Inez Bell made her first appearance in public; she has a good voice, and sings with taste and intelligence. Of the numerous successes of the afternoon we may name Miss Cooper in Mozart's "Zeffiretti," Miss Woodhatch in "Angels ever bright and fair," Miss Fuselle in "Let me wander" (Handel), and Miss Blackwall in "They shall be turned back" (Costa). The concerted music, including Smart's "Fisher-maidens," was sung with great taste, precision, and finish, under the skilful direction of M. Sainton and Mr. H. F. Frost. Mr. Leipold officiated at the piano with his accustomed ability. J. S. SHEDLOCK.

## MUSIC NOTES.

WE have received with much satisfaction notice from Herr Franke that the date of the first Richter Concert has been altered from Friday, May 5, to Wednesday, May 3. In our last number we suggested the advisability of such a change in consequence of the former date clashing with the first night of the "Nibelungen" performances.

M<sup>me</sup>. MARIE ROZE has been engaged by Mr. Vert to appear in a series of concerts to be given in the principal cities of England and Ireland. The first concert will take place at Norwich on April 13, and the tour will last until the middle of May.

## AGENCIES.

London Agents, Messrs. W. H. SMITH & SON, 186 Strand, and Messrs. CURTICE & Co., Catherine Street, Strand.

Copies of the ACADEMY can also be obtained every Saturday morning in EDINBURGH of Mr. MENZIES; in DUBLIN of Messrs. W. H. SMITH AND SONS; in MANCHESTER of Mr. J. HEYWOOD. Ten days after date of publication, in NEW YORK, of Messrs. G. P. PUTNAM'S SONS.

## PARIS.

Copies can be obtained in Paris every Saturday morning of M. FOTHERINGHAM, 8 Rue Neuve des Capucines.

## LITERATURE.

*Thomas Carlyle: a History of the First Forty Years of his Life (1795-1835).* By James Anthony Froude. In 2 vols. With Portraits and Etchings. (Longmans.)

MR. FROUDE has now accomplished, according to his lights, one-half of the task that devolved upon him as Carlyle's literary executor. "I found," he says, "that I could not write a formal Life of Carlyle within measurable compass without taking to pieces his own memoirs and the collection of Mrs. Carlyle's letters, and this I could not think it right to attempt." So he has followed up the *Reminiscences* with this account of Carlyle's life up to the time of his final settlement in London. It, in turn, is to be succeeded by the publication of Mrs. Carlyle's letters, with a connecting narrative by Carlyle himself, as they "are a better history of the London life of herself and her husband than could be written either by me or by anyone." Finally, Mr. Froude will give a short narrative of his friend's last years, based on his own knowledge.

It is desirable—it is indeed absolutely necessary—to bear these facts in mind, for it is now plain that, until Mr. Froude has completed his task, it will be useless to attempt the formation of a final judgment on Carlyle. This work is studded, like its predecessor, with criticisms of Carlyle's contemporaries, quite as likely, too, to "give pain" to their relatives and admirers. What is of more importance, criticisms on the same persons change, or perhaps it would be more accurate to say develop; for example, Carlyle's last words in these volumes on Mrs. Buller and John Wilson are very different from his first, and much more unkindly. What is true of his judgments of men is also true of his judgments on things. Thus he desired to see a succession of "heroes" of the Frederick type, because he thought they would relieve the "congestion of population" in the Old World by compelling emigration. Yet he lived, Mr. Froude tells us, to admit that "natural influences," without any interposition on the part of Heaven-sent Alarics and Hengsts, were sending multitudes to the American continent. The truth is that Carlyle was compelled, in small ethical matters, no less than in the ordinary sense, to live from hand to mouth for the greater part of his career. He did not repine at having to live thus; he saw no hardship in others having to do so. But most fiercely and persistently he objected to and denounced intellectual, and still more moral, stagnation or

retrogression. "It was not in his nature to be content," Mr. Froude says. There was, to say the least, a noble side to his discontent; and at the bottom of his harshest judgments—on Wilson, Lamb, De Quincey, Campbell, even Jeffrey and Macaulay—there lay the belief that they had allowed material prosperity, self-indulgence, or the influences of society to injure their moral fibre, and had therefore, in his view, sinned against the clearest light. He may have been wrong in his opinions; he may have come to admit that he was wrong. On the other hand, he may have been confirmed in them, and may have given more adequate reasons for them, than appear either in the *Reminiscences* or in this new narrative. For the sake, therefore, of Carlyle and of his contemporaries, it is desirable to wait patiently for the appearance of his wife's letters and of Mr. Froude's "last words," before coming to any decision as to the one or the other, or the relations between them. These volumes, no less than the *Reminiscences*, prove that very many of the balls of personal judgment which Carlyle fired were made by his wife, whose insight into character he believed to be at least equal to his own. The next instalment of the Carlyle memoirs may therefore be expected to be—for many reasons it will be a matter for regret if it is not—the unroofing of the "works" of the Carlyle ammunition.

Upon two points in connexion with Mr. Froude's enterprise, however, it is perfectly safe, even at this stage, to speak definitely. In respect of style, those portions of these volumes which are in Mr. Froude's own hand will compare favourably with anything he has written. There is passion in all his best passages, but it is generally the passion of hatred held in restraint. Here it is love—held, too, in some restraint, but not strenuously so. It may be doubted if he has ever written anything better than this, which is the sum and substance of the work, if not of Carlyle's whole moral life:—

"Carlyle has been seen in these volumes fighting for thirty-nine years—fighting with poverty, with dyspepsia, with intellectual temptations, with neglect or obstruction from his fellow-mortals. Their ways were not his ways. His attitude was not different only from their attitude, but was a condemnation of it, and it was not to be expected that they would look kindly on him. His existence hitherto had been a prolonged battle. A man does not carry himself in such conflicts so wisely and warily that he can come out of them unscathed, and Carlyle carried scars from his wounds both on his mind and on his temper. He had stood aloof from parties, he had fought his way alone, he was fierce and uncompromising. To those who saw but the outside of him he appeared scornful, imperious, and arrogant. He was stern in his judgment of others. The sins of passion he could pardon, but the sins of insincerity or half-sincerity he could never pardon. He would not condescend to the conventional politenesses which remove friction between man and man. He called things by their right names, and in a dialect edged with sarcasm. Thus he was often harsh when he ought to have been merciful; he was contemptuous where he had no right to despise; and, in his estimate of motives and actions, was often unjust and mistaken. He, too, who was so severe with others, had weaknesses of his own of which he was unconscious in the excess of his self-confidence.

He was proud—one may say savagely proud. It was a noble determination in him that he would depend upon himself alone. But he would not only accept no obligation; he resented the offer of help to himself or anyone belonging to him as if it had been an insult. He never wholly pardoned Jeffrey for having made his brother's fortune. His temper had been ungovernable from his childhood. He had the irritability of a dyspeptic man of genius, and when the devil, as he called it, had possession of him, those whose comfort he ought most to have studied were the most exposed to the storm. He who preached so wisely on doing the duty which lay nearest to us forgot his own instructions, and made no adequate effort to cast the devil out.

"Nay more, there broke upon him in his late years, like a flash of lightning from heaven, the terrible revelation that he had sacrificed his wife's health and happiness in his absorption in his work; that he had been oblivious of his most obvious obligations, and had been negligent, inconsiderate, and selfish. The fault was grave and the remorse agonising. For many years after she had left him, when we passed the spot in our walks where she was last seen alive, he would bare his gray head in the wind and rain, his features wrung with an unavailing sorrow. Let all this be acknowledged, and let those who know themselves to be without either these sins, or others as bad as these, freely cast stones at Carlyle."

Mr. Froude's spirit and method seem to us only less commendable than his style. He thinks the public have a right to be informed of the details of the private life of every great teacher, or *vates*, "in order to know whether his own actions have corresponded with his teaching, and whether his moral and personal character entitles him to confidence;" and he fortifies this view of his duty by quoting Carlyle's doctrine as to the business of a biographer from his review of Lockhart's Life of Scott. It is idle to argue whether this view of a biographer's function is correct or not. Mr. Froude had no other course open to him if he was to obey his friend's wishes at all. Carlyle at first wished to have no biography, a fact which is forgotten by those who censure him for his essentially private ejaculations when "the devil of dyspepsia" had possession of him. But, when he saw that a biography was inevitable, he, no doubt remembering how Burns's reputation has suffered through being left to the tender mercies of Paul Pry and Mrs. Candour, in place of a minutely chronicling Boswell or a just and discriminating Lockhart, resolved that, so far as lay in his power, his own biography should be thorough. What has followed his death shows the wisdom of this resolution—about one-half of the literature called forth by the *Reminiscences* consists of anecdotes wholly unauthentic or only partially authenticated to prove that Carlyle was a wretched egotist who behaved habitually like a brute to his wife. It was well, therefore, that, if the Carlyle story must be told at all, it should all be told, and by the one man now in possession of the facts. If Mr. Froude can be said to have erred, it is in doing his work too thoroughly. There are no direct evidences here that he has been influenced by the storm raised on the publication of the *Reminiscences*. It was not to be expected, of course, that he would apologise for that publication; for

Carlyle himself had probably not more contempt than he for the reed shaken with the wind. But he has taken no notice of the various "corrections" of the narrative in the *Reminiscences*; thus he adheres strictly to Carlyle's statement that Miss Martin declined to free Edward Irving from his engagement to her, and makes no mention whatever of the vehement contradictions given by that lady's relatives. Yet we are much mistaken if the criticism of the *Reminiscences* has not had some effect upon Mr. Froude; at all events, he has apparently thought it his duty not only to give Carlyle, warts and all, but to give the warts above all. The "immortal and infernal" dyspepsia does get a little wearisome, after we are gravely informed that, in obedience to the orders of the Edinburgh "jackass" of a doctor, endorsed by Birmingham Badams, the sufferer gave up tobacco and took to mercury and hogsheads of castor oil. Old Mrs. Carlyle's description of her son as "gey ill to live wi'" suggests itself in these volumes almost as often as "wae's me" in the *Reminiscences*, and there is not the same excuse for the repetition. Mr. Froude further seems to us to exaggerate the *vates* theory of Carlyle. It is quite true that he believed himself a man with a message as truly as did the Hebrew prophets, and that, like Jeremiah, he took an essentially pessimistic view of the future of his country. But surely it is going too far to say that, if he was wrong in his prophecies, he "has misused his powers," and "his own desire for himself would be the speediest oblivion of himself and his works." There are many, and those not the least steadfast lovers of Carlyle, to whom the moral support his writings give in the conduct of life, the solid historical masonry of *The French Revolution*, *Frederick*, and *Cromwell*, even his humour and power of intense description, seem more truly passports to immortality than his Jeremiads.

The leading facts of Carlyle's life recorded in these volumes—his early training, the Buller tutorship, the beginning of his curriculum of dyspepsia, his Goethean "conversion," his marriage, his relations with Irving and Jeffrey, his sojourning in the wilderness at Craigenputtock, his difficulties about the publication of *Sartor*—the public have already been made familiar with through the *Reminiscences* and otherwise. Mr. Froude had already published in the *Nineteenth Century* a portion of his present narrative, including the "episode" of Margaret Gordon, who shrunk from undertaking the duty and earning the somewhat tragic immortality that fell to Jane Welsh. These two volumes are necessarily to a large extent an elucidation, amplification, and correction—there is very little of this last, however—of the portions of the *Reminiscences* which cover the same thirty-nine years. Very properly Mr. Froude passes, comparatively speaking, with lightness over the Irving section of Carlyle's life. With equal propriety he makes perfectly clear the relations between Carlyle and the other members of his family, for these justify the services he rendered them, and the panegyrics he has bestowed upon them. Some of the best and tenderest of the letters here published are those to his parents and

to his two brothers, whom he practically supported until they were able to support themselves. Mr. Froude does not render equally plain the reasons which made Carlyle to the very last believe that Jeffrey, his old friend and patron, shrunk from rendering him a kindness—the securing for him the appointment to a Chair of Astronomy in Edinburgh or of Rhetoric in London—when he might have done so. It seems probable, however, as Mr. Froude surmises, that Carlyle resented being lectured on his "arrogance" by a man to whom both he and his brother were under pecuniary obligations; and it is worthy of note, in this connexion, that Mrs. Carlyle was, as we learn from one of her letters, quite as glad as her husband when the debt to Jeffrey was paid. These volumes certainly will not lower Jeffrey's reputation; they prove that not only did he introduce Carlyle to the *Edinburgh Review*, offer to settle an annuity on him, lend him money, and start his brother John on a medical career, but that he wished to make him his own editorial successor. The other side of the account is that Jeffrey and the whole *Edinburgh Review* coterie were wrong about Carlyle and his "impracticability," and that Goethe was right. In other words, Goethe knew more of the universe, Carlyle included, than did Jeffrey. The letters of the Patriarch of Weimar given here are mainly notable for their mellow wisdom and courtly kindness, and as proving how much more valuable at a crisis in the career of a man of proud independence is moral than material aid. Among the other men of note of whom there is pleasant mention in this "howling wilderness of dyspepsia" are Emerson, John Stuart Mill, and Charles Buller. Although Carlyle broke off his connexion with the Bullers in something like a "tiff," and said some harsh things about Mrs. Buller, he liked Charles. The feeling was evidently reciprocated. Mr. Froude gives a letter from this promising young politician dealing with British politics, and particularly with the character of the House of Commons, which reads like a cut-down "Latter Day Pamphlet." The persons and places that receive mention the reverse of kindly in Carlyle's letters and journals are much more numerous. Lamb and De Quincey are, if possible, worse treated than in the *Reminiscences*; even Mr. Froude has to stand up for the "gentle Elia," for he is described as "a shameless drunkard" whose faculty it was a scandal to describe as genius. Lytton Bulwer is spoken of in the most contemptuous terms. John Wilson falls off sadly in Carlyle's estimation. At first, the worst said of him is that he was fond of all stimulating things. Then we find him trying to combine poetry and philosophy with rizzared haddocks and toddy. Lastly, it is more than hinted that he was ungenerous and untruthful in regard to Carlyle himself. Campbell is "as heartless as a little Edinburgh advocate," and this is no light charge when it is borne in mind that Edinburgh is treated to almost as much wholesale invective as the Scottish aristocracy since the days of Wallace, who are styled "toothless hyenas," a *canaille* that may be thankful if they are "paid off" some day. These volumes are, in fact, spiced with characteristically Carlylian "mis-

chief," of which this *noyade* may serve as a specimen:—

"Empson, a diluted, good-natured, languid *Anemphinder*. The strongest young man, one Macaulay (now in Parliament, as I from the first predicted), an emphatic, hottish, really forcible person, but unhappily without divine idea. Rogers (an elegant, politely malignant old lady, I think) is in town, and probably I might see him. Moore is I know not where, a lascivious triviality of great name. Bentham is said to have become a driveller and garrulous old man."

The most interesting section of Mr. Froude's narrative, from the personal point of view, is that which details the story of the friendship of Carlyle and Miss Welsh, which ended in their marriage and forty years' comradeship. No practised novelist could have told the story better, from the first and peremptory repulse by Miss Welsh of her literary correspondent, to her confession that she had "wilfully deceived" him as to her love for Irving, her personal surrender at his own home—recalling that of Bathsheba Everdene to Gabriel Oak in Mr. Hardy's well-known novel—and Carlyle's preparation for the "odious ceremony" by reading Kant's *Critique of Pure Reason* and the novels of Scott, whom he subsequently thanked by describing as a man who might have been a Conscript Father but had sunk into a *restaurateur*. Mr. Froude thus sums up this remarkable wooing and its results:—

"He admired Miss Welsh. Her mind and temper suited him. He had allowed her image to intertwine itself with all his thoughts and emotions; but with love his feeling for her had nothing in common but the name. There is not a hint anywhere that he had contemplated as a remote possibility the usual consequence of a marriage—a family of children. He thought of a wife as a companion to himself, who would make life easier and brighter to him. But this was all, and the images in which he dressed out the workings of his mind only served to hide their real character from himself. . . . The stern and powerful sense of duty in these two remarkable persons held them true, through a long and trying life together, to the course of elevated action which they had both set before themselves. He never swerved from the high aims to which he had resolved to devote himself. She, by never-failing toil and watchfulness, alone made it possible for him to accomplish the work which he achieved. But we reap as we have sown. Those who seek for happiness in this world must not complain if happiness is not their portion. She had the companionship of an extraordinary man. Her character was braced by the contact with him, and through the incessant self-denial which the determination that he should do his very best inevitably exacted of her. But she was not happy. Long years after, in the late evening of her laborious life, she said, 'I married for ambition. Carlyle has exceeded all that my wildest hopes ever imagined of him—and I am miserable.'"

This last statement is so serious that we cannot help desiring to learn the circumstances under which it was made. That Mrs. Carlyle sacrificed her health for the sake of her husband and his mission in a spirit of silent stoicism which kept him ignorant of what she was doing, all the world knows. But may not this "I am miserable" have been only her translation of her mother-in-law's "gey ill to live wi'"? On neither her side nor Carlyle's was there love in the

popular, *Little Dorrit* sense. Certainly there was nothing in him of what, in his "Annandale vernacular," he would have styled "the erotic business." But, on the other hand, we have her protestations before marriage that she "loved him earnestly, devotedly;" and her declaration in a letter to an aunt—a letter which he saw only after her death—that she "liked him in the inmost part of her being." As for Carlyle, his letters after marriage are brimful of quaint tenderness. The union of these two remarkable persons was rendered tragic enough by circumstances and that all-unconscious egotism for indulging in which Carlyle was torn with remorse to his latest day; but we are at present unwilling to believe that "I am miserable" was anything more than the expression of a mood or a moment of physical weakness.

Necessarily this work deals with many things—such as Carlyle's politics and religion—of which, although they were of the very essence of the man, it does not come within the province of a literary journal to treat. Passages revealing his views in these respects, like much in the *Reminiscences*, will offend many, and may diminish the number of Carlyle worshippers. That cannot be helped, nor is it to be much regretted. Carlyle is strong meat, to be taken only by those whose digestive powers are of the best. But these volumes, although they may reduce the number, will intensify the esteem of his genuine admirers. They will see now how much—rather how little—his "arrogance," his "egotism," his "self-consciousness" come to. They will see that his most fruitful and most stimulating work was almost literally written with his life-blood. As for readers who, instead of now returning to his books with a deeper and more personal interest, may turn from them in the belief that "Carlyle's reputation has been irretrievably damaged," all that can be said is that they have either never needed, or never understood, the moral message which has quickened and sustained two generations of English—nay, of European and American—men of action.

WILLIAM WALLACE.

*The History of Antiquity.* By Max Duncker.  
Translated by Evelyn Abbott. (Bentley.)

ANOTHER volume has appeared of what ought to become a standard English work on history. Both the translation and the appearance of the book are worthy of the original. As usual, it is eminently readable, and abounds with a mass of erudition, which is handled by the author with the easy grasp of a master.

The new volume deals with the Baktrians of the east, and the Medes and Persians of the west. The greater part of it is occupied with "the Arians of Eastern Iran," with the Zend Avesta and Zoroaster, whom Prof. Max Duncker assigns to Baktriana. Here he comes into conflict with a number of rival theories, each of which claims the balance of evidence to be on its side. In fact, there is hardly a question connected with the rise of Zoroastrianism and the origin of the Avesta which is not beset with diffi-

culties and capable of more than one answer. Was Zoroaster a real personage or the creation of later myth? when and where did he live? what was his relation to the religion which is usually assumed to have been founded by him? was this religion a natural development out of Vedic theology or a deliberate revolt against the latter? where was the language of the Avesta spoken, and when and where were the fragments of which it is composed written? are the Gāthas, or hymns, the oldest or the latest part of it? who were the Magi—were they a non-Aryan tribe or the priests who formed the religious system which we find in the sacred books of the Parsis? All these are questions which are hotly contested, and to which no definitive answer has as yet been returned. As befits an historian, however, who writes for the great public, Prof. Max Duncker sweeps aside such problems of minute scholarship, and argues out his own views with no uncertain sound. According to him, Zoroaster was a Baktrian who flourished about a thousand years before our era in the great kingdom of Baktria, the foundation of which he would place about 1100 B.C. The religion which he preached was a reformation—a revolt, in fact, against the old nature-worship of the Aryans; and his two gods—Ahura-mazda, or Ormazd, the principle of good, and Angro-mainyus, or Ahriman, the principle of evil—were new deities. For some 200 years his priests, the Athravas, handed down the ceremonies and creed of his faith; then a new priesthood arose in Western Iran, the Magians of Media, in whose hands the religion of Zoroaster underwent fresh modification and development. It is needless to say that all these conclusions, supported as they are with great learning and ingenuity, would be disputed step by step by other scholars. But a few weeks ago, for example, Prof. de Harlez published an elaborate *Introduction à l'Étude de l'Avesta et de la Religion mazdéenne*, in which he seeks to prove that Zoroaster was not a Baktrian, but a native of Media Rhagiana, and that the greater part of the Avesta was composed during the last five centuries before the Christian era. It is only within the last two years that our views of the rise and character of the Persian empire have been revolutionised by the progress of cuneiform discovery; and it is not too much to hope that before long the evidence of contemporaneous inscriptions will clear up many of those problems which Zend scholars are trying to solve. At all events, the arguments drawn from the Assyrian inscriptions, by the help of which Prof. Duncker endeavours to support his hypothesis of a great Baktrian kingdom, can no longer be maintained. The land of Muzri, from which Shalmaneser II. obtained the Baktrian camel, was not Baktria, but Lesser Armenia, into which the animals of a more eastern climate may have been imported; and Tiglath-Pileser II. never marched farther eastward than lat. 66°. Even the land of Bikni, the most distant point in this direction ever reached by an Assyrian king, lay to the west of Rhagiana. Zigruti, instead of being Sagartia, really denotes the Zagros mountains. On the other hand, I agree with Prof. Duncker in believing that a religious work similar to the Avesta is mentioned by Darius

Hystaspis in a passage of the Behistun inscription, the importance of which was first pointed out by Dr. Oppert; and I further believe that the Gāthas are meant by "the sacred hymn," the *gaitham* of the Persian text, which Darius states he re-established. It is equally clear to me that the Magians were not Zoroastrians at the time when the Behistun inscription was engraved, whatever they may have been afterwards. On the contrary, Gomates, like Kyros the King of Elam (not Persia) and his son Kambyse, whose brother he personated, must have been a polytheist, and differed from his more politic predecessors only in endeavouring to crush the Aryan or Persian element and the worship of Ormazd.

It is a pity that in his interesting account of the Median empire Prof. Duncker was unable to take advantage of the two newly discovered inscriptions which have set Kyros and his earlier history in so new a light. We now know, at least in outline, the actual facts relating to the downfall of the Median kingdom upon which the great heroic poems of Media and Persia were afterwards based, and we see that the legend was correct which called Kyros an Amardian or Elamite. What the ethnic and linguistic affinities of the Medes of Ekbatana were, however, we cannot at present tell with certainty; before the question can be settled, excavations must be made on the site of the Median capital. All that is certain is that the so-called Scythic or Protomedic transcript of the Akhaemenian inscriptions is really the language of the Amardians of Elam, to whom Kyros belonged, and that it was this fact which caused it to occupy a place of honour in the public documents of the Persian kings. On the other hand, the name of Istuvegu, the Astyagēs of the Greeks, has not an Aryan sound; and the non-Aryan land of Ellipi, overrun by Sargon, seems to have been that in which the city of Ekbatana was afterwards built. The controversy, however, as to whether the Medes were an Aryan or a non-Aryan people is really an idle one, since the term "Mede" originally had merely a geographical sense. It was the name applied by the Assyrians to the heterogeneous tribes east of the Zimri of Kurdistan. Some of these are shown by their proper names to have been distinctively Aryan, others just the contrary. From the Assyrians the name was handed on to the Babylonians and Persians, and it was only among the Greeks that it began to have an ethnological signification. How the kingdom of Ekbatana came to be known as the kingdom of Media we do not yet know; all we can say is that its probable founder, Kastarit, or Kyaxares, the King of Karukassi, is also called "King of the Medes."

I have left myself no space to notice the many interesting points touched upon by Prof. Duncker in the course of his book, such as the fact, which he has clearly proved, that the names of the fellow-conspirators of Darius given by Ktésias are the names of their sons, not of the conspirators themselves. Those who wish to be at once entertained and instructed should study the volume itself

A. H. SAYCE.

*Essays and Dialogues of Giacomo Leopardi.*  
Translated by Charles Edwardes. (Trübner.)

It is essential to a good translator that he should have an enthusiasm for his original; it is his foible correspondingly, though an amiable and interesting foible, to complain of the world's inadequate appreciation of that original. So far as I can judge, Mr. Edwardes is a good translator; that is to say, his volume might be read through by a person wholly ignorant of the original, and be laid down with a conviction that he had been reading a clear and pithy set of English essays and dialogues. This is no small success, as translations go. Card. Newman long ago laid it down that, to keep up to a high level of style in reproducing accurately thoughts not your own, expressed in another language, is one of the severest tests of the faculty of attention. Mr. Edwardes stands the test very well on the whole. He does not, I think, escape the foible above alluded to of overrating his original. It may be doubted, moreover, if the reading world is so wholly neglectful of Leopardi as Mr. Edwardes thinks. His list of authorities (p. 43) should itself be a proof that thoughtful people in England and France, as well as in Italy, have done their best to familiarise readers with this hectic and gloomy, yet interesting and brilliant, writer. One of the articles quoted anonymously by Mr. Edwardes has, if I mistake not, been recently acknowledged by no less a person than Mr. Gladstone. Few persons, also, will forget Mr. Matthew Arnold's short, but interesting, parallel between Leopardi and Byron in the Preface to his recent volume of selections from the latter poet. But when Mr. Edwardes complains that Leopardi's name is not yet "a household word" (p. 7) among Englishmen, he surely overshoots the mark. He forgets that the subject-matter, the style, and tone of these essays forbid their becoming so. Sadness and gloom are popular, or may be so at times, in poetry. But argumentative pessimism in prose can rarely be so. Leopardi, at all events, does not pretend a hope—hardly even a desire—for popularity. Many to whom the dark gloom of such a poem, e.g., as "L' Ultimo Canto di Saffo" is full of interest and emotion, turn away, unattracted, from such a dialogue as "Nature and an Icelander." Pessimism, presented in a logical and argumentative form, cannot become "household words." For a household, after all, is an attempt at happiness or contentment; and Leopardi's elaborate attempt to persuade people that, if they are happy, they ought not to be, however ingenious, logical, and grimly humorous it may be, finds no response from ordinary people. To them such a theory simply *dominat in vacuo*; if they feel happy, they are happy; and, when they are miserable, they do not thank anyone for a logical proof that they were fated to be so.

Apart, however, from this rather unreasonable claim of Mr. Edwardes for Leopardi, his prefatory essay is very interesting, though melancholy, reading. "The stricken poet of Recanati," as Mr. Arnold has called him, deserves certainly all compassion, in every point but two—his friend Ranieri, true to him as Severn to Keats, and his present

biographer. It is grievous to think that this exquisitely gifted man should have suffered three such evils as a bad and unsympathetic home, a bodily deformity, and an unrequited affection. Let those to whom such essays as "The Academy of Sillographs" (pp. 24–27) or "Malambruno and Farfarello" (pp. 33–35) seem repulsive in their peevish cynicism, bethink them of its cause, and judge tenderly. That Leopardi increased his sufferings by a fretful egotism seems pretty plain; but of their reality there can be no question.

Perhaps the most interesting essay is that on the "History of the Human Race;" the most considerable, "Rarini on Glory;" the most full of self-revelation and biographical interest, "Philip Ottonieri" and "Timandro and Eleandro." The first mentioned is based upon the *Critias* of Plato; indeed, the manner of Plato is clearly copied throughout. But the thoughts are far more those of Lucian than those of Plato. Yet they are like Lucian "with a difference." The "excellent fopperies of the world" were as hollow to Lucian as to Leopardi; but their hollowness amused the former, while it tortured the latter—to whom was given the Horatian "*sapere et ringi*" in painfully large measure. Occasionally, indeed, humour strives not unequally with despair, as in the saying that "a child makes a world out of nothing—a man makes nothing out of the world;" or in the dialogue (pp. 167–81) between Copernicus, the First Hour, and the Sun; to which may be added "Hercules and Atlas" (pp. 15–18). But, on the whole, the subjects, quite apart from the prevailing pessimism, are too recondite for the humour of their treatment to be generally appreciated.

The translation is generally, as has been said above, in good style. There are one or two slips, however, which should be corrected. On p. 137, we are told that "his writings are all else trifling;" on p. 125, that "such misfortunes are inconsolable;" on p. 87, "are almost quite incapable;" and on p. 64, the saying "there is no difference between life and death" is ascribed to some mysterious Pyrrhus. Mr. Edwardes has been misled by the Italian form; the saying belongs not to Pyrrhus, but to Pyrrhon the Sceptic, and is as follows:—"μὴδὲν διαφέρει ζῆν ἢ τεθνᾶναι." On p. 130 we have the word "dissatisfactory," which has not, I believe, very high authority. But these are small blots. On the whole, I repeat that gratitude is due to Mr. Edwardes for an able portraiture of one of the saddest figures in literary history, and an able translation of his less-inviting and less-known works.

E. D. A. MORSHEAD.

*The History of Jesus of Nazara.* By Dr. Theodor Keim. Translated by Arthur Ransom. Vol. V. (Williams & Norgate.)

THIS fifth volume of the translation of Keim's great work carries us from Sunday, the 3rd of April, A.D. 35, to the evening of Thursday, the 14th—the Passover evening—and from Capernaum to Jerusalem. Rejecting as absolutely unhistorical Luke's Samaritan mission, with its anticipations of Paul and impossible simultaneous return of the seventy-two disciples, Keim brings Jesus and his little band of Galileans across the Lake of Gennesaret and down the scorching

Jordan valley to Jericho, "the city of fragrance." There a night is spent, not, however, with the apocryphal Zacchaeus, and the next morning the party set out for Jerusalem. Passing Bethany, charmingly hidden among its trees and corn-fields, they arrive at the village of Bethphage, where Jesus, not with the certain foreknowledge of his death ascribed to him by the fourth evangelist and more or less by the others, but rather in a joyous mood, and resolved now to assert his Messiahship, mounts the prophetic, and therefore somewhat questionable, ass. Entering the capital amid the plaudits of his followers, he proceeds to the Temple, and, taking advantage of the enthusiasm already awakened, creates a still greater, and, indeed, quite extraordinary, sensation by the expulsion of the money-changers. In the evening he retires to Bethany. Then follow on successive days the encounter with the priests and elders in the Temple; the parables of the two sons and the wicked husbandmen; the attempts of the Herodians, the Sadducees, the Pharisees; the denunciation of the Scribes and Pharisees; the genuine prophecy of the destruction of the Temple. From midday on the 12th till towards the evening of the 14th Jesus is in Bethany. Meantime, Judas, without any bargaining, has gone to the priests and promised to betray him. Keim finds no explanation of the treacherous act either in the mercenary motive or in wounded ambition, and still less, of course, in the temptation of a personal Satan. His analysis points rather to disappointment in the Messiah who had so markedly failed to realise the expectations of his followers, and to a growing respect for the men that sat in Moses' seat, as the true incentives of his conduct. The account of the Passover is given with great feeling and power and picturesqueness of detail; and it is noticeable that Keim, notwithstanding his genuinely historical standpoint, held that Jesus himself believed in the expiatory efficacy of his own death, adding, however, that, while his will to make his death a sacrifice for his brethren gives to his purpose "its moral worth and its eternal truth before God and before man," the conception itself was not free from error. The volume concludes with a valuable conjecture that it was at this time (on the Passover evening) that the institution of baptism, which must, in any case, be traced to the initiative of Jesus, and which the gospels, on this supposition, have simply removed to a later date, was actually established.

Throughout this volume the brilliant author continues loyal to his original Matthew, but rejects without scruple the interpolations of the "Gentile-favouring" editor. He is merciless in his exposure of the unhistorical character of the Johannine narrative; and there are many half-contemptuous side-glances at Mark which throw a flood of light on the real nature of his work. His postponement, for example, of the cleansing of the Temple to the day following the triumphant entrance, when there would be a natural reaction of feeling, and his description of Jesus "looking round upon all things" in the Temple, as if he were a tourist come to see its wonders, speak little for his fidelity as an historian. The instructions to the disciples about the

place where the Passover is to be kept—the man with the pitcher, &c.—common to him with Luke, are too much of the clairvoyant order. Nevertheless, Mark has sometimes preserved the original tradition more faithfully than Matthew, as in Christ's answer to the disciples about divorce, where the single exception in Matthew (μὴ ἐν πορνείᾳ) must be regarded as an interpolation of the editor. Keim does not hesitate to speak of "pure fictions" in John; and as to the raising of Lazarus "not a doubt can remain of the spuriousness of the whole story." In the canonical Matthew he rejects as not historical the parable of the wedding feast (on the ground that it attacks, not the hierarchs, but the people, and describes the future persecutions of the apostles), that of the Ten Virgins, and the great eschatological discourse in chap. xxiv. This last is simply "one of those restless attempts," of which there are examples enough, "of the later Jews and Jewish-Christians to calculate future events"—in fact, "a little apocalypse," which the latest editor of Matthew thought fit to incorporate into his work. The prediction of the destruction of the Temple, on the other hand, Keim can accept the more readily, in that it was not literally fulfilled. There are stones left standing one upon another, and the Temple was not thrown, but burned, down.

It is quite unnecessary to say anything in general of the merits of this instalment of a great work, in which narrative, description, and criticism are blended together with a master's hand, and without any interruption of the interest which carries the reader forward from point to point. The merits of the translation are also, I believe, unquestioned. There can be no doubt that it gives effectively the meaning and spirit of the original; and, in spite of some few instances of careless or indifferent English, its style is, on the whole, no less correct than it is vivid, forceful, and picturesque. The sixth and last volume, which is promised for the present year, will be eagerly looked for by readers who are obliged to depend on a translation.

ROBERT B. DRUMMOND.

#### NEW NOVELS.

*The Rapiers of Regent's Park.* By J. C. Jeaffreson. (Hurst & Blackett.)

*A Poor Squire.* By Holme Lee. (Smith, Elder & Co.)

*A Story of Two Years.* By Mrs. Meldrum. (Edinburgh: Oliphant & Co.)

*Over the Seas and Far Away.* By Cecilia Lushington. (Griffith & Farran.)

*Alfreda Home.* By E. B. Bayly. (Jarrold & Sons.)

MR. JEAFFRESON is a person expert in titles; and it is quite possible that he has calculated on the mistake which is likely to be made in taking up his book by some people, who will assuredly look for a series of real or fictitious histories of duels fought under the shadow of the First Gentleman's trees. *The Rapiers of Regent's Park*, however, have nothing to do

with fighting. They are a highly respectable family, consisting of a mother of great wealth, daughter of a Liverpool smuggler and slave-trader and a Mulatto woman of doubtful character; a harmless but rather snobbish father, who is a mild parson; and two daughters, Erica and Mildred. In Erica only is there any trace of black blood; and the chief point of the story is the exposition of the evil effect produced on her by accidentally coming to the knowledge of the fact in a peculiarly painful way, by the ill-treatment of her mother, and by a disappointment—certainly of a rather trying character—in love. The bulk of the book is occupied with the story of a fiendish and not very probable plot by which Erica sows disunion between her dead sister's husband, whom she herself passionately loves, and his second wife, of whom she is furiously jealous. The instrument of this plot is a certain Mr. Ceoil Twyford, of whom Mr. Jeaffreson has made a very great scoundrel, though not a very likely one. The book has, in parts, resemblances to Mr. Wilkie Collins' manner, but has more literature, and what may be called cleverness, about it than the author of *The Woman in White* is master of. Except for a general improbability in the characters, and for a certain amount of very stale and conventional social satire, it is a book of merit in its way; but we don't like a husband who, on reconciliation with his injured wife, quotes first Pope and then Dryden. It is not improper in itself, but it is not nineteenth-century manners.

Holme Lee's work is always welcome because of a certain quietly refreshing character which it possesses, and because of its author's remarkable faculty for describing still life of the country kind. But *A Poor Squire*, though it has both these characteristics, is inferior to its predecessors. In the first place, there is next to no story, and what there is is practically finished before the first volume is half through. In the second, the characters are uninteresting, and, except the heroine (who might have been better if a little more pains had been taken with her), wanting in individuality. In the third place, Holme Lee has permitted herself, in the course of two scanty volumes, to talk a great deal of singularly unpractical politics. We do not say that when a woman talks politics she always talks nonsense—it was a woman who said that, thereby supplying a pleasant variant on the fine old logical puzzle, *si te mentiri dicis, idque verum dicis*, &c. But we fear we must say that Holme Lee's politics do somewhat approach the nonsensical, not because they are Utopian, but because they are Utopian in an unpractical way. The picture of Oak Royal, however, a haunt of ancient peace full of heirlooms and trim parlours and gardens, is pleasant, and abides in the imagination.

We have before had occasion to remark that the idea (popular, we believe, with novelists) that their books are reviewed without being read is, as far as we are concerned, a fond thing vainly invented. Out of some thousand novels, however, we have come across perhaps half-a-dozen—not more—which simply and literally did not let themselves be read.

It is very difficult to define this quality of unreadableness. It is certainly rare, though it can hardly be said to be precious. It does not consist merely in dulness, otherwise the blue-book of duty and necessity would frequently remain unperused. It does not consist in mere silliness, for a very silly book is sometimes excellent fun. Blunders will not do; for there is sport in noting them. It seems to be a happy combination of all possible faults, no one in measure sufficiently preponderant to be an interesting study, but aptly joined and combined so as to push the enquiring mind back with a steady unwavering resistance till it at last gives up the task in despair. Mrs. Meldrum's book is one of this rare class; at least, we have found it so, and as we cannot pretend to have read it we shall not say anything more about it except that the author is remarkably fond of emphasising her dialogues by the use of very singular typographical devices. Thus divers pronunciations of the word "and" are indicated by the forms "a-nd," "an-d," and "a-n-d," nor are these by any means confined to the stammerer (for we got far enough to find that there was a stammerer) of the book. It is quite possible that the interior kernel of this story may be as sweet as its outer rind is hard. But from several irregular and despairing dives into the middle which we attempted when orthodox attack proved useless we should doubt it.

Miss Lushington's book has some resemblance, though it is less vivid and less strictly realistic, to Mrs. O'Reilly's admirable Sussex stories. It is a very unpretending tale, recounting the fortunes of a girl who is left an orphan, goes hop picking, then becomes a nurse, &c. Mary Ellerton, the heroine, is a pleasant character, and her story is fairly told. The only adverse criticism that ought to be made is that what the evil-minded will call the "goody" part of the book is a little too prominent. It is in the subduing of this element, while keeping it everywhere present, that the art of the writer to whose work we have compared Miss Lushington's, as of all writers who have handled the style satisfactorily, consists.

*Alfreda Home* is a book not dissimilar in character to a large class of American stories such as those of Miss Warner and some of Mrs. Beecher Stowe's later books. The scene, however, is Australia, not America; and therefore, though there is sufficient novelty of scene and customs to give the book an interest, the atmosphere is more English than that of *Queechy*, or the *Old Helmet*. To light-minded novel-readers the form, as well as the contents, may be what they themselves would probably call "stodgy," the pages being large and closely packed, and the print, though very clear, decidedly small. As a good middle-class family story, not of too literary a kind, with morals and religion unexceptionable, *Alfreda Home* will doubtless have its public and satisfy it.

GEORGE SAINTSBURY.

## CURRENT LITERATURE.

*Plain Speaking.* By the Author of "John Halifax, Gentleman." (Hurst and Blackett.) We should be rather at a loss to discern the exact applicability of this title if we did not remember a curious book which showed that some of Mrs. Craik's sex find her a plain speaker and resent her plain speaking. The actual contents of the volume consist of a number of papers, apparently magazine papers, having no community of subject and no discoverable table of contents. Here there is a description of a winter sojourn in Capri; there a paper of hints on novel-writing. One article is on the ruins of St. Cloud; another, a biography of, and very well-deserved panegyric on, Mr. F. J. Campbell, the blind leader of the blind (in a very different sense from the original) in the Normal College at Norwood. None of these things come in any intelligible sense under the head of plain speaking. However, this is perhaps hypercriticism. Great part of the book is occupied with what we suppose does answer to the title—a collection of moral essays of the class which, after a considerable interval, A. K. H. B. made popular, and which is now practised by a great number and diversity of people, from Mr. Louis Stevenson downward. The taste for these things is a taste, we suppose; we know that there are some people who have not got it, or who, to speak more accurately, would rather, if it be necessary to be told that two and two make four, hear the fact from Solomon or Plutarch or Montaigne than from anybody of their own day. However, the things may do good, and it is just possible that such a sentence as, "on the whole far more harm is done by irresolution than by precipitation," may act as a fine moral tonic to somebody. It is almost needless to say that whatever Mrs. Craik writes is excellent in intention, pure in taste, and sensible in purport. "Decayed Gentlewomen," perhaps, comes nearest to the general title; and, for aught we know, it may prove as irritating as the famous paper in which Mrs. Craik said that she knew a duchess who wore stuff dresses, or a duchess who did not wear stuff dresses, for the details of this important matter abide not with us.

*Local Government and Taxation in the United Kingdom.* "Cobden Club Essays." (Cassell, Petter, Galpin and Co.) In 1875 the Cobden Club published a volume of Essays upon Local Government. The object of that volume was to trace the history and exhibit the working of local institutions in various foreign countries, and, by comparison of their merits and defects with those of our own system, to throw light on its characteristic features, and promote the cause of reform at home. The Public Health Act of 1875, a mere consolidation Act, was the single contribution of the late Government towards the improvement of our local administration. This volume of Essays, which deals only with local government and taxation in the United Kingdom, sees the light under happier auspices. The present Ministry are pledged to deal with local reform in a comprehensive spirit; and measures for the creation of representative county boards, and for giving a municipal government to London, are among those mentioned in the Queen's Speech. The subjects discussed in the essays now before us are therefore well within the range of practical politics—a consideration which adds not a little to the interest of the essays themselves. To this series, as to the last, Mr. Brodriak contributes the first paper, taking as his subject Local Government in England. He begins by sketching, in his usual clear and vigorous style, the history and fortunes of English local institutions from Saxon times until the Reform Act of 1832. He then describes the immediate origin and work-

ing of our present system, if system it can be called, of local administration, and after critically examining its principles and more important details, proceeds to discuss the necessary conditions of any effective measures of reform. He concludes with suggestions for a scheme of reconstruction of local administration. The greater part of Mr. Brodriak's scheme would in principle command general assent, but his idea of attempting the solution of the Church and State question by giving large control over ecclesiastical matters to local authorities is one which few people are at present prepared for. His proposal that local councils should be directly represented in Parliament is not likely to pass unchallenged; but these two suggestions are merely collateral to the main purpose of his scheme. Mr. C. D. T. Aoland, the new member for East Cornwall, contributes a second essay, his subject being "County Boards." Lord Edmond Fitzmaurice devotes a paper to "The Areas of Rural Government." The facts he brings forward fully justify Mr. Goschen's description of the English system of local government as "a chaos of areas, a chaos of authorities, and a chaos of rates." Mr. T. B. Firth's essay on "London Government and How to Reform it" will probably be read with more interest than approbation by people connected with the Corporation. The vestries, too, may not altogether appreciate the idea, so pleasing to Buddhists, of absorption into a higher existence. Mr. T. Thackeray Bunce, of Birmingham, takes for his subject "Municipal Boroughs and Urban Districts;" while Local Government and Taxation in Ireland, Scotland, and Wales are dealt with respectively by Mr. O'Shaughnessy, Mr. Macdonald, and Mr. Roland Phillips. The volume is edited by Mr. T. W. Probyn, and a careful index at the end adds much to its practical utility.

*Familiar Allusions: a Hand-book of Miscellaneous Information.* By William A. and Charles G. Wheeler. (Chatto and Windus.) This is a book that deserves a treble lash from the critic. To begin with, neither its title nor sub-title gives an adequate indication of its contents, which are thus described lower down on the title-page—"the names of celebrated statues, paintings, palaces, country seats, ruins, churches, ships, streets, clubs, natural curiosities, and the like." In the second place, it is an American article, though nowhere so expressly stated, and no better adapted for English consumption than is the *New York Herald*. Lastly, and chiefly, its "miscellaneous information" exhibits on every page the most desperate and irritating ignorance. There is a certain class of mistakes in fact which are pardonable, because the subject-matter is abstruse or the truth doubtful. But when a writer presumes to explain "familiar allusions," we expect him to know that the "Grosvener Gallery" is not the same as the collection of the Marquis (sic) of Westminster; and that the county of Northumberland is not in Scotland. It is just to add that absolute misprints are few; and that the binding (colour apart) is so excellent that we grudge it sorely to such an interior. Messrs. Chatto and Windus have before now published many books of reference of varying degrees of value, but, so far as we know, none so well got up, and so worthless, as this.

*My Boy and I; or, the Road to Slumberland.* By Mary D. Brine. (Trübner.) The strength of Samson was in his hair; and the charm of this attractive but odd-looking volume lies in its binding, its typography, its illustrations, and its externals generally, rather than in the lyrics in which Mrs. Brine celebrates the known joys of motherhood and the imagined delights and cares of baby-life. The embossed leather cover, with its primitive fastenings of

silk, can hardly fail to charm lovers of the curious; and the binding does not stand alone, but is, so to speak, carried out in the brown German-text typography, and in the very charming decorative treatment of the opening stanza of each lyric. One is struck with the oddity rather than with the beauty of the book, and the taste for such things is probably acquired. But this remark can be made of so many of our tastes that to make it of any one taste in particular is, perhaps, rather beside the mark; and *My Boy and I* must be declared to be, on the whole, decidedly attractive.

READERS of Mr. Bisset's former works will probably know what to expect from his little book under the title of *A Short History of the English Parliament* (Williams and Norgate). He discourses on things in general, and relieves his mind on the subject of kings and other persons in authority. The following passage will probably convey an idea to others of the spirit in which the book is written:—

"If Simon de Montfort had not been of moral materials, which made a broad difference between him and the common run of the founders of thrones; if he had not been a man as remarkable for a scrupulous observance of truth, justice, and honour as for genius and valour, there can, I think, be little doubt that the name of the Kings of England might for some generations have been De Montfort instead of Plantagenet."

*XVII. Opusculæ by Juan de Valdes.* Edited by J. T. Betts. (Trübner.) Juan de Valdes, who died in 1541, before the Inquisition was yet very terrible at Naples, made the strongest intellectual impression of any among the small groups of Spaniards who sympathised with what is called the Reformation. Most of these little treatises and introductions to scriptural commentaries were composed for Lady Giulia Gonzaga, and have been lately recovered from the library of the Emperor Maximilian II., now preserved at Vienna. Their tone is a mystical quietist Calvinism, ready to pass into Socinianism. The writer uses orthodox language, without *arrière pensée*; but where the Fathers saw a clear revelation he only sees impenetrable mystery.

*The Vision of the Eucharist, and other Poems.* By Alfred Gurney. (Kegan Paul, Trench and Co.) These verses, by the Vicar of St. Barnabas, Pimlico, are always smooth, sometimes musical, now and then suggestive. The author often echoes Faber; in the "Modern Pilgrimage" he borrows the metre, something of the tone, if little of the charm of "In Memoriam." A book of half-sonnets is a new and not unhappy experiment; the same metre is employed in the "Vision of the Seven Seals."

*Authors and Authorship.* By W. Shepard. (New York: Putnam's Sons.) We have the profoundest doubt whether Mr. Shepard ought to have written his book, because his principle, which is that "lovers of books ought to love to hear about writers of books," is one with which we disagree irreconcilably. This protest being duly made, let it be said that Mr. Shepard has done his work inoffensively, and without prying into any private sources of information. He has got together as many first-hand testimonies from English and American authors as possible about the pecuniary gains of authorship, the ways of editors, &c., &c., &c. Much of the book is amusing, and, as almost all of it has been voluntarily published by the persons concerned, there is not, we suppose, much good in protesting against its republication. Mr. Payn's famous freak, of course, appears. We are sorry to say that a certain other recent composition, in which an English author confessed how, without any pressure of necessity, he had descended to the lowest class of bookmaking and hackwork, and how he pestered managers for free admissions, appears likewise.

## NOTES AND NEWS.

MR. JAMES MACDONALD HORSBURGH, senior master of modern subjects at Radley College, has been elected out of forty-four candidates to succeed Mr. Nicholson as principal librarian and superintendent of the London Institution. Mr. Stanley Lane-Poole, the Orientalist, stood next, and after him Mr. J. Y. W. MacAlister, librarian of the Leeds Library. No one over forty years of age was admitted as a candidate, and these gentlemen were all under twenty-nine.

MESSRS. KEGAN PAUL, TRENCH AND CO. are about to add to their "Parliament Library" an edition of Shakspeare's Works, without notes or comment, but printed in the style which has hitherto distinguished that series. The works will be comprised in twelve monthly volumes, of which the first will be ready on May 1. The text will be mainly that of Delius, and the chief difference will consist in a more sparing use of punctuation, commas being scattered in the German book as out of a pepper-caster. Whenever the editor has adopted a variant reading, he has followed some good and recognised Shaksperian critic; he has in no case altered the text himself.

MR. EGMONT HAKE's new volume, *Flattering Tales*, which has been expected for some time, will appear next week. The publishers are Messrs. Remington and Co., who will also issue *Songs and Rhymes*, by Mr. Walter H. Pollock, and *Poets' Walk*, by Mr. Mowbray Morris.

SOME delay has arisen in the preparation and printing of the concluding portion of Prof. Skeat's *Etymological Dictionary*. The fourth part has been extended to more than 300 pages, but the price of it will be the same as that of the preceding parts. We believe that the date of publication is now definitely fixed for the first week in May. The abridgment of the work, by the same author, will appear simultaneously, with the title, *A Concise Etymological Dictionary of the English Language*.

PROF. RHYS has finished his little monograph on Celtic Britain, which will be published by the S. P. C. K. in the series begun by Mr. Grant Allen's *Anglo-Saxon Britain*.

THE interest in the sacred books of the East is spreading. We hear from Calcutta of a translation of the Koran into Bengali being published by Bhai Grish Chunder Sen. The Moulevis in Calcutta speak well of it, and vouch for the accuracy of the translation.

PROF. MAX MÜLLER's Hibbert Lectures have been translated into Guzerathi by Mr. Behramji Malabari. The translator has added a Life of the author, and a full account of his labours. We learn from the Preface that this translation is to be followed by other translations into Sanskrit, Bengali, Hindustani, Marathi, and Tamil.

MESSRS. GEORGE BELL AND SONS have in the press a somewhat notable book. For many years Mr. Edwin W. Streeter has been engaged in collecting materials for something like an authoritative history of the world's famous diamonds. In collaboration with Mr. Joseph Hatton and Mr. A. H. Keane (a well-known Oriental scholar), he has completed a very interesting volume, entitled *The Great Diamonds of the World*. In addition to the literary alliance just mentioned, Mr. Streeter has had the honour to have had the MS. of the chapter on the "Koh-i-nûr" graciously read by the Queen, and those on "The Pitt," "The Eugénie," and other stones revised and corrected by Her Majesty the Empress Eugénie. The Ministers and ambassadors of several European Courts have contributed valuable information, and the result will be a unique addition to the romance of history.

MR. STANLEY LANE-POOLE's volume of *Speeches and Table-Talk of the Prophet Muhammad* will be published in Messrs. Macmillan's "Golden Treasury" series early in May. It is not a volume of selections, in the sense of choice sentences deprived of their context, but a series of entire chapters, or speeches, typical of each stage in the prophet's career. It is believed that the twenty-five chapters selected contain, with a few supplementary notes, all the practical teaching of the Koran, and illustrate sufficiently the mental and oratorical development of Mohammad. The table-talk is, of course, a selection from the traditions.

WE are informed that the long-expected translation of Eduard von Hartmann's *Philosophy of the Unconscious*, by Mr. W. C. Coupland, will appear before the end of this year in three volumes, as a fresh instalment of Messrs. Trübner's "English and Foreign Philosophical Library." The same firm will also publish early in 1883 an English translation of Schopenhauer's great work, *The World as Will and Idea*, by Messrs. B. B. Haldane and John Kemp. It will also be in three volumes, and will likewise appear in the "Philosophical Library."

A NEW volume of poems and sonnets by Miss Bevington, author of *Key Notes*, is in the press, and will shortly be published by Mr. Elliot Stock, who will also issue at an early date a volume of poems by Mr. William Sharp entitled *The Human Inheritance: The New Hope; Motherhood*.

ANOTHER English version of *Don Quixote* will shortly appear. The text is substantially that of Motteux, but considerably revised and emended. The introductory verses generally omitted will be given complete. F. G. Lockhart's Life of Cervantes and notes will also appear in an amended form. This edition will form two volumes of "Bohn's Standard Library," which already contains translations of translations of the *Galatea* and the *Novelas Ejemplares*.

THE same publishers (Messrs. Bell) also have in the press a biography of Kant by Mr. E. Belfort Bax, which will precede the translation of the *Prolegomena* announced some months ago.

MESSRS. REMINGTON AND CO. will publish next month the *Life and Letters of Berlioz*, translated from the French by Mr. H. Mainwaring Dunstan; and *Russians and Germans*, by M. Tissot, the French ambassador in England, translated by Mr. S. L. Siméon. The same firm will also publish the following novels:—*A Royal Amour*, by Mr. R. Davey; *Tempted of the Devil*, by the Author of "A Fallen Angel"; and *The Dawn of the Twentieth Century*, by the Rev. Augustus K. B. Granville.

A SERIES of "Holiday Handbooks" is in preparation to some less-frequented districts at home and on the Continent. The first, *A Trip to the Ardennes*, by Mr. Percy Lindley, will be followed early in May by *A Holiday in Holland*, to which a chapter on "North Holland and the Death Cities of the Zuyder Zee" will be contributed by Mr. Thomas Purnell.

MR. REGINALD LANE POOLE has undertaken to edit for the Wyclif Society the treatise *De Dominio Civili*, being Books III., IV., and V. of Wyclif's *Summa Theologiae*.

A SECOND edition has been published of Mr. Serjeant Ballantine's *Experiences of a Barrister's Life* (Bentley). The same publishers have ready *Corbie's Pool*, a novel by Susan Morley, in two volumes, crown octavo, and *Eau de Nil: a Nile Diary*, by E. O. Hope-Edwardes.

MR. HENRY SWEET having decided to put off till next year the publication of his *Oldest English*

*Texts*—from the seventh to the tenth century—for the Early-English Text Society, the auto-types and annotated transliteration of the unique MS. of *Beowulf*, edited by Prof. Zupitza, will be the society's chief issue in its original series this year.

A BROWNING society is forming at Girton College. It is intended to hold three meetings a term, at each of which a paper is to be read, and its reading followed by a discussion. "Caliban on Setebos," "Saul," and "Browning as a Translator" are the subjects for next term. A small society, or Browning reading club, has been in existence at Newnham College for some time.

MR. TREVES' lecture on "The Dress of the Period," recently delivered at Kensington, will be published immediately by Messrs. Allman and Son.

MESSRS. JAMES NISBET AND CO. will publish immediately an edition of the Psalms pointed for chanting by Sir Herbert Oakeley, Professor of Music at Edinburgh University, and adapted by him to suitable chants.

A PAMPHLET by Mr. Arthur Crump, reviewing the position and prophecies of the Bimetalists, will appear immediately. The publisher is Mr. Effingham Wilson, Royal Exchange.

THE lectures which Mr. E. A. Freeman has been delivering during his visit to America are to be collected into a volume, with Mr. Freeman's authority, and published by Messrs. Porter and Coates, of Philadelphia. The title will be "The English People in their Three Homes, and the Practical Bearings of General European History."

WE hear that Messrs. Macmillan's cheap illustrated edition of *Tom Brown's Schooldays* is having an extensive circulation in the United States, where the price charged is ten cents.

MESSRS. HOUGHTON, MIFFLIN AND CO., of Boston, U.S., announce the publication by subscription of an *édition de luxe* of English and Scottish popular ballads, edited by Prof. Francis J. Child, of Harvard. Special attention has been given to obtaining a faithful text, all known sources having been collated, and independent versions being reproduced in full. Each ballad will have its own preface, and references will be given to foreign analogies. There will be a general introduction, full indexes, and a careful glossary. It is proposed to publish the work in eight parts, each containing about 250 pages.

WE learn from the *Literary World* that Mrs. MacGahan, widow of the well-known correspondent of the *Daily News*, has written a book on the social condition of Russia. Mrs. MacGahan is connected by marriage with the Dolgorouki family.

MESSRS. D. LATHROP AND CO., of Boston, U.S., will shortly publish a Life of Horace Greeley, by Mr. W. M. Cornell.

THE Maryland Historical Society, which has a publication fund of 20,000 dollars (£4,000), bequeathed by George Peabody, proposes to use part of this in printing certain Maryland documents, missing from the State archives, but preserved in our own Record Office.

THE May number of the *Century* will have a portrait of Mr. Lowell for frontispiece, with an essay on his poetry by Mr. E. C. Stedman. Mr. Lowell will himself contribute a short poem, called "Estrangement."

THE *Critic* states that Mr. Alexander H. Stevens, on retiring from public life, proposes to devote himself to the preparation of a political history.

A BROWNING reading and discussion society has been formed at Cheltenham, in connexion with the parent society in London.

THE latest number of Franz von Holzendorff's *Zeit und Streitfragen* (Berlin: K. Habel) consists of a memoir of Bluntschli, who is described as equally pre-eminent among his contemporaries as "a scholar and a character," from the editor's own pen. Prof. von Holzendorff appeals for the support of the Bluntschli-stiftung. The number contains also a portrait of the great jurist.

THE editors of the official collection of the older Swiss Federal *Abchiede* have advanced so far with their work during the last year that two new instalments will shortly be published—vol. iv., part i. (1541-48), and vol. vi., part ii. The Repertorium of the modern *Abchiede* from 1803 to 1813 has made little progress. Meanwhile, Dr. Strickler has advanced as far as the fourth, and apparently last, volume of the collection of documents illustrating the history of the Swiss Reformation. The entire work will embrace the period 1521-32, and contain over 2,000 documents. The editing of the documents of the period of the Helvetic Republic (1798-1803) is in progress, but no portion of it is as yet ready for the press. There seems to be a wish among Swiss historical scholars that the printing of this portion of the official *Aktenammlung* should be delayed.

**Errata.**—In the translation from Cynewulf by Miss Hickey, published in last week's ACADEMY, "Long, while," in l. 18, should read "Long while;" "brought," in l. 22, should read "wrought;" "when," in the same line, should read "where;" and "warrior's," in l. 59, should read "warriors."

#### FRENCH JOTTINGS.

THE results of the mission of two French scholars to Tunis, to search for Arabic MSS. and inscriptions, will disappoint the sanguine hopes that have been entertained in some quarters. The scholars chosen were MM. René Basset and Houdas, both professors at the Ecole supérieure of Algiers. At the capital of Tunis itself every difficulty was thrown in their way. They were refused access to the mosques, to the *madrasa*, or college, and also to private libraries. Even the booksellers would not sell to them except through the intervention of a third party. At the holy city of Kairouan they were better received. The library of the great mosque contains nothing of importance; but in the house of the Sheikh Addun were found about twenty-four MSS., all of which were examined and catalogued, and of three a copy was taken. The most interesting is the *Ma'rifat el-Agalim* of el-Fezari, a geographical treatise of the eleventh century. At Kairouan, also, copies were taken of several Cufic inscriptions. By the latest news, M. Houdas had returned to Tunis to explore afresh the libraries of that city; while M. Basset was travelling southwards, through Monastir, Sfax, and Gabes, in search of inscriptions which are said to exist there. An Arabic MS., containing an historical and geographical account of Kairouan in the fifteenth century by one Ibn el-Nadji, which was bought at Tunis, has been found to be identical with one preserved in the Bibliothèque nationale.

THE Académie française has found itself unable to award the *prix d'éloquence*, just as last year it refused to award the *prix de poésie*. The subject was an *éloge* of Rotrou, the elder contemporary and friend of Corneille. Out of twenty competitors, the work of five was taken into serious consideration, and to one of these a medal of 1,000 frs. was given. But this was admitted by its author to be an *étude* rather than an *éloge*; and it is suggested that the Académie should modify the conditions of its competitions, to bring them into accord with the critical spirit of modern literature.

M. G. MONOD has addressed a letter to the current number of the *Revue politique et littéraire* upon the new military Bill of M. Gambetta, which proposes to reduce the period of service to three years, and at the same time to abolish all exemptions. The eminent historian and teacher, pleading on behalf of the higher education which he has done so much to promote, suggests that the term should be reduced to two years in favour of those who have taken the degree of bachelor, and to a single year for those who have pursued their studies further. In his own words, his object is "pour imposer, si je puis dire, à la bourgeoisie française, l'enseignement supérieur obligatoire."

OUR correspondent at Paris, M. Paul Bourget, will publish immediately with M. Lemerre a volume of verses entitled *Les Avenez*.

At a recent meeting of the Académie des Inscriptions et Belles-Lettres, M. Hauréau read a paper upon the authorship of the *Liber de viris illustribus*, which is commonly attributed to Henry of Ghent. Three early catalogues of the writings of this celebrated schoolman are in existence, but none of them assign this work to him, though one of them (John of Trittenheim) quotes from it frequently. The only MS. of the work, that in the Bibliothèque nationale, represents it as anonymous—*Liber cujusdam de viris illustribus*. The first to give the authorship to Henry of Ghent was Suffride Petri (1580), who gives no reasons for his statement; and all subsequent writers have simply followed him. The internal evidence is still more decisive. The author of the *Liber* states that he has not read the works of Albertus Magnus; whereas Henry of Ghent was first the pupil, and afterwards the opponent, of Albertus Magnus, and of course quotes freely from his works. Similarly of Thomas Aquinas, whom also Henry of Ghent controverted, there is a totally inadequate mention in the *Liber*. The author may have been called Henry, and may have lived at Ghent, but he was certainly not the famous schoolman, but possibly a monk or regular canon who knew nothing of the philosophical controversies of his time.

M. GASTON PARIS, of the Collège de France, proposes shortly to publish a complete bibliography of his father, the late Paulin Paris, of which he has issued by anticipation a summary under the title of *Paulin Paris et la Littérature française au Moyen-âge*.

#### ORIGINAL VERSE.

CECINNIT VIATOR.

LIKE child, who in a meadow fair  
Pulls berry bright and blossom new,  
Yet knows he may not linger there  
For heavy task at home to do—  
Or him of whom the Phrygian tells,  
Shell-gathering by the sleeping main,  
Content to cast aside his shells  
Called by the Boatswain back again—  
Through fields so fair so journey I;  
Yet pass with not too curious eye.

DAVID FITZGERALD.

#### OBITUARY.

DANTE GABRIEL ROSSETTI.

AT Westcliffe Bungalow, Bournemouth-on-Sea, Thanet, Kent, Dante Gabriel Rossetti died on Sunday last at 10 p.m. He had been seriously unwell during some eight or nine months previously; and his illness, understood to be in the first case due to prostration of the nervous system, the result of overstrain and general excitement, resulted in a disorder of the kidneys which soon terminated fatally. About the beginning of December he suffered from an attack of the nature of paralysis, which took part-possession

of his left arm and leg. Rallying in a measure from this serious blow, he was advised by his medical attendant, Mr. John Marshall, to try a change of air at the sea-side; and, in pursuance of the advice, he left London for Bournemouth-on-Sea in the early part of February. Here at first he appeared to recover strength, but very soon it became apparent that a new phase of illness was setting in. He lost the power of taking active exercise, and ultimately became confined to his bed. On Good Friday, alarming symptoms having declared themselves, his relatives and immediate friends were summoned; and, besides his mother and sister and myself, who had been present throughout the later phases of his illness, his brother, William Michael Rossetti, Mr. Frederick Shields, and his constant friend, Mr. Theodore Watts, were with him at the end.

Dante Gabriel Rossetti was the eldest son of Gabriele Rossetti and Frances Polidori, daughter of Alfieri's secretary and sister of the young physician who travelled with Lord Byron. Gabriele Rossetti was born at Vasto, in the mountainous district of the Abruzzi. He was a patriotic poet of very considerable distinction; and, having become a member of the Provisional Government, he took a part in extorting from Ferdinand I. the Constitution of 1820. After the failure of the Neapolitan insurrection, owing to the treachery of the King (who asked leave of absence on a pretext of ill-health, and returned with an overwhelming Austrian army), the members of the Provisional Government were compelled to fly. Some of them fell victims; others lay long in concealment. Rossetti was one of the latter; and, while he was in hiding, Sir Graham Moore, the English admiral, was lying with an English fleet in the bay. The wife of the admiral had long been a warm admirer of the republican hymns of Rossetti, and, when she learned his danger, she prevailed with her husband to make efforts to save him. Sir Graham thereupon set out with another English officer to the place of concealment, habited the poet in an English uniform, placed him between them in a carriage, and put him aboard a ship that sailed next day to Malta, where he obtained the friendship of the governor, John Hookham Frere, by whose agency valuable introductions were procured, and ultimately Rossetti established himself in England. Arrived in London about 1823, he lived a cheerful life as an exile, though deprived of the advantages of his Italian reputation. He married in 1823, and his eldest son was born May 12, 1828, in Charlotte Street, Portland Place, London. He was appointed Professor of Italian at King's College, and died in 1854. His house was for years the constant resort of Italian refugees; and I have heard the son say that it was from observation of these visitors of his father that he depicted the principal personage of his "Last Confession."

Dante Gabriel Rossetti, whose full christened name was Gabriel Charles Dante Rossetti, has died on the eve of the completion of his fifty-fourth year, after becoming illustrious in two arts, after directly influencing two generations of English painters and one important school of English poets, and after gathering about him a following scarcely second to that of any man of his time in either half of his twofold walk of life. He was educated principally at King's College School, London, and there attained to a moderate proficiency in the ordinary classical school-learning, besides a knowledge of French (which throughout life he spoke well) and some acquaintance with rudimentary German; Italian he had mastered at a very early age. There has always been some playful mention of certain tragedies and translations upon which he exercised himself from the ages of five to fifteen years; but it is hardly necessary to say that he himself never attached value to these efforts of his precocity, and even displayed, occasionally,

a little irritation upon hearing them alluded to as remarkable youthful achievements. Having from childhood shown a propensity towards painting, the strong individual inclination was fostered by his parents, and art was looked upon as his future profession. Upon leaving school about 1844, he studied first at an art academy near Bedford Square, and afterwards at the Royal Academy Antique School, never, however, going to the Royal Academy Life School. He left the Academy about 1848 or 1849, and in the latter year exhibited his picture entitled the "Girlhood of Mary Virgin." This painting is a beautiful example of his early art, before the Gothicism of the early Italian painters became his quest. Better known to the public than the picture is the sonnet written upon it, containing the beautiful lines:—

"An angel-watered lily, that near God  
Grows and is quiet."

It was while Rossetti was still under age that he associated with Millais, Holman Hunt, Thos. Woolner, Jas. Collinson, F. G. Stephens, and his brother, W. M. Rossetti, in the movement called pre-Raphaelite. It has sometimes been stated that Ruskin was an initiator, but this is not strictly the case. The company of young painters and writers who inaugurated the movement are said to have been ignorant of Ruskin's writings when they began their revolt against the current classicism. It is a fact, however, that, after, perhaps, a couple of years, Ruskin came to the rescue of the little brotherhood (then so much maligned) by writing in their defence a letter in the *Times*. It is very easy to make too much of these early endeavours of a company of young men, exceptionally gifted though the reformers undoubtedly were, and inspired by an ennobling enthusiasm. In later years Rossetti was not the most prominent of those who kept these beginnings of a movement constantly in view; indeed, it is hardly rash to say that there were moments when he seemed almost to resent the intrusion of them upon the maturity of aim and handling which, in common with his brother artists, he ultimately compassed. But it would be folly not to recognise the essential germs of a right aspiration which grew out of that interchange of feeling and opinion which, in its concrete shape, came to be termed pre-Raphaelite. Rossetti is acknowledged to have taken the most prominent part in the movement, supplying, it is alleged, much of the poetic impulse as well as knowledge of mediæval art. He occupied himself in these early years mainly in the making of designs for pictures; and a few of these were exhibited in London and Liverpool, the only noteworthy circumstance in connexion with them being that at the latter place he exhibited the first study for the "Dante's Dream" which was last year purchased by the corporation of that city. It may be said that almost from the outset he viewed the public exhibition of pictures as a distracting practice; and hence his reputation as a painter has had to depend mainly upon the enthusiasm of the few fit judges who have had access to the private collections (Mr. Leyland's, Mr. Rae's, Mr. Graham's, Mr. Turner's, &c.) containing his works. There is yet another factor among the agencies at work in establishing a prominent position for a painter who never invited publicity, and that is the influence exercised upon a younger generation of artists. Shortly after his rank as a painter had become completely established, Burne Jones arose; and he has more than once generously allowed that he owed much to Rossetti at the beginning of his career, and still regards him as, in a sense, the leader of the movement with which his own name is now so eminently and distinctively associated. His own indebtedness as an artist he was accustomed to speak of as chiefly due to Madox-Brown, with whose cartoons exhibited

at Westminster Hall about 1846 he appears to have been very deeply impressed. An intimacy arose between them, which lasted throughout Rossetti's life; but Brown never joined the pre-Raphaelite school of painters, mainly, it is said, from dislike of coterie tendencies. To sum up what remains at this moment to say of Rossetti as a pictorial artist, we may describe him (as he liked best to hear himself described) simply as a poetic painter. What is meant when we speak of his special method is a distinct poetic abstraction, together with a choice of mediæval subjects, and no less vivid rendering of nature than is found in other painters. At the beginning of his career he recognised, in common with his associates, that the contemporary classicism had run to seed, and that, beyond an effort after perfection of technique, the art of the period was all but devoid of purpose, of thought, imagination, or spirituality. At such a moment it was matter for little surprise that ardent young intellects should go back for inspiration to the Gothicism of Giotto and the early painters. There, at least, lay feeling, aim, aspiration, such as did not concern itself primarily with any question of whether a subject was painted well or ill, if only it were first of all a subject at all—a subject involving manipulative excellence, perhaps, but feeling and invention certainly. And with those early designs (the outcome of such a quest as I indicate) there came, perchance, artistic crudities enough, but assuredly there came a great spirituality also. Thenceforward Rossetti perceived that he must make narrower the stream of his effort if he would have it flow deeper; and for many years he perfected his technical methods by confining himself to simple three-quarter length pictures. One only of his early designs, the "Dante's Dream," did he ever paint on a scale commensurate with its importance; and the solemnity and massive grandeur of that noble work leave only a feeling of regret that, whether from personal indisposition upon the part of the painter or lack of adequate recognition upon that of the public, the three or four other finest designs made in youth were never carried out. There is a design representing Mary Magdalene at the door of Simon the Pharisee; another depicting the death of Lady Macbeth; and a third, called "Desdemona's Death-song," which he himself felt anxious to paint. A great work, entitled "Found," the subject of which may be gathered from a sonnet under that name in *Ballads and Sonnets*, has been in hand for fully twenty years—being worked upon from time to time, yet even now left incomplete. Certain of the three-quarter pictures I allude to are in Rossetti's finest manner, as, for example, Mr. Rae's "Sibylla Palmifera," Mr. Leyland's unfinished "Salutation of Beatrice," and Mr. Valpy's "Dying Beatrice." Of these works, solidity may be said to be the salient characteristic. The drapery of Rossetti's pictures is akin in quality to that of Rembrandt; his colour may be said to be at times almost matchable with that of Tintoret. He hated beyond most things the "varnishy" look of some modern work; and his own oil pictures had so much of the manner of frescoes in this particular that they were sometimes mistaken for water-colours, while, on the other hand, his water-colours had often so much depth and brilliancy as sometimes to be mistaken for oil. It is alleged in certain quarters that Rossetti was deficient in some qualities of drawing, and this is no doubt a just allegation; but it is beyond question that no English painter has ever been a greater master of the human face, which in his works (painted in later years) acquires a splendid solemnity and spiritual beauty and significance all but peculiar to himself.

Concerning Rossetti's literary life and opinions

I must necessarily be brief. I have said that he early displayed talent for writing as well as painting, and (his efforts of childhood out of the question) I think the poems he wrote in youth must be considered even more remarkable than the pictures he painted contemporaneously. I hardly know whether it will add to the marvel of mature achievement, or subtract from the sense of reality of personal experience, to make public the fact that the "Blessed Damsel" was written when the poet was no more than nineteen years of age. The extraordinary story entitled "Hand and Soul," which appeared about eight years ago in the *Fortnightly Review*, was written at twenty. I have heard the author say that he sat up all night to write it, and that the emotional strain involved in the prolonged tension left him mentally and physically prostrate for days afterwards. Several of the sonnets on pictures—as, for example, the very fine one on a Venetian pastoral by Giorgione (published first with the "Blessed Damsel" and other poems in the *Germ*)—were written very early in life. A first draft of "Jenny" was struck off while Rossetti was scarcely more than a boy, and taken up again many years afterwards, and almost entirely rewritten—the only notable passage of the early poem that now remains being the passage on lust. "Sister Helen" is of later origin, belonging, probably, to the poet's twenty-sixth or seventh year; the only material changes made in it are the eight fresh stanzas added to the printed poem last year, and written in 1880. The great sonnet on "Lost Days" is not an early work; I have not heard its precise date, though I have heard at what terribly opportune moment this cry of a baffled spirit was wrung from him. "Rose Mary" in the new volume was written about a year after the publication of the first volume in 1870, the "Beryl Songs" being added much later; the "White Ship" belongs to 1879-80, and the "King's Tragedy" was written in the spring of 1881. "Cloud Confines" was written about the time of its appearance in the *Fortnightly*, and was, in his opinion, altogether his finest lyric work. Of the sonnets recently added to the "House of Life," the three spiritual ones on "True Woman" were almost, if not quite, the last composed. The translations were made between 1845 and 1849, and published in 1861. I believe this to be an accurate statement of the chronology of the poems. Rossetti was not a prolific writer, yet he was indisputably a swift one. I have heard that the first drafts of "Rose Mary" and the "King's Tragedy" were turned off in the incredibly short space of three weeks each. A sonnet, as I know, was often composed in half-an-hour, and sometimes in ten minutes. It would not be just, however, in saying so much, to forbear to add that Rossetti was an unwearying reviser of his work, usually keeping it by him for long periods, and touching and retouching it at intervals, and never publishing until he believed every line had been brought up to, what he considered, his highest level. He thought himself an exceptionally equal writer; and, certainly, he spared no pains to become so. Nevertheless, he believed the "King's Tragedy" to be his most memorable work, partly because (with all its historical fidelity) it brought more invention into play, and partly because it offered the highest opportunity for the development of the supernatural element, in which he must have felt his mastery. Critical conjecture is likely to go a good deal astray in his case as to his primary sources of inspiration in literature. It is an obvious assumption that Dante was his model as sonnet-writer. This, however, is far from the fact. His earliest and latest model, in all condensed and emphatic utterance, whether of sonnet or song, was not Dante, but Shakespeare.

With our national poet he had an intimacy of acquaintance (extending even to a literal remembrance of countless passages) which I have certainly never met with elsewhere, unless it be in the person of Mr. Swinburne.

Of the capacity possessed by some eminent men for philosophical analysis he may not have exhibited much; but nothing could exceed the depth of his poetic sympathy, which, when it displayed itself occasionally in the reciting of a passage from "Macbeth" or "King Lear," stirred the listener as no stage representation could move him. Rossetti's voice was of a full rich quality, and of great compass. I should not say that during the period of my acquaintance with him (the period mainly of broken health, however) he was in the complete sense a great talker. He was too uncertain, too unequal, to be that; but at moments of unusual animation he would rise to a splendour of sustained speech which, while never passing the limits of conversation, and never impinging on monologue, was for fervour, incisiveness, and force beyond anything I have heard from any other man. In his personal character Rossetti was a born leader. He had just that emphasis of purpose which is necessary, and added to it was a magnetic quality about his personality which attracted men upon first acquaintance. The geniality of his greeting was a conspicuous point in his manners: it never failed him, and never, even at moments of illness, was it lacking. He lived so secluded a life that his face was not familiar beyond his immediate circle. He was of the type of figure considered typically English; and English, not Italian, he constantly considered himself—English, and a countryman of Shakespeare. Moreover, his face in later life, when the hair receded from his forehead, became as much like the Stratford bust as like the portrait taken of him a dozen years ago; Watts's portrait was painted early in his life. His distinguishing characteristic as a man of letters was appreciativeness, unbiassed admiration of good work by whomsoever done. While he lay on the bed from which he never rose, I told him the story of one of Mr. Buchanan's new ballads, and he seemed deeply touched. His sympathies in literature were of the broadest; he believed Tennyson to be, after Coleridge and Keats, the great poet of the century; he was not, like his brother, a very ardent Shelleyan, though, of course, an admirer; he recited Browning's "Childe Roland," Swinburne's "Dolores," W. B. Scott's sonnets, and passages from Morris's "Earthly Paradise" with unwonted animation. Of many of the younger writers he spoke warmly—Mr. Payne, Mr. O'Shaughnessy, Mr. Gosse, Mr. Watson, Mrs. Meynell, Mr. Sharp, Mrs. Webster, Miss Blind, Miss Robinson, Mrs. Pfeiffer, and, most of all, Mr. Marston. He never wearied of helping forward the talent he thought neglected. The revival of Charles Wells is probably due as much to his enthusiasm as to Mr. Swinburne's noble essay; and the revival of Ebenezer Jones arose with him.

I have not always seen him under the best or even under fair conditions. I found him, nevertheless, in the main, earnest, sympathetic, and affectionate. Reminiscences of his last days I may at another moment commit to writing. The insomnia which throughout more than a dozen years induced the use of chloral did something, no doubt, in later years to deprive him of the amiability that was natural to him; but, in common with all his more immediate friends, my personal recollections are only of grateful expressions and warm solicitude; and these are equally the recollections of his relatives—his mother, in her eighty-fourth year (to whom he was devotedly attached), his sister Christina, his brother, and his self-sacrificing friend, Mr. Theodore Watts.

T. HALL CAINE.

### MAGAZINES AND REVIEWS.

Of the three half-crown magazines, the *Fortnightly* gives us not only the best, but also the most readable number for April. Three articles, which are distinctly political, present views of Syria, Russia, and the Transvaal. Each of these is fresh; and the first of them, by Mr. Valentine Chirol, will be to most of us almost a revelation of French diplomacy in the Levant. Mr. Frederic Harrison's recent lecture at the London Institution upon "The Nineteenth Century," which has the leading place, is somewhat disappointing. The style is brilliant, and there are many suggestive points; but we look in vain for any sober statement of the real characteristics of modern civilisation. A similar criticism must be passed upon the one literary paper in the number—that on "Emile Zola," by Mr. Andrew Lang. The analysis is very elaborate in detail, but the true position of realism in literature is left undiscovered. As essays of this sort are not unfrequently destined for republication, we may be pardoned for noticing that Mr. Lang has invented a comment which he puts into the mouth of Mr. Pickwick. We have failed to appreciate the point of Mr. Montagu Lubbock's article on "The Development of the Colour Sense," in so far as it is meant to be a criticism of Mr. Grant Allen. By far the strongest article in the number is that by the editor himself, on James Mill, suggested by Dr. Bain's recent book. The first of our living biographers here sets himself to review a biography which is very open to animadversion in form and in style. Incidentally, he has let his pen wander into several interesting digressions; and he finishes with the striking question—Where is the school of liberal thought now to be found that can compare in comprehensiveness with that of which James Mill was the spokesman? We are disposed to ask another question—Are we not to have a Life of J. S. Mill? Who alone is worthy to be his biographer we have no doubt.

THREE articles at least in the *Nineteenth Century* deserve attention. Dr. Siemens gives us "A New Theory of the Sun," which we have no disposition to criticise. It is an attempt to account for the permanence of the sun's heat by supposing that his furnace is continually fed from the aether diffused throughout interplanetary space. The Baron d'Estournelles writes in a very lively way about "The Superstitions of Modern Greece." Our only comment is that we should have preferred the stories to be told in the actual words of the narrators. "A Sketch of the Criminal Law," by Mr. Justice Stephen is a very able summary from the historical point of view. Part of it, however, is not new, and the rest is stated to be an abridgment of a forthcoming work on the same subject. The practice of publishing books in a series of magazine articles is bad enough; but to anticipate the results of historical research by this sort of popular appeal seems to us yet more blameworthy. Yet there is much here that will attract both for its matter and manner—e.g., this criticism of Coke:

"Coke had great technical learning, and a character of great force and audacity; but he had no power of arranging or generalising his knowledge, and not only was his style pedantic, but his mind never rose above a very trivial kind of acuteness."

WE are compelled to say that the current number of the *Contemporary* is exceedingly dull, though this is not the fault that can be charged against Lady Verney's "Autumn Jottings in France." M. E. de Laveleye's paper on "The Political Condition of Belgium" is also readable, if thin; and Mr. Lewis Morris states the case very forcibly in favour of "Higher Education in Wales." He does not, however, solve our difficulty. If the Welsh people are naturally

so fond as he says of education, why have they not already provided it for themselves?

IN the *Revista Contemporanea* of March 30, Fernandez Duro collects evidence to overthrow three of the most popular commonplaces of Spanish history. He endeavours to prove that the jewels of Queen Isabella were not pledged to supply money for the expedition of Columbus, that Cortés never burnt his ships, nor Alvarado ever make his wondrous leap. In "Mis Apuntes" we learn, from MSS. rescued from destruction by D. A. Ubique, that some of the tapestry in the Chapter of Toledo was made at Brussels in 1699-1701 by J. F. Vanden Hecke from designs by Rubens at a cost of 5,616 florins. The MSS., which contain much other interesting matter, are deposited in the "Archivo de la Deputacion Provincial" in Toledo. Gen. Pavia continues his political reflections on the reign of Isabella II. and on the revolution down to the death of Prim. He declares that not a single *pronunciamiento* was based on patriotism or disinterestedness, that all equally failed by their own suicidal selfishness, and that Prim's murder was the work of his own party—he was assassinated by liberal hands (the italics are in the original). Peña y Goñi hails "La Tempestad," the zarzuela by Ruperto Chápi performed for the first time at Madrid on March 11 last, as the beginning of a true revival of this kind of Spanish musical drama.

## CORRESPONDENCE.

CHAUCER "NOT" AT WOODSTOCK.

3 St. George's Square, N.W.: April 4, 1882.

We Chaucer students and the public in general have been invited by a writer with much confidence to assume that Chaucer had been at Woodstock, because, in his *Parlement of Foules*, he describes a park "walled with grené stone," in which were—as is natural to parks—a stream, a fish-pond, and a well; and in Woodstock Park were a stream, fish-pond, and well, while stone walls were round it. But not a word is said in the article on the all-important point in Chaucer's description—the colour of the stone walls.

Yet it is surely evident that if Chaucer's description of the park is not borrowed from any other Italian or French author—as, of course, it may be—but is one of an English park, he has, by his epithet "*grené* stone," told us the district he meant the park to be in—namely, that of the greensand underlying the chalk. And there, in the Kentish-rag or other greenstone district, one always meant to look for it. One would as soon have thought of going for green stone to the red sandstone of Devonshire, &c., as to the yellowish-brown oolite of Oxfordshire, whose colour is known to all visitors to Oxford from the colleges built of it—though some have lately been refaced with harder stone—and the open quarries on its north.

It is abundantly plain that the condition precedent to any identification of Chaucer's park is that it have green stone walls. Anyone who knows a ha'porth of him knows his eye for colour, on which Mr. William Morris and other lovers of him have dwelt.

I therefore at once declined to accept the theory, treated as fact, of the article-writer, and sent enquiries to the spot. The answer of the chief builder at Woodstock is:—

"The walls of Blenheim Park are built of stone dug on the estate—a kind of light-brown oolite. Certainly not green stone. The Palace itself is built of Taynton stone, oolite. I do not know of any green stone to be found in this neighbourhood."

And Mr. Marshall, in his *History of Woodstock Manor*, 1873, rightly observes that the park wall in Henry I.'s time is explained

"from the abundance of stone of the oolitic formation in the district, which is suitable for such a wall, and which has in later times been so commonly employed for the inclosure of fields as to have made their appearance a characteristic feature in the scenery of the north of Oxfordshire."

It is true that oolite walls, like others, get, and are now in parts, green with age and moss. But that is not what Chaucer meant by "*grené* stone," as every faithful student of him will acknowledge.

I decline, then, to admit that Chaucer's description of a park "walled with grené stone" proves him to have referred to Woodstock Park, and to have been at Woodstock. I say, on the contrary, that it proves he did not refer to Woodstock Park.

As to his having been at Woodstock, the presumption of that must be given us by some honest worker at the Record Office, who will search the Patent Roll for the whole of the time that Chaucer was in service at Court, and show us day by day where the King was. I did this for January and February 1363-64, to

upset a confident *Saturday* reviewer about the date of this *Parlement of Foules* (see my *Trial-Forewords*, pp. 73, 74), and I don't think that date of 1363-64 will be put forward again for the poem. I haven't been able to find time for going on with these searches, or money to pay a Record-clerk to make them. But the work wants doing. Will any humble-minded admirer of the poet volunteer for it? If one will, I will print his results.

F. J. FURNIVALL.

## A PROTEST.

Copenhagen: March 28, 1882.

I have before me a book with the following title:—"Old Norse Fairy Tales, gathered from the Swedish Folk, by George Stephens and H. Cavallius, &c. (London)." This book is undated. It is therefore, I suppose, illegal, as in most other civilised countries, for undated pieces are a great misfortune in literature, and are for many purposes useless. If the practice is not yet illegal in Britain, it is high time it were made so, for undated books, &c., are merely a part of modern shoddy.

The title is a wonder to all. How Norse (that is, Norwegian) tales can be "gathered from the Swedish folk," no earthly man can understand. In the body of the book they are called "Swedish," but on the title-page and the binding they appear as "Norse." Probably this was a mere catch-penny trick, another bit of modern shoddy because Mr. Dasent's translations of Norse tales were so favourably received.

Nor are these *fairy* stories. They are *folk* tales, hearth stories, olden Aryan heirlooms, which is something very different.

On the title, the illustrations are said to be by E. Lundgren, "member of," &c., &c. This should have been the late E. Lundgren, for this gifted Swedish artist, my own dear friend, has long been dead.

People who live in English glass houses should not throw stones at American glass houses. The permission of the authors has not been asked to translate this book. That it would not have been refused is no excuse for such a breach of courtesy. Nor has the author (or publisher) had the grace to send me (nor, I suppose, H. Cavallius, else I should doubtless have heard of it) one single presentation copy of the book. I have had to buy my copy from my bookseller in the usual way.

The Preface is short enough to say nothing. But it is long enough to have told the reader that these bits of Swedish folk-lore are only a small selection from the volume printed in Stockholm, 1844-49, 500 pages in smallish type. A handful from this large collection (those traditions which E. Lundgren had illustrated) appeared in Stockholm in 1875. From these last thirteen tales we have here versions of ten.

Now, it seems to me that all this is very unsatisfactory. To me and my learned fellow-worker, Chargé-d'affaires Cavallius, it is "hard lines," especially as coming from "Christian England"—at least what might be gentlemanly England.

GEORGE STEPHENS.

## "BEWRAY."

Cambridge: April 12, 1882.

The utmost that can be said as to any connexion with the A.-S. *wreton* or *wrihan*, "to cover," is that some confusion may once have subsisted between the verbs *wrihan* and *wreġan*, which may have affected the sense of the latter. Such confusion could have arisen from the fact that the past tense of the M.-E. *wrihen* was *wreih*: see Stratmann. I find, accordingly, that in a note on *Biureie* in part i. of "Specimens of English" (which will, I hope, soon be

published), Dr. Morris says that "Sometimes this verb seems to have the meaning of *to betray*, as if from A.-S. *onwreton*, to uncover." I should think the same idea must have occurred to most people who are familiar with Middle English. But this is quite another thing from supposing that it is possible to *derive* the Mod.-E. *bewray* from the A.-S. *wreton* or *wrihan*, since phonetic laws show this to be impossible. Dr. Morris gives a reference for *beureis* to King Horn, l. 362 of his edition. This is worthy of remark, as Stratmann omits this reference. I have already noted, in my Dictionary, the use of the simple verb *wreyen* in Chaucer, *Canterbury Tales*, 3502. It occurs again four lines below, l. 3506. As for *wrien*, "to cover," it occurs in l. 7409 of the same. WALTER W. SKELAT.

## APPOINTMENTS FOR NEXT WEEK.

MONDAY, April 17, 7.30 p.m. Aristotelian: "Aquinas and the Dogmatists," by the Rev. E. P. Sorymsecour.  
 8 p.m. Victoria Institute: "The Fallacy of the Materialistic Origin of Life," by Dr. Mallik.  
 TUESDAY, April 18, 3 p.m. Royal Institution: "The History of Customs and Beliefs," by Dr. E. B. Tylor.  
 8 p.m. Historical: "Fairs and the Part they have played in the Commerce of Nations," by Mr. G. Walford; "Queen Elizabeth's Soldier-Poet," by Mr. F. C. Fleay.  
 8.30 p.m. Zoological: "The Mutual Affinities of the Animals composing the Order Edentata," by Prof. W. H. Flower; "The Modification of a Race of Syrian Street Dogs by Means of Sexual Selection," by Dr. van Dyck; "The Desirability of adopting a Standard of Nomenclature when describing the Colours of Natural Objects," by Mr. J. E. Harding.  
 WEDNESDAY, April 19, 8 p.m. British Archaeological: "The 'Thing How' at Bury St. Edmunds," by Mr. H. Frigg; "Some Notes on a Bronze Sword found at Henley-on-Thames," by Dr. Stevens.  
 8 p.m. Society of Arts: "The Channel Tunnel," by Sir Edward Watkin.  
 THURSDAY, April 20, 8 p.m. Royal Institution: "The Metals," by Prof. Dewar.  
 5 p.m. Society for the Promotion of Hellenic Studies: Second General Meeting.  
 8 p.m. Linnean: "Male Prothuberant Organs ancillary to Generation in Butterflies," by Mr. P. H. Gosse; "Himalayan Algae," by Prof. Dikie; "Some New Varieties of Sugar Cane by planting in Apportion," by Baron de Villa Franca and Dr. Glass.  
 FRIDAY, April 21, 9 p.m. Royal Institution: "The Researches of H. Ste-Claire Deville," by Prof. Dewar.  
 8 p.m. Society of Arts: "The Mineral Resources of India, and their Development," by Prof. V. Ball.  
 SATURDAY, April 22, 3 p.m. Royal Institution: "The History of the Science of Politics," by Mr. F. Pollock.  
 3 p.m. Physical: "Some Electrical Phenomena in Connection with the Telephone," by Prof. A. E. Dolbear.

## SCIENCE.

MOSELEY'S CORALS OF THE "CHALLENGER."

*The Zoology of the Voyage of H.M.S. "Challenger."* Part VII.—"Report on the Corals." By H. N. Moseley.

THIS highly interesting and beautifully illustrated description of the corals obtained and studied during the expedition of the *Challenger* forms part of the second volume of the great series of monographs preparing under the superintendence of Sir C. Wyville Thomson, whose death we have to deplore since this article was written. It forms a very handsome volume of some 248 pages, with thirty-two plates; and in all probability the contents will not be surpassed in their importance to science by the results of the labours of any of the other numerous contributors to the zoology of the great expedition. Before the *Challenger* had sailed, the researches of Pourtales in the American seas, and the results of the examination of the deep-sea corals dredged by H.M.S. *Porcupine*, had interested naturalists, and the peculiarities of the deep-sea coral fauna and its geological alliances had been appreciated. The coral fauna of depths below the region occupied elsewhere by reef-builders, which had a great bathymetrical range, was described and illustrated. Its genera

and species, characteristically simple in their construction, were found to have a great geographical range in the West Indian seas, the seas of the East coast of America, the North Atlantic, and the Mediterranean. Many of the genera found widely distributed and at considerable depths were recognised in the Cainozoic strata of Europe; and a few very old species are still living.

The results of the study of these forms were sufficiently interesting and important to excite great expectations from the work of the able naturalist to whom the *Challenger* corals were to be entrusted. A very great development of the deep-sea coral fauna was expected to occur on the floor of the great oceans; and it was anticipated that a special study would be made of some shallow-water forms which had already been partly examined, and which had remarkable zoological and palaeontological affinities.

These expectations have been fulfilled. But while Mr. Moseley has advanced the knowledge of the shallow-water forms, and has, in fact, elaborated truths which will always remain associated with his name—truths which are of singular importance in natural-history science—the amount of material from the deep sea has been disappointing. Nevertheless, its zoology has been admirably written, and the delineations convey to the minds of those naturalists who have seen the Floridan and North Atlantic specimens the general resemblance of the members of the coral fauna of the deep sea.

In the general Introduction to the volume Mr. Moseley states:—

“A large number of naturalists had failed to accept as conclusive the late Prof. Agassiz's results as to the hydroid nature of the *Milleporidae*; the *Stylasteridae* were universally considered to belong to the *Madreporaria*, although Gray had formed them into a special family, and Pourtales and Verill had recognised some of the remarkable peculiarities of these corals. The presence of tabulae in *Heliopora* had led to the association of that form with *Millepora*, and no one suspected that it was an Alcyonarian allied to *Corallium*, *Tubipora*, and *Alcyonium*. When I undertook the investigation of the deep-sea *Madreporaria* dredged during the voyage, I naturally became anxious to examine the structure of *Millepora*, and early in the expedition attempted to examine the structure of *Millepora alcorni* at Bermuda, but without success, the problem proving too difficult. I did not succeed with *Millepora* until near the end of the voyage. The discovery which I had made at the Philippine Islands that *Heliopora* is an Alcyonarian led me to examine the structure of all corals which were not most evidently *Madreporarian*, and hence I studied *Stylaster*, and my suspicions that it belonged to the Hydroids were confirmed by the examination of the remarkable rich haul of *Stylasteridae* obtained on the homeward voyage off the mouth of the Rio de la Plata.”

The first part of Mr. Moseley's book commences with the anatomy of *Millepora nodosa*, and his researches, supplementing those of Agassiz, necessitate the placing of this tabulate coral among the Hydroids. Mr. Moseley describes and delineates the Zooids, which so readily disappear on the slightest agitation, and notices the tortuous canals which traverse the hard structure in every direction, and communicate eventually with the pores. The two kinds of Zooids admirably drawn on

plate xiv. are described as belonging to the digestive system—gasterozooids—and to the catching series—dactylozooids—the first being solitary and environed by a circle of the others. The first kind has short tentacles and a mouth, and the others have tentacles at irregular intervals but no mouth. Thread cells resembling those of Hydroids exist; and, indeed, the only point which still requires elucidation relates to the method of reproduction of these interesting *Hydrocorallinae*. It is to be hoped that Mr. Moseley may be able to spend a summer and autumn at the Bermudas, and that he will be rewarded by discovering the young stages. The *Stylasters* have been thoroughly worked out by Mr. Moseley, and he discovered the use of the curious irregular swellings on and beneath the surface of the hard parts. These ampullae contain the reproductive elements, and some a developing planula. As in *Millepora*, the hard skeleton has tortuous canals; and in the typical genus *Sporadopora* only a thin layer of the surface is occupied by living soft tissue, and it consists of a network of tissue, Zooids, and the reproductive gonophores. As in *Millepora*, the calcareous matter is produced by the outer layer of the canals. The dactylozooids of the *Stylasters* have not little projections from them, and they are themselves simple tentacles, and occupy in *Sporadopora dichotoma* the smaller pores of the surface of the hard part; and the gasterozooids, cylindrical in form, have four tentacles in a whorl. Above these is the dome-like mouth. There is a wide gastric cavity within, and up into it projects the peculiar style which may be noticed in the pores of the hard parts. The gastric cavity communicates by tubular offshoots with the axial cavities of the tentacles; and at the periphery of its base it becomes continuous with the cavities of four canals, which subdivide and anastomose with the general network of the body.

In the genus *Pliobothrus* Mr. Moseley was able to discover the method of reproduction by examining the ampullae which are sunk within the hard parts. In these, he says, “the ova are solitary, one only being developed in each growing ampulla. Each ovum is developed within the cup of a cup-shaped spadix.” The planula developed out of this ovum is a large object of an ovoid form, with a long diameter greater than the extreme length of the ampulla, and has an ecto- and endoderm, but presents no evidence of invagination. How it escapes and metamorphoses and develops into the mature form is not known. After carefully describing the anatomy of the genera and species of the *Stylasters*, Mr. Moseley attacks the last form, *Cryptohelia pudica*. This pretty little hydrocoral has the calices on one side of its branching body, and a stout little projection covers or overlaps their free surface or face. The ampullae which contain the planula are beneath the calices; and this young form, when mature, measures nearly a quarter of an inch in length, and is so long that it has to be doubled up.

The second part of the Report refers to the tabulate *Helioporidae* and their allies. The beautiful *Heliopora coerulesa* is considered first of all. The nature of the hard parts, and their distinctness from that of ordinary stony

corals and the genera *Tubipora* and *Corallium*, are noticed; and the chemistry of the blue tint of the coral is explained. In treating of the digestive organs, Mr. Moseley notices that the stomach is closely similar to that of any other Alcyonarian. There are eight mesenteries dividing the upper part of the cavity of the polyp into eight radially disposed chambers. The number of “septa” may be twelve, but it is by no means constant, and there is no definite connexion between it and the eight mesenteries. The ova are attached to the edges of the muscular margins of the mesenteries by a mass of cells, and are in close relation with the mesenteric filament. A species of *Sarcophyton* is then described, and the author sums up the subject by showing the necessity of abolishing the *Tabulata* as a great group of corals. In fact, his able morphological work has settled questions which were influencing palaeontology ten years since, as may be understood by reading the Third Report on the British fossil corals to the British Association in 1871.

The remainder of the Report relates to the deep-sea *Madreporaria*, and is more zoological than morphological. Mr. Moseley writes: “Unfortunately, there are no other animals in which the technical difficulties in the investigation of the anatomy are so difficult, or in which they require so long a time for their accomplishment, as in the *Madreporaria*.” This is a well-known fact, and it is pleasing to read that the author will endeavour to work out the anatomy during his leisure. He has the beautiful investigations of Jules Haime for an example, who worked without pickling, and utterly altering the structures of his specimens of *Oladocora caespitosa* (*Hist. nat. des Coralliaires*, vol. ii., p. 589). The opportunities for research were denied to Mr. Moseley on account of the decomposition and injury to which the soft parts were subjected during dredging. In his classification, Mr. Moseley, impressed with the diminished importance of the tabulae as classificatory elements, is revolutionary in the matter of the endothecal dissepiments of the true *Madreporaria*.

“I conclude that the presence or absence of dissepiments is probably of no more value as a criterion for the determination of the natural affinities of various forms of *Madreporaria* than is the presence or absence of tabulae among coelenterates forming a corallum.”

Most who have studied the *Madreporaria*, both fossil and recent, will demur to this, and Mr. Moseley's changes of generic position will not be always acceptable. Forty-eight genera are described, five of which are represented below 1,000 fathoms, and the genera *Dalmanocyathus*, *Bathyactis*, and *Leptopenius* (the last two Mr. Moseley's own) reach to below 2,250 fathoms. *Bathyactis* was found at the depth of 3,000 fathoms. Twenty-two of the genera are relics of the faunas of the secondary or tertiary ages. Of these deep-sea corals, the palm for beauty and interest rests with the *Stephanophylliae* and the deep-sea genera just mentioned. *Leptopenius* is a discoid form, so thin and fragile, and such a perfect piece of network, that, as Mr. Moseley truly suggests, it was astonishing that the specimens arrived at the surface in such good preservation.

The illustrations to this most valuable

work are exquisite. Most of the details are from the author's own pencil, and he was fortunate in having the assistance of Drs. Stewart and Wild. He is responsible for the figures of most of the Hydrocorallinae, which give a perfect notion of the construction. Erxleben, Purkiss, Griesbach, Berjeau, were the lithographic artists; and, as might have been expected, the results are most satisfactory. The Report is certainly a very valuable contribution, and it would be very satisfactory to science if Mr. Moseley were so placed that he could continue his investigations.

P. MARTIN DUNCAN.

#### NOTES OF TRAVEL.

WE regret to hear that the Treasury seem disposed to fetter with annoying conditions the proposed public grant of £5,000 towards the *Eira* search expedition. It is to be hoped that they will not persevere, or the disagreeable spectacle may be seen of an expedition only associated with the nation through the Royal Geographical Society.

ACCORDING to reports from Washington, Lieut. Schwatka, whose remarkable journey to King William Land we noticed in a recent number, is endeavouring to organise an expedition to explore the northern part of Alaska, and has already applied to Congress for a grant to enable him to carry out his purpose. Lieut. Schwatka is eminently fitted for the leadership of such an expedition, which could hardly fail to yield interesting results, as the region which he proposes to explore is one of the least-known parts of North America, except, perhaps, certain tracts in Northern Mexico.

COL. VENIUKOFF has publicly informed the French Geographical Society of a somewhat startling fact. According to his informant, Col. Tillo, the economic societies in the Baltic provinces of Russia have taken a levelling of their country, and they have discovered that certain determinations of heights made by the celebrated astronomer, W. Struve, and his assistants, exhibit considerable errors. Some of these even exceed 650 feet, which is a very large error considering the generally low and level nature of the region. It is now feared that other and equally important mistakes may be discovered in the Russian system of triangulation.

It may be interesting to record, for purposes of reference, that the *New York Herald*, in its European edition of March 22, has published the first authentic reports from Engineer Melville and others respecting the landing of the survivors of the *Jeannette*.

An ethnographical map of Russia is now in course of preparation by the Imperial Geographical Society; and this, as well as a vast amount of statistical information regarding the various populations of the empire, is expected to be ready for the Moscow Exhibition.

DR. STECKER is reported to have left Abyssinia on his way to Kaffa, with letters from King John to the Negus of Gojam, the Queen of Gera, and the Sultan of Kaffa. The King has particularly requested the last-named to facilitate Dr. Stecker's progress southward, and the traveller is, in consequence, very hopeful of reaching Zanzibar.

THE Rev. Mr. Coillard and his wife will leave France for the Zambeze in May to found a new station between that river and Lake Bangweolo.

THE Japanese survey of the interior of the Bonin Islands, to which we have before referred, is nearly finished, and that of the coast lines will probably be completed late next summer.

MR. BIENENFELD, the Italian consul at Aden, is organising a commercial expedition to Shoa, which will be composed of persons well acquainted with the neighbouring countries.

THE Government printer at Wellington, N.Z., has just issued, by command, an official paper entitled *New Zealand, Thermal Springs Districts*, containing papers relating to the township of Rotorna, with maps and plans of the township and district, together with information regarding the hot spring districts and a report on the mineral waters.

THE American Board of Commissioners for Foreign Missions at Boston, U.S., have just issued a very interesting brochure entitled *Explorations for the Mission to Umtala's Kingdom, South-Eastern Africa*, illustrated by a map of the whole continent. It deals with the subject *ab initio*, and gives the missionaries' account of their journey from the Portuguese sea-board through a country which was previously but very little known.

#### SCIENCE NOTES.

*Deep-Sea Exploration*.—The last number of the *Proceedings* of the Geologists' Association is almost wholly devoted to communications by Mr. W. H. Hudleston, the accomplished president of this association. The Presidential Address delivered at the beginning of the present session, and here published, gives an excellent account of deep-sea exploration, commencing with a history of the subject from Capt. Dayman's survey of the North Atlantic sea-bed in 1857 up to the date of the *Challenger* expedition. Mr. Hudleston passes next to the study of the hydrography and physical conditions of the deep sea, then discusses the character of the deposits and their mode of occurrence, and finally deals with the subject of life on the deep-sea bottom. It would be difficult to point elsewhere to an equally clear analysis of the results of the *Challenger* expedition, especially so far as these results bear upon geological questions. Mr. Hudleston also publishes in the same number a paper "On the Geology of the Neighbourhood of Keswick," which was called forth by the visit of the association to the lake district.

WE understand that the Hammond Company have started an Electrical Engineering College, in order to provide the thorough scientific and practical training necessary to young men of good education who wish to become electrical engineers. In view of the great developments that lie before electricity in every branch, this college meets a decided want, and its connexion with this successful commercial company will give an opportunity of securing a business training not obtainable at any of the ordinary scientific colleges.

MESSRS. HARPER BROS., of New York, will publish immediately a fourth and enlarged edition of Prof. Simon Newcomb's *Popular Astronomy*, with five maps of stars and 112 wood-cuts.

#### PHILOLOGY NOTES.

WE announced a fortnight ago that Mr. W. R. Morfill, of Oriol College, Oxford, had undertaken to write for Trübner's series of "Simplified Grammars," besides Slavonic Grammars, a Grammar of Modern Greek. This is a mistake, Mr. E. M. Geldart having been entrusted with the preparation of the Modern-Greek Grammar, which is already in the press. Mr. Morfill will confine his collaboration to the writing of Russian, Polish, Cheskian, Servian, and Bulgarian Grammars. Mr. Henry Jenner, of the British Museum, will write for the collection Grammars of the Cymric of Wales, Cornwall,

and Brittany, and of the Gaelic of Scotland, Ireland, and the Isle of Man, in parallel columns. A Hungarian Grammar by Mr. Ign. Singer, of Buda Pesth, is already in the press. The following are also preparing:—An Assyrian Grammar, by Prof. Sayce; a Hebrew Grammar, by Dr. Ginsburg; a Pali Grammar, by Dr. T. W. Rhys Davids; and a Danish Grammar, by Miss Otté. Particulars about Grammars of Roumanian, Finnish, Siamese, Burmese, Japanese and Chinese, Swedish and Icelandic, will be announced very shortly.

AT the Académie des Inscriptions et Belles-Lettres, M. Albert Dumont has been elected a member in the place of de Longpérier, and M. Simeon Luce in the place of Thur ot.

AT a recent meeting of the Académie des Inscriptions, M. Bréal read a paper upon an archaic Greek alphabet which is engraved, by way of decoration, upon an Etruscan vase recently discovered at Formello, near Veii, on an estate belonging to Prince Chigi. It is the most complete Greek alphabet known to exist, approximating more closely than any other to the Phoenician. E is followed by both Vau and Zain, Π by both Tzaddi and Koph. As is well known, Vau or F and Koph or K were preserved in the Greek system of numerical notation; while Tzaddi was confounded with Zain, and took the place of the latter as Z (ζ). At the end of the alphabet on this vase come three characters after T; the first has the form of the ordinary x, the second is φ, the third resembles a χ which is found on some ancient monuments. This last undoubtedly stands for x, though out of place; what the first of the three represents is not clear. M. Lenormant pointed out certain points of resemblance between this alphabet and that upon another Etruscan vase which came from Cervetri, and is now in the Gregorian museum at Rome.

MESSRS. TRÜBNER AND Co. will shortly publish *The Vastir of Lankurán*, edited by Mr. W. H. D. Haggard (late secretary to the British Legation at Teheran) and Mr. Guy Le Strange. The object of the joint-editors has been to provide a text-book of modern colloquial Persian for the use of students and travellers. They have given a translation, a grammatical Introduction, and a vocabulary showing the pronunciation of the words.

M. RUEILLE, librarian of Sainte-Genève, has received a mission from the French Minister of Public Instruction to visit Venice, with the object of collating certain MSS. there, and in especial a MS. of Damascus of the ninth or tenth century, of which part has never yet been edited.

ERNEST LEROUX has just issued a monograph, by M. J. Loth, upon the Celtic Verb in Old Irish and in the modern dialects.

THE *Revue critique* for April 3 contains an important notice, by M. James Darmesteter, of the recent contributions made by Ferdinand Justi, of St. Petersburg, to our knowledge of the Kurdish language.

#### MEETINGS OF SOCIETIES.

SOCIETY OF ANTIQUARIES.—(Thursday, March 23.) A. W. FRANKS, Esq., V.-P., in the Chair.—Mr. R. P. Greg read an elaborate paper on the meaning and origin of the fylfot and swastika. He argued that the two symbols were identical, and, in the first instance, exclusively of early Aryan use and origin; and, whatever their subsequent adaptation may have been, that down to the time about 500 B.C. it was the emblem or symbol of the supreme Aryan god, Dyaus or Zeus; and later, of Indra, the rain god in India; of Thor or Donner, among the early Scandinavians and Teutons; and of Perun or Perkun among the Slavs. Dyaus, originally the "Bright Sky" god, came more especially to mean

the god of both sky and air, and the controller of the rain, wind, and lightning; as in Jupiter Tonans and Jupiter Pluvius. Not improbably the emblem itself, resembling two Z's or Zetas placed crosswise, may have been a holy or mysterious cross, intended also to represent the forked lightning by the addition of feet or spurs; and the author threw out a hint that possibly the letter Z itself of the early Attic Greek alphabet might have in the first instance arisen, as being a letter required by the Greeks better to give or express the earlier sound of d's or t's, as the initial sound of Z in Zeus, and borrowed partly from the emblem itself. Subsequently, in certain cases, the fylfot may have been occasionally employed either as a solar or as a water symbol, and in the latter case may have been not improbably the origin of the Greek-fret or meander pattern. It was later still even adopted by the Christians as a suitable variety of their own cross, and became variously modified geometrically, or used as a charm. In India and China, the swastika was adopted and propagated, doubtless by the Buddhists, as either an auspicious sign or holy emblem. Mr. Greg, in contending for the fylfot being the early emblem of the supreme Aryan sky and air god, drew attention to several suggestive examples from early coins and pottery, as from Bactria, Greece, and Ilion, where the symbol was appropriately placed, as it were, midway between the solar disk (often at the top) and the earth, water, or animals; and in certain cases also as being sometimes in obvious connexion with the bull, as an emblem of Indra or Jove, and with the soma plant or sacred tree, fire altars, and other religious emblems.

### FINE ART.

*The Graphic Arts.* By P. G. Hamerton.  
(Seeley, Jackson & Halliday.)

(First Notice.)

THIS is a book which is much wanted, and has been excellently done. It is wanted for many reasons. First, because there is no book of the kind. It is a grammar in the same sense as Charles Blanc's *Grammaire du Dessin*, a grammar of one language of many dialects, or rather of many languages of one stock, and no such grammar has been written before. Some books, and some admirable books, exist on one graphic art or another, such, for instance, as Chatto's on Wood Engraving, Harding's on Lead Pencil, Eastlake's on Oil Painting; but some of these are hard to get, some hard to read, and none of them down to date. Secondly, because some arts have widened their range, like oil and water-colour painting; some have been revived, like pastel, silverpoint, and tapestry painting; and at least one, charcoal drawing, has come into existence of recent years. Thirdly, because a book on the graphic arts written in the modern temper of scientific research, analysis, and comparison, just and discriminating, putting them in their proper relations one to another, and showing the value of each, will do much to set straight much loose thinking and ignorant prejudice, besides saving a great deal of trouble to a thousand minds who are at the present moment trying to work out the same results for themselves. It is a book that has never been wanted till now, and could never have been written or adequately illustrated before. It is essentially a book of the time.

It is also written by the right man. Mr. Hamerton, like others, has learnt (as a writer) much from the graphic arts. Of the obligations of certain novelists and historians to them he speaks himself. They have helped such writers to more fully realise the appear-

ances of past times; but to Mr. Hamerton they have been an intellectual training, and have affected his habits of thought and his style of expression. Unless they had done so, it would not have been possible for him to have written this book so well. That the practice of art cultivates the mental powers, especially those of analysis and synthesis, he himself very usefully and properly points out; but the power to translate the knowledge so acquired into words is often denied to artists, as, for instance, Turner, whose course of lectures as Professor of Perspective at the Royal Academy is described in the *Annals of the Fine Arts* for 1819 as "distinguished for its usual want of connexion, bad delivery, and beautiful drawings." On the other hand, the practice of literary composition would not suffice to make a man competent to write such a book as this, however carefully he had got up his materials, without practical experience as an artist. Not only are the modes of expression of the two arts different, but the modes of thinking; and it is only Mr. Hamerton's singular combination of graphic and literary faculty that has enabled him to write a book which will be a true interpreter between artists and the public. He can think not only in words, but in form and line and colour; and in materials also—in pigment and lead pencil, in charcoal and ink—and the different processes of his thoughts as an artist are visible in the truly "graphic" character of his sentences. The merits of his style may be well expressed in terms applicable to drawing. One of his best chapters is devoted to the difference between useful and aesthetic drawing. There is also a distinction to be drawn between useful and aesthetic writing. In criticism both are right on occasion, but one of the errors of many modern writers on art is that the distinction is not clearly appreciated. One writes poetry where clear statement is wanted; another gives a dry and often ignorant disquisition on *technique* where a little eloquent description would be far more serviceable to his readers. Into neither of these faults does Mr. Hamerton ever fall. He can be eloquent or simply lucid, as occasion calls. He adjusts his means exactly to the end required. We all know from other books of his that he can sketch delightfully with the pen as with the needle; but when, as in this book, his design is more serious and requires finish, he can place his sentences with the same deliberation as that with which an engraver lays his lines. It may be said that his shades are never opaque nor his lights flimsy, that he knows exactly where to place the firm touch or the spot of colour, and can make the commonest subject interesting by skilful treatment. It would be easy to continue the analogy, but space is as stern a master of one sort of composition as of the other, and we will only record in painters' terms one more merit of his—viz., his "sure process" of criticism.

It is evident that the School of Censure as compared with the School of Enquiry—the names of these two schools of art criticism are an invention of Mr. Hamerton's—has the defect that it does not allow for any alteration of opinion. It is difficult to sustain faith in oracles who publish second and third editions

of their utterances, greatly modified, but equally positive as the first. Oracles, moreover, are nothing unless striking and original; and the number of dogmas, even in art, is very limited, so that a critic of censure who wishes to maintain his public vantage is reduced to repetition if he does not resort to the dangerous expedient of variation. From these, as from many other defects which need not be mentioned, the School of Enquiry is free. "In this school," writes Mr. Hamerton, "the pride of the critic, the pre-eminence and success, are not to lead the fashion and influence the market, but *simply to throw a little more light upon the true nature of the work that is done.*" This is the "sure process" which Mr. Hamerton follows, and which we heartily recommend to the notice of all critics, whether of art or letters.

It is not only as a critic, however, that Mr. Hamerton comes before us in this volume, but also as a teacher and exponent; and there can at least be no doubt that the temper just expressed is the proper one in which to execute such a serious and deliberate task as a treatise on the "graphic arts." That an Englishman should have been the first to do it is no small cause for congratulation, for it demands a union of qualities which are rare in one man. Some of these we have already mentioned; but one of the most important is a strict impartiality. This is one of the arguments against the practice of art by critics, who are likely to be biased in favour of the particular school (they affect or the material they use. They are liable to become in a small degree specialists; the danger is more than usually great in the case of a man like Mr. Hamerton, who has distinctly an art of his choice—viz., etching—which he has not only practised but championed. Those who take in the *Portfolio*, or who have read the first chapter of *Etching and Etchers* (in which he compares the properties of etching with those of other arts) or his *Life of Turner*, will know that he has long made a study of all modes of graphic expression, and has practised many of them. Nevertheless, it is remarkable that one man should write so sympathetically of all; and much of Mr. Hamerton's dedication to Mr. Robert Browning, in which he pronounces a well-deserved eulogium on the interest the poet has taken in the works of others, may be applied with justice to himself.

Few readers need to be told that Mr. Hamerton writes with unusual ease and finish. This is partly due to two causes. He knows what he is writing about, and never, like many writers of the present day, attempts to express his meaning while it is still obscure (or obscurely formulated) to himself. He gives us the clear result of cogitation, without the confused process of it. He thinks "out" before he writes, and, though master of his subject, takes time to choose the simplest and best words for expounding it. In *The Graphic Arts* the sense of literary expression is not more apparent than that of literary design; though it is composed of numerous chapters on very different subjects, the book is a unit. In the Preface and the first chapter, on the "Importance of Material Conditions in the Graphic Arts," he expresses general ideas, of which the rest of the book may be

said to be the development and proof in detail. Here are one or two passages which will, as far as such short extracts can, explain the aim and attest the value of the work as a whole.

"In the graphic arts you cannot get rid of matter, every drawing is in a substance and on a substance. Every substance used in drawing has its own special and peculiar relations, both to nature and the human mind."

"There is a prevalent idea that the study of material conditions is uninteresting—a dull study not fit to occupy the attention of highly cultivated persons. This idea comes from our curiously unsubstantial education. The training of a gentleman has been so much confined to words and mathematical abstractions that he has seldom learned to know the intimate charm which dwells in substances perfectly adapted to human purposes. There is a charm in things, in the mere varieties of matter, which affects our feelings with an exquisite sense of pleasurable satisfaction when we thoroughly understand the relation of these substances to the conceptions and creations of the mind."

"There is an absolute value in each of the graphic arts quite independent of its relative value with regard to the temporary state of public opinion. The two questions about each of these arts are, 'Can it interpret nature?' and 'Can it express human thought and emotion?' The answer to these questions in every case is 'Yes; within certain limits fixed by the nature of the material and the process.' And then comes the further question, 'What are those limits?' to which this volume shall be as complete an answer as I can make it."

COSMO MONKHOUSE.

#### EGYPTIAN JOTTINGS.

THE new rooms just added to the Boolak Museum are now finished, all but painting and decorating; and next winter's travellers will not only find the lately discovered mummies royally installed, but will see the whole collection arranged to greater advantage than heretofore. Even with this additional space, however, the building is still far too small to accommodate the stores of objects which continue year by year to accumulate in the warehouses at the back, into which no sight-seer ever penetrates. With a view to disembarassing Boolak of some of these superfluous riches, and of exhibiting objects connected with the Greek period of Egyptian art, Prof. Maspero has obtained the sanction of the Government for the foundation of a Museum of Antiquities at Alexandria. In the meanwhile, the old house in the museum garden at Boolak, where Mariette lived and laboured for so many years, and where at last he died, is falling fast to ruin; and his successor has no resource but to live in his steamer on the river, where the mosquitoes most do congregate.

Prof. Maspero's winter campaign has resulted in various discoveries of considerable interest. He has inspected many little-visited and almost unexplored localities on both sides of the river between Meydoom and Assouan; finding at one spot a group of tombs of the VIth Dynasty; at another, a necropolis of the Middle Empire; and, at another, a temple of the time of Vespasian. The pylon of Horemheb at Karnak has been cleared down to the ground; and some interesting inscriptions have been copied from the tombs of Hieraconpolis, better known as Kom-el-Ahmar. The famous hiding-place at Dayr-el-Bahari has also yielded a further treasure in the shape of three hieratic inscriptions relating to the entombment therein of Pinotem II. and Princess Nasikhonsu, all of which will, in due time, be published by Prof. Maspero. Last, not least, he has found several new sepulchral excavations at Thebes, including two royal tombs.

Meanwhile, the great pyramid fields continue to occupy a large share of Prof. Maspero's attention; and, although the work at Meydoom has been suspended since February, two or three gangs of fellahs are employed at the present moment in clearing the sand from other scattered pyramids in various parts of that far-reaching district preparatory to further attempts towards the elucidation of the remote and obscure history of the ancient empire. Many of these pyramids, which show only as small and insignificant heaps of ruined masonry above the sand, prove, when excavated, to be of considerable size and fine workmanship, and only look small because the original level is low and the accumulation of sand enormous. The freshness and beauty of the *revêtement* of those buried pyramids, when laid bare, is said to be quite astonishing.

If Prof. Maspero carries into effect his intention of exploring the whole pyramid field of the ancient empire from Abou Roasch to the Fayoom, he may probably discover some entirely hidden pyramids in addition to the seventy catalogued by Lepsius.

M. Naville, who has wintered this year in Egypt, has also been actively at work, partly in continuation of his great *variorum* edition of the *Ritual*, and partly in other fields of Egyptology. At Karnak, by permission of Prof. Maspero, he has made an excavation resulting in the discovery of a long and important historical inscription of Pinotem III., and at the Boolak Museum he has transcribed the extracts from the *Ritual* which are written in marking ink upon the outer shrouds of Thothmes III.

AMELIA B. EDWARDS.

#### CORRESPONDENCE.

##### "THE SO-CALLED VENUS OF MELOS."

Domodossola: April 1, 1882.

An article with the above heading, by Mr. J. W. Stillman, in the November number of the *Century Magazine*, has attracted considerable attention both in England and America, on account chiefly of the novelty of the views expressed in it.

Without entering into any critical examination of Mr. Stillman's article, or pointing out the numerous mistakes that disfigure it, I may perhaps be doing a service by setting its two main positions in their true light. These positions are—first, that the statue in question represents a Nike (Victory), and not an Aphrodite at all; and, second, that it is the original Nike that once occupied the beautiful little Ionic temple that still stands on the bastion to the right of the Propylæa at Athens.

1. We must set out by distinguishing between Nike proper, the daughter of Styx, who is always winged, and Athenâ Nike, or Nike Athenâ, who is always *apteros*, or unwinged. (A scholion to Aristoph. *Aves*, 574, says that both Nike and Eros were anciently figured without wings. This may be true; but there is no known example of a wingless Nike proper.) The former is a distinct divinity, the daughter of Styx, with her own form and attributes, and is very frequently the companion of Athena; the latter is Athena herself under a particular aspect (*ἡ μὲν ἔχει ἄπτερον θεὸν ὁμοίως δὲ τὰς οὐκ ἐπ' αὐτῆς τῆς Νίκης ἐστὶν ἄλλ' ὁμοῦμος*: Ael. Aristid., *Athens*, p. 26), or, as Mr. Stillman puts it, "rather an attribute or variation of Athena than a distinct goddess." She was no more identical with Nike than Athenâ Hygieia was identical with Hygieia the daughter of Asklepios. It follows that "the so-called Venus of Melos," if it be a Nike at all, must be an Athenâ Nike or variation of Athenâ. But to this there are two fatal objections—first, the features of the statue in question have not the remotest resemblance to those of Athena in any of her known aspects; and, secondly, the

absence of drapery on the upper part of the body is absolutely at variance with the known characteristics of Athenâ, whether as Nike or otherwise. If, in opposition to this, it should be urged that, in representing Athenâ as Nike, an artist might feel obliged to leave her partially undraped, we reply that this argument has no force, unless it can be shown that partial nudity was a standing characteristic of Nike. Now this is so far from being the case that the very opposite is true. There is no known example of a partially undraped Victory, winged or wingless, from any period near that to which Mr. Stillman would assign the Melian statue. He himself does not produce a single example to the contrary. The Nikes of the Parthenon, the Nike of Paionios, the Nikes (misnamed Naiads) from Xanthos, the Nikes of the Balustrade of the Temple of the Wingless Victory, the Nike of the Pergamon marbles, the Nike of Brescia, are all completely draped. It follows that there is nothing in favour of, and much at variance with, the assumption that the "so-called Venus" is a Nike.

2. If the Melian statue is not a Nike, of course it is not the Nike *Apteros* of the Athenian Akropolis. But it may not be amiss to show that, even if it were proved to be a Nike, we should still be certain that it was not the Nike in question, and, in doing so, to make evident how frail is the ground upon which Mr. Stillman rears his argument. He tells us that "when Pausanias visited Athens the Nike *Apteros* was gone." What grounds Mr. Stillman may have for this unqualified assertion we cannot say, but it is most certainly incorrect. It is true that Pausanias, in describing the Athenian Akropolis, does not mention the Nike *Apteros*; but he does mention her temple, without hinting that the statue had been removed from it (i. 22, 4). Now, since Pausanias is in the habit of noting the absence of statues which he expected to find in temples, the natural presumption is that the statue was still there. This presumption, moreover, is raised to a certainty by two passages in Pausanias which Mr. Stillman appears to have overlooked. In his description of the Altis at Olympia, Pausanias says:—

"Near the larger offerings of Mikythos . . . there stands a statue of Athenâ, with helmet and aegis. It is the work of Nikodamos the Maenalian, and an offering of the Eleians. And near the Athenâ there stands a Nike. This was an offering of the Mantineians; but the inscription does not inform us after what war it was dedicated. Kalamis is said to have made it without wings, in imitation of the wooden statue (*xoanon*) of the so-called Wingless Nike at Athens" (v. 26, 6).

Again, in his account of Sparta, after mentioning the Temple of Hippothenes, he says:—

"Opposite the temple there is a chained Enyalios, an ancient statue. The Lakedæmonians have the same notion about this statue that the Athenians entertain in regard to the so-called Wingless Nike. The former think that Enyalios will never abandon them, because he is bound with fetters; the latter that Nike will always remain with them, because she has no wings. In this way and with this notion these cities set up these wooden statues" (iii. 15, 7).

From these passages three things are plain: first, that the Wingless Nike of the Akropolis was as ancient, at least, as the time of Kalamis, therefore pre-Pheidias; second, that its material was wood; and, third, that it was still in existence and *in situ* towards the end of the second century of our era. (Pausanias did not live "in the century after Christ," as Mr. Stillman asserts (p. 100), but in the second half of the second century.) It is altogether inconceivable that, in stating the reason why the Athenians made their Nike wingless—viz., that she might never leave them—Pausanias should have omitted to note that the

statue had left, if, indeed, it had really done so. It follows directly that the Melian statue is not the Nike of the Akropolis. Since, moreover, we have seen that there is no reason for considering it a Nike at all, we may go on calling it an Aphrodite or Venus until we have stronger reasons than those adduced by Mr. Stillman for assuming the contrary. It follows, further, that Mr. Stillman's proposed restoration, which is that of Kossos (who had a marble restoration in the Vienna Exhibition of 1873) and several German archaeologists, is inadmissible.

THOMAS DAVIDSON.

#### ARCHAEOLOGICAL NOTES ON THE TERRA D'OTRANTO.

##### IV.

##### PREHISTORIC ANTIQUITIES.

SIG. FIGORINI'S *Bullettino di Paleontologia* published in 1879 a short notice by Sig. Giustiniano Nicolucci on prehistoric antiquities discovered in the province of Lecce. The author very properly assigns the for most place to the collection of flint implements and weapons, comprising more than 6,000 pieces, formed by Sig. de Simone, which I visited at his villa near Lecce. It contains only arrow-heads, of widely differing shapes (the peasants of the province call them *lingue di trenu*), javelin- and lance-heads (one, for instance, of simply marvellous workmanship, is 11 centimètres in length) finely cut with extreme care, augers and knives of various sizes. They are often found, and of large dimensions, on the territory of Tarentum, on the shores of the Mare Piccolo. Objects of polished stone, hatchets or hammers, are wholly unrepresented in this collection; and, as a matter of fact, they are extremely rare in the Terra d'Otranto. At the most, it is impossible to mention more than six well-authenticated cases of the discovery of such antiquities. The archaeological museum at Lecce, for instance, possesses a fine polished axe of diorite, which was found in the country. In the natural history museum of the same town are preserved the objects obtained from the prehistoric stations of the Stone Age, explored by Sig. Botti in the Grotta del Diavolo and the Grotta Portinara, at the Capo di Leuca. The association of coarse earthenware and of terra-cotta whorls with weapons of stone simply cut and not polished, and with implements of bone and horn, imparts a character of originality to these relics of the Troglodytes who dwelt in the caverns of the Iapygian promontory. The Grotta Portinara, which afterwards became, as I have before mentioned, a sacred place in historical times, served as a place of burial, as well as a dwelling-place in the prehistoric period. In addition to other bones, it has yielded a complete human skeleton in a good state of preservation.

Discoveries of characteristic implements of the so-called civilisation of the Bronze Age, especially of hatchets, celts, and the type of axe with double socket to which the name of *Paalstab* has been given in German, are of very frequent occurrence in this province. In 1872 a collection of these objects, a cubic yard in size, was unearthed in the *commune* of Ayetrana. Unfortunately, it was dispersed before it could be submitted to an adequate scientific investigation, and the majority of the pieces composing it were melted down. Sig. O. Pasanisi, on whose estate the treasure was found, was only able to save some thirty articles, which are now in his possession at Manduria. These are hatchets of the three types above mentioned, wedges, chisels, lance-heads, and small reaping-hooks. It should be noticed, as an exceptionally rare circumstance, that out of the whole number two of the hatchets, the metal of which has been analysed, are of pure copper, and not of bronze with an alloy of tin.

In ancient times discoveries of this kind were so common, and the origin of bronze instruments belonging to types long since disused so completely forgotten, that they gave rise to a legend which Athenæus (xii. 24) has preserved for us. It was said that the Iapygians, who originally came from Crete, rapidly forgot, amid the wealth of their new home, the unsophisticated manners and wise laws of the land from which they came. They fell into the extreme refinements of luxury and effeminacy, and reached such a height of impiety that they made their houses more beautiful than their temples, and their princes tore down from their sanctuaries the images of the gods in order to secure divine honours for themselves.

"But this impiety was punished with an ever-memorable chastisement, for they were overwhelmed with darts of fire and bronze sent forth from heaven (*ἐξ οὐρανοῦ βαλλόμενοι πυρὶ καὶ χαλκῷ*). The forged bronzes which armed these heavenly darts (*κεχαλκευμένα ἐξ οὐρανοῦ βελῶν*) are still picked up and are still to be seen."

Athenæus adds that, in memory of this catastrophe, their descendants adopted the custom of wearing garments of a sombre hue, as if in token of mourning, and that, since that time, great distress had succeeded their ancient prosperity.

##### TERRA-COTTAS.

The terra-cotta *figurines* representing protecting deities of the cycle of Démêter, Persephone, and Dionysos—symbolical animals or fruits—are scarcely ever wanting in the ancient tombs of the Terra d'Otranto. Specimens are to be seen in all the private collections of the province; and the Lecce museum possesses a very numerous series, which is as yet neither classified nor, as regards the larger portion, exhibited, for want of suitable rooms for the purpose.

It is a remarkable fact that, despite the neighbourhood of Tarentum, its extensive trade with the native populations, and the preponderant influence which it exercised, these terra-cottas by no means present the characteristics of Tarentine manufacture. They deviate distinctly from the Tarentine type, and approximate more closely to the products of the factories of Apulia. Even at Oria and Manduria, which are only a few leagues distant from Tarentum, this difference is as marked as at places more remote, such as those situated close to the Apulian frontier. I have seen no terra-cotta of unmistakably Tarentine origin among the results of excavation on the soil of the Messapian and Iapygian district, with the exception of those fine *antefixa* of whitish earth, well designed and skilfully modelled, which were produced in great numbers by the potters of Tarentum after five or, at most, six unvarying types. These *antefixa* were exported over a vast extent of territory; large supplies of them were despatched in another direction to Metapontum and beyond. One of the commonest types is that representing a female head decked with the lion-skin—doubtless an Omphalê. The Duc de Luynes brought back a specimen from his excavations at Metapontum. In 1880 I was able to place side by side with his, in the collections of the Cabinet of Medals at the Bibliothèque nationale in Paris, a second specimen, evidently from the same mould, which was found at Tarentum itself. Last year I saw others at Brindisi, Lecce, and Fasano, which were found at Brentesion, Rudiae, and Gnathia.

But nowhere in these regions has anything been discovered similar to the votive terra-cottas of Tarentum, a store of which has been found in the recent excavations at Metapontum near the temple of Masseria di Sansone, to which they were transported in large quantities. Nor has anything been unearthed presenting even a distant resemblance to those exquisite figures

of Eros which are worthy to compare with the most delicate and graceful statuettes of Tanagra, and specimens of which have only this year been turning up on a single spot in the necropolis of Tarentum.

Among the terra-cottas in the Lecce museum dug out of the ancient tombs of Rugge, the most important, in respect of its size and the strange character of the figure represented on it, is one which I will endeavour to describe, and which introduces us to a clearly non-Hellenic divinity of a type which must be related to the conceptions of the mythology peculiar to the natives, and with regard to which we are as yet in possession of no certain information. The figure is about a foot high, and is in reality only a kind of *alto-relievo* stamped in a mould, for it has no back. It represents a goddess, with a matronly aspect, seated on a high-backed throne with lion's feet. Her head is veiled and surmounted with a lofty *stephanos*, decorated with egg-shaped, or rather blossom-shaped, ornaments. Her long hair falls in great waves, spreading over her shoulders and along the back of her seat. Her hands are resting on her knees. Her dress is a tunic reaching to the ankles, and opening in front so as to leave the breasts exposed. She is clearly a chthonian goddess of universal fertility, a kind of Ops or Bona Dea. The head of this figure was moulded on that of a Démêter or a Hellenic Gaia, grand and severe in style and magnificent in character. The body, in which the native modeller had no prototype of the same kind to guide him, and clearly followed his own inspirations, is singularly inferior both in point of style and of execution.

FRANÇOIS LENORMANT.

##### OBITUARY.

THE *Intelligenzblatt* of Bern records the death of the painter Albert Walch in that city. Walch belonged to an Augsburg family which has done service to art in various branches for many generations. His father, Johann Walch, was a glass-painter of some repute, who died in 1841. Albert Walch was born in 1815, and studied at Munich under Cornelius, but afterwards lived in Rome. The siege of Rome by the French in 1849 drove away many of the artists, and Walch among others, who, after a short stay in Germany, settled finally at Bern, where he obtained local celebrity, first as a portrait painter in oil, and afterwards for his *genre* compositions in water-colour and his designs for many branches of art-workmanship and decoration. His devotion to the severe ideals of the antique, and to the school of Cornelius, may be traced in all his work.

##### NOTES ON ART AND ARCHAEOLOGY.

MR. G. H. BOUGHTON, A.R.A., has finished several pictures for the coming exhibitions remarkable for their fresh inspiration from real life. Three of them are scenes in Holland. One represents groups of women weeding a quay in one of those dead cities of the Zuyder Zee of which M. Henri Havard has written so pleasantly. In the distance, a spit of land stretches out into the cool, gray waters, and on its narrowing banks red-tiled cottage and feathery willow stand out against the quiet sky. The clouds, the sea, the moist air, are all as Dutch, and delightful, as the maidens with close head-dresses, short petticoats, and wooden shoes who are kneeling on the bright green grass. They and the grass, and the rich purple red of the stones which have already been cleared, give life and warmth to the foreground. In unity of impression this picture seems the best of the three Dutch scenes from Dutch life, and also in general harmony of colour; but another of them has a group of girls

carrying cabbages, red and green, which for subtle and beautiful play of delightful tints the artist has never equalled. The third is remarkable for the bold, free attitude of a girl who, with her arms behind her, is standing chatting on the shore. In a portrait of a lady walking in a favourite part of her own estate in Scotland, Mr. Boughton has made a charming innovation on this branch of art. The landscape is not only a very beautiful one, and painted with the same strength as the figure, but it is more than a background—not a foil, but a decoration; not a servant, but a friend. A single figure of a Frisian girl, with skates, completes the year's harvest, which shows great advance in technical skill, as well as much freshness of impulse and fertility of design.

MR. CARL HAAG has completed for the forthcoming exhibition of the Royal Society of Painters in Water-Colours five drawings of Oriental subjects, one or two of which are remarkable studies of character, and all display that ripe understanding of his theme and that proficiency in brilliant yet sober painting which help to give to Mr. Haag the position he now holds among painters of Eastern subjects.

MR. JULIAN LEVEROTTI has just finished a noteworthy bust, shortly to be exhibited. The subject is Mrs. John Bennett, a lady still youthful, and whose portrait is rendered by the artist with dignity and refinement. The work shows many features of interest.

PROF. ADOLF MENZEL's contribution to the exhibition of the Royal Society of Painters in Water-Colours will be a picture in *gouache* entitled "The Head of a Knight."

M. BRACQUEMOND's etching of "Le vieux Coq," which won the *médaille d'honneur* for engraving at the last Paris Salon, has now been published in England by Messrs. Dowdeswell, of Bond Street. We have already called attention to the peculiar merits of this plate in its early states. For the use of pure line to express local colour and texture, it is most remarkable. The structure and sheen of the darker feathers, the fleshy consistency of the comb, the horniness of beak and talon, are marvellously "got." The insistence on such qualities is, of course, incompatible with full *chiaroscuro*; but the modelling of the figure is assisted by that fine appreciation of the value of local markings in the suggestion of shape which is one of the characteristics of Japanese art; and "Le vieux Coq" is a veritable piece of "sculpture by incision," as old John Landseer defined engraving.

THERE can be no reasonable ground for taking exception to the course of the recent debate in the House of Commons on the subject of the claims of the provincial museums; the general feeling of those instructed in the matter is doubtless that which found expression in Parliament—that the most precious art possessions of the country are lodged in London, and must there remain, not so much for the benefit of Londoners, as for that of all the world, which visits London. At the same time, a remark made by one honourable member who seemed dissatisfied with things as they are might be made of service, not so much through the action of Parliament or of the central authorities, as through the independent initiative of certain great provincial towns. It would be an excellent encouragement to high-class artwork, not if every provincial town famous for one kind of production received from Government a permanent collection of what was most precious in that order of production, but if every such provincial town bestirred itself to secure, as opportunity offered, the best of the most ancient specimens of that production coming into the market. Birmingham is the seat of

goldsmith's work nowadays, it is said, and that it does not possess a fine collection of old goldsmith's work has been adduced as an instance of provincial hardship; but Birmingham, enormously populous and exceedingly rich—very enterprising, too, in its provision of library and institute—might easily set aside a sum of money for the gradual accumulation of all available treasures of goldsmith's design and execution. A like plan for other art industries might well be adopted in towns famous for these, and thus a provincial museum, instead of entertaining as its ideal the imitation of a metropolitan show, might gain an individuality and a peculiar interest.

WE are able to announce two foreign print sales of great importance; one of them, indeed, will be one of those notable events that occur but rarely. M. de Vreeswijk, an architect of Utrecht, long known as a collector, will dispose of his collection of rare engravings of many schools. The sale will take place at Amsterdam, on May 3 and 4, and will be conducted by Mr. Frederick Muller. But this, though it will be an interesting occasion, is the less important of the two sales. Mr. Muller also has charge of the earlier one, which will occur on May 2, and will consist of the duplicates of the Amsterdam Museum. The sale of duplicates from a national collection is not so difficult a matter—is not so fenced about with formalities—abroad as it is in England. Yet even abroad, though the obstacles are less considerable, the event rarely occurs. The Amsterdam Museum is particularly rich in duplicates, and the sale will allow the collection to be enlarged in directions in which it has not yet extended, and this is, indeed, the object of the auction. The "Cabinet d'Estampes d'Amsterdam" dates, in some sort, from the first half of the seventeenth century. That is to say, the earliest contributions to what afterwards became the collection of William the Fifth date from that time. The collection of William the Fifth constitutes the present cabinet. It was subsequently enriched by the Bonaparte who sat on the throne of Holland, this monarch purchasing the entire cabinet of Baron de Leyde de Warmond. This purchase, though generous, may have been in some sort unnecessary, since so great a proportion of what was then acquired was work already represented by excellent impressions. Hence, we understand, the present sale of duplicates, which include examples of German little masters, of masters of the Dutch school—Rembrandt, of course, chief of them; of Sir Anthony Vandyke, of Albert Dürer, of prints after Rubens, who was so fortunate in his interpreters with the burin. Nor does this exhaust the list.

MR. REGINALD STUART POOLE will give a course of three lectures in the Parish Room, Kensington Vicarage, on "Excavations in Egypt: What they have Produced, and Why they should be Continued." The dates fixed are May 4, 11, and 19, at 5 p.m. Special reference will be made to the scheme for investigating the sites of Goshen and Naukratis.

THE controversy about the condition of some of the sculptures in the Cesnola collection at New York has broken out afresh. Mr. Duncan Savage, assistant to Gen. di Cesnola in the Metropolitan Museum, has resigned his post, and published a pamphlet entitled "Transformations and Migrations of Certain Statues in the Cesnola Collection." In this he gives a list of the number of objects which he asserts that he has tested and found to be false.

PROF. WILLIAM W. GOODWIN, of Harvard, has accepted the post of director of the school which the Archaeological Institute of America intend to found at Athens. Nine colleges have already agreed to take part in its foundation. Prof. Goodwin, who proposes to start for Greece

in July, will continue to receive the salary of his chair.

A DÜRER CLUB has been founded at Brooklyn, U.S., somewhat after the example of our own Hogarth Club, for the encouragement of art by the reading of essays and the exhibition of works by its members.

M. DU SOMMERARD has been elected a member of the Académie des Beaux-Arts, in the place of the late Charles Blanc, by a majority of three votes over M. Heuzey.

AT the last meeting of the Société académique indo-chinoise, the president, the Marquis de Croisier, communicated the results of the archaeological mission to Cambodia of M. Delaporte, lieutenant in the French Navy, who has just returned to France. He started from Marseilles last October, and was compelled by fever to abandon the work in January, leaving three Europeans behind out of the original party of six. He has brought back with him about 300 photographs, forty rubbings, and a few pieces of sculpture. The principal scene of his investigations was among the ruins of Angkor; and the most important result is to prove that Brahmanism had prevailed there at some period. Many of the temples are adorned with bas-reliefs showing scenes from the *Rāmāyana*; and the *linga*, or emblem of Siva, is also found. Only recently we reported that M. Aymonier had brought back some inscriptions in good Sanskrit from the same region. The importance of these discoveries upon the early history of India cannot be overrated.

ON March 29, the jury of painters who form the "hanging committee" of the Salon constituted its bureau. M. Bonnat was elected president, MM. Cabanel and Bussion vice-presidents, MM. Humbert and de Vuillefroy secretaries. The total number of pictures sent in is 7,063, of which only 2,500 can be accepted.

COMM. DEMETRIO SALAZARO, vice-director of the national museum at Naples, and author of *Studi sui Monumenti della Italia meridionale*, is now publishing an equally important work upon Roman art in the Middle Ages, illustrated with reproductions by chromo-lithography of mosaics and oil-paintings, dating from the eleventh century onwards, and with photographs of buildings, &c.

THE brothers Edmond and Jules de Goncourt have issued (Paris: Charpentier) the second series of their *Art du XVIII<sup>e</sup> Siècle*, which treats of Greuze, the Saint-Aubins, Gravelot, and Cochin.

LEOPOLD FLAMENG contributes a very masterly and highly finished etching to the April number (a very good one) of the *Art Journal*. It is after a painting by M<sup>me</sup>. Virginie Demont-Breton. It represents a fisherwoman who has bathed her two children, and is carrying them back over small rocks cropping out of the pools on the beach. The poise of the woman's figure, as, with one naked child in each arm, she steps from one bit of rock to another, is admirable, and not less so the contrast between the helpless, chubby children and their strong, thin mother. The modelling of the soft, round limbs of the children could scarcely be beaten by the burin. Mr. Aitichison contributes a very interesting article on colour as applied to architecture.

THE *Zeitschrift für bildende Kunst* for the 23rd ult. contains an etching by Woernle after a painting by Wereschagin, the Russian painter, representing Skobelev in the Schipka galloping with his suite past his troops drawn up in line immediately after the Battle of Schakna. The ability of Wereschagin as an artist is not less remarkable from the malformation of his right hand and the number of accidents which have happened to it. The forefinger was severely

injured by a bite from a pet leopard, the second finger has been shot through, and he has a cartilaginous mass in the palm like the pad of a bear's paw.

### THE STAGE.

THE latter part of Lent has, in the theatrical world, been even duller than it is wont to be, and now at Easter there is, perhaps, only one new piece deserving of much notice. That is the piece at the Court Theatre called "The Parvenu," and written by Mr. G. W. Godfrey. Mr. Godfrey, if he is hardly yet a popular author, is by no means an untried hand. We owe to him, among other work of good quality, the play of "Queen Mab," in which the lady who is now our leading English actress made a distinct mark several years ago at the Haymarket. In Mr. Godfrey's new play at the Court Theatre such aid as Mrs. Kendal alone can afford has to be dispensed with. There is no heroine of passion or marked character—no one to demand the services of an actress who may be called great. But there is a sentimental heroine and a comic heroine; and Miss Marion Terry represents sufficiently well the one and Miss Lottie Venne, with an almost superfluous display of energy, represents the other. The audience is pleased with them. But it is neither to the characters of his heroines nor to the skill of their representatives that the author of "The Parvenu" owes the success which we believe his play will obtain. It is a robust play; frankly enough conventional in some of the leading lines of its construction, as in the opposition of the *bourgeois* to the aristocrat, but individual and fresh as regards much of its treatment, healthy, sagacious, even witty in dialogue. Moreover, the love scenes and that which follows upon the love scenes of the piece are written with vigour; the expression of feeling has the true ring about it; the dialogue, while never being lax, is yet not too resolutely and continuously smart—scenes that are passionate, or almost passionate, are treated with dignity. The characterisation is interesting. It is, of course, too much to demand of a playwright, as it is also too much to demand of a novelist, that every character presented shall be fresh as well as true. No dramatist could respond to a request so exacting—the affairs of life and the affairs of the stage have often to be conducted by persons who are at least typical, who can make no claim to be new. But of the personages whom Mr. Godfrey presents, a fair proportion are individual, and a fair proportion interesting. The self-seeking Sir Fulke and Lady Pettigrew do something to atone for their unworthiness by their provision of literary entertainment. The newly successful man, represented by Mr. Anson, is capable of abnegation as well as of vulgarity; and either Mr. Charles Tracy is amusing, and welcome for his own sake in the play, or else Mr. Clayton makes him so. Sir Fulke and Lady Pettigrew are played by Mr. Kemble and Miss Sophie Larkin. Mr. Kemble is a good actor—in a part that suits him he is a very good actor, and the public is beginning to find it out. Miss Larkin is a true comedian, who has cultivated to the utmost the gifts of Nature, and who can be profoundly disagreeable with perfect self-contentment, cheerfully venomous, and maliciously epigrammatic. Indeed, there is only Mrs. Bancroft who equals—nobody excels—this lady in the measure of humorous bitterness that can be compressed into a phrase. Miss Lottie Venne's delivery of acidulated dialogue is likewise apt to be pointed; but in "The Parvenu" the dialogue that Miss Venne has to deliver is wholly good tempered, and Miss Venne accordingly waxes boisterous where she fails to be witty. "The Parvenu" is an English piece. There is nothing new at

the theatre; nothing wholly underived; but we mean that "The Parvenu" is English and original in the sense in which the last Court piece—Mr. Burnand's "Manager"—could not, and did not, pretend to be. It will, therefore, not be open to "The Manager's" misfortune—that of having to be withdrawn in consequence of difficulties with a French writer at a moment when its English adapter had made it least imitative and had made it most successful.

If the Alhambra Theatre is not precisely the chosen home of intellectual entertainment, it is a house in which brilliant *spectacle* is best studied, in which scenery is most gorgeous, and in which ballets best crowd the stage. Its character in this respect is maintained to the full by the Easter playbill, in which the one place is assigned to "Babil and Bijou," a production that won for Mr. Boucicault, in old days, little honour; but, we will hope, a fair compensation in hard cash. "Babil and Bijou" was, in truth, out of place where Mr. Boucicault somewhat cynically produced it, but it is no doubt the right thing where it is now to be seen.

### MUSIC.

*The Genesis of Harmony.* By Hugh Carleton. (Augener.)

MR. H. CARLETON has written a book that cannot fail to interest all who study the laws which govern musical composition. Since the time of Rameau, attempts have been made to place the theory of music on some sort of philosophical basis. The great chord supplied by nature has served as a foundation-stone, but the various modes of selecting and arranging the series of harmonies or overtones have given rise to many and conflicting systems. Mr. Carleton dislikes arbitrary, or what is called "natural selection," and prefers implicit acceptance of what nature has supplied to us. He takes two monochords (tuned as dominant and tonic), connects by lines the nodes of each, thus showing what he terms "the cadential procession of overtones from the dominant to the tonic monochord." The fourth and fifth nodes of dominant string are connected with the third and fourth nodes respectively of tonic string—i.e., taking G as dominant and C as tonic, *b* is joined to *c*, and *d* to *e*. Then the sixth node of dominant is joined to the fourth of tonic—i.e., *f* to *e*. The *f* he terms *bemol*; hitherto this note has been considered "out of tune," and another *f* used as the sub-dominant or fourth degree of the scale. (*Bemol* is to *fa* as 63 to 64.) According to the author, *bemol* is too flat to take the place of sub-dominant in the ascending scale, but is in tune as a note of the descending scale, and, as he asserts, in practical use. This "frank acceptance" of the despised overtone seems just, thoroughly logical, and likely to lead to practical results. In the course of the treatise he shows how this "unselected note" affects the nature and naming of intervals, plays an important part in the harmonisation of the scale, and helps to explain the upward resolution of the lowest note in the chord of the great sixth. To return to the nodes and notes: *b*, *c*, *d*, *e*, and *bemol* form a pentachord containing an ascending and descending tetrachord. The pentachord, says the author, "is the master-key to the science of music," and from it he deduces the heptachordal and octochordal scales. The connected nodes, forming a series of "bichordal" cadences, determine their structure and harmonies. Mr. Carleton reminds us that the octochord in use is highly artificial, and that it is no scale of nature. His object is, therefore, to show how the different series of notes have been obtained artificially from the pentachord, "within the

limits of which alone safe theorising is to be found." His mode of reasoning is ingenious, but, like the octochord itself, somewhat artificial. We quite agree with him in what he says of the minor scale—that it is abnormal, and has no existence in nature. The octochordal scale is of great antiquity, is used in various forms by all nations, and, though it may be possible to trace it by evolution from the pentachord and its component tetrachords, it forms the basis of modern tonality, and is necessary as a point of departure to explain modern harmonies and modulations. The pentachord may, on the one hand, be more natural than the octochord, but the latter is, perhaps on account of its very faults and imperfections, more governable and of greater service.

Mr. Carleton is dissatisfied with the analysis hitherto given of the chord of the augmented sixth. He dislikes the desperate expedient of "double roots," but his mode of explanation appears to us only a double root in disguise. He meets the difficulty of the twofold relation in the following manner:—In the chord *a flat*, *c*, *f sharp*, we could have G as root of minor ninth (*a flat*) or D as root of major third (*f sharp*). But we cannot connect *f sharp* with prime G, or *a flat* with prime D. We may take either as root, but if we choose G we must say *f sharp* is "a passing note advanced by courtesy to the rank of a substantial note;" if we choose D the *a flat* must be described in a similar manner. Mr. Carleton has a short and, in our opinion, unsatisfactory chapter on the "chromatic scale." Had he obtained his sharps and flats in a more natural manner—i.e., more in accordance with modulation as practised by classical writers—we think he might have explained the chord of the augmented sixth without having resort to two roots, and without "an advance by courtesy." Why should not D be the root? It could stand as dominant from G for the *f sharp* and also as supertonic of C minor for the *a flat*. In his chromatic scale he admits without hesitation *e sharp*, but fears to accept *d flat*, lest he should "borrow after the manner of the Israelites when leaving Egypt."

Mr. Carleton would like to reform the technology of the art; but to do so thoroughly would amount to the creation of a new language, so he is satisfied to amend, though he cannot completely cure. He remembers that Max Müller has said, "A change of nomenclature generally produces as much confusion as it remedies." He makes the most, and at times too much, of the present anomalies; but some of his proposed emendations are excellent. To speak, however, of dominant in an abbreviated form as *do* is rather confusing, seeing that the word is in use as an equivalent for "ut." The author admits this, and says, "it is a mere invention of the singing-masters;" but to state the way in which the term has arisen does not remove the fact of its existence and actual employment. His attempt to reform "figured bass" is clear and ingenious. The chapter on "consecutive fifths" is one of the most interesting and original in the book; he proceeds in a very logical manner to show not only that all fifths are not equally objectionable, and that their imperfection is a question of degree, but also to trace the cause and measure of the imperfection.

To give a clear and satisfactory account of this treatise it would be necessary to have music-type, and also to quote many of the new terms and definitions so as to understand the author's language and process of reasoning; but in our few and necessarily imperfect remarks we hope to have succeeded in calling attention to a work full of suggestive thought and originality. It is, as the author says in his Preface, "an independent endeavour to think out the system from the outset." J. S. SHEDDOCK.

## LITERATURE.

*A History of Agriculture and Prices in England from the Year after the Oxford Parliament (1259) to the Commencement of the Continental War (1793).* Compiled entirely from Original and Contemporaneous Records. By James E. Thorold Rogers, M.P. Vols. III. and IV. (Oxford: Clarendon Press.)

It is somewhat more than thirty years since the most brilliant of modern historians delighted the age with a work which, besides setting forth the great benefits we have received from the Revolution of 1688, was designed to show with unmistakable clearness how much better in every respect the England of Queen Victoria's reign was than the England of any previous era. Development theories were as yet in their infancy, and in the domain of natural science they were not regarded with so much favour as they are now; but, as regards the progress of civilisation, society was evidently quite prepared to believe with Lord Macaulay that it was a matter of simple development from less to more and from worse to better in every possible direction. What else could be expected from a study of the past but a revelation of the shortcomings of our ancestors? The good old times, indeed! How the historian delighted to explode that figment as he pictured to us the infamous roads, the mounted highwaymen, the country half cultivated, the contracted limits of the towns, the bad drainage, bad lighting, bad police, and ill-built houses of the days of the Stuarts. And when, to leave the subject of material warfare, we were further enlightened as to the degraded condition of the clergy, the ill-educated country gentlemen, the low social morality that prevailed in that uncomfortable generation, the argument seemed complete. Where on earth had men caught the idea of that golden age which blockheads talked about as "the good old times"?

Lord Macaulay certainly displayed extraordinary vigour in slaying a superstition which to all appearance never had much real life in it. But it may be questioned whether he did not do a good deal to nourish an opposite superstition of a kind much more really injurious. The belief that we are far better than our forefathers has been at least as common in every age as the belief in the goodness of times gone by; and it is for the most part quite as much of an assumption, unsupported by anything like a sufficiency of evidence. Even of the material condition of past ages a satisfactory judgment cannot be formed without very careful and elaborate

research; and, as to their moral complexion, it is too easily forgotten that the darker features of the times are generally more conspicuous than the quiet virtues. With this latter subject of enquiry, however, we are not at present concerned. The nineteenth century must be allowed to form what estimate it thinks proper of the comparison between its own morality and that of former ages. But the question as to the progress of material prosperity is one that can only be determined by statistics. And it is remarkable that, though much has been asserted hitherto, the means of arriving at a safe conclusion have been almost entirely wanting; for it is clear that we cannot congratulate ourselves on the simple fact that the general rate of wages now stands much higher than it did one or two centuries ago, unless it is certain that the purchasing power of money has not diminished in a still greater ratio. And yet this very obvious consideration has been conveniently overlooked by writers bent on making out a case of general amelioration in everything!

We have now, however, something like an authoritative declaration on the subject in the book before us; and it is curious that, after collecting and tabulating the most elaborate statistics of prices, both of food and of commodities of every kind, in early ages, Mr. Rogers gives it as his deliberate opinion that the theory of "the good old times" was not far from the truth. Not that this is the way he himself expresses it, but this is very distinctly the result of his researches. For he tells us that the period which, of all others, most people probably regard as the most uncomfortable in all English history was really marked by "substantial, unbroken prosperity." In spite of civil broils, "the fifteenth century and the early years of the sixteenth were the golden age of the English husbandman, the artisan, and the labourer." Nor were these the only classes to whom the remark would seem to apply (for, as regards them, the fact had been already pointed out by Hallam), but Mr. Rogers extends it to the whole people. "The condition of the English people," he says expressly, "was that of an almost monotonous prosperity." Mr. Rogers, in fact, quite confirms the surmise of the late Prof. Brewer that the Wars of the Roses passed over the land like a boisterous gale without doing much internal damage, the people at large taking very little interest in what was really a struggle between two aristocratic factions. What first broke the uninterrupted flow of prosperity was, we are told, the tyranny and extravagance of Henry VIII., and, Mr. Rogers might surely have added, the enormous confiscations of monastic and other property. The monks were easy landlords. After them came a race of new proprietors, who obtained large grants by bribery and Court favour, who rack-rented tenants and put the screw on all their dependents. Under Elizabeth it cost 2s. a week barely to maintain the family of a labourer who could have kept them very well for 8d. a century before and laid by money besides out of his wages. From this time the condition of the poor husbandman shows a steady decline. It had begun, indeed, to excite serious uneasiness even in the end

of Henry VIII.'s reign. But under George III., with the American and Continental wars, it became a state of "unrelieved hopelessness;" and from that time to the abolition of the Corn Laws was the darkest era in the poor hind's existence. Since then he has been simply taking himself off and making it every day a more serious problem how the land is henceforth to be tilled.

Now, if such a retrospect as this had been presented to us—as we may quite well conceive it might have been, with a few slight differences merely in the theory of causation—by some old-world Tory, or, perhaps, by some notable economic heretic like the late Lord Beaconsfield, it would doubtless have been dismissed as unworthy of serious attention. But it is the work of one who, besides being an eminent political economist, is conspicuous in Parliament as an advanced Liberal; and it is the result of long and patient researches, the value of which was most truly appreciated beforehand by the Delegates of the Clarendon Press when they authorised the publication. The first of the two volumes before us contains over 700 pages entirely occupied with tabular statistics of the prices of all sorts of commodities during the period from 1401 to 1582. The second alone contains the author's observations upon the subject. And the main result we gather, alike from facts and comments, is that, however justly we may congratulate ourselves on having attained a higher, smoother, and more tranquil civilisation than our ancestors, these blessings are paid for by a more severe struggle for existence; that every advance has been brought about by some serious dislocation of the social fabric, and has been accompanied by some corresponding deterioration.

It is impossible within the limits of an article like this to do justice to Mr. Rogers's shrewd and able criticisms on the social and economic condition of the period under review. But we must say that, able and vigorous as they are, they are sometimes open to question. Mr. Rogers, with all his cleverness, is slightly given to the foible of omniscience. On his own subject he is an indisputable authority, and we may well be grateful for a work which has certainly been the result of enormous labour in ascertaining definite facts. But no amount of information relative to prices and the rate of wages will qualify a man to discuss every phase of the social condition of England through two centuries of her history. It is true Mr. Rogers has made himself master of the Acts of Parliament bearing on economic subjects. He has also edited Gascoigne's Theological Dictionary, and has probably peeped into the Paston Letters, beside being reasonably well acquainted with other sources of information. Yet we venture to doubt his opinion as to the depraved condition of the monasteries; and we are quite certain that he is wrong in saying that at the accession of Elizabeth there were very few bigoted adherents of the old faith beside the exiles whom Pole had brought back with him. Dr. Jessopp's researches tell a different story, showing that under Elizabeth there were squires who allowed their parish churches to go to ruin rather than have the English service read in them. This it is

obvious they could not have done without the almost universal sympathy of their neighbours. Nor can I, for my part, see the evidence on which Mr. Rogers founds his opinion that Henry VIII. "was outwitted by every European Sovereign," and "made the tool of each in succession." Henry did, indeed, at one time, lend money to Charles V., which that magnanimous monarch never intended to repay; but it is a great question whether, with Wolsey's help, he did not make the Emperor feel the loss of his friendship a far more serious injury than he had inflicted upon Henry.

In short, Mr. Rogers is rather given to the practice of enunciating opinions on matters apart from his own subject which have no other foundation than his own surmises. He is much more modest on doubtful points, such as the population of mediæval England, where he really knows what is to be said on both sides; and it is much to be regretted that he has disfigured a work of so much real value by a number of crude statements about matters on which he was not called upon to enter. All that he has to say within his own legitimate province is of undoubted weight, and much of it really interesting—as, for instance, the analysis of Fitzherbert's husbandry, and the evidence given at p. 106 as to the manufacture of cloth in country places. But the solid facts contained in the work are, of course, its main justification, and these make it quite an indispensable book to all who wish to study closely our social and economic history. JAMES GAIRDNER.

*Spain.* By the Rev. Wentworth Webster. (Sampson Low.)

THIS excellent little book appears just at the right moment. To judge from the newspaper press, English interest in Spain, in her reforms, her Ministers, her prospects, has very much quickened of late. The luckless holders of Spanish stock have been driven to study Spanish finance and the sources of Spanish revenue by Señor Camacho's bold proposals for "converting," *alias* curtailing, their property. But, apart from the Stock Exchange, there seems to be a general feeling abroad that Spain is looking up, that the new Liberal Ministry is doing well, that the young King is an element of hope in the future, and that before very long, if things go on as they are now doing, it will be desirable, if not imperative, to re-admit the country of Charles V. to something of her old share in European politics. Travelling in Spain is becoming more and more a common form of English holiday-making. Spanish curiosities are eagerly sought for by English collectors, as was proved by the beautiful, although very incomplete, exhibition at South Kensington last year; and modern Spanish pictures rank among the most prized and the most expensive of all forms of Continental art. Mr. Webster's pleasant little book will, we hope, reap the advantage of this increased popular interest in the Peninsula and its affairs. It answers just the questions which the intelligent traveller asks, and to which so few guide-books supply the right replies. Mr. Webster takes us rapidly through the geography, the climate, and productions,

the geology, ethnology, and language, of Spain. He then describes the different provinces in order, and concludes with a sketch of Spain's past history, both literary and political, combined with a short analysis of her present system of government and an estimate of her present place in literature and art. As might have been expected, the historical and literary chapters are the least successful. It is possible so to summarise the geography or the ethnology of a country in sections averaging thirty pages apiece as to leave some clear impressions on a reader's mind, but it is practically impossible to tell the story of a nation's historical or literary development within similar limits so as to be even intelligible, much less interesting.

The opening geographical chapter could not well be better. It gives a clear account of the mountain and river systems of Spain, and of their relations to that high central plateau the configuration of which has had so strong a determining influence upon Spanish history. The effect of the Guadarrama range on the climate of Madrid and Central Castile; the shelter afforded by the Sierra Nevada to the bountiful plains of Granada; the use made of the rivers in past and present times for purposes of irrigation; and the results for Spanish commerce of the noticeable fact that only two of the great rivers of the Peninsula reach the sea within Spanish borders—these and many other such points are rapidly and effectively brought out. In the following section a number of simple and striking statistics of the temperature and rainfall in the different provinces of the Peninsula lead up to an extremely readable sketch of the agricultural products of Spain, with which Mr. Webster has interwoven as much historical botany as he could find room for. Would it not have enlivened his comparison between the modern and the old flora of the country to have introduced that wonderful description of the riches of Spain at the time of the Moorish conquest which first appeared in full-blown literary shape in the *Cronica de España* of Alfonso X.? The date of this curious and poetical fragment is uncertain; but in the form which Alfonso gave to it it is certainly a development of older material, and both it and the kindred *Elogium Spaniae*, so long attributed on insufficient grounds to Isidore of Seville, might very well have been used to bring out the effect produced from time immemorial upon the minds of her sons by the beauty and fertility of some parts of Spain. One or two of the remarks on the Westgothic power in Spain which occur in the course of a generally excellent chapter on "Ethnology, Language, and Population" are hardly as accurate as they might be. It is unfair to rank the Westgoths with the Sueves and Vandals as having equally shared with these in the wrecking of "a civilisation which they could neither appreciate nor understand." Euric, the real conqueror of Spain, was very far removed from a mere barbarian chief; and the steady advance of the Westgothic power in the Peninsula during the fifth century, mainly in alliance with Rome and under the shelter of the "foedus," is as clearly distinguishable from Suevo and Vandal raids as the monarchy of Leovi-

gild and Recared of Kindasvinth and Wamba is, with all its weaknesses, distinguishable from the freebooters' rule of the Suevi. Again, Mr. Webster wonders how it was that, "with all the power of the Church to uphold it, the Visigothic empire remained so weak that it fell at the first shock of the Mohammedan Arabs." But it is much more true to fact to say that the Westgothic empire fell because of its alliance with the Church than to say that it fell in spite of it. Other causes, no doubt, contributed powerfully to the final result; but the great lesson of later Westgothic history is that in fighting times a fighting State cannot safely be ruled by bishops. The submission of Recared seemed at the time, and probably was, an act of political necessity; but none the less was it the failure of the ecclesiastical system of government, which followed upon his submission, to meet the social and military necessities of the situation which ultimately destroyed Westgothic Spain. In the same chapter, Mr. Webster attributes the origin of the Maragatos to the isolation of a few Berber tribes from their countrymen in the course of the Christian advance during the tenth and eleventh centuries. Prof. Dozy, in the few pages which he devotes to the Maragatos in the first volume of his *Recherches*, comes to the conclusion that they are the survival of Berber contingents stranded in the course of the backward movement, which was already forced upon the Mohammedan invaders by famine and civil war as early as the middle of the eighth century. There can be little doubt, indeed, that the "Montani de Mala Contia" (Mala Gothia), mentioned in certain early annals as having attacked Asturia in 784, were the ancestors of the modern Maragatos. The remarks upon language are here and there rather hasty. Mr. Webster believes it to have been doubtful "down to the twelfth century" which language would prevail, "so many Arabs wrote in Spanish, and Spaniards in Arabic, &c." Spanish, as a written language, cannot be traced back beyond the twelfth century. Mr. Webster meant, no doubt, to say Latin; but even so the statement, so far as the Arabs are concerned, is a wild one, and we know of no facts by which it could be substantiated. The chapter on "History and Political Constitution" is as good as the limit of thirty-five pages will allow; and the sketch of Spanish history since 1812 is done with praiseworthy clearness, and with a resolute avoidance of all but the most necessary names and details. It is difficult to say as much for the chapter on "Literature and Art." We notice a few serious mistakes, and the strings of names and dates in which it abounds are very unattractive. Mr. Webster makes no mention of the *Poema del Cid*, the most important of all the early poetical efforts of Spain, and as interesting from a linguistic as it is from a literary point of view. "J. L. Segura" is hardly a critical way of describing the thirteenth-century author of the Spanish romance of Alexander, Juan Lorenzo, clerk of Astorga, and native of Segura; and we are amazed to find that Mr. Webster should have confused Chaucer's lively predecessor and contemporary, Juan Ruiz arch-priest of Hita, with Gines Perez de Hita,

the author of the sixteenth-century romance of the *Guerras civiles de Granada*. Mr. Webster's literary sense must have played him desperately false before it could have led him into such a blurring of names and periods as this implies. There is nothing, however, in Mr. Webster's mistakes which may not be easily corrected in a second edition of a book which well deserves to keep a place among popular manuals. MARY A. WARD.

*Ballads of Life, Love, and Humour.* By Robert Buchanan. (Chatto & Windus.)

IN this book Mr. Buchanan affords his readers a most complete view of his many gifts. Early in his career the public attained to a tolerably accurate estimate of the quality of his poetic genius; but of the range of his powers in various directions he has in recent years made rather unexpected disclosure. His earliest efforts were mystic, philosophic, and to some extent romantic in character; and when the natural tendency of his mind to look beneath the surface for sources of inspiration was brought to bear on immediate subjects, to the neglect of the more remote ones that furnished him with his primary prompting, he became at once a popular writer. His *London Poems* was a book happily conceived and admirably executed; and its success was due equally to the circumstance that it was the first of many similar products by writers of all degrees of merit, and to the intrinsic value of the author's lyric gift. Indeed, the volume had throughout a spontaneity that was itself full of refreshing cheer, and bore witness to a strong hold of reality that was at least strangely in contrast with the writer's mystic beginnings. It was not difficult at this early stage to perceive the sources of Mr. Buchanan's poetic impulse, notwithstanding a good deal that was said at the time with a view to showing that in the new poet the literature had secured a new voice. What it had in fact secured was a most notable addition to the number of writers who possessed a marked facility in rich and varied verse, a genuine command over the rougher sorts of pathos, and a great fund of genuine humour, not, perhaps, of the higher, unconscious, ingenuous kind, but of that rollicking order which results from a very lively perception of the ludicrous. Apart from these, there was one characteristic of Mr. Buchanan's work which merited recognition: we mean its vivid realisation of the phenomena of nature. Here Mr. Buchanan was conspicuous among the poets later than Tennyson, for it is not more certain that there was a school of Cockney poets at the beginning of the century than that certain of the poets who were young when Mr. Buchanan began to write furnished abundant evidence that their familiarity with the aspects of external nature was limited to their acquaintance with Hampstead Heath. There was assuredly ample display, amounting, indeed, to plethora, of passionate love of nature, but it had often a bookish appearance, and bore much the same resemblance to the picture that grows out of constancy of intercourse as landscape gardening bears to the primitive face of a natural garden. Mr. Buchanan wrote like

one who had looked upon external nature in many places and under many of her changeable moods; his description of the great snow in the "White Rose and Red" was eminently vivid, and, though wanting perhaps in the face-to-face faithfulness which belongs to a description by Wordsworth, had something of the emotional portraiture which we associate with Byron. And this touches the most conspicuous quality of Mr. Buchanan's poetry. Great power of observation and of swift, rather than subtle, perception constitute his best gift. The present volume exhibits nothing more plainly than the author's knowledge of life, his acquaintance with the world, and his powerful grasp of actual fact. In poems like "The Lights of Leith," "Phil Blood's Leap," and "O'Connor's Wake" Mr. Buchanan shows how much he has seen and heard and felt—in a word, how much he has lived. And this power of observation and vividness of perception, coupled with a capacity for dramatic realisation (within determinable limits), while it constitutes his salient gift, denotes also the limit of his genius. The reader of this book of ballads may perceive immediately where Mr. Buchanan's faculty fails him by turning from such masterly stories of real life as "The Wedding of Shon Maclean" and "James Avery" to the vaguer confines of such semi-philosophical creations as "Earth and the Soul" and "Giant Despair," not to speak of the more fanciful poetic fabric of "The Faery Foster-Mother," or "The Asrai," or even such narratives of remote interest as "Fra Giacomo," "Convent Robbing," or "The Devil's Peepshow." It is where Mr. Buchanan permits himself to rely in any large measure upon the purely imaginative in conception, as well as in treatment, that his grasp becomes perceptibly weaker. Not that he is deficient in imaginative phantasy (it would be fatal to his claims as a poet—whatever his power in the portrayal of human passions—if he were), but that imaginative phantasy is in his case best confined to the sensuous presentment, not the gestation, of his thought. Where it is permitted to become fundamental, the writer's strength is dissipated. This is observable in such poems in the present volume as "The 'Midian-Mara,'" "Will o' the Wisp," and "The Changeling;" and more notably still in Mr. Buchanan's deservedly celebrated ballad of "Judas Iscariot." The last-named poem is, in the strict sense, a pure poetic phantasm, with only such side-hold of reality as belongs to the reflected picture of the fruits of sin and the terrors of remorse; it lives in the mind as a thing born of the imagination and having no existence apart from it; possessed of no parallel, no antetype, in the world of actual facts. At first sight, it seems well, consistently, and completely imagined, perfect in its parts, rounded and finished into unity, and pregnant with a memorable significance. Assuredly it is Mr. Buchanan's most imaginative creation, but it fails (where everything of his must fail) in realising the supernatural—an element in the poetic art which neither observation of life nor perception of human passion may compass, and which nothing can achieve save the vision that can go to work upon itself. "Judas Iscariot" is a poem of which any man whatever

might be proud. Few things in modern poetry are more strikingly conceived than the light to which the soul of Judas Iscariot bears the body of Judas Iscariot—not because it would do so, but must. Yet the poem proves conclusively how much Mr. Buchanan is dependent, in the exercise of his highest faculty, upon the promptings of the actual world of men and women. What the work would have been if to the human fire the poet has infused there had been added the spiritual vision which Coleridge might have given it, we can easier realise to our emotions than to our intellect. Less ambitious, but more satisfying, because more adequate, than this, is a poem in the present volume which, limited in sphere to the realm of stern fact, brings into active operation every gift and acquirement of the writer, embracing knowledge of life, familiarity with the phenomena of external nature, strength of passion, and force of robust intelligence; nay, the very mysticism of his early impulse finds expression in it; and, if the incidents have a tragic character that forbids the play of the fine humour that is natural to the narrator, they start as a counterbalancing effect a vein of deeper pathos, perhaps, than has yet been touched by his hand. "The Lights of Leith" is a ballad of which the foundation is stated to be historical. It turns upon the infamous statute against witchcraft which was procured by James VI. of Scotland upon his accession to the English throne, and remained unrepealed until 1736, and even then was repealed only under strong protest from the Scottish clergy. One traveller, as late as 1664, is said to notice casually the fact of having seen nine witches burning together at Leith. The ballad tells the story of a sailor of Leith who returns after years of absence to find his old mother burning at the stake in his native town:

"The lights of Leith! the lights of Leith!  
See, see! they are flaming still!  
Thro' the clouds of the past their flame is cast,  
While the Sabbath bells ring shrill!"

"The lights of Leith! the lights of Leith!  
They'll burn till the Judgment Day!  
Till the Church's curse and the monarch's shame,  
And the sin that slew in the Blessed Name,  
Are burned and purged away."

It is a truly noble ballad, full of tender feeling and right purpose, impregnated with spiritual and vivified by human love. By-gones are by-gones; and Mr. Buchanan will not now object to hear it said that his "Lights of Leith" is an example of the frank, full-bodied, robust, manly English ballad of which the "King's Tragedy" must remain for many a long day the finest modern type.

Mr. Buchanan divides his ballads into two sections—dramatic and lyrical; but a more natural division, in our judgment, is that indicated in the title, *Ballads of Life, Love, and Humour*. To what extent any ballad may be specifically described as dramatic or lyrical is, after all, uncertain. Primarily, a ballad is a lyrical narrative. "Thespis," says Dryden,

"the first professor of our art,  
At country wakes sung ballads from a cart."

It is scarcely possible to discuss in this place the relation of the English ballad to the Italian *ballata*; it is enough to concern ourselves with the earliest type known in England. Now,

"Chevy Chase" and the "Ballad of Sir Patrick Spens" are, first of all, narrative; next, they are lyrical, because so arranged into subdivisions that they can be sung; and, lastly, they are dramatic, because spoken in various voices. The early English ballad is, therefore, both dramatic and lyrical. How Wordsworth and Coleridge came to describe their joint volumes as lyrical ballads it is not easy to discover, for, though the lyrical element preponderates (almost to the exclusion of the dramatic) in such shorter poems as "Alice Fell" and "Lucy Grey," "The Ancient Mariner" is as dramatic as the most dramatic of the old ballads, without being less lyrical. We trust it may, without disrespect to Wordsworth's profundity, be frankly said that there probably existed no better reason for the coupling of the phrases in question than the necessity of finding a distinguishing and memorable title. So that, when Mr. Buchanan divides his ballads into dramatic and lyrical, we fail to see wherein his "Fisherman" is less dramatic than his "Cuckoo Song," or his "April Rain" less lyrical than his "In the Garden." It does no injury to Mr. Buchanan's claim as a ballad-writer to say that he rarely imparts to his work the sinewy simplicity of the old singers. There is a development of the English ballad that is entirely of modern product, being far more complex than the first form, and getting rid to some extent of the out-worn notion of the narrative being actually sung to set music, but retaining enough of the sweep and swirl of a free rhythm to carry a sensible effect as of being chanted when read. This is a sort of ballad-romance, such as "Christabel" and "The Lay of the Last Minstrel," and, to a less degree, "Will o' the Wisp" in the volume under review.

T. HALL CAINE.

*Travels and Researches in Western China.*  
By E. Colborne Baber. Supplementary  
Papers of the Royal Geographical Society.  
(John Murray.)

OF the numerous journeys in Western China made by Mr. Baber the work under review contains the account of one of three and a-half months' duration, and notes with regard to a previous and to a subsequent journey. As the former notes are reprinted from the Parliamentary Report, China, No. 3, 1878, it is only necessary to explain that, after the murder of Mr. Margary at Manwyne, on the border between Burmah and China, the Hon. Mr. Grosvenor was ordered to proceed to the spot to enquire into the circumstances of the crime, and to return by way of Burmah. To his suite were attached two consular officers, one of whom was Mr. Baber. His special duty was to furnish geographical notes of the route of the mission. For this task Mr. Baber was peculiarly fitted by his knowledge of the Chinese language and of surveying, and by his strong physique and natural flow of high spirits, which enabled him to bear with gaiety all the privations entailed by the duty assigned to him.

After the return of the Grosvenor mission to China, it was stipulated that a British consular officer should be stationed at Chung ching, a town on the bank of the River

Yangtze some 1,500 miles from its mouth, nearly 700 miles from Hankow, hitherto the westernmost point at which English merchants were allowed to establish themselves, and over 300 miles above Ichang, at present the westernmost port open to trade. Mr. Baber was selected to be the first consular resident at Chung ching; and since that time until his recent appointment as Chinese Secretary at Peking he has been continually in the centre or on the west frontier of China, and has led a life of almost ceaseless travel.

Mr. Baber started from Chung ching on July 8, 1877, on the journey which forms the principal subject-matter of the volume under review. Proceeding north-west for twelve days, and traversing over 230 miles, he reached Cheng tu, the capital of Szechuan—a town containing about 350,000 inhabitants, which is the seat of the Viceroy of Szechuan, who controls Chinese relations with Thibet, and even claims jurisdiction over Nepal. After resting here six days, Mr. Baber marched about 100 miles in a southerly direction, and then turned aside from the main road with the object of visiting Omi—a precipitous mountain rising 11,000 feet, which, though inhabited almost exclusively by Buddhist monks, is also held sacred by non-Buddhist tribes. In a temple on the side of this mountain Mr. Baber, besides seeing many objects of ethnological and archaeological interest which he describes, examined an alleged tooth of Buddha, which he surmised, in all probability correctly, to be the molar tooth of an elephant or a cognate animal. The great feature of Omi is a phenomenon called by the Chinese Fo Kwang, or "Glory of Buddha," a peculiar halo light seen from the summit resembling the "Giant of the Brocken" (Sir D. Brewster's *Natural Magic*, p. 130). From Omi Mr. Baber retraced his steps some twenty miles, and, travelling up the valley of the Ya River, again reached the Szechuan high road, and went along it for about ninety miles to Han yuan kai, the farthest point reached by Mr. Cooper, and called by him Han yan ky. From this point Mr. Baber traversed about 500 miles of country unknown to modern geographers, but portions of which were traversed by Marco Polo, whose "Caidu" Mr. Baber agrees with Col. Yule in identifying with the modern Chien chang valley, in the Ning yuan prefecture of Chinese maps. The great interest of this part of Mr. Baber's journey consists in the fact that he thus travelled round three sides of a territory called Ta liang shan, a mountainous region containing 11,000 square miles, and occupied by a race of people, independent of the Chinese, called the *Lo su*, *Lolos*, *Lei su*, &c. These people Mr. Baber describes as a tall, well-built race, with peculiar wrinkles on the forehead. Of their language he gives a long vocabulary, which shows a resemblance to that of the Leesaw described by Dr. Anderson; the physical appearance of the two races seems to be quite dissimilar. Mr. Baber not only collected details with regard to the customs of the Lolos, but procured also specimens of their handwriting. One of these specimens is provided with a Chinese transliteration. M. Terrien de La Couperie says of this writing:—"Son affinité est remarquable avec les écritures

des Lampung et des Redjang de Summatra; les caractères chinois auxquels les écritures comparées nous conduisent en dernier ressort appartiennent à l'écriture progressivement réduite en usage en Chine quelques siècles avant notre ère."

Another, or rather, if language is a test in such matters, a branch of the same, tribe encountered by Mr. Baber on this, and still more frequently on a subsequent, journey was a tribe called by the Chinese Si fan—literally Western Barbarian—whose proper title Mr. Baber discovered to be the "Menia" or "Manyak." The Menia are, it appears, divided into twenty-four sub-tribes, nominally under Chinese or Thibetan rule, but really enjoying autonomy. A map showing their distribution is given at p. 93. According to the Chinese account, confirmed by Mr. Baber's observation, the Si fan are as licentious as the Lolos are the reverse. A Chinese saying literally translated runs:—"Lolos prudes, Si fan female dogs." In their marriage customs, which show survivals of taking a wife by capture, the Lolos resemble the Miaotzu or non-Chinese tribes inhabiting the less accessible hills of Yunnan and Kweichow. Other non-Chinese tribes exist in Formosa, Hainan, Kwangtung, and other portions of Eastern China, and receive from the Chinese various names, according to the locality they inhabit—such as Li, Fan, Man, Yao, I, and Miaotze, signifying savages; Lao, signifying aborigines; and Shan, signifying hill-men. It is possible that the Lolo, Menia, and all these tribes may be, as some of them, such as the Li in Hainan and the Fan in Formosa, undoubtedly are, aborigines who have been driven into the hills by the immigrant Chinese. It is known that these tribes formerly ranged over a larger extent of country than they now possess. Thus the independent Lolos were not in the seventeenth century confined, as now, to the Ta liang shan; and, during the last fifty years, the Yao in Kwangtung have been rapidly merging with the Chinese population, while the Li and Fan have been driven many miles farther into the interior of the isles of Hainan and Formosa. Of these tribes we possess but the scantiest information. The Yao are said to be flat-footed, with ape-like jaws; the Li to be of dwarf stature, with thin thighs and large flapping ears. Most of the tribes are said by the Chinese to be unacquainted with the art of writing. It is therefore difficult to connect them with the Lolos.

After rounding the Southern limits of Lolodom the easiest route to return to Chung ching would have been to proceed S.E. and join the Yunnan and Burmah main road, which Mr. Baber had already trodden when attached to the Grosvenor mission. Mr. Baber, however, determined to take a short cut, and, leaving the main route at Ku chu, struck a N.E. course over the mountains, thus skirting Eastern as he had already skirted Western Lolodom. Like most short cuts, Mr. Baber's route was one of great difficulty and danger; unlike most short cuts, it compensated him for all its hardships by the discoveries he made along it. Geographically, he has been able to lay down with almost

certainly that the Chin sha, or Golden Sand River, flows from Chiao chia to Ping shan, in a direction varying from N.E. to N.N.E., and that "the elegant northward meander, with the graceful turn eastwise provided for it by cartographers, is a bit of freehand drawing." Further, after about 120 miles of adventurous travel from the main road at a spot where Mr. Baber's track had reached an elevation of 9,700 feet, as he turned a knoll one of those discoveries which so seldom fall to a modern tourist flashed upon him. The discovery was a snowy ridge lying to his west in Lolo territory, fifteen miles long, and at least 18,000 feet high, which was culminated by a boss 2,000 feet higher. The position of this ridge, called by the Chinese the "bridge of the sun," Mr. Baber was able to fix by observations subsequently taken both from the N.E. and N.N.W. For the geological discovery made by Mr. Baber we must refer the reader to pp. 107-9 of the volume under review. The ethnological discovery was the Lolo writing above alluded to. Some 140 to 150 miles from the point where Mr. Baber first sighted the Sun-bridge Mount brought him, on October 18, to Ping shan, where the narrative concludes, and whence he could reach Chung ching by floating down the swift streams of the Kinsha and Yangtze in about five days.

It is impossible in so short a review to do justice to the many interesting subjects hinted at and treated at length in Mr. Baber's paper. Written for a scientific society, it yet possesses more than common interest for the general reader, who, however, thoroughly to enjoy it, should be armed with the necessary books of reference. Its great defects are meritorious qualities carried to excess—brevity and condensation. It is a pudding made entirely of plums, and therefore, to a certain extent, lacks adhesion.

CHRISTOPHER THOMAS GARDNER.

#### NEW NOVELS.

*For Cash Only.* By James Payn. In 3 vols. (Chatto & Windus.)

*The Bloody Chasm.* By J. W. De Forest. (New York: Appleton.)

*The Pet of the Consulate.* In 3 vols. (Bentley.)

*A Loveless Sacrifice.* By Ina L. Cassilis. In 3 vols. (White & Co.)

*Farnborough Hall.* By Hubert Simmons. In 3 vols. (Tinsley.)

MR. PAYN winds up this time, not with the usual tear-sprinkled orange-blossoms, but with a joke by no means so bad at the expense of his black sheep, Percy, who, deserted by his wife, sank to the level of the turf, if not a little below it. "They say," said Herbert, "that he has become a welcher." "Dear me!" sighed Miss Darrell—who, though she had been a schoolmistress, did not know everything—"how curious! I suppose he has changed his nationality to avoid recognition." The other villain of the piece has been already disposed of in a shipwreck, and the moral young engineer triumphs in peace. The scene is laid in a smoky Lancashire town, where Sir Peter Fibbert presides

over the cotton-spinning plutocracy. His newly coined family motto, "*In medio tutissimus ibis*," suggests the title of the book. "The majority imagined that *in medio* had reference to the circulating medium, and freely translated the sentence, '*For Cash Only*;' while others took it to mean 'No risks and moderate profits.'" There is naturally plenty of sharp practice going on; and, on the whole, we fear the Stokeville magnates were not over-scrupulous in money matters. Mr. Payn's young ladies are by no means going off yet, nor has the author lost any of his high spirits and lively style of narration. To this he owes much of his popularity with those who do not object to pretty frequent doses of flippancy and smartness, and a rather unfair amount of padding.

*The Bloody Chasm* is not a pretty name for a treatise on the domestic affections; and, as it stands on the smart binding beneath a gilt seraph who somehow wears his conventional waistcloth round his neck after the manner of a comforter, it will probably warn off the reader who has no taste for the brutally strenuous school of American fiction. This would be a pity, for the book is, in its way, extremely interesting, and the chasm turns out to be nothing more than a Bostonian euphemism for the rancorous grudges of North and South after the war was over. At a time when the grand work of "promoting the Unity of Christendom" on both sides the Atlantic is being consummated upon the common ground of elephant-worship, we trust we shall not complicate the delicate negotiations if we venture to excuse the rugged asperities, the ungraceful outlines, and the displeasing details which this *Chasm* presents both in style and treatment, upon the ground that American writers are perhaps wise to discard the use of the file altogether, since if they try to refine they usually end by over-refinement. We will therefore say nothing of these little national peculiarities, merely mentioning by the way the word *placatingly* as something very novel and portentous, and observing in the most respectful way in the world that the plot betrays that curious American tendency to substitute for European licentiousness and impropriety, which is clearly wicked, a half-innocent, half-prurient prying into the more delicate relations of married life, which is, of course, quite as nice, but not so naughty. This odious tendency is here not very offensively, but still unmistakably, apparent. The war had brought the good old Beaufort family very low. Its last survivors, the beautiful Virginia and her querulous old aunt, keep house in a Charlestown shanty with two of their family slaves, Mauma Chloe and Phil, and there take in washing. A rich Boston uncle-by-marriage in vain offers succour. "Not a single Yankee dollar" will the patriotic Seceders accept from the murderers of her father and four brothers. The uncle dies, but by his will leaves her half his fortune on condition of her marrying his nephew, a Yankee colonel whom she has never seen. She yields at last from poverty, but stipulates for a formal marriage, followed by separation. The husband disguises himself at the wedding, is able to re-appear under a false name, and, by his pronounced Con-

federate views, and fervent, if not very powerful, Secessionist poems, involves her in what she recoils from as a guilty passion. Explanations and happiness ensue. The negro servants are really excellent—so genuinely kind and trusty, and, within their narrow horizon, so shrewd and far-seeing. The aunt is indeed a remarkable study, her peevish inconsequence and vacillation peeling off as she emerges again from poverty; and the whole book seems to give the clearest and most graphic, and, as we should imagine, the most life-like, picture we have yet seen of the complicated feelings and passions which marked the downfall of the old Carolina patriarchal system.

The very first chapter of *The Pet of the Consulate* is rather alarming. It introduces us to two Becky Sharpes, teachers at a Chicago school, plotting to abscond, and, by changing names, to carry out a diabolical plot against the whole male sex. The one beauty has lips of "pomegranate," the other of "red sealing-wax"—she has, besides, "straw-coloured hair, green eyes, and plaster-of-Paris complexion." Of course "the tails of both hung down behind"—in the one case, "loosely over the shoulders and reaching almost to the knees;" in the other, "in clouds about her lightly draped person." We will not attempt to follow the course of these mischief-making Jezebels. Of Miss Ord, who goes on the stage, the authoress mercifully, perhaps discreetly, tells us very little. She dwells with more unction upon Mrs. Urquhart's career, who could not have been more petted by the fast men of the Anglo-Japanese colony than she is by the authoress of her being. This Milly is somehow not so very unlike life, and has been drawn with perfectly unconscious satire from a female point of view. She is a thoroughly dangerous person, the constant victim of cruel slanders, ill-usage, misunderstandings, and unforeseen accidents. The truth she never tells, except sometimes to her lovers. When found out, she is equally ready with more lies or with a deliciously whimpering confession of her imprudence, supported by a waspish assertion of her high honour and purity. With all her adoration for her loving spouse, she never dreams of confiding in him, but conducts all her confidential intrigues and secret correspondence through the medium of several chivalrous lovers (*ci-devant* libertines, of course), whom she cajoles in what is supposed to be a very masterly, or rather mistressly, manner. The peculiarity of this distressing kind of person is to require strict watching, as they have an unerring instinct for getting into trouble. Poor Mr. Urquhart had indeed much to put up with. On her way out to Japan at Mr. Arnold's expense as his destined bride, she marries another man and embezzles part of the *trousseau*. Through the agency of a storm she passes one night alone with a young man in an Indian hut, where her maid, Emma, was disconcerted to find them

"fallen asleep like the babes in the wood, clasped in each other's arms. Their slender young figures so naturally and gracefully posed; the fair fresh face of the girl laid on the young man's breast, and his bent over her golden head. Even the rough natives who, at dawn, arrived

to conduct them back to port hesitated to disturb such a lovely *tableau*."

An earthquake entombs her for two or three days in a cavern with another lover, while Mr. Urghart is tearing wildly at the masses of rock outside and shrieking to get at them. The Sicilian marquis is seen escaping from her window at midnight, and the Colonel over the wall in the early dawn, his pocket-handkerchief being discovered under her pillow. After all these agitating experiences, Mr. Urghart could hardly have been much shocked to find that his immaculate Milly was the daughter of a drunken old murderer. Now, all this sort of thing is really much worse than it seems. It is based on the feminine instinct of evasion and excuse. As we know, in the world an honest woman need fear little serious annoyance from the rare *contretemps* which are due to chance and not to imprudence, provided she have the confidence and support of her husband. But the *esprit de corps* of the lady novelist prompts her to put arms in the hands of her married sisters by representing these unavoidable equivocal situations as much more frequent and serious than they really are, and by exaggerating the power and the injustice of scandal. But, after all, men are not such fools as women think. Half-a-dozen high-souled heroes are not likely to be rapturously and reverently enthralled by such a married woman as Milly, who is nothing more than a perfectly commonplace and unladylike young person. If, after this, we could doubt, we might more plainly detect the female hand in the bad taste in dress not seldom displayed, and in the way the authoress revels in the lovely Parisian furniture of the bridal abode—among the rest "the toilet-table, a gem of elegance and good taste—soft white lace, looped up with clusters of forget-me-nots, over blue silk," and so on, all these horrors being imported at vast expense by British vulgarity into a country like Japan, where decent furniture could be easily procured. Some portions of the book are interesting as giving a faithful view of the life of the isolated English settlement at Hakodadi, and that from the most narrowly insular point of view. Many well-known stories, such as the robbery of the Aino graves, are woven in, and the outrageous consular matrons in the first volume are really very amusing, and no doubt portraits. But why this twisting and clipping of well-known names? Why write Wyn, Urghart, Hethcot, Whiteston, and so on?

*A Loveless Sacrifice* is neither of Aulic nor Tauric dignity. The heroine is a very nice girl, and the only altar to which the reader will expect to follow her is that of St. Hymen's, Eaton Square. The story is of the sound church Devonshire cast, with plenty of ferns, sea-views, poetry, and mild love-making. It ambles along after its kind comfortably enough, and we have not one word to say against it.

But we really must put our foot down on the threshold of *Furnborough Hall*. What novels are coming to one really is afraid to guess. The poor dear old novel with a purpose seems quite exploded, and the romance of to-day aims at being the vehicle of abstruse political theory, or, as in this case,

a practical Farmer's Manual. They might just as well set up as vehicles for medicine. Meanwhile, we cannot pretend to discuss this twaddling book, which is mostly made up of the *bizarre* economical views with which the bucolic neophytes of the Farmers' Alliance enliven the daily papers; nor shall we attempt to disentangle the toils of Cupid which Mr. Simmons weaves amid his chaos of steam ploughs, unexhausted improvements, Game Bills, and other farmers' nostrums, manurial and legislative.

E. PURCELL.

#### CURRENT LITERATURE.

*Chap-Books of the Eighteenth Century.* With Facsimiles, Notes, and Introduction. By John Ashton. (Chatto and Windus.) Next to a collection of the chap-books themselves, nothing could give a better idea of this branch of the popular literature of the eighteenth century than the volume before us. Of the literary quality of most of the little books here reprinted or quoted from, it is impossible to speak highly; the best-written are but weak and colourless versions of great masterpieces or of legends common to the race, and the worst are bad indeed. But, doubtless, they did not seem so dreary to the country-folk who spelt them out one by one, and who had but little other secular literature with which to compare them. The wood-cuts are more interesting than the letterpress, and are by no means without character and a certain narrative power. Those executed at Newcastle are, as a rule, much more vigorous than those of the London-printed chap-books, and perhaps point to a difference between the artistic tastes and qualities of the popular artists of the North country and the South, while manifestly preserving the motives and methods of an earlier age. On the whole, this is not a book to be read through at a sitting, but to be glanced at and dipped into at intervals. The author is, it need hardly be said, not responsible for the somewhat depressing character of the popular literature which he has set before us so skilfully and so patiently; and the short introductions to the more important of the tales, in which he traces their origin and their first appearance in the field of letters, possess an independent interest, and will be useful for purposes of reference. Mr. Ashton has traced upwards of 120 of the chap-books to the firm of the Diceys, of No. 4 Aldermay Churchyard, who were the chief publishers of this branch of literature, and whose works were extensively pirated, especially at Newcastle. His hope that he has "succeeded in producing a book at once both amusing and instructive" is fully justified; and his book is certain to remain the standard authority on the subject, and to be consulted by everyone who wishes to know what was read in the cottage and the roadside inn and the village school in the eighteenth century. Perhaps, on a cursory glance at these engravings, the strongest impression left on the mind will be that the age was emphatically, and before all else, a hanging age, an impression which a dip into the State Papers of George III.'s reign will show to be by no means without foundation.

*Lord Macaulay, Essayist and Historian.* By the Hon. A. S. G. Canning. (Smith, Elder and Co.) Mr. Canning, encouraged, we suppose, by finding that there is a public for his wares, pursues the odd course which he began with Scott and continued with Dickens. It is calculated to make a man blush for his own want of modesty when he discovers that there are actually people who will allow themselves to be instructed by a person who has so very little apparent claim to instruct as the Hon. Albert Canning. We have racked our brains to discover what this book is like; and there are

only two things to which we can compare it—the essay of a rather stupid school-boy, and the sermon of a very young, rather modest, but quite incapable curate. It is not in any sense a criticism, though the author does now and then venture to give an opinion. It is not a *compte-rendu*, for there is no method in it, and a person who had not read Macaulay would, but for a few quotations, be nearly as wise before taking it up as after laying it down. Mr. Canning's very quotations are of an astounding but almost refreshing *naïveté*. If he wants a literary opinion for contrast or corroboration he goes to Shaw's *Manual of English Literature*. If he wants to talk about Greece the *Student's Greece* is his arsenal. Far be it from us to speak or insinuate anything but good of these two respectable handbooks. But any kind of literary instinct must surely tell an author that they are not authorities proper for citation. With the assistance of Shaw's *Manual* and the *Student's Greece*, with Scott's *Novels for English history*, Mr. Canning sets to work bravely, and in some fashion meanders about for two or three hundred pages. That he thinks Bacon's style harsh may serve as some indication of his powers of literary appreciation. That he thinks Macaulay's notoriously shallow and even positively erroneous attempt to expound Baconianism an "intellectual exploit equalled by no modern essayist," and presents Macaulay as the first interpreter of Bacon after a long time during which Bacon's thoughtful philosophy had slowly but steadily attracted and converted some learned minds in England and on the Continent, will serve as a test of his philosophic capacity. The simple truth is that his book, though not at all bumptious (which makes it rather unpleasant to have to speak the truth of it), is utterly valueless.

*Essays on Some Aspects of Human Nature.* By James Kerr. Second Edition, Enlarged. (Longmans.) This is a very funny book, and the fact of its having reached a second edition is a very pregnant and instructive fact. Mr. Kerr, who seems to know much of India and Scotland, but not much of England, has written four essays, "Castism," "Sectism," "Contrast-Lessons," and "The Characteristics of Genius," which are really triumphs of inoffensive but too frequently ludicrous platitude. The author's fundamental insensibility to the humorous may be judged from the following brief extract. Mr. Kerr has been attacking "Castism," as he calls the conventional separation of ranks, &c., very fiercely, and then, like a just man, he busies himself with showing its better side, as thus:—

"We may see the advantage of rules of etiquette in the custom of friends when they meet shaking hands. Were there no well-understood rule to guide us, awkward mistakes might occur. A friend when he met you might, on the spur of the moment, adopt a mode of salutation which would be far from agreeable. Instead of your hand, he might inconveniently seize some other part of your person to your great surprise! But the existence of an understood rule prevents such mistakes."

We have not found in Mr. Kerr anything else quite equal to the penultimate sentence, but it is not unfairly typical of the portentous fashion in which he sets about his work.

MR. HENRY B. WHEATLEY, in his lecture on *Bookbinding considered as a Fine Art, Mechanical Art, and Manufacture* (Elliot Stock), is, as usual, clear, competent, and entertaining. Mr. Wheatley is not one of those of whom Hearne complains in his *Diary*, that they "are in love with good binding more than good reading;" but he loves books too well not to wish to see them suitably and artistically bound, and he has Locke—whom no one could accuse of a contempt for good reading—on his side. Perhaps

Mr. Wheatley slightly underrates the undeniable stir among the dry bones of the English binding trade, and it can hardly be doubted that the artistic revival will, in course of time, extend more and more widely to the outside of our books. His reasons for the inferiority, on the whole, of English to French binding are as follows:—

"Why does binding flourish more in France than in England? The natural answer is, because, abroad, there are more collectors who possess small cabinets of well-bound books. It has been remarked that, in spite of our boasted culture, few houses of well-to-do persons contain any handsome books. Now, most of us have one or two favourite authors. The works of these should be possessed in the best editions and the handsomest covers. Other books might be ordinarily clothed, but those which the owner delights to honour should have ornament lavished upon them. If this feeling became general, we should soon see a revival in the art of bookbinding; but I must add one caution. Good binding will always be expensive, because it takes much of the time of a good workman. The lover of binding, therefore, must not grudge the price, or, if he does, he will not get good work."

Good bookbinding, too, has for centuries been a tradition in France, and it is probable that it offers a peculiarly suitable field for the exercise of the patient, orderly, and delicate French taste in matters of art. Mr. Wheatley's little book teems with anecdotes and information which will be new to all except the most hardened bibliophile, and which will be a god-send in a small way to many a diner-out; while the plates with which it is illustrated are interesting from both the historical and the artistic point of view. It is noteworthy that three of the specimens of English binding are from the library of Henry Prince of Wales, who evidently, like Charles I., inherited his parents' taste for the arts. But, to our thinking, nothing else in the volume can compare in beauty with the superb specimen of Le Gascon's work.

*Anglers' Evenings*. Second Series. Papers by Members of the Manchester Anglers' Association. (Manchester: Heywood and Son.) So long as anglers exist, so long will they delight to read during the close time of winter about their craft. This volume contains some score of papers in prose and verse on fish and fishing. Reading in the kindly temper of an angler, we are tempted to say to essayist as well as poet, *et vitula tu diquus, et hic*; but the critical faculty must needs pronounce the verses mediocre, and the illustrations which accompany them even worse. The latter are only worthy of a street ballad, and strike a jarring key with the rest of the book. These facts merely prove what has long been too well known—that many anglers can write pleasant prose, but very few can compose good angling poetry. Certainly, in the Manchester Anglers' Association, although we see it has been termed "the premier angling society of England," there is not at present to be numbered a poet. To make up for this unkindness of nature, three or four excellent papers are comprised in the volume, notably Mr. Mackenzie's practical "Tweedside," Mr. Sumner's sketch of fishing on the Wye, and Mr. Vannan's "Fishing Days on the Aberdeenshire Don." Half the papers may be said to be of local interest, touching on the fishing to be obtained in the neighbourhood of Manchester; while the writers of the other essays ramble farther afield, to Wales or Scotland. Some pleasant landscapes, reproduced by the autotype process from carbon drawings, adorn these pages, although they are somewhat blurred in two or three cases, which detracts from the appearance of the book. The articles themselves mostly show a distinct advance on those in the First Series. We can promise the Manchester anglers a hearty welcome if

they again venture into print, provided they abstain from poetry and comic cuts. Mr. Faraday may rest assured that Homer never committed the absurdity of singing about hooks made out of horn. The ox-horn which that poet does mention was used either as a plummet or, more likely, for a covering to protect the bait from being washed off the hook. The same essayist's evolution, too, of all material civilisation from the primitive man's rod and line is much more ingenious than convincing.

*Gathered in the Gloaming*. By T. Westwood. (For Private Circulation.) Mr. Westwood here sends his greeting to a select band of English anglers. The cover of these little songs is inscribed, "A Christmas Card," and after the inanities ordinarily so-called is a welcome change. Angler-like, the author sings best of spring.

"O sycamore above,  
Hast never a thrush to sing  
A little dirge for my love,  
For my love that died in the spring?"

And there is an amusing "aesthetic intensity," not unsuited to the present day, with the refrain—

"For in Eden meadows the hay is down,  
And the bells are ringing in Eden town."

If it were likely that Mr. Westwood could be forgotten by angler-scholars, his memory will be kept green in this daintily printed booklet.

#### NOTES AND NEWS.

PROF. OWEN has recently received from the Duke of Mantua a gold medal, bearing on one side a portrait of the Duke in bold relief, and on the other the names of the great men (including Dante, Michelangelo, Raphael, Napoleon, Cuvier, &c., and, lastly, Prof. Owen himself) to whom this mark of distinction has been presented.

On a visit to Oxford last week, Mr. F. D. Matthew and Mr. Furnivall were shown by Mr. Shadwell three very interesting entries in the old accounts of Oriel College of the buying of MSS. of Wyclif's works. The chief one was on April 18, 1454, when the college gave 42s. for a handsome folio, which they still possess, containing treatises by the Archbishop of Armagh and by Holcot, and Wyclif's *De Incarnatione*. The other two were of smaller MSS., in 1453, since lost—3s. 6d. for one, and 7s. 6d. for the other, the latter charge including "binding and chaining" several other MSS. These entries show the continuing influence of Wyclif's writings in Oxford at a time when his heresy is generally supposed to have been rooted out there.

A VISITOR to Cambridge last term speaks warmly of the excellence of Mr. Stanford's setting of Mr. Browning's *Cavalier Tunes* for solo and chorus, and of the performance of it at the University Musical Society. Two meetings of the University Browning Society were held last term as at Oxford, though only one has yet been reported in the *Cambridge Review*.

THE next meeting of the Wordsworth Society will be held in the Freemasons' Tavern, 61 Great Queen Street, on Wednesday, May 4, at 4 p.m., the Lord Chief Justice presiding. He has asked the members of the society to his house, 1 Sussex Square, on Tuesday, May 3, at 9 p.m.

PROF. KOVALEFSKY, the Professor of Public Law at Moscow, has just passed through London on his way to the United States, to the study of whose institutions he will give the next six months. He specially wishes to compare the progress of the freed slaves of the States with that of the enfranchised serfs of his own country. He has lately been collecting

materials in Italy and Spain for a work on their condition from the fourteenth to the seventeenth century, like that which he has published on the condition of England during the same period, from his searches in our Record Office and the Museum, Mr. Furnivall's books in the Ballad and Early-English Text Societies, &c. In the Escorial, Prof. Kovalefsky has found several very interesting reports, still unpublished, from Spanish ambassadors in England, on the state of our country in Tudor times.

MR. MUNBY'S *Dorothy* is already in its third edition in America, though it has not been published there three months. The many favourable reviews—of which five-and-twenty have reached England—have induced a Western firm to print a cheap edition of the poem, while Roberts's handsome dear one is in its second edition. Has not the time come to try a shilling reprint of it in this country?

MISS AMELIA B. EDWARDS has written a paper for *Harper's Magazine* on the recent discoveries at Dayr-el-Baharee. It will be illustrated with a large number of photographs taken by Herr Emil Brugsch himself (some of them expressly for this article), and with a view of the place where the mummies, &c., were found, from a drawing by Mr. Tristram Ellis. Miss Edwards is also engaged upon an elaborate paper, entitled "Rameses II., the Oppression and the Exodus," which will appear in several instalments in *Knowledge*.

MESSRS. SAMPSON LOW AND CO. have in the press a Life of Sebastian Bach by Mr. Reginald Lane Poole, which should claim attention as the first original work on this subject addressed to an English public. Hitherto we have depended upon three translations or abridgments of German biographies, all of which are now superseded by the exhaustive work of Prof. Spitta. Pending the translation of the latter, English musicians will be glad to have his main results presented to them in a convenient shape; but it is understood that Mr. Poole has throughout exercised an independent judgment, based upon a long and close study of the master's works. The volume will appear in the series of "Great Musicians" edited by Mr. Francis Hueffer.

WISHING to ascertain the Russian view of the Central Asian question, Mr. Cowen, M.P., despatched a few weeks ago to St. Petersburg Mr. Charles Marvin, the author of *Merv the Queen of the World* and other works dealing with that controversy. Mr. Marvin saw in succession almost every authority on the subject, and contributed to the *Newcastle Daily Chronicle* a series of letters describing his interviews with Gen. Skobelev, M. de Giers, Ignatieff, Grodekoff, Prof. Martens, Annenkoff, Baron Osten Saken, and others. These he is now revising for the press, and will shortly issue in an enlarged and annotated form under the title of *The Russian Advance towards India: Conversations with Skobelev, Ignatieff, and Other Distinguished Russian Generals and Statesmen on the Central Asian Question*. This will be early followed by his history of Skobelev's siege of Geok Tepé, a voluminous work on the recent Turcoman War, consisting of matter extracted from a number of Russian books on the subject and nearly 8,000 Russian newspapers.

THE Hon. Capt. Bingham, whose *Marriages of the Bonapartes* lately reached a second edition, is now engaged on another work, to consist of the letters and despatches of the First Napoleon, with explanatory narrative.

MESSRS. RIVINGTON have in the press, and will shortly publish, the second and concluding volume of the Rev. J. H. Blunt's *History of the Reformation of the Church of England*, embracing the period from the death of Henry VIII. to the Restoration of the Church after the Common-

wealth; *Henri Dominique Lacordaire*: a Biographical Sketch, by H. L. Sidney Lear, author of "The Life of Fénelon," "St. Francis de Sales," &c.; *Five Minutes*: Daily Readings of Poetry, selected by the same author; and *The Bampton Lectures*, on the Mediatorial Character of the Son of God, now in course of delivery, by the Rev. Canon Medd.

MESSRS. HURST AND BLACKETT will shortly publish a new novel, called *Donovan*, by Edna Lyall, in three volumes, and a new story by Mrs. Macquoid, author of "Patty," &c., entitled *A Faithful Lover*, also in three volumes.

MR. EDWIN H. W. DUNKIN, author of *The Church Bells of Cornwall*, has in the press a work upon the Monumental Brasses of Cornwall, which he proposes to publish by subscription. It will contain sixty-one plates, giving careful reductions of all the brasses known to exist in the county. The oldest is in the parish church at Cardynham, and goes back to about 1400. A "Seyntaubyn" occurs at Crowan in about 1420; a Courtney at Landrake in 1509; a Boscawen at St. Michael Penkivel in 1619; Arundells are specially numerous. Mr. Dunkin has added descriptive, genealogical, and heraldic notes, giving a large amount of information hitherto unpublished, chiefly derived from the public records, wills, and parish registers. The subscription price is 25s., and subscribers should address themselves to the author, Kenwyn House, Kidbrooke Park, Blackheath, S.E.

MR. KARL BLIND will treat on "Richard Wagner's 'Ring of the Nibelung' and the Siegfried Tale" in the forthcoming number of the *Cornhill Magazine*, with special reference to the Eddic and other Norse sources.

MR. PHILLIPS BEVAN has written an account of the earliest industrial census, which will appear in the next number of the *Antiquary*, and he has compared it with subsequent returns so as to show the increase in the numbers of persons following certain trades. This first census was made in Paris in 1292.

MESSRS. WILSON AND MCCORMICK, of Glasgow, will publish on April 26 a new volume of poems, entitled *The Praise and Blame of Love*. The book is finely printed on Dutch hand-made paper, and only a limited number of copies will be struck off.

The old Registers of St. James, Clerkenwell, are now being transcribed for the Harleian Society. These Registers abound in interest, since, during the sixteenth and seventeenth centuries, many persons of importance were resident in that parish. They may possibly be published by the society next year.

At the meeting of the Royal Society of Edinburgh on April 17, Prof. Blackie read a paper on "The Definite Article in Greek, with Special Reference to the Revised Version of the New Testament." After elaborately defending the position of Budaus—that Greek authors of all periods were lax both in the insertion and in the omission of the article—Prof. Blackie proceeded to affirm that the Revisers had fallen into numerous mistakes by reason of their false estimate of the value of the article. Indeed, his opinion of the value of their work seems to be altogether unfavourable. He is reported in the *Scotsman* to have said:

"On the whole, while those who are ignorant of Greek may here and there derive a useful hint from the photographic minuteness with which the authors of the Revised Version have transferred some indifferent details of the original into English, it is in the highest degree undesirable that a version so marked by minute scrupulosity about trifles, servile verbalism, want of taste, and disregard of English idiom should be allowed to take the place which the Authorised Version has so long occupied in the estimation of all educated readers."

MESSRS. HURST AND BLACKETT have in the press a new work, in two volumes, entitled *The Friendships of Mary Russell Mitford*: in Letters from her Literary Correspondents, edited by the Rev. A. G. L'Estrange, editor of the *Life of Miss Mitford*.

As a tribute to the memory of the late D. G. Rossetti, the owner (Mr. J. P. Seddon) of the estate at the new watering-place, Birchington-on-Sea, has named after him the road that runs on the sea-front of the house in which the poet died.

DR. F. LANDMANN, who set the historians and critics of our literature right about the origin of Euphuism and Lyly's *Euphues*, proving that it was Spanish, has now shown our bibliographers which was the first edition of *Euphues*, and that the British Museum has a copy of it.

ON Friday, April 28, Prof. Farinelli will deliver at University College, London, the first of the Barlow lectures on Dante. The course will comprehend twelve lectures, which will be delivered in Italian on Tuesdays and Fridays, at 3 p.m., and will be open to the public without either payment or ticket.

MR. A. SONNENSCHNEIN has just brought out a new edition for teachers, at one shilling, of his book on Code Reform (W. Swan Sonnenschein and Co.), and we trust it will be widely read by the teaching profession. The comparison it gives between fifteen foreign Codes and the English Code is in a high degree instructive and important.

THE publication of the authorised edition of the Works of President Garfield has been entrusted to Messrs. James R. Osgood and Co., of Boston, U.S. It will be carefully prepared and edited by President B. A. Hinsdale, of Hiram College, Ohio, the life-long friend of Gen. Garfield, who was thoroughly familiar with the late President's habits and method of thought. The work will be in two octavo volumes, printed from new and clear type in the best style of the University Press of Cambridge, U.S., and handsomely and substantially bound. It will contain new portraits of President Garfield, and is expected to be ready for publication in November next.

WE learn from the *Nation* that Mr. F. H. Underwood is well advanced with a biography of Longfellow which he projected and began more than a year ago, aided by frequent counsels and suggestions from Longfellow himself. The poet also chose most of the subjects that will be used as illustrations. These include his ancestral home at Newbury, his birthplace at Portland, and other scenes of similar character. Messrs. Osgood, of Boston, U.S., hope to have the work ready for publication in the course of the summer.

THE *May Atlantic* will contain the last poem written by Longfellow, the proof of which passed under his hand but a day or two before his illness.

ACCORDING to *Harper's Weekly*, Mr. George Dolby, who acted as manager and confidential agent for Charles Dickens during the novelist's last tour in America, proposes to publish all the letters Dickens wrote him on business. It is said that these epistles describe American audiences in the same vein of caustic pleasantry that pervades *Martin Chuzzlewit*.

THE Swiss papers announce that M<sup>me</sup>. L. Strecken has bequeathed to the public library of Geneva eight volumes in the handwriting of Rousseau, including the original MS. of the *Confessions* and of the *Contrat social*.

SIG. LUIGI MATTEUCCI is preparing a revised edition of his Italian translation of "Hamlet," published at Milan in 1875.

THE *Magazin für die Literatur des In- und*

*Auslandes* will shortly publish a series of inedited letters from Goethe to Carlyle, which have, it is stated, been discovered in London.

WE learn that the forthcoming poem by the Queen of Roumania will not be entitled *Ahasver* as had been stated, but *Jehovah*.

PROF. KARL BARTSCH, of Heidelberg, is about to publish a carefully emended edition of Friedrich Diez's *Leben und Werke der Troubadours* (Leipzig: J. A. Barth).

HERR JOHANN SCHÖBER has published (Leipzig: W. Friedrich) a biography of Wilhelm Heinse, the author of *Ardenghello*, and one of the foremost leaders in the literary movement of the last century known to Germans as the Sturm-und-Drang Periode.

THE new "Heft 22" of the *Beiträge zur vaterländischen Geschichte*, published by the Thurgau Historische Verein, contains a history of the school system of the Thurgau from the earliest times to the year 1803, by Pfarrer Sulzberger.

### FRENCH JOTTINGS.

M. VICTOR HUGO has sent to the press a new drama, "Torquemada," which will be published by M. Albert Quantin at the end of next month. It is in three acts, with a prologue headed "In pace."

DR. J. JUSSERAND has turned into French, and greatly enlarged, the article he wrote on English roads and travelling in Chaucer's time in the defunct *New Quarterly*, and also his paper on Chaucer's Pardoner, in the Chaucer Society's Essays, not yet published. He will add to them another paper or two on Early England, and print all in the *Revue historique*. The delay in the appearance of Dr. Jusserand's one-volume *History of English Literature* is partly due to his having been sent by M. Gambetta last winter for two months to Tunis to report on the situation there.

THE Comte de Cosnac, who is favourably known from his *Souvenirs du Règne de Louis XIV.*, and under whose editorship the *Memoirs of the Marquis de Sourches* are now appearing, is a candidate for the *fauteuil* in the *Académie française* vacant by the death of Charles Blanc.

THE French Minister of Public Instruction has given a commission to M. Maurice Tarnaux to examine the numerous MSS. of Diderot that are known to exist in Russia, with a view to preparing an authoritative edition of his works.

WHILE we in England occupy ourselves with compiling primers and hand-books, both France and Germany are better employed in editing texts. Among the most attractive of such editions is a series that MM. Charavay frères, of Paris, are now bringing out under the title of "Bibliothèque des Français," which is intended to comprise all the chief national authors. The literary editor is M. Anatole France, and the art editor M. Fernand Calmettes. The first of the series was the *Fables of La Fontaine*, in two volumes, to be followed by the *Théâtre* and the *Contes* of the same, all edited by M. Brunot. There has just appeared the *Histoire d'Henriette d'Angleterre*, who, we may remark, was not the Queen of Charles I., but her daughter. And we may further notice that this particular publication exhibits the tendency, not unknown among ourselves, to exaggerate the importance of a work simply because it is rare. The *Maximes* of de La Rochefoucauld are announced as already in the press; and the works of the great French dramatists, of Molière, Bossuet, M<sup>me</sup>. de Sévigné, Lesage, Beaumarchais, &c., as in preparation.

M. CH. ROESSLER, a merchant of Havre, is engaged in compiling a catalogue of all the documents, whether in public or private hands, that may serve to illustrate the history of his native city.

THE bibliographer will have to chronicle another addition to the long list of sumptuous editions which the enterprise of French publishers and the enthusiasm of French readers have raised into so many monuments to Molière. M. Jouaust has published the first volume of a new edition of the great dramatist's works, which is to be included in that section of the *Librairie des Bibliophiles* known as the "*Bibliothèque classique*." The peculiar spelling of the original will be carefully followed. We regret to note that, simultaneously with the appearance of the Molière, a reprint of Brantôme's infamous gossip-book, *Les Dames galantes*, was issued in the "*Bibliothèque artistique*" of the same series. This most obscene work is actually printed in the very best style of French typography, and illustrated by Edouard de Beaumont, as if it were a credit to French literature.

THE sale of the fourth section of the Ambroise Firmin-Didot Library will take place during the first fortnight in June. Among the MSS. which will be dispersed are a Missal of Monte-Cassino, the date of which is fixed as 1404; a *Livre d'Heures*, adorned with 107 miniatures, which is believed to have been executed for Anne de Beaujeu; another MS. of the same kind executed for Louis XII.; a *Recueil de Traités de Devotion*, illustrated with miniatures, which is believed to have belonged to Charles V.; and some treatises of Lionardo da Vinci, illustrated by the hand of Poussin. Many of the printed books are interesting from bearing the autographs of historical and literary celebrities; and, among these, not the least desirable is a volume said to have been annotated by Rabelais.

#### ACKNOWLEDGMENTS.

OF new editions and reprints we have received the following:—*The Gospel according to St. John*: the Authorised Version, with Introduction and Notes by B. F. Westcott, reprinted from "*The Speaker's Commentary*" (John Murray); Pearson's *Exposition of the Creed*, thoroughly Revised, by the Rev. Robert Sinker (Cambridge: at the University Press); *Memoriale of Bishop McIlvaine*, edited by the Rev. William Carus (Elliot Stock); *Selected Plays of Shakespeare*, Abridged for the Use of the Young, by Samuel Brandram (Smith, Elder and Co.); *The Poems of Virgil*, Translated into English Prose by John Conington (Longmans); *Out of Court*, by Mrs. Cashel Hoey (Sampson Low); Macaulay's *Lays of Ancient Rome* (Longmans), both in cloth and paper; N. D'Anvers' *Elementary History of Music*, edited by Owen J. Dullea (Sampson Low); Hobbes' *Leviathan*, reprinted from the First Edition of 1651, with the frontispiece reduced by photo-lithography (Oxford: Thornton); *Songs for Little Singers*, in the Sunday School and Home, composed by Henry King Lewis (Hodder and Stoughton); Taylor's *The Reign of Christ on Earth*; or, the Voice of the Church in all Ages concerning the Coming and Kingdom of the Redeemer, revised and edited by H. L. Hastings, tenth thousand (Bagster); *Principles of Organic Life*, by Dr. Benjamin Ridge (Charles Higham); *Plain Reasons Against Joining the Church of Rome*, by Dr. Richard Littledale, thirtieth thousand (S. P. C. K.); *Catholic Controversy: a Reply to Dr. Littledale's "Plain Reasons,"* by H. T. D. Ryder, third edition (Burns and Oates); *The Bibliography of Ruskin*, fifth edition (Elliot Stock); *New Grammar of French Grammars*, by Dr. V. de Fivas, forty-fifth edition (Crosby Lockwood); *Handbook of Com-*

*petitive Examinations, for Admission to Every Department of Her Majesty's Service*, by W. J. Chetwode Crawley, corrected for 1882 (Longmans); *Elements of Acoustics, Light, and Heat*, by William Lees, fortieth thousand (Collins); *Collins' Guide to London and Neighbourhood*, with Maps and numerous Original Illustrations (Collins); *Forewarned, Forearmed*, by Lord Henry Lennox (William Ridgway); *Empirical Psychology*; or, the Science of Mind from Experience, by Laurens P. Hickok, revised by Julius H. Seelye (Boston, U.S.: Ginn, Heath and Co.); *Jean-Paul Marat: an Historico-Biographical Sketch*, by Ernest Belfort Bax (the Modern Press); *Out of Court*, by Mrs. Cashel Hoey, cheapest edition (Sampson Low); &c., &c.

#### IN MEMORIAM.

THOMAS HILL GREEN.

(Obiit March 26, 1882.)

HUSHED be the Bells of all his native Towers,  
We need no sound to swell the deep "alas!"  
Let Isis move unobbling thro' the grass,  
The sun shine still upon the Nuneham flowers!  
He was of those rare hearts whom Nature dowers  
With unassuming quietude, his glass  
Turned all reflection inwards, men might pass  
Nor know the depth and splendour of his powers.  
Hew him of granite, granite was his mind,  
Give him the sword, for trenchant was his thrust,  
And cast these pithless late philosophies  
Prone at his feet who trod them into dust.  
Then write him "Patriot that no bribes could blind,  
Prophet of Truth, sure Teacher of the Wise."

DANTE GABRIEL ROSSETTI.

(Obiit April 9, 1882.)

GONE down to take Proserpina the flowers  
Those "daffodils let fall from Dio's wain,"  
The grey old Bard\* who bound, as with a chain,  
By simple song his Western home to ours  
Waits haply for thy guidance to the bowers  
Where—guests long time of thy mysterious  
brain—  
The Singers sit right glad to entertain  
Thee with thy later song of Florence Towers.  
Painter and poet, careless of the Bay,  
With Woman's grace to make thy brothers thine!  
Dreamer of dreams too wondrous for the tale!  
Didst thou not craving quittance from thy day  
Haunt the pale Past in hope of anodyne?  
Sing happier now, melodious Nightingale!

\* Longfellow.

H. D. RAWNSLEY.

#### OBITUARY.

WE regret to announce the death of Mr. Harry Wooldridge, which occurred on the 14th inst., after many years of suffering. He was for a long period manager of the publishing department of Messrs. Smith, Elder and Co., in which capacity he founded the *Cornhill Magazine*, and was the compiler of two small religious works, *The Divine Teacher* and *The Sure Resting Place*. The deceased leaves a widow and numerous family. His eldest son, Mr. H. Ellis Wooldridge, is well known in art circles, and is the painter, among other important works, of the reredos which is such a conspicuous feature in the adornment of the Wagner Memorial Church at Brighton. Another son is the comedian known to the public as Mr. W. Lestock.

#### MAGAZINES AND REVIEWS.

A NOTEWORTHY feature which has been introduced into the *Antiquary* with the present year is the series of articles on Church, popular, and national festivals. One paper for this month is naturally on Easter. It is by Mr. John Fenton, and has many excellent features. We think, perhaps, he errs, like many other writers on kindred subjects, by laying too much stress on

analogies that are somewhat faint. Miss Lucy Toulmin Smith contributes an account of the Early-French Text Society, which contains much information that will be new to her readers. This useful society is younger than our own Early-English Text Society. It works on similar lines, and with at least equal diligence. There are some features in the French society which we would gladly see imitated by its English brother. The most interesting paper by far to readers who are not specialists is Miss Evelin Carrington's "Theft of a Shroud." It contains a verse rendering of a Provençal ballad, which is so excellently executed that it might well be passed off as a genuine relic of our mother-tongue but a very little modernised. We have never seen the original. It must be of a high order of pathetic beauty. For the purpose of comparison, Miss Carrington has printed a rendering of Goethe's "Todten Tanz," which belongs to the same circle of ideas. The German poet had, we may confidently assume, never heard of the Provençal ballad, but he must have come across something in verse or prose which contained the root idea from which both have sprung. The meetings of provincial antiquarian societies continue to be carefully reported. This is an interesting feature which renders the *Antiquary* a very useful work of reference.

WE hail with pleasure the first appearance of our new contemporary, the *Girton Review*, which records the doings of the "fair girl (under-) graduates" at Girton, Newnham, London, Ann Arbor, &c., their work, their play, their grievances, and wants. The only real grievances are the smoky chimneys—which surely can be cured by proper cowls—and the want of a good library, which any of our readers with books to spare can help to supply. The subscription to the *Review* is 1s. 7½d. a-year, to be sent to Miss E. Macleod, Girton College, Cambridge; and the three numbers a-year, if kept up to the level of the first one of sixteen quarto pages, will be well worth the money. We note that at the fancy dress ball held "partly in Lecture-room No. 1," there was "the Pied Piper of Hamelin, who was to have been accompanied by the one rat who escaped drowning; but the rat, not appearing, was supposed to have been unavoidably detained at the last by a problem paper." Mathematics has evidently not taken all the fun out of the Girton damsels.

THE *Deutsche Rundschau* for April has an article on "German Emigration" which may be commended to sociologists for the fullness of its statistical details. Herr Georg Brandes writes a pleasant paper, founded on personal knowledge of the brothers "Edmond and Jules de Goncourt." Prof. Spitta deals with "The Restoration of Protestant Church Music" in a way which will interest musicians. He advocates a return to Bach as affording the only basis for a new departure. Herr Erman writes a popular article on "The Profane Literature of the Egyptians;" he calls attention to their folk-lore, and characterises their literature generally as showing a superficial spirit and a strictly practical tendency.

#### THE "ANTIGONE" OF SOPHOCLES AT TORONTO.

Toronto: March 30, 1882.

ON Tuesday and Wednesday, April 11 and 12, the "Antigone" of Sophocles will be acted in the original Greek in the Convocation Hall of University College, Toronto, by graduates and undergraduates. Mendelssohn's music will be sung by the Chorus; for the first time, it is believed, with the Greek words. These have been set to the notes for this occasion by Prof. Ramsay Wright—a task rendered comparatively easy by the metric faithfulness of the trans-

lation (Donner's) which Mendelssohn used. The Chorus will be accompanied by an orchestra of forty instruments, and aided by a supplemental Chorus of forty voices. The latter Chorus will not appear on the stage, but will stand immediately in front of the audience on a lower level, facing the actors. The orchestra will be placed in a pit beneath the stage. The acting Chorus of fifteen Senators will stand on small platforms two feet beneath the level of the main stage at either end, with their side face to the audience. The size and shape of the hall make it impossible to place them more correctly. For the same reason the thymele will be represented by a small altar set in the front of the main stage. A smaller altar to Apollo Agyieus will stand several feet farther back on one side of the palace door. The Chorus will ascend by steps from their lower stages to the upper stage during the singing of "*πολύθυμη Καμείας νύμφας ἀγαλμα*" κ. τ. λ., and will surround the thymele with uplifted thyrsuses.

The scenery will be modelled on that used at Harvard for the "Oedipus Rex." The suit of Greek classical armour constructed for the same play by Mr. Millet, of New York, has been kindly lent to University College by Gen. Loring, Curator of the Boston Museum, and will be worn by the Watchman. The two Princesses will wear the Greek stage mourning of black and apple-yellow, and black and gray-green. A himation of white netting will represent the obscure "*ἀγνήτης*" of Teiresias. The Chorus will wear cashmere and flannel chitons and himatia of different colours.

Preparations for the play and rehearsals of the acting and music have been in progress since November last. The part of Antigone has been twice shifted, that of Ismene once; otherwise, the original distribution of the characters remains unaltered.

Both Choruses are supplied by the college glee-club. The conductor of the club, Mr. Torrington, assisted by Prof. Wright, has charge of the music. Prof. Lewis Campbell, of St. Andrews, has kindly authorised the reprinting of his translation of the "Antigone," which will be sold to the audience.

The stage management is in the hands of Dr. Pike, of University College (formerly lecturer of Merton College, Oxford).

MAURICE HUTTON.

#### MR. LANSDELL'S "THROUGH SIBERIA."

We quote the following from the *New York Herald* for March 22. The extract headed *Over and Through Asia* occurs in a book written by Mr. Thomas Knox, and published at Hartford, Connecticut, in 1870, and in London in the following year. We have verified both extracts.

*Through Siberia*, vol. i., p. 265. *Over and Through Asia*, p. 395.

"The markets of Irkutsk are well supplied. Fish and game are plentiful. Beef is abundant and good, and costs about 2d. a pound. Pork, veal, and mutton are also cheap, especially in winter, when everything that can be frozen succumbs to the frost. Frozen chickens, partridges and other game are often thrown together in heaps like bricks or firewood. Butchers' meat defies the knife, and some of the salesmen place their animals in fantastic positions before freezing

"Everything that could be frozen had succumbed to the frost. There were frozen chickens, partridges and other game thrown in heaps, like bricks or stove-wood. Beef, pork and mutton were alike solid, and some of the vendors had placed their animals in fantastic positions before freezing them. In one place I saw a calf standing as if ready to walk away. His skin remained, and at first sight I thought him alive, but was undeceived when a man over- turned the unresisting

beast. Frozen fish were piled in stacks, and milk is offered for sale in cakes or bricks. A stick or string is generally congealed into a corner of the mass to facilitate carrying, so that a wayfarer can swing a quart of milk at his side or wrap it in his handkerchief at discretion."

beast. Frozen fish were piled carelessly in various places, and milk was offered for sale in cakes or bricks. A stick or string was generally frozen into the mass to facilitate carrying. One could swing a quart of milk at his side or wrap it in his handkerchief at discretion."

#### CORRESPONDENCE.

##### DANTE GABRIEL ROSSETTI AND CONTEMPORARY POETS.

Sandbrook, Midhurst, Essex: April 17, 1882.

Mr. Hall Caine has added to his valuable memorial of Dante Gabriel Rossetti a word which will be prized by all whom it concerns, and for which they have reason to thank him; for it must have been welcome indeed to the writers named in your columns last week to learn that the great and exquisite poet just gone, whose fame became a glory before he died, was wont to speak warmly of their work. Nor can it be matter of indifference to Mr. Tennyson, as to any leader in letters, to know that Rossetti delighted in his poetry. There

is one, however, whom the late poet not only admired, but owned as his forerunner. Mr. Lowell has said that to all writers should be addressed the question put by the shade of Farinata to Dante: "*Chi fur' li maggior tui?*" And among Rossetti's *maggiori* was Dr. Thomas Gordon Hake; not that there was any likeness in the manner of the work of the two, but Dr. Hake is, as he was, a poet of rapture of heart, and from his serious and penetrating ecstasy was derived the mood of mind which produced "Hand and Soul" and many of Rossetti's poems. He is fortunate who can thus trace and acknowledge the derivations of his thoughts or his emotions. More often the modern poet conceives what has been conceived and forgotten, and conceived and forgotten again; he does not know who were his *maggiori*, though he confesses them implicitly. But when such influences, derivations, and descents are known let us remember them; they form the unions which make the happiness of the literary life. Derivation is as certainly honourable in the poet as imitation is dishonourable in the postaster. The noble thinkers have generally some elder

"who speaks with such a tone  
That they almost receive his heart into their own;"  
and to him they desire to ascribe "half the song."

The admiration of Rossetti is assuredly to be commemorated among Dr. Hake's honours, as we "younger writers," in our degree, will never forget that words of ours even had a place in that generous heart.

ALICE MEYNELL.

##### CHAUCEER'S "VIRGIN" AT BOULOGNE.

Boulogne-sur-Mer: April 16, 1882.

Readers of Chaucer may care to know that there is yet extant a fragment of the miraculous wooden statue of the Virgin which attracted pilgrims to Boulogne in the Middle Ages, and was honoured with a visit from the Wife of Bath among other people. This miraculous statue had a bad time of it even before the first Revolution, for it was thrown into a well by the Protestants in 1567, and not reinstated over its altar till 1630. In 1793 it was burnt. Fortunately, one of the faithful saved the right hand; and it is a fragment of this member which may be seen in the church of Our Lady in the Haute Ville. Preserved in the back of a hand-shaped reliquary, it is kissed by devout lips through a piece of glass. And it makes one realise how little the world has moved in some respects to see how even now, as centuries ago, there is no lack of devout lips to enjoy this inestimable privilege.

"Chaque année, au mois d'août, des pèlerinages, réorganisés depuis 1853, attirent à l'église Notre-Dame de Boulogne, un grand nombre de fidèles qui viennent de tous les points du département du Pas-de-Calais et des départements voisins."

But the kissing is not confined to August; there has been much of it this Easter, for instance.

JOHN W. HALES.

##### "THE NUMISMATA ORIENTALIA."

Richmond: April 15, 1882.

The *Times* newspaper evidently understands the first essential of impressive teaching, which, according to the best models, consists in frequent repetition. Last week (April 12) there appeared in the "leading journal" a review of the "International Numismata Orientalia," which was also reviewed in the same paper on November 14, 1877, four years and a-half ago. The only differences to be discovered are a change of front towards some of the essays included in the work, and the addition of a final paragraph dealing with the latest fasciculus

(which was not published in 1877)—M. Madden's *Coins of the Jews*. The re-review, however, adds nothing to the criticism of the first, and, being evidently the work of a writer who has no special knowledge of the subject, would not call for notice on my part if the article had not contained two or three statements about my own share in the "Numismata Orientalia" which are misleading. The re-reviewer is a little contemptuous about my admission that I was using at that time four different systems of transliteration from the Arabic. If he had been a student of Oriental numismatics he would have known that this was forced upon me: for the British Museum Catalogue of Coins I had to use Mr. Lane's system; for the "Numismata Orientalia," Mr. Thomas's; for the *Journal of the Royal Asiatic Society*, another system; while, in a few publications, I was free to use my own. The re-reviewer also charges me with accepting M. Karabacek's "somewhat doubtful" theory that the Urtuki large silvered copper coins passed as dirhems; whereas, while setting forth M. Karabacek's views to the best advantage, I expressly stated that I did not consider his theory absolutely proved. If my little essay, which I had almost forgotten, is reviewed a third time in the *Times* five years hence, I hope the re-re-reviewer will see the advisability of at least reading it.

STANLEY LANE-POOLE.

#### REPLY TO PROF. STEPHENS' "PROTEST."

London: April 20, 1882.

We are the publishers of the book, just issued, "*Old Norse Fairy Tales*," gleaned from the Swedish Folk by George Stephens and H. Cavallius, against which Prof. Stephens raises his "Protest" in the *ACADEMY*, April 15. We fully appreciate his intended delicacy in not naming our firm as the publishers against whom he has complaint to make; but at the same time have no wish to remain disassociated from the book.

The MS. was offered us in the regular course of business, and we arranged with Mr. Alberg, the translator, himself a Swede, that he should conduct the negotiations with both the authors and the publishers.

Mr. Cavallius, the joint-author with Prof. Stephens, whose address was known to Mr. Alberg, was communicated with, and both his and the publishers' written consent to a translation obtained. Moreover, casts of the original wood-blocks were sold to us. Prof. Stephens' charge against us is, therefore, wholly unfounded in fact; and this he might have surmised from the circumstance that the original wood-cuts appear in our book.

Had Prof. Stephens either communicated with his co-author or addressed himself to us, he would, we believe, never have ventured upon his "Protest."

W. SWAN SONNENSCHN & CO.

#### WHITSUNDAY.

Isleworth: April 10, 1882.

Mr. Friend's citation of this as a Devonshire name for *Stellaria holostea* is interesting, although I am not sure that it confirms his view as to the connexion between White Sunday and Low Sunday. The *Narcissus biflorus*, which blossoms about Pentecost, is called Whitsunday in both North and South Devon, and the name may have been transferred from this to the *Stellaria*. Whitsun-boss (bush), a Gloucestershire name for the cultivated guelder-rose, and Whitsun-gilliflower, a Somerset and Salop name for *Hesperis matronalis*, certainly refer to Pentecost; the latter name goes back as far as Coles's *Art of Simpling* (1656), where we read "May brings roses, pinks, Whitsun-gilliflowers."

Mr. Friend's special knowledge will make the work on *Flower Lore*, which he announces, a valuable contribution to the subject. It is my misfortune that my own book upon the folklore of plants, for which I have been collecting material since 1868, will be forestalled by Mr. Friend's volume.

JAMES BRITTEN.

#### PRINCE BONAPARTE AND THE BASQUE VERB.

San Remo: March 29, 1882.

It is an indisputable fact (which I never thought that Prince Bonaparte ignored) that initial *d* in Basque, as I have said in my *Grammaire comparée*, is always, in all the persons of all the presents of the indicative of all active verbs, the object "it."

Prince Bonaparte, being unable, as it appears, to distinguish assertion from argument, I must repeat that it is of no importance that he "sees" in *daut* the demonstrative pronoun *au* or *haur*. He may like his assertion, like the gentleman who believes the earth to be flat; but some real argument is wanted if he wishes to upset my theory. Big adjectives do not prove that *haur* becomes *nuen*, &c., "I was," &c. Inaccurate quotations are also not a safe way to prove that one is right. I said, and I repeat, that "Nowhere *daut* stands for *daut*; the flections from *iduki* (*daut*, &c.) are always employed with an object only; the flections of *eroan* with object and dative." This is another indisputable fact, and Prince Bonaparte may find these elementary notions of the Basque verb in my Grammar. There he will learn, also, to distinguish *daut* or *dot* (Bisc.) from *iduki*, and *daut* for *deraut* or *derot* or *derat* from *eroan*; all which flections are used—flections and not terminatives, an erroneous expression copied from antiquated grammarians, and showing a total want of analysis. Another inconceivable error is to say that *eroan* does not exist in the Labourdin dialect; there is no other auxiliary in Labourdin, as in all the other dialects (except in Biscayan), when object and dative is to be expressed! I must suppose this a slip of the pen. I have not finished with the errors: it is another one to quote *edin*, "can," as *adi*; one never mentions a verb by a flection. When calling *adi* a type, instead of a verb, Prince Bonaparte proves again here that he does not know that it is a verb!

I agree in one point with Prince Bonaparte—i.e., to stop a useless waste of time; and I leave, again, to the readers of the *ACADEMY* to decide which of us "wants philological sense and is ignorant of the Basque verb."

W. VAN EYS.

#### THE SHETLANDIC SPEECH AND THE GOTHIC OF ULPHILAS.

Lerwick: April 3, 1882.

With regard to the remarks of your correspondents Messrs. Annandale and Mayhew, I was quite aware that the Shetlandic *gang*, *loof*, &c., were the same as the Icelandic *ganga*, *lófa*, &c., and that these forms are used all over Scotland, where, as Carlyle said long ago, the speech has "a Norse tinge." What I wished to point out was that these words are not found in the Icelandic New Testament, while they are found in Ulphilas. Does Mr. Annandale say that the *ere* of *ere-yesterday* has nothing to do with Gothic *airiza*, English *ere*? As to referring to "Anglo-Saxon"—it is not a much farther cry from Shetlandic to Moeso-Gothic than to that doubtfully named tongue. One of your correspondents speaks of my Shetlandic; but I did not invent the dialect, and have no proprietary rights therein.

A. LAURENSEN.

#### MR. PICKWICK.

London: April 13, 1882.

The reviewer of the magazines in the *ACADEMY* accuses me of inventing a remark and putting it into the mouth of Mr. Pickwick. The scene of this offence of mine is an article on M. Zola in the *Fortnightly Review*. May I assert my innocence? I said Mr. Pickwick reminded Messrs. Allen and Sawyer that the details of the dissecting-room need not be discussed in the drawing-room. And this Mr. Pickwick did:

"I wouldn't mind a brain, but I can't stand a whole head," rejoined Bob Sawyer.

"Hush, hush, gentlemen, pray," said Mr. Pickwick; "I hear the ladies."

This was the "genuine logion" of Mr. Pickwick to which I referred.

A. LANG.

["The reviewer" apologises. He had looked up a different passage—that of Mr. Bob Sawyer's entertainment to Mr. Pickwick in his lodgings.]

#### APPOINTMENTS FOR NEXT WEEK.

MONDAY, April 24, 4 p.m. Royal Asiatic: "The Vaishnava Religion, with Special Reference to the Siksha Patri of the Modern Sect called Swami Nārāyaṇa," by Prof. Monier Williams.

7 p.m. Actuaries: "The Adjustment of Mortality Tables," by Mr. J. A. Higham.

8.30 p.m. Geographical: "A Journey in the Atlas and the Northern Part of the Algerian Sahara," by M. Valentin de Gorioloff.

TUESDAY, April 25, 3 p.m. Royal Institution: "The History of Customs and Beliefs," by Dr. E. B. Tylor.

8 p.m. Society of Arts: "The Character and Social Industries of the Inhabitants of China, Japan, and Formosa," by Lieut. H. N. Shore.

8 p.m. Anthropological Institute: "An Exhibition of Pottery from Silesia," by Gen. Pitt-Rivers; "The Aboriginal Inhabitants of the Andaman Islands," II., by Mr. E. H. Man.

8 p.m. Civil Engineers: "The Theory of the Gas Engine," by Mr. Dugald Clerk; "Harbours and Estuaries on Sandy Coasts," by Mr. L. F. Vernon-Harcourt.

WEDNESDAY, April 26, 8 p.m. Geological: "The Relations of the Eocene and Pliocene Strata," by Prof. J. W. Judd; "Fossil Onchostomatous Bryozoa from Mount Gambier, South Australia," by Mr. A. W. Waters; "Phanerozoic: Permian, Carboniferous, and Silurian," and "The Occurrence of a New Species of *Pygospira*," by Mr. G. W. Shrubsole.

8 p.m. Society of Arts: "Telephonic Communication," by Col. C. E. Webber.

THURSDAY, April 27, 3 p.m. Royal Institution: "The Metals," by Prof. Dewar.

8 p.m. Telegraph Engineers: "Attraction and Repulsion due to Sonorous Vibrations, and a Comparison of the Phenomena with those of Magnetism," by Mr. A. Strob.

8 p.m. Society of Arts: "The Manufacture of Steel from Phosphoric Pig Iron," by Messrs. S. G. Thomas and P. O. Gilchrist.

FRIDAY, April 28, 8 p.m. Quakett.

8 p.m. Browning: "Browning's Philosophy," by Mr. J. B. Bury.

8 p.m. Society of Arts: "National Necessities as the Basis of National Education," by Dr. Richardson.

9 p.m. Royal Institution: "Some Dangerous Properties of Dusts," by Prof. Abel.

SATURDAY, April 29, 3 p.m. Royal Institution: "The History of the Science of Politics," by Mr. F. Pollock.

#### SCIENCE.

*The Quatrains of Omar Khayyám*. Translated into English Verse by E. H. Whinfield, M.A., late of the Bengal Civil Service. (Trübner's Oriental Series.)

HE would seem to be a bold man who attempted a translation of Omar Khayyám after Mr. Fitzgerald's fine rendering; but there was really room for another English version. Mr. Fitzgerald's does not aim at completeness or literal correspondence with the original; in quantity it is but a *cento*, in quality a paraphrase. In saying this we are not raising an objection, but merely stating a fact. Mr. Fitzgerald has done what the finest textual criticism and the most uncompromising devotion to literal accuracy could never accomplish: he has reproduced the thoughts of the Persian poet in English poetry, not merely in versified prose. Omar

Khayyám is, we believe, the only Oriental poet who has been thus worthily represented. Others have been done into fair verse translations, but of none save Omar can it be said that the translation stands by itself as true poetry.

But while we believe Mr. Fitzgerald's version to be unapproachable in poetic feeling, and scarcely less in perfectness of form; there are reasons which may amply justify another translator in treading approximately in the footsteps of the master. Mr. Fitzgerald's version contains but 101 quatrains; whereas the various texts of the *Rubá'iyát* contain from 158 to 800. Those, therefore, who have been impressed with the thoughts of the poet as rendered in the *canto* will welcome those additional verses which a larger selection may supply. In this connexion, it is to be regretted that Mr. Winfield's translation does not go farther than the 253 quatrains he offers, without explanation or comment of any kind. There is a Preface to his book, chiefly filled with notes and references as to the scanty details to be learned of Omar's life; but herein is no word to explain why the translator has chosen these particular 253 quatrains. The Bodleian MS. has 158; M. Nicholas' text, 464; that of Lucknow, nearly 800; the Calcutta MS., 516. Mr. Winfield uses several of these, and scrupulously indicates the source of each quatrain; but he nowhere declares his principle of selection. It is surely desirable that a thorough examination and sifting of the various texts of Omar Khayyám should be made, and a complete translation published. Mr. Winfield's is only a selection like Mr. Fitzgerald's, but without the merit of the arrangement according to sense which Mr. Fitzgerald has carried out with signal success. In Mr. Winfield's version the order is, like the original, chaotic, without the justification which would belong to a complete translation of the whole work. But, if the new version has not the merit of completeness, those who wish to read as nearly as possible the very words of Omar Khayyám will value Mr. Winfield's literalness. He evidently tries to make his lines correspond with the original as closely as the differences of the two languages permit; and there are undoubted advantages in the principle. In free paraphrase the translator's personal theory as to his author's meaning, where there is room for doubt, will be conveyed more strongly than in a literal version, where the ambiguity of the original will be retained. Mr. Fitzgerald, for example, regards Omar Khayyám as a materialist; Mr. Winfield apparently holds him to have been a mystic. In such cases of difference a literal version is the only sure guide of the unlearned reader.

It must be admitted, however, that even in a tolerably literal version it is not always easy to decide what Omar Khayyám really meant. It is wonderfully easy to foist a Súfi interpretation on almost any Persian poet, and we believe that a great deal of these mystical interpretations are absolutely groundless. In the case of Omar Khayyám, after reading Mr. Fitzgerald's version one would be convinced he was a materialist and no mystic at all; after reading Mr. Winfield's, one would see rather more probability than

before in the Súfi theory. Some quatrains may be taken both ways; this, for example, which, according to Mr. Winfield, is "the climax to all Omar's gloomy epigrams":—

CCXX.

I never would have come, had I been asked;  
I would as lief not go, if I were asked;  
And, to be short, I would annihilate  
All coming, being, going, were I asked.

But three stanzas farther on we come upon a quite unmistakable epicurean quatrain:—

CCXXIII.

Slave of four elements and sevenfold heaven,  
Who aye bemoan the thrall of these eleven,  
Drink! I have told you seventy times and seven,  
Once gone, nor hell will send you back, nor heaven.

No. clxxi. is also clearly epicurean:—

Let us shake off dull reason's incubus,  
Our tale of years or days cease to discuss,  
And take our jugs and plenish them with wine,  
Before grim potters make their jugs of us.

But two pages further occurs a quatrain which presents a handle to the Súfi theorist:—

We make the wine jar's lip our place of prayer,  
And drink in lessons of true manhood there,  
And pass our lives in taverns, if perchance  
The time misspent in mosques we may repair.

And No. cclii. seems undoubtedly to possess a mystical meaning:—

O soul! when on the Loved One's sweets you feed,  
You lose yourself, yet find your Self indeed;  
And when you drink of His entrancing cup,  
You hasten your escape from quick and dead.

The real question seems to be—How much of the text of Omar Khayyám is the interpolation of Súfi scribes? That he himself had any leaning to Súfi doctrines we do not believe; but the metaphorical character of his poetry may have suggested to later commentators the possibility of incorporating it, with a few glosses, in the elastic body of Súfi literature, and this may account for a certain number of apparent contradictions in the *Rubá'iyát*.

It will be seen that Mr. Winfield has adopted Mr. Fitzgerald's metre, perhaps a little rashly; for his form is never equal to his predecessor's, though there are many good verses. The difference of treatment may be seen by comparing Mr. Winfield's No. xxxvii. with Mr. Fitzgerald's xlv.

XXXVII.

This body is a tent, which  
for a space  
Doth the pure soul with  
kingly presence  
grace,  
When he departs comes  
the tent-pitcher,  
death,  
Strikes it and moves to a  
new halting-place.

Or Mr. Winfield's cciv. with Mr. Fitzgerald's lxx.

CCIV.

Blame not this ball, im-  
pelled by bat's hard  
blows,  
That now to right and  
now to left it goes;  
That One who wields  
the bat and smites  
the strokes,  
He knows what drives  
thee, yea, He knows,  
He knows.

XLV.

'Tis but a tent where  
takes his one-day's  
rest  
A Sultan to the realm of  
Death address  
The Sultan rises, and  
the dark Ferrásh  
Strikes and prepares it  
for another guest.

LXX.

The Ball no question  
makes of Ayes and  
Noes,  
But right or left as strikes  
the Player goes;  
And He that tossed  
you down into the  
Field,  
He knows about it all,  
He knows — HE  
knows.

Mr. Winfield's version, it will be seen, is a fine one, but it misses the note of genius

that we hear in Mr. Fitzgerald's. As a rule, Mr. Winfield's verse is very careful and considered; but there are a good many extremely ill-sounding lines, such as

"Nor proved by touch of keenest wit's touch-  
stone;"  
"Beshrew these baleful stars who circling run;  
Beshrew my nature's imperfection;"

and a number of bad rhymes—e.g., "trow" rhyming with "do" and "go;" nor are such phrases as "the rondure of the empyreal blue,"

"Holds heaven's blue duomo such another wight," improvements upon the ordinary vocabulary of poets. These faults, however, are small compared with the general ability displayed in the work. Though he cannot compete on equal terms with Mr. Fitzgerald as a translator of the first excellence, Mr. Winfield has executed a difficult task with considerable success, and his version contains much that will be new to those who only know Mr. Fitzgerald's delightful selection.

STANLEY LANE-POOLE.

### CORRESPONDENCE.

DR. HAYMAN'S "ODYSSEY."

Aldingham: April 15, 1882.

While thanking Prof. Mahaffy for a review, published in the *ACADEMY* for March 18, of my edition of the "Odyssey," I cannot but regret that the critic, for whose erudition and taste I have great respect, has not duly shown the much more commonplace quality of attention to what he was doing. Thus he writes:—"Stranger still, if possible, is the complete silence on all the recent Odyssean criticism in Germany, Kirchhoff, for example, being totally ignored." References to Kirchhoff's theory will, on the contrary, be found on book xvii., 530-1, and on xviii. 108-9.

Again, he says that my "Preface of 150 pages is almost all filled with a *réchauffée* of old articles refuting Mr. Paley's theory." I presume this refers to two papers printed in the *Transactions* of the Cambridge Philological Society, which *Transactions* have been published since my volume went to press. These papers comprise together fifty-three pages, which is no very great proportion of the 150, even when four more pages have been added containing a condensation of some remarks previously published in the *Church Quarterly Review*. Of the Cambridge society Prof. Paley and myself are alike members; and the papers were read purposely before it, in order to elicit, if possible, any critical remarks from its members, although, of course, in no way to make any of them responsible for the views submitted. The same thing applies to some remarks in a paper in the *Journal of Philology*, Cambridge, 1879, although these last were recast, with additions, in the same Preface to *Odyssey*, vol. iii., so fully as really to rewrite the paper, so far as it had matter in common with this Preface.

Prof. Mahaffy adds, at the close of his notice: "His [my] careful statement of the action for each day will not, however, persuade sceptical readers that the plan of the poem is harmonious or undisturbed. I should have thought that my very frequent insistence, in the course of my commentary, on the fact that 'the plan of the poem is not harmonious or undisturbed,' would have obtruded that view, even on a cursory inspection of my remarks, as one of the broadest features of my handling of the text. I may refer to the passages book xiii., 183-4, 190-1; xvi., 281-98, 305-7; xxi., 431-4, *et al.*, as showing this, as also to appendix G, 2 in vol. ii.

The argument as regards written texts is so widely distinct from inscribed monuments that I doubt extremely how far any reference "to the Abu-Simbel inscription" would have had a pertinent value. It may possibly be that "a perusal of Kirchhoff's *Studien* on the Greek alphabet" would "render all this kind of ingenuity [referring, apparently, to my arguments against Mr. Paley's theory, founded on Greek linguistic grounds and early literature] subsidiary, if not otiose." But those *Studien* are not likely to be accessible to, or convenient for, the English Homeric student.

As regards "the unity of authorship" of the poems either separately or *inter se*, I long ago (vol. i., pref., pp. ix., x., and xliii.-xlv.) stated my own view (see also vol. ii., pref., pp. lxxviii.-lxxxiv.). That view seems still to me to outflank and render otiose all such arguments as those developed recently by Kirchhoff and Kammer, just as those of Lachmann and Köchly before them. The word "unity," indeed, I may observe, is probably misapplied to a poem which, unwritten and recited only in portions, can hardly claim objective existence as a whole. Is there, or was there ever, a whole in the sense in which it is amenable to their criticisms? is the previous question with which these critics refrain from dealing. If this view of mine is correct, all such questions as Kammer raises in his *Einheit* may be safely passed by. On the contrary, Prof. Paley's eminent services to English scholarship insure for his views a weight and currency such as few contemporaries, if any, can claim.

Prof. Mahaffy writes as though my Preface to vol. iii. was a mere repetition of that to vol. ii., and possibly, as regards a mere summary of previous remarks to save the reader's trouble, there may be some virtual repetition allowed. But he cannot be ignorant, I think, that substantially the arguments adduced in vol. iii. are distinct from those of vol. ii.; or, so far as they include a common element, are greatly expanded by cumulative and subsidiary proofs—e.g., that founded on the Greek dramatists by the proofs derived from the fragments of their Latin imitators. Had the "country living" to which Prof. Mahaffy refers been anywhere in or near the triangle of which Oxford, London, and Cambridge are the points, the "leisure" to which he refers might doubtless have been better employed. The utter remoteness from great libraries and centres of scholarly thought form a drawback which nothing can counterbalance to such a position as mine. Often, after months of labour, one learns that the book has been just long enough in existence which would have saved it all, had it been known of. But from critics who are in the "swim" of the full current of thought one cannot expect sympathy for one stranded on the shoal.

HENRY HAYMAN.

PS.—I have only just returned home after a fortnight's absence, and find the ACADEMY of March 18 among packets not forwarded, or this would have been written sooner.

#### NOTES OF TRAVEL.

WE understand that Capt. R. F. Burton and Commander V. L. Cameron are expected to arrive in Liverpool, on their return from the Gold Coast, on May 18. The two travellers have made large and valuable collections in all branches of natural history, while their report on the gold mines cannot fail to prove of great interest. Commander Cameron has also made extensive surveys. Capt. Burton is announced to lecture on the West African gold-fields, at the Society of Arts, on May 23; and writes that his book will be ready for the press as soon as he reaches England.

HERR MARNO's survey of the lower Bahr el Ghazel as far as the mouth of the Bahr el Arab in lat. 9° 5' N., has just been published in Petermann's *Mittheilungen*, and, as a matter of course, differs very essentially from all preceding surveys, so-called. In fact, no satisfactory map of a river of the nature of that in question can be produced unless the surveyor is in a position to determine the position of a number of points by careful astronomical observations. At present, and notwithstanding the extensive labours of Petherick, Schweinfurth, Dr. Junker, and others, not a single longitude has been satisfactorily determined in the vast region lying to the westward of the Upper Nile, while the latitudes are few and far between. The same number of the *Mittheilungen* contains articles on the Russo-Turkish frontier in Asia, by Gen. Stebnitzki, with a map; on Terraces in Alpine Valleys, by Dr. F. Löwl; and on the Flora of Northern Africa, by Dr. O. Drude.

#### SCIENCE NOTES.

*Geology of the Færøe Islands.*—The Royal Society of Edinburgh has recently published in its handsome quarto volume of *Transactions* an elaborate paper on "The Geology of the Færøe Islands," from the pen of Dr. James Geikie. His description is based on observations made during a visit to the islands in 1879 in company with Mr. A. Hellund, of Christiania. Although the exploration was primarily undertaken for the purpose of studying glacial phenomena, the general geological structure of the islands was not neglected, and a good geological sketch-map was produced. The principal rocks of the islands are bedded basalts, with interstratified layers of volcanic tuff; while in Suderøe and in Myggenæs there are deposits of coal, with carbonaceous shales and clays. The coal-deposits are of lenticular form, thickening and thinning out with irregularity, and they appear to have resulted from the alteration of patches of vegetable matter in swamps, marshes, and bogs during pauses in the volcanic outbursts. The whole of the solid rocks, whether volcanic or sedimentary, are probably referable to the Miocene period.

AT the last meeting of the Biological Society of Washington, Dr. Elliott Coues laid before the members the advance sheets of his latest contribution to ornithology, about to be published in Boston, U.S., by Messrs. Estes and Lauriat. This work is ostensibly the second edition of his *Check List of North American Birds*, published in 1874, but enlarged to include a lexicon of the etymology, orthography, and orthoepy of the scientific names of North American birds, a concordance of previous lists, and a catalogue of the author's ornithological publications, some 300 in number. The total number of names in Dr. Coues's new list is 888, being an increase of 120 over the edition of 1874. A portion of this accession results from the formal inclusion of Greenland birds in the North American list; and another large portion from discoveries of species in Mexico and Alaska. The novel feature of Dr. Coues's work consists in the philological explanation it gives of the derivation and application of the technical names.

#### PHILOLOGY NOTES.

THE fourth part of Dr. Paul Haupt's *Akkadische und Sumerische Keilschrifttexte*, which has just appeared at Leipzig, is a work which no Assyrian student can afford to be without. It not only contains a sketch of Accadian grammar and a description of the chief characteristics of the two pre-Semitic dialects of Northern and Southern Babylonia—Accadian and Sumerian—but also considerable

additions to our knowledge of the cuneiform syllabary and the Accadian vocabulary. A large number of unpublished bilingual texts and references are given in the book, as well as important corrections of texts already published in the fourth volume of the *Cuneiform Inscriptions of Western Asia*.

DR. J. N. STRASSMAIER is about to publish at Leipzig an alphabetic list of the Assyrian and Accadian words contained in the second volume of the *Cuneiform Inscriptions of Western Asia*, with numerous additions and corrections. Allied words in the cognate Semitic idioms will from time to time be also given. Dr. Strassmaier has spent two years in copying and collating the Assyrian tablets in the British Museum, and his work, when it appears, will be of great use to Assyriologists. The archaic and Babylonian forms of the cuneiform characters will be reproduced wherever they are found in the original documents.

ANOTHER Assyriological work is also being brought out at Leipzig. This is a revised edition and translation of the Babylonian texts of the Persian inscriptions. So much progress has been made in our knowledge of Assyrian since Rawlinson, Oppert, and Schrader worked upon them, that it was full time they should again undergo a thorough examination. Dr. Carl Beyold is the author.

WE have received a copy of the first quarterly instalment of the *Philologische Wochenschrift* (Berlin: Calvary), a new weekly learned periodical, edited by Dr. W. Hirschfelder, with the assistance of Drs. Andresen and Hiller. The object of the *Wochenschrift* is to furnish (1) reviews of new publications, (2) extracts from learned periodicals, German and non-German, (3) reports of congresses and meetings, (4) communications respecting important discoveries, (5) personal notices, (6) bibliographical notices. The paper is, so far as we can judge, conducted in a competent manner. But we should be glad to see the English and American *Journals of Philology* and the *Hermathena* put upon the list of foreign periodicals.

THE last three numbers of Bursian's *Jahresbericht* contain the conclusion of Blass's report on the recent literature relative to Demosthenes. Similar reports are given by Herman Schiller on Roman history, chronology, and political antiquities, by Carl Frick on ancient geography and geographers, by Wecklein on the Greek tragedians, by Lorenz on Plautus, by Voigt on Roman private antiquities, and by Heinze on Plutarch's *Moralia*. The two last reports await completion.

THE *Revue critique* of April 10 contains a long and most appreciative review of Messrs. Westcott and Hort's Greek text of the New Testament by M. A. Sabatier. While fully admitting their arguments concerning what may be called the genealogy of the MSS., M. Sabatier finds himself unable to follow them in their conclusion that the most primitive text obtainable is therefore the nearest to the autographs. But he adds:

"Si nous ne pouvons tenir leur texte pour le texte même original, nous reconnaissons qu'il est, généralement parlant, le texte historique le plus ancien que l'on puisse atteindre, un texte à peu près contemporain d'origine et, ou même, si l'on veut, d'Irénée et de Tertullien."

#### MEETINGS OF SOCIETIES.

ANTHROPOLOGICAL INSTITUTE.—(Tuesday, April 4.) GEN. PITT-RIVERS, President, in the Chair.—The President exhibited a series of carvings and painted masks from New Ireland.—A paper on the Papuans and Polynesians was read by Mr. C. Staniland Wake, who, from a consideration of the physical peculiarities of the Oceanic races, arrived at the following conclusions:—(1) The Eastern Archi-

pelago was at a very early period inhabited by a straight-haired race belonging to the so-called Caucasian stock, the present modern representatives of which are the Australians. (2) To this race belonged, also, ancestors of all the Oceanic races, including the Papuans, the Melanesians, the Micronesians, the Tasmanians, and the Polynesians, as shown by their common possession of certain physical characters. (3) The special peculiarities of the several dark races are due to the introduction of various foreign elements, the Negritos having influenced all of them in varying degrees. (4) The lighter Oceanic races show traces of the Negrito influence; but they have been affected at various periods by intermixture with peoples from the Asiatic area, giving rise, on the one hand, to the so-called "Savage Malays," and, on the other hand, to the Polynesians, who have been specially affected by the Malays. (5) Traces of an Arab or Semitic element are apparent among both the dark and light Oceanic races, but chiefly among the Papuans and the Melanesians, the former of whom may also possibly possess a Hindoo admixture.—Mr. C. Pfouder read a paper on "Rites and Customs in Old Japan," and exhibited a number of photographs and Japanese books and pictures.

#### ARCHAEOLOGICAL INSTITUTE.—(Thursday, April 6.)

MR. J. HILTON, in the Chair.—A paper by Mr. E. A. Freeman on *Sens and Auxerre* was read.—Mr. E. Peacock sent a transcript, from the Episcopal Register of Lincoln, of a "professio" made in the Benedictine nunnery of Little Marlow, Buckinghamshire, to Margaret Vernon, the last prioress, before John Longland, Bishop of Lincoln (1520-47), by "suster Constance petronill Anne," who vows, offers, and fully gives herself to serve Almighty God during her natural life, and renounces for ever and utterly forsakes the world and property of temporal substance, &c., and takes upon herself wilful poverty, utterly forsaking her own proper will. The bringing to light of this document by the Rev. A. R. Maddison forms a small, but interesting, addition to the scanty published accounts of the nunnery of Little Marlow.—The Chairman exhibited a silver-gilt collar of SS., apparently Flemish work, and Mr. Hartshorne contributed some notes upon SS. collars in general. Mr. Hilton also exhibited a collection of early keys, a bronze celt, and a large Italian fibula.—Mr. C. R. B. King sent some illustrations of the undercroft of the church of the Knights of St. John of Jerusalem at Clerkenwell, and drawings of a *balдахино* lately removed from the church of St. Mary, Totnes.

#### NEW SHAKSPEARE SOCIETY.—(Friday, April 14.)

F. J. FURNIVALL, Esq., Director, in the Chair.—Dr. Peter Bayne read a paper on "Shakspeare's Characters contrasted with those of George Eliot." Claiming that though all our modern writers had been influenced by Shakspeare, that all were, to some extent, his pupils, Dr. Bayne noted the change from drama to novel as the medium of expression of popular writers. Had Shakspeare lived now, he would have written novels, not dramas: no strong man, since his time, had made his chief appeal to his fellows through the stage; the public of Dickens and Thackeray was to be sought, not that of Robertson and Burnand. Yet the best novel should be but the best drama "writ large." To George Eliot the experiences of Macbeth, who "could not say amen," of Claudius, who could not pray, were akin. She dealt with mixed characters, like Bulstrode in *Middlemarch*. She could have written out "Macbeth" and "All's Well" into novels. Helena would have suited her, for, like Dorothea, Helena's object in life was to make the joy of another soul. Was Browning's view true—that woman's supreme wish was to absorb herself in the man she would make noble, though he were not so? Shakspeare belonged to the age of Faith and no Science; George Eliot to the age of Scepticism and Science. His men and women were more broadly and permanently human than hers. Dorothea, Casaubon, and Will Ladislaw were only nineteenth century. She believed in the influence of blood and race, as in *Fedelma*. So did Shakspeare: Perdita was a lady, though brought up on a desert island. She felt the symbolism of gems; Shakspeare that of flowers.

He was a mirror to human nature in stable equilibrium; she, one to it in unstable. She was the champion of women—Adam Bede and Savonarola were her only male heroes—and never showed the "mystery of feminine malignity." Her works were mainly an indictment of men in favour of women. This was not like Shakspeare's truth and fairness to both sexes. Her "note" was the working out of neutral, indirect influences to modify character, and her special power that of tracing the imperceptible stages in the progress of evil: witness Maggie Talliver and Tito. The origin of evil with Shakspeare was generally temptation, as with Angelo and Macbeth; or deliberate badness, as with Iago and Richard III. In the drama there was no time for the gradual evolution of character that was fitted for the novel. Many folk in reading of Tito felt that they *must* have taken the first step with him, and could not tell how they could have stopped short. With George Eliot, man was more of a drift-log, awayed hither and thither by the tide of circumstance, than with Shakspeare. He knew the worth of Will in man, that 'twas in *ourselves*, if we were hirelings. All his heroes had a feeling of God, knew that there was a divine vengeance and a moral law. He apprehended religion far more definitely than Goethe or George Eliot. Since his time, some things that he did had been better done by other men and women; but, for the general, his largeness and greatness were incomprehensible; he wore the crown of the literature of the world.

#### FINE ART.

*The Journal of Hellenic Studies*. Vol. II., No. 1 (April 1881); No. 2 (October 1881). (Macmillan.)

THE second volume published by the Society for the Promotion of Hellenic Studies shows no abatement in the energy which has characterised the new movement. It may still be permitted to hope that the undue preponderance of archaeology will be temporary. Out of twenty-six articles in the two parts now before us, at least twenty-one fall under this description, leaving only five, or one-fifth of the whole number, for all the other fields open to the society. The balance, however, is not so unequal when the length and importance of the articles is taken into account. At the head of the list appears Prof. Jebb's discussion on "Homeric and Hellenic Ilium," in which his unique clearness of thought and language is applied to one of the side-questions arising out of Dr. Schliemann's discoveries. Dr. Schliemann, it will be remembered, not only maintains that Hissarlik is the site of the Homeric Troy—which is now admitted—but refuses to allow that any other view was generally entertained in antiquity; and Prof. Mahaffy has written a short paper, printed as an Appendix to Dr. Schliemann's *Ilios*, in which he seeks to show that Troy was not utterly destroyed, but continued to exist on the same site until it became the Aeolic "Ilium." Prof. Jebb agrees with Dr. Schliemann on the main point of the place of Homer's Troy, but not on the subsidiary one as to the opinion of antiquity. He does not touch the issue raised by Prof. Mahaffy; probably considering that it is hardly a practical one. We may be able to determine from allusions in literature, or from the discussions of ancient geographers, what the *ancient belief* was as to the site of Troy; but to determine the *fact* is quite a different matter. Prof. Mahaffy refers to the similar statements about Mycenae, which he criticised with success in the *Hermathena*. The cases, however, are not parallel; the

asserted destruction of Mycenae falls within a period which can be reached by historical evidence. The destruction of Troy by Agamemnon can hardly be said to be better attested than the destruction by Heracles; and Prof. Jebb's conclusion—which is that the story about the survival of Troy in Ilium was only local legend, due to the not disinterested patriotism of the Greek inhabitants—is equally good, whether Homer's Troy ever existed or not. Dr. Schliemann's own contribution to this volume—his account of the exploration of Orchomenus—is of much interest. It is not, indeed, to be compared with his triumphs at Hissarlik and Mycenae; but as Dr. Schliemann is not a magician, but only a shrewd and enthusiastic explorer, there are limits even to his powers of discovery.

Mr. Ramsay's two papers on Southern Aeolis are valuable both for themselves and as evidence of the gain to be derived from the personal contact of a genuine scholar with countries which to most of us are as unreal as the figures of geometry. We have not indeed in this case the literary interest which belongs to exploration in the Troad; but the historical interest is perhaps greater. Mr. Ramsay shows that it is still possible to trace, in the remains found in the little known country to the north of Smyrna, the lines by which Aeolic colonisation spread from Cyme. The sites which he chiefly discusses are those of Myrina, Neonteichos, Iarissa, Temnos, and Aegae; and it is not too much to say that he does so with a union of freshness, learning, and sobriety that is rare in these days. If Englishmen have to admit with shame that their country, in spite of its rich universities, is decidedly behind Germany and France in respect of antiquarian discovery, they may at least feel that it is not for want of able and enterprising men.

Prof. Mahaffy's suggestive article on the Olympian Register revives a question discussed with much judgment by the late Col. Mure. In the destructive part of the paper Prof. Mahaffy does not differ materially from his predecessor. His attribution of the Register to Hippias the Sophist does not seem well made out. Hippias is only said to have edited (*ἐκδοῦναι*) the list; and it is not likely that a private work would be quoted under the name *τὰ Ἡλείων γράμματα*. Of the philological articles the most important is the systematic account given by Mr. E. S. Roberts of the inscriptions from Dodona. Mr. Verrall's paper on Ionic elements in Attic tragedy carries on a vein of enquiry already known from his previous contributions. It will be interesting to compare his theory with the different view taken of the same phenomena in Mr. Rutherford's *New Phrynichus*.

In the field of archaeology, where the details are everything, it is impossible to sum up the results of a series of articles. The general reader may be directed to Prof. Gardner's proof that boat races were not unknown among a nation at once maritime and fond of athletic competitions, and to the paper in which Canon Greenwell discusses a specimen of the curious bronze shams found in historical times as votive arms—a survival for religious purposes of the bronze weapons of Homeric and earlier times. D. B. MONRO.

### THE INSTITUTE OF PAINTERS IN WATER-COLOURS.

THIS is the last exhibition of the Institute which will be held in their present gallery. The fine rooms being built for them in Piccadilly will be opened next spring, even if there be no winter exhibition. Whether in winter or spring, the new gallery will mark a new departure in the Institute's shows, which will no longer be confined to works of the members, but will, on the principle of the Royal Academy, be open to the world at large. We do not know whether this is a subject for congratulation. To the outside world of artists it is, and perhaps to the majority of the public; but to those who prefer small and choice collections, and to those who have to review art exhibitions, the substitution of a large and miscellaneous gathering in place of one of few artists of known merit will not be an unmitigated boon. It is true that "artists of known merit" are apt to repeat themselves, and that habitual visitors to the old and close societies know rather too well what to expect; and this must be their consolation for the change.

It cannot be said that the present exhibition is altogether barren of novelty, nor that what is old is uninteresting. What may be called the school of David Cox—with its broad generalisations and effects of "weather"—its blue watery skies and bold, bright flying clouds—its strong lights and darks and direct dashes at Nature—is well represented by such men as Thomas Collier, J. Orrock, and E. M. Whimperis. In well-considered audacity the first of these shines actually as well as metaphorically in his large study of slabs of rock and masses of white cloud in strong sunlight (157). Not so astonishing, but more beautiful, is "A Wooded Valley" (61) by Whimperis; and there are several drawings by Orrock which are as fine, if not finer, than any we remember from his hand. "In Charnwood Forest" (72) is specially remarkable for the strong drawing of the group of Scotch firs and its luminous sky; and among his smaller works "Dumbarton Castle" (149) is a good specimen of simple truth and sense of the picturesque. To those who prefer greater refinement of colour, and those exquisite effects of atmospheric evanescence which will always be associated with the name of Copley Fielding, the drawings of H. G. Hine will afford delight. The large drawing of the "Downs near Lewes" (145) is perhaps his most important work here; it presents, probably as perfectly as paint and paper can suggest, the soft modulations of chalk hills, with their short grass flooded with sunlight, and their soft contours lying one against the other as cheek to cheek. His "Evening, Low Tide" (71), with its pale reflected orange sky, and the white gull so gently relieved against the pale amber cloud, is a lyric of light and colour. Not a little of pleasure of similar quality is given by Whymper's "South Downs" (45). Harry Hine also sends many charming drawings.

A different and newer class of sensation is given by Keeley Halswelle's "On the River below Sonning" (75), which is striking and original in design. Between the sky and the river one bank stretches almost straight across the middle of the picture. The way in which this line is broken by the bold, dark cloud, that curves in one direction above, and the water lilies and rushes that curve in the converse direction below, is one of the very few instances here of inventive power, or search for the uncommon. We have, moreover, the sense of expanse, both of river and atmospheric space, admirably given by this device. There is neither end nor beginning to the scene, but it is unified. The drawing seems to us true throughout, and the colour also—a little hard, perhaps, but such sunlight is hard.

Another very striking drawing is MacWhirter's "Lake of Monteith" (152), a brilliant study of a warm, curdy sky and its reflection, painted in the manner and with almost the force of oils. Much as we admire the brilliance and originality of these drawings, and welcome them as symptoms of renewed energy in art, the eye turns from them for refreshment to the cooler and more sober beauties of J. Syer's delightful nooks among the hills and valleys of Wales. Grateful also are such scenes as W. L. Leitch and Edward Hargitt still paint for us, not only for their quiet charm, but their pure method. To those who love the old art, guiltless of gums and body colours, and whose eye pastures with delight on passages of luminous grays, and detects left lights with joy, to those also who think that landscape art should not despise the science of composition, the works of the older members here will be regarded with a sad delight, for they are few, and the art which they represent—the art which first made England rank among the schools—is dying fast.

Some of the most charming and least pretentious of the drawings (though there is little pretension here) are contributed by John Fulleylove and George Elgood. The colour of the former suffers by its delicacy in contrast with its neighbours, but it is good. His "Garden of the Villa Medici, Rome" (143), is painted with true sentiment, almost classical; and his "St. Mark's, Venice" (130), likely to be overlooked from its proximity to Percy Macquoid's startling "Iconoclasts" (131), is very tender in colour. Of Mr. Elgood's four charming drawings of old buildings and fresh vegetation it is difficult to choose the best; they are all delicate in colour and sweet in feeling.

Perhaps the most complete success in the exhibition has been achieved by Harry Johnson in his view of Stonehenge by moonlight, called "Prehistoric Scenes" (44), an original and poetic view of a hackneyed scene. The effect of cool light and mist and the transparency of the deep shadows are admirably given, as well as the semi-prismatic arch above the warm moon. By J. Aumonier, W. Wyld, James Fahey, Walter M. May, and others are many drawings which will sustain their reputation.

In figure subjects the exhibition is weakened by the absence of Herkomer, Gregory, and Seymour Lucas; and the works of John Tenniel and John Absolon do not add much to its strength. The "Fancy Ball at Florence" (186), by Caldecott, is a clever drawing; but, on the whole, his contributions are disappointing. By Edwin Bale there are some very pleasant and accomplished drawings, of which we prefer "Ursula—a Portrait" (42), which is lifelike and beautiful as an arrangement of delicate colours. Frank Topham's "Poveretta" (47) contains an unusually graceful and pathetic group of a mother and child; and Hugh Carter sends a few delightful examples of those interiors with figures in the modern Dutch style of which he is a master.

Not forgetting these, nor the clever drawings of Guido Bach and Mrs. Elizabeth Murray, nor yet the strong contribution by F. Small, it is by Charles Green, J. D. Linton, and G. Clausen, we think, that the greatest and most original power is shown. The first, in his "Talented Troupe" (65), has drawn for us a clown and four performing dogs with a skill and appreciation of character which it would be difficult to excel; the second has painted a lady (58) in yellow satiny dress and crimson sash, holding a lute in her hand, with his almost unique command of material and his true genius for colour; the third sends a small drawing of a "Boy and a Man" (138), trudging homeward in the twilight with faggots on their back, wonderful no less for its impressive design than for its breadth of treatment. It is like a Millet.

COSMO MONKHOUSE.

### ARCHAEOLOGICAL NOTES ON THE TERRA D'OTRANTO.

V.

#### PAINTED VASES.

THUCYDIDES (vii. 33) states that, when the Athenians were making preparations for their disastrous expedition to Sicily, they renewed the ancient alliance between their city and the Messapians, whose king was then called Artas. A little later, Lysias, after his return from Thurioi to Athens, spoke in one of his orations of the trade by sea with the Italian coasts of the Adriatic as perilous, but extremely lucrative (*Contr. Diogit.* 25). The commercial relations maintained throughout the whole of the fifth century B.C. with the native populations of the South-east of Italy by the Athenians—whose ships naturally frequented the ports situated on the Adriatic rather than those of the Ionian Sea, so jealously watched by the Tarentines—are attested by the discoveries of Athenian coins which are of daily occurrence in the district, as well as by the fine vases with red figures, in a severe and absolutely perfect style, which are beyond a doubt of Attic importation, and which have been found more especially in certain tombs at Rugge. Discoveries of vases with black figures, of delicate and careful workmanship, and of genuinely ancient manufacture, dating before the fifth century, are extremely rare in this district. Those exhibited in the Lecce Museum are derived from places in the strictly Greek and Tarentine territory, such as Massafra, and not from the cemeteries of the Iapygo-Messapian cities; and the few specimens from these cemeteries which I have been able to get a sight of here and there seemed to me to have been imported from Greece rather than from any Graeco-Italic seat of manufacture. It is still an unsolved problem whether Tarentum possessed at that date, or even in the fifth century, a manufactory of painted earthenware like that which flourished at Cumae from a very early epoch. On the other hand, with the fourth-century vases painted with red figures, in a free style that is rapidly tending to become loose, which are already much more numerous than those of the preceding period, we begin to distinguish very clearly, by unmistakable characteristics, the products of the local industry of the Greek cities of the district, first and foremost undoubtedly of Tarentum, from those which were still brought from Attica in great numbers by a more or less direct trade route. These are succeeded in order of time by the vases of the so-called "Apulian" style, with extravagantly rich decoration, the date of which corresponds with the cessation of the importation of any kind of ceramic ware from Greece proper into the South of Italy. These so-called "Apulian" vases, as I have already shown elsewhere, and as is fully admitted, on the strength of the arguments I have adduced, by Prof. Helbig (whereto I am now enabled to add new proofs which are absolutely decisive), are really Tarentine. The chief centre of their production was Tarentum itself, at the culminating period of its wealth and luxury. And if any were manufactured in certain localities in Apulia—for instance, at Rubi—these are simply due to colonies of Tarentine artisans established among the natives, to whom they brought the style and processes of the ceramic art of their native city. In the Terra d'Otranto they form by far the largest proportion of the total number of vases exhumed from the ancient sepulchres. In fact, they are more numerous than those of all other styles and periods put together.

Simultaneously with the decline in the so-called Apulian style in ceramics we note the appearance of the vases no less improperly called "Gnathian." It is well known that this name was given to a

special class of pottery belonging to the last period of painted Graeco-Italic earthenware, which, on a background of black glaze of gradually changing quality, bears decorations extremely light and delicate in character, painted in white touched up with yellow and reddish violet, these decorations chiefly consisting of festoons of vine-tendrils or of ivy, with Dionysiac symbols or scenic masks hanging from them, and often with birds or tiny Cupids represented on the wing. These decorations, dashed in with the brush with remarkable freedom of touch, possess an elegance wherein the taste of the ceramic painters still shows the very flower of Hellenism. In purely decorative compositions the potters still preserve a skill of execution and a freshness of feeling which form a decided contrast to the heavy and feeble style into which they fall when they try to draw the human form on their vases, ornamented with figures in red. The vases with white decorations on a black ground made their first appearance in the market of antiquities at Naples after the great excavations at the necropolis of Gnathia in 1848, and accordingly the name has stuck to them. But it should now be given up as implying an altogether false and misleading notion. These vases are by no means peculiar to Gnathia, and there is nothing to justify the view that they were manufactured there. They are found everywhere in the Iapygo-Messapian district, from the neighbourhood of Bari on one sea and Tarentum on the other to the Capo di Leuca, and everywhere in considerable numbers. The provincial museums of Bari and Lecce, different as they are in importance, are both glutted with them, as well as all the private collections of the country, for there is not a single necropolis from which they have not been exhumed by hundreds. These vases are no less abundant at Tarentum itself than on other sites in the two provinces of Bari and Lecce. I have seen some taken from tombs, opened in my presence, on the property of Signor Diego Colucci. Similar productions are known which come from certain islands in the Greek Archipelago: e.g., Milo. Here, therefore, we have a strictly Hellenic pottery, both in style and in manufacture. And in the portion of Southern Italy in which it was especially developed, if we had to mention one single manufacturing centre which spread its productions throughout all the localities within a certain radius, we should undoubtedly have to name Tarentum—i.e., the great Greek city whose trade and influence were paramount in this region, and which enjoyed an undisputed hegemony, moral and industrial as well as political. But in spite of the unity of make and style characteristic of the vases in question, I have some difficulty in believing in one single centre. It seems to me more probable that, as has been conclusively proved in the case of the vases painted with figures in red in the so-called Apulian style, the wares with white decorations on black glaze must have been executed simultaneously at several points, but in every case by potters from Tarentum, or formed in the school of the Tarentines, copying their processes and their models.

In Messapia, as in Etruria, the natives set themselves, during the very same period of decline, to imitate the vases with red figures which they purchased from the Greeks of the neighbouring cities. The Messapian vases of the decadence are readily distinguishable from the Greek vases from which they are imitated by the inferior quality of the glaze, by technical imperfections of a more decided character, by the yellowish instead of decided red colour of the figures, as well as by their coarse and careless drawing. In all these respects they approximate closely to the Etruscan vases of the decadence, which are nearly contemporary.

Before this period, the native painted pottery,

which is almost always associated in the tombs with that of Greek manufacture, was highly original in character. It begins, at the earliest date at which it is known to us, with those small vases with geometrical patterns in black or dull brown on a white, yellow, or grayish ground, to which I called attention two years ago, and some specimens of which I then presented to the Louvre. These vases show in their shapes, decorations, and colours a close analogy to a portion of the archaic pottery of Cyprus. It is there, and not in Greece proper, or even in other parts of Italiote Greece or in Sicily, that their prototypes must be looked for. The preservation, however, of the primitive system of geometrical decorations should not cause any illusion, so as to lead us to attribute to them too high an antiquity. Their use and manufacture continued during the period in which the Greeks imported vases with black figures of delicate and careful execution, and even vases with red figures in a severe style, with which we find them associated in the tombs. On this point, which is one of great importance for the history of the ceramic art in Italy, the details which I have collected in the Terra d'Otranto, as well as those registered by Prof. Helbig, are fully in accordance with the information which I picked up, two years ago, at Canosa. Throughout the greater part of the fifth century the particular type of small vases with geometrical decorations was the native and common pottery in Apulia and Calabria; while the superior ware, to which only the wealthy could aspire, consisted of Greek vases with red figures, imported in the course of trade, and principally of Attic origin.

The following period, comprising the fourth and third centuries B.C., is marked by the disappearance of this pottery with geometrical patterns, and by the occurrence of great numbers of a wholly different type of vases, the native manufacture of which is equally indisputable. These are never of very large proportions, and have the particular shape now generally known as *trozzella*; and I have proposed to give them the scientific name of "Iapygian amphora." It is this shape, characterised by the little circular bosses with which the handles are decorated, the development of which to final perfection by the taste of the Greeks gave rise to that of the fine *amphorae* with round bosses and masks of Ruvo and Canosa. Vases of this type are entirely confined to the Terra d'Otranto; they occur here in great abundance, but no specimen has ever been found in any other part of Italy.

Beside their peculiar shape, they bear tokens of a special technical process of manufacture. They have no brilliant glaze, no vitreous surface. The biscuit remains in its natural state, or is only covered with a uniform coating of a dull white, and often yellowish, hue, granular and unglazed. On this ground decorations are traced, first in brown, with a dash of yellow, and later in pronounced black and red. Such, at least, is the appearance and technical character of the vast majority of the Iapygian *amphorae* belonging to the centuries above named. For we also meet, though very rarely, with vases of a similar shape, having geometrical decorations executed in black on a reddish-yellow ground, the painted portions of which are brilliantly glazed. These appear to be of earlier date; and the perfection of their manufacture inclines me to doubt whether they can be attributed to the natives, who could scarcely have been as yet sufficiently skilled in the potter's art.

The decorations on the Iapygian *amphorae* are, as a rule, purely conventional. They consist of belts of arabesques, wreaths of foliage, branches of ivy, very carelessly executed, or else of compartments in which palm-leaves and

star-shaped flowers are represented. On the bosses of the handles are lines intersecting one another, like the spokes of a wheel diverging from the central point. Among hundreds of these vases in the museums and private collections of the country, or the very few which are to be met with, here and there, in foreign museums, there exist but four ornamented with figures the archaic appearance of which, slightly resembling that of the paintings on the old Corinthian vases, is only apparent, and is wholly due to the want of skill of the Iapygo-Messapian potters. Of these four I have been fortunate enough to bring back the originals of two to Paris, and they are now in the Louvre.

In some very rare examples the shape of the Iapygian *amphora* is combined with the use of the vitreous silico-alkaline glaze after the Greek mode. For instance, in the possession of Sig. L. Maggiulli, at Muro Leccese, I saw a vase of this kind completely covered with a brilliant black glaze similar to that of the Hellenic potters; it had just been discovered in the neighbourhood. The National Museum at Naples possesses another, found at Oria, the black glaze of which, equally delicate and successful with that of the vases of Nola or Capua, is relieved with elegant wreaths of ivy finely painted in red on the neck and handles. Finally, one of the gems of the Lecce Museum is a vase of the type of the Iapygian *amphora*, discovered at Rugge, in which the system of decoration is that of the so-called Gnathian potteries, but richer and more elegant than in any other known specimen of this mode of painting. Over a very brilliant black glaze, the whole body of the vase is covered with a perfect network of vine-branches laden with grapes, and with festoons of flowers incomparably light in execution, among which various animals are playing. The whole is painted in white with a brush as unerring as it is free.

After the close of the manufacture of painted vases properly so called, with their characteristic silico-alkaline glaze, and before the period of the Social War, we must place, as I have proved by the study of the tombs of Canosa, the age of the production of potteries of still elegant shape, the grayish unglazed paste of which often bears impressed reliefs, and was painted after firing with bright colours, white, rose, blue, yellow, green, rather dusky looking (which have not been passed through the kiln), or was even gilt or silvered; these occur in considerable quantities in Puglia. They are also occasionally found in Messapia, especially in places near the Apulian territory, like Gnathia. But there has never been an instance of the discovery of those large vases, crowned with little figures entirely separate from them and in high relief, which are peculiar to Canosa. It is from Canosa that those are derived which are to be seen in the Lecce Museum, in the Municipal Library of Oria, and in the Nervegna collection at Brindisi.

FRANÇOIS LENORMANT.

#### NOTES ON ART AND ARCHAEOLOGY.

WE are authorised to state that the family and friends of the late Dante Rossetti are concerned and grieved at what they cannot but think the inconsiderate haste which has been displayed in certain quarters to announce forthcoming exhibitions of the painter's works. They desire it to be known, first, that all pictures painted by Rossetti, except the one belonging to the city of Liverpool, were sold under copyright restrictions which cover control of exhibition; next, that the holders of the important works positively decline to lend their pictures, except to the executor of the estate;

and, last, that they cannot countenance the exhibition of the lesser works to the exclusion of the greater ones on which Rossetti's fame must finally rest. They appeal to owners everywhere to help them (and prevent complications) by withholding from all applicants promises of loan at the present stage.

WE must fairly confess that the number of picture exhibitions of various kinds which are now open or will shortly be opened are too many for us. The Royal Academy opens, of course, on the first Monday in May, which happens to be May 1. The private view is on the preceding Friday; and the private view at the Grosvenor Gallery is fixed for the day after. The exhibitions of both the water-colour societies will also be on view at that time. So far there may be cause for congratulation rather than complaint. But, in addition, we have received cards for no less than three minor exhibitions which all open next week. The London International Exhibition Society has a summer exhibition at the United Arts Gallery, in New Bond Street; work by Constable, John Linnell, Mr. Hook, and other English landscape painters, is exhibited in the King Street Galleries; while Messrs. H. Mendoza and Son will have on view a collection of pictures, both English and foreign, and also "the latest production of that highly talented sculptor, Signor Focardi," in what is called the St. James's Gallery. Let us hope that the professional picture-seer is less easily fatigued than the professional critic.

THE Art Furnishers' Alliance propose to hold an exhibition during the coming season of a new kind of glass of English manufacture, which is asserted to rival that of Venice. This will be followed by a display of work in iron, brass, and mixed metals adapted to household requirements.

ON April 14, Mr. John MacWhirter, A.R.A., was unanimously elected an honorary member of the Royal Scottish Academy.

SIR NOËL PATON has just completed a coloured design for a window to be placed in the abbey church of Dunfermline by Mr. Andrew Carnegie, of New York, to whose munificence his native town is already indebted for its public baths and library. This is the west window of the church, and dates from the early part of the fifteenth century. It has four lights, surmounted by tracery. The two central lights display the full-length figures of the founders of the church, Malcolm Canmore and St. Margaret—the former represented with his hound and a slain deer; the latter, her head circled by an aureole, and her hand resting on the Gospels, instructing a peasant and his child. In the left compartment is Wallace, with drawn sword, supporting a fallen female with streaming hair, manacled wrist, and with a broken blade in her hand, typical of the down-trodden liberty of Scotland; and on the right side stands Bruce, sheathing his sword in token of victory, his foot resting on the prostrate Typhon of oppression. The figures are set beneath canopies of a quaint early form; and below is the heraldic shield of each, relieved on a space of zoomorphic ornament executed in *grisaille*, and surrounded by arcading studied from details in the old abbey church itself. In the highest compartment of the tracery above appears a symbol of the Holy Trinity, to whom the edifice was dedicated; and below this are the shields of Scotland, of Dunfermline, and of its Church, each borne on the breasts of angelic figures. The decoration which fills the other compartments and appears elsewhere in the design is a very happy and skilful adaptation of old Celtic ornament, such as appears in MSS. and on jewelled reliquaries, but now, we believe, for the first time applied to glass-

painting. The whole design is rich and glowing in colour; its figures are excellent as personifications, and show all the artist's accustomed grace and accuracy of draughtsmanship. The window is to be executed by Messrs. J. Ballantine and Son, of Edinburgh, under Sir Noël's personal supervision.

THE seventh volume of Mr. Stanley Lane-Poole's Catalogue of Oriental Coins in the British Museum will be published immediately. It describes the coinage of Timur (Tamerlane) and his successors in Transoxiana and Khorasan, and the subsequent dynasties of Sheybanids, Astrakanids, and Mangits, who ruled Bokhara from the downfall of the house of Timur to the present day. Descriptions of the coinage of the Khans of Khokand and Khiva, of the Atalik Ghazy of Kashgar, and of the Emirs of Budlis are appended. The Introduction deals with the difficult subject of the geographical limits of the Bokhara khanate, sketches the history of the dynasties who ruled over it from Timur to the Russian conquest, illustrates the relations of the different princes by ten genealogical tables, and analyses the character and peculiarities of the coins described, with the useful addition of a sketch-map of mint-places. Vol. viii., describing the coins of the Turks, is in the press.

WE are informed that Dr. J.-P. Richter, and Mr. Six, of Amsterdam, have acquired Rembrandt's second "Anatomy," which of late had been rediscovered in England, for the museum of Amsterdam. This picture, representing Dr. Deyman's lesson on anatomy, was painted in 1656 for the Surgeons' Hall at Amsterdam, and originally contained nine life-size portraits; but by a fire in 1723 it was greatly damaged, and subsequently found its way to England, where it was completely lost. The principal figures are well preserved, as well as Rembrandt's signature.

"THE LION AT HOME" is the title given to the last picture (or, as the prospectus has it, "the latest *chef-d'œuvre*") of Rosa Bonheur, which is on view at Lefèvre's gallery in King Street, St. James's. The lion (whose head as "An Old Monarch" is already well known) has a wife and three children, and their "home" is floored with red sandstone and screened with aloes and cacti. It need not be said that the animals are splendidly modelled, and full of life and character. The weak-legged crawl of one of the cubs and the serious face of another, "the very picture of his mother," are excellent; the third is asleep under difficulties arising from the activity of its brethren. It would have made the picture more pleasant if the artist had chosen a cooler colour for the rock, which not only covers the foreground, but appears through breaks in the vivid green background; and, as there is no sky or cool shade, the picture is all red and green and tawny. It is, however, difficult to judge of the picture in its present small room, with the light artificially arranged. The visitor should set his back to the wall if he wishes to see the design at anything like a proper distance. The grand heads of the lion and lioness really dominate it, but this is not apparent if you get too close.

MISS ISABELLA JAY's wonderfully accurate and sympathetic copies of Turner's pictures and drawings do not need Mr. Ruskin's warrant to recommend them to those who know the originals, but from the small prices at which they are to be purchased it would seem that even this was not enough to assure the public of their value. So fast are some of the originals disappearing that the glories of such works as "Childe Harold's Pilgrimage" and "The Bay of Baia" will be unknown to posterity except through these faithful reproductions. They will be some day past copying by even the most skilful hands, and it seems to us most desirable that the

nation should secure as perfect copies as possible of them while there is yet time. A small collection of Miss Jay's facsimiles are now being exhibited at Messrs. Dowdeswell and Dowdeswell's in New Bond Street.

MR. HODDER M. WESTROPP has just returned from Rome, where he gave a course of eighteen lectures on the archaeology of Rome, which were numerous attended. At the last lecture, on "Roman Tombs," given at the tomb of Cecilia Metella outside the walls, Mr. Shakspeare Wood, the correspondent of the *Times* at Rome, proposed a vote of thanks to Mr. Westropp for his lectures.

THE executive committee of the Metropolitan Museum of Art at New York have lost no time in replying to the serious imputations brought against some of the objects in the Cesnola collection, to which we alluded last week. Two statues—one described as "a fraudulent patchwork of unrelated parts," the other as "built up of several fragments belonging originally to different statues of various sizes"—they have had removed from their glass case and placed on the floor of the grand hall where they can be examined on all sides. A reporter of the *New York Herald* has "interviewed" these statues, in company with a working mason. The opinion of the latter was at first inclined to be unfavourable, on a mere ocular inspection, for the colour, &c., of the surface seemed to vary, and there were marks that looked like joinings. But Gen. Cesnola allowed him not only to wash the figure, but also to scrape the doubtful portions with a knife; and then it became demonstrable that the whole was of one piece. It is to be hoped that we have now heard the last of this unpleasant matter.

The *Great Historic Galleries* for this month gives us a magnificent photograph of Velasquez' portrait of "Juan de Pareja" at Castle Howard, and a very good one of Isaac Oliver's interesting seated full-length miniature of "Sir Philip Sidney," with Penshurst in the background, which belongs to the Queen. The third picture is "St. John baptising Christ," after the Hampton Court picture ascribed to Francia.

THE rage for diamonds forms the sad subject of complaint by M. E. Fontenay in a recent number of the *Revue des Arts décoratifs*. The King-Diamond rules even at "réunions intimes," and ladies who wear marvels of art in the shape of *bijoux* produce no effect whatever, and have to put up with the consolatory compliments of one or two friends. In this sacrifice of art to the brilliance of precious stones, M. Fontenay finds the cause of the comparative neglect of "bijouterie" in the midst of the present revival of all other forms of old art-workmanship: "Le bijoutier disparaît et fait place au joaillier." In this excellent periodical M. Ed. Garnier continues his learned and interesting papers on the manufactory of Sèvres porcelain.

THE first exhibition of the Société des Animaliers français was opened last week in Paris.

AN international exhibition of industrial art was opened at Lille on the 8th inst. Belgium contributes about one-third of the "exhibits," other nations a sixth, and France the rest.

NEXT month an exhibition devoted to the works of Courbet will be held at the Ecole des Beaux-Arts. The nucleus will be formed of fifty works of the artist still in the possession of his sister.

AN article in the *Genevois* deplores the bad success of last year's exhibition in London of the works of Swiss artists. French rather than German Switzerland was represented. The writer observes that the failure was not so much "moral as financial." An impression was made upon the English that the Swiss really have artistic as well as commercial

capacity, but the organisers of the exhibition—the members of the section of painting and sculpture in the Arts Society, Geneva—find themselves burdened with a considerable debt. They speak kindly of the aid which was given them by Sir P. Owen and the Swiss consul-general, M. Vernet. A special exhibition is to be opened in Geneva with a view to the liquidation of the debt, and a lottery of pictures is connected with this project.

THE Solothurn sculptor Kissling, who resides in Rome, has just completed the model of a group for the commemoration of the founding of the society of the "Red Cross." The work is to be executed in marble at the cost of the city of Geneva. The group represents the Angel of Philanthropy extending his wings over a young girl who is tending a wounded soldier. Another Swiss artist, A. Guidini, of Ticino, was one of the eight "praemiated" candidates among the three hundred who furnished designs for the projected Victor Emanuel monument in Rome.

DURING the alteration not long since of the old road in the village of Windisch, in the canton of Aargau, some portions of ornamented stonework were excavated, together with a piece of tile upon which the sign of the XVI. Legion was stamped. The stone is supposed to have belonged to one of the temples in the old Roman city Vindonissa. Hitherto, the *Aargauer Nachrichten* states, the only legions whose presence has been traced with certainty in Vindonissa are the IX. and XXI. (*rapax*); it seems now that others were stationed there.

THE restoration of the celebrated Byzantine cathedral of St-Front, at Perigueux, dating from the eleventh century, has just been completed after thirty years' labour.

### THE STAGE.

NOTWITHSTANDING the great and increasing pecuniary success of the Lyceum revival of "Romeo and Juliet," we understand that preparations for the production of "Coriolanus" are in progress. Mr. Irving will likewise produce the long famous melodrama of "Robert Macaire," in which Lemaître—perhaps the greatest actor of melodrama that our century has seen—made so profound an impression. We are of opinion that the character, in which we had the opportunity of seeing Lemaître at the Ambigu some fourteen years ago, will suit Mr. Irving perfectly, and that his performance of it will come to be ranked by the side of his rendering of Mathias in "The Bells." In Shakesperian pieces the triumph of the actor is less assured; the result of "Coriolanus" is therefore doubtful; yet it must be remembered that Mr. Irving has never—hardly even in "Othello"—fallen below the attainment of a *succès d'estime*, and that in more than one Shakesperian part in which his ability was questioned at first he has eventually become triumphant. His Hamlet, for example, is no longer an interesting experiment of which the success is to be debated in the monthly Reviews by the praisers of past times—it is accepted, with whatever drawbacks, as the one Hamlet of our day.

A COMPLETE change in the Haymarket play-bill takes place next Tuesday, when Mme. Modjeska returns to London, and the English version of M. Sardou's "Odette" is to be produced in place of the somewhat flimsy comedy which has been played until now, and which has aged so quickly. Mrs. Langtry will very shortly set forth on a provincial tour which has been for some time in process of organisation; but she first of all meets an audience of the art. suburbs, for on Thursday and Saturday

next she appears at the Standard Theatre. Mrs. Langtry afterwards goes into the North. We have already had occasion to note her increased control of the means of emotional expression. Her defects are of a kind that may quite disappear with time, while her qualifications for the theatre are of a sort that should last for many years.

By the destruction of the Strand Theatre, which will take place very shortly, to make way for a wholly new playhouse on the same site, we shall lose one of the smaller, but one of the more characteristic, of our elder London theatres—a place full of traditions. The Strand, though not actually old, is old enough to have a history. The performances which have been given at it during the last few years have practically nothing in common with those which made the reputation of the house in its brightest days. A quarter-of-a-century ago Miss Patty Oliver and Miss Marie Wilton, and certain young writers who are now fully middle-aged men, made it the home of modern English burlesque—the burlesque that succeeded Planché's and Mme. Vestris's, and preceded that of Mr. Robert Reece. Later, it was devoted to farce and farcical comedy, both old and new, and perhaps never did a better business than when it played "Paul Pry" for the exhibition of the American comic actor Clarke—a truly grotesque performer, who, we think, was somewhat overrated. More recently the theatre has been associated with French comic opera, and it is probable that a performance of "Manola" will be the last given within its walls.

We hear that Mr. Edwin Booth is expected to revisit England during the present season.

### MUSIC.

#### MUSICAL PUBLICATIONS.

*Marches.* Vols. VII. and VIII. of "Novello's Pianoforte Albums." (Novello, Ewer and Co.) These two volumes contain a varied and interesting selection of marches, including not only compositions of the great masters, but also specimens from modern living writers, such as Miss A. Zimmerman, A. Sullivan, H. Hofmann, and others. Of all musical forms the march is perhaps the easiest to understand, and consequently the most popular. Handel's "Dead March," Meyerbeer's "Coronation" march, and the "Rakoczy" march introduced by Berlioz in his "Faust" are as familiar to lovers of music as Longfellow's "Psalm of Life" or Tennyson's "Charge of the Light Brigade" to readers of poetry. The three marches just named, with many others of equal interest, are included in these volumes. They have been carefully edited by Mr. B. Tours, and his arrangements are both simple and effective.

*Mignon's Requiem.* "Wilhelm Meister." Composed by R. Schumann. (Novello, Ewer and Co.) The publication in octavo form of one of Schumann's finest compositions will be a great boon to many. The obsequies of Mignon are described in music of charming simplicity and tender mournfulness. Schumann in this work certainly shows himself a rival of Schubert in the intimate and remarkable connexion which links the words with the music. The composition is not a long one, and, for Schumann, it is not over-difficult. Its publication in octavo form will tend to make it more extensively known, and it is strongly recommended to choral societies. The words are translated from the German by the Rev. J. Troutbeck.

*Schubert's Songs.* Vol. I. For Mezzo-Soprano. (Novello, Ewer and Co.) As a great instrumental writer Schubert's fame is of

comparatively recent date; but as a song writer his reputation commenced with his first efforts, and has been steadily on the increase for more than half-a-century. Some of his songs are well known in this country. These, however, form but a very small portion of the number bequeathed to us by Franz Schubert. His name is now sufficient to ensure popularity for the present volume, which includes Mignon's three beautiful songs from Goethe's "Wilhelm Meister" and the wonderful "Rosamunde" romanza. It seems a pity that the English version has been given and that the German words should be omitted.

*The Organ Works of J. S. Bach.* Edited by J. F. Bridge and James Higgs. (Novello, Ewer and Co.) The first book just published contains the well-known eight short preludes and fugues. The names of the editors are a sufficient guarantee that the work has been done carefully and conscientiously. There are indications for pedalling and marks of phrasing. The changes of key-board or registers are very simple; and, though the work is laid out for a three-manual organ, the compositions may generally be performed on an instrument of two manuals.

*Twenty Original Voluntaries for Organ or Harmonium.* By Arthur Henry Brown. (Novello, Ewer and Co.) A series of short pieces for the various parts of sacred service. They are simple in form and phrasing, but, notwithstanding the title, cannot lay claim to any marked originality.

*First Sonata for the Organ.* By L. Selby. (Novello, Ewer and Co.) The three movements of this work are not lacking in vigour, ambition, and a certain amount of character, but the workmanship shows a hand not yet well versed in the mysteries of musical composition.

*Organist's Quarterly Journal.* Part LIII. (Novello, Ewer and Co.) This number is not particularly interesting. The postlude by J. Katterfeldt is rambling and unsatisfactory; the composer has really nothing of importance to say. Mr. O. Hepworth's fantasia on Mendelssohn's "Volskied" is only a set of variations with a *finale fugato*. The treatment of the theme is not in any way striking, and the counterpoint and general conduct of the *finale* are not marked by great success. The "Prayer" by E. Evans is restless, and the modulations are not pure: the part-writing is not altogether *sans reproche*. The fugue by E. W. Healey is well written, and contains some good strettos, but the *coda* is decidedly weak.

*The Pianoforte Teacher's Guide.* By L. Plaids. Translated by Fauny Raymond Ritter. (W. Reeves.) In 1843 Louis Plaids attracted the notice of Mendelssohn, who induced him to become a teacher in the newly formed Conservatorium at Leipzig. For more than twenty years he laboured there, and was honoured for his practical and excellent method of teaching. There are some valuable hints and suggestions in the pages of this little book. Two remarks are worthy of mention: "A teacher," says Plaids, "should not instruct according to a pattern, but should possess sufficient mental elasticity to yield to the individual peculiarities of his pupil." And, again: "Thoughtless practice is a wanton waste of time, and leads to nothing but incorrect performance."

*The Technics of Violin Playing.* By Karl Courvoisier. Translated by H. E. Krehbiel. (W. Reeves.) The author of this little treatise was a pupil of Herr Joachim, who recommends the work as calculated to render material aid to real students of the violin.

J. S. SHEDLOCK.

SATURDAY, APRIL 29, 1882.

No. 521, New Series.

THE EDITOR cannot undertake to return, or to correspond with the writers of, rejected manuscript.

It is particularly requested that all business letters regarding the supply of the paper, &c., may be addressed to the PUBLISHER, and not to the EDITOR.

## LITERATURE.

"ENGLISH MEN OF LETTERS."

Bentley. By R. C. Jebb. (Macmillan.)

"PROBABLY many school-boys," says Prof. Jebb, "have passed through a stage of secretly wondering why so much was thought of this Bentley, known to them only as the proposer of some rash emendations on Horace." And probably, we may venture to add, there are also many, and not among school-boys only, who have never got through this stage at all, and who have seen with astonishment the name of Bentley placed in Mr. Morley's series of "English Men of Letters." Or if that mysterious entity, the general reader, succeeded in recalling the passage in Macaulay's essay on Sir William Temple, in which the wit, the sagacity, the power of combination, and the masterly logic of the Dissertation on the Epistles of Phalaris were praised with no more reserve than the unrivalled learning, he may still have thought that these were displayed in a field attractive only to the professional scholar. But Prof. Jebb, while by no means overlooking Bentley's splendid services to scholarship, has rightly laid some stress on his position in the history of English prose. Among the earlier masters of the clear, nervous, and idiomatic style which distinguished the first few decades of the eighteenth century, Bentley is entitled to a place of his own. It is true that his language is sometimes rough and colloquial. He writes as if he would have chosen rather to talk. There are numerous laxities of syntax, not unfrequent Latinisms, and commonly enough homely words and phrases apparently beneath the dignity of written composition. But there is always life, freshness, and force; and under all seeming carelessness of expression there is really a scrupulous exactness, or perhaps it should rather be said an instinctive correctness, in the use of words. As Prof. Jebb happily puts it, "Bentley's genius was in accord with Greek, the voice of life, rather than with Latin, the expression of law." No student of the history of the English language can afford to neglect the prose of Bentley.

But of course it is especially for his place in the history of scholarship that Bentley's work deserves to be studied. He was so far before his own age that his true greatness was little understood by his contemporaries; and even yet the nature of his services is often misconceived. It is sometimes supposed that he was merely a verbal critic, whereas, in truth, he commenced his critical work by dealing with the matter rather than the form; and it was only when

he found the purification of the classical texts necessary to any real advance that he turned his attention to this. His work, therefore, needs for its exposition not merely the stylist's tact in language, but also a wide and sure command of the subject-matter; and Prof. Jebb's previous publications have shown that he unites these two requisites to an extent certainly not exceeded by any living scholar. But, further, the chapters dealing with Bentley's editions of Horace, Terence, and Manilius, and his notes on Homer, have been revised by Mr. Munro, and that on his proposed edition of the New Testament by Dr. Hort. The student may therefore feel sure that on these matters he has the judgment of the ripest modern scholarship. On one point the verdict passed by Mr. Jebb on Bentley's *Horace* appears to need supplementing. He speaks of it with justice as "a monumental proof of his ingenuity, learning, and argumentative skill." He points out with admirable insight the characteristics of the style of Horace, which made it one of the most perilous subjects on which Bentley could have exercised that divining skill which effected such marvellous restorations in the text of some of the Greek poets. He allows that where Bentley does use the MSS. he nearly always shows the greatest tact. But his final verdict (illustrated by some excellent criticisms in detail) is as follows:—"Speaking of Bentley's readings in the mass, we may say that Horace would probably have liked two or three of them—would have allowed a very few more as not much better or worse than his own—and would have rejected the immense majority with a smile or a shudder." This is not overstated, if regard is had only to the readings introduced by Bentley simply by conjecture; but attention might have been called to the large number of instances in which Bentley has restored, in accordance with the best MSS., a reading previously unknown or ignored. Without entering on a discussion of the much debated "V-princip," perhaps too technical a question for the readers for whom his little volume is intended, Prof. Jebb might have noticed the fact that Bentley's text, if it gives us often what Horace might have written, and sometimes what he certainly could not have written, not unfrequently restores what he assuredly did write.

In speaking of Bentley's other classical work, Prof. Jebb rightly brings into prominence the extent to which he was before his time. This is equally striking in all the departments to which his activity extended. If his *Horace* was not fully appreciated before that Berlin school of criticism, of which Meineke and Haupt are representatives, his views on Terentian metres were left in comparative neglect until they were taken up, corrected, and expanded by Hermann and Ritschl nearly a century after their publication. The true merit of his principles of New Testament criticism was not seen until Lachmann, working on similar though not identical lines, had shown what sure results could be in this way attained; and his views on the digamma were destined to wait for their proper basis until the modern development of comparative philology. But while this was one reason why his influence on English scholarship was

less than might have been expected, and another doubtless lay in the bitter personal animosities which it was his fortune, if we ought not to say his fault, to excite, the chief reason was that the man was so much greater than any of his books. There is not one among them, not even the Dissertation on Phalaris itself, which gives a true conception of what he could have done with a theme selected so as to call forth the whole range of his powers, and handled at leisure. Hence his notes so frequently teach, rather than convince; he asks the right question—and that is a matter which often calls for genius—but is too impatient or too dogmatic to ensure the right answer. It is not too much to say of him that he marks a real epoch in the history of scholarship. In his own time he was looked upon as "the awful Aristarch," the *auceps syllabarum*. Bunsen, with a truer insight, wrote, "Historical philology is the discovery of Bentley—the heritage and glory of German learning." For if it is to Germany that we in these later generations have been indebted for almost all the real progress that has been made in our knowledge of classical antiquity, it must not be forgotten that by the great German scholars themselves no name is held in higher honour than that of Bentley.

The personal history of the illustrious scholar has been narrated by Prof. Jebb with a care which has enabled him to add something to the admirable biography by Bishop Monk, from which, of course, his materials are mainly drawn; and his character is depicted with a real sympathy, which never passes into indiscriminate eulogy. The description of the portrait in the Lodge of Trinity College gives the impression left by the Life at least as faithfully as that given by the picture.

"The pose of the head is haughty, almost defiant; the eyes, which are large, prominent, and full of bold vivacity, have a light in them as if Bentley were looking straight at an impostor whom he had detected, but who still amused him; the nose, strong and slightly tip-tilted, is moulded as if Nature had wished to show what a nose can do for the combined expression of scorn and sagacity; and the general effect of the countenance, at a first glance, is one which suggests power—frank, self-assured, sarcastic, and, I fear we must add, insolent; yet, standing a little longer before the picture, we become aware of an essential kindness in those eyes of which the gaze is so direct and intrepid; we read in the whole face a certain keen veracity; and the sense grows—this was a man who could hit hard, but who would not strike a foul blow, and whose ruling instinct, whether always a sure guide or not, was to pierce through falsities to truth."

In recounting the long and painful history of the struggle between Bentley and the majority of the Trinity Fellows, Mr. Jebb holds the balance with an impartial hand; but he acknowledges that the scales turn decidedly against the Master. As against De Quincey's hasty statement that the college was wrong and Bentley right, he contends that both legally and morally Bentley was in the wrong throughout. The legal question he regards as settled by the decision on two distinct occasions, given after an enquiry by experienced lawyers; the moral, by the fact that Bentley was the aggressor, and that it

was only after long forbearance that the Fellows were forced to take active measures in self-defence. Sometimes the necessary compression of the narrative does some injustice to the conduct of the Master. "In one instance he expelled two Fellows of the college by his sole fiat." But it might have been added that one of these, Wyvill, had been guilty of cutting up college plate with a view to melting and selling it, that he confessed the justice with which he had been treated, and that he refused afterwards to give evidence against Bentley, declaring that he had nothing to complain of; and that the other had been outlawed for an assault committed under scandalous circumstances. Besides, the entry in the conclusion-book that the fellowships had been declared void "by order of the Master and seniors," though somewhat suspicious, cannot be said to have been proved incorrect. This is a slight, though significant, indication that Prof. Jebb's account will not be found unduly biassed out of favour to the scholar whose services he honours so highly.

The far more important history of Bentley's literary activity is given with great clearness. One point in regard to the Dissertation upon Phalaris is put by Prof. Jebb in a somewhat new light. Macaulay expressed the common judgment of all competent critics when he wrote of the "utter and irreparable defeat" of Temple's champions. But Prof. Jebb has shown that this represents the opinion of posterity as to what ought to have been the case rather than the general opinion of contemporaries. "The tamer account of the matter, besides being the truer, is also far more really interesting. It shows how long the clearest truth may have to wait."

Especially worthy of notice, too, is the excellent final chapter, on the place of Bentley in the history of scholarship. It is, perhaps, an inseparable condition of the attempt to sketch within a brief compass the life and work of a man of such restless and varied activity that there should be a certain rapid hurrying from point to point. This is sometimes to be felt in Prof. Jebb's volume; and there are few topics on which he touches where the reader would not be glad if the author's limits had allowed him a somewhat fuller treatment. But it may be supposed to be a main aim with the series to which this book belongs to stimulate rather than to satisfy the interest of the reader. Certainly no student of literature will read Prof. Jebb's pages without the desire to learn for himself more of Bentley's work; nor will he attempt to do so without the feeling that he has received many most welcome hints for his guidance.

A. S. WILKINS.

*Episodes in the Lives of Men, Women, and Lovers.* By Edith Simcox. (Trübner.)

THIS is the first time that we have had the pleasure of meeting Miss Simcox in what are called "the realms of imagination." The motive springs of action, the influence of circumstance, the development of character, have hitherto been treated by her (so far as we know) rather in the abstract than in the concrete; and it is with most persons a hazardous enterprise to pass directly from

the sphere of analysis into that of synthesis. Miss Simcox has therefore acted prudently in making the transition by a gradual process; for a three-volume novel from the pen of a philosophical writer would in all probability be a complete failure. Novel-making, as now practised most successfully, is a fine art, to which an apprenticeship is needed; and there are few writers who can afford to neglect the preliminary training which enables them to employ their powers to the best advantage. In these brief and unconnected "Episodes," then, Miss Simcox has probably been pluming herself for longer flights; and we should not be surprised if she were, in due time, to vindicate for herself a high place in what we may term the scientific branch of the great army of novelists.

We must, however, venture to remark, *in limine*, that the introductory essay, entitled "In Memoriam," seems to us to be an unnecessary repetition of a somewhat hackneyed fiction. The begetting of the Episodes is a matter into which the reader will not care to pry; nor will the knowledge of the secret of their composition be of any special value to him. There is less reality about the individual story-tellers who wrote down their confessions in the big blank book of the lord of the isle than there is in the stories themselves; and we fail to see why Miss Simcox should endeavour in any degree to repudiate her share in the parentage of the latter. The peculiar modesty which leads an author into rather weak inventions whereby to escape the responsibilities of authorship is worthy of Miss Simcox's study. Scott had it (and the present generation has voted his introductions tiresome); but it showed itself long before Scott in the reputed origin of the *Arabian Nights' Entertainments*. Yet, if ever there were stories with vitality enough to take care of themselves, they are surely those which bear the names of the *Thousand and One Nights* and the *Tales of my Landlord*.

Miss Simcox, as most of our readers know, is a thoughtful and able writer upon the ethical problems which most concern the present generation. She is not a mere book-philosopher, but a student of human nature in full sympathy with her subject. She writes in pure, nervous English, and, as this little volume proves, possesses a strong imaginative faculty. If the Episodes are in some senses stories with a purpose, the purpose is a high one and the stories are well told. A few extracts will suffice to show their character and, in some measure, their variety also.

The second Episode, entitled "A Diptych," is, in fact, a dissertation upon love. The picture is cleverly painted in two panels, and the female figure which occupies each of them is a study from life. The artist is the writer's wife, who, with rare generosity, has used all her skill in depicting the successive objects of her husband's love. How the first was lost is told by him at length. The pang of parting was on his side.

"She had no thought or struggle. If I did not or could not see the truth as she did, it did not seem so much to her that we must part as rather that we had never met. The keenest part of the blow to me was knowing that she had never for a moment thought of loving me too much to care whether I was to go to hell or

heaven. But at the moment when I resented this most strongly—what right had she to accept my love if hers was so slight a thing?—the first after-thought obtruded itself too: Had I felt any temptation to change myself, my life, my creed, for her love's sole sake?"

He gets from the lips of Edith's successor, a golden-haired Italian who discourses on love with all the philosophy of an Aspasia, the solution of the difficulty. "If you ask me as an oracle," says Eleonora, "I will answer. Half of Edith's nature loved half of yours, and she and you did not know there was any more of either." And in this is to be found not only the explanation of the fact that perfect sympathy between man and wife, and, therefore, perfect happiness, are rarely seen, but also an excuse for men's inconstancy.

"It is often only a sign of the unchangeableness of their ideal—they find too late that the vision is not realised where they thought, and they go to seek elsewhere. You ask if they are wrong? Perhaps they are not right; but is it then more right never to risk a generous trust that may justify itself in time? If it were forbidden to love in faith, can you promise that all should have sight enough of good to love by? No; love must dare—dare to hope and dare to suffer."

The analytical tendency of the writer's mind shows itself in this passage; but in the following extract from an old soldier's narrative how "Some One had Blundered" Miss Simcox displays, in addition and in combination, powers of quite another kind:—

"It [the martial passion] did not last long—what keen pleasure ever does?—but while it lasted I was glad; the pride of life was in my veins. I am inclined to question whether those who have never led a forlorn hope know what glorious gladness is; one has left life behind; all life's triumphs are summed up in the feeling that one rushes gladly to encounter death; all the fierce selfishness of animal passion, which we quell as may be in the days of peace, finds its outlet here and feeds our delight in the tumult and savageness of war; and yet we do well to rejoice in our rage, for we charge at the call of duty, and pay with our life-blood for the moment's glory. We had to charge first over broken ground and then in a slant up-hill; the danger from the flank fire came in the last part of the advance. I gave the word for a rapid double, and, as the pace was uniform up-hill, the square, formed by our double line, grew into a blunt diamond: I led the way at the foremost corner, keeping my eye upon the nearing battery. I had nothing to do with the green-coated mass upon the left; it was nothing to me whether they knew their business or no; my business was to reach the guns alive, if they and destiny would let me. I looked back and was pleased; notwithstanding the pace, our lines were almost even. There was a white fan-shaped patch of cirrus vapour on the clear blue sky that met my eye in front; perhaps I should not have known that I saw it but for what happened next. A sound like a thunderclap struck me in the face. I felt blind and shaken; I remember no other feeling."

Of course, exception may be taken to some of the above phraseology, as well as to the spelling of cirrus, but the motion that pervades the descriptive part of the passage is unmistakable, and contrasts well with Miss Simcox's usual style.

It is scarcely necessary to add that the Episodes are not mere tales to amuse a trifling or refresh a weary mind. They are thought-

ful, suggestive essays, into which living creatures have been introduced to show the relation of the problems discussed to the actual lives of men and women. As such, they will be read and appreciated by many who might have stumbled at a more abstract treatment of the very same subjects.

CHARLES J. ROBINSON.

*Wanderings, South and East.* By Walter Coote. With Maps and Engravings. (Sampson Low.)

It is generally with some feeling of dread that one opens a book of travels in another continent, or of a tour round the world. We know too well the usual commonplaces that are almost certain to be repeated, the wonder at all that is large or new, the admiration excited by the long, straight streets and dusty squares of towns which have sprung from nothing to gigantic ugliness so rapidly that they must necessarily be devoid of all that is picturesque, poetical, or historical. The reader need fear nothing of this kind in the present work. The author sees and thinks for himself; with a few lively touches he brings scenes and places vividly before us, and we can heartily recommend his fresh and pleasant book. Mr. Coote divides his *Wanderings* into four parts, the first consisting of Australia, New Zealand, and Fiji, at which last place he had the advantage of being the guest of the governor, Sir Arthur Gordon. Fiji enjoys an immunity from fever and ague which has as yet been unaccounted for, and which must prove one of its chief recommendations to English settlers. Our author remarks:—

"I have seen Englishmen living in Fiji on the borders of almost stagnant estuaries, with the densest and most rank vegetation around them on all sides, with mosquitoes and a hundred such insects infesting the district like a plague; in dry seasons their houses will stand in the very centre of great plains of reeking ooze; in times of flood the muddy river will rise to their very verandahs, and yet these people are robust and healthy. I have gone from there and a few weeks later visited islands in the Solomon group or New Hebrides, where I have found a dry coral soil and high land upon which the pure trade-wind blows freshly month after month; steep land too from which the rain-water is quickly borne downwards to the sea, and all this but a few hundred miles from the Fiji group, and in the same latitude and blown upon by the same trade-wind; and yet in these places it is almost death for a white man to spend more than a few months in the year on shore, and practically no one who lives ashore at all can hope to escape frequent and severe attacks of fever."

The Sandwich Islands, with the volcano of Mauna Ioa, and with their rapidly diminishing population—in Kealakeakua Bay, where, in Capt. Cook's time, 15,000 natives and 3,000 canoes are spoken of as assembled, there are now 100 inhabitants with six canoes—and a tour in the mission-bark *Southern Cross* in Western Polynesia, occupy the second part, and Mr. Coote ends this portion of his work with an interesting chapter on the labour traffic in the South Pacific. The whole system he believes to be distinctly wrong as at present carried out,

and very probably would be so however regulated,

"for we take the strongest men away from their homes at the best period of their lives, and, as a rule, we return them again demoralised and diseased, so that the whole social organisation of the native tribes is corrupted, and their numerical strength most alarmingly diminished." He adds,

"For my own part, I believe that we, as a civilised nation, have no right to hire native men until we have first made them clearly understand what our terms of engagement are. At present the labour trade is merely a disguised slave trade."

The abuses are greatest in New Caledonia, for the reason that the French Government has not taken even the insignificant interest in the subject that England has.

The third part of the book contains Mr. Coote's travels in China and Japan; with all that was old and truly native in Japan he was delighted, and equally disgusted with what was European. Europeanised Japan is squalid and dirty; art has vanished, the poetry of Japanese life, all that is characteristic and beautiful in it, is disappearing. He makes some interesting observations on the new régime. The Japanese Government has plunged headlong into every kind of extravagance, under the mistaken notion that change and expenditure are necessarily progress.

"Great piles of brick and stucco, of all and no architectural styles, are being run up in the capital towns to serve as mints or palaces or barracks; the national costume is being abandoned for European slops; foreign food, unsuitable as well for climate as for race, is being introduced, and artificial conditions of every sort and kind have become the rage in New Japan."

And yet roads, one of the great tests of true civilisation, are neglected. The author found the once magnificent one, ninety miles in length, which leads from Nikko to Tokio so utterly uncared for that for many miles it was easier to travel across the fields than by the road. This grand approach to the capital was formerly shaded by an avenue of cryptomerias, from 150 to 200 feet in height. Nearly half of these have been cut down to supply the necessities of a wasteful Government.

The last portion of Mr. Coote's travels—"Spanish America"—will not be found the least interesting. He gives brief, but very graphic, sketches of the many different States into which Central and South America are divided—all in many respects different, but, with the exception of Chili and Brazil, alike in universal misgovernment and corruption. It is a problem why, of all the Spanish-American States, Chili alone should be prosperous. Can this be owing to the fact that it is the only one situated outside the tropics? But, if this be the reason, how are we to account for the condition of the States of Portuguese origin on the other side of South America?

WILLIAM WICKHAM.

*Thomas à Kempis and the Brothers of the Common Life.* By the Rev. S. Kettlewell. (Kegan Paul, Trench & Co.)

DE QUINCEY, who was always ingenious and occasionally stupid, once "attempted to show that the enormous and seemingly incredible

popularity of the *De Imitatione Christi* is virtually to be interpreted as a vicarious popularity of the Bible." He might just as well have explained the popularity of curaçoa as a vicarious popularity of wine. However, Mr. Kettlewell gravely quotes De Quincey's *bévue*, partly in confirmation of his own observation that à Kempis is a profoundly Biblical writer, and partly as a proof of his general eminence, which might surely have been spared, as well as the familiar passages from *The Mill on the Floss* which figure in an appendix to the first chapter. Nor is Mr. Kettlewell's historical sense much surer than his aesthetical sense. He thinks that the Reformation was the euthanasia of the movement of which à Kempis was the flower, and he greatly over-estimates the importance of the movement apart from à Kempis. The Low German revival which began with Geert Groot was the latest and the smallest in extent and the feeblest in intensity of all the revivals of piety within the pale of Catholicism. It was not even original. The Cistercians had given scandal in their day by the coolness of their devotion to the saints and their protest against splendour in the externals of worship. And the Cistercians did decidedly more for Europe than the Brothers of the Common Life for Lower Germany; while the Mendicant Friars preserved the allegiance of the universities for two centuries and of the proletariat for five. Still, although Mr. Kettlewell overrates them, the Brothers of the Common Life were a very interesting community, and tried an interesting experiment whose nature Mr. Kettlewell has done much to help us to understand.

They made it their business to reverse the experiment which the Mendicants had tried, as the Mendicants made it their business to reverse the experiment the Monks had tried. The Mendicants saw the inconveniences and scandals which followed when the Monks lived upon lands and rents; they resolved to live upon alms. The Monks had only gathered a few lay brethren or sisters out of the world; the Mendicants attracted crowds of Tertiaries of all stations. Geert Groot, who was much more censorious than St. Francis or St. Dominic, sympathised with his neighbours, who had already arrived at the conclusion that the Mendicants of their day were sturdy beggars, and resolved that his disciples should be self-supporting. He was hardly persuaded to allow them to form communities at all, for we find with surprise that he feared the jealousy of the Mendicants; and, when he did found a community, he reversed the order of the Mendicants. He brought the more fervent of his converts to live together without vows; and it was quite an after-thought (though, as Mr. Kettlewell proves, an after-thought of his own) to establish houses of regular canons to which the houses of brothers and sisters could turn for protection and for guidance. Probably his choice of an order was influenced by the number of chapters or collegiate churches in the Netherlands (Florentius, his favourite disciple and the master of à Kempis, was a vicar in the great church at Deventer); but our authorities tell us more of his reasons for declining to affiliate himself to the Carthusians or Cistercians, the two uncorrupted orders of his day.

Both, unfortunately, were too strictly enclosed to be of much use to brethren or sisters beyond their walls.

After all, it seems as if the original institute was the more fervent of the two, at least if we may judge by the difference between the tone of a Kempis' *Lives of the Brothers of the Common Life* and the tone of his obituary notices of the canons and lay brethren and associates of St. Agnes. The foundation of a monastery was a laborious business, and most of the monks who carried it through are praised for their practical, rather than for their spiritual, qualities. They seem to be precursors of the Rochdale Pioneers. Perhaps this may explain a curious point which meets us often in the *Imitation*. The writer's great outward trial seems to have been that other people's opinion counted for more than his own—that he was always being overruled. It is true that a Kempis was twice sub-prior and master of the novices; but the novices were not many, and, apart from his duties to them, the sub-prior may very well have had something like a sinecure. No one ever thought of making him prior, which is surprising, since his mediocre brother, who was not so much older, was prior when he himself entered the monastery, though, to be sure, he was tried as steward and proved a failure. "He was 'interior' and devout," we learn from the continuator of his chronicle, and, consequently, he was imposed upon, which was not surprising, because the brethren appointed him in the expectation that such a kind-hearted man would be a good almoner. The only fruit of the appointment was a little treatise on "The Faithful Steward," who is exhorted to be methodical and always reserve time for his own private devotions.

It is possible that Thomas' ideal of the office in which he failed may owe something to reminiscences of Ketel, the cook of the Brother House of Deventer, who, perhaps, is the most picturesque of all the figures who illustrate the early days of what was called "the New Devotion." He had been a rich merchant, and had thought to better himself by entering the clergy, and actually ordered some very rich vestments to wear when he was ordained. Upon his conversion he sold them and gave the price to the poor, and settled down as cook, refusing all offers of promotion. "When he had his white dress on for cooking, 'Am I not now made a great priest and prelate, since I can administer the Communion twice every day to the brethren?'" It is not surprising that when John Lubhardt was dying he was tormented by the apparition of "an evil-disposed spirit" in the guise of the free-spoken cook, who rebuked him for trusting in the intercessions of the saints and of the brethren instead of relying upon God alone, who had taken him, John Ketel, straight to glory. The alarm with which Amilius, who nursed Lubhardt, tells the story shows how little tendency to revolt there was among the Brothers of the Common Life. The boldest, John of Zutphen, who actually insisted that the laity ought to read the Bible in their mother-tongue, still persuaded himself that they would keep to the plain hortatory parts and draw no doctrinal inferences. Florentius himself, who was decidedly the most considerable figure of the whole group,

was, after all, not very extraordinary—he was simply the earliest specimen of a type which became common in the seventeenth century in France and elsewhere. He was full of tact and discretion and of private fervour, and, without protesting against the rulers of the Church, he had no sympathy whatever with its triumphs as an institution. He was benevolent and helpful to all who sought his aid, spiritual or temporal. But it cannot be said that "zeal for souls"—the zeal of a Loyola, or a Xavier, or a Whitefield—was characteristic of him or of his brethren. It was obviously one of Mr. Kettlewell's objects in his laborious work to refute the common imputation on a Kempis' great work that its doctrine, after all, is selfish, or at least that it amounts to "égoïsme à deux." Upon the whole, he has failed. A Kempis himself is just about as benevolent as a Buddhist who "wanders alone like a rhinoceros," and knows perfectly well that an abstract good-will to the world he avoids is one of the conditions of his inward peace. The famous saying that peace was only to be found "in nooklets with booklets" implies that a Kempis outlived his love of spiritual conversations.

Mr. Kettlewell succeeds better in showing that the author of the *Imitation* was certainly a true foster-child of the Brothers of the Common Life, and owed much to them; but he has not settled the question which M. Renan raised—how much he owed, directly or indirectly, to the brighter and more rapturous Catholicism of the thirteenth century. He has also done a good deal to illustrate the doctrine of the *Imitation* on the fluctuations of the spiritual life by drawing out the autobiographical element of the "Soliloquy of the Soul." But, after all, it is almost labour in vain. We know everything about the author of the *Christian Year* that we wish to know about the author of the *Imitation*; and, after all, the *Christian Year* is all that is worth knowing. We are no nearer the secret how a man, who, to be sure, was exquisite in his way, came to write one book that perhaps may prove immortal. One can hardly regret that, in spite of the diligence of biographers, a Kempis has so nearly had his wish "to be unknown and counted for nothing." He would have protested if he could against the modest centenary commemoration of his memory in 1880, and still more against the proposal that his native town should grant £15 or £20 to "enable a thoroughly learned work" on the authorship of the *Imitation* "to be taken in hand." Anything in the shape of a shrine or a statue was felt to be quite out of the question; and his jawbone, with three teeth in it, has brought no luck to the abbey of Solesmes, whither Dom Pitra translated them, September 18, 1841.

G. A. SIMCOX.

#### SATHAS' GREEK RECORDS OF THE MIDDLE AGES.

*Documents inédits relatifs à l'Histoire de la Grèce au moyen-âge.* Par C. N. Sathas. Première série: Documents tirés des Archives de Venise (1400–1500). Vols. I. and II. (Paris: Maisonneuve; London: Bernard Quaritch.)

THERE are such gaps in the history of Greece

during the Middle Ages that, while we know it only imperfectly from the time of the Crusades, the previous history is hardly known at all. The Emperors at Constantinople, though the Empire (nominally Roman) was really Greek, managed Greece itself in the harshest manner. Justinian's closing the schools at Athens was merely a conspicuous instance of the way in which the country was treated, and which made the Greeks prefer the rule of barbarian chiefs to that of the Emperors. The Byzantine clergy used the name Hellene to denote a pagan, and there are traces of the continuance of paganism long after Justinian's time. Some of the Greeks were still faithful to Zeus and Athene, just as Roman senators were to Jupiter Capitolinus. The Mainotes who claimed to represent Sparta only embraced Christianity under Basil the Macedonian, and the statue of Diana at Patmos was not overthrown till the time of Alexius Comnenus. The country, too, was overrun by invaders. Constantine Porphyrogenetus says that all Peloponnese was "Slavonised," ἐσθλαβώθη. Sathas, however, will not allow this word to be construed "Slavonised." The modern Greeks will hear nothing of the Slavs; and the name of Fallmerayer, who laid so much stress on the Slavonic theory, is odious to them. The word for Slavs is σκλάβοι, not σθλάβοι, says our author, as the letter *th* does not occur in Slavonic; and when Slavs are mentioned in Peloponnese it is by mistake. "Sthlabi" means barbarians clad in skins; and the people known by this name were subjects of the Avar conquerors, and probably Albanians, who settled in Elis and Laconia. Many villages in Elis still have Albanian names. Similarly the Venetian despatches give the names of many Albanian families in Laconia, while the Government lays down a general rule against enlisting Greeks and Albanians for the garrisons of the fortresses (i. 253); and it is said (i. 112) that the Greek Despots could not control their Albanian subjects, but the Venetians allowed them to settle with their horses and cattle in the plain country. In fact, to this day the country people in Attica and Boeotia are mostly Albanians, and there seems no reason why Greeks and Albanians should not now get on well together. The Slavonic party used to claim the very name Morea, as meaning in Slavonic the country on the sea. But the derivation of this name is very doubtful. Sathas thinks it possible that Morea (or Amorea, as the Venetians spell it), which, in the times of the Frank rule, meant not the whole of Peloponnese, but only Elis and Achaia, and sometimes Elis alone, may come from Μοργά, a fortress in Elis, since it was, and is, the custom to name Greek provinces from their chief places; and this, again, may come from the ancient name, Μαρπυλία.

The despatches given in these volumes supply us with a picture of Venetian rule in Greece for a century, and of the relations of the Republic to the Turks, the Greek Despots of the Peloponnese, the various Frankish and Italian families still ruling in parts of the country, the Archbishop of Patras, who held that city under the Pope, and the remains of the Catalan conquerors, sometimes called Navarrese, whose name survives in Navarino.

Among all these rulers the Greek Despots of the family of Paleologus became the most powerful, and their miserable feuds helped largely to ruin the country. The heroic death of Constantine Paleologus on the walls of Constantinople has availed to drown the memory of the trouble which his restless rule as Despot inflicted on the Peloponnese during his incessant quarrels with his two brothers, while his imprudence brought Amurath II. into the country. The Despot Thomas wasted all the country about Modon (i. 212). The policy of the Venetians all through is characteristic. They were not strong enough to venture far inland, but they occupied (like the Phœnicians of old) strong places on the coast, such as Modon and Coron, at the south-west angle of the Morea, and made them Italian colonies, just as we made Calais an English colony; and they endeavoured to get hold of the places between these towns. So, again, they held Lepanto, at the entrance of the Gulf of Corinth, and were constantly negotiating with the Latin Archbishop of Patras, on the opposite side, to secure that place, which would give them complete command of the entrance to the gulf. Their own population was so small that they had to depend largely on mercenaries, and their commanders were sometimes apt to act without orders. Besides this, Venetian nobles were allowed to occupy places for themselves as family property, but under the suzerainty of the Republic; and this prevailed largely in the Archipelago. Thus the family of the great Doge Antonio Veniero intermarried with the family of Crispo Duke of Naxos, and Venice interfered on behalf of Petronilla, the wife of Nicolo Veniero. The Government spared no efforts to maintain a commercial monopoly on the same principles as those which dictated the English navigation laws, and their jealousy of their rival, Genoa, is everywhere apparent. The Greeks could only sell their produce through Venetian hands; their own shipping perished, industry declined, and population diminished. Venetian galleys were stationed at the most important points as far as Crete, and there is also some mention of Cyprus. Othello might have been ruling there at this time. Their naval basis of operations enabled the Venetians to help each place as it was threatened. They had heavy cannon, though the shot used were still of stone; but at last the superiority in artillery passed to the side of the Turks. It was the use of heavy artillery and iron cannon balls which similarly enabled the French to drive out the English in Henry VI.'s reign; the walls of the old feudal castles could not stand against the new means of attack.

A main interest of these despatches lies in the picture they enable us to form of the Venetian rule and system. It is disappointing that they contain so little that refers to the state of the Greek population. The town of Tenedos had been destroyed, owing to a treaty with Genoa; Tenos and Myconos "have gone from bad to worse since they came into our hands;" and it would be better to lease them out to private citizens. Orders are given to respect the local customs of Patras; and the rights of the Greek clergy of Corfu are to be maintained according to the charters of

Queen Joan of Naples, the Despot Philip, the Emperor Robert, and previous rulers which are quoted; but the number of priests and caloyers is limited (ii. 192). On the other hand, the Latin clergy were often non-resident; even the archbishops of Crete and Corfu would not reside (ii. 236). The latter pleads that he is studying at Padua; and similar pleas occur in English episcopal registers, for livings were given to boys who were maintained out of the proceeds at a university. The Greek serfs were not allowed to take orders, perhaps under the early church law of Leo the Great, repeated in our Constitutions of Clarendon. The Despot of Salonichi says that he offers the place to the Venetians "de bona voluntate omnium civium." Unfortunately, the letters from the commanders in the Levant have almost entirely perished, though they are sometimes referred to in the answers of the Government. The editor gives a full account of the documents in the second volume. The fullest notices of the treatment of the people may be drawn from the long commission granted to the Castellan of Modon in 1485 (i. 283-306); the serfs were allowed to appeal against oppressive dues (ii. 169-90). The Jews, however, were treated very harshly (ii. 83, 150). The regulations about the peasants and serfs show the state of things. Some of them seem to be copied from the rules laid down for Roman governors when going into a province; some from feudal customs. The officials are not to take the fowls and eggs which the peasants are bound to pay as rent, but are to buy for themselves like other people, and not exercise any claim of pre-emption. Nor may the Castellan put into his cellars (*incanipare*) more than 600 measures of wine a-year, and he must pay the proper price. The code of rules is arranged under heads; e.g., "Licetum est tibi recipere a villanis deinde illos presentes quos dare consueverunt castellanis quando conducunt uxores." We may notice here that, while there is an Index of proper names, there is no glossary, and there are many words not to be found in Ducange. A few short notes like those in the *Monumenta Germaniae* would have been very acceptable. But perhaps the glossary is reserved till the series is complete. Most of the documents are in Latin; but Italian becomes more frequent towards the end of the period. To prevent the peasants being oppressed, the Castellan must get his wood from Venice to the amount of a hundred loads. On the whole, the abuses of purveyance are closely checked. Mention is made (i. 293) of the valania (*βαλανός*), or acorn-cups used for tanning, and (p. 292) of the grapes of Copiata and Coron. The editor remarks (i., p. xxviii.) that the mention of currants in the fourteenth and fifteenth centuries shows Beaujour's story, that the currant was only brought from Naxos to the Peloponnese in 1580, to be incorrect. The name currant implies that it came from Corinth, and "raysyns de Corouns" are mentioned much earlier in English accounts and cookery books. There are some notices of the cities of Old Greece. Thebes was ruled by Antonio Acciaiuoli (descended from the famous banker of Florence); and when he took Athens from the Venetians, the governor of Negropont

attacked Thebes, but was beaten and captured. His instructions were that, if Thebes was taken, "debeat facere ruinari et destrui totam terram" (ii. 92). Many despatches relate to Corfu, which, as the most valuable station on the way to Italy and Sicily, has been, more often than not, disconnected from the history of Greece, and it did not fall under the Ottoman rule. Venice allowed part of the population of Corfu to bear arms, and in 1400 relieved the serfs of Negropont from the hearth tax on condition of their each keeping a bow and forty arrows.

Venice inherited much from the Greek bureaucracy. Sathas points out that many official titles are mere translations from the Greek, and even the famous gondola is only *konvelás*. But, as to some of the borrowed words, he perhaps goes too far. Why should *lembo* be derived from *λέμβος*, when *lembus* is true classical Latin? It is strange that so few Greek words occur in these documents; but *anagraphi* is found ii. 222, *parastasi* 275. A daughter of Constantine Ducas married the Doge in 1049, and introduced the use of forks instead of fingers in eating. The Venetian dialect still keeps the Greek word *piron* (*πηροῦνι*), where other Italians say *forchetta*. There are a few misreadings in the Latin text, such as (ii. 3) *suis capitibus* for *sive*, (7) *arenata* for *armata*, (57) *non mille* for *nonnulli*, (68) *debeat* for *debitis*, (158) *domino consiliarii* for *duo*, (209) *identitati* for *indemnitati*, (214) *possint* for *posuit*, (254) *alia persona* for *pecunia*; but the text in general reads fluently.

The *Monumenta Historiae Hellenicae*, which Sathas is editing under the auspices of the Greek Chamber of Deputies, will consist of ten volumes divided into two series. The first will contain the Venetian despatches, accompanied by copies of the old coloured maps (three of which are given). The second will be devoted to documents in the Greek language, ranging from the introduction of Christianity to the Fourth Crusade. The price of each volume is twenty francs. It is a series to which public libraries should, if possible, subscribe. The name of the editor is sufficient guarantee for the manner in which the work is done. C. W. BOASE.

#### BOOKS OF GEOGRAPHY AND TRAVEL.

*Ordnance Gazetteer of Scotland*. Edited by Francis H. Groome. Vol. I. (Edinburgh: Thomas C. Jack.) The Scotch have an insatiable appetite for statistical information, especially about their own country. Nearly a century ago the first Sir John Sinclair compiled his celebrated *Statistical Account of Scotland* in twenty volumes, chiefly from materials supplied by parish ministers. We are not aware that his example has ever been followed in the part of the island that lies south of the Tweed, which has not got beyond county histories, local guide-books, and Post Office Directories. But here we have before us the first volume of a Scotch gazetteer that is intended to occupy the same position towards Sinclair's that the Ordnance maps based upon the trigonometrical survey may be supposed to occupy towards the maps of Sinclair's time. The conception does great credit to the editor, and still more to the publisher. The task they have combined to undertake is not only very heavy in its dimensions, but also very wide in its character. There are to be six volumes in all, each of about

three hundred quarto pages of double column. The number of places recorded is simply enormous, including hamlets, mansion houses, and burns. Under B alone there are said to be 1,514 entries. The information given is both most minute and most varied, figures being mingled with Gaelic or Border legend, with antiquarian or historical fact, and the whole being administered in that peculiarly condensed form which Scotsmen love. Scotticisms abound, of which we would be the last to complain; but, by a curious lapse, the stipend of the parish minister is usually spoken of as his "living." The article on Aberdeen town is a model of fullness, but we are not equally satisfied with that on Aberdeen county. In the maps there is a similar inequality. The two which bear the name of Mr. Bartholomew are excellent; but those of the counties are very old fashioned. The landscape engravings and the wood-cuts of burgh seals in the text are a valuable feature. We shall look forward with interest to the articles on Scotch history, literature, language, &c., which are to be contributed specially by recognised authorities on the several subjects.

*Griffin Ahoy!* A Yacht Cruise to the Levant and Wanderings in Egypt, Syria, the Holy Land, Greece, and Italy in 1881. By Gen. E. H. Maxwell. (Hurst and Blackett.) When people are associated together for a time, words and sentences often acquire a meaning and an importance which do not of right belong to them; and this, it may be guessed, would suggest the answer if the author were to be asked what caused him to adopt the peculiar title of this book. *Griffin Ahoy!* suggests no connexion with the places described in the work. On the contrary, it brings the mind back to the west end of Fleet Street. In this case the *Griffin* was a barque-rigged yacht of 350 tons, with auxiliary screw. Such is the kind of craft in which a wealthy man nowadays visits the East. In the time of Queen Elizabeth "Will Adams," a Thames pilot, reached Japan in a Dutch vessel, the *Charity*, of only 160 tons, and the crew nearly all died on the voyage. The pilgrims to the Holy Land in the olden time had to walk, or ride if their means permitted. Now the journey is done in a floating palace, with friends to make the time pass sociably, with a complete staff of servants, including ladies' maids and (in the present case) a "gamekeeper." In the old days the mode of travelling led to adventure, and all was new to the wanderer; the modern style of luxurious travelling precludes all this. Risks and dangers are carefully avoided, well-beaten ground only is gone over, and the man who tries to make a book out of the experiences of such a journey finds he has a hard task before him. In *Griffin Ahoy!* this is palpably evident. All the places mentioned in this yacht cruise are now regularly visited by Mediterranean tourists, and have been so often described that there is nothing new to tell about them. Under such circumstances it would be unfair to judge the gallant author, for he shows some ability and appreciation of character, which comes to the surface at times; and the "Story of a Letter" is the freshest bit in the book. It would make a good plot for a novel, and in these days of "cabbage planting" Gen. Maxwell need not be surprised if he find it soon, under a new name, as a favourite piece in one of the London theatres. When the author talks of "eating the air" we have strong evidence that he has had some experience in India, and has been familiar with the custom of taking a *hawa khana*; but his book shows that he has not followed up many of the archaeological questions connected with the localities visited during the cruise. Had he done so he would have hesitated before stating that the Kubbet es Sakrah at Jerusalem was built by the Khalif Omar. Another example may be given when he describes his visit to the

museum in Athens, containing the objects found by Dr. Schliemann at Mycenae. Those who are familiar with the details of this "find" will smile on reading that "the rich tombs of Mighty Agamemnon have been rifled to supply its contents," and that there is in the museum a model of the tomb, with the body of Agamemnon in it. If the General will enquire he will find that there is still among the most eminent archaeologists a considerable difference of opinion as to the date of the objects found at Mycenae, and that no one is entitled to say as yet whose tomb it was in which they were found.

*With the Boers in the Transvaal and Orange Free State in 1880-81.* By Charles L. Norris-Newman. (W. H. Allen.) Mr. Norris-Newman, who has already written on the Zulu war, now gives us, in a thick volume, a history of the Boers and a very full account of the late war. Without admitting that such a book was needed, it is only justice to Mr. Norris-Newman to say that he is very well qualified to write on the subject. He has resided for some time in South Africa. He acted as special correspondent to several local prints in both the Zulu and Boer wars; and he is evidently well acquainted with the state of parties, and the working of prejudices and self-interest in Natal and the Transvaal, without a knowledge of which it is impossible to form a correct judgment on the causes of the Boer war. Mr. Norris-Newman writes in a spirit of tolerance and moderation; his sympathies are with the Boers, but he seldom, if ever, blames individual actors on either side, and reserves his censure for governments and systems. It is impossible not to agree with his opinion that, though our difficulties with the Boers are in part due to their peculiarities and untractableness, yet they are principally to be attributed to the undoubted mismanagement and wilful blindness of the Imperial authorities, both at home and in South Africa. In another place he says:—

"I think it will be admitted by all, including the Boers themselves, that Sir Bartle Frere took a fair and liberal view of the question; and had his views, together with Sir T. Shepstone's promises, been carried out in a spirit of conciliation by a competent official, there can be little doubt that the Transvaal would still have remained a British colony, a valuable addition to the Empire, and a united and prosperous country, and that the recent disastrous war would never have occurred."

We doubt Mr. Norris-Newman finding many readers. His subject, from whichever side it be approached, is a painful and humiliating one, which most of us would willingly forget; still we would ask those who are of this mind to read the General Review contained in the author's last chapter, written in the same temperate tone as the rest of his book, and from which there is much to be learned.

*Pathways of Palestine*, by H. B. Tristram, First Series (Sampson Low), is a gossiping account of routes and sites in Palestine, illustrated with photographs. The photographs, twenty-three in number, are very good; and the narrative has a certain freshness of colour, as was to be expected from a writer who has wandered much in Palestine, and has the trained eye of a naturalist. Beyond this not much can be said in favour of the work. The archaeological and historical notices are a mere *réchauffé* from the commonest sources, put together with a total want of criticism, and even the printing of proper names is such that one is sometimes tempted to ask whether the author read his own proofs (Beth has Jekilah, "the place of stoning," p. 59). Identifications, old and new, are accepted with that careless eagerness to believe in the possibility of recognising all manner of Biblical sites which is the curse of English exploration in Palestine, and they are forced upon the reader

with an air of confidence which can only mislead the unwary and repel the cautious. In a word, Canon Tristram plays the dragoman, not the man of science. Of course, the oldest masonry on the temple platform is set down to the age of Solomon, and the absurd mistake in the *Recovery of Jerusalem*, which accepts the mason marks as Phœnician letters, is repeated. In reality these marks are more like the tribal marks of the Bedouins (*wasm*) than anything else; what is quite certain is that they are not Phœnician. *A propos* of the remark that Bir Ayûb is not mentioned by any Crusading writer before A.D. 1283, it may be worth while to call attention to the fact that the well is described under its present name by Moqaddasy in the tenth century. The Moslems then fancied that the waters of Zemzem visited it on the night of Arafat, which implies that the spot had a certain traditional sanctity.

*Philips' Popular Atlas of the World.* Constructed by John Bartholomew. (G. Philip and Son.) In three respects at least this new atlas is deserving of high praise. Special attention has been given to the modern demands which physical geography makes upon students, inset maps have been very skilfully used, and minor British possessions receive more adequate treatment than in any other map with which we are acquainted. In short, everything is given, and given well, that was consistent with the plan of the work. The only criticism that can fairly be made goes to the conception of this plan. From the strictly geographical point of view, sufficient importance has not been allowed to relative scale. Africa has but one map allotted to it; Australasia has five. Italy, Turkey in Europe, and Greece are all compressed into a single sheet; so is India, with the adjacent countries from Beluchistan to Siam. Such maps are almost useless. But, after all, a "popular atlas" (like other books) is to be valued for what it actually achieves, not for what it is compelled to leave undone. In some respects, as we have already said, no other gives so much of useful knowledge as this. That it is carried up to date, and that the engraving is of the first excellence, may be safely affirmed on the authority of Mr. Bartholomew's name.

*Stanford's London Atlas of Geography.* (Stanford.) This beautiful atlas is designed specially for general use, and we have never seen one which is more adapted for its purpose. It is of convenient size, not so large as to require you to stand to it, and not so small as to need references to two or three maps when following a campaign or planning a reasonable trip. It is, moreover, very clear, and the colouring is not only useful, but pretty. The results of the Russo-Turkish and Chili-Peruvian Wars, as well as the latest acquisitions of Russia in Asia, and the discoveries of travellers in Africa and elsewhere, are of course indicated as accurately as possible, together with the few small and widely divided acquisitions of England during the last few years. Our colonial possessions are well cared for. No less than three maps are given to Canada, one each to Ceylon, Australia, Tasmania, New Zealand, and the Fiji Islands. Nor is the present interest only of Englishmen consulted. By the aid of two large maps of East and West Turkestan, the future operations of the Russian armies can be marked with accuracy and the importance of future encroachments understood. And Egypt has a map all to itself. At home we have not only the usual maps of England, Scotland, and Ireland, showing the railways, high roads, &c., and giving the names of places very legibly, but two extra maps of the British Isles, one showing not only the different heights of land, but the depths of the surrounding seas, and the other showing the rainfall, the river basins, and

the tides. A fine map of Japan is also a very interesting feature of this carefully designed and beautifully executed atlas. The Preface apologises for the map of Palestine, which it has not been possible to base upon the recent surveys for the Palestine Exploration Fund. The want of correct surveys is also probably the reason for the absence of maps of Cyprus and Armenia; but, with these exceptions, the work seems to fulfil every present need of the British public which can be reached by an atlas of its dimensions.

ADOLF STIELER'S *Handatlas*. Ueber alle Theile der Erde. Lieferungen 23-29. (Gotha: Perthes.) This excellent atlas, which we have already noticed several times, continues to make good progress; and, while the new maps are most welcome, we cannot but admire the way in which new discoveries are worked in where the maps are taken from old plates revised. We would specially call attention to the maps connected with our Indian possessions and the countries to the west of India as far as Persia. The same may be said of the African maps, since new districts and streams are being heard of almost every week. So, again, the new map of South America, with its special maps of Brazil, &c., shows a great advance, and these regions possess an ever-increasing interest for Europe. Australia is not neglected, having two maps (74 and 75) assigned to it, with a special map of Tasmania; while No. 72 is devoted to the Cape and the neighbouring districts. The frontiers of Germany and France, and the Austro-Hungarian territories, are also given; and No. 36, the Balkan country (with special maps of Constantinople and the neighbourhood), shows us another contested frontier land. No. 10 illustrates the attempts at penetrating into the seas round the North Pole; and 4, "Gebiet der Sonne," and 6, "Uebersicht der Luft-Strömungen und Niederschläge," are so full of matter that an explanatory text would in some cases be desirable. The first contains a general view of the solar systems, with almost every detail, from eclipses to comets, and the paths of the meteorites. The other marks the tracks of the winds, especially in reference to the main ocean routes—e.g., between the Lizard and New York. The colours, too, designate the rainy or dry regions, and forest and steppe lands are equally well shown by lines and dots of a somewhat heraldic character. But we have said enough to show how interesting these maps are for English readers and students.

#### NOTES AND NEWS.

DR. SCHLIEHMANN'S most recent work in the Troad has been the excavation of the tumuli of Achilles and Patroclus. The excavations are still in progress, but as yet, it would appear, without results.

WE hear from India that the recently appointed Education Commission, of which Mr. W. W. Hunter is president, is well under weigh. Mr. Hunter has himself been staying on at Calcutta into April in order to wind up the first portion of the work. The total number of pupils in all the schools in India is now just two millions. In a few years this ought to rise to three millions; and it is not rash to hope that when the labours of the commission have borne fruit—say in ten years' time—the present number may be doubled.

THE widow of Canon Shirley has placed at the disposal of the Wyclif Society her late husband's copies from the MSS. of Wyclif's *Manual of Logic*, which he drew up for his pupils at Oxford, and of Wyclif's *Treatise on the Truth of Holy Scripture*, which contains much that is valuable for the Reformer's character and opinions.

WE learn that a new volume of the "Epochs of Modern History" series—*The French Revolution*, by Miss Bertha M. Cordery—has gone to press.

THE editor of the *Glasgow Herald*, Mr. Stoddart, has just acknowledged the authorship of *The Village Life*, a poem which was published anonymously some months ago.

THE author of *Obrig Grange* and *Hilda*: among the Broken Gods, is at present engaged upon another volume of poems. His last volume, *Raban*; or, *Life Splinters*, was published a couple of years ago.

THE new parts of the Palaeographical Society's publications, shortly to be issued, contain, for the General Series, facsimiles of a Latin-Greek-Phoenician inscription of B.C. 160-150; Greek MSS. of the eleventh, thirteenth, and fourteenth centuries; a leaf of the fragments of Virgil at St. Gall, of the fourth or fifth century; the Runic inscriptions on the Franks casket in the British Museum, of the eighth or ninth century; the "Book of Deer," the Gospels of Maebrihte, A.D. 1138; a series of Latin charters of the thirteenth century, including the Articles of Magna Charta; and some finely illuminated MSS. of the fourteenth and fifteenth centuries. The Oriental Series, of twelve plates, represents, among others, a Sanskrit MS. of 1198-99; the Gotha MS. of the *Mabesut*, written by a Turkish woman in the year 1109-10; *Kalilah wa-Dimnah*, of 1259; a series of Arabic coins, 1221-1819; the famous Siloam inscription, about B.C. 700; the Pentateuch in Hebrew, Arabic, and Samaritan, of 1227; the Siphra, of 1073; and a Coptic MS. of 979.

MR. ERNEST AYSOGHE FLOYER'S volume of travels, which is at length nearing completion, will be entitled *Unexplored Baluchistan*, and will contain an Introduction by Major-Gen. Sir Fr. J. Goldsmid. It will be published by Messrs. Griffith and Farran early in next month, when the author will probably visit London.

MESSRS. KEGAN PAUL, TRENCH AND Co. will publish immediately two books of recent travel. One, by Mr. J. J. Aubertin, the translator of "The Lusiads," will give an account of his last year's "Flight to Mexico;" and the other, by Mr. D. Pidgeon, will relate the episodes of a journey round the world during "An Engineer's Holiday."

MESSRS. TRÜBNER AND Co. have in the press a new work by Mr. Edward Jenkins, the author of *Gin's Baby*, entitled *A Paladin of Finance*; or, *Monsieur Cosmo: a Story of the Era*. The title sufficiently indicates the subject of the work.

MESSRS. GRIFFITH AND FARRAN will shortly publish a little book entitled *Whispers of Love and Wisdom*, which will have a Preface by Miss Charlotte M. Yonge.

A NEW work, entitled *The Hall Marking of Jewellery Practically Considered*, by Mr. George E. Gee, author of "The Goldsmith's Handbook," "The Silversmith's Handbook," &c., is announced for immediate publication by Messrs. Crosby Lockwood and Co. It will include an account of the assay towns of the United Kingdom, the stamps at present employed, and will deal fully with the laws relating to the standards and the marks at all the existing assay offices, &c., &c. The same publishers also have ready a new and enlarged edition of *The Manual of Colours and Dye Wares: their Properties, Applications, Valuation, Impurities, and Sophistications*, revised and enlarged by the author, Mr. J. W. Slater; and a handy little volume for mechanics, engineers, builders, &c., entitled *Tables, Memoranda, and Calculated Results*,

selected and arranged in a compact form by Mr. Francis Smith.

MESSRS. CROSBY LOCKWOOD AND Co. will also issue immediately the following technical works in their popular "Weale's Rudimentary Series":—*The Construction of Roofs of Wood and Iron*, deduced chiefly from the Works of Robison, Tredgold, and Humber, by Mr. E. Wyndham Tarn; *Elementary Decoration: a Guide to the Simpler Forms of Every-day Art as applied to the Interior and Exterior Decoration of Dwelling-houses*, by Mr. J. W. Facey, jun.; and *A Practical Treatise on Handrailing*, showing New and Simple Methods for finding the Pitch of the Plank, &c., by Mr. George Collings.

WE understand that Messrs. MacLehose and Sons, of Glasgow, will publish immediately *A Birth Song, and other Poems*, by Mr. William Freeland, the editor of the *Glasgow Evening Times*.

MR. HENRY TAYLOR, town clerk of Flint and deputy-constable of the castle, proposes to publish by subscription, *Historic (Historical?) Notices of Flint*. A good deal of original matter will be given from documents in the British Museum and Public Record Office, as well as from the borough and parish registers. The whole will be set forth in chronological order—from the Roman remains in the neighbourhood down to the present time. The work will be illustrated with facsimile wood-cuts, and also with original drawings by Miss Louise Rayner and Mr. Randolph Caldecott. We are glad to see that a full index is also promised.

MR. ARTHUR SIDGWICK'S paper on "Browning's Love-Poetry," which he read before the Oxford Browning Society last term, will be printed in the May number of the *Journal of Education*.

THE May and June numbers of Mr. Walford's new *Antiquarian Magazine* will contain, *inter alia*, some interesting papers by the Rev. F. K. Harford, minor canon of Westminster, on the true origin of our National Anthem, which he has traced back to its original source in a Latin anthem sung in the Chapel Royal of St. James in the time of the Stuarts.

THE *Leisure Hour* for May will print the autobiography (hitherto unpublished) of William Jackson, of Exeter, the well-known musician, the friend of Gainsborough, Goldsmith, and Sir Joshua Reynolds. Many letters of Gainsborough are in the narrative.

AT the recent matriculation examination of the Calcutta University eight women passed successfully, of whom six are natives of India; and at Bombay seven women were successful, including four from the city of Poonah. At the First Arts examination at Calcutta a female candidate obtained a scholarship of the first grade.

MR. BANCROFT'S *History of the Formation of the Constitution of the United States of America* will be published by Messrs. Appleton in May. It will be in two volumes, uniform with his *History of the United States*, of which the first volume appeared in 1834 and the tenth (bringing the narrative to the close of the Revolution) in 1873. "Although Mr. Bancroft is now eighty-two," says *Appleton's Literary Bulletin*, "he has no idea of laying down his pen, and confidently expects to bring his great work down to the close of the Mexican War."

*John Inglesant* is being issued by a New York publisher for twenty cents, or tenpence, while one dollar (4s.) is asked for Messrs. Macmillan's "cheap edition."

ANOTHER American publisher has brought out an edition of Mr. Buskin's *Modern Painters*, in five volumes, at one dollar a volume. We are told that they contain all the wood-cuts, but none of the plates, of the original edition.

ACCORDING to the *Dial*, a monthly literary Review published at Chicago, the King of Sweden has sent an autograph letter to Miss Marie A. Brown, of that city, authorising her to translate his works. This lady has already successfully rendered into English the works of several prominent Swedish authors.

THE Rev. Mr. Owen's *Evenings with the Skeptics*, which was favourably reviewed in the ACADEMY last year, appears to be attracting some attention on the other side of the Atlantic. Many of the leading American journals have bestowed flattering notices upon it, the *Boston Literary World* going so far as to say, "For breadth and depth of view, for freshness and strength of thought, for animation of style, and for the right kind of 'popularisation,' these volumes have no equals in the English language." Are the critics of the Old World harder to please, or the others too lavish of praise?

It is noteworthy that the American reader of to-day has a decided relish for modern French fiction. Hence translations of the more celebrated works of French novelists are published in rapid succession, and apparently find a ready sale. This is a somewhat remarkable phenomenon, as translation, which has not inaptly been termed "the wrong side of tapestry," is but ill-adapted for rendering the easy *persiflage* and double-meaning sentences of French authors into any language, still less into English, a speech that is nothing if not precise. But in America, English versions of French novels and tales still find favour with a large class of readers. We notice that B. Worthington, of New York, has just issued a translation of Théophile Gautier's *Une Nuit de Olépatre*.

THE May number of *Wide Awake*, an American magazine for children, will contain a poem in memory of Longfellow and his love for children, by Mr. Whittier.

THE New York *Publishers' Weekly* for April 8 contains the first instalment of a bibliography of copyright, which attempts to be exhaustive as regards both time and country. It goes so far as to include reprints of articles, and also critical notices of articles and books. The compiler is Mr. Thorwald Solberg, who will be glad of any corrections or additions to be sent to him.

THE University of Michigan is described by the *Nation* as now holding, in point of numbers, "the leading position among the higher political institutions of the country." The total of students for the current year is 1,534, of whom 180 are women. Less than one-half belong to the State of Michigan. A school of political science has recently been organised; and in the arts department a wide, though not unlimited, choice of studies is allowed, the principle being to require a certain degree of proficiency in one or more specified branches of knowledge.

THE *Deutsches Literaturblatt*, which is published by Perthes, of Gotha, and edited by Messrs. Keck and Herbst, will for the future appear weekly instead of fortnightly.

THE first volume is now complete of the thirteenth edition of Brockhaus' *Conversations-Lexikon*, containing the first thirteen parts. The total number of articles is 3,814, comparing with 2,310 in the previous edition.

A SMALL but very valuable collection of autograph MSS. and letters will be sold at Leipzig, on June 12, by Messrs. List and Francke. Among the MSS. are original compositions by Beethoven, Mozart, Haydn, Schubert, Chopin, Liszt, Weber, and Mendelssohn-Bertholdy. The catalogue of autograph letters includes epistles by Louis XI. of France, the Emperor Ferdinand II., Gustavus Adolphus, and Napoleon I.

THE study of history appears to flourish in Sweden. Not to mention T. Carlson's solid work, *The History of Sweden under the Kings of the Pfulz Dynasty*, which has now reached a sixth volume, dealing with the earlier years of the reign of Charles XII., we notice that the learned archaeologist, Hans Hildebrand, is engaged on a work of colossal proportions, to be entitled *The Middle Ages in Sweden*. Nor are there wanting annalists of literature and philosophy. Prof. G. Ljunggren is passing through the press *A History of Swedish Literature*, conceived on a large scale; while Prof. L. Nyblæus is doing the same with his *Philosophical Researches in Sweden*.

THE first number of *El Folk-Lore Andaluz*, March 1882, is curious from containing (p. 28) as a fact within the writer's knowledge the story of a dog shot by his master while endeavouring to make him comprehend that he had lost his purse, which has been current in Germany for at least thirty years. The "Oracion de San Antonio de Padua" (p. 41), to recover lost objects, is really given as a pious practice in the Catechisms of Southern France. This magazine, and the society of which it is the organ, is, we hope, destined to render good service to the science of folk-lore.

WE regret that our authority was wrong last week in his dates of the next Wordsworth Society gatherings. Both the afternoon and evening meetings are on Wednesday, May 3.

#### FRENCH JOTTINGS.

WE regret to hear that M. Louis Blanc, whose health (already weak) received a severe shock from his brother's death, is now in a very critical condition.

THE literary event of the week in Paris is the publication of the correspondence of George Sand (Calmann Lévy), forming a sort of complement to the *Histoire de ma Vie*. Among the letters is one of literary advice to M. Eugène Pelletan, and another written in the same year in the warmest language of admiration to "mon bon enfant et frère," M. Franz Liszt.

M. ALPHONSE DAUDET is continuing in the *Nouvelle Revue* his "Histoire de mes Livres." In the current number he treats of *Le petit Chose* and of *Robert Helmont*. The former was published in 1867, first as a *feuilleton* in the *Petit Moniteur* and then in book form by Hetzel. It was the earliest of M. Daudet's novels, and for a long time the most successful. In it the influence of Dickens is most conspicuous, and it is hard not to believe that its autobiographical character was not partly suggested by *David Copperfield*. M. Daudet, however, does not give any authority for this affiliation. It is interesting to learn from his own lips how large is the measure of actual autobiography. The sordid home at Lyons, the misery of the usher's life, the sympathy of the abbé Germane, and the devotion of brother Jacques (Ernest Daudet) are all of course true. The concluding scenes at Paris are entirely imaginative. Of *Robert Helmont* it is enough to say that it fell entirely flat on its first publication in 1873. So recent is M. Daudet's fame.

*Moths* has been translated into French, and published under the title of *La princesse Zouroff* (Paris: Hachette).

THE industrious bibliophile who writes under the name of "Philomeste Junior" has just issued (Bruxelles: Gay et Doucet) a little book entitled *La Bibliomanie en 1881*, which gives an account of the famous book-sales that took place in France and elsewhere during the past year, with many interest-

ing comments. The books that fetched the highest prices are thus classified:—(1) Original editions of the French classics, especially Corneille and Molière; (2) books illustrated by the artists of the last century—Eisen, Marillier, Moreau, &c.; (3) those bound by celebrated binders of the same period—Boyet, Padeloup, Derome; (4) those bearing the book-plates of eminent collectors—Longpierre and Count d'Hoym. Excluding the first portion of the Sunderland sale, the highest price recorded is 24,000 frs. (£960) for the "Grandes chroniques des gestes des ducs et princes de Savoye," by Symphorien Champier.

ANOTHER form of French bibliomania is illustrated by the *Bibliographie des Plaquettes romantiques*, which has been published by M. Nauroy (Paris: Charavay). This has reference to what may be called the occasional literature of the romantic period, and has been compiled from the materials in the Bibliothèque nationale. For the future bibliographer of Victor Hugo it will be specially interesting. It gives the original form of the "Ode to Bonaparte, 1822;" and the poet's "Address to the Electors," dated May 18, 1848, of which a copy recently fetched 43 frs. A copy of the first edition of *Notre-Dame de Paris*, in its original paper cover, was sold last year for 1,700 frs. (£68).

WE notice yet another contribution to French bibliography under the title *Origines de l'Imprimerie à Tours, 1467-1550*, by Dr. Girardet. According to the author, the first book printed at Tours was the *Roman de Florio*, by Nicolas Jenson, which was issued from the press of Guillaume Larchevêque, December 31, 1467.

AT the recent gathering of the provincial societies of France, which is held every year at the Sorbonne during the Easter holidays, M. Grellet-Balguerie read a paper in which he claimed to have done no less than discover a new King of France of the Merovingian dynasty. This is Clovis III., son of Dagobert II., associated on the throne by his father in 673, and probably assassinated with him in 680.

THE first volume has just been published (Paris: Didot) of an important work upon the wars of the time of Louis XV. It treats of the war in Spain (1719-20) and the war of the Polish succession (1733-39). The work is to consist of seven volumes in all; the sixth will include the invasion of England by the Highlanders under the Young Pretender, and the struggle between the French and the English in India.

*Polybiblion* for April contains the first part of an appreciative notice of the "English Men of Letters" series by M. Gustave Masson; but surely he knows better than to say that they are edited by "M. le professeur Morley." This is not only wrong, but misleading.

#### MAGAZINES AND REVIEWS.

THE present number of *Mind* has a peculiar interest as containing the last publication of Prof. T. H. Green. The second of the two articles on the theme, "Can there be a Natural Science of Man?" which ends with a promise which death is likely to leave unfulfilled, is, we think, one of the best specimens of the writer's deep insight into philosophical problems, and of his close and persistent reasoning. In these days, when science is apt to think that it settles everything in delightful ignorance of the pre-suppositions on which it takes its stand, such work as that of Mr. Green can hardly be too highly estimated. In the present essay he does much to establish the self-contradictoriness of the idea of things in themselves on the one hand, and on the other of mere feeling or sensational consciousness stripped of all intel-

lectual determination. He draws a careful distinction between knowledge as a process of intellectual attainment in the individual mind, in which sense it is a phenomenon in time and can be treated by psychology, and knowledge as the completed act which, by embracing a number of parts under certain relations one to the other and to the thinking subject, is a kind of "supernatural" consciousness lying out of time. One of the best parts of the essay, to our thinking, is the discrimination between the scientific view of a material thing as the cause of our sensations, and the view of it as an object for the mind which perceives it. This may profitably be read along with Mr. S. Hodgson's distinction between things as *conditions* of mental phenomena and as *objective aspects* of cognition. It is argued with great force that perception is something quite different from a congeries of sensations, original and revived. Such an essay as this must set every serious reader thinking on the properly philosophic problems which lie over after all our psychologies are perfected. And the fitness of this criticism may, we think, be fully appreciated without accepting any particular philosophic system. The other articles of this number call for little notice. To the outsider Hegelianism is no doubt apt to seem a colossal product of ingenious folly, and as a thing which can be best dealt with by ridicule. To such Prof. W. James's article "On Some Hegelisms" may prove amusing. It is racy, with a distinctly American raciness. It must be acknowledged, however, that this bit of light-hearted banter lies dangerously near (to say the least of it) the confines which we may assume to be recognised by a journal which is devoted to the serious study of philosophic questions. In another article, Mr. A. W. Benn completes his study of the influence of Greek philosophy on modern thought. There is no doubt a considerable ingenuity shown in looking at Hobbes, Locke, Spinoza, and the rest as representing and more fully working out certain tendencies of Greek thought. Yet the analogies seem to us a little strained in places. And in any case this kind of treatment of modern thinkers is apt to lead to a somewhat distorted conception of their real-aims and accomplishments.

THERE are only two articles in the "retrospective" part of *Le Livre* for March. But these are of much more than ordinary interest. The first is a short paper by Champfleury on the bibliophile Jacob. The editor has thought it well to apologise for some expressions in this; and we think that the author would have shown better taste in speaking more respectfully of a veteran who (if some of his contemporaries have excelled him a little in accurate scholarship and sound judgment) has done almost unequalled service of the most precious kind in the republishing of lost or forgotten literature. It is this that the true student of letters requires and is thankful for. He can neglect or correct for himself the conjectures of a too imaginative editor; he cannot elaborate for himself texts to which he has no access. Far be it from us to quarrel with the more erudite and accurate scholarship of the period succeeding that of which, in different ways, M. Lacroix and the late Paulin Paris were representatives. But what we want first of all is the texts to form our own opinion on; and when we see scholars of to-day loitering to re-edit already printed MSS. the editing of which does not come up to their standard, instead of continuing to make unprinted, or printed but practically inaccessible, texts public, we cannot help feeling cordially disposed towards the older school. The second paper, by M. de Lovenjoul, is a very long and very interesting account of Gautier's unaccomplished literary projects. Most of these are known to all lovers of Théo

the Delectable; but some are new. The article is illustrated with a facsimile poem containing an unpublished stanza, and with a fancy portrait of Gautier. The other paper has a very pretty *encadrement-frontispiece* printed in brown ink.

IN the *Revista Contemporanea* of April 10 Gen. Pavia continues his political reflections on the Provisional Government, the reign of Amadeo I., and the Republic of 1873. He reproaches the authors of the revolution for not having seen that the only two issues possible were a Republic or Alphonso XII. and for having given Spain first to a foreign Prince, and then to Cantonalism. His account of Amadeo's reign is unfavourable to the political capacity of the Prince, but admits the dignity of its close. In "Mis Apuntes," D. A. Ubique tells how he found the will of Don Carlos, son of Philip II., in a shoemaker's shop in Toledo, and finally secured it for the *Archivo histórico nacional*. Capt. Bermeje concludes his *Impresiones de Viaje* with reflections on the naval forces of Germany, Austria, and Italy—in the two first merely defensive auxiliaries to the army, in the last a vital necessity for the State. Señor Vallejo contributes a pleasing historical novelette on Sebastian Gomez, the mulatto of Murillo. The editor announces that this Review will henceforth publish the lectures given in the Ateneo of Madrid.

#### ORIGINAL VERSE.

ART AND POPULARITY.—TO R. BROWNING.

"No man having drunk old wine straightway desireth new, for he saith the old is better."

HAPLY thy life were harmed if earth her fame  
Had proffered ere years proved thou didst not need  
Drink of applause Art's daily force to feed—  
Ere the *Poem*—God—deep source whence came  
Thy poet's impulse, bade thee first to claim  
Reward like to His own—true Artist's need  
Of joy that flows in essence of the deed,  
Unreached by accident of land or blame.

But now, since thou through long uncrowned days  
Didst draw soul's strength from draughts of this  
old wine  
Of gladness (which doth evermore sustain  
All Nature's working human or Divine),  
No fear for thee lest thou that first good gain  
Should'st quit to thirst for new wine of men's  
praise.

A COUNTER-PART TRUTH TO THE FOREGOING.

SAID I thou didst not need to feed thy Art  
From daily draughts of wine of human praise,  
While God sustained thee in unlaundered days  
With Earth's old gladness which makes vigour dart  
Through the soul's pulses? Ay! but yet my heart  
Saith that this thought of thee is but a phase  
Of truth concerning thee; and on me lays  
Urgence to speak the half-truth's counterpart.

For thou hadst need of us. Pure Artist's joy  
Could not suffice thy soul's whole thirst to slake.  
Tasted alone, God's precious wine would cloy.  
Thy manhood needed men thy gains to share;  
Thy brethren's sympathy, not praise, can make  
Thy life complete that else imperfect were.

E. D. W.

#### THE SUNDERLAND SALE.

THE second Sunderland sale is now over, after ten days of renewed struggle among the lovers of rare books. Many important lots were sold (or seemed to be) at low sums; but the more remarkable articles produced, as on the former occasion, unprecedented prices. Mr. Quaritch, M. Téchener, Mr. Ellis, and Messrs. Morgand and Fatout were the principal buyers; but

there were also several competitors in the background who had entrusted their commissions to uninterested and inexperienced agents. This practice may sometimes result in a bargain; but, to judge from this and other sales, it is an ill-advised one. The knowledge of the value of old books and of special copies is confined to a very few heads; and these *cognoscenti* seek to punish the givers of unlimited commissions by running the prices to an extravagant pitch, the nominal opponent being in most cases unable, from want of knowledge and experience, to form a true notion on the subject. The first book noteworthy for its cost was (2,801) vol. i. of the original edition of the *Chroniques de St. Denys*, 1466 (the first French book printed in France), which was bought by Mr. Quaritch at a low figure, £27 10s. (2,802) *Chroniques de St. Denys*, Verard, 1493, was secured by M. Téchener for £116; (2,804) the first edition of the *Chroniques de Normandie*, 1487 (only two other copies known), fell to Mr. Quaritch at the absurdly low price of £36; (2,806) *Cronica del Rey Don Rodrigo*, Seville, 1499, £28 (Mr. Ellis); (2,816) *Guarino Mesquino*, Seville, 1527, £19 (Quaritch); (2,850) *Ciceronis Opera*, Milan, 1498-99, the first collected edition, £30 10s. (Quaritch); (2,868) the Aldine edition, 1560-65, £35 10s. (Quaritch); (2,887) *Ciceronis Rhetorica*, Jenson, 1470, on vellum, £80 (Ellis); (2,900 and 2,933) two Aldine Ciceros, on vellum, in very poor condition, fetched £30 and £36 (illustrating the remarks made above on unlimited commissions); (2,922) *Cicero de Oratore*, Sweinhelm and Pannartz, 1469, £31 (Quaritch); (3,019) *Ciceronis Tusculanae Quaestiones*, Jenson, 1472, on vellum, £90 (Quaritch); (3,043) *Ciceronis De Officiis etc.*, Fust and Schoeffer, 1465, on vellum, the first printed classic, £100 (Quaritch), a singularly low figure for such a book, the second edition, also on vellum, 1466 (3,044), fetching £91; (3,073) an Elzevir of comparatively trifling value, *Cicero de Officiis*, 1677, reached the enormous price of £120 in consequence of its size and condition; (3,083) the first edition of *Ciceronis Epistolae ad Familiares*, Rome, 1467, on vellum, £295 (Téchener); (3,086) another edition of the same, Venice, 1469, £70 (Quaritch); (3,103) another edition, a fine Lyons counterfeit of the Aldine, also on vellum, £56 (Quaritch); (3,178) an illustrated large-paper copy of Clarendon's *History*, 1707, containing a large number of beautiful drawings from unpublished portraits, apparently prepared for the engraver, £275 (Quaritch); (3,212) an imperfect copy of the Clementine Constitutions, Fust and Schoeffer, 1460, on vellum, £240 (Ellis); (3,252) a palimpsest Greek Codex, recently described by Prof. Mahaffy, £51 (Quaritch); (3,302) *Poliphilo*, 1499, £86 (Ellis); (3,657) the first edition of the *Commentaries* of Albuquerque, the Portuguese conqueror of India, so rare that there is no copy in the British Museum, and perhaps but two copies extant, £32 (Quaritch); (3,684) a MS. of Dante's *Inferno*, with an unknown commentary by Guido Pisano, fifteenth century, £101 (Quaritch); (3,685 and 3,686) the *Foligno editio princeps* of Dante, 1472, and the undated Naples edition by Tuppò, £46 and £205 (Quaritch); (3,867) the first edition of the *Dialogus Creaturarum*, 1480, and the first dated edition of the *Gesta Romanorum*, both in one oaken binding, £52 (Quaritch); (4,052) *Sir Francis Drake revived*, 1626, £75 (evidently another instance of unlimited commission); (4,124) the first edition of the *Faits d'Armes de Bertrand Du Guesclin*, £112 (Quaritch); (4,154) *Durandi Rationale*, printed on vellum by Fust and Schoeffer, 1459, £790 (Quaritch)—this was probably the highest price produced during the second Sunderland sale, for the *Aulus Gellius* of 1469, on vellum, which was yet unsold at the time of our going to press, was not considered likely to bring anything like such a sum.

# THE ONLY ENGLISH PROCLAMATION OF HENRY III.

PERHAPS few pieces of Early English are more interesting than the famous "Only English Proclamation of Henry III.," dated 1258, which was so ably edited and discussed by Mr. A. J. Ellis for the Philological Society. It will be remembered that Henry III. seems to have sent round a copy of this proclamation to each county, but Mr. Ellis supposed (as did all the rest of us who were interested in the question) that only one copy has come down to us—viz., that which was issued to the county of Huntingdon. But I think students of English will be amazed to learn that this is not the case, and will be still more amazed to learn that the other copy was printed so far back as 1837.

It must have been a considerable time ago since Mr. Turner, who was at work in the Bodleian Library upon various documents connected with Oxford, informed me that there was a very valuable piece of Old English preserved among the town records, which had already appeared in print. He then showed me the printed copy, asking me if I knew anything about it. After reading the first line, I told him that it was nothing else than the *Oxfordshire* copy of the famous "Only English Proclamation of Henry III." He was greatly interested in the matter, and, as I naturally wished him to have all the credit of his discovery, I left it for him to deal with, and said no more about it. Unfortunately, his early death left much of his work uncompleted.

On making enquiries lately at the Bodleian, I found that the matter appeared to be but little known, nor could any account of it be found in Mr. Turner's published work. I had forgotten the name of the book which he showed me, though I remembered the general appearance of it. After a while, Mr. Madan suggested trying a book by Dr. Ingram, and there it was. In the *Memorials of Oxford*, by J. Ingram, D.D., President of Trinity College, three volumes octavo, 1837, vol. iii., p. 6, we read as follows:—

"But a singularly curious document in the same language [he had just been speaking of the latest portion of the Anglo-Saxon Chronicle], lately discovered in the archives of the city by Mr. Joy, throws some light on the transactions which took place here in the memorable contest between King Henry III. and his rebellious barons. . . . The King issued a public writ or proclamation addressed to his loyal subjects in every county," &c.

He then gives a facsimile of a small portion of the MS., with a transcript of it, and a Modern-English version. Fortunately, Dr. Ingram had edited the Anglo-Saxon Chronicle, and knew what he was about. His print of it is tolerably accurate, much more so than the singularly bad versions of the Huntingdonshire proclamation which were printed by Mr. Ellis's predecessors.

On enquiry at the town clerk's office, every facility was afforded me, and it was not long before we found it. Other towns might take a lesson from Oxford in the art of preserving and keeping their old documents. But I fear it may not always have been so, for the proclamation appears to have been badly creased in one place by folding it up, so that many letters which Dr. Ingram read correctly (testing his work by the other MS.) are at present entirely illegible, though the MS. is now properly flattened out and well mounted. It is a most extraordinary circumstance that Dr. Ingram makes no allusion to the other copy.

I have carefully compared his printed version both with the Oxford MS. and with Mr. Ellis's edition of the Huntingdon copy. There are a few curious variations; but, as this communication has already extended to some length, I reserve my remarks for the present,

hoping soon to give a transcript of the whole, as it is very short. I will only add at present that the Oxford copy is undoubtedly genuine, and is written in the usual hand of the period, in long lines containing more than twenty words each, just as is the case with the other copy. Where there is no crease, it is extremely clear and easy to read. WALTER W. SKEAT.

## CORRESPONDENCE.

### MEDICI PORCELAIN.

Florence: April 6, 1882.

To the many who take an interest in the potter's art and in the history of its development, particularly among amateurs of porcelain, that rare variety known as the "Medici ware," the earliest produced in Europe of which specimens have been recognised in our day, is one of the most interesting. The result of patient experiments, conducted under the encourage-

ment of the Grand Duke Francesco de' Medici, it was brought to considerable perfection at Florence about the year 1580, more than a quarter-of-a-century before Böttcher's discovery at Meissen. Probably not so many as five-and-thirty examples could be numbered from the public and private collections of Europe, and the fact of a piece being known as "in the market" causes a flutter of excitement among collectors. Of the details of its history little is yet known, and every additional fact connected with the ware is the more valuable. We have, however, reason to hope that ere long much additional light from hitherto unpublished documents and notes will be thrown upon the subject by the careful investigations of the Baron Charles Davillier, who has given much time to their collection, and who promises a work accompanied by accurate description and illustration of the more characteristic specimens of the ware.

In the meanwhile, it may be interesting to know that an important example has just fallen under my notice, which has probably hitherto escaped observation by English or French amateurs. It is said to have been found by the authorities about a year since among the stores of the Uffizi, but has only within the last few weeks been exhibited in the National Museum at the Bargello in this city. It is an oval medallion plaque of stony-white colour, the fracture showing the porcellaneous nature of the composition, which is, moreover, lightly coated with a translucent glaze; certain fire-cracks upon the surface are further characteristic. In somewhat low relief upon its face is a profile portrait bust of Francesco de' Medici, looking to the right of the beholder. He is habited in a rich dress, with fur-collared over-garment, and wears the Order of the Golden Fleece. The head is uncovered. In letters scratched upon the paste when moist around the head and front we read, FRANC. MED. MAG. DVX. ETRVLÆ, and the date 1586 (or 5), the last two figures being partially chipped away; beneath the bust is the capital letter P, doubtless the initial of the artist's name.

This small medallion, about five by three-and-three-quarter inches, is therefore a portrait of the Grand Duke who instigated or encouraged those experiments which resulted in the porcelain of which the plaque appears to have been formed, and is eminently confirmative of what we at present know of its history.

C. DRURY FORTNUM.

D. G. ROSSETTI.

Birmingham-on-Sea: April 23, 1882.

Upon looking through the obituary published in the ACADEMY of the 15th inst., I find that, notwithstanding my anxiety to mention the name of every living poet and painter in whom Rossetti was actively interested, I have seemed entirely to ignore a poet of whom he had ever the highest admiration. After grouping the writers with whose work he was familiar (I omitted from my list Mr. Lang, Mr. Dowden, and Mr. William Davies), I meant to devote a paragraph to the *Oxford and Cambridge Magazine* and Rossetti's contributions to it, mainly with a view to touching upon his interest in the least known of its three founders—who were, as will be remembered, Mr. Burne Jones, Mr. Morris, and Canon Dixon. It was his most amiable characteristic to take delight in constantly championing the good work which in the eyes of the world had not attained to adequate rank; but Rossetti's appreciation of Canon Dixon's two small volumes of poetry published twenty years ago was, so far as I could judge, beyond all comparison greater than any similar admiration entertained by him for work insufficiently recognised. He believed

Canon Dixon to be, at his best, not only a true, but also a great, poet; and he repeatedly appealed in vain to the undue modesty of the author to put aside for a while his Ecclesiastical History in order to pass his poems through the press afresh, in the hope that they might at length attain to the distinction which he considered their due. I am so much concerned about the omission of Canon Dixon's name from the list of living poets in whom Rossetti took pleasure that I beg you to permit me even at this stage to append it; friendly anxiety to do so is the greater from the certainty that Canon Dixon himself is the last man to complain of the omission, or allude to it.

T. HALL CAINE.

#### LORD BEACONSFIELD'S POLITICAL ECONOMY.

London: April 21, 1882.

A passage in Mr. Gairdner's review of Mr. Thorold Rogers' *History of Agriculture and Prices*, in last week's ACADEMY, suggests to me a curious comparison, which Mr. Gairdner only hints at. In *Sybil*, that "notable economic heretic," the late Lord Beaconsfield presented a retrospect of the fortunes of the English hind in the dark days between the Reformation and the early Victorian age which differs from that given by Mr. Rogers merely in the theory of causation to the extent of dwelling on the disintegrating effects of the secularisation of ecclesiastical property by Henry VIII. upon the prosperity which had gone on uninterrupted during the Wars of the Roses.

Thus, at p. 52, edition 1862, Lord Beaconsfield puts into the mouth of Gerard those very considerations as to the monks having been easy landlords, who were followed by a race of new proprietors who rack-rented their ill-gotten lands and put the screw upon all dependents, which Mr. Gairdner justly blames Mr. Rogers for leaving out of account. Indeed, except in this one particular, the latter has all unconsciously pitched his work in the key of the "Young England" theory of the solution of the "Condition of England Question" which is the central idea of *Sybil*, and plays a large part in other novels of the deceased Tory leader.

A. R. FAIRFIELD.

#### PORTUGUESE GRAMMAR.

Villa Adelin, San Remo: April 17, 1882.

I have just received, through the kind help of a friend in London, d' Ovidio's notice of Dr. von Reinhardtstoettner's Portuguese Grammar, and also his little sketch of Portuguese grammar.

For the sake of fair play, I must now say that this conclusive review nearly fills an octavo page, or about the same length as seventy lines of a column of the ACADEMY! It terms the Grammar a sufficiently good compilation, and regrets that it was not received in time to be fully used for d' Ovidio's own Grammar! It then notices some eight small oversights, or misprints, respecting some of which, at least, Dr. von Reinhardtstoettner might find something to say. It concludes by stating that the book will prove useful to a student of Portuguese, though it contains errors—some "grave ones"—to be corrected.

This is the substance of a very brief notice of a most laborious work of about 420 pages! How far it justifies Prince Bonaparte's wholesale condemnation of Dr. von Reinhardtstoettner I leave the readers of the ACADEMY to determine. I, at least, can find nothing to make me regret my good opinion of the work.

Prof d' Ovidio's little Grammar is clearly an excellent little sketch of Portuguese grammar; but it is purely elementary, and contains about fifty pages, or as much as Dr. von Reinhardtstoettner has devoted to the letters alone. It

refers to the last, and terms it a "Grammatica scientifica" but "mediocre." It is, on the face of it, as much a compilation as any such work must be.

I must hold, then, that the opinion I expressed, and which I arrived at after much use of the work, is fully justified—viz., that Dr. von Reinhardtstoettner's is the "best scientific Grammar of Portuguese." I never said that it is definitive, nor would the author, I suppose, claim it to be such.

The Prince objects to more than one topic at a time; but, as regards the Spanish-Portuguese "-s" and "-z" in patronymics, I must ask where Larramendi said that the Basques once used patronymics in "-z" which they afterwards gave up for the Spanish, &c., forms expressed by "de"? He certainly does not say so on p. 11 of his Grammar. A single instance of a Basque patronymic in "-z" of a time before the Gothic genitive in "-is" could have been introduced into Spanish would settle the matter, and be far more valuable than any idea of Larramendi.

A. BURNELL.

#### DR. HAYMAN'S "ODYSSEY."

Dublin: April 25, 1882.

I am very unwilling ever to answer the complaints of an author on my criticisms. These are seldom welcome, if they suggest defects; and it has already happened to me to make a permanent and bitter enemy because I spoke out the truth. But Dr. Hayman is so fair and large a scholar that he will excuse me if I defend myself against two of his criticisms, more especially as he is verbally right in both of them, and therefore has a good case legally, though not, I contend, morally.

In the first place, he complains that I spoke of the "total silence" of his work on the labours of Kirchhoff, and he points to two passages—I have since found three—where he mentions that scholar. On this I observe that when a writer produces an elaborate book in three volumes *without an index* he cannot blame a reviewer if a few foot-notes escape his observation; and I think the author ought to have considered this, the more so as the notes in question are of the shortest and most trivial kind. They do not reproduce a single argument of Kirchhoff's, and seem only inserted by way of saving the author's conscience on the matter of this important side of Odyssean criticism. Had I seen them in time, my criticism would have run as follows: "Kirchhoff, for example, they totally ignored, except in three foot-notes, which tell us nothing whatever of the reasons of his theory, and hardly anything about that theory itself." So then my criticism, though verbally inaccurate, was substantially true. In his elaborate Preface, where Dr. Hayman discusses Homeric questions, he is totally silent on recent German criticism. The same remarks are true as regards Ebeling. Possibly he has mentioned him somewhere; but his work does not handle this great and recognised source of Homeric lore.

The same thing is also true of the general arguments in the Preface. Those of the new volume are exceedingly able and convincing, and many of them different from those of the second volume; but they are addressed to an old adversary, and aim at Mr. Paley, and not at the newer German critics, who ought to have been considered.

Of course it is a thankless thing to tell a man what he ought to have done, instead of praising what he has done, and done well. I have already said, and I say again, that Dr. Hayman's is a first-rate edition of the "Odyssey;" and the careful and thorough use he has made of Faesi, Ameis, and of Dr. Schliemann's researches show how ably he would have discussed the recent

critics to whom I have referred had he been familiar with them.

If I have done him any injustice, no one is more ready than I to confess it, and to trust that he will not remember it for years, and carry it into other controversies. But I cannot think my review was, on the whole, unfair or unappreciative. If it was, it did not convey my very strong impression of the merits of his book.

J. P. MAHAFFY.

#### APPOINTMENTS FOR NEXT WEEK.

- MONDAY, May 1, 2 p.m. Royal Institution: Annual Meeting.  
7.30 p.m. Aristotelian: Discussion, "Perception."  
8 p.m. Victoria Institute: "Investigations as regards the Formation of Coal," by Prof. Henssch.  
TUESDAY, May 2, 3 p.m. Royal Institution: "The History of Customs and Beliefs," by Dr. E. H. Tylor.  
7.15 p.m. Biblical Archaeology: "Notes on Glass, according to Ancient Jewish Records," by the Rev. A. Löwy; "The Rules of Life among the Ancient Assyrians," by M. G. Bertin.  
8 p.m. Civil Engineers: Discussion, "Harbours and Estuaries on Sandy Coasts," by Mr. L. F. Vernon-Harcourt.  
8 p.m. Shorthand.  
8.30 p.m. Zoological: "The Desirability of adopting a Standard of Nomenclature when describing the Colours of Natural Objects," by Mr. G. E. Harting; "The Structure of Feathers in Relation to their Colour," by Dr. Hans Gadow; "An Abnormal Specimen of *Pithecia satanas*," by Mr. W. A. Forbes; "The Cranium of a New Species of *Hyperodon* from the Australian Seas," by Prof. Flower.  
WEDNESDAY, May 3, 4 p.m. British Archaeological: Annual Meeting.  
7 p.m. Entomological.  
8 p.m. Society of Arts: "The Fire Risks incidental to Electric Lighting," by Mr. Thomas Bolas.  
THURSDAY, May 4, 3 p.m. Royal Institution: "The Metals," by Prof. Dewar.  
8 p.m. Linnean: "Remains of the Great Auk found in Oronsay, Argyleshire," by Mr. S. P. Grieve; "Cape Orchid," by Mr. H. Bolus; "Dimorphic Florets of *Catanche lutea*," by Mr. B. D. Jackson; "Butterfly Genitalia," by Mr. P. H. Gosse; "New Varieties of Sugar Cane," by Baron de Villa Franca.  
8 p.m. Chemical: "Recent Developments of the Theory of Dissociation," by Prof. Dewar.  
8.30 p.m. Antiquaries.  
FRIDAY, May 5, 8 p.m. Royal Institution: "The Proper Motions of the Stars," by Prof. R. Grant.  
8 p.m. Philological: "Some Notes on Grammar," by Mr. E. L. Brandreth.  
8 p.m. Society of Arts: "Experiences of a European Zemindar in Behar," by Mr. James Milne.  
SATURDAY, May 6, 3 p.m. Royal Institution: "The History of the Science of Politics," by Mr. F. Pollock.  
3 p.m. Physical: "The Mercurial Thermometer," by Mr. F. D. Brown.

#### SCIENCE.

*A Manual of Greek Inscriptions.* By E. L. Hicks. (Oxford: Clarendon Press.)

LITTLE has been done hitherto in England to familiarise our younger students with the general characteristics of the inscriptions of Greece and Rome, or to put before them typical examples of special interest in such convenient form as to be accessible to all. The great collections of Berlin are usually to be found only in our larger libraries, and their bulky folios are little likely to attract a wide class of readers beyond the few who turn to them for illustration of their special studies. Our thanks, therefore, are due to Mr. Hicks for giving us a Manual which may really serve to introduce the subject to a larger circle. It is noteworthy as the first attempt which has been made among us to bring the study of epigraphy into its natural place in the work of school or college life. The author's name is sufficient guarantee that the experiment is made with care, and that we shall find in it the evidence of the research and accuracy which have been trained and tested in the work already done for the Greek inscriptions of our national museum.

The principle which has guided him in his selection of examples has been almost exclusively that of their value as historical documents, as illustrating, as well as supplement-

ing, what we learn from other literary sources about the stirring events or great political changes among the States of Greece. Passing by the multitude of those which deal with other sides of social life, and which have added so largely to our knowledge of the religion, law, economy, and domestic usages of the ancient world, he has confined himself mainly to the documents which deal with ancient history in that narrower sense in which Thucydides regarded it, and in which it is chiefly studied in our universities, where the attention of the student is concentrated on a few standard authors, and on a limited period of time.

Unfortunately, only a small proportion of the inscriptions are of earlier date than the close of the fifth century before our era, if we except the inventories of temple treasures, or the long lists of the contributions from the subject allies of Athens. A reader fresh from the pages of Thucydides may naturally be repelled by such bare summaries of names, and may rest satisfied to hear it stated with authority—as has been done of late—that the tribute-lists, however lengthy, are still too fragmentary to lead to any sure conclusions, and that a cautious scepticism will decline to accept the theories which have been based upon them. But even the most careless reader, as he turns over those pages, must realise more fully the wide range of the Athenian empire, and the financial aspects of the long struggle to maintain it, as well as the constitutional forms which the ruling democracy observed in such relations. Yet, though it may be unavoidable, it is perhaps to be regretted that, at least in Oxford, where the book is printed, it will chiefly be referred to in illustration of the period for which the evidences of epigraphy will be brought into comparison with the greatest of Greek histories, where the chief events of national life are described for us so fully that we can hardly hope that inscriptions will do more than add a few fresh circumstances to the picture. They do far more than this, indeed, in different departments and for other times. Whole chapters of Greek antiquity have to be rewritten as fresh materials of this kind come to hand. And those who will look carefully through the work before us will find much that is little known save from such sources—such as the specimen of commercial treaties limiting free trade at Keos, details of Athenian colonies at Brea and Samos, international contracts between Oeanthia and Chaleion or petty towns of Crete unknown to fame, remarkable provisions for a fusion of distinct communities like Lebedos and Teos or Magnesia and Smyrna, illustrations of the management of sacred funds accumulated at Athens and at Delos, or of the forms of government in the Hellenised societies of Asia Minor under petty chieftains like Maussollus. Those, again, who are interested in the varieties of local dialects may find strange forms and phrases in the inscriptions of Oeanthia and Naupactos and Mytilene. As might be naturally expected, the selection of materials and the arrangement of the work exhibit the precision of a practised hand; and the notes are kept within convenient limits, while they contain the necessary references for fuller study of the evidence in all disputed

questions. The topics treated of are, for the most part, so important, and the scene changes so rapidly, that there is none of that monotony which is unavoidable in the great volumes of the Corpus, where the same technical forms constantly recur, and thousands of petty circumstances are recorded with wearisome iteration of the same persistent types.

The book might have been livelier, perhaps, if it had included a wider range of social interests, and might have given fuller evidence that the inscriptions furnish a substantial addition to our knowledge of the life of Greece; but these advantages could only have been gained at the expense of the clearly defined limits and orderly arrangement of the work, which, to be of good service as a Manual, must be somewhat brief.

W. WOLFE CAPES.

#### OBITUARY.

CHARLES DARWIN.

THE news that Charles Darwin was no more fell upon the world like a thunderclap. It is true, his years might have led us to suspect that he had no long span of life yet before him; but his scientific activity was still so ceaseless, his powers were still so fresh and vigorous, his old age was still so green and vital, that we all put off the end in fancy to an indefinitely distant and unrealised future. We could not think, we could not bear to think, that that untiring and fertile brain, that simple, kindly heart, could cease to work in our midst for many a year yet to come. We looked forward to many another of the familiar green-bound volumes, rich with teeming facts and marvellous applications of minute discovery. Even now it is hard to speak of him as one gone from us, hard to realise that the world is bereft of one among the noblest and purest lives it ever nurtured. Yet it may console us in what is, even to many who never saw his face, a personal sorrow that at least he had fairly completed the great work of his life, and reaped the full reward of his patient and enduring labours. For fame, indeed, he cared but little; that last infirmity of noble minds hardly touched a mind so noble as his; but he had none the less a guerdon of his own which no man could fail to appreciate—the happiness of seeing his own thought incorporated with all the thought of the world, and working out a thousand new results in the minds of millions whom he had never himself known. The revolution of ideas which he symbolised for us all was not altogether of his own making; it was itself a natural evolution from the current knowledge and the current philosophy of the age; but he, more than any one man who ever lived, put the coping-stone upon the work of centuries, and impressed the whole coinage of thought with his own mint-mark. Even without his vast and varied labours, evolutionism would still be a power in our midst; but it would be a young and struggling power, slowly working its way upward, and gaining but a few converts here and there among the picked intellects of the age. Charles Darwin brought to its aid his immense stores of knowledge, his magnificent grasp of method, his luminous insight, his transparent honesty of purpose, his guileless simplicity; and he made evolutionism at once into the dominant philosophy of modern Europe and America, the key-note of all the fruitful and effective thinking of the present time. Without neglecting the importance of the environment, we may yet pay full homage to the individual greatness of the man and his work. A thinker and teacher has passed away from our midst whom all respected, and, one may truthfully add, whom all loved. So much

intellectual greatness, allied to so much simplicity of soul and goodness of heart, the world has seldom, if ever, seen.

It would be a poor tribute to such a man as Charles Darwin to write of him as one writes of the lesser men who come and go from week to week. We need no outline of his life, seeing that all its chief landmarks are fresh and familiar in every mind already. Sprung, in the best sense of a misused phrase, from two historical families, an eminent man of science from his earliest manhood onward, a writer of famous books whose every word the whole world has eagerly scanned and debated, he has lived, practically, in spite of his personal retirement, in the full light of the public eye his whole life long. His history is the history of his work. The grandson of Erasmus Darwin, and the son of a not undistinguished father, Charles Robert Darwin was born at Shrewsbury in 1809. From the Grammar School of his native town he went to Cambridge, which can have taught him very little that he would care to learn. In the very year of his degree (1831) Fitzroy took him as naturalist on his voyage round the world in the *Beagle*; and his narrative of the expedition was the first book he ever published. For years he worked in silence. The *Coral Reefs* and *Cirrhædia* were almost the only volumes he published before he was fifty; and it is strange indeed to think that, if his life had ended then, he would have been remembered only as the author of some interesting monographs on minor biological and geological subjects. We may indeed thank the caprice of Fate for those twenty-three later years. At an age when many men are retiring from active life, Charles Darwin began the busiest part of his career—to outward seeming at least, for all his previous time had been spent in tacitly and industriously collecting the vast mass of information that he lavished upon us in his later works. In 1859, the *Origin of Species* at last appeared, under what circumstances all the world knows. It was nothing less than a revolution; it marks the year 1 of a new era, not for science alone, but for every department of human thought—nay, even of human action. We certainly do not underrate the enormous value of the co-operating factors—least of all do we underrate the immense importance of Mr. Herbert Spencer's philosophical method—but the fact still remains that in its immediate influence upon the world the *Origin of Species* was the real proximate cause of the great mental revolution of the present century. There were many auxiliary forces, but Darwin was the general who led them to victory.

This is not the time, while the sense of loss is still keen upon us, to weigh and appraise and accurately distinguish Charles Darwin's place in the history of science and philosophy. That task is best left to those who have less reason for personal devotion to the great man whom we have lost than the present generation. Yet this much may even now be said with certainty, that the influence of his thought upon the thought of the age has far outweighed any influence ever before exerted by a single man during his own lifetime. He has revolutionised, not biology alone, but all science; not science alone, but all philosophy; not philosophy alone, but human life. Man, his origin and nature, his future hopes and realisable ideals, all seem something different to the present generation from their seeming to the generations that lie behind us in the field of time. The difference is more due to Charles Darwin than to any other man. Before him, evolutionism was weak and almost headless; it lacked the key that was to unlock the secret of organic development, that crux which seemed to most men the impassable barrier in their way towards the evolutionary solution of things. Natural selection was the key needed. Once given, the

acceptance of evolutionism became universal. The broader and best adapted minds jumped at the offered solution; the laggards came in slowly behind. Darwin's work bore fruit suddenly in many directions. Its implications were universal; it affected the very foundations of every science and every creed. In biology, evolutionism rose to be dominant at once. Genealogy became the great problem of zoology and botany, of palaeontology, and of all allied studies. The mighty maze of organic life was no longer without a plan. So much all might have expected, though, perhaps, even the master-workman himself could hardly have hoped to see his designs furthered during his own lifetime by so many able journeymen. But it was the lateral results of his thinking that were the most astonishing. The best men in every line saw at once that their own special sciences must needs be affiliated upon the general evolutionary scheme, and an outburst of intellectual activity ensued unparalleled since the Renaissance, if paralleled even then. Philology was remodelled; ethnology took a new face; sociology, as a complete science, first really began to be. Even such studies as law and history felt the remote effects of the great Darwinian wave. Nay, political life itself has been indirectly affected by it, for whatever cause works great changes in men's sentiments and feelings must at length react upon their corporate being. Allow all we will for the general movement of the time—allow for the nascent interest in primitive man, for the independent growth of philology, for the natural *rapprochement* that had gradually been growing up between the sciences once widest apart—and we must yet recognise that the largest share in immediately producing all this stir and ferment of the human mind was due to that solitary thinker, pacing alone through his garden on the windy Kentish hill-side. Even those of us who are by nature inclined to make most of the underlying causes, and least of the individual great man—to think relatively much of the force that impels the wave, and relatively little of the crest that tops it—even such cannot fail to recognise that here at least we had a great man worthy of the name, a man who pioneered and directed the best energies of his time into a course that they would mostly have missed without his keen-sighted guidance. Standing on the peak and summit of his age, he saw what others saw not; and he led them at once where they might otherwise only have blindly groped and fumbled, perhaps for centuries yet to come. Is it too much to say that, without a Darwin to prepare the way with the people, even a Spencer might never have finally succeeded in gaining a public hearing?

Of his character, many who knew him personally will speak; some who did not know him, know enough to say that his very name brought always a smile of pleasant recollection to their lips. His goodness of heart, his sterling honesty of purpose, his consuming love of truth, are all clear enough, even in his books; of his more private and endearing characteristics, all of us have heard or learnt something. This much in particular, we may add, that to young writers and scientific thinkers he was always exceptionally kind and considerate. In spite of his manifold labours, he could always find time to read what they had to say, to give cordial and generous praise where he thought it due, to criticise and point out erroneous or doubtful statements with a minute care which was worth far more than any mere conventional politeness could possibly have been. In dealing with younger men, he seemed to be (and was) unconscious of his own greatness, anxious only to hear what new thing they might have to say, and to weigh its merits with impartial yet ever kindly and almost fatherly consideration. There is scarcely a biologist of the newer generation in England who did not feel that the hope of obtaining his

approbation was one genuine stimulus to higher exertion, and that with the loss of that stimulus science has become, for the time at least, less rich in living impetus to action.

On the day when these lines are written, all that remains of Charles Darwin is being consigned with fitting solemnity to its last home in Westminster Abbey; and yet not all that remains, for his voice is with us still, and will be as long as the English speech is yet spoken upon earth—ay, and longer. There he will rest beside the greatest previous name in the annals of science—the name of Newton. But it cannot be unsafe to anticipate to-day the verdict of after-ages, and to declare that, even so, among all the mighty dead who lie beneath those fretted vaults the great minster does not hold a greater than Charles Darwin.

GRANT ALLEN.

#### NOTES OF TRAVEL.

AT a council meeting of the Royal Geographical Society held last Monday, the royal medals for the year were awarded as follows:—The Founder's medal to Dr. Gustav Nachtigal for his great journey in the years 1869-75 through the Eastern Sahara, during which he explored the previously unknown regions of Tibesti and Baghirmi, added much to our knowledge of Lake Chad, and returned by a route previously untrodden by Europeans through Wadai and Dafur to Upper Egypt; also for the carefully prepared narrative of his travels now in course of publication, which is illustrated by many maps, and contains a large amount of original information regarding the countries he visited and their inhabitants; and the Patron's medal to Sir John Kirk, K.C.M.G., H.M.'s agent and consul-general at Zanzibar, for his long-continued and unremitting services to geography—first as naturalist and second in command to Dr. Livingstone in the Zambeze expedition of 1858-63—during which he took a prominent part in all the new discoveries and explorations, enriching the results by his scientific observations; and secondly by the great assistance he has since rendered to successive expeditions in East Africa during his fifteen years' residence as consul-general at Zanzibar, and in none more signally than in the last sent out by the committee of the African Exploration Fund, under the auspices of the Royal Geographical Society.

A GERMAN traveller, Dr. Obst, has lately returned to St. Petersburg from a journey in the Russian Transcasian territory, in the course of which he traversed the Akkhal Tekke oasis from end to end. He received the greatest assistance in his scientific researches from the various Russian officials he met with.

THE French Government have laid before the Chamber of Deputies a credit of 70,000 frs. (£2,800) for the new expedition which Dr. Cravaux intends to undertake in South America. Starting from Buenos Ayres, he proposes to ascend the Paraguay River as high as possible, and then to strike across to some of the less-known sources of the Amazon. Dr. Cravaux himself will descend the Tapajos, of which the upper waters are entirely unknown; while a companion, M. Billet, chosen for his astronomical qualifications, will similarly descend the Tocantim, another tributary of the Amazon.

THE Rev. T. Duke, of the South American Missionary Society's station on the Rio Purús, has lately written home to say that he was about to undertake a journey up the river with Dr. Melrose, an American gentleman, his more immediate object being to explore the Panany tributary, and also to reach the Indian tribes living along some of the other affluents.

Two young Belgian officers, MM. Storms and Constant, have just started from Zanzibar to join the expeditions of the International African Association in East Central Africa.

#### SCIENCE NOTES.

*New Carboniferous Fishes from the South of Scotland.*—A remarkable collection of fish-remains from Eskdale and Liddesdale has been studied by Dr. Traquair, of Edinburgh. The fossils were obtained from the Calciferous Sandstone series, which appears to be equivalent to part of the lower portion of the Carboniferous Limestone series of England. The collection of fishes contains representatives of a large number of new species, of several new genera, and of one new family. The new family is called the *Tarrasiidae*, from Tarras Foot in Eskdale, where a typical specimen was discovered by Mr. Macconochie. The genus *Tarrasius* is described as being "so startlingly novel" that even its subordinate position is altogether problematical. Dr. Traquair's description is published in the last part of the *Transactions of the Royal Society of Edinburgh*. In the same volume, Mr. B. N. Peach, who is acting as palaeontologist to the Geological Survey of Scotland, has described some interesting new forms of phyllopod and decapod crustaceans and some fossil scorpions, many of them being from the same localities which have yielded the new fish-fauna.

DR. J. COSSAR EWART has been appointed by the Crown to the Chair of Natural History in the University of Edinburgh, vacant by the resignation of Mr. E. Ray Lankester. Prof. Ewart is still a young man. In 1874, he took the degree of M.B. at Edinburgh; from 1875 to 1878 he was conservator of the zoological and anatomical museums in University College, London; and in 1878 he was appointed Professor of Natural History in the University of Aberdeen. In the latter capacity he organised a station for zoological research on the East coast of Scotland, which is the only one of the kind yet established in this country.

THE triennial Ellis prize at Edinburgh University has been awarded to Mr. Patrick Geddes for his essay on "The Relations between Plants and the Surrounding Atmosphere."

#### PHILOLOGY NOTES.

THE completing part of vol. vii. of the *Transactions of the Society of Biblical Archaeology*, which is now in the hands of the printer and will be issued to the members in a week or two, will contain the following papers:—"The Stele of Mentuhotep," by Mr. E. L. Lushington; "The Assyrian Numerals," by M. Geo. Bertin; "The Campaign of Rameses II. in his Fifth Year against Kadesh on the Orontes," by the Rev. H. G. Tomkins; "A Contract Tablet of the Seventeenth Year of Nabonidus," by the Rev. J. N. Strassmaier; "The Papyrus of Bek-en-Amen, in the Municipal Museum of Bologna," by Prof. Kmenek-Szedlo; "The Inscribed Stones from Jerabis, Hamath, &c.," by the secretary, Mr. H. Ryland. Maps and plates will illustrate these papers; and there will also be issued ten plates of photographs and drawings of the inscribed stones discovered at Hamath, Jerabis, &c., of which either casts or the originals are now in this country—inscriptions which have been decided by many to be the writings of the Hittites.

THE French Minister of Public Instruction has laid before the Chamber of Deputies a credit of 79,000 frs. (£3,160) for the purchase of the entire library of books and MSS. belonging to the late Mariette-Pasha. One portion of the books, numbering 3,000 volumes, is said to form

an almost complete bibliography of Egyptological publications from the year 1840 onwards. This portion, which is valued at 50,000 frs., it is proposed to deposit permanently with the French school at Cairo. The MSS., which are valued altogether at 24,000 frs., are a yet more interesting collection. They include all the original correspondence, &c., relating to the discovery of the Serapeum at Memphis (which M. Maspero is now editing for publication); and these it is proposed to preserve in the Bibliothèque nationale, by the side of the MSS. of Champollion.

The following are some of the courses of lectures that will be given at the Collège de France during the coming half-year, hardly one of which can be said to have its corresponding representative in this country:—"The Chinese Religion," by M. Albert Réville; "The Private Life of the Athenians, from their Literature and their Monuments," by M. Ollivier Rayet; "The Rules of Poetical Composition in Ancient Egyptian," by M. Grébaud; "The Earliest Semitic Inscriptions," by M. Renan; "The Grammar of the *Langue d'oïl*," by M. Gaston Paris; "The Ancient Literature of Ireland," by M. d'Arbois de Jubainville; "The History of Provençal Poetry in the Twelfth Century," by M. Paul Meyer; "Latin Grammar, as illustrated by Oscan and Umbrian," by M. Michel Bréal.

M. OPPERT has been reading a series of papers before the Académie des Inscriptions upon the cuneiform inscriptions in the Sumerian language. Of two of these he gave translations—one on the back of a statue, purporting to be that of one Gudea, governor of Sirtella, who promised to give daily certain measures of milk and bread to his god Ninvah; the other of one Urbar or Likbagus, also governor or king of Sirtella, enumerating the temples he had built to his several gods. M. Oppert identified two names—Maggan and Melukka—occurring in the first inscription as places from which building materials were brought, with the peninsula of Sinai and Libya. M. Georges Perrot commented upon the difficulty of believing that the inhabitants of Chaldaea at that time could circumnavigate Arabia; but M. Heuzey thought the objection not fatal, for with Orientals "le temps est peu de chose," and water transport is always adopted by preference. Surely it ought not to be impossible to ascertain what is the stone used, and whether it actually occurs in the neighbourhood.

THE Society for the Promotion of Science and Art of Utrecht offers a prize of 300 florins for the best essay on the works of Aristophanes and Thucydides with regard to their respective value for the study of their time. The treatises must discuss the opinions of Herr Müller-Strübing, of London, formulated in his book *Aristophanes und die historische Kritik*, and may be written in Latin, Dutch, English, German, or French. They should be delivered on December 1, 1883.

THE abbé Favre, Professor of Javanese and Malay at the Ecole des Langues orientales vivantes, has just published a French-Malay Dictionary. He is already known for his Malay-French Dictionary and his Malay Grammar.

THE Royal Academy at Berlin has just issued the ninth and eleventh volumes of the series of Greek Commentaries upon Aristotle, which will form a collection of about thirty-five volumes in all. Though numbered nine and eleven, these are the first to appear.

## MEETINGS OF SOCIETIES.

## SOCIETY OF HELLENIC STUDIES.—(Thursday, April 20.)

E. M. THOMPSON, Esq., V.P., in the Chair.—Mr. J. Reddie Anderson exhibited and commented on a number of terra-cottas collected by him at Tarentum. Among these were *antefixa* exhibiting several types of Gorgon-head, earlier and later; also a head of the tauriform Dionysus and one of Pan. The smaller terra-cottas were mostly heads of Dionysus and other deities of his circle.—Prof. P. Gardner read a paper on the palaces of Homer, more especially the house of Odysseus, in which he examined the usage in Homer of various terms as applied to parts of the house. Of the three parts of the house, αὐλή, μέγαρον, and θάλαμος, the writer compared the αὐλή to a farm-yard, with out-buildings and store-houses round it; the μέγαρον, to the Scandinavian hall, or the living-room of mediaeval barons. As to the θάλαμος, the quarter appropriated to the women, its arrangement and divisions are not to be made out from the words of Homer.—The Secretary read part of a paper by Prof. Jebb on Pindar, treating alike of the subject-matter and the language of the poet.—The Chairman announced that the society contemplated the formation of a fund for prosecuting excavations on Greek soil.

## ROYAL HISTORICAL SOCIETY.—(Thursday, April 20.)

DR. ZERFF in the Chair.—After paying a tribute to the memory of Longfellow, who was an honorary fellow of the society, Mr. C. Walford read a paper on "Fairs: their Influence on the Commerce of Nations."—A discussion followed, in which Prof. Seligmann, Mr. E. Walford, Mr. Gomme, and Mr. Fleay took part.—A paper by Mr. Fleay on "George Gascoyne" brought the proceedings to a close.

## PHILOLOGICAL SOCIETY.—(Friday, April 21.)

HENRY SWEET, Esq., V.P., in the Chair.—Mr. Alexander J. Ellis, President, read a paper on the dialects of the Midland and Eastern counties, in continuation of that read on December 17, 1880, on those of the Southern counties. He explained that he had found it best to divide all English speech into four parts by the treatment of the Anglo-Saxon short and long *u*, as in the words *some house*. These were pronounced practically as in received pronunciation in the Southern and Eastern counties, south of a line through Shropshire, the north of Worcestershire, south of Warwick, and through Northamptonshire, with the extreme north of Hunts and Cambridgeshire, to the sea. But north of this line they became *u* with curious varieties of *house* in the Midland counties between this line and another through extreme south of Cumberland and Westmoreland, east of Craven and north of Leeds, and east of Doncaster in the West Riding of Yorkshire, and thence to the sea through north of Lincolnshire just north of Great Grimsby. North of that line to about the Scotch border they said *u* *u* *house*, which in the Lowlands became *some* (as in received speech) and *u* *u*. Mr. Ellis then proceeded to examine the Midland speech, which he said was phonetically the most interesting in England, as it contained so many "missing links" between the old sounds of *i*, *u* (as *ee* and *oo*), and the new, as in *time*, *town*, and showed the curious transformations to which these diphthongs were liable. He then explained the several phonetic districts which he proposed to form, showing their boundaries on maps, and describing their characteristics, and defended a phonetic classification as the only one dependent on observation. His paper forms the second stage of preparation for fifth part of his *Early-English Pronunciation*, which will deal with the phonology of existing English dialects.

## ROYAL ASIATIC SOCIETY.—(Monday, April 24.)

SIR EDWARD COLEBROOKE, BART., M.P., President, in the Chair.—Prof. Monier Williams read a paper on "The Vaishnava Religion," and laid before the society the *Sikshâ-patri*, or directory of the Swâmi-Nârâyana sect, edited and translated by himself from a MS. given to him when at their head-quarters at Wartâl and Ahmadabad. In his

paper he showed the relationship between the Vaishnava religion and three other forms of the Hindu religious system—viz., Vedism, Brahmanism, and Saivism. The two latter were too severe and too philosophical for the mass of the people; hence a reaction in favour of Vishnu, the worship of whom implied a personal devotion to a personal god who could satisfy the yearning of the human heart for a religion of faith and love. Such a god was Vishnu, who evinced his interest in human affairs by his frequent descents and incarnations. Vishnu-worship, connected as it was with that of the sun, was the popular worship of India, though much split up into sects opposed to one another. The four principal sects were founded by Râmânujâ, Madhva, Chaitanya, and Vallabha. The Râmânujâ sect was again divided into two sub-sects—Vadakalaia and Ten-kalaia. Their views as to the nature of the soul's dependence on the Supreme Being differed much in the same way as do the Arminians and the Calvinists. The Ten-kalaia had one of the finest pagodas in India, near Trichinopoly. The Madhva sect were the nearest to Christianity. They were strong opponents of Sankara's duality. The Chaitanya sect held that devotion to Vishnu was best symbolised under the figure of human love. The Vallabha sect held similar opinions, and were the Epicureans of India. They taught that the way to salvation was through eating and drinking and enjoying the good things of life. It was in opposition to this sensual view of religion that the modern reformer, Svâmi Nârâyana, founded a new sect and wrote his *Sikshâ-patri*, a sort of religious directory, consisting of 212 precepts which give a good idea of the purer side of Vaishnavism.—At the conclusion of the paper an interesting discussion took place, in which the President, Sir Bartle Frere, Dr. G. U. Pope, Mr. Brandreth, Mr. Wood, and others took part.

## FINE ART.

J. A. MCNEIL WHISTLER.—An ETCHING of CHELSEA by this celebrated Etcher forms one of the Full-page Illustrations to the May Number of the ART JOURNAL. Price 2s. 6d.—2s. 11s. LANE; and of all Booksellers.

CHELSEA.—Proofs of this ETCHING by J. A. MCNEIL WHISTLER, in the May Number of the ART JOURNAL, may be had from the Publisher, price 2s. 6d., or from the principal Printers.—2s. 11s. LANE, E.C.

## THE ROYAL ACADEMY.

## (First Notice.)

A GREAT improvement has been made this year in the arrangement of the galleries by the transfer of the bulk of the sculpture to the Lecture Room. The vestibule is left clear; and the north room opposite the staircase, which was dismal as a repository for sculpture, makes as pleasant a picture gallery as any of the rest. For the first time in the history of the Royal Academy, sculpture has room enough and light enough, and the many fine works of this kind which have been sent this year have been arranged with much taste. Conspicuous, as they deserve to be, stand Hamo Thornycroft's "Artemis" and "Teucer," the one beautifully executed in marble, the other (much improved by the omission of the stump that gave support to it in its plaster existence) in bronze. Armstead's beautiful recumbent figure of the late "Dr. Heaton," his sprightly "Ariel," and a stately figure of "Automate" by George Lawson are also among those which can be seen on all sides; and a sloping screen has been arranged for medallions and medals. Further criticism on these and other pieces of sculpture we must reserve for the present, noticing only that Legros' "Sailor's Wife," now cast in bronze, seems to us to merit all the praise which we bestowed upon it some few months ago, when the clay model was yet wet. There are many other proofs in the room that sculpture has a new life in England, and that the Academy have done wisely in devoting such a noble chamber for its display.

Of the pictures, it may be said generally that they bear also traces of new life—life strong and earnest and healthy, not resulting in any great

achievement, but producing little that is vivid or unhealthy. We do not speak of the work of the older men, good, bad, or indifferent, but of the rising generation, the efforts of whom are generally vigorous and manly in subject, and show decision and skill. Such are J. D. Linton, who, with the third of his series of large pictures illustrating the life of a soldier of the sixteenth century, has increased his already high reputation as a designer and a colourist; Seymour Lucas, who adds true dramatic power to great force of colour and drawing; and R. Caton Woodville, whose terrible picture of the "Saving of the Guns at Maiwand" is one of the finest things here. Mrs. Elizabeth Butler, with her "Floreat Etona," and Ernest Crofts, with his scenes from Waterloo, show good art directed to a noble and national purpose. Perhaps the British school exhibits its decided advance in nothing more than the way in which battle-scenes are painted. Other young painters who show great strength are Dendy Sadler, whose humorous and finely painted picture of "Monks at a Fish Banquet on a Fast Day" is remorselessly skied, and W. Logsdail, who sends several small but vivid pictures of nooks in Venice, with figures characteristic, and not without humour. If to these comparatively well-known names we add those of W. Christian Symons and T. C. Gotch, we shall illustrate, without exhausting, the list of juniors who paint not only with colours, but with brains. We do not remember any picture in the gallery which is more complete and beautiful in colour-drawing and sentiment than the "Phyllis" (11) of this last and (to us) new painter.

While the exhibition gives plentiful assurance that the ranks of the Academicians and Associates will not fail for want of worthy recruits, there is no sign of a genius as great as that of Leighton, or Millais, or Pettie. Few Presidents have justified their position, artistic and social, so completely as Sir Frederick Leighton; and his pictures this year are worthy of him. His "Phryne" is one of his finest and noblest conceptions. It bears, as all his work should do, the stamp of his individual imagination; it is in no way an imitation of a Greek statue; it is coloured with the colours which are distinctly Leightonian; but it is classic, nevertheless, in its complete seriousness. The artist might have painted her as bare as a French artist would have done without loss of modesty, but he has not injured her beauty by his reticence. She is a superb ideal of female beauty, and a noble presentation of the divinity of physical perfection. To prevent rash judgment as to the curious colour of the flesh, the visitor should know that it is meant to represent flesh gilded by the sun. The President's other pictures are full of the luxury of line and colour in which he takes such full and pure delight. The pictures of Millais are portraits only, but then they are portraits which he has rarely, if ever, excelled. The most daring of these is that of "Cardinal Newman," in his robes of thick, rosy silk and scarlet skull cap, painted in all their strength of colour. That the success is absolute we cannot say. In the shifting gleams of an April afternoon, the face grew now white and now yellow, the modelling of the features appeared and disappeared. We can at least say that it is splendidly drawn and treated with marvellous breadth. Less trying, and exquisite in colour as well as lifelike in expression, is Millais' portrait of "Mrs. James Stern." His fine portrait of "Sir Henry Thompson," his sweet "Dorothy Thorpe" and "Princess Marie," and the rest we must leave for the present. Several pictures by Pettie more than sustain his reputation for dramatic imagination and splendid colour. "The Duke of Monmouth's Interview with James II." (30) is a work which it would be difficult to over-praise. Another artist who seems to have ex-

celled himself this year is Boughton, who sends two scenes from Holland remarkable no less for their truth to nature and vigorous character than for their pure sweet colour. In portraits the exhibition shows extraordinary strength. Holl's "Sir Arthur Hobhouse," Herkomer's "Archibald Forbes," and Collier's "Charles Darwin" are three out of many by these and other artists to which we shall have to draw further attention. If in landscapes we make mention now only of Albert Goodwin's "Sindbad" and Brett's "Gray of the Morning," it is because they are unique in their way. The former is an instance of true poetical imagination; the latter, of the power to render nearly all of nature. The number will no doubt be increased by further examination, but these are the pictures by English artists which struck us, at a first and necessarily hurried survey, as the most remarkable.

The exhibition does not, however, depend entirely upon native efforts for its interest. Some portraits by Fantin, perfect in skill; a fine example of the rich and unique gifts of Munkacsy; two by the equally accomplished but very different hand of Van Haanen; two not less skilful by F. Andreotti; a capital example of Francesco Vinea; Henri Motte's very clever "Geese of the Capitol" (582); and an Edouard Frère are among foreign contributions to the Academy of 1882 which vary and strengthen it.

COSMO MONKHOUSE.

#### THE ROYAL SOCIETY OF PAINTERS IN WATER-COLOURS.

THE Society of Painters in Water-Colour has opened what is, on the whole, a good exhibition; but its excellence is due to the contributions of the elder members of the body and to certain younger members and associates elected a few years ago. Very recent elections have added little to the prestige of the Society or to its capacity to furnish a worthy and attractive show; and the most recent elections of all—save, perhaps, that of a graceful lady artist, Miss Constance Phillott—have been the least intelligible, unless it is no longer to be understood that a rightly established reputation for the painting of water-colours should be the basis of choice. From among those artists who are excellent figure-painters an effort should be made to recruit the ranks of the Society, if the Society is to continue to represent the Art. At present—with two or three exceptions to be noted farther on—the strength of the Society lies chiefly in landscape art. The strength of water-colour has generally been in landscape art. In the old time the names of Hamilton, Mortimer, and Wheatley made but an insignificant show against the names of Turner, Cox, Dewint, and Copley Fielding. But with the change of method in water-colour art there has come, naturally enough, some change and enlargement of aim. A few figure-painters within the Society—Mr. Carl Haag, Mr. Alma Tadema, Mr. J. D. Watson, Mr. Buckman, Mr. Radford, Mr. Parker, and Mr. Brewtnall—represent, on different sides, in various ways, this change and this enlargement of aim; and outside the "Society," or rather within the "Institute," it is represented brilliantly by men as widely separated as Mr. Charles Green and Mr. Linton, Mr. Carter and Mr. Clausen. The old Water-Colour Society will more fully reflect the tendency of the day when figure-pieces appear on its walls in larger proportion than they do at present, and when the show of landscape art is more closely restricted to what is original and the result of personal observation. At present, along with a good deal of work that is original and delicate, one comes upon far too much that is imitative and petty, laborious and trivial.

But, as was hinted at the beginning, the present show is not a show to grumble at as a whole; and, avoiding the criticism which mentions only to blame, we offer a few notes on work that seems to us excellent, or work that has in it fine qualities not overpowered even by noticeable defects. Neither Mr. Tadema nor Mr. J. D. Watson are contributors this year. Mr. Smallfield sends a drawing of "Peg Woffington with the Manager Rich"—a drawing well considered, careful, and dainty, yet verging, it may be, on the petty. Herr Menzel, an honorary member of the Society, and highly distinguished in Germany, sends one head, the head of a knight, full of force and character, of which the treatment is as skilled as it is modern. Only within the last quarter-of-a-century could such work have been produced in water-colour. This drawing bears date 1864, and it shows how well Herr Menzel has been abreast of his time. Perhaps even he would have been less completely abreast of it if he had studied water-colour art in its own headquarters—London—instead of bringing to its practice little knowledge, we may presume, of its earlier traditions and much sympathy with the aims of artists working in a different medium. Mr. Carl Haag's contributions of Eastern subjects, five in number—the carefully studied portrait, the brilliant and gorgeous decoration, the beast of burden with its trappings of finery, the dramatic incident of the sword just drawn from its scabbard—exhibit the whole of the familiar skill, and are among the most accomplished examples of keen observation and of pure painting. Mr. Brewtnall, a younger member of the Society, is apt to be genuinely dramatic, but this time he is too merely theatrical. More than once we have enjoyed his work: it is inventive and suggestive; it is life as it actually is, seen skilfully and skilfully put down. But this year, in "The Visit to the Witch," his imagination has served him but incompletely and the gestures of the graceful girls who break in upon the gray hag's solitude are such as may have been seen behind the foot-lights—they are those which an academical actress, rich in training and deficient in impulse, would be surest to select. This is wrong with the picture—this, and very likely nothing else. Mr. Tom Lloyd sends a healthy composition of "Potato Gatherers," girls and children, clustered in a field by the sea; and Mr. Parker, an engaging figure-painter, who has something in common with Mr. Lloyd, since the type beloved of both is agile and robust, not weary or lackadaisical, contributes a couple of drawings which are a refreshment to the senses. One of these is the portrait of "Mopsa," a justly self-confident young woman, yet rosy under a red cap, and with the red and gray of a tight-fitting gown; the other is a vision of the five maids of Dame Durden, rustic figures, with the health of the farmyard and the grace of the opera bouffe. Mr. Buckman paints modern life, and not only modern persons. He has never perhaps before been quite so delicately humorous as in his "Toast of the Army and Navy." The toast is given by a girl standing at a table outside a village inn. It will be drunk with little enthusiasm by an aged wayfarer, and will be responded to by an enamoured private and two observant tars. Sometimes Mr. Buckman's humour has been a little *chargé*; his enjoyment of character has allowed him to touch the bounds of caricature; but as regards the present drawing nothing can be better in modern *genre*—it is artistic as well as funny, pleasurable as well as adroit. Of the treatment of the figure and its accessories in a spirit avowedly poetical, the work of Mr. Henry Wallis is generally a type. We have sometimes liked him better when he has worked upon a larger scale than he has adopted in the drawings just now exhibited; and his

realisation of Shaksperian heroines falls short of what is altogether satisfactory. But in his "Meeting of Shylock and Tubal," where Tubal brings to his comrade all the bad news of Jessica the spendthrift, Mr. Wallis shows himself able to deal adequately, even powerfully, with character and incident. His Shylock and Tubal are figures that remain in the memory. Mr. Radford is now and then more sensuous than poetical; but there is place for his art in its concern with the roundness and the softness of the figure, with the warmth of flesh colour, generally so little understood (Mr. Radford, if anything, is inclined to exaggerate it) and with the beauty and charm of selected accessories, marbles, precious stuffs, and faint and delicate hues, that exist to minister to luxury.

Much commonplace landscape work, much landscape work of mediocrity, stale and unprofitable, since not expressive of the individual man and the individual impression, may safely be passed by; and with it must be passed by not a little of better labour—the labour of veterans bearing distinguished names—if attention is to be concentrated on the fresher products of landscape art in Pall Mall. The Messrs. Frupp are represented in familiar ways; Mr. Albert Goodwin perhaps hardly so well as at the Winter Exhibition; the refinement of Mr. Alfred Hunt has nothing of novel; the force of Miss Montalba is what it was half-a-dozen years ago—her sketches are brilliant and they are equal, they are still striking, and they are still simple; but Mr. Hale appears to us to have gained in subtlety and Mr. Herbert Marshall in power. Two of Mr. Hale's most notable drawings are those entitled "Across the Moor" and "Light lingers in the West." The first deals with the savage beauty of a desolate land—a beauty promptly perceived; the second, with the yet more refined interest that belongs to the passage of unwonted light over a country remarkable, so to say, more for expression than form. This is poetical landscape, but its poetical power finds sustenance in a store of delicate observations of natural fact. Mr. Herbert Marshall's work is of various quality; and we have once or twice—as in the case of his "Durham" in the Winter show—questioned, not his choice of a theme, but his method of treatment of themes unsuited to display him at his best. Among cities, he is most at home in London; among rivers, the Thames is for him, but it must be the Thames below bridge. His increasing strength is most completely evidenced in the present exhibition by his "Westminster—Evening after Rain." The spectator stands in the damp street, all the roadway studded with pools that catch reflections of the evening light. Buildings stand in the foreground to right and left, and, farther away, the monumental towers rise gray against the gray and orange-red sky. The sea-pieces of Mr. Francis Powell are individual and peculiar. Often it requires a little observation to like them at all; and sometimes one is inclined to resent a so persistent choice of effects of colour and light more rare than beautiful. Mr. Powell sees the sea as no one sees it but a yachtsman—in its unvisited leagues, and at strange hours. This year, "Sunset over the Sea" is his most interesting contribution. He has wrung a new effect out of water and sky; a curious purple and woolly cloud brooding over an horizon else clear and unbroken, pale greenish lemon coloured. The effect is closely seen and closely recorded, though no one can pretend to deem it as delightful as that depicted in a drawing shown some months ago, in which a ship rode stately upon calm waters, and white sails, fully spread, caught the glow of gold from the west. But even when the charm of "Opposite the Sunset" is not equalled, there is suggestion of the skill which made that charm possible.

FREDERICK WEDMORE.

### THE TERCENTENARY OF SIR FRANCIS DRAKE.

AT Messrs. Henry Graves and Son's galleries in Pall Mall three pictures of much national interest and artistic merit are now on view. They all illustrate the great victory over the Spanish Armada. One of them is Mr. Seymour Lucas' oil picture of the famous bowling-green scene at Plymouth, which was exhibited at the Royal Academy in 1880. Sir Francis Drake, determined to win his game first and beat the Spaniards afterwards, is taking careful aim, bowl in hand, notwithstanding the remonstrance of Lord Howard of Effingham. Frobisher, Raleigh, Mannington, Sellinger, and other captains, the faces of most of whom are from authentic portraits, are introduced into the animated scene, which is as truly historical as such work can be, for the costumes, arms, &c., are very carefully studied, and the landscape is taken from the very spot where the game was played. The other pictures are in water-colour, by Mr. Oscar Brierly, who has studied the ships of the period with equal care. One represents the "Sailing of the Armada from Ferrol," the other "The Decisive Battle off Gravelines." The latter will be remembered by all visitors to the Royal Society of Water-Colours. The ships in both are finely drawn and grouped, and the latter is vividly imagined. M. Paul Girardet has been long engaged in engraving Mr. Seymour Lucas' picture, Mr. David Law has finished an etching of Mr. Brierly's battle scene, and his etching of the "Sailing from Ferrol" is far advanced. The quality of M. Girardet's work was, of course, assured from the outset; but this is, as far as we know, Mr. David Law's first essay in interpreting another man's work. Even those who duly appreciate his remarkable skill with the point will feel that his success is a matter for sincere congratulation.

To add to the attractions of the exhibition, Mr. Arthur Lucas has taken pains to gather together an interesting collection of objects commemorative of Sir Francis Drake and the defeat of the Spanish Armada. Among these are a portrait of Sir Francis, lent by the Mayor of Plymouth, and a set of the engravings of the tapestries made in Flanders after designs by Vroom to illustrate the national victory. The original tapestries were burned with the Houses of Parliament. There is also a sword, lent by Lady Drake, said to have been presented by Queen Elizabeth to Sir Francis on his return from his voyage round the world; the blade is engraved with ship and globe. The Baron de Cosson has lent some fine pieces of armour of the same period; and among other curiosities is a portrait of Columbus supposed to have been taken out of one of the Spanish galleons.

### NOTES FROM ROME.

Rome: April 1882.

AN important discovery has been made during the excavations in the Roman Forum. A piece of the plan of Rome, which was engraved on marble during the reigns of the Emperors Septimius Severus and Caracalla, was found built into a wall of post-classical date. In the Pontificate of Pius IV., a quantity of fragments were dug up on the spot where stood the convent of SS. Cosma and Damiano, and many of these fragments can now be seen in the balustrade of the steps of the Palazzo dei Conservatori in the Capitol. Since the time of Pius IV., no more pieces have been found, with the exception of one solitary fragment, which was brought to light in 1867 on the same spot. It may be noted that no portions of this plan of Rome have ever been found outside the limits I have indicated. But this discovery is not merely remarkable on account of the fragment having

been found where it might least have been expected. Curiously enough, the portion of the plan now brought to light is concerned with the very section of the Forum in which the excavations are being carried out. The piece found fits, with one small break, another fragment which has been figured by Prof. Jordan in his work, *Forma Urbis Romae* (tab. iii., n. 20). We can trace the left and a portion of the rear of the temple of Castor and Pollux, some buildings which lay between this temple and the Palatine, the houses built against the Palatine, and, what is of still greater interest, the flight of steps leading from the Palatine to the Forum which was constructed to avoid the fatiguing ascent of the *Clivus Victoriae*.

The founding of Rome is celebrated on April 21; and this year Sig. Michele Ruggiero, who holds a post in connexion with the archaeological excavations, published on that day a work on the discoveries made in the ancient Stabia. The book is illustrated with plans of the buildings which have been explored, and contains various documents from the public archives.

At Formello, situated within the limits of the ancient Veii, a tomb has been discovered which had already been opened at a remote period, but was still able to yield some relics of great interest. Among these are fragments of a painted Corinthian vase of careful finish, which formed the subject of an address by Prof. Robert at a recent meeting of the Imperial Archaeological Institute of Rome. But the most interesting object of all is an Etruscan vase, bearing an incised inscription in two alphabets. Prof. Mommsen delivered an address at the meeting of the Institute held on April 14, when he argued that these characters are identical with the alphabet transmitted from the Chalcidians to the Etruscans, on which the alphabets of all the Italian peoples were modelled. In the Professor's opinion this vase is of no less interest than its well-known prototype the alphabetic vase of Cerveteri, generally believed to have come from the Regulini-Galassi tomb. Prof. Mommsen addressed a most distinguished audience, including—besides those Roman scholars who frequent the Institute, such as the Comm. G. B. de Rossi, Bruzza, and others—Prof. Jordan, of the University of Königsberg, who has come to take part in the Forum excavations; Prof. Robert, of the University of Berlin; Prof. Boissier, of the Institut de France; and Prof. Geffroy, the chief of the *Ecole française d'Archéologie de Rome*. At this same meeting I exhibited a plaster cast from a terra-cotta *piramidetta* found in the district of Metapontum, which bears in archaic Greek characters an incised votive inscription to Herakles. The characters are such as were used by the Achaean colonists, and their date is fixed as B.C. 500. This inscription, of which Dr. Hütson was able to decipher two verses, is of equal antiquity with the other from Metapontum dedicated to Apollo, which was published in the *Notizie degli Scavi*, 1880, p. 190.

F. BARNABEI.

[M. Bréal read a paper on the Formello vase before the Académie des Inscriptions on March 24. See ACADEMY, No. 519, p. 271.]

### ART SALES.

IF the collection of Mr. J. S. Forbes, of the London, Chatham, and Dover Railway Company, was not well known; it must, nevertheless, have been among the most notable of the gatherings of contemporary pictures. It was sold last Saturday by Messrs. Christie, Manson, and Woods, and fetched, on that day, between £17,000 and £18,000. Noticeable were the French landscapes of Diaz, Corot, and Jules

Dupré. There was more than one example of Josef Israels—among them, the important picture exhibited at the Royal Academy, "Out of Darkness into Light," which realised £1,102. A set of Spring, Summer, Autumn, and Winter, by Munkacsy, sold for £509; and his "Picking Lint in War Time" for £1,207. A cattle piece by van Marcke fetched £446; and a picture by a Scandinavian artist—Tide-land—which made a certain sensation some few years ago, sold for £682. This was the "Norwegian Wedding." Baron Leys's "Coming from Church" sold for £362. There were likewise good specimens of the two Bavarian painters Munthe and Heffner. The collection was richest in foreign work. It contained a Charles Jacque, a Schreyer, a Goupil, a Frère, and a Henriette Browne, besides those which we have mentioned.

#### NOTES ON ART AND ARCHAEOLOGY.

WE are glad to hear that the important collection of water-colour drawings by Thomas Girtin in the British Museum is now on view in the King's Library of that institution.

A CONSIDERABLE exhibition of water-colour drawings has just been opened in Brighton, comparing not unfavourably with any of the past annual shows, though Brighton has lately lost, by the death of Mr. Hill, the well-known tailor, its most constant art patron, and one who did much to organise the frequent exhibitions. What will become of Mr. Hill's own large and really important gallery of modern pictures is not yet known to us. But it is of the Brighton public exhibition that we now write. Many of the drawings are contributed by well-known artists. Mr. J. M. Jopling's "Page in Waiting" is an interesting and skilled study of colour and costume. Miss Clara Montalba sends a forcible work, "Fishing Boats at Hastings." Mr. A. F. Grace, who is now being recognised as one of the most delicate and conscientious of contemporary workers in landscape, contributes "Afternoon in the Hayfield." "At the Well" is an agreeable work by Blanche Macarthur. Mr. Clem Lambert sends many brisk and dainty little studies, showing close reference to Nature rather than any pre-occupation with the problems of composition. Mr. Radford sends at least one study of the figure aiming at classic grace, though it be the grace of a decadence. Perhaps his draughtsmanship is not invariably faultless, but there is life in his work, and the semi-nude figure is treated by him with a regard to the truth of flesh tints not too common in our English school. Altogether, the exhibition is not unworthy.

THE Society for Photographing Relics of Old London will this year give to its subscribers six photographs of Ashburnham House, and three of the large mansions in Lincoln's Inn Fields with which more historical interest is associated than most of the passers-by know. The usual dozen will be made up by photographs of Little Dean's Yard, Westminster, the Banqueting House at Whitehall, and the Water-gate of York House. The secretary of this useful society, which is now in the eighth year of its activity, is Mr. Alfred Marks, Long Ditton.

MESSRS. CHRISTIE have begun the removal from Hamilton Palace of the pictures and decorative furniture which they will shortly sell in London. The sale catalogue will be illustrated with numerous photographs. An interesting description of the furniture, &c., appeared in the *Scotsman* of April 25.

THE Council of University College, Liverpool, will shortly fill up the Boscoe Chair of Art. The duties of this professorship include the delivery of lectures upon the history, theory, and practice of Art. The chair is held on a

tenure terminable at the end of five years, and the salary (partly dependent on fees) is guaranteed not to fall below £400 a-year.

A SOCIETY of engravers with the burin is to be formed at Paris. It is quite time one was formed in England, or that some steps were taken here to encourage this fine old art. The prize for students of engraving at the Royal Academy is not even competed for now. It is to be hoped that one of the results of Mr. Hamerton's book on *The Graphic Arts* will be the true revival of engraving as well as of lithography as fine arts. Both have qualities which cannot be supplied by any other white-and-black process.

THE *Allgemeine Zeitung* announces the immediate publication, in a separate volume, of Adolf Menzel's illustrations to the works of Frederick the Great. When Frederick William IV. was arranging for an *édition de luxe* of the great King's works, he determined to give the text a special artistic attraction by small wood-cut vignettes. He selected as the artist Adolf Menzel, then twenty-seven years of age, who had shown his aptitude for the task by his illustrations to Franz Kugler's popular *History of Frederick the Great*. Menzel, in co-operation with the engravers Unzelmann, O. and A. Vogel, and H. Müller, executed 200 vignettes between 1843 and 1849. Hitherto these vignettes have been buried in the thirty folio volumes of the *édition de luxe*, of which a few copies only were printed by Frederick William IV. and the present German Emperor for presents to distinguished personages. The Berlin firm of B. Wagner (H. Pächter) has now obtained permission from the Emperor to issue these 200 vignettes as an independent work, with a short explanatory text by the well-known art-critic L. Pietsch. The printing of the wood-cuts will be executed direct from the wood-blocks, at the Imperial Printing House, under the superintendence of Prof. Albert Vogel, the only survivor of the original engravers. Only 300 copies will be printed, and the price will be 300 marks a copy.

PARIS is to have her Crystal Palace at St-Cloud. The terms upon which part of the park is to be leased have now been settled. The lease or "concession" is for thirty-six years, with power of renewal for twelve more, when the buildings will become the property of the State. Besides the Crystal Palace, a building is to be erected, on the site of the old Palace of St-Cloud, for a "musée rétrospectif." The Crystal Palace will be visible from Paris.

It is stated by the Christiania paper *Morgenbladet* that Lieut. E. J. Mørch, of the Royal Norwegian Navy, and Mr. Ole Möller, of the firm of Galbraith, Pembroke and Co., have been appointed commissioners for Norway at the Exhibition of Ships' Models which is to be opened in London on May 1; and Mr. O. Richter, consul-general for Sweden and Norway, has kindly placed his services at the disposal of the special committee. Upwards of fifty models from different parts of Norway left Christiania in the *Cameo* on the 20th inst.; and among them is a model of the celebrated viking ship from Sandherred, made by Mr. Blom, inspector of ship-building, which will be a most interesting supplement to the descriptions given at the last meeting of the British Association and elsewhere.

THE death is announced, in his eightieth year, of Innocenzo Fraccaroli, an eminent Italian sculptor, professor at the Academies of Florence and Milan, and corresponding member of the French Institute since 1863. His best-known works are the monument to King Charles Emmanuel at Turin, and an "Eve after the Fall," exhibited at Paris in 1867.

THE triennial exhibition of pictures, &c., will be held this year at Antwerp during the month of September.

MR. HERBERT, R.A., has been so busily occupied up to the last that he has been unable to admit any friends to his studio. But the walls of the Academy show that the veteran brain and hand are still vigorous. One of his paintings, "Queen Esther passing through a Babylonian Court," embodies the special learning that Mr. Herbert laboriously acquired for his great wall-picture of "Susanna and the Elders;" another, "The Appointed Hour," recalls in its theme some of his earlier works; while a third, representing a Greek tomb desecrated by Arabs, with Nemesis appearing in the shape of two lions, will, we venture to say, attract special attention by its dramatic boldness of treatment.

In the *Gazette des Beaux-Arts* for this month M. Charles Ephrussi contributes a second article on the *His de la Salle* collection of drawings by the Old Masters, M. Alfred de Lostalot concludes his study of Louis Knaus, and M. Eugène Müntz his papers on the rivalry between Michelangelo and Raphael. M. Anatole de Maignon's "Sonetti d'Arte" deserve a longer notice than we can afford them in these notes. They are little masterpieces of criticism and versification, clearly cut as gems, reminding one not a little of the classical simplicity and severity of Landor. The illustrations, as usual, are numerous and excellent. The etching is by Unger after a Holy Family by Knaus, and is a brilliant piece of work.

#### THE STAGE.

OVER and above "Odette," which must be spoken of next Saturday, the week has given us two novelties at least, if a revival is to be counted among novelties. Neither is of the first importance. To the playgoer chiefly occupied with the purely dramatic aspects of the pieces he sees, the semi-musical or almost wholly musical piece, "Boccaccio," at the Comedy Theatre, will be interesting principally as affording further opportunity for the display of the acting powers of Mr. Lionel Brough and Miss Violet Cameron. But Mr. Brough is hardly at a stage at which advance is possible. It is now many years since, in common with several other low comedians, he addressed himself to the business of embodying the greatest possible amount of self-satisfaction united with the greatest possible amount of stupidity. On the stage such a union is always telling, and Mr. Brough in "Boccaccio" can count at all events upon his old effects. Mr. J. G. Taylor's method may be a little less sane, and he is included in the cast. Miss Violet Cameron is a justly acceptable young actress of operetta. She began by looking pretty, and continued by learning to sing, and has ended—but we hope it will be a long time before she has exactly "ended"—by learning to act. "Boccaccio" marks for her another step in advance, both in professional efficiency and in the favour of the public. Miss Munroe also appears, and knows how to sing. Messrs. Reece and Farnie are responsible for the dialogue; Herr Suppé for the light and graceful music, which is very French in character.

"LONDON ASSURANCE," revived at the Vaudeville last Saturday morning, and destined to be presented again to-day, and likely, we imagine, to take the place of "The School for Scandal" pretty shortly at the evening performances, is an effective stage piece, written at a time when Mr. Boucicault was concerned with literature, and was fired with the ambition to be that second Sheridan which he has never become. It contains many good acting parts, and not

few smart things; but one or two of its most famous "lengths" are in a high degree improbable, and an air of artificiality waits upon its presentation even of simplicity. Still, it is not a bad piece to see, and the revival has been carefully made, especially as far as regards the acting. The cast is at some points strong. No one now plays the courtly elderly gentleman of old-world comedy, or of imitation old-world comedy, so well as Mr. Farren. He learnt it partly from his father, but his own gifts are very considerable and delightful. Then Mr. Henry Neville is in the cast, and Mr. Thomas Thorne; and Mr. Righton plays Dolly Spanker—which David James played when the piece was last revived at the Vaudeville—and he plays it effectively, though with somewhat of exaggeration. The heroines of the drama are less fortunate; at all events one of them is. Miss Alma Murray may represent Grace Harkaway intelligently and appropriately too. No one denies Miss Cavendish's intelligence, but she was not made for Lady Gay Spanker. If, however, the cast is not at all points of the happiest, the management is to be commended for having made it generally strong. "London Assurance" will continue to amuse.

### MUSIC.

#### LISZT'S "DANTE" SYMPHONY AND MME. MENTER'S RECITAL.

MR. GANZ gave his first orchestral concert last Saturday, at St. James's Hall, when the programme included F. Liszt's symphony "Dante's Divina Commedia," dedicated to Richard Wagner. Robert Schumann, in writing concerning Berlioz' Fantastic symphony, says: "The main question, after all, is, whether this music, without text and explanations, has any meaning in itself, and especially whether it possesses vitality." If this canon were to be applied to the first movement of the "Dante" symphony, we fear an unfavourable verdict would be given. We hear wild and discordant sounds, and long, painful, rambling passages. Only for a moment do we catch anything like melody; but it soon passes away, and the noise and confusion become more intense until the movement closes amid the din of the brass, strings, and percussion instruments. It may be asked, What does the text do for us? The first motive, which plays so conspicuous a part throughout the movement, speaks to us of "the city of woe," "eternal pain," and "the people lost for aye," and the crash which immediately follows is intended to portray the celebrated inscription on the gates of Hell, "Lasciate ogni speranza voi ch' entrate." Words from Dante's poem are written over several portions of the first movement; but they add no interest whatever to the music, and merely serve to show how unsuccessful a composer may be whose self-consciousness so obtrudes itself upon him as to stifle all freedom and that spontaneity ever necessary to the production of whatsoever is great in art. The little gleam of light in the *andante amoroso* (a section of the first movement) is supposed to depict the unhappy lovers, Paolo and Francesca, so celebrated in Dante's story. The music here, for the first time, becomes intelligible, and we have a short but graceful episode in 7-4 time which forms a pleasing contrast to what precedes, and indeed to what follows. We need not speak at length about the rest of the symphony. A musical picture of "Purgatory" is indeed novel and curious, but, apart from one or two interesting passages, and some ingenious orchestration, it must be pronounced dull and unsatisfactory. "Para-

dise" suggested to the composer a *chorale* in old ecclesiastical tones, quaint harmonies, and a plentiful use of harps. The feebleness of the last part of this "Paradise" section seems to indicate a conscious sense of failure felt even by the composer himself. The "Paradise" music requires great delicacy in performance, and we fancy that a very perfect rendering would prove it to be more effective, though not great. There was some hesitation on Saturday in the chorus singing, and the orchestra and organ (the published score has only an harmonium part) were not sufficiently subdued. Mr. Ganz had taken great pains with the whole work, and he deserves much credit for affording musicians an opportunity of hearing a composition hitherto known in England only by name. We have in this symphony another item of evidence whereby to judge Liszt as a composer. Herr Ondricek gave a very satisfactory performance of Mendelssohn's violin concerto. He has a good, though not very powerful, tone, and plays with taste and energy. The programme included Beethoven's fourth symphony.

Mme. Sophie Menter, the distinguished lady pianist whose performances last year caused so great a sensation, gave a pianoforte recital last Monday at St. James's Hall. She first played Schumann's "Carneval," but we cannot say that her interpretation of this characteristic work was altogether satisfactory. The rate at which some of the movements were taken was open to objection, the reading of many of the passages was rather *outré*, and, throughout, the playing was objective rather than subjective. Two pieces by Scarlatti were played to perfection. Mendelssohn's "Fileuse" was somewhat lacking in delicacy. Two studies by Henselt and two transcriptions from Schubert by Liszt were magnificently played. After this came a Chopin selection—three preludes, in C minor, G major, and B flat minor, with sundry variations; a mazurka in A minor, played with extreme delicacy; the C sharp minor walse; and the great polonaise in A flat. The pianist's rendering of the last piece was somewhat capricious, and the addition of a *cadenza* by no means an improvement. The last piece in the programme was Liszt's very clever transcription of the "Tannhauser" overture. Mme. Menter gave us last season more than one specimen of her mechanical ability; but her performance of this overture was astounding, and the ease with which she conquered all-but superhuman difficulties simply incredible. Mme. Menter will give a second recital on May 5. The programme includes Beethoven's "Appassionata" and an interesting selection of pieces.

J. S. SHEDLOCK.

Miss Meredith Brown gave her first morning concert at 37 Grosvenor Square, by permission of the Earl and Countess of Aberdeen, on April 25. Miss Brown, whose own singing showed cultivation and refinement, was assisted by Mme. Lemmens-Sherrington, Mr. W. H. Cummings, and M. Ghilberti, vocalists; and Herr Hollander, M. Gustav Libodon, and Master Alfred Hollins, instrumentalists. Mme. Lemmens-Sherrington, who was in excellent voice, rendered Handel's "From mighty kings" with all her characteristic skill. Mr. Cummings, who was accompanied by Sir Julius Benedict, sang "O ma maîtresse" with charming effect. Some reference should also be made to the excellent pianoforte playing of Master Alfred Hollins, one of the pupils of the Normal College for the Blind. Miss Brown is to be congratulated on her success, and on having secured the valuable support of Sir Julius Benedict, Mr. Albert Baudegger, and Mr. Sidney Naylor, all of whom assisted in conducting the concert.

#### PERSIA: an Essay in Greek. By the Rev. LAUNCELOT DOWDALL, B.D., F.R.G.S. 2s.

Cambridge: J. JOYCE.

"The result in the pages before us is a piece of work done in a thoroughly good and scholar-like fashion. The author's style is marked by an ease and naturalness meriting the highest praise. . . . To all lovers of Greek . . . we most cordially recommend this little book."—*Spectator*.

ESTABLISHED 1851.

#### BIRKBECK BANK,

Southampton-buildings, Chancery-lane.

Current Accounts opened according to the usual practice of other Banks, and interest allowed on the minimum monthly balances when not drawn below £25. No commission charged for keeping Accounts.

The Bank also receives money on Deposit at Three per cent. interest, repayable on demand.

The Bank undertakes for its Customers, free of charge, the custody of Deeds, Writings, and other Securities and Valuables; the collection of Bills of Exchange, Dividends, and Coupons; and the purchase and sale of Stocks and Shares.

Letters of Credit and Circular Notes issued.

A Pamphlet, with full particulars, on application.

1st March, 1880.

FRANCIS RAYNESCHOFF, Manager.

SATURDAY, MAY 6, 1882.

No. 522, New Series.

THE EDITOR cannot undertake to return, or to correspond with the writers of, rejected manuscript.

It is particularly requested that all business letters regarding the supply of the paper, &c., may be addressed to the PUBLISHER, and not to the EDITOR.

## LITERATURE.

*Wyclif's Place in History.* By Montagu Burrows. (Isbister.)

THE design of the three lectures contained in this little volume is to evoke a somewhat more general and appreciative interest in the career and writings of Wyclif, and thereby to bring about a more accurate, and possibly a final, estimate of his relations to his own and subsequent times. The lecturer's purpose, he informs us, takes its origin from the visit of the late Dr. Cather to Oxford in 1879. The latter had hoped to rouse the University to an adequate sense of the value of the labours of one whose influence on its students in the fourteenth century was certainly not inferior to that of Dr. Newman in the nineteenth, widely as the tendencies of their respective teaching differed. Dr. Cather's exertions, however, fatal to himself, failed sadly in their object—an unsatisfactory result which Prof. Burrows was fain to believe was "more the result of a want of accurate knowledge than anything else;" and, actuated by this belief, he himself delivered, and has now published, the lectures before us. They treat successively of (1) the History and Present State of the Wyclif Literature; (2) "Wyclif's Preparation" (i.e., the main facts of his career prior to his assuming the part of a reformer); (3) his Work; his final connexion with Oxford and his true place as a reformer.

While thoroughly sympathising with Prof. Burrows in his design, not a few readers, I apprehend, will be inclined to think that he would have done well to insist on Wyclif's claims to the regard of posterity in somewhat more qualified language. That, as a reformer, a writer, and a translator, Wyclif is entitled to the veneration and gratitude, not only of all Protestant Englishmen, but of all Protestants, and not only of all Protestants, but of all to whom the language and literature of the Anglo-Saxon race are dear, few will be found to deny. But the result of recent research has undoubtedly been to give rise to some doubt and speculation in connexion with certain elements in his teaching, and to cause many students to hold their judgment in suspense until the evidence has become more complete, and each question has been more thoroughly sifted. When, therefore, Prof. Burrows, not content with co-ordinating his subject with Chaucer, Shakspeare, and Milton in respect to his influence on the English language and literature, holds him to be "wholly unapproached in the entire history of England for his effect on our English theology and our religious life" (p. 41); maintains that we owe to Wyclif

"more than to any one person who can be mentioned our English language, our English Bible, and our reformed religion" (p. 6); and asserts that "the religious liberty we enjoy at the present day may all be traced to him as the human source" (p. 124), he is really assuming as proven a good deal that not a few want to see more accurately ascertained; and one of the best claims of the new Wyclif Society to support is the prospect it holds out of subserving such an end.

It may be worth while here to note the more important questions in relation to Wyclif which may be said to be still awaiting a more satisfactory solution, and the direction in which Prof. Burrows' observations in connexion with these seem to point.

First, it would be of real service if we could be enabled more clearly to distinguish Wyclif's own tenets from those subsequently held by his professed followers, "the Lollards"—a term almost as liable to misconception from the licence employed in its application, and its actual change of meaning with the lapse of time, as that of the Anabaptists. It is difficult altogether to assent to Prof. Burrows' assertion that Wyclif "gave the distinct and audible key-note which the Councils of the fifteenth century took up" (p. 80). Even in relation to questions of mere Church reform, we have only to consult the pages of Milman to see how wide an interval separated the aims of Peter d'Ailly and Gerson on the one hand, and John Huss on the other; and among the forty-five articles condemned as tenets of Wyclif at Constance, those which apply to the relations of the civil and the ecclesiastical power are not less demonstrative of the essential difference between the conceptions of the English reformer and those of the reform party in the councils of the *sacculum synodale*. Prof. Burrows, indeed, somewhat unjustly characterises Milman's sketch as "open to criticism from want of information," because it originally appeared prior to the publication of Dr. Shirley's *Researches*. Reference, however, to the editions of 1869 of the *Latin Christianity* will show that the author there frequently cites the *Fasciculi Zizaniorum* and its notable Preface.

In the next place, it would be no slight advantage if we were able to ascertain more accurately the actual circulation and real influence of Wyclif's version of the Bible. There must surely by this time be further evidence on this point than we find in Forshall and Madden's Preface to their edition of this version, or even in Dr. Lechler's pages. And here I cannot but note that Prof. Burrows himself seems to challenge criticism on this point when he divides the honour of the impulse given in this country to Biblical studies prior to the Reformation entirely between Wyclif and Tyndale, and to the total exclusion of any mention of Erasmus. It does not require any deep investigation into the history of the first half of the sixteenth century to be aware that the English Reformation owed its origin in no small measure to Cambridge, and that the most eminent of its leaders were Cambridge men. Nor can there be any doubt that the publication in 1516 of the *Novum Instrumentum* of Erasmus gave the first impulse to the movement at the university. His version was the result of his labours

while at Cambridge, and it appeared ten years before Tyndale's translation; while, as regards its influence, the testimony of Bilney the martyr might alone be regarded as almost decisive. In a letter to Cuthbert Tonstal, printed by Foxe, Bilney distinctly refers back his religious conversion to the light he gained "even then, when the New Testament was first set forth by Erasmus." Those who insist so strongly on the direct connexion between Wyclif's labours and the Reformation would probably find it difficult to produce a similar piece of evidence in support of their theory. It is not a little significant that Foxe, in tracing out the rise of the Reformation, makes no reference whatever to Wyclif's version. Prof. Burrows, indeed, pronounces his silence on this point "unaccountable;" but it is unaccountable only to those who refuse to recognise the fact that at the time of the Reformation Wyclif's Bible was hardly ever heard of, and exercised no appreciable effect in bringing about that great movement. It was the Martyrologist who revived the memory of the Reformer rather than the Reformer who originated the movement recorded by the Martyrologist.

Closely associated with the foregoing question is the more general one of the connexion between Lollard doctrines and those of the Reformation; and here, again, I find myself reluctantly compelled to join issue with Prof. Burrows. He holds that the Reformation in England "can be connected with no one preceding individual with anything like the same distinctness as with Wyclif" (p. 123); and, while wholly ignoring Erasmus and the Cambridge movement, he brings forward a purely gratuitous assumption in favour of his own university—by way, I suppose, of compensation. After adverting to the remarkable interest excited by the lectures of John Colet in the year 1496, he asks: "Can we believe that the extraordinary interest he excited was the mere product of influences imported from the Continent?" (p. 125), the answer which he himself suggests being that Colet's discourses found a sympathetic audience among a certain Lollard element still existing in the university. It is just possible that such may have been the case; and we do know, as a matter of fact, that many poor Lollards in London were in the habit of going to hear Colet preach at Paul's Cross. But when we come to estimate the probability of his interpretation of the New Testament having been found acceptable by the better-educated Lollards at Oxford, an objection suggests itself which would seem nearly fatal to such an hypothesis—viz., that the doctrines of Wyclif, Huss, Tyndale, and Luther represent a continuous current of the severest Augustinianism, and from this we know the teaching of Colet and Erasmus to have been a novel and notable departure. The admirable letter addressed by the latter writer (Epist. cccclxxviii.) to the Hussite John Schlehta shows how widely the enlightened tolerance of the "Oxford Reformers," as Mr. Seebohm styles them, differed from the vehement iconoclasm of Lollardism and Lutheranism. Mr. Gairdner, whose opinion on such a point is entitled to much weight, holds that on the eve of the Reformation nothing that could properly be termed a Lollard sect existed, although he

inclines to believe that "the religion of Englishmen in general was largely tinctured with an element which had come down from the Lollard teaching of an earlier day" (*Studies in English History*, p. 3).

A fourth point of enquiry—and one of primary importance, although scarcely touched upon by Prof. Burrows, is that of Wyclif's relations to the school philosophy of his age—for unless these are rightly comprehended it is impossible to understand his mental training and habits of reasoning. And here, it must be admitted, his influence would seem to have been reactionary and pernicious. To the eminent historian of the scholastic logic he seems, indeed, like an "abandoned waif" ("vergleichbar einem verlassenen Fremdling," Prantl, *Gesch. d. Logik*, iv. 38) by the side of the great on-rushing triumphant tide of Nominalism, which bore aloft the names of Occam, Buridan, Albert of Saxony, and those of a host of less eminent teachers. Along with Jerome of Prague, he appears to have opposed to their more enlightened interpretation of Aristotle a resuscitation of the Platonic theory of "ideas." Nor was the opposition of either characterised by much of philosophic calmness or Christian tolerance. The one at Oxford, the other at Heidelberg, branded his opponents in the schools as heretics; and it can hardly be doubted that, when Gerson and Peter d'Ailly were called upon at Constance to examine the tenets of the former and to listen to the defence of the latter, their estimate of the religious orthodoxy of both was to some extent affected by the conviction of the logical unsoundness of these two assailants of that school of philosophy of which they were themselves distinguished ornaments. But, however this may have been, it is certain that much in Wyclif's Latin writings is only intelligible when considered in connexion with the scholastic method by which they are pervaded. Dr. Shirley has pointed out that the startling paradox, *Deus debet obedire diabolo*, was really only a thesis put forward by Wyclif for disputation in the schools, to illustrate the unfairness of the conclusions which had been wrested from his doctrine of Dominion being founded in Grace. As, however, it arrests the eye of the pious Protestant reader in the list of his tenets condemned at Constance, it seems a doctrine which scarcely needed the convention of a Council, oecumenical or otherwise, for its summary rejection.

I have now adverted to perhaps the most important questions which require to be examined more carefully before Wyclif's claims as a theologian or a philosopher are finally adjusted, and we may all readily assent to the conviction to which Prof. Burrows gives expression,

"that a final estimate of the opinions and position of the man can never be attained until we have the whole of his writings before us, until the difficult process of sifting out the spurious works attributed to him has been completed, and until their chronological sequence has been determined by the critical examination of several competent scholars."

It is gratifying to think that such a process seems far nearer its accomplishment than it did twelve months ago, owing to the formation of the Wyclif Society. A volume of

the shorter Latin tracts, chiefly controversial, is now passing through the press, under the editorship of Dr. Buddensieg. But it is in the *Summa Theologiae*, the great work now lying at Vienna, that the interest will mainly centre, and of this parts are already being edited by Dr. Buddensieg and Mr. F. D. Matthew. Judging from what we learn about the work in Dr. Lechler's pages, it will offer some highly interesting points of contrast with the *Summa* of Thomas Aquinas and the *de Monarchia* of Dante. But even to students who have small time or inclination for either theology or philosophy, Wyclif still remains an interesting study. "A great age, as we all know," says Prof. Burrows, "makes a great man;" and while thus assuming the decision of a controversy in which the authority of Sir William Hamilton and Macaulay may be cited on one side, and that of John Stuart Mill on the other, he proceeds to point out how Wyclif may be looked upon as the outcome of his age. There are, however, few studies of a great man and his volitions over which the student will feel more inclined to pause before giving his suffrage in favour of either theory. J. BASS MULLINGER.

*A Noble Boke off Cookry.* Edited by Mrs. Alexander Napier. (Elliot Stock.)

THIS "Boke" is an exact reprint from a rare MS. in the Holkham collection, which dates from the fifteenth century. It is intended "for a Prynce Houssolde or eny other estately houssolde;" and as it not only gives receipts for cooking, but also several *menus* of princely feasts, it abundantly ministers to curiosity at the same time that it is most useful in enabling us to realise the domestic life of great houses in the past. Forks had not been invented when these receipts were used, and carving was as important an art in England as it was at Rome in the time of the Imperial banquets. Another feature of these *menus* carries us back to Rome. Their "suttleles" may be compared with the "opera pistoria," and especially with the achievements of the "structor" who, in Petronius, turns a hare, by the addition of a pair of wings, into Pegasus, and fashions birds of all kinds, fishes, and fatted fowls out of a pig. Thus at the "stallinge of Clifford Bischope off Londone" the following "suttlele" appeared in the first course:—"A brod custad with a castell ther in with a stuff in the castelle of a gille [jelly] and the demon in the myddes brynging a doctur to suttlele in a pulpit in clothinge of grene tabard & hood with a rolle on his hed wretyn thereon *in deo salutare meo*." These "suttleles" survived for country folk until the last thirty years in the grotesque gingerbread monsters sold at fairs, and, for all we know, may yet be seen at such places of merriment as exist on sufferance in the matter-of-fact England of to-day; while for the higher circles they remain in the temples of Venus, the doves and Cupids and gilt inscriptions of wedding cakes. Doubtless the Court *pâtissier* immortalised himself by magnificent "suttleles" and "scriptures" on the bride cake of the Duke of Albany. Other culinary survivals may be noted on every page of this "Boke." The "coffyn"

of our ancestors, filled with "chekkyne," "pertouches" (partridges), and "fessands," has developed into our game-pie; while, as Mrs. Napier points out, the "aigre-douce" of Edward the First's time is the mint-sauce of to-day. The "tartes of fleshe of pork," with figs and all manner of spices, represent our mince-pies. The late Bishop of Exeter is said to have defined a tart as consisting of amplitude without profundity. This finds a suitable example in the "custad lombard" of the "Boke," which was to be made in "a large coffyn" filled with "dates, gobettes of mary and smalle birdes clowes, mace, raisins, corans, warden pears, creme of almonds," and many more ingredients. Is a hostess at present in want of a chicken? Forthwith she procures one from the nearest poulterer. Our distant great-grandmothers were more thrifty. One chicken was skinned, and then roasted, while the skin was filled with all manner of good things, and did duty as a second, after the fashion of the following receipt: "For to counterfet a kiddy Take a kid & fley of the skyn & fille it full of swet mete and trusse hym on a broche in the maner of a kiddy then rost hym & endore [glaze] hym with yolk of egge and serve it." Spelling, it will be noticed, was in a decidedly chaotic state in the fifteenth century. Each one spelt as he chose, and seldom spelt the same word twice in the same manner. Punctuation as yet did not exist at all.

Not only is this book of mediaeval cookery interesting in itself, for wherever we dip into its pages we can pull out a plum as the nursery hero did from his pie, but it illustrates the life of our ancestors. Let us take the Paston family, for instance, itself one of the best-known families of the county to which this MS. of cookery belongs. At John Paston's funeral in 1466, one Richard Charles brought to the house great store of viands for the funeral feast, "xxvii gees, xxvii frankyd gees, chekons, pygges, lambys, egges, creme, butter, salt, fyssh," and the like. How were these cooked? Margaret Paston, his wife, was a notable good housewife. We find her at one time writing to her husband in London to send her down "dats & synamun as hastily as ye may," and on other occasions "almands & sugyr," "a sugor loff," and "a potte with treacle;" while she did not forget her *batterie de cuisine*, "it wer well do ye shuld do purvey a garnyssh or tureyn of powter vesshell, ij. basanes and ij. hewers." Many of the receipts in this book, such as "braun rialle, sturgion for sopers, Breteyn," or "brisbayne," from their complicated ingredients and the different kinds of spices which they demand, would try all the resources of her establishment. Thanks to this "Boke," a dinner at her table is not now so like dining with Duke Humphrey. Naturally more use was made of fresh-water fish in the fifteenth century than now, when we are so much better supplied with sea fish. Fish of all kinds furnished the staple of many repasts in those pre-Reformation days, and here are receipts for cooking "roche, congur, halybut, bace, molet, eles, place, menemes, breme," and many more. The very enumeration of these fish is useful to the student of what may be called the archaeology of English

natural history. So, too, with the birds. An ornithologist sees at a glance many differences between the distribution of birds in Norfolk in old days and at present, fertile though that county still remains in birds rare elsewhere in England. Thus we have in this "Boke" receipts for cooking "godwitts, woodcock, red shankes, yarowe helpes [stone plovers], egret, quailles, curlew, railes, sarcelles;" and these are far from exhausting the list. Our ancestors' notions of cruelty again are singularly exemplified here. Take, for instance, the beginning only of the receipt for making "a freshe lamprey bake." "Tak & put a quyk lamprey in a pot put ther to a porcyon of red wyne then stop the pot close that he lep not out & when he is dyinge tak him out & put hym in skaldinge water," &c., &c. But we have now helped our readers to sup with a fifteenth-century Nasidienus off

"aves, conchyliis, pisces

Longe dissimilem noto celantia succum,"

and must refer them to the "Boke" for the viands left untasted, the

"Membra gravis, sparsa sale multo non sine farre  
Pinguibus et ficiis pastum jecur anseris albi,"

and the rest of them.

Mrs. Napier has prefixed a pleasant introduction. The "Boke off Cookry" will interest everyone who keeps his eyes open for those lighter matters which fill up and lend life to the dry bones of history. Her glossary might, with advantage, be made somewhat longer. The work itself is produced in a style worthy of Mr. Stock's recent reprints, with a luxury of paper and margin and a binding which leave nothing to be desired.

M. G. WATKINS.

#### MASKELL'S ENGLISH RITUAL AND LITURGY.

*Monumenta Ritualia Ecclesiae Anglicanae.* The Occasional Offices of the Church of England, according to the Old Use of Salisbury, the Prymer in English, and other Prayers and Forms. With Dissertations and Notes. By William Maskell. In 3 vols. Second Edition. (Oxford: Clarendon Press.)

*The Ancient Liturgy of the Church of England*, according to the Uses of Sarum, York, Hereford, and Bangor, and the Roman Liturgy, arranged in Parallel Columns, with Preface and Notes. By William Maskell. Third Edition. (Oxford: Clarendon Press.)

THE first edition of the *Monumenta* appeared in 1846-47. In the year 1846, *The Ancient Liturgy of the Church of England* (originally published in 1844) reached a second edition. Since then these volumes, though in constant demand, were not re-issued, and accordingly had become "scarce" and proportionately costly. Liturgical students will be well pleased to find that, whatever may have been the reasons for the long delay of nearly forty years, Mr. Maskell has again put these invaluable collections more within the reach of the many clergy and others who are interested in the subjects dealt with. The whole has been subjected by Mr. Maskell to a very careful and thorough revision, extending to the

smallest minutiae of typography. In appearance, the four beautifully printed volumes seem superior to even the admirable work of Whittingham, of the Chiswick Press, as issued by William Pickering, of the "Pike and Ring." More on this feature of the new edition need not be said.

Mr. Maskell informs us that "the additions made in this edition extend to more than two hundred pages, and are mixed up with the text and notes." He has not drawn attention to the fact that there are also omissions; but these are not, for the most part, of a kind to affect the value of the work, and are obviously due chiefly to the change of the editor's theological opinions since leaving the communion of the Anglican Church. It is, indeed, of no importance to the liturgical student that Mr. Maskell has ceased to praise Sir William Palmer's *Treatise of the Church* and the views of John Johnson the Non-juror. On the other hand, there is throughout a singular freedom from party-writing; and, though Mr. Maskell avows a natural liking for controversy, he has certainly exercised self-restraint so far as to avoid generally (with a few notable exceptions) even controversial innuendo.

Since the first appearance of Mr. Maskell's ritual and liturgical works there have been some useful contributions to the more general study of the devotional system of the English Church in the mediaeval period. Of these, the principal are Dr. Henderson's *York and Hereford Missals*, Mr. G. H. Forbes' *Sarum Missal*, and, recently, Mr. Warren's *Liturgy of the Celtic Church*, and the fascinating volume of Canon Simmons, published by the Early-English Text Society, and entitled the *Lay Folks' Mass Book*. But Mr. Maskell, beside illustrations drawn from other writers, has added some that have occurred to himself in the interval since 1846; and the value of the work may be regarded as substantially increased. If I remember rightly, the "Litany sung at the Coronation of Matilda wife of William the Conqueror" (ii. 85) was not in the earlier editions, nor the specimen of the Metrical Calendar (iii. 224, 225), nor the Order of Communion, 1548 (*Ancient Liturgy*, p. 294). But the chief gains of the new edition will be found in the preliminary dissertations and in the notes, where much new matter is incorporated, and the old often recast in an improved form.

Mr. Maskell's province is distinctly the mediaeval Service books of England. When he ventures on early Christian antiquities his step is not secure. Thus, in this new edition, we are again told (*Ancient Liturgy*, p. 26) that "the use of incense in the public worship of the Church is of the most remote antiquity." Yet can a single clear case of the use of incense during the first four centuries of our era be established?

The Clementine Liturgy is printed in the Appendix, and no longer in the uncouth form presented by unaccented Greek. But why occupy space with matter to be found elsewhere so easily? And the same question may be asked in respect to Edward VI.'s Order of Communion.

On a topic at present interesting to many of the English clergy it may be worth while quoting the opinion of one who has been long

since an outsider with no personal interest in the matter under discussion.

"No legal judgment in the present century seems to be so directly contrary to all the principles which for generations have been supposed to rule the decisions of our chief courts as that which lately told us that a clause in an Act of Parliament plainly referring to the second year of King Edward is to be understood as referring to the seventh year of Queen Elizabeth. . . . Nothing can shake men's reverence in England for legitimate authority more than bringing in 'expedience' to overrule the distinct language of an Act of Parliament" (p. lxxiii.).

Little now remains to be done to afford the student free access to the texts of the mediaeval Service books of the English Church. Since taking up the pen, another important contribution from Dr. Henderson has reached us—the *Processionale ad usum insignis ac praeclarae Ecclesiae Sarum*; and when Messrs. Procter and Wordsworth shall have completed their edition of the *Sarum Breviary* (why, by-the-way, has the second fasciculus so long delayed its appearance?) the material for a fairly thorough study of the entire devotional system of the Church in this country, so far as the texts are concerned, will be within the easy reach of all who are interested in the subject.

I may notice, in conclusion, the curious interpretation put by the old English Calendar printed by Mr. Maskell on the expression *S. Johan. ante portam latinam* (May 6)—the "Latin gate" becomes the "brazen gate," *latin* being understood as *latten*. But it is well known that traps for the feet of the unwary abound in old Calendars. Indeed, for proof one need not go beyond the amusing blunder which may be found in every English Book of Common Prayer, where September 26 is made the day of St. Cyprian of Carthage through confusion with the Eastern Cyprian, the magician, known to the readers of the poems of Calderon.

JOHN DOWDEN.

*Victor Emmanuel.* By Edward Dicey. "The New Plutarch Series." (Marcus Ward.)

As a *résumé* of the events which combined to form a united Italy, Mr. Dicey's volume is a valuable text-book; as a Life of Victor Emmanuel, it is deficient in the leading features which constitute a biography, however modest. One-third of the little book is devoted to events preparatory to the Italian struggle, during which time there is but little heard of the hero. We are told that he existed in his cradle during the progress of certain events, and that the fact of his existence in that cradle bore marked influence on those events to which Mr. Dicey devotes a couple of chapters. Of the many estimates of Victor Emmanuel's character, Mr. Dicey adopts the one most popularly in vogue at the present time in the peninsula—Massari was the first to give it utterance; Miss Godkin, in her Life of Victor Emmanuel, published two years ago, followed in his footsteps—and it is a very just one. Mr. Dicey, however, gives us no clue whatsoever as to the formation of that character. Victor Emmanuel is introduced to us on the battle-

field of Novara—a man of twenty-eight, a husband and a father, ready to take up the reins of government on Charles Albert's abdication. We are told nothing about that wild mountain-life at the castle of Racconigi, where he and his brother got up at five every day, and had their studies only interrupted by such manly exercises as fencing, riding, and sporting in the wild Savoy mountains. To his early training is due, perhaps more than to any other cause, "the common-sense, vigorous energy, and good faith" which enabled him, though "not great in himself, to do great things and to leave behind him a name for ever."

It is almost a pity that Mr. Dicey undertook to give us a sketch of the earlier fortunes of the House of Savoy, as by doing so he has fallen into gross inaccuracies. For instance, while picking at hazard a few dates to "show the process by which the ancestors of Victor Emmanuel extended their dominions," he tells us "In 1888 Amadeus VII. was elected sovereign of Nice." Later on, when speaking of Victor Emmanuel's early literary production, Mr. Dicey says, "It is a curious coincidence that the hero of the youthful Prince's biography was the Duke of Savoy, who annexed Nice and Ventimiglia to the duchy." Now this was an essay on the career of Amadeus VI., whereas, in point of fact, it was Victor Amadeus I. who in 1631 was the first to get a foothold on the sea-shore for Savoy after a war with the republic of Genoa about the marquisate of Zuccarello. Up to this time Genoa held undisputed suzerainty over Nice, and for a century afterwards Savoy had much difficulty in maintaining her position.

We cannot complain if Mr. Dicey's sketch of the maze of Italian politics prior to the accession of Victor Emmanuel is somewhat confused—it would require volumes to unravel the subject; but when he tells us that "Massimo d'Azeglio is better known to history as the author of the *Promessi Sposi* than as a politician," we must complain most bitterly. Every tyro of the Italian language has *I Promessi Sposi* placed in his hands to lead him by the gentle guidance of romance to a more thorough knowledge of the Italian idiom, and on the title-page of this work he learns that it was written by Manzoni.

When Mr. Dicey has thrown off the trammels of compilation and narrates events of which he has had personal experience, his remarks are excellent. Throughout he considers the dominant feature of Victor Emmanuel's character to be "his readiness to subordinate every private consideration to the attainment of his life's object." On the face of it there are many points to be raised which militate against this opinion; his *liaison* with the Countess Miraflore, when a marriage with some European princess would have furthered his cause materially; his delay in marching on Naples at the Garibaldian crisis that he might dally at Capua with some fair one. But then, as Mr. Dicey points out, there was much of the animal in his nature, which he really kept wonderfully in check, for he steadfastly followed Cavour's advice in not marrying the Countess, whom he was most anxious to make his queen; and, though of an extremely religious turn of mind, he preferred to run

the risk of eternal punishment to giving way to the Pope on any one point; and, also, for the furtherance of his cause, he sacrificed to Prince Napoleon his favourite daughter Clotilde.

Mr. Dicey wisely allows to Cavour the merits of being the master-spirit in all the negotiations which secured Central Italy and the Two Sicilies for the House of Savoy. Between his accession and the rise of Cavour, however, is the time which throws the greatest credit on Victor Emmanuel. Then he acted alone and acted wisely; but after that Cavour was everything, and Mr. Dicey can only say for his hero that "the combination which the genius of Cavour had brought to pass would have fallen to pieces if the King had shrunk from the risk."

Mr. Dicey has likewise grasped very well the part played by Garibaldi in the Italian drama, "the brave old general" he calls him—"a sort of compound of Don Quixote and Sancho Panza." He shows how Garibaldi's success was due to the absence of resistance, and his ultimate failure to the fact that his theory of the efficiency of raw volunteers with right on their side against well-disciplined troops was decidedly Quixotic; but here again Mr. Dicey is not very accurate, for he says that, on Victor Emmanuel's entry into Naples, "it was the King and not the General who was the hero of the hour." Now, as a fact, the Neapolitans cheered wildly for their Liberator, and hardly noticed their King; and, when a seat which had been placed for Garibaldi next to the King's at the theatre was removed, the audience groaned with vexation, and continued to groan when Victor Emmanuel had entered the box.

No one can fail to be interested in this little work, telling, as it does, in a simple and pleasant way, the story of one of the most stirring episodes of contemporary history. Yet the text would bear a more careful revision. It is a pity to Anglicise Alessandria by calling it Alexandria, for reasons of geographical distinction; and it is a pity to Italianise Pius IX. when the printer's devil is likely to make the mistake he is guilty of in one place of calling him Pio Nino instead of Nono. And why are the inhabitants of the Romagna called by such an uncouth word as Romagnoes? J. THEODORE BENT.

#### PALESTINE EXPLORATION.

*Map of Western Palestine.* In Twenty-six Sheets. From Surveys by Lieut. C. R. Conder and H. H. Kitchener, R.E.

*The Survey of Western Palestine.* "Memoirs," Vol. I.—Galilee. "Special Papers." "Name Lists."

*Reduced Map.* Special Edition, illustrating the Natural Drainage and the Mountain Ranges.

*Introduction to the Survey of Western Palestine.* By Trelawney Saunders. (Bentley.)

TILL the series of publications connected with the survey of Western Palestine is complete, it would be premature to attempt an elaborate criticism of this important contribution to the geography of the Holy Land; but, on the other hand, it seems not

out of place at the present stage to make some provisional remarks on those results of the survey which are already before the public. Of the various publications named above, all but the two last form part of the great collected edition of the labours of the Palestine Exploration Society. The reduced map published by Stanford may be had in two forms; we have chosen the edition specially coloured to facilitate study of the natural divisions of the country according to water-basins, &c., as that which will be found most instructive and convenient. With it the student will naturally take the volume of Mr. Saunders, on which this map, in its special features, is based. It is an elaborate memoir, consisting mainly of a careful analysis of the physical features of the country, for which other sources are employed in supplement to, or in comparison with, the work of the surveyors.

The proper work of such a survey as we are now considering consists of three main parts: (1) To lay down accurately the physical features of the land as a whole and the special topography of important sites; (2) to register with accuracy all place-names now current; (3) to note and describe all remains of archaeological interest, and to furnish trustworthy copies of inscriptions. Under (1) must be included the collection of information about geological structure, which is of the utmost importance for physical geography; and notes on flora and even on fauna may also be fairly expected from the surveyor. To collect information as to manners and customs, and enquire into local traditions, is hardly part of the proper work of a survey, but it is right that these matters should be kept in view as far as possible. On the other hand, it is not proper that the surveyors should devote themselves to speculations as to Biblical sites. The work of the historical geographer is distinct from that of the surveyor, and requires an equipment which he cannot be expected to possess. But, what is of more consequence, it is hardly possible to hunt up Biblical names and sites while a survey is going on without allowing the hypotheses to which one is thus led to react on the surveying work. One is tempted to put leading questions, which in the East invariably lead to deceitful answers; and it is so difficult for a European ear to catch Arabic names exactly that it is highly desirable to have no preconceived notions of what one would like to hear. Unfortunately, a great part of the public interest in the Palestine survey has run in the direction of a desire for as many identifications as possible. The surveyors have been inevitably influenced by the public taste, and have hazarded, as their work went on, a number of highly precarious identifications, accompanied, no doubt, by others that are of real value. This practice is much to be deprecated, especially when one observes that many of the proposed identifications show an imperfect knowledge of the Arabic tongue. For it is to be noted that, according to Prof. Palmer's Preface to the *Name Lists*, "many of the names were collected by European members of the party, and submitted to the scribe afterwards, who seems to have written down some conjec-

turally." In some cases perhaps it was impossible to avoid this unfortunate method of collecting the names; but the possibilities of error which it involves, and which can be best estimated by those who have themselves tried to collect information from natives, are vastly increased if the imperfect European ear is unconsciously influenced by any preconceived idea about a Biblical name. One is sorry to make any criticism which may seem to discourage the zeal with which the surveyors have thrown themselves into the work. The public is more to blame than they are; but, for the sake of the survey of Eastern Palestine now in progress, it is a duty to point out a danger which, however apt to be overlooked by those who are warmly interested in the work, will be recognised as real by every Orientalist.

Let us now look at the way in which the essential parts of the work of the survey have been carried out.

1. The enormous gain to geography which lies in the substitution of a map made by trigonometrical survey for the old maps based on route surveys is self-evident. The physical features of the whole country are now accurately known for the first time. The importance and extent of the corrections thus introduced cannot be seen by a mere glance at the map, but ought to be studied in detail with the aid of Mr. Saunders's book. Of particular importance in this connexion are the numerous determinations of heights, made by a variety of the most approved methods, for these, taken along with the exact representation of the watercourses, lie at the very basis of a just idea of the aspect of the country. At first sight, indeed, one feels a little disappointed that the great map is on the method of hill-shading, and does not show the contour lines; but it is easy to see that to draw contours in a country of the configuration of Palestine would have involved an amount and kind of work altogether impracticable under the conditions of the survey. With regard to the hill-shading, it is explained in the *Memoirs* (i. 35) that the characteristic slopes of the hills were observed with an Abney's level by each surveyor when sketching detail, and the hills were sketched with horizontal hachures. The hill-traces were kept distinct from the rest of the work and used at Southampton for the reproduction of the hills by means of chalk-work photozincographed. The chalk-work is very beautiful and delicate, and a great deal can be learned from it by adjusting the plane of the map at a proper angle to the line of vision. But much interesting detail has necessarily been lost; and it is to be hoped that the society will publish some exact facsimiles of the sketches of the surveyors at places of special importance, like the pass of Michmash, where the details would be of great value for the elucidation of the Bible history. The *Memoirs*, in fact, do contain many detailed plans of an archaeological character; but in most of these the interest is post-Biblical. Now it ought to be borne in mind that, though the Bible contains a vast number of proper names, there are only a very few parts of Palestine where topographical details are absolutely necessary for the complete understanding of some Scripture narrative; and, so far as is possible, one would be glad to

find in the *Memoirs* sketches of every one of these.

2. I come now to the question of names. Here, again, the first thing to be gratefully noted is the immense wealth of material. No doubt many of the names on the great map are individually without importance; but this does not mean that it is unimportant fully to collect them, for it is only by sifting a complete list that what is of value can be satisfactorily determined. The usefulness of the lists, however, depends on their exact accuracy, by which I mean that the historical geographer cannot safely use the material unless each name is given in such transcription as corresponds to its Arabic spelling; for, in Arabic, differences of sound which are hardly to be recognised by the unpractised European ear are of essential importance for the interpretation and historical identification of names. This being so, it is clear that no map can be really useful for scholarly purposes which does not adopt a system of transliteration in which every Arabic letter is distinguished. This has not been done on the great map; the orthography adopted is really barbarous, both as regards consonants and vowels. For example, *h* and *ḥ*, *s* and *ṣ*, *k* and *q*, are not distinguished; single letters are written double (*Belled*); *d* is sometimes *dh*, sometimes *dḥ*; *a* and *u* are interchanged in the most perplexing way (*Kul'at*, but *'Ayn*); and so forth. Thus, it is necessary to warn the student that it is mere waste of time to use the map without constant reference to the *Name Lists*, which contain the names in Arabic character. I cannot help thinking that this is an inexcusable fault. The map, it appears, was engraved before Prof. Palmer began to work on the lists; in other words, it does not represent the final and complete results of the survey. Now it is certain that the map will give the rule of spelling for other maps and works of Biblical geography, and so errors and ambiguities will be perpetuated in quarters where the ponderous quarto of *Name Lists* is not accessible. It is to be hoped that in this respect a new departure will be made when the map of Eastern Palestine comes to be published.

Behind this matter, however, lies the yet more important one of the accuracy of the *Name Lists*. Reference has already been made to the circumstance that in some cases the names depend on a European ear, and were written down conjecturally by the scribe, who had not heard the name himself from a native. These cases, however, are probably not very numerous, as the native guide seems generally to have been present at the work of the scribe. Moreover, the survey nomenclature was compared with the Turkish official lists of villages, with Robinson's lists, &c., and "in all cases where discrepancy occurred further information was obtained." The society had also the advantage of enlisting as editor of this part of its work Prof. Palmer, of Cambridge, whose excellent ear and rare familiarity with spoken Arabic must have been of great use in the process of redaction. It is, however, unfortunate that we are not told what is the exact relation of the lists as now published to the form of their original collection, what scope was given to the "philological investigation" appealed to

by the editor to settle the orthography, or how far forms derived from the lists afterwards compared were allowed to supersede what was originally written. For example, on sheet VIII. we have a village written 'Ar'arah, as in Robinson's list. But the Sheikh el-Khiyāry (ed. by Tuch, 1850) writes 'Ar'ārah, and we naturally ask whether the survey depends on Robinson or is an independent testimony against the old traveller. There is indeed reason to think that on such points as the length of vowels the work of the survey often calls for revision. Thus the Kurāwā Ibn Hasan of the *Name Lists*, p. 238, ought, according to Yāqūt, iv. 51, to be Qarāwā Bani Hassān; and so, too, in the astounding piece of absurd philology devoted by Lieut. Conder in the *Special Papers* to Bethany and Batanea, so common a word as Bathaniya is written Bethānieh. Even a cursory inspection shows a number of such minor errors, sometimes extending even to the Arabic (*e.g.*, قلسوه Kulunsaweh for Qalansuwa, sheet XI.). It is not surprising that such errors exist, but their existence shows how desirable it is that the rich material now placed in our hands should be systematically gone over and checked both by travellers familiar with Arabic and by comparison with the Arabian geographers and other writers. The society would greatly facilitate the execution of this indispensable task if they would furnish a general index to the *Name Lists*, including all the sheets, and arranged, according to the Arabic spelling, by the main element in each name, ignoring such prefixes as *Khirbet*.

This notice has already run to such a length that I shall not attempt to speak at present of the archaeological and other information in the *Memoirs* and *Special Papers*. These may be taken up when the publication of the *Memoirs* is continued.

WM. ROBERTSON SMITH.

#### NEW NOVELS.

*A Broken Lily.* By Mrs. Mortimer Collins. In 3 vols. (Hurst & Blackett.)

*Eliane.* By Mrs. Augustus Craven. Translated by Lady Georgiana Fullerton. In 3 vols. (Bentley.)

*The Gifts of the Child Christ, and other Tales.* By George MacDonald. In 2 vols. (Samson Low.)

*Scotch Marriages.* By Sarah Tytler. In 3 vols. (Smith, Elder & Co.)

THERE is no critic who will not wish to speak with all possible kindness of the first work on our list, for the name upon the title-page recalls the work of one to whom every novel-reader owes gratitude for many delightful hours. Criticism, however, must, before everything else, be truthful; and it must be admitted that *A Broken Lily* is deficient in all the qualities which distinguished the achievements in fiction of the brilliant and versatile *littérateur* whose name the writer bears. The novels of Mr. Mortimer Collins were far from faultless; he probably did not eagerly strive to make them so; but, with or without striving, he always succeeded in making them readable, and unfortunately readableness is just what is conspicuously wanting in the three volumes of *A Broken*

*Lily*. That its writer is a woman of refinement and cultivation is evident, and there was a time when refinement and cultivation sufficed, at any rate for the more popular kinds of art; but the golden age of well-meaning amateurishness is past, and we demand from an artistic producer some evidence that he has mastered the elementary conditions of technical success. It can hardly be said that this mastery has been achieved by Mrs. Mortimer Collins. Her method of narration is cumbrous and unsymmetrical, the first volume, for example, being largely filled out with conversations which have neither interest in themselves nor any value in their relation to the presentation of character or the evolution of incident. The persons who indulge in these conversations are featureless lay figures, whose want of vital individuality is mournfully attested by the reader's difficulty in remembering which interlocutor it is to whom his attention is being called. In addition to all this, it has to be sadly declared that what there is of plot in *A Broken Lily* is improbable without being interesting, to say nothing of the rather unpleasant motive which Mrs. Collins has found in the passion of a man for the reputed daughter of his wife. There is nothing whatever in the treatment of this repellent situation to which fair exception can be taken; but the choice of a theme was unfortunate, and the treatment, such as it is, does not justify it. Probably some of the faults of the work might have been removed or, at all events, lessened had it been compressed into one volume; but, as this remark applies to half the fiction of the day, I do not know that it is worth making. That *A Broken Lily* is a good novel cannot be said; but Mrs. Collins may do better work in the future, for she has some literary facility, and the story of the conspiracy of Miss Green and Captain Carstairs witnesses to her possession of a vein of genuine humour.

It would be far easier to write a book like *Eliane* than an interesting or edifying criticism upon it. The most facile of reviewers is put to silence by a novel which is as destitute of positive defects as of positive merits—which in the matter of incident is tolerably well constructed, in the matter of character tolerably well conceived, in the matter of style tolerably well written, and which is as a whole one of the most intolerably tolerable of recent fictions. The reception given to *A Sister's Story* has encouraged Lady Georgiana Fullerton to translate into English another work from Mrs. Craven's pen, and it would be an act of temerity to say that there is no public from which *Eliane* will not receive a welcome; but the translator herself probably attaches more importance to the religious tone of the book than to any purely artistic qualities which it may exhibit. From a Catholic point of view this tone is unexceptionable, and even the Protestant who finds anything offensive in the book must be captious or bigoted, or both; but both Catholics and Protestants who are critics as well as theologians will feel that in Mrs. Craven's mind the artistic instinct has been rather overborne by an impulse to edification. Not that *Eliane* can be classed

among religious novels pure and simple, for its purpose—so far as it can be said to have one—is the setting forth of the underlying advantages which compensate for the obvious defects of the French system of arranging marriages without much consideration for the prepossessions of the persons most immediately concerned. Still, *Eliane* is far from being a mere pamphlet in disguise, and is throughout characterised by a certain grace of treatment which will recommend it to readers who do not demand from fiction anything but a very moderate amount of emotional or intellectual excitement.

No one ever opens a volume from the pen of Mr. George MacDonald without an anticipation of the delight always to be derived from imaginative conception and subtly interpretative handling; nor is the anticipation ever followed by total disappointment. It must, however, be granted that Mr. MacDonald is an unequal writer; indeed, inequality is of the very essence of a genius which manifests itself for the most part in spiritual vision. Such a genius may in itself be constant, but its highest developments are reached only in favourable moods; and, when the mood is absent, the imaginative product is apt to strike the reader as being somewhat thin and unsatisfactory. Mr. MacDonald is the very reverse of a literary hack; it is absolutely impossible to him to put his whole strength into work which is, as the phrase has it, "written to order"—that is, written in the absence of a dominating productive impulse. This is evident in his longer works—witness the descent both in conception and craftsmanship from such a book as *Robert Falconer* to such a book as *The Vicar's Daughter*—but it is still more evident in a collection of short tales like those which are contained in these two volumes. In working through the ground covered by a three-volume novel the true vein is sure to be struck somewhere; we are certain in some page or in some sentence to catch the consecration and the gleam; whereas the short story may be begun and ended in a mood unvivified by inspiration, and is, in consequence, decidedly disappointing. Mr. MacDonald has a literary conscience; we feel that he is never careless even in the production of a pot-boiler; but even a careful pot-boiler is a pot-boiler still, and in the production of these articles of commerce the author of these stories has many equals and not a few superiors. Two of the stories in these volumes—"Port in a Storm" and "The Butcher's Bills"—are average magazine tales and nothing more; the "drama" entitled "If I had a Father" is a laboured failure; but the remainder of the work, though it may not show Mr. MacDonald on his highest level, does possess many of the qualities which make his best work notable. The sketch of the lonely little girl in "The Gifts of the Child Christ" is full both of spiritual insight and of unstrained pathos; and the central situation, which I will not spoil by trying to describe, is a masterpiece of reverent tenderness. In "Photogen and Nycteria" we have a piece of purely imaginative work that recalls *Phantastes*, the book which Alexander Smith admired so warmly, and which—whatever may be said about its inspiration being derived from

Tieck—has never, save by a few, been appreciated as it deserves. "Stephen Archer" is a realistic study in prose which may fitly stand beside such work in verse as the less intense of Mr. Buchanan's *London Poems*, slight enough in texture, but rich in grace and charm and sympathetic vision. One can hardly say of any of these stories that it will raise its author's reputation, but one can say of all of them that they will sustain it; and surely this is no faint praise.

*Scotch Marriages* is not, as its name would lead the reader to expect, a novel dealing, like Mr. Wilkie Collins' *Man and Wife*, with the inconveniences of the marriage law on the northern side of the Tweed, but a batch of four stories entirely unconnected with, and bearing no resemblance to, each other beyond the fact that in every one of them we have a marriage, and that all these marriages are celebrated in Scotland. As, however, with the exception of the runaway match of Harry Balfour and Ailsie Hyndford, there is nothing about any of them which is at all distinctively Scotch, the title is somewhat misleading; and perhaps Miss Tytler would have been well advised had she given to these volumes a name more readily indicative of their character. Still, though it is a good thing to have a title that is fairly descriptive, it is a matter of far greater importance that the thing described should be worth describing; and it is pleasant to be able to speak of Miss Tytler's idyllic sketches of Scottish rural life as in every way delightful and satisfying. So far as the mere literary art displayed in them is concerned, they cannot be declared equal to Mr. Wedmore's *Pastorals of France*, but in other respects they remind me, and will, I am sure, remind others, of that exquisite volume. There is the same sympathy, the same knowledge, sometimes even the same fine dexterity of touch; and Miss Tytler shares with Mr. Wedmore the peculiar knack of composition—rather rare among English workers in fiction—which enables her to arrange her figures in such a way that they shall be neither crowded nor straggling, but shall fulfil the conditions of the special form of art which for the moment she has chosen. Unfortunately, both for Miss Tytler and her readers, the perusal of two of these stories has been rendered difficult, and, indeed, all but impossible, by the carelessness of the printers, who have printed back-to-back on the same sheet a large portion of "Lady Peggy" and an equally large portion of "Harry Balfour's Elopement," so that bits of one story are most annoyingly sandwiched between bits of another; and the reader, while engaged upon vol. i., is obliged to have vol. ii. close to his elbow in order that he may fill each hiatus as it occurs. It is no mean compliment to say that both stories are worth the trouble; but the best of the three shorter compositions is undoubtedly "Jean Kinloch," a very fine sketch of a noble and impressive figure. As a study of a single figure nothing could well be better than this story of how Jean bore and forgave a great wrong; and it is only the greater wealth of material, and consequent complexity of treatment, which compels one to regard "Hamesucken" as the more important and valuable work. It cannot be said

that either Bruce Kirkpatrick, the high-spirited Scottish young country lady, or Wat Baillie, the minister whose peasant training breaks through the restraints of his cloth, is a specially original conception, for similar figures seem to be in a vague way very familiar to us; but frank individuality of treatment compensates for the lack of absolute invention, and in the central situation of "Hamesucken" Miss Tytler has certainly achieved the honours due to an originator. Were it not for those wretched printers, these volumes would be wholly pleasurable.

JAMES ASHCROFT NOBLE.

#### NOTES AND NEWS.

WE regret to learn that Col. Chester has been for some time lying seriously ill at his residence in Southwark Park Road, an unsuspected internal disorder of long standing having suddenly developed itself. Sir James Paget and Dr. Moxon of Guy's Hospital have been in attendance.

THE Earl of Lytton is now engaged in preparing for publication during the ensuing autumn the earlier volumes of his father's Life. Anyone who may be in possession of correspondence with the late Lord Lytton will greatly oblige the biographer by entrusting it temporarily to his care at Knebworth. Letters thus confided to him will be returned to their owners as quickly as possible and in perfect safety.

MR. ERNEST LONGFELLOW, the son of the poet, announces that an authorised biography of his father will be issued in due time. The family will be glad of any letters or other memorials which may prove of service in the preparation of this work.

MESSRS. MACMILLAN AND Co. have in the press Prof. Sayce's long-expected edition of the first three books of Herodotus, which will form a volume of "The Classical Library." The appropriateness of entrusting these particular books to a scholar who combines classical and Oriental learning with a practical knowledge of much of the ground traversed by Herodotus need not be pointed out. The book may be confidently expected to contain much that is new and instructive.

PROF. MAHAFFY has been elected an Honorary Fellow of Queen's College, Oxford, a distinction which he shares with Prof. Bartholomew Price and Dr. Birch.

ON Wednesday, May 17, a meeting will be held in the town hall at Oxford, for the purpose of considering in what way the services of the late Prof. Green to the university and city may be most fittingly commemorated.

THE last-elected vice-presidents of the Browning Society are Dr. Walter Bache, as the representative of Music, and Mr. Henry Irving, as the representative of the Drama. They hold office beside Sir Frederic Leighton for Art, Miss Swanwick for Greek translation, Messrs. Llewellyn Davies, H. B. Haws, and the Hon. A. Lyttelton for Theology, M. Milsand for France, and Lady Mount-Temple for gracious Womanhood.

THE Rev. J. Long, formerly of Calcutta, has communicated to the *Journal* of the National Indian Association a note upon a curious MS. relating to the early history of Bengal. This is a diary of Sir W. Hedges, formerly in the possession of Lord Saumarez. Sir W. Hedges, who was a Director of the East India Company, was sent out as governor of the factories in Bengal in 1681, and returned home by way of Persia in 1683. The interest of his diary is

twofold. He gives an account of the social life of the English in India at that time, among whom Job Charnock, the future founder of Calcutta, figures conspicuously; and also of the Muhammadan system of government. Dacca was then the capital of Bengal; but there are many allusions to Gaur, Satgaon, and Hugli, which ought to throw much light upon the somewhat obscure history of these places. The diary is to be published, with notes; and no one is better qualified to write the notes than Mr. Long himself, if only he will refrain from "When Sir W. Hedges landed in Bengal, the tiger, alligator, and shark roamed freely near what is now the city of palaces."

IN consequence of a despatch of the Earl of Kimberley in April 1881, calling attention to the neglect and the importance of the antiquities in Malta and Gozo, a valuable Report has been made to the Maltese Government by Dr. A. A. Caruana, Librarian of the Public Library, Valletta, upon the present state of the Phœnician (so-called) and Roman remains in the islands. The Report, just issued, collects much interesting information upon the rough stone monuments and catacombs, as well as upon the buildings, sculptures, pottery, coins, and inscriptions of the Phœnician, Greek, Carthaginian, Roman, and early Christian periods; and it forms, together with the special memoir on the recent Roman discoveries at Notabile lately issued by the same writer, the most complete account of the historic archaeology of these islands yet put together. Dr. Caruana, who patriotically desires that the public museum should be made a worthy centre for the preservation of all such remains to prevent their dispersion abroad, has at his own cost embellished a certain number of copies of the Report with thirty-nine photographs. Anyone who would like to possess this beautiful and unique Government Report should give an order for it at Dr. Williams' Library, Grafton Street, Gower Street, W., where the librarian, the Rev. T. Hunter, kindly allows a copy to lie for inspection. The price is £1 2s. 6d.

THE *Irish Monthly* for May gives the first of some articles entitled "O'Connell: his Diary from 1792 to 1802 and Letters." The diary, extending from O'Connell's seventeenth to his twenty-seventh year, and the letters have not hitherto appeared in print. The passages selected from the diary in the present number include notes on the acting of Kemble and Mrs. Siddons, records of O'Connell's reading, and the following virtuous resolution as to duelling:—"All I have to fear is premeditation in plunging myself in future into quarrels. I know that duelling is a vice; yet there is a certain charm in the independence which it bestows on a man that endears it even to many thinking minds. I have, however, made a resolution not to fight a duel from the time that I become independent of the world."

A VOLUME of *Essays at Home and Elsewhere*, by Mr. E. S. Nadal, one of the secretaries of the United States Legation in London, will, we understand, be published immediately by Messrs. Macmillan and Co.

THE same publishers will issue a prose translation of *Thirteen Satires of Juvenal*, by Profs. Strong and Leeper, of the University of Melbourne, and a translation, with essays and notes, of Sallust's *Catiline and Jugurtha*, by Mr. A. W. Pollard. Messrs. Macmillan have, moreover, in the press, and hope to publish in the course of the year, Messrs. Lang, Leaf, and Myers' prose version of the *Iliad*; Messrs. Church and Brodribb's translation of the first five books of Livy's Third Decade; and a translation of Aristotle's *Politics*, by Mr. J. E. C. Welldon, Fellow of King's College, Cambridge.

MR. J. S. FLETCHER's new volume of poems

is in the press, and will be published early next month by Mr. William Poole.

THE Hibbert Lectures which Prof. Kuenen is now delivering at St. George's Hall and at Oxford will be published immediately by Messrs. Williams and Norgate.

MESSRS. CASSELL AND Co. have nearly ready for issue to the public, through their canvassing agencies, an edition of Burns's works in parts, and also in two volumes.

THE Rev. O. L. Dodgson, of Christ Church, Oxford, will shortly publish, through Messrs. Macmillan and Co., an edition of the first two books of Euclid, intended to convey the great geometer's actual method stripped of all accidental verbiage and repetition. It will be immediately followed by a pamphlet, entitled *Simple Facts for Circle-Squarers*.

IN view of the interest created by the performance of Wagner's "Der Ring des Nibelungen" Messrs. Griffith and Farran are issuing a new and cheaper edition of *Golden Threads from an Ancient Loom*, which is in reality "Das Nibelunglied" adapted to young and general readers. The volume is adorned with fourteen engravings by Julius Schnorr, of Carlsfeld.

WE hear that the article "Not Non-conformists, but Dissenters," in the new number of the *Church Quarterly Review* is written by the Rev. T. Hancock, who also wrote the article on "Congregationalism" in the preceding number.

ON May 14 will be published, in Birmingham, the first number of the *Sunday Echo*, a non-sectarian and, we understand, non-political Sunday paper.

MESSRS. SOTHEBY AND Co.'s sale on Monday next will include a collection of upwards of 1,000 political caricatures, rare broadsides, and the more extravagant Communist newspapers issued in Paris during the siege and the Commune. It was formed by the Paris correspondent of the *Illustrated London News*.

AT the meeting of the Wordsworth Society last Wednesday, Mr. Rawnsley read a most amusing paper on the opinions of Wordsworth entertained by the poor Cumberland folk about Rydal. He "interviewed" the now aged butcher-boy who in former days served Wordsworth's family; the innkeeper who was formerly the poet's garden-boy, and who, when drunk, recollects all about the poet better than when he is sober; the waller who built walls and chimneys, &c.; and then gave their racy report in the dialect and its twang. Wordsworth was but a poor creature beside "lile Hartley," little Hartley Coleridge, "the philosopher" as he was called. The poet never went into a public-house and made himself at home with his neighbours; whereas "lile Hartley" was the oracle of all the publicans in the district. Wordsworth used to go "bumming and bumming," but no one there read his poetry; his real line was "chimleys"—he had ideas about their being built round—and trees, which he did not like to be cut down. He also objected to stones being broken up or moved. He was no good at wrestling, or any other sport except skating, and was generally of not much account. His wife was "terrible sharp on the butchering-book." His sister used to put down the scraps of his "pomes" as he "bummed 'em out." We hope that some enterprising magazine editor will soon print Mr. Rawnsley's paper. His two raciest reports on the poet he had no time to read.

AT the annual meeting of the Royal Institution held on May 1, it was stated that the real and funded property of the Institution now amounts to over £85,400, entirely derived from the contributions and donations of members; the number of new members elected during the

past year is sixty-two; the additions to the library during the year amount to 893 volumes.

SIG. GIULIO CARCANO, one of the vice-presidents of the New Shakspeare Society, has just published, at Hoepli's, Milan, the four last volumes of his handsomely printed and handy Italian translation of Shakspeare's Dramatic Works (twelve volumes, 50s.). Each play has a short critical Introduction; and in many of these the views of the New Shakspeare school, "il Gervinus, il Dowden, il Furnivall," are given, though, unfortunately, Spedding's masterly analysis of the genuine from the spurious part of "Henry VIII." is not alluded to. Due warning is, however, given of the spurious portions of "Pericles" and of the small share that Shakspeare can have had in "Titus Andronicus." The translation is very good, so far as we have had time to test it. Each play is dedicated to some distinguished Italian, as Visconti Venosta, Maffei, Verdi, Maspero, Bonghi, de Gubernatis, &c., but the last lets in an Englishman—"Federico J. Furnivall."

THE next volume of the "American Men of Letters" series, which is published in this country by Messrs. Sampson Low, will be *Thoreau*, by Mr. Sanborn.

M. CASTAN has identified a MS. in the library of Besançon as one of those in the collection of Charles V. of France, of which the catalogue is still preserved. M. Delisle, of the Bibliothèque nationale, had already identified seventy-seven out of about 300. This MS. is a collection of moral treatises, written in French, and illuminated with forty-eight miniatures, with Charles V.'s favourite bordering of blue, white, and red. On the last page is an *ex libris*, seven lines long, with a signature in the handwriting of the King. This has become almost illegible, and can only be deciphered from a photograph.

THE well-known publishing firm of Hoepli, of Milan, announce the publication of a "Storia universale della letteratura dai primi tempi e presso tutti i popoli civili fino ai nostri giorni," edited by Prof. Angelo de Gubernatis, of Florence. The collection will consist of eighteen volumes in all—nine volumes of text, each accompanied with one of anthology. The first is to appear in the course of the present month.

AN interesting "Luther" collection has just been bought by the city of Berlin. It contains nearly 5,000 objects all more or less connected with the Great Reformer, and is particularly rich in portraits of Luther at all periods of his life, his wife, children, and relations, friends, disciples, princely protectors, enemies, and fore-runners in the cause of religious liberty.

THE proprietors of the *Revue politique et littéraire* and of the *Revue scientifique*, both of which are published by MM. Germer Baillière, have constituted themselves a *société anonyme*. Among the directors are the names of M<sup>me</sup>. Adam, of the *Nouvelle Revue*; M. Ch. Buloz, of the *Revue des Deux-Mondes*; M. Hébrard, of the *Temps*; and M. Joseph Reinach.

MESSRS. SCHOTT AND CO., the well-known music publishers, have just issued an English version of Wagner's poem, *Der Ring des Nibelungen*. Each section of this great drama ("The Rhine-gold," "The Valkyrie," "Siegfried," "The Dusk of the Gods") is contained in a separate volume, and the German and the English texts are placed side by side. It is scarcely necessary to add that these little volumes will be heartily welcomed by all about to attend the performances of Wagner's tetralogy at Her Majesty's Theatre. The translators may be congratulated on the success with which they have reproduced not only the meaning and manner, but also the spirit of the original text.

## ORIGINAL VERSE.

### SLEEPY HOLLOW.\*

(In Memoriam: Ralph Waldo Emerson.)

He sleeps here the untroubled sleep  
Who could not bear the noise and moil  
Of public life, but far from toil  
A happy reticence did keep,  
With Nature only open, free:  
Close by there rests the magic mind  
Of him who took life's threads to wind  
And weave some poor soul's mystery  
Of spirit-life, and make it live  
A type and wonder for all days;  
No sweeter soul e'er trod earth's ways  
Than he who here at last did give  
His body back to earth again.  
And now at length beside them lies  
One great and true and nobly wise,—  
A King of Thought, whose spotless reign  
The overwhelming years that come  
And drown the trash and dross and slime  
Shall keep a record of till Time  
Shall cease, and voice of man be dumb.  
At last he rests, whose high clear hope  
Was wont on lofty wings to scan  
The future destinies of Man—  
Who saw the Race through darkness grope,  
Through mists and error, till at last  
The looked-for light, the longed-for age  
Should dawn for peasant, prince, and sage,  
And centuries of night be past.  
Thy rest is won. O loyal, brave,  
Wise soul, thy spirit is not dead—  
Thy wing'd words far and wide have fled,  
Undying, they shall find no grave.

\* In Sleepy Hollow Cemetery are the graves of Thoreau and Hawthorne, and near them have just been laid the remains of Emerson.

WILLIAM SHARP.

## OBITUARY.

### RALPH WALDO EMERSON.

THE lovers of coincidences have not often had such an instance as the death of the foremost and oldest prose writer of America within a week or two of the death of her foremost and oldest poet. In each case age and rank must be taken together in estimating the claim to these superlatives, but the result is less doubtful in the case of Mr. Emerson than it was in the case of Mr. Longfellow.

Mr. Emerson was born in Boston on May 25, 1803, of a family which, for nearly as many generations as the scanty history of the United States has permitted, had taken to theology as a study and a profession. In his father's time a change had come over the character of the family religion. William Emerson had discarded the ancestral Calvinism for Unitarianism. The future philosopher (who was the second child) followed his father, and, after taking his degree at Harvard, became a minister at a somewhat early age, settling finally at the Second Unitarian Church in Boston. The general tendency of his teaching may be inferred from a remark of his own about one of his sermons: "I am going to prove the sovereignty of the moral law and to slay the utility swine." It was not a very humble remark, but humility was never Emerson's strong point. Another not uncharacteristic utterance of his was, "To every man the great end of existence is the preservation and culture of his individual mind and character." The divergence from his future friend Carlyle was, in this last maxim, already marked. He was married in 1829, but his wife died after little more than two years. It does not appear that the life of a minister was at any time very congenial to him, and weakness of health, together with the shock of his wife's death, made a visit to Europe seem

advisable in 1833. This was the first of the visits, the result of which is recorded in *English Traits*, and perhaps the most fruitful. Then it was that he made acquaintance with Carlyle—an acquaintance memorable in result on the characters of both. Much that is foolish has been said as to this acquaintance; the truest thing, probably, that can be said is that it had some influence on Carlyle's thought, and very much influence on Emerson's style. Then, also, he saw Coleridge, Wordsworth, and Landor, and showed a certain want of perspective by the memorable remark: "He pestered me with Southey; but who is Southey?" Southey was the best writer of English prose living at the time; but that was a matter not within Emerson's ken. He returned to America, and to lecturing, but not to ministerial work properly so called. In 1835 he married again, and established himself comfortably in Concord. His biographers are not very explicit as to the sources of his income, but it would appear that he was independent. 1836 saw his first book, *Nature*, a result of a certain study of Plotinus it is said, though Emerson does not give one the impression of knowing Greek or Greek thought very thoroughly. He still preached occasionally, but declined regular work. In 1836 and 1838 he published the American edition of Carlyle's *Sartor and Essays*. It was about this time that the famous "Boston transcendentalism" began to display itself, and Emerson became its prophet, with Ripley, Margaret Fuller, Brownson, &c., as half comrades, half disciples. He contributed not a little to the *Dial*, but had nothing to do with Brook Farm. It was in 1838 that he ceased to have any connexion with the Unitarians, and practically disavowed himself from any dogmatic or even liturgic form of religion. Indeed (without any unfavourable connotation of the word), Emerson may be said to have been an essentially irreligious person, just as Carlyle was an essentially religious one. A cheerful process of exploration within his own soul, and a confidence in its power of comprehending the universe, was the note of the one; a sense of the vast and terrible unknown surrounding the *ich*, and of a presence pervading that unknown, was the note of the other. The reader of Emerson very soon perceives his attitude towards any "Mother of Form and Fear." Emerson appreciated the excellence of neither. But he had a great faculty of enjoyment of the good things of the visible and the intellectual world, and a considerable sense of humour, and so he did very well. His essays appeared at intervals during the early '40's; and in 1846 the first volume of his remarkable *Poems*, in which his real literary power perhaps best appears, despite a careless or wilful indifference to form. His second visit to England came in 1848, and two years later appeared the best known of all his books, the *Representative Men*. The *English Traits* (a combination of his notes in both his visits) were published in 1856, *The Conduct of Life* in 1860, the charming *May-day* in 1867. These were the chief of his works, though others have followed since. He visited England for the last time in 1872. Of late years he is said, though untouched in his bodily health, to have somewhat failed in his memory and other mental faculties. But his end was as peaceful as his life had been, and as the life of one whose moral character was singularly unblemished deserved to be.

Literary appreciation of Emerson is not altogether easy, because it has to be made with perpetual allowance, a proceeding as annoying to the audience as it is unsatisfactory to the critic. It is probable that in his verse are to be found the most absolutely poetical things yet put into words by any American poet; yet it would be hard to pick out half-a-dozen consecutive lines not disfigured by some capital defect

of form or phrase. His prose is of the same unequal kind—nearly always suggestive, often admirably eloquent, not seldom marvellously acute, but, on the other hand, sometimes quite platitudinous, often conceited and grotesque, and not seldom containing a stray morsel of gratuitous bad taste on which the teeth grate with a consequent disgust scarcely to be exaggerated. That his merits far outweighed his defects no competent judge will question, and there is little doubt that posterity will assign him the position of the greatest of American men of letters up to the time of his death. An essay on the bad and good influence on him of what his own people would call his surroundings would be one of the most curious exertions of the kind possible. But there is one thing very noteworthy in Emerson. No one, however much he might differ with him, could form a dislike to the author as he read, or could affect to see in him other than a great thinker and writer. This came, partly from the fact that, with the most egotistic of all possible creeds in literature, politics, and philosophy, he was personally not in the least an egotist; partly from the sheer literary merit of even his most unequal work.

GEORGE SAINTSBURY.

MR. JOHN BRENT, F.S.A., an antiquary who made the history of the Metropolitan city of England the subject of his study for many years, died at Dane John, Canterbury, on April 23. The family originally resided at Cossington, in Somerset, but removed to Kent about a century ago; and Mr. Brent was born in that county in 1808. His first work in antiquarian literature was a revised edition of the *Handbook to Canterbury*, by Felix Summerly, the *nom-de-guerre* of the late Sir Henry Cole. His own learned and interesting volume on *Canterbury in the Olden Time* was first published in 1860. It has since been reprinted, and is universally accepted as one of the most accurate and valuable specimens of topographical literature ever issued in this country. Mr. Brent published two volumes of poetry, and was a frequent contributor to the pages of the archaeological magazines. The pilgrims to Canterbury should hold his name in especial honour for the patient labour which he bestowed on its past history.

MR. GEORGE GRANT FRANCIS, lieutenant-colonel in the 1st Glamorgan Artillery, died at 9 Upper Phillimore Place, Kensington, on April 21. He was born at Swansea in 1814, and was long identified with its chief industries. The history of the town of Swansea was the "hobby" of his life; and in 1867 he printed, and distributed among his friends, a volume on *The Smelting of Copper in the Swansea District from the Time of Queen Elizabeth*. It abounded in information on the progress of mining in the West of England, and was much prized by the few persons to whom copies were presented. After being revised and enlarged by the addition of many facts accumulated in the last fifteen years, it was again passed through the press, and offered for sale a few weeks before his death. Col. Francis also compiled a short account of the Free Grammar School at Swansea, with memoirs of its founder and masters (1849), and a selection of charters and other materials for a History of Neath and its abbey.

#### PROF. BUGGE'S ETRUSCAN RESEARCHES.

By the kindness of Prof. Bugge, of Christiania, I am able to give to the readers of the ACADEMY a brief sketch of the results of his Etruscan researches. As Prof. Deecke has, I believe, lately arrived at partly similar conclusions, it may be as well to state that Prof. Bugge first made his results known in two papers which he read, one in September, the other in November, last

year, before the Christiania Academy of Sciences (Videnskabs-selskab).

Prof. Bugge considers Etruscan to be an Indogermanic language, occupying a peculiar position, related to the Italic languages, but at the same time more nearly related to Greek than any one of the Italic languages, although often showing special agreements with other members of the Indogermanic family. In its general structure it has departed farther from the original type than any other old Indogermanic language, its inflections being often quite modern in character, very much as in Modern Danish. Thus, the genitive plural and several other plural cases of nouns are formed by adding the case termination to the nom. plur.; in the verbs, the third pers. sing. is often used where there are several subjects.

As an illustration of his method, he gives the following reading and interpretation of an inscription (Gamurrini, Appendice 912 bis), written without word-division on a patera from Foiano, near Clusium:

eku Suñialz rex-ova zel: es'ulzi pul Ses-ova purtiur-a pruenetur-a reketi.

= Hanc civitatis rex (i.e. summus magistratus) munere ter functus pateram ponit ob magistratu[m] [peracta], ob successus [quos] in administratione [habuit].

He explains the words thus:

eku = "hanc." Same pronominal stem in Oscan and Pelignian.

Suñialz = "reipublica," "civitatis," gen. formed with the termination -alz, for which -als is also found. Related to Umbrian *tua*, &c.

rex formally = Lat. rex, but without the s of the nom. Apparently applied to the highest magistrate, who was appointed, not for life, but for a definite shorter period, probably a year.

-ova, also -va, enclitic particle of emphasis. Probably related to Sanskrit -u.

zel: a contracted spelling, = "magistratu functus." Belongs to *zila* = "magistratus." Perhaps from a word corresponding to Latin *sella*, as the *sella curulis* was the special mark of a magistrate.

es'ulzi, "thrice." The suffix -zi belongs to Greek -ki, -kis, having the same meaning. Written also *eslz*. From *zai*, "three," which is perhaps for *(e)zar*; cf. Sanskrit *tiśas*, Old-Irish *teora*.

pul = "pateram." Elsewhere written *puln*. Probably from an adjective signifying "full," Sanskrit *pūrṇa*, cf. Anglo-Saxon and Old-Norse *full*, "the filled goblet."

Ses = *tithēsi*. *ova* enclitic particle. *purtiur*, plur. of *purtiwa*, which means the position held by a *purisvana* or *puršne* (Porsenna, prūtania), i.e., the highest magistrate. Here plural because the position has been held thrice. *purtiur* is governed by the postposition -a = Latin *a*, here much the same as *post* = *propter* ("on having held").

*pruenetur* plur. = Latin *proventus*, i.e., "successus"; plur. because several magistracies are spoken of. Governed by the postposition -a. Stands for *pruenetur*, like *eslz* for *zelz*, *epšne* for *puršne*, and Greek *andrōn* for *\*n(e)rōn*.

*reke*, from *rex*, the same word as Sanskrit *rājya*, Gothic *reiki* = "regnum." -ti is a locative suffix identical with Greek -ti.

HENRY SWEET.

#### SARAH BERNHARDT IN OPORTO.

Oporto: April 24, 1882.

READERS of the ACADEMY may care to hear of the doings of this lady—certainly, at present, the most-talked-about personage of her sex, and, perhaps, the most interesting—in this corner of the Peninsula.

It is but a flying visit she has paid us at Oporto after two or three nights in Madrid and three in Lisbon. She had given an afternoon performance on Friday at Lisbon; in the evening she acted again in the capital, took the midnight express after the play, reaching Oporto in good time for an appearance at 8 p.m. the following day in the "Dame aux Camélias."

To-morrow she gives us "Frou-frou," and the day after that she leaves us, with her company, her diamonds, dresses, husband, and fine pretty sets of scenery, "to spread her conquests farther." No one, since Swift's Mordanto "filled the trump of fame," has travelled faster or farther in the Peninsula or made so much stir.

The theatre she chose to appear in here is one of the smallest in the city, about the size of the London Olympic. It was crammed, every box crowded with twice its proper number of occupants; and tickets for every part, fixed originally at about treble the usual price, were sold before the night in many cases at double the prime cost.

Certainly, the "Dame aux Camélias" is a most miserable and morbid play, as vicious in taste as it is in morals; and I sincerely hope M<sup>me</sup>. Damala will not give it during her London engagement. I do not think it would go down at the present day. London playgoers have, I believe, arrived at sounder views in ethics, and certainly in *dramatics*, since this very poor play was written and took. Its objectionableness now as a play, however, lies almost entirely in its phenomenal tediousness. We can all make allowances for sprightly iniquity; but here all is stale, tame, and *connu*. In the "Dame aux Camélias" vice may be said to be paying this compliment to morality—that it has borrowed all that dulness with which unskilful expounders sometimes clothe the fair form of moral truth. It is a homily in dialogue, and a homily with a bad and, indeed, an absurd moral. Not all the cleverness and pretty attitudes and frequent changes of lovely apparel on the part of the gifted actress could make the audience forget that we were mostly listening to the flattest and wordiest of sermonising. The company which supports—perhaps it would be more just to say, which fails adequately to support—the great artist is composed of the lady's husband and a third- or fourth-rate set of provincial French actors. M. Damala is a better and more intelligent actor than I expected from recent newspaper accounts. His utterance is, indeed, a little indistinct and monotonous, his movements somewhat slow and heavy for a *jeune premier*; but in the last act he showed more vivacity and some approach to light and shade in his speech. On the other hand, the "conqueror of the conqueror of the world," though tall and well limbed, is by no means the Apollo that the fancy of the newspaper paragraphist has painted. He is a rather dark, bearded gentleman, apparently nearly forty years of age. He has no stage presence, nor is he at all remarkable for good looks or distinction. I find his exact prototype in that obliging, intelligent, and most respectable class of young men who serve behind the counters of the great retail establishments in the West End of London. I describe M. Damala best, and not unflatteringly, when I call him "a Waterloo House young man."

Here at Oporto was something like a virgin audience; and the artist, in taking them captive (as she undoubtedly did) after a little hesitation, was in truth breaking new ground and obtaining a new triumph. I do not suppose that a dozen among us had ever seen Sarah Bernhardt before, but everyone had seen the well-known photographs and caricatures of her. Portraits of Sarah Bernhardt, however, never succeed in catching the true likeness of her strange, mobile features. Consequently, when the actress came first upon the stage, she did not "get a hand." No one seemed to know it was she. Everyone, so far as I could learn, was struck by a beauty which he did not expect to find. We are not much of stage-play critics here; we could assess the woman more quickly than the actress, and found more in her to admire than we thought to find. Her repeated change from one

rich dress to another, her satin-lined cloaks—one apparently ready to slip on, or off, as each new emotion in the play arose—the splendour of her diamonds in the fourth act—I heard all these things greeted with a buzz of approval. But, as the play went on, the audience seemed to wake to the fact that a rare genius was before them. The graceful transition from one exquisitely statuesque pose to another, the sudden energy of passionate gesture, the remarkable range of the vocal organ and the artist's command over it—each point was acknowledged by culminating murmurs of applause. I doubt much whether five per cent. of the great audience present understood French enough to follow the actors' dialogue; happy for them was it that they could thus escape hearing some of the most consummate rubbish that perhaps was ever spoken on a stage. And all the greater, therefore, was the artist's merit to have won their sympathy by her crowning charm, her wonderful voice, which rises and falls with her breathing—never too loud or too low to be melodious—like the rise and fall of some strange, sweet strain of music.

### CORRESPONDENCE.

AMERIGO SALVETTI.

Florence: April 29, 1882.

A search in the archives of Lucca has rewarded me with some curious facts in the life and adventures of Amerigo Salvetti, who during a portion of his remarkable career acted as Tuscan Resident in London. His real name—that of Salvetti being assumed—was Alessandro Antelminelli, and he descended, through the female line, from Castruccio Castracani. His father, with his brothers Scipio, Henry, and Lelius, was executed in Lucca for conspiracy against the State; and he, although absent at the time, residing in Antwerp as a merchant, was in 1596 summoned to Lucca, and a price put upon his head. There is no evidence that he took any part in the conspiracy of his relatives. For upwards of thirty years he lived under the dread of assassination, assassins being hired to pursue him wherever he went, and, if possible, to take his life. Assuming the name of Amerigo Salvetti, he travelled in various parts of Europe with Sir Henry Wotton and his nephew Pickering. When Sir Henry became ambassador at Venice, being required by King James to obtain possession of Robert Eliot, an adherent of Robert Dudley, a natural son of the Duke of Leicester by Lady Sheffield, who lived in Tuscany, calling himself Earl of Warwick, Duke of Northumberland, and, latterly, Duke of Dudley, the English ambassador entered into correspondence with the magistrates of Lucca, promising that Salvetti should be arrested in London, where he lived, and should be delivered up at Viareggio, provided that Eliot was seized and given up to him. The letters which detail this discreditable transaction are preserved in the archives at Lucca. This conspiracy against Salvetti failed, as all Salvetti's appeals to the Luccese government likewise failed to induce it to remove the price set on his head. News, however, reached Lucca in 1637 that he had married the daughter of Sir John Colborne, Bart., and had a son. By this lady he had in due time a family of three sons and three daughters; and the magistrates of Lucca, finding that they could not exterminate the race of Antelminelli, ceased to persecute him. Alessandro Antelminelli, or, as he was known in London, Amerigo Salvetti, died there on July 10, 1657, and was buried in the chancel of the parish church of St. Bartholomew, in the presence of numerous English friends whom he had won by his excellent qualities.

O. HEATH WILSON.

#### PLATO'S "NUMBER."

Trinity College, Cambridge: April 29, 1882.

I am able, I think, to offer a fairly simple and straightforward solution of this difficulty, which has been a standing puzzle from the time of Cicero. The text generally adopted is as follows (Plat. Rep. viii. 546):—

ἔστι δὲ θεῖον μὲν γεννητὴν περιόδον ἣν ἀριθμὸς περιλαμβάνει τέλειος, ἀνθρωπείῳ δὲ ἐν φ' πρώτῳ αὐτῆς δυνάμει τε καὶ δυναστεύμεναι τρεῖς ἀποστάσεις τέτταρας δὲ ὅρους λαβούσαι, ὁμοιοῦντων τε καὶ ἀνομοιοῦντων καὶ αὐτῶν καὶ φθινόντων, πάντα προσήγορα καὶ ῥητὰ πρὸς ἄλληλα ἀπέφηναν. ὦν ἐπι- τριτος πύμην πεμπτὰς συζυγείας δύο ἁρμονίας παρέχεται τρις αὐτῆς, τὴν μὲν τῶν ἰσάκων, ἐκαστὸν τοσοῦτάκις, τὴν δὲ ἰσομήκη μὲν τῇ, προμήκη δὲ, ἐκαστὸν μὲν ἀριθμῶν ἀπὸ διαμέτρων ῥητῶν πεμπτὰς, δεομένων ἐνδὸς

ἐκαστὸν, ἀρῆσαν δὲ δεῦν, ἐκαστὸν δὲ κύβων τριῶν· ἔμβας δὲ οὗτος ἀριθμὸς γεωμετρικὸς, τοιοῦτον κύβος κ. τ. λ.

The reader requires, before attacking the passage, a little preliminary information, which I have here set out.

1. Aristotle (Pol. v. [viii.], 12, 8) quotes the words ὦν ἐπιτρίτος . . . αὐτῆς as the gist of the passage, and adds λέγων (sc. Σωκράτης) ὅταν δὲ τοῦ διαγράμματος ἀριθμὸς τοῦτου γένηται στερεός. This explains τρις αὐτῆς, and Aristotle was evidently unconscious of any further difficulty.

2. In the fantastic Pythagorean theory of numbers a perfect number is one which is equal to the sum of its aliquot parts, as 6 (= 3 + 2 + 1), 28, &c. A product of any three numbers was called solid (στερεός), and was conceived for some purposes in a figure of three dimensions, just as a product of any two was conceived, geometrically, in a rectangle.

3. In the application of arithmetic to geometry, the Pythagoreans made two important discoveries relative to the property of a right-angled triangle previously discovered by them and known to us through Euclid (i. 47). The first of these was that the diagonal of a square was represented numerically by  $\sqrt{2}$ , and was incommensurable with the sides. The second was that the sides of a right-angled triangle, to be commensurable with one another, must be to one another in the ratio 3 : 4 : 5 ( $3^2 + 4^2 = 5^2$ ). All the ancient writers who speak of Plato's number agree that it is founded on this doctrine.

4. Alexander Aphrodisiensis (in Arist. Metaph., p. 35) informs us, with evident reference to this passage of the Republic, that δυναμένη means the hypotenuse, and δυναστεύμεναι the sides, in a right-angled triangle. I take αὐτῆς δυναμένην and αὐτῆς δυναστεύμεναι to mean the squares of these. δυναμένη possibly means here "equal-ling," and δυναστεύμεναι "equalled."

5. ἐπιτρίτος means "in the ratio of 4 to 3." προμήκης means "oblong." None of the other words in the passage, I think, are technical.

Plato's number, then, according to my interpretation, is 3600—i.e.,  $3^4 \times 4^3 \times 5^3$ . This, being a product of three factors, is solid, and is to be conceived, geometrically, as a parallelepiped, like a brick or a beam of timber.

My translation of the passage in question will run somewhat as follows:—

"The divine offspring has a period which is covered by a perfect number; but the human has a number in which for the first time [i.e., taking the simplest case] the squares of the hypotenuse and the sides [ $5^2$ ,  $4^2$ , and  $3^2$ ], arranged in a figure of three dimensions with four edges ["four-square," as Tennyson says, disregarding, like Plato, the two ends of the parallelepiped], make conformable and commensurable with one another a whole series of factors, producing, like and unlike, greater and smaller products. The base of the figure, which is  $4^2$  by  $3^2$ , when joined with  $5^2$ , admits, in three dimensions [ $3^4 \times 4^3 \times 5^3 = 3600$ ], of two symmetrical arrangements, the one a square taken a hundred times [ $6 \times 6 \times 100 = 3600$ ], the other of the same length as this [i.e., 100 in one dimension], but oblong [at the base], composed of 100 of the numbers which have the commensurable diagonal 5, minus 1 each [ $4 \times (3 - 1) \times 100 = 800$ ], 100 of those with the incommensurable diagonal  $\sqrt{2}$  [ $1 \times 1 \times 100 = 100$ ] and a hundred cubes of 3 [ $3^3 \times 100 = 2700$ .  $800 + 100 + 2700 = 3600$ ]."

Thus two modes of composing a solid 3600 are selected. The first is a figure with the dimensions 6, 6, 100; the second is a figure with an oblong base, compacted of other figures, of which the dimensions have nothing in common with one another or the preceding figure, save the uniform length, 100. And this is Plato's point. The cycle in the affairs of men lends itself alike to symmetry and disorder, strength and weakness, health and decay. If a mistake be made in laying the foundation of the number, 6 by 6, the cycle may still be completed, but only by the introduction of unequal elements,

of which the second *ἀρμονία*, described by Plato, is an extreme instance. And there are other reasons, beside the variety of its factors, why a special mystery should have attached to 3600. It is not only the product of  $3^3 \times 4^3 \times 5^3$ , but of  $6^3 \times 10^3$ , of which the former was a perfect number, and the latter, as we know from Lucian, the most sacred element in Pythagorean mysticism. The difficulty which has been found in understanding the passage is due partly to Plato himself, who confuses numerical and geometrical symbolism (treating, e.g.,  $4^3$  as a number, and  $6^3$  as a square geometrical figure, and using *τετρας* for  $5^3$ , but *δωδεκ* for  $\sqrt{2}$ ). These ambiguities, however, may be easily illustrated from Plato himself and other Greek writers. But the great cause of confusion in the minds of commentators is that *ἀρμονία*, *ἀρμονία*, and *ἁρμονία* acquired technical senses in Greek arithmetic wholly different from those earlier and simple meanings which Plato here uses. I shall, I hope, find another opportunity of commenting at large upon this text.

I have seen a paper on Plato's number by J. Dupuis (Paris: Hachette, 1881), in which a full account of previous theories is given. The author himself fixes on 21600 as the number. F. Hultsch (in Fleckeisen's *Neues Jahrbuch* for 1881, reviewing Cantor's *Mathematik*) mentions a theory of his own which he had sent to the literary department of the *Zeitschrift für Mathem. u. Physik*. It should have appeared by this time, but I have not seen it. It seems, from the cursory mention in Fleckeisen, that he selects  $60^4$  as the number, and obtains it by quite as complicated a process as any other commentator. Mr. Monro's article in *Journ. Philol.*, viii. 275, contains all the useful references to ancient commentators.

JAMES GOW.

## SPANISH "-Z" IN PATRONYMICS.

6 Norfolk Terrace, Baywater, W.: May 1, 1882.

The only way to enable the readers of the ACADEMY to determine how far Dr. Reinhardt-stoettner's Portuguese Grammar can be relied on would be to submit to them the entire criticism of it by Prof. F. d' Ovidio, which has failed to convince Dr. Burnell. Unfortunately, the editor cannot spare me so much space.

As regards Spanish -z in patronymics, I have never stated, contrary to what Dr. Burnell supposes, that Larramendi says anywhere "that the Basques once used patronymics in -z, which they afterwards gave up for the Spanish, &c., forms expressed by *de*;" what I have said, only on my own responsibility and without quoting Larramendi, although in confirmation of his views, may be seen in the ACADEMY of April 10, 1882. I may add a fact which very likely will interest Dr. Burnell, consisting in the actual existence of Basque local names, used from time immemorial, some of which are also family names, presenting the Basque suffix "-z" in the sense of the Spanish "*de*," as *Arraiz*, *Iziz*, *Ostiz*, *Usoz*, *Aranaz*, *Atez*, and a thousand more, derived from *arraiz*, "fish," *izi*, "hunting," *osti*, "thunder," *uso*, "dove," *aran-a*, "the plum," *ate*, "door," and the meaning of which is: a (place) of fish, of hunting, of thunder, of doves, of the plum, of doors. The same is the case with proper personal names, as *Maria-z*, *Pedro-z*, *Martin-ez*, *Larramendi-z*, *Johnson-ez*, *Newton-ez*, which have exactly the same meaning as the Spanish patronymics, although the Basque names in "-z" are not generally at present used as patronymics.

L.-L. BONAPARTE.

## DANTE G. ROSSETTI.

Harrow-on-the-Hill: May 2, 1882.

My recollection of the late D. G. Rossetti dates back as far as 1848 and 1849, if not earlier. I was a boy at the time, and used to see him day

after day in the studio of my cousin, the late John Hancock, the sculptor of the "Beatrice" now belonging to Lady Burdett-Coutts, and of the two bas-reliefs of "Christ entering Jerusalem" and "Christ departing from Jerusalem," which were published by the Art Union. The two young men had been fellow-students at "Sass's." Rossetti's personality made an impression upon me which is still fresh. I can see him now as I think he then was, joyous, buoyant, defiant, hearty. I see him entering the studio at 40 Robert Street, Hampstead Road, singing a few lines in a loud, clear voice, imitating the official reading of clergymen in church—I remember him going through the first chapter of Job as a specimen—and railing at Sir "Sloshua" Reynolds, as he called him. John Hancock was then hoping to go to Rome, and Rossetti used to give him a few desultory lessons in Italian. He dashed off sketches in pen and ink while he sat at the table. I believe that my cousin, though he was never a member of the organised P.R.B., belonged for a time to some preliminary society, half artistic and half poetic, of which Mr. Rossetti was the centre, and at whose meetings sketches were shown and poems read. I remember listening to a poem which my cousin had prepared for the ordeal. After he moved his studio to Stanhope Street, where he and Mr. Woolner were neighbours, I saw less of Mr. Rossetti; but I well recollect the publication of each successive number of the *Germ*, which I regarded with a sort of awe. A copy of the first number was given to me. I remember my cousin trying his hand at etching—I imagine with a view to providing an illustration for a later number. I even tried to get a subscriber or two for the projected regenerator of art and poetry. Upon showing the first number to a *genre* painter not wholly without fame at the time, he said, to my horror, "Ah! poetry and high art, two things I never trouble myself about." Rossetti's "Annunciation" in the Portland Gallery, which I well remember, was satirised as "A distressed needlewoman." My later life carried me away from artists and studios, and I did not see Mr. Rossetti until after an interval of twenty years, when I suddenly met him in the Strand—the same, but strangely changed—about 1870. I have never seen him since. But I cannot omit saying how much I owe to listening to his talk when I was at a very impressionable age. It was from him I first learned, what scarcely any schoolmaster would have taught at that time, that Shelley and Keats were great poets, and contracted the habit, perhaps imitative, of carrying Shelley about in my pocket. I hope that this very meagre glimpse of a very remarkable man from a boy's point of view may not be wholly uninteresting, though it is necessarily somewhat egotistic in form.

THOMAS HANCOCK.

## DANTE ROSSETTI'S "HAND AND SOUL."

Dublin: April 29, 1882.

While tendering my best thanks to Mr. Hall-Caine for his obituary notice of Mr. D. G. Rossetti, permit me to enquire where the prose story "Hand and Soul" may be found. Mr. Hall-Caine says it appeared in the *Fortnightly Review* "about eight years ago," but I have searched for it vainly through the *Fortnightly* for the past fifteen years. I had to make the search on the floor of a dark gallery in the National Library of Ireland, but I believe I made it thoroughly.

If Mr. Hall-Caine will tell precisely where and when the story appeared he will oblige many in Dublin who have thought for some time of starting a "Dante Rossetti Society" for the discussion among ourselves of the poet's wonderful writings and personality.

W. WILKINS.

## APPOINTMENTS FOR NEXT WEEK.

- MONDAY, May 8, 5 p.m. Royal Institution: General Monthly Meeting.  
 7.30 p.m. Education Society: "The Teaching of Grammar," by Dr. Alexander Bain.  
 8 p.m. Society of Arts: Cantor Lecture, "Book Illustration: Old and New," I. by Mr. J. Comyns Carr.  
 8.30 p.m. Geographical: "Surveys and Explorations in the Native States of the Malayan Peninsula, 1875 to 1882," by Mr. D. D. Daly.  
 TUESDAY, May 9, 3 p.m. Royal Institution: "History of Customs and Ballets," by Dr. E. H. Tylor.  
 8 p.m. Anthropological: "The Evidence of Surmises as to Ethnological Changes in England," by Dr. J. Beddoe; "The Survival of Certain Racial Features in the Population of the British Isles at the Present Day," by Mr. J. Park Harrison.  
 8 p.m. Civil Engineers: "Coal Washing," by Mr. Thos. F. Harvey.  
 8 p.m. Colonial.  
 WEDNESDAY, May 10, 8 p.m. Society of Arts: "The Fish Supply of London," by Mr. Spencer Walpole.  
 8 p.m. Geological: "The Relations of *Hyboecrinus*, *Basrocrinus*, and *Hyboecystites*," by Mr. F. Herbert Carpenter; "The Exploration of Two Caves in the Neighbourhood of Tenby," by Mr. Ernest L. Jones; "The *Madreporaria* of the Inferior Oolite of the Neighbourhood of Cheltenham and Gloucester," by Mr. R. F. Tones; "The Comparative Specific Gravities of Molten and Solidified Vesuvian Lavas," by Mr. H. J. Johnston-Lavis.  
 8 p.m. Microscopical.  
 THURSDAY, May 11, 8 p.m. Royal Institution: "The Metals," by Prof. Dewar.  
 8 p.m. Society of Arts: "The Recovery of Sulphur from Alkali Waste: Schaffner's Process: a Record of Recent Results," by Mr. Alexander M. Chance.  
 8 p.m. Mathematical: "A Formula relating to Elliptic Integrals of the Third Kind," by Prof. Cayley; "Elementary Analytical 'Proof' of Graves's and MacOulagh's Theorems, with an Extension of the Former," by Mr. J. Griffiths.  
 8 p.m. Telegraph Engineers: "Measuring Instruments used in Electric Lighting and Transmission of Power," "The Technical Education of an Electrical Engineer."  
 8.30 p.m. Antiquaries.  
 FRIDAY, May 12, 8 p.m. Society of Arts.  
 8 p.m. New Shakespeares: a paper by the Rev. W. A. Harrison.  
 9 p.m. Royal Institution: "Different Modes of Lighting," by Mr. A. G. Vernon-Harcourt.  
 SATURDAY, May 13, 3 p.m. Royal Institution: "History of the Science of Politics," by Mr. F. Pollock.  
 3 p.m. Physical.

## SCIENCE.

*Aryo-Semitic Speech: a Study in Linguistic Archaeology.* By J. F. McCurdy. (Trübner.)

UNDISMAYED by the failures of his predecessors, Mr. McCurdy comes forward once more with an attempt to prove the original relationship of the Aryan and Semitic families of speech. He feels himself better equipped for the task than they were. Not only has he their errors to profit by and avoid, but he can also call to his aid that wider and deeper knowledge of comparative Aryan philology which has resulted from the researches of the last half-dozen years, as well as the extraordinary progress that has recently been made in the study of Assyrian, deservedly termed the Sanskrit of the Semitic languages. He follows a strictly scientific method, and claims to have shown that Aryan and Semitic roots are identical, and that, consequently, the Aryan and Semitic idioms have sprung from a common source.

It cannot be denied that some of his results are striking. The resemblances which he establishes between the Aryan and Semitic roots for "fire," for example, seem almost too great to be accidental. If we are persuaded by his arguments that a common stock of roots, rather than a common grammar, is the ultimate test of linguistic relationship, it seems difficult to avoid his conclusion that the ancestors of the Aryans and the Semites once spoke the same tongue.

Nevertheless, while fully acknowledging the learning, the ability, and the scientific method Mr. McCurdy displays, I am stiff-necked enough to remain unconvinced by his arguments. The school of comparative Indo-

European philology he represents is the obsolescent one of Schleicher and Curtius. It is true he shows himself not altogether unacquainted with the revolution which is being effected by Fick and Johannes Schmidt on the one side and the "junggrammatische Schule" of Brugman, Osthoff, and de Saussure on the other; but his references to their labours prove that he has neither followed nor assimilated them. They have demonstrated that, as I said nine years ago, the primitive Aryan alphabet of Schleicher is a mere figment of the philologist's laboratory.

The history of language is the history, not of the growth of new sounds, but of the disuse or softening of old ones. Mr. McCurdy's proto-Aryan alphabet, therefore, must be greatly enlarged before it can represent the whole number of sounds belonging even to the so-called parent-Aryan—the earliest form of Aryan speech, that is, of which the materials at our disposal allow us to know anything. It is just the same with his proto-Semitic alphabet. Here, too, the latest researches show that the parent-Semitic possessed a far larger number of different sounds than that which he would allow to it, and that, instead of there being but one primitive *s* as he asserts (p. 66), there were at least three (see Haupt, *Z. d. M. G.*, xxxiv., 4, p. 763). I may observe that one of the sounds which afterwards coalesced in the Hebrew *shin* was the aspirated *sh*, like the Sanskrit *ṣ*; in no other way can we explain why the same pronoun became *su* in Assyrian and *hū* in Hebrew, or the same verbal form a *shaphel* and a *hiphil*. I do not understand Mr. McCurdy's argument (p. 56) that, since only one symbol stood for the Hebrew *ע* and *ע* in the Phoenician alphabet, the two sounds must have been differentiated after the invention of the latter. The argument would only hold good if the Phoenician alphabet had been of Hebrew invention. So, too, the example of Arabic shows that Assyrian need not have possessed only the four vowels *a*, *i*, *u*, and *e*, because no others are represented in writing; in fact, I believe there are evidences of other vowel-sounds having been used. In any case, the coalescence of the original Aryan *ā*, *ē*, and *ō* into simple *a* in the Asiatic branch of the Indo-European family might have warned Mr. McCurdy against assuming that the "proto-Aryo-Semitic" alphabet contained only the three vowels *a*, *i*, and *u*.

It will now be clear why Mr. McCurdy's comparison of Aryan and Semitic roots has failed to convince me. The forms he assigns to them are not those they would have had supposing them ever to have existed. They represent, not the earliest forms of roots, but the latest—those, namely, into which groups of allied words may be reduced by phonetic decay or the magic knife of the philological anatomist. With the limited number of sounds thus obtained, and the vague and general meanings given to roots, it would not be difficult to discover that Aryan roots were closely related to those of Basque or Dravidian, or almost any other family of languages in the world. How dangerous this manipulation of roots is may be judged from the fact that some of the words supposed by Mr.

McCurdy to be Semitic—such as *barzēl* ("iron") or the Assyrian *agaru* ("a field")—are shown by the bilingual tablets of Nineveh to be really loan-words from Accadian. It must be remembered, moreover, that there is an increasing number of comparative philologists who would reject Mr. McCurdy's primary assumption that roots were once real words. For my own part, I cannot conceive how anyone who tries to realise what roots actually are, and how they are arrived at, can doubt the truth of Fick's remark (*Gött. g. A.*, April 6, 1881): "Anstatt fingierter 'Wurzeln' liegen also der Verbalflexion wirkliche lebendige Wörter zu Grunde." Mr. McCurdy, however, is fully acquainted with the objections that have been brought against the root-theory, and has endeavoured to meet and answer them. He has, therefore, a right to claim that the justice of his conclusions must be decided upon other grounds.

Apart from all philological considerations, however, there is one reason why, as it seems to me, all attempts to prove a common parentage for Semitic and Aryan must be fruitless. The able investigations of Hommel and Guidi have made it clear that the home of the undivided Semitic race lay in the desert on the western side of the Euphrates. The undivided Aryans, on the other hand, lived far away in Central Asia. Between them came the populations whose agglutinative languages and peculiar features have been revealed to us by the monuments of Assyria, Babylonia, and Elam. While, as might have been expected, the language of the Semites shows how profoundly they were influenced in early days by the higher culture of Accad, there is no trace of Aryan influence in the valleys of the Tigris and Euphrates, or of Accadian and Semitic influence upon the Aryans. Indeed, it is not until the eighth or seventh centuries B.C., at the earliest, that the monarchy of Assyria came into contact with Aryan tribes on the east. How, then, can we imagine any connexion between the language of the undivided Semites and the language of the undivided Aryans—the oldest forms of Semitic and Aryan speech, it must be remembered, to which our data enable us to reach back?

I hope Mr. McCurdy will not think that a review of his interesting book by myself must be necessarily prejudiced. The very fact that his conclusions are opposed to those which I have advocated elsewhere has made me study his arguments all the more carefully and keep myself on the guard against one-sided judgments. But while I fully admit the suggestiveness of his work and the ability with which he has treated the subject, I cannot honestly say that I think he has been a whit more successful than his predecessors in the same field. Underneath the whole book lies the fundamental fallacy which finds expression in the words: "It is surely a perilous assumption to regard the conditions of the primitive periods of language as analogous to those of its historical progress in the latest ages of the earth." On the contrary, all that we know of the laws and development of speech is confined to the historical period; that is to say, to the period which alone presents us with our facts. Language is no less formative now than it

was in the remotest epoch to which we can trace it back; indeed, the more advanced and developed a language becomes, the more formative it must also be. But Mr. McCurdy's error is an old one in philology, and old errors die hard.

A. H. SAYCE.

#### SCIENCE NOTES.

*Climatic Changes in Late Geological Times.*—In a masterly memoir which is in course of publication by the Museum of Comparative Anatomy of Harvard College, and of which the second part has just appeared, Prof. J. D. Whitney discusses the climatic changes of later geological times, basing the discussion on observations made in the Cordilleras of North America. These observations tend to prove that a decrease in precipitation has occurred—a conclusion which is supported by similar evidence from other regions. This diminution of rainfall is not due to the destruction of forests by the hands of man, but appears to be explicable by the operation of purely natural causes. Geological investigation favours the notion that there has been an increase of land-surface on the globe, and a marked diminution of temperature consequent upon the fact that the sun is a cooling body. These two conditions—increased land and decreased heat—are held sufficient to account for all the phenomena of desiccation. The reconciliation of these conclusions with the occurrence of a so-called glacial epoch is reserved for the concluding part of this elaborate memoir.

THE second edition of volume i. of Messrs. Thomson and Tait's *Treatise on Natural Philosophy* is now nearly completed, part ii. being in the press, to be published very soon by the Cambridge University Press. The work has been carefully revised, and amended in many points. The parts "On the Attraction of Ellipsoids" and "On the Equilibrium of Rotating Liquid Masses" have been rewritten, with the addition of some results of fresh investigations in the last-mentioned parts.

THE Cambridge Press has also very nearly ready for publication a volume of *Mathematical and Physical Papers*, by Sir William Thomson. Generally the papers are arranged according to the date of first publication, but in some cases this rule is departed from and the articles on one particular line of research brought together. Among the more important papers included in this volume may be noticed the series of papers "On the Dynamical Theory of Heat" published from 1851 to 1878, with the addition of one on "Thermo-dynamic Motivity" published in 1879. Also the joint papers by Dr. Joule and Sir William Thomson on a long series of researches on "The Thermal Effects of Fluids in Motion," which they carried out together during the years 1853 to 1862. The volume also includes papers "On the Thermo-dynamics of Electrolysis" and "On the Theory of Electro-dynamic Machines," which latter has acquired so much of general interest through the extensive practical applications which have been made of it for electric lighting and the electrical transmission of power within the last ten years. Additions and annotations have been made in many parts of the volume, but the original papers are given without even verbal change. Corrections, where errors have been found, have been distinctly marked in every case, and in most cases dated. This volume includes all of Sir William Thomson's papers published between 1841 and 1853, except those which appeared ten years ago in his volume of collected papers on "Electrostatics and Magnetism." It will be followed as speedily as possible by other volumes completing the series to the present date.

THE second volume of the *Mathematical and Physical Papers* of Prof. G. G. Stokes is now nearly complete, and will shortly be published by the Cambridge Press. In the chronological arrangement adopted, this volume carries us to the year 1850. One of the papers contained in it gives the mathematical theory of the formation of the central spot in Newton's rings when the angle of incidence exceeds that of total internal reflection. It is shown that the spot depends on a disturbance in the second medium, which in a certain sense may be spoken of as light refracted beyond the limit of total internal reflection. Another contains a demonstration of Clairault's theorem as resulting simply from the observed form of the earth's surface combined with the law of gravitation, without entering into any speculation as to the distribution of matter in the interior. In another paper will be found a discussion of a differential equation relating to the breaking of railway bridges. Another contains a dynamical theory of diffraction, together with a description of some experiments which seemed conclusive in favour of Fresnel's supposition that in polarised light the vibrations are perpendicular to the plane of polarisation, and not parallel to that plane, as has been supposed by some eminent mathematicians who have endeavoured to frame dynamical theories of polarisation and double refraction. A third volume is in preparation, and it is intended to complete the series as soon as possible.

THE Musée ethnographique was inaugurated at the Trocadéro on Sunday last. The galleries at present opened are devoted almost entirely to South America and Mexico. The Peruvian collection is specially rich.

#### PHILOLOGY NOTES.

WE understand that parts i. and ii. (576 pages, A to Lwistlian) of an Anglo-Saxon Dictionary, based on the MS. collections of the late Dr. Bosworth, edited and enlarged by Mr. T. Northcote Toller, Professor of English in the Owens College, Manchester, will be published almost immediately by the Clarendon Press.

THE Syndics of the Cambridge University Press will shortly publish *The Chronicle of Joshua the Stylite*, edited in Syriac, with an English translation and notes, by Prof. Wright. This little work gives an account of the war between the Persians and the Byzantines during the years A.D. 502-6, preceded by a sketch of the events which led up to and occasioned the outbreak of hostilities. It is of considerable historical interest and value, as the author was a contemporary, and in many cases an eyewitness of the incidents which he describes, and was therefore better informed on various points than the Byzantine historians who treat of the same period. We may mention as being of special interest his account of the famine and pestilence at Edessa, A.D. 500-1, and of the sufferings of the people of Amid after its capture by the Persians, as well as his description of the conduct of the Gothic mercenaries in the Greek army. The Syriac text has been carefully re-collated with the unique MS. in the Vatican Library, and is consequently more accurate than that edited some years ago by the abbé Martin.

MESSRS. WILSON AND M'CORMICK will publish about the middle of the present month Mr. E. J. W. Gibb's *Ottoman Poems*, being a series of translations in the original metres from 2,200 Turkish poets, which was announced in the ACADEMY of July 9, 1881. It may be remembered that the same number contained two specimens of Mr. Gibb's work.

THE same publishers will also issue Mr. Clouston's reprint of Sir William Ouseley's

text and translation of the *Bakhtyar-nāma*, which was announced in the ACADEMY of March 18 last.

AT two recent meetings of the Académie des Inscriptions, M. Deloche drew attention to a glass vase found in 1880 at Hermes, in the department of Oise, inscribed with the words OFIKINA LAVRENTI V. Comparing this with a coin preserved in the Bibliothèque nationale which bears the inscription VIENNA DE OFFICINA LAVRENTI and the name of the Emperor Maurice, he inferred that the vase and the coin are of the same date—the close of the sixth century. From this he proceeded to argue that the hard pronunciation of c before i continued to a much later date than is commonly supposed. But M. Gaston Paris pointed out that this conclusion had no bearing upon the question of the substitution of *ti* for *oi*, as in *propitius*. This is a phonetic change limited to the case of *i* followed by another vowel, and was certainly accomplished by the time of Commodianus, as is proved by his acrostic verses on the word "Concupiscentia." The hardening of *c* in other cases has not yet been effected in all the dialects derived from Latin. The Sardinians still say "kervo" for *cervus*.

THE *Euskal-Erria* of San Sebastian of April 20 announces that the inedited Basque Dictionary of Don José F. de Aizquibel will shortly be printed by Señor D. E. Lopez, of Tolosa, under the authority of the Diputación of Guipuzcoa.

#### MEETINGS OF SOCIETIES.

BROWNING SOCIETY.—(Friday, April 28.)

JAMES COTTER MORISON, Esq., in the Chair.—A paper by Mr. John B. Bury, on "Browning's Philosophy," was read. The writer started with the distinction which Browning himself has drawn in his Preface to the (spurious) Shelley letters in 1851—the distinction between the objective poet and the subjective. The objective poet, according to Browning, is he who is impelled to embody his perceptions with reference to the many below; the subjective, he who is impelled to embody his with reference to the "supreme intelligence which apprehends all things in their absolute truth." Browning, to Mr. Bury's mind, is at once a subjective and objective poet, and has, in fact, transcended the one-sided standpoints of both classes. Mr. Bury insisted on the necessity of clearly comprehending Browning's theory in order to understand what are the practical conclusions he draws. He treated his subject under the following heads: (1) Browning's point of view: individual. Though it would be possible to class human souls in genera and species, classes and varieties, none the less is each soul individual, and for each life has a different meaning. (2) Browning's first principle, or God. Browning's first principle, or absolute truth, is love. His poems are dramatic pictures of life so drawn as to let us detect love as the permanent spiritual unity underlying the manifold changing variety of circumstances. (3) How Love manifests itself in the world; power and knowledge. Love is revealed by power and knowledge. Power is the mode of love's manifestation in nature; knowledge, love's recognition of itself through the medium of power. Truth and beauty are merely love revealed as an object to man's knowledge. Man realises love by knowledge; but the essence of his manhood is the passion that leaves the ground to lose itself in the sky; the "spark" that "disturbs our clod" is the pledge of our divinity;

"the incomplete  
More than completion matches the immense."

Closely connected with this point of view is another great feature of Browning's philosophy—(4) the implication of opposites, necessity of falsehood and evil. The longest and fullest exposition of this principle is to be found in "Fifine at the Fair." (5) Love and Knowledge complementary. Excess of love accompanied by defect of knowledge, and excess of knowledge accompanied by defect of love, are equally disastrous. (6) Comparisons with Hegel. The spirit of Hegel's method pervades Browning's reasoning. The method depends on recognising

that, when we think anything, we implicitly think what it is not; and, when we think a definite quality, we implicitly think its opposite—e.g., good and evil, light and dark. (7) Personal God, Christianity, Individuals. Browning does not believe in a personal God, but holds that Love is God. The recognition that God, in whom man lives, moves, and has his being, is Love, is the soul of Christianity. (8) Immortality. Immortality, in Browning's poems, implies, not memory and an unbroken chain of consciousness, nor yet an absorption into unconsciousness, but a state inconceivable to us, a state which may involve other manifestations in worlds "not a few."—In the discussion, opened by the Chairman, Messrs. Coupland, Furnivall, and Radford took part.

SOCIETY OF BIBLICAL ARCHAEOLOGY.—(Tuesday, May 2.)

DR. SAMUEL BIRCH, President, in the Chair.—The Rev. A. Löwy read a paper entitled "Notices concerning Glass in Ancient Hebrew Recor ds." The Hebrew word *Zéchuchit* is employed to denote "glass." Whether it has this signification (in Job xxviii. 17), or whether it relates to some precious stone, is a debateable question. The word *zéchuchit* means a pure substance, and does not imply transparency. The Phoenicians, though credited with the invention of glass, have not left any other records except the names of some makers of glass vessels. On some Phoenician relics occurs the name of Artas the Zidonian. Whether the Jews, as neighbours of the Phoenicians, were manufacturers of glass during the Biblical period of their history cannot be proved by any relics. Of glass which came from Assyrian excavations, the British Museum has several specimens; one of 700 B.C. bears the inscription of Sargon. A more direct insight is given by the Egyptian monuments, where we have pictorial representations of glass-making. The earliest relic brought from Egypt bears the inscription of Thothmes III., and was made 1500 B.C. The Coptic name of glass, *Badjein* or *Abadjein*, and some variations of this word, have no connexion with Semitic words. The Arabs have given a wide extension to the word *zajaj* or *zagag* among Mahomedan nations. But among the Aryan Mahomedans in India, in Persia, in Kurdistan, as also among the Turks, glass is called *shisha*. In Hebrew *shish* or *shadyish* is the name of marble, and may eventually have been used in the signification of glass. Whether glass was in the earliest days manufactured in Palestine or not, glass vessels must have been known to the Jews. This is not to be inferred from the circumstance that the Palestine Exploration Fund has brought to light numerous fragments of glass vessels, for such vessels may have been made at a late period, but it is an indubitable fact that the Phoenician traders, according to the testimony of the Bible (Proverbs xxxi. 24 and Hosea xii. 8), constantly came to Judaea to offer their wares. Israelite women liked to adorn their necks with glass beads; specimens of such ornaments occur in the tombs of the Egyptians and the Etruscans. Among the treasures which Dr. Schliemann discovered at Hissarlik, the so-called site of Troy, and again in the graves of Mycenae, Egyptian or Phoenician glass beads have been found. Even beneath the lakes of Switzerland, where the pale-buildings of ancient inhabitants have been brought to light, glass beads were discovered which none but Phoenician traffickers could have carried to Switzerland, just as they brought them into the lands of the ancient Britons. No doubt can therefore exist that the Hebrews of the earliest date were fully acquainted with articles made of glass.—A paper was also read by M. George Bertin on the "Rules of Life among the Ancient Akkadians." M. Bertin noticed that there were in the British Museum several tablets belonging to the same series, the real meaning of which had escaped translators when dealing with the tablets separately, but which is quite clear when the series is taken as a whole. These tablets give precepts for the conduct of man in his various occupations: one treats of the duties of the agriculturist, another of the duties of man towards his family, and so on. It was the contents of one of these tablets that had been selected by M. Bertin as the subject of his paper. First, the child is declared to be of age, and after the ceremony of emancipation he became a citizen, paying tribute and answerable for his own actions. After

a break of a few paragraphs comes the question of marriage, and, according to the tablet, it is the father who negotiates this important affair; the first wife could not be other than a free-born maiden. The paragraph following next, and treating of the betrothal, is much mutilated, but seems to speak of the various kinds of marriages; as a wedding gift, the young man was to give a drinking-vessel, which was no doubt the one used at the marriage ceremony; after the ceremony he received the dowry. The first duty of the young married man was to build a shrine, and when this was finished he could then enjoy his honeymoon. On the birth of his first child it was placed in the shrine. After a few paragraphs relating to the education of the child and his being taught to read inscriptions, the last act of paternal authority is to find a wife for the son, and when this is done the father and son come under the common law. The text then gives some definitions as to the laws touching the relationship of the son and father and mother, and also about the duties of masters towards their servants.

## FINE ART.

### THE GROSVENOR GALLERY.

If the Grosvenor Gallery is this season a little disappointing it is not through the absence of excellent pictures, but through the presence of not a few which want the *cachet* of distinction, which are either the occasional failures of people of taste or the habitual successes of men of mediocrity. The hanging, though it is plain that, as usual, it received careful attention, does not appear as happy as it has sometimes been. Elsewhere it has been noted how the Burne Jones suffers—or are there perhaps some who say that it actually gains?—by the close juxtaposition of a scene which is nothing if not poetry with a couple of life-like portraits which are nothing if not prose. Again, the engaging sketches of Mr. Whistler, which speak to the artist even in their audacity, but which, I fear, have nothing to say to Tom, Dick, or Harry—and Tom, Dick, and Harry have taken to go to the Grosvenor—are seen quite at their worst when they are detached each from the other, and when each brushes close against some completed canvas in which an ordinary vision of the world has been realised by quite ordinary hands. Even if it is true that the entrance to Southampton Water is to be looked at in the light of a joke because Mr. Whistler has chosen to localise an impression which might have been noted at night on many a spot besides the coast of Hampshire, all that is unsubstantial in it is accentuated and emphasised by its present neighbourhood. Other people paint localities; Mr. Whistler makes artistic experiments. Then there is a picture by Mr. Boughton—Mr. Boughton's finest picture in a year in which he is undeniably strong: its colour suffers terribly from the surface of the yellow marble table which, so to say, it is placed upon. And the theme could be pursued. But we have said enough. With the best intentions to display the works of each artist to advantage, the Grosvenor management has yet not been happy in its hanging this year.

Strictures on a portion of the contents of the gallery have been made sufficiently in another place. There is rather too much of commonplace work, which may profitably be passed without notice. Of the more considerable work, it must be said that, while Mr. Millais and Sir Frederick Leighton exhibit but in name—for we cannot discover in the "Children of Mrs. Barrett" a tithe of the interest that attaches to the "Dorothy Thorpe" or the "Cardinal Newman"—and that while Mr. Watts's strength and refinement are pretty equally divided between Piccadilly and Bond Street, Mr. Alma Tadema is to be seen only at the Grosvenor. He has one portrait in Piccadilly, but it would require an industrious and indefatigable admiration to see in that portrait a well-spring of

pleasure and the justification of his fame. It is, in truth, of little worth. But at the Grosvenor Gallery Mr. Tadema is represented in force. It has even been suggested that it savours of disloyalty to the Academy for one of its conspicuous members to send all his best elsewhere. But that is capable of easy explanation. An important work—we believe so, at least—destined for the Academy was unfinished. And of the several pictures sent to the Grosvenor, the best are on a scale that would suffer at Burlington House. The best of all is a small cabinet work of high finish—"An Audience." Imagine the daintiness of its execution seen below the instances of Academical triumph. Imagine it in juxtaposition with Mr. Wells's touching record of a gathering of friends who did not deserve this immortality, or in juxtaposition with the instructive canvases of Mr. Herbert—to name but two Academicians of "swelling port" in the large gallery. These gentlemen have done excellent work, but Mr. Alma Tadema is doing skilful work to-day. We may not be quite sure that Mr. Tadema can imagine; we may not be quite sure that he can feel. His curious fidelity to offensive types has done him harm with those who would trace beauty in expression. But at least Mr. Tadema can paint. And "The Audience"—a lovely little composition of three heads, in which even the familiar type acquires some dignity of expression and some repose of mind not ignoble—is one of the prettiest things that he has ever painted. We have here none of his mannerisms. The heads compose themselves naturally and well, with two exquisite hands, lifted and clasped, and all that we want of a shoulder; there is no effort to force the design into a shape which shall of itself be so peculiar as to arrest the attention. Accessories, generally so important, are abandoned; and the thing stands or falls by its presentation on the small scale we have already mentioned of just three women's heads, of which the eldest is experienced without being debased, and the youngest intelligent without lack of simplicity. Clovet, himself a painter of the delicate hand—Gerard Dow, a painter of delicate gesture—would needs allow as worthy to rank with their own art of elegant precision this graceful little work of a master of execution here bestowing himself on a worthy theme.

Mr. Alma Tadema, interpreter of classic life, paints us "An Audience"; a painter of modern life, a realist who is still an artist, paints us "A Rehearsal." Mr. Tadema has been engaged in the research for refinement; Mr. Gregory's pre-occupation is with things as they are. The large public has not quite sufficiently recognised in him that courageous painter of modern life who has long been waited for. Yet many canvases have already proved his courage, and the last, as much as any other, has witnessed to his capacity. "A Rehearsal" is a triumph over difficulties—the dexterous conquest by an artist and craftsman of obstacles which vulgar weakness encounters unsuccessfully, and which refined weakness unwarrantably prides itself on avoiding. Mr. Gregory, by the delightful exercise of strength, wrings material for art out of much that seems incapable of yielding it. If he paints an interior, it is often not a specially chosen or tasteful one. He is not afraid of every-day furniture, any more than of every-day people. But his people are too closely studied to be really commonplace, and his furniture and accessories gain interest from the light and colour his skill throws upon them. The creator of art, like the critic, must have his eye on the object, steadily fixed. Mr. Gregory has a faultless vision of at least a certain side of modern life—a society which is aware that it is a little weary and *blasé*—a world in which the men and women are terribly knowing, but in which they are

thoroughly individual and constantly interesting. The humanity he paints the best—pleasure-loving people, and hard-working people, too, of the professional classes, the educated daughters of the lately enriched, the true Bohemian, who has given society the slip—may not be precisely exalted, but they are at least highly organised; and, in painting, hardly any serious artist has studied them till now. "A Rehearsal" shows a critical gentleman, courteous but not too easily enthusiastic, standing behind the chair of an interested girl, who bends forward eagerly, and stops the play of her fan, and watches with intent eyes the mimic action of the stage unseen in the picture. A more precise and penetrating rendering of human expression when it is neither very glad nor very pathetic nor very anxious, but only very interested, has not been reached within the limits of contemporary art. Nor are beauty of colour and skill of composition withheld from this portrayal of what a commonplace painter would have grappled with only to fail in. Mr. Gregory's understanding having acquainted him precisely with what he wanted to do, his power of execution has permitted him to do it perfectly.

Not to speak in any detail of Mr. John Collier's "Cassandra"—an instance of vivid realisation and admirable painting—two painters of the figure, addressing themselves to aims very different from Mr. Gregory's, and different partly because more limited, have done exactly, as I surmise, that which they intended to do. The charm of quick and graceful movement is just suggested by Mr. Whistler's "Harmony in Flesh-Colour and Pink—Mrs. H. B. Meux;" and, as in Eastern work, colour is disposed by colour with a curious instinct for success. A certain legitimate enjoyment—the enjoyment of the dexterous hand—belongs to so considered a slightness, if people will but accept it for what it is, and for nothing besides. It strikes a pleasant note or two—to Mr. Albert Moore, in his "Acacias," belongs the faculty of striking not a note, but a chord. "Acacias" shows us one of the girls who, in the Academy picture, soft, flushed, and warm, are overcome so happily with the gracious sleep of childhood. But who it is that is shown matters little; and, when Mr. Moore has secured so exquisite a type, I should consider myself too easily querulous did I complain of his repeating it. His modifications are subtle, but with him a single change—such as escapes, perhaps, altogether an insensitive eye—obliges the reconstruction of the whole edifice, though on lines again but slightly different from the old. Mr. Moore's art is an art of refined luxury. In his art it is always afternoon, and generally an idle afternoon. But there is rest and satisfaction in it. His world has the repose of lovely line, and the delight of faultless colour.

Mr. Burne Jones and Mr. Walter Crane are among the more noticeable painters of a world not much more real than Mr. Albert Moore's, but into which human trouble, and something more than a reasonable share of human trouble, has somehow entered. Mr. Walter Crane's allegorical treatment of a theme suggested by some fine lines in Omar Khayyam is an enrichment and illumination of the text he quotes; and, whatever may be thought of his forms, a happy inspiration of colour adds to the significance of his design. A brightly winged angel, rushing into the presence of Fate, seeks to alter the character of much that will be inscribed, and so to fashion to "the heart's desire" much that would else go wrong. While Mr. Burne Jones's "Feast of Peleus" is thoroughly deserving of notice as well for its execution as for its imagination, attention will be more likely to be directed to "The Mill" and to "The Tree of Forgiveness." "The Mill" shows, with not much motion in the figures, a dance, not over joyous, danced in a strange and

weird landscape in front of a reflecting water. The presence of a certain rhythmic beauty of line and hue silences an otherwise inevitable enquiry as to the meaning of this subject, could it be told in common speech. "The Tree of Forgiveness" is more easily readable, nor has it, in truth, any beauty of colour to atone for obscurity of intention, if such existed. But the story is plain, and it is pathetic likewise: Phyllis is seen, indeed, "no less loving than of old time," and remorse haunts the vision of the lover who had forsaken her. This, as the subject almost implies, is a picture of the nude—the nude, of course, wholly delivered from all suggestion of offence. It is instructive to remember—and the fact has already been recalled to our memory, we believe correctly—as illustrating the advance even in the popular conception of Art, that a water-colour drawing of the same theme, very similarly treated, was the occasion of Mr. Burne Jones's severance from the Society of Painters in Water-Colour. People whom enfeebled draughtsmanship of the clothed figure could not shock, and to whom impotent design was faultless if it expressed unimpeachable sentiment, were likely to be shocked too severely by the chastened nudities and tender allegories of Mr. Jones. Mr. Jones withdrew himself from the Society as the Society withdrew the work. Even in the halls most sacred to respectability could such an incident occur to-day?

Mr. Henry Moore, Mr. Hunt, Mr. Armstrong, Mr. Mark Fisher, Mr. Hennessy, Mr. O. E. Holloway, Mr. Orrook, and Mrs. Savile Clarke are among the contributors of refined landscape; not to speak of Mr. Boughton and Mr. Phil. Morris, whose union of landscape with the figure is of a completeness commoner in France than in England. Mr. Cecil Lawson sends several works, of which one will surely be held to be beautiful as well as arresting—the one in which, placed near the turn of the road over Mentone, he depicts the gray and brown of the woodland, the sudden dip of the valley, the blue of the water, and the luminousness of the sky. The work is in a lighter key than Mr. Lawson has often painted in. The effect of luminousness attained in his sky is attained less than of old by massive treatment of unbroken land that lies this side of the horizon; the present work did not admit an effect so simple, and it recalls, accordingly, nothing of Dutch or Norwich landscape—nothing of De Koning or of Crome. There is more of intricacy than there has sometimes been of old in its sources of pleasure.

Leaving aside much creditable portraiture, and some portraiture for which the Grosvenor Gallery is not the fitting place, a last word may be kept for the sculpture, which is generally chosen with discretion and displayed to advantage. M. Rodin's contribution brings forward the name of an artist who perhaps may not hitherto have been noticed in England—an artist of distinct talent. Mr. Onslow Ford's busts have always character in them. Here is a bust of "Mrs. Bram Stoker," probably excellent. Mr. Mullins sends a life-size bust of "Stopford Brooke," conceived and executed with true dignity and intelligence—a portrait of unusual interest and success. Mr. Boehm's "Recollection of the Late Dean Stanley" strikes us as even too sketchy for terra-cotta, and, apart from this, rather a petty treatment of a subject that was worth treating with more of deliberation and endeavour. Mr. Legros, who exhibits no pictures, sends several of the works of a modeller; and thus, while opportunity remains for the praise of his invention and of his touch, opportunity of complaint as to his colour is removed. "La Source" and "Death and the Woodman" display the variety of his preoccupations. "La Source" is a relief; the subject, a very young girl's figure bending under the burden of a heavy vessel. The

subject has been treated many times in art, notably, of course, in the picture by Ingres. The necessities of a painting demanded what a relief was scarcely obliged to present, a head of great comeliness, a face of unquestioned beauty—and Ingres succeeded in this as effectually as in the fine line and dimpled modelling of the figure, though a famous surgeon did say of "La Source" that she had a disease of the hip-joint. In consultation with his brethren, some difference of opinion on that point would probably have been revealed. Mr. Legros's maiden is under no strain so severe as the heroine of Ingres—the sixteen years child of his *conterge*. With an uninteresting head, Legros has given to the figure extreme suavely of beauty, and yet there is hardly idealisation at all. But, interesting as "La Source" is as a whole, and characteristic as it is of its creator, it yet does not display quite as fully as "La Mort et le Bûcheron" Mr. Legros's genius. "Death and the Woodman" is Mr. Legros's subject. More than once he has treated it in etching—the old man not unwilling to go, and Death not too hurried or importunate in his summons, but still certainly coming since the summons must be made, and with something of pity in his ways. The employment of allegory—often exhausted and outworn, and pressed often quite uselessly into the service of our art to-day—is justified entirely when the embodiment of a fancy so simple can be made so significant and solemn. Whether in etching or in sculpture, Mr. Legros's treatment of the theme commends itself to all who can be touched by the dexterous and delicate suggestion of an imaginative art. FREDERICK WEDMORE.

#### THE SALON OF 1882.

##### (First Notice.)

AMONG the most interesting work of the year is, to me, that of M. Puvis de Chavannes; but in looking at his "*Jeunes Picards s'exerçant à la Lance*," or his decorative panel "*Doux Pays*," we must put on one side all those considerations which arise when we regard art as having for its object the dexterous imitation of reality. To imitation, in the vulgar sense of the word, M. Puvis de Chavannes' work makes not the slightest pretence; the wildest flight of an admiring imagination could conceive of no bird sufficiently idiotic to peck at the fruit gathered by the maidens who people the shores of the *Doux Pays*. It should, however, be remembered that Nature herself presents to our apprehension other truths than those which can be rendered by the camera just as well as by the human eye and hand. The masses by which an artist constructs his composition are also realities which must be sought and found by patient observation of Nature not less than those realities of texture and modelling which we are in the habit of considering the especial object of skilful imitation. A deceptive rendering of the truths of texture and modelling or of local colour is not within the province of M. Puvis de Chavannes' art. He looks for constructive masses of tint and form; and these he employs with an apparent simplicity which is the result of elaborate calculations, and pitches his scheme of colour in a very subdued, but very clear, key, exactly adapted to give the fullest effect to the general character of his conceptions. The great mural painting, "*Jeunes Picards s'exerçant à la Lance*," which he exhibits this year, and which is destined for the Museum at Amiens, is an excellent illustration of M. de Chavannes' special gifts. The design for this work—which was described in the ACADEMY at the time—was exhibited at the Salon of 1880. A certain noble character in the design, rarely wholly absent from M. de Chavannes'

work, stamped the project, which has gained greatly in execution. It is perhaps as well to repeat here that the composition consists of three principal groups. In the centre are the band of "*jeunes Picards*": one advances in the act of throwing his pike; behind him his companions await their turn; the last in order, a youth who impatiently tosses his pike aloft. On the right, in front of the leafless trunk at which they aim, is a pyramidal group of figures. Just behind, on the extreme right, enters a huntsman bearing on his back a black swan. On the left, various figures are grouped in front of some simple buildings; they are separated from the central band of pike-throwers by a second pyramidal group which balances that on the right; and a vigorous mass of white in each brings these two groups into further relations with each other. The mass of flesh-colour is reserved for the central group; and M. de Chavannes has here obtained an extraordinary space of light by basing this group, in which there occurs a single break of yellow, upon a bare piece of ground put in in a sandy tint precisely the same in value as his flesh-colour. To this space of light he has given further predominance by separating it from the white mass on the left with draperies of iron-gray, and by throwing on the trunk of a fallen beech-tree in the foreground a dark-greenish mantle with a streak of white lining brought into relief by one or two of the scarlet poppies which, scattered at intervals across the foreground, are the nearest approach in hue to positive colour that the painter has permitted himself. The hue of the poppies is repeated farther up in the pyramidal group to the right by an apple in the hand of a child leaning against an old man wearing deep-brown draperies, above whom is seen a girlish figure in pale rose. The deep-brown mass, like the mass of white, finds an echo on the left; and the deep-blue draperies of the figure bearing the black swan are also balanced on the left by dull-green robes of the aged woman seated beneath the cottage walls, making a sombre ground for figures arrayed in pale-blue and rose and yellowish-white, which get strength from an interposed passage of dark-olive. This is the darker side of the picture, the side on which the eye feels the frame. To the right, M. de Chavannes has introduced the large white sail of a boat floating on the blue river which traverses the whole scene horizontally; and this sail gives the true suggestion of infinite unseen continuation which is, I think, one of the essentials of a composition of this character. The landscape is designed with exquisite grace, and forms a delicate groundwork of grays and blues for the more varied hues of the foreground. The decorative border is a very skilful addition. A closely woven garland of fruits and flowers—dark masses of apples and pears broken with sunflowers and iris—is relieved on a deep-blue ground. M. de Chavannes' second contribution has been executed for M. Bonnat's drawing-room. M. Bonnat has painted M. de Chavannes' portrait; and in return M. de Chavannes has executed—a poem, "*Le Doux Pays*." The arrangement of light and dark is diagonal, slanting from right to left. On the right a lofty rock shuts out the sky, and from its base to the extreme left the space is filled by broken ground and wooded country, beyond which are sea and sky. On this diagonal arrangement the changes are gracefully rung by the two groups of figures in the foreground. Reaching upwards to the wild vine which wreaths the rock stands a girl draped in blue, at whose feet are seated others in white and yellow, having before them lemons gathered into a long basket; beyond are two children wrestling; then there rises against the sky, just in the centre, a tall figure draped in white,

having before her a high *panier* full of oranges, against which leans a seated boy, and so the eye is carried downwards to where branches of oleander blossom show their rosy flowers against the deep-blue sea. This is but a skeleton indication of the general scheme of a work rich in lovely detail, for the empty half of the design is patterned with level lines of blue promontories and points of islets, and there is beautiful drawing in the silver foliage of the tree which springs in the middle distance to the right and breaks the too great insistence of the diagonal lines.

Of the much-talked-of and much-expected great work by M. Roll what shall one say? It is a vast canvas commemorating "14 Juillet 1880." In depicting the Parisian crowd saluting the statue of the Republic with music and jollity, M. Roll shows astonishing "go" and freshness. Scaffolding climbed by street boys on the right corresponds to the erection on which is placed the band of music on the left; shafts and tricolors shoot up into the sky, and the white statue is seen afar off. But, was the crowd on that day such a crowd as this which M. Roll has given us? A carriage with smart ladies as large as life traverses from the right a riotous fair full of people excited with wine and the drum—they don't seem any of them to present the characteristics of enthusiasm; and whirling round in the corner beneath the band-stand dances a tipsy mob, surely not representative of "le vrai peuple." It is not right, of course, to judge such a work by a literary standpoint; but I have tried in vain to see in "14 Juillet 1880" anything more than an immense and immensely dashing sketch for an illustrated journal, enlarged to preposterous dimensions, totally wanting in meaning as a work of art, and, therefore, not likely to be of any permanent interest.

M. Wencker's big canvas, which faces M. Roll's enormous work in the Salon carré, shows at least a great deal of conscientious labour and study. He has chosen for his subject, "*La Prédication de Saint-Jean Chrysostôme contre l'impératrice Eudoxie*." The Saint, robed in white, starts out of his dark pulpit—supported on open wooden columns—about half way up the picture on the right; directly in front of him, in an open balcony, sits the Empress, attended by her ladies; a deep dahlia-coloured carpet bordered with white and green is thrown over the edge before her; immediately beneath runs a horizontal line of dignitaries clothed in scarlet; and beneath these sits the audience, cast in deep shadow. All our attention is thus carried up with the light to the duel of looks and words, which hangs, as it were, in mid-air. But M. Wencker seems to me to have failed, in spite of his evident serious effort, in carrying out his intention, partly, at least, from having forced the dramatic meaning of his subject; his saint looks a little like a jester, and his lady very unlike a queen. And one feels sorry that this should be so, because one sees that the painter would have had it otherwise, has cared about his work, and has in the minor passages come near in no small degree to his own intentions.

Close by M. Wencker's big picture is one of M. Villa's usual contributions—a stupid girl, and an equally stupid man; but they have both dressed themselves in their finest clothes in order to feed love-birds. Her fair face is the central spot, it is framed in rose-red; her petticoat is gleaming white satin embroidered in greenish gold; her train and sleeves of pink and silver; the cold gray tones of the marble floor carry off the petticoat, the train is relieved against a carpet of deeper hue; the background to her beautiful dress is furnished by the gold-and-orange garments of the man standing just behind her, and a deep-red curtain serves as a foil to both. The love-birds fly in

through an open window on the left: but nothing seems half so real in M. Villa's "*Charmeuse*" as the gorgeous stuff, and the gold and silver with which they gleam, and these are indeed marvels of skillful painting.

Two little pictures by M. Stott, a pupil of M. Gérôme's, show remarkable feeling for tone. Both are river-side studies. In "*Le Passeur*," two children watch for the ferryman from beneath a tree on the strip of meadow which runs straight across the foreground. The broad river lies between them; he sets forth from the opposite bank on the extreme left; behind him we see the village for which they are bound, the brown roofs of its cottages telling dark against the strip of clear evening sky flecked with red. Half the broad band of river is thus full of dark reflections; then, just before the children and their strip of meadow bank, we see the clear image of sunset glories. The work seems full of careful study, simple and direct; but the children, though their general aspect is suggestive, are not very thoroughly worked out. The same criticism applies to "*La Baignade*," M. Stott's second picture. The river, with its water-lilies, fills two-thirds of the space; to right, it is overshadowed by dark masses of trees; to left, we get a glimpse of distant country house, with trim garden gracefully laid out. Three boys have come out to bathe; the punt is in mid-water; one is in, one won't leave his comfortable lounge; a third, standing upright ready stripped for a header, exhorts the lazy lad to get up and plunge.

Something of the same merit in point of tone marks M. Tristan Lacroix' carefully studied landscape, "*Hiver*." The desolate wolds whence the little shepherd maiden leads her sheep are studied with great care, and the relations of different values are very sensitively felt. The little maiden's white cap tells gray beneath the bright white cloud which settles down far off on the deep-blue horizon line; and, though the deepest and the brightest hues in the whole range of the picture are thus juxtaposed forcibly in the extreme distance, everything keeps its place—sheep and maiden, barren hills, and grassy patches by the way-side, seem all to be just where they should be; only the maiden is unsubstantial, and her skirts look as if there were no legs beneath them.

E. F. S. PATTISON.

#### THE UNITED ARTS GALLERY.

THERE will be few, if any, exhibitions of the season better worth a visit than this. Every, or nearly every, Continental school is represented, not indeed by great works, but by accomplished ones. It is a truly cosmopolitan collection, and contains nothing which is not interesting from one or other of the many points of view of modern art. It is also of moderate size, the rooms are well lighted, and the pictures well hung. Moreover, there is an excellent illustrated catalogue, which, besides titles and sketches, gives interesting accounts of Bastien-Lepage, Emile Vernier, and a young painter, L. Welden-Hawkins, the son of an Englishman, whose work bears the mark of original power and French discipline. His principal picture here, "*Les derniers Pas*" (58), represents an old woman feebly walking in a sunlit graveyard. Her back is towards you, and you know, rather than see, that she is looking at, and perhaps speaking to, the gravedigger up to his knees in the ground, the only other figure in the picture. The treatment is broad and masterly. The same simplicity of design and command of material, the same truth of tone and feeling for sweet, clear colour, mark a smaller picture called "*The Flowers that soothe a Grief unhealed*," which is pathetic without being maudlin in

sentiment. We may properly take a national interest in this new scholar of Barbizon. Bastien-Lepage has two works of his usual astounding force. They both represent a little girl in a hood (is it the same little girl?), one arch and happy, with pink tassels to her hood, the other melancholy, without any tassels. One, at first sight, appears to be pasted against a street, the other against a field; but it is only fair to this strong and conscientious artist to say that the longer you look at his work the more atmosphere seems to come between his figures and his backgrounds. Both "*La petite Coquette*" (31) and "*Pauvre Fauvette*" (165) are works of a real master. We were glad to see again Albert Maignan's refined "*Beatrice*" (54). Albert Aublet's "*Portrait of Mdlle. Aublet*" is a wonderful piece of "white upon white," rendering the textures of swansdown, white silk, white kid, white satin, &c., very cleverly. It is also a beautiful picture. Chierici is delightful as usual with his children and animals. The Italian scenes of Del Campo, Longa, Fragiaco, and others are numerous and bright. Gabriel and Jettal send good examples of more sober nature. H. Gogarten has a sunset of unusual strength and softness (123). Victor Gilbert sends two fresh, bright coast scenes, with well-painted fish. Jimenez-y-Aranda has a large and admirable composition, "*A Sermon in the Cour des Oranges, Seville*" (134). A. Kiwshenko's exquisitely cool and pearly picture of "*Shrimpers*" (60) and Liebermann's "*Preparations for Dinner*" (264) are two of the most notable works here. We have no space to do justice to the rest; but the visitor, however hurried, should not miss those by Szerner, Boubaud, Quadroni, Carstens, Hahn, Oederstrom, Arcos, Feyen, Girardet, Werenskiold, Ridgway Knight, Simoni, Zezzos, Blommers, and Clays.

#### MUNKACSY'S "CHRIST BEFORE PILATE"

THIS picture is a strong effort to present, as it might have happened, one of the most dramatic scenes in the life of Christ. With great audacity, the artist has painted the scene in the entirely modern spirit of naturalism, abandoning traditional sentiment. It illustrates the gospel according to Renan. Christ is unglorified, a man of unusual, but not even exceptional, temperament, sustained by intensity of purpose and belief in his destiny and mission through every ordeal—that is all. His type is not particularly fine or noble, or even benevolent; he stands in bold relief against the other human types in the picture because they are all strongly marked and antagonistic, not because of any divine or human majesty of presence. He is not a master of men, but he is—what none else in the picture is—master of himself. He is, without anxiety or passion, watching Pilate with eyes that gaze through, rather than at, him, concerned with the mental conflict through which his judge is passing, rather than with the result as affecting himself. He is called Christ, but he might be a modern Communist.

In the vortex of human passions which whirls around this vivid and original Christ, there is no figure without individuality. Munkacsy's Pilate is a Roman, a judge, a gentleman with a conscience; his wealthy merchant is the incarnation of stolid worldly prosperity, his Caiaphas is commanding and eloquent, his nobles have an air of culture and breeding, his roughs are roughs indeed. Each of those who may be called the secondary characters in the composition has his physiognomy marked with some personal shade of malevolence, or envy, or indifference, or sheer brutality. The sea of fury is only broken by one little rock of sympathy, in the

shape of a woman and child, effectively introduced in the background. As a mere study of humanity, the picture is one of variety and strength.

As an artist, strength of presentation is Munkacsy's forte—but it is also his foible. He sacrifices much to it. To gain strong oppositions of light and shade, he sacrifices delicacy of gradation; to achieve force of colour, he abandons texture; to get agitation, he surrenders dignity. His draperies might be cut out of coloured chalk or cheese, his marbles out of chocolate, his flesh out of clay. The extraordinary relief in which his figures stand out is not got without forcing his shades; his open mouths, for instance, are abysmal. His large pieces of colour are enforced by violent isolation. At the same time, his strength, if somewhat abused, is wielded with a sure hand.

#### NOTES ON ART AND ARCHAEOLOGY.

THE Syndics of the Cambridge University Press will shortly issue a very important archaeological work—viz., *A Catalogue of Ancient Marbles in Great Britain*, by Prof. Adolph Michaelis, of Strassburg, who has himself inspected almost all the collections of importance. The marbles in the British Museum are excluded. Notwithstanding this, the Catalogue extends to more than 500 pages royal octavo. The general reader will find the Historical Introduction of some 200 pages very interesting. The work is translated from the German by Mr. Fennell, and has been revised by Mr. Murray, Prof. Newton, and in particular by Prof. Sidney Colvin. The attractiveness of the volume will be enhanced by several illustrations, and its usefulness to students by most exhaustive Indexes which the author has himself prepared.

ONE hundred autotype copies have been printed of a unique seal, used by Ingelram de Couci, Earl of Bedford, and lately discovered at the Public Record Office. The Duke of Bedford, upon learning the fact of its existence, commissioned Mr. Greenstreet to have these copies made. His Grace's illustrious predecessor in the title is represented at length, fully armed, with lance and pennon, and shield on left arm bearing his mother's arms quartered.

BARON CHARLES MEYER DE ROTHSCHILD, of Frankfort, whose magnificent art collection is one of the finest possessed by this family, has determined to leave a permanent graphic record of it, if we may use the word "graphic" of photographic processes, some of which will doubtless be used in the production of his magnificent catalogue, on which no expense will be spared. The work will not be sold, but copies of it sent to museums and schools of art.

THERE is now on view at the Fine Art Society's gallery in New Bond Street a large number of original drawings executed by various artists for Messrs. Cassell, Petter, Galpin and Co.'s fine-art publications. Here will be found the original drawings prepared by Mr. Frank Dicksee, A.R.A., for the *édition de luxe* of *Evangeline*, so highly commended by Mr. Longfellow. The artists who are represented in this collection include also Messrs. J. E. Millais, R.A., W. Small, G. L. Seymour, R. W. Macbeth, J. E. Christie, G. Clausen, Val Bromley, C. Green, G. G. Kilburne, E. B. Leighton, A. Hopkins, P. Macquoid, M. L. Gow, A. H. Barrard, C. Gregory, F. Murray, and J. D. Linton.

WE gladly welcome the formation of a National Society for Preserving the Memorials of the Dead, which will hold its inaugural meeting on Wednesday next, in the hall of the Society of Arts, under the presidency of Lord Carnarvon. Its objects are larger than is

implied by its name. Besides recording and preserving sepulchral monuments, it hopes to encourage the printing of parish registers, to publish itself historical examples of tombstones, &c., and to form a reference library of works relating to its main subject.

THE *Art Journal* for May contains a slight, but very clever, etching by Mr. Whistler of "Old Chelsea Bridge;" an article by Mr. Hubert Herkomer, A.R.A., of unusual interest on drawing and engraving on wood; the first part of a study of "Adolph Menzel," by Mr. J. Beavington Atkinson, very well illustrated; and other articles and engravings, which make it altogether a remarkably good number.

THE pictures in the Febre collection did not fetch large sums. The *Guardia* seems to have sold best. A remarkable picture by the rare artist L. Volders was bought by an English collector for 6,505 frs., after a feeble competition with the museums of Frankfort and Brussels. From an article in the *Courrier de l'Art* it would appear that this picture formed part of a collection sold in Paris in 1814, of which an illustrated catalogue, with careful descriptions by M. Didot, was published at the time, verified by Mme. Vigée-Lebrun. It fetched 3,000 frs. at that sale. It has been engraved in *L'Art* (No. 379).

MEDALS are going up in the market. Very high prices were realised at the Fillon sale, as much as 7,850 frs. being given for one by Pisanello of Sigismond Malatesta. This was bought by M. Hess, of Frankfort. The sale of the Piot collection by Messrs. Christie and Manson on the 8th inst. will be one of great interest.

Two new wall paintings in the Panthéon have been finished and uncovered. One in four divisions is by Jean-Paul Laurens, and has for subject "The Death and Apotheosis of Saint Geneviève." The other, of which a portion only is at present visible, represents a procession to the shrine of the same saint in the time of Charles VIII.

AN important discovery of stone coffins has been made at St-Jean-des-Vignes, near Chalon. They belong to the Romano-Gallic period. In one of them was found the skeleton of a man. The plateau of St-Jean-des-Vignes is supposed to have once formed the site of Julius Caesar's camp.

M. HEUZEY is communicating to the Académie des Inscriptions some papers upon "The Pottery of Kittion, now Larnaka, in Cyprus." The first of these papers describes a large heap of fragments of *ex votos*, found south of the site of Kittion, on some salt pans. They bear inscriptions to Artemis Paralia (not Demeter Paralia), Melanthios, a local hero, and a Phœnician god named Eshmun-Melqarth. This accumulation represents, according to M. Heuzey, not the scene of an ancient temple, but a sort of Monte Testaccio, whither worthless *ex votos* were brought when their number had become inconvenient. They were broken into small pieces to destroy their magic influence. All styles of art are represented, from a rude Oriental to a polished Greek; and M. Heuzey is of opinion that the manufacture of all was contemporary. Generally, the pottery of Kittion is distinguished from that of Dali and of the interior of the island by the fineness of the material and the Egyptian character of the workmanship.

LAST week the artists and authors engaged in the production of the great work on St. Mark's, Venice, gave the enterprising publisher, Ongania, a banquet to celebrate the success of so much of the work as is already issued. The undertaking will require several years' more work to complete it.

#### MUSIC.

##### THE BACH CHOIR, MR. E. PROUT'S "ALFRED," ETC.

THE programme of the sixtieth concert of the Bach Choir, which took place last Wednesday week at St. James's Hall, was one of unusual interest. Bach's "Missa Brevis" in A was heard for the first time in London. It is adapted for public performance by means of additional accompaniments, and this necessary adaptation has been accomplished in a very skilful and unobtrusive manner by Mr. Ebenezer Prout. The chorus-writing in this Mass is polyphonic and at times highly elaborate; but science here only fulfils its proper mission—that of developing the latent beauty and intrinsic grandeur of the composer's ideas. The difficult solos were well rendered by Miss Elliot, Mme. Fassett, Mr. Kenningham, and Mr. King. The Mass was followed by Mendelssohn's ninety-eighth Psalm, for solo voices, eight-part chorus, organ, and orchestra. This short but impressive work was admirably interpreted; and the enthusiastic applause suggested surprise that such a gem should have remained so long all but unnoticed. The second part of the concert commenced with the overture and the third act from Gluck's "Armida." It was most instructive and refreshing to hear the quaint but beautiful strains of a composer who has not inaptly been styled the "Wagner of the eighteenth century." Miss Carlotta Elliot distinguished herself as Armida, and Miss Sophie Robertson as Hate. The concert concluded with a scene from Max Bruch's "Odysseus." The choir sang throughout the evening with precision and vigour, and Mr. O. Goldschmidt conducted with his usual ability.

Last Monday Mr. E. Prout's new cantata, "Alfred," was performed at the Shoreditch Town Hall. The concert was the last for the season given by the Borough of Hackney Choral Association. Mr. Prout, the enterprising conductor, has for several years devoted his best energies to the musical interests of this choral society, and has succeeded in obtaining for it a foremost place among London musical institutions. The libretto of "Alfred" is from the pen of Mr. William Grist, who also wrote the words for Mr. Prout's first cantata, "Hereward," produced by the Hackney society in 1879. In "Alfred," after a short instrumental introduction, we have Alswitha (Alfred's bride) and her attendants awaiting, and afterwards receiving, the King and his defeated warriors. Alswitha's recitative contains some interesting scoring: the Prayer which follows is simple and appropriate, and well written for the voices. The Saxon choruses are pleasing and effective, though perhaps somewhat too orderly and measured for the utterances of a routed and panic-stricken host. The love-scene between Alswitha and Alfred contains some very soothing and flowing strains; and, with the exception of one or two passages, we deem the whole of this number very successful. In the second part, Alfred, disguised as a harper, enters the Danish camp, and a musical contest ensues between the Saxon King and the Danish leader, Guthrum. The opening chorus of the Danes in praise of their leader is spirited, and the orchestration highly effective. This chorus is, indeed, one of the best numbers of the work. The contest music is exceedingly good, and the composer seems here to have abandoned himself more freely to the inward promptings of his muse than in some other parts of the cantata. The chorus "Fill up the flowing bowl," Handelian in character, is ingeniously written, and is most effective in performance. In the last part we have a tuneful and joyful chorus representing the gathering together of the Saxons to Egbert's stone. The fugal form is here fittingly employed, and the various entries of the voices

depicting the scene are presented in a natural manner. The Danes having been defeated by the Saxons, the event is celebrated by a triumphal march. The composer has reason to be proud of his success in this much-beaten path. The music of the march is stately, and the episode in B flat very delicate and pleasing; while the richly varied and sonorous instrumentation gives colour and brilliancy to the whole piece. The scoring alone would render this movement attractive, apart from any intrinsic worth; but the march possesses much merit and cannot fail to become popular. The cantata ends with the conversion of Guthrum and his host to Christianity; and, as a symbol of the new faith, the last chorus winds up with a *chorale*. The cantata thus briefly noticed is a work which gives many proofs of the composer's talent and general ability. It is of moderate length, contains only three characters, and all the part-writing, presenting no great difficulties, is smoothly and, with regard to compass, judiciously written. It is a work well suited in subject and treatment for musical societies. Objections may perhaps be raised against the music on account of its inelaborate structure and the adoption of the ideas and habits of the past rather than those of the present. If this be a fault, it is one in the right direction. To write clear and simple music is not such an easy task as may appear to many. The chromatic and sinuous paths of modern Germany have proved an enchanting but fatal course to many a musical Roland. The *libretto* is well written, the subject is in itself attractive, and the stirring scenes of the great Saxon warrior are artistically arranged for musical treatment. In one or two places effective use is made of alliterative verse. The performance of the new cantata, under the direction of the composer, was very good: the solos were well interpreted by Miss A. Marriott (Alswitha), Mr. Shakespeare (Alfred), and Mr. F. King (Guthrum). The cantata was enthusiastically received, and many pieces would have been repeated but for the fixed rule of the association forbidding any *encore*.

Mr. Oscar Beringer gave a pianoforte recital at St. James's Hall on Wednesday, April 26. The programme included Brahms' sonata in F minor, Tausig's "Zigeunerweisen," and selections from Chopin, Liszt, &c. The piece by Tausig is an accumulation of difficulties, and served to show off the finished technique of Mr. Beringer. Miss Randegger took part in Liszt's *concerto pathétique* for two pianos, and achieved a marked success. The concert-giver was well received, and played everything with his usual skill and brilliancy.

The first of the Symphony Concerts took place at St. James's Hall last Monday evening. The programme included no novelties; but we may mention a very fine performance of Rubinstein's concerto in G major by Mme. Sophie Menter, and an effective rendering of the choral symphony. The soloists were Miss Williams, Miss Orridge, and Messrs. Vernon Rigby and Santley. The "Beethoven" Choir greatly distinguished itself, and Mr. C. Hallé conducted with efficiency.

The first of Herr Franke's chamber concerts was given last Tuesday afternoon at the Marlborough Rooms. With the exception of Tartini's "Trille du Diable," excellently played by the new Russian violinist, Gospodin Adolf Biondsky, the programme was devoted to the works of English composers, and included Mr. C. H. H. Parry's pianoforte trio in E minor and Mr. C. V. Stanford's pianoforte quartett in F major. Mr. E. Dannreuther took the piano part in the former, and the composer in the latter. Mr. Stanford's quartett was heard at a Richter chamber concert two years ago. The next concert, on May 9, will be devoted to the works of Schumann. J. S. SHEDLOCK.

## MUSIC NOTE.

AN "Entertainment for the People," organised by Mr. Percy Mocatta, was given last week at the Royal Victoria Coffee Palace, when some *débutantes* were introduced to the public. Miss Isabella Stone and Mme. St. Ives (a lady gifted with a charming soprano voice) were especially well received.

## AGENCIES.

London Agents, Messrs. W. H. SMITH & SON, 186 Strand, and Messrs. CURTICE & Co., Catherine Street, Strand.

Copies of the ACADEMY can also be obtained every Saturday morning in EDINBURGH of Mr. MENZIES; in DUBLIN of Messrs. W. H. SMITH AND SONS; in MANCHESTER of Mr. J. HEYWOOD. Ten days after date of publication, in NEW YORK, of Messrs. G. P. PUTNAM'S SONS.

## PARIS.

Copies can be obtained in Paris every Saturday morning of M. FOTHERINGHAM, 8 Rue Neuve des Capucines.

Or 8, GRAND HOTEL BUILDINGS, CHANCERY CROSS, LONDON. WILLIAM J. VIAN, Secretary.

## PHOENIX FIRE OFFICE, LOMBARD STREET

and CHANCERY CROSS, LONDON.—Established 1782.

Insurance against Loss by Fire and Lightning effected in all parts of the world.

Loss claims arranged with promptitude and liberality.

JOHN J. BROOMFIELD, Secretary.

ESTABLISHED 1861.

## BIRKBECK BANK,

Southampton-buildings, Chancery-lane.

Current Accounts opened according to the usual practice of other Banks, and interest allowed on the minimum monthly balances when not drawn below £25. No commission charged for keeping Accounts.

The Bank also receives money on Deposit at Three per cent. Interest, repayable on demand.

The Bank undertakes for its Customers, free of charge, the custody of Deeds, Writings, and other Securities and Valuable; the collection of Bills of Exchange, Dividends, and Coupons; and the purchase and sale of Stocks and Shares.

Letters of Credit and Circular Notes issued.

A Pamphlet, with full particulars, on application. FRANCIS HAYES-CROFT, Manager.

1st March, 1880.

SATURDAY, MAY 13, 1882.

No. 523, New Series.

THE EDITOR cannot undertake to return, or to correspond with the writers of, rejected manuscript.

It is particularly requested that all business letters regarding the supply of the paper, &c., may be addressed to the PUBLISHER, and not to the EDITOR.

## LITERATURE.

*History of England in the Eighteenth Century.* By W. E. H. Lecky. Vols. III. and IV. (Longmans.)

THESE volumes cover the whole period between the year when George the Third ascended the English throne with the dogged determination of obeying his mother's injunction to "be a King," and the hour of triumph when, after many delays and defeats, his expectations seemed to have been realised by the return of the younger Pitt to power with an unprecedented majority at his back. There was no possibility of the monarch directing the government of the country according to his own personal wishes so long as the compact phalanx of Whig politicians who had ruled over England since the accession of his great-grandfather remained unbroken, and George the Third set before himself the task of destroying their influence by splitting them into opposing cliques. Weak and short-lived Ministries are, as Mr. Lecky points out, ordinarily considered the products of Parliaments elected by democratic constituencies; but never in the whole range of English history has there been a more rapid succession of feeble Administrations with divided councils and antagonistic aims than in the first decade of this reign. This was the result of the incessant intrigues of the King and of the first Pitt's dislike of the Whig leaders. Had Pitt but consented to link his fortunes with those of the Rockingham Ministry, a strong and stable Government, possessing a complete ascendancy in Parliament and unbounded popularity in the nation, would have overcome the prejudices of their master as well as the opposition of the Court party, and spared the country many of those calamities which all but overwhelmed it in absolute ruin. He preferred, however, to dwell apart, and by his isolated action he marred the closing years of his own career and endangered the future of the English nation. Until Lord North came to the front, one impotent Administration gave place to another, and the Ministers had only been a few months in office before they were called upon to surrender their places to their successors.

The first chapters of Mr. Lecky's third volume are occupied with the narrative of the rise and fall of these Ministries, and with estimates of the opinions and abilities of the leading politicians who composed them. These characters of the chief statesmen—to many of them the word is inapplicable except as a courtesy title—of the earlier years of the reign of George the Third are uni-

formly written without any trace of political bias, and they supply not infrequently an opportunity for correcting the traditional beliefs of political life. The unparalleled greed of the place-hunters who surrounded the Duke of Bedford induces the historian to question the accuracy of the accepted opinion that men of wealth are the most desirable leaders in politics. Mr. Lecky can "spy desert" even in the third George, and scrupulously advances all the pleas which can be urged in justification of his conduct, in spite of the conviction that the refusal of the King to call Chatham to his councils "is as criminal as any of those acts which led Charles the First to the scaffold." Lord Bute's patronage of the arts and the rarity of State prosecutions for libel during his Ministry are acknowledged as bright spots in the darkness of his career. Sometimes, perhaps, the memory of the reader will recal an illustration in contemporary literature which might have lent an additional point to these biographies of the actors who strutted on the political stage. Dr. Johnson's sarcasm on George Grenville—"He had powers not universally possessed: could he have enforced payment of the Manilla ransom, he could have counted it"—is the tersest summary of his capabilities; but it finds no place in Mr. Lecky's pages. The criticism of Charles Townshend's life should not have been closed without a reference to "Jupiter" Carlyle's reminiscences of their intercourse, and the quotation of that keen observer's estimate of Townshend's dazzling qualities. If there is a Ministry which Mr. Lecky speaks of in terms of too faint praise it is that of Lord Rockingham. If there is a politician to whom he metes out an imperfect measure of justice, Fox is the man.

In these volumes Mr. Lecky has the painful duty of describing the rise and close of England's difficulties with her American colonies, and it is in the consideration of this question that he differs most widely from the score of historians who have preceded him. The preliminary description of these colonies and the habits of life of their inhabitants stands out as one of the most striking specimens of Mr. Lecky's manner of writing history. The illustrations are drawn from a variety of sources indicating a range of reading only surpassed by Mr. Buckle. No one save he or Mr. Lecky could have referred to the life of *Bampfylde Moore Carew* (a wandering vagabond who left a good position to herd with gipsies) for a graphic description of Philadelphia or for the particulars of the printing-presses in New England. Mr. Lecky dwells with pride on the fact that, whatever may have been the policy of England nearer home, her action towards the colonies was marked by an entire freedom from sectarian supremacy; he might have added that even now the settlers in the remaining colonies of Great Britain are in some instances less fettered by religious intolerance than are those who stay in the old country. The two great objects which the English Ministry had resolved upon—the establishment of a division of the army in North America, and the procuring of the moneys required for its maintenance from the taxation of the colonists—seem in Mr. Lecky's eyes to have been rendered expedient by the course of recent

events. In justification of the one he refers to the fact that the natives of Ireland, in spite of their proverbial poverty, raised the means of support for an army of 12,000 men. In defence of the other he points to the devastation which, for want of sufficient troops on the frontier, the Indians had twice inflicted on two of the American colonies, and to the not unreasonable apprehension of the British Government that, in case of war, France would make an attempt to recover the Canadian territory which she had so recently lost. These considerations, however, do not prevent him from acknowledging that the wiser course would have been to have abandoned the design altogether, and that the Americans had reason on their side in asserting that they were already sufficiently hampered by their connexion with England. They only intensify his condemnation of the reckless manner in which the English Ministers entered upon the contest, without calculating the energy of the colonists, and without considering that other powers might be brought into the struggle. Mr. Lecky attaches far more importance than other historians have done to the influence of the classes in America which were opposed to the war, and his sentences on the ideal for which they were striving glow with a fire very unusual in his pages. Again and again does he lay before the reader the evidence in favour of his contention that at the best the revolutionists formed little more than a bare majority of the colonists. Again and again does he quote extracts from Washington's letters to prove that their resistance was on the brink of subsiding. To these representations of the American leader Mr. Lecky possibly assigns greater value than they deserve. If Washington's army had declined even so early as 1776 to less than 6,000 men; if at that early period soldiers were enlisted with difficulty, and the pecuniary resources of the colonies were dried up—how comes it that the war lasted for six years longer, and that Washington succeeded in defeating the British forces? If it were possible that in the last days of the struggle the resistance of the colonists might collapse for lack of men and money, and that even after the surrender of Yorktown the American leaders saw no possibility of continuing the campaign for another year, who can blame the King for wishing to protract the contest or support the Prime Minister in desiring to abandon the strife long before 1779. Be that as it may, there came a time when the leaders on both sides recognised the wisdom of putting an end to the fight, and negotiations for a peace were opened by Franklin and the English Cabinet. The unhappy differences which sprang up in the minds of Fox and Lord Shelburne are set out by Mr. Lecky with sufficient detail, and the verdict on the majority of issues is given in favour of the former Minister. Fox may have shown "some exaggeration and misunderstanding" in his opinion, but the course adopted by Shelburne manifested "an extreme want of candour and frankness of communication." Mr. Lecky, like most other critics, from Lord Beaconsfield downwards, confesses his astonishment at the universal suspicion with which Lord Shelburne was regarded by his contemporaries, and finds little in his

conduct to justify such an intensity of distrust.

From America the mind naturally turns to Ireland. The transition is easy, if not always delightful. The great majority of the Presbyterians of Ulster did not shrink from openly showing their sympathy with the colonists, and many of the ejected tenants of Lord Donegal—dispossessed of their holdings in a manner considered shameful even in Ireland—became the fiercest opponents of the connexion with England. Moreover, a large section of the inhabitants of the other provinces feared lest the triumph of the English Government over its refractory subjects in America might result in its levying taxes in Ireland. To the consideration of Irish politics Mr. Lecky always turns with peculiar pleasure, and in the recital of the grievances which the country of his birth has groaned under for generations he puts forth all his powers. Although the first half of the last century had brought to Ireland an accession of wealth, and the upper classes had advanced in prosperity and in power, but little of these advantages had penetrated to the cultivators of the soil. The majority of the greater landlords still spent their rents in another country, and their estates were still farmed out by middle-men—one, two, three, and even four deep—a hateful class which fattened on the sums wrested from the peasants. Tithes were still the cause of perpetual strife, and, in consequence of the strictness with which they were levied, the clergy became richer and the occupier poorer every year. Whiteboy outrages became common in many counties, and scenes of violence disgraced the land. The opinion adopted by some historians, that these acts had their origin in sectarian hatred, is dismissed by Mr. Lecky as unworthy of consideration. With this increase of material prosperity there came an awakening of political interest. Pensions, which a few years previously might have been granted without notice by the Irish Legislature, were vigorously denounced, and motions of censure were only defeated by small majorities. The duration of Parliament was limited to eight years, and an increase of 3,000 men in the army could not be obtained until after an unusual creation of peerages and other honours. A few years later the English Ministry consented—in the former case willingly, in the latter grudgingly—to the passing of a considerable measure of relief for the Catholics, and to the declaration of Irish independence.

For good or for evil Mr. Lecky has adhered to his system of writing history by means of separate essays. The advantages of the plan are obvious; the objections are no less palpable. There are at all times many points of union between the various questions which engage the attention of public opinion, and it is not possible arbitrarily to divorce them. The historian is therefore compelled (as at pp. 115 and 217 of the fourth volume) to give a short summary of events the full consideration of which is deferred to a further period. A prominent politician passes out of life in one section of the book, and the estimate of his abilities and his public actions is postponed for another two hundred pages.

In the course of my perusal, I have noticed a few flaws on the surface of the narrative which it may be well to bring under the notice of their author. They can be removed without any detriment to the spirit of the History. The relationship of Lord Egremont to Sir William Wyndham is erroneously stated on p. 35 of the third volume; twenty pages later there is a slip in the name of a Chancellor of the Exchequer. Warburton is rather loosely stated, in the account of the parody of the *Essay on Man* by Wilkes, to "have recently published Pope's poems." To point out Mr. Lecky's assertion (i. 457) that the "land tax for 1776 was raised to fourpence in the pound" is at once to indicate the error into which he has fallen. The statement that Pitt "unsuccessfully canvassed Cambridge" leaves us in doubt whether he was wooing the electors for the university, the borough, or the county. The future member for the university did more than canvass the constituency; he went to the poll, but was defeated. A curious error is contained in the paragraph (ii. 207) on the present system of Secretaries of State; and it will certainly mislead the average reader to speak of the Irish Viceroy of 1778 as Lord Buckingham.

Everywhere throughout these volumes there is apparent a marvellous skill in bringing together from various sources a vast number of references bearing on the questions at issue. When Mr. Lecky proceeds, as no doubt he will in the succeeding volumes, to describe the progress of literature and art, the growth of science and of maritime discovery, these qualities will stand him in good service. Freedom from prejudice and liberality of opinion are written in large letters on every page of Mr. Lecky's History, and must impart an abiding value to his labours.

W. P. COURTNEY.

*Heine's Religion and Philosophy in Germany.*  
Translated by John Snodgrass. (Trübner.)

It would not be easy to say whether Heine's miscellaneous works are well known in England, but it is pretty certain that they are far less known than the poems and the *Reisebilder*. The present book—having originally appeared in French in the *Revue des Deux-Mondes*, afterwards figured, and figures, as the first part of the *De l'Allemagne*, which, at intervals of nearly twenty years, was twice published in German by the author himself—contains some of Heine's best-known things. But we doubt whether, as a whole, it is much read among us. Mr. Snodgrass has translated it very well, giving the variants of the French and German versions, and adding a fair amount of annotation.

Translation of prose is never open to the objections which apply to translations of verse, and this particular book is made much more translatable from the bilingual character of its original production. Mr. Snodgrass, we see, expresses a doubt whether Heine's French work was entirely original, or, at least, whether it was not assisted. We have heard a contrary opinion expressed by qualified Frenchmen, but the matter is, of course, one for positive evidence. However

it may be, the style of this tractate is remarkably clear; and, except for some of Heine's characteristic turns, it would be rather difficult if the author's name were unknown to pronounce on the language in which it may have originally been thought or written. It certainly is not entitled to the praise of being a very complete or a very methodical treatise on its ostensible subject. Probably no one would expect any such thing from Heine; but as the expression of the thoughts of a man of no small information, and in intellectual acuteness and fertility inferior to no man of the century, it cannot fail to have interest. As usual, when the general intellectual power of a writer is superior to his special knowledge of, or interest in, his subjects, the digressions, which are numerous, are the best part. Without other information it is to be feared that any good person who diligently reads this book with a view to ascertaining the actual state of religious and philosophical thought in Germany even fifty years ago, much more now, will go away somewhat empty. But if the book contained nothing more than its admirable disquisition on the difference between "classic" and "romantic," and the striking and, indeed, rather terrific prophecy with which it concludes, it would be a book of the most remarkable kind. The first, it is noteworthy, does not occur in the French version, and the subject has been treated elsewhere by Heine in his avowed treatise on the romantic school. But the treatment here is nearly as good as it can be, little as it has apparently to do with the subject. It is the fashion nowadays to sneer at the famous division, but it is certain that it corresponds to a fundamental difference of literary taste, and therefore to a fundamental difference in literature. In the first place, Heine's remark that the terms refer, not to the material, but to the treatment, of literature, contains in it the germ of all sound doctrine, not merely on this, but on every other literary subject, though unfortunately there are in this matter far more heretics than there are orthodox. The subsequent definition—that the treatment is classic when form and subject are identical (we should prefer "strictly commensurate"), and romantic when the form reveals the subject (Heine says the idea), not through identity with it (exact correspondence with it), but by parable or suggestion—is also certainly right, though it is susceptible of much improvement in terms of statement. The prophecy of the results of the unity of Germany, and the sarcastic warning to the French to beware of it, is too long and, let us hope, too well known to quote. For the rest, desultory as the book is, it is full of flashes of the marvellous acuteness and of samples of the equally marvellous power of expression which distinguished Heine. The most famous single thing in it is perhaps the conceit (for it is little more) about the bells ringing as the sacrament is being carried to a dying God. But there are numerous other things as brilliant, and perhaps of purer water. Of the various persons treated, the sketches of Luther, Spinoza, Lessing, Kant, and Fichte dwell particularly in the memory. They are always luminous, and the light, despite its

will o' the wisp appearance, is by no means delusive.

On the whole, the book must be regarded as one of the most remarkable examples of existence of a very rare kind of handling, that in which serious subjects are treated lightly, yet so as, after all, to convey a serious meaning.

GEORGE SAINTSBURY.

*The Prophets of Israel and their Place in History to the Close of the Eighth Century B.C.* Eight Lectures by W. Robertson Smith, LL.D. (Edinburgh: A. & C. Black.)

ANOTHER volume of lectures! and it must be owned that there is less reason than usual to complain of incompleteness of treatment. The author, it is true, has had a large experience in lecturing; still it is not every Professor of Hebrew whose academical lectures would furnish forth such a rich feast as now lies before us. Aberdeen's loss is Scotland's and England's gain; even the happy few who know something of the facts of the Bible will learn much from the felicitousness of the present exposition. For Mr. Robertson Smith is not only a "full man," but has a singular gift of making a hard subject intelligible. He is the very opposite of those who "darken counsel by words without knowledge;" on the contrary, he loves to blow away the mists of controversy, and show the truth in all its attractive simplicity. He holds some critical opinions which are not generally united with positive views of religion, but his reverent spirit makes it evident that they are so united in his case. His religion is, in its essence, so simple and so Biblical that he can afford to criticise traditional opinions; but he does not flaunt his advanced criticism in the eyes of the beginner, and is evidently willing to modify his theories so as to account for more facts. This position is rendered possible by a fundamental distinction between theology and religion. Mr. Smith regards the foundation—facts of the Jewish and Christian revelation as assured in a fuller sense than the variable doctrinal conceptions which illustrate and account for them, and he even ventures to defend that stumbling-block of "modern thought," the special self-manifestation of the Deity to individuals of a particular nation (lecture i.). His sympathetic treatment of the Old Testament distinguishes his writings from those of his friend Wellhausen, to which, as he himself states, almost every part of these lectures is more or less indebted. Suggestiveness is, indeed, one of Wellhausen's great merits, though it cannot be said that the suggestions have always been well weighed by their own author.

The work before us is not precisely a history of Jewish or even of prophetic religion, but supplies a valuable *prolegomenon* to such a work. It is mainly an introduction to the prophetic literature, though it does not withhold such preparatory historical information as is necessary to realise the wonderful phenomenon of spiritual prophecy. Of the "higher criticism" there is even less than in the volume on *The Old Testament in the Jewish Church*; the few critical discussions relate either to chronological difficulties or to a question concerning the contact of Assyria

with Judah. The former class of discussions deserves a very careful study. The author admits the artificial systematic character of the early chronology maintained by Nöldeke and Wellhausen; but he supports this by the acute observation that, upon analysing the 480 years of the Judean chronology in Kings, and the 240 of the Ephraimite, we find that "each is naturally divided into three equal parts, and in each case the commencement of the second third is given by a date which is not due to the redactor of the Books of Kings, but stood in the original sources from which he worked." It appears, then, that both chronologists first of all trisected their respective periods, and then filled up the intervals in accordance with what they knew of the duration of the reigns. Such a system of chronology can of course only be approximate and partly conjectural; and hence the great importance of fresh data from the precise Assyrian chronology, which Wellhausen and, after him, our author have made perhaps the first serious attempts to utilise in a critical spirit (see the first part of lecture iv., and note 3 to lecture v. on pp. 413-19). As regards the latter, it may at least be asserted that the arguments against the view that Sargon as well as Sennacherib invaded Judah are not very formidable. Mr. Robertson Smith is unable to believe that history can have "repeated itself exactly" within ten years, and declares that the new theory makes Isaiah hold precisely similar language in both cases. Unfortunately, Assyrian history has a tendency to repeat itself. It did so in the case of Merodach-Baladan; why should it not have done so in that of Hezekiah? Not of course "exactly;" but what Mr. Sayce and I contend for is the parallelism of the two Assyrian invasions of Judah, not their exact similarity. And as to the language of Isaiah, it must be a very hasty perusal of my two groups of prophecies which can detect no difference between those written during Sargon's and those during Sennacherib's invasion. Mr. Smith is surprised at the non-mention of the punishment of Judah in Sargon's annals. But the annals for 711 are far from complete, and merely mention the chief object of the year's campaign. Is it reasonable to suppose that, when Ashdod was punished for "speaking treason," Judah was allowed to go scot-free? On another page Mr. Smith questions whether the Book of Kings would have ignored the invasion of Sargon had it really taken place. But he might as well question whether Sargon captured Samaria because the Book of Kings makes no mention of the fact. The written traditions of the Jews are so fragmentary (thanks to the Exile) that hardly any omission need much surprise us.

Amos, Hosea, Isaiah, and Micah are the prophets introduced to us in this volume; Joel is omitted as being of post-Exile origin. Their historical circumstances, religious and moral conceptions, and mutual relations have never been so clearly unfolded, though the author would gladly admit how much he owes to his predecessors. The part on Hosea strikes me as specially interesting and instructive, nor can I suppose that any serious correction will have to be made in it. The point of the allegory in the first and third

chapters of Hosea has never been expounded so well in English before; readers of Wellhausen will notice the influence of an important passage in the *Geschichte Israels*. The difficult verses in chap. vii., in which the figure of a hot oven, to express the wickedness of the king and the princes, is mingled with that of intoxication, are explained most satisfactorily in a note on p. 410; and the significance of the figure of the fir-tree in chap. xiv. (Mr. Smith joins me in returning to the old rendering of *b'rōsh*) is beautifully brought out by the remark,

"So long as the individual side of religion fails to receive that central place which it receives in the Gospel, it is impossible to represent the highest spiritual truth without some use of physical analogies; and this shows itself in the most characteristic way when the Book of Hosea closes with an image derived from mere vegetative life" (p. 190).

The portion on Isaiah is less interesting to me; but I would draw attention to the excellent pages on the conception of the supernatural (pp. 312-16). It must be startling to hear for the first time that "it was of no moment to Isaiah's faith whether his picture of the sudden downfall of the enemy before the walls of Jerusalem was fulfilled, as we say, literally." But the context shows that in making this observation the author is strictly on the lines of the religion of the great prophets (comp. Riehm, *Messianic Prophecy*, p. 246). With a hasty glance at the opening portion of the subsequent prophetic period, separated from that of Isaiah and his contemporaries by the Deuteronomic Tōrah, the lectures conclude. The author has ably performed the first and, comparatively speaking, easier part of his task; all students will look forward with eagerness to the absorbingly interesting sequel which is held out in prospect. The author is not just beginning his preparations; yet it may be permitted to express a hope that he may not be too much hurried in the publication. The earlier prophets can be more or less considered by themselves; but the interlacing of critical problems becomes greater the nearer we approach the great literary and religious, as well as political, turning-point of the Babylonian Exile.

It is only fair to Mr. Smith to mention that the notes to this as well as to his former volume are full of interesting and even important matter; and the references to the recent literature of the subject will enable the student to continue his researches fruitfully. A few of the points which have interested me in these notes may be here mentioned in conclusion. A parallel to Jacob's vow reported by an Arab scholiast—"If God gives me a hundred sheep I will sacrifice one in every ten" (p. 383); heathen Semitic parallels to the Hebrew feasts (p. 383); the phrase "the day of Jehovah" explained from the use of "day" in the sense of "day of battle" (p. 397). Interpolations in Micah v. 10 (p. 428); refer also to an article on the prophecy of the Captivity in Micah, *Expositor*, 1881. Note on the view that the pestilence attacked the part of Sennacherib's army which lay before Jerusalem (p. 435); it is of this view, taken by the late compiler of 2 Kings xix., that I speak in *Isaiah*, i. 203, not of the historical

fact (on this comp. *Isaiah*, i. 197). Note on Amos v. 26 (pp. 399–401); I do not see so much force in the objection urged by Mr. Robertson Smith to the view that Sakkuth (a title of the Assyrian god Adar) is to be substituted for the strange pronunciation *sikkuth*. True, it is of Accadian origin; but so also is Tammuz, which we find in Ezek. viii. 14 for the Phœnician god Adonis. If this Semitic deity was known to the Jews under a non-Semitic name, why not another also? I do not know (Levy's *Chald. Wört.* not being at hand) how Fleischer disproves the assertion that Kaivân (A.V. in Amos, Chitun), as Schrader and others would pronounce, following the Peshito, is Assyrian. A perverse critic might reply that even the name Adar may be held to be Persian. Note on Isa. ix. 3 (p. 425); the correction adopted is no doubt probable, but the received text has been plausibly defended. The new reading does not approach so near to certainty as Secker's correction of Isa. viii. 12 (the notion of "formidable alliance," *Prophets of Israel*, p. 254, is not supported by usage).

T. K. CHEYNE.

*A Description of the Remains of Roman Buildings at Norton, near Brading.* By J. E. Price and F. G. H. Price. (Davy & Sons.)

SOME time ago a short account of the Roman villa at Brading was noticed in the ACADEMY, but since then more has been excavated, and the present account embodies a description of all that was discovered up to the date of publication. The three remains of Roman buildings hitherto discovered in the island—those at Gurnard Bay, those near West Cowes, and the villas at Carisbrooke and Brading—seem to show that at least the north-east half of the island was regularly occupied by the Romans, for, though they are all close to water communication, the two last are not the ruins merely of a fortress in a hostile territory or of a trading port, but show by their arrangement and decoration that the occupiers expected to live permanently and peaceably in them. Brading Harbour, which is now being utilised for oyster culture, has been much altered by the action of the sea during historical times, as has been the case also with the neighbouring coast of Hampshire and Dorset. In the middle of the harbour a stone-cased well has been found; and remains of buildings have been discovered at Woolverton Wood and elsewhere, affording indications of an important settlement, the chief part of which may perhaps be buried under the mud and water of the harbour.

The remains hitherto discovered at Brading appear to be those of at least two buildings connected by a wall, forming two sides of a rectangle, and abutting on a road. The smaller block is remarkable for the mosaic pavements forming the floors of several of the chambers. The workmanship of these, especially of the heads in chamber viii., reminds one of the gladiatorial mosaic from the baths of Caracalla now in the Lateran Palace, but the intricacy of the design, and a certain feebleness in some of the figures, seem to be indications of the decline of the art. The figure with a cock's

head has been often discussed, but no satisfactory explanation has been offered. It has been suggested that it is Mithraic, and it is true that a human figure with a cock's head appears frequently on Mithraic and Gnostic gems, but always with human legs, or with serpents in place of them; never, as far as I know, with cocks' legs. Then the remainder of the design—the house and gryphons—does not fit in with any other known Mithraic groups. The prevalence of the Mithraic cult in Britain is well known. It is believed that more altars to Mithra than any other deity have been discovered; and recently the eight-rayed cross, the emblem of the sun, has been found on a leaden *ossuarius* dug up in Newgate Street; so that there is nothing improbable in this being Mithraic, if similar figures could be found in that connexion. A gladiatorial group in the same chamber is quite wrongly described. The *Retiarius*, not the *Secutor*, was armed with a trident, the latter having a sword and shield. In this group one figure bears a trident in one hand and a sword in the other, which is not the recognised armament of any gladiator. There is also no trace of a net, and it is even difficult to say with certainty that the figure attacked is a man. The busts in the centre and at one corner are, perhaps, *lanistae*, though the hair is longer than usual.

Another pavement represents Orpheus surrounded by animals, a group very similar to that on a bronze ring of the fourth century of which an engraving is given; and a third, the largest of all, contains many elaborately designed groups—among them, an astronomer, with a globe and sun-dial. In the margin of this pavement occurs the *suastika*, or *fylfot*, which has previously been found on altars and other Roman remains in England, but not, I think, in mosaic. Engravings are given of the pottery and other small objects found, among which were some fragments of window glass. Both the drawings and the plans are very good and clear, and no one who intends to visit the villa should neglect to take this book with him and to study it beforehand. Subscriptions are still being received by the committee, of which Lieut.-Col. Malone, of Ryde, is the treasurer, for the purpose of further excavations. C. T. MARTIN.

A VISIT TO COMPOSTELLA.

*Recuerdos de un Viaje a Santiago de Galicia.* Por el P. Fidel Fitay Colomé y D. Aureliano Fernandez-Guerra. (Madrid.)

THIS work is a collection, with additions and corrections, of the letters of Padre F. Fita and Señor Fernandez-Guerra, which appeared in the *Ilustración Católica* during the first months of 1880.

The journey had a very different object and result from that of the ordinary tourist. The object was to search for literary and archaeological treasures, and especially to examine the lately discovered sepulchre of St. James and the archives at Compostella. The results of such an enterprise depend greatly on the competence of those who undertake it. It almost needs a Tischendorf to discover and appreciate a "Codex Sinaiticus;" and the trained philological eye of

Padre Fita was needed to pick out the earliest Basque Vocabulary from amid the rubbish of so much of the "Codex Calixtinus" at Compostella. This is, perhaps, the chief, but it is by no means the only, treasure collected by our travellers. In Spain, and among theologians of their own Church, their investigations into the tradition of St. James and the history of Compostella will be considered of at least equal value. Though currently believed in Spain, the story of the preaching of St. James the Greater and the miraculous translation of his body from Jerusalem to Compostella, in Galicia, has seemed of late scarcely a question for serious investigation outside of the Peninsula. Even there it has been combated by the rival Archbishops of Toledo and Compostella in their struggle for the Primacy, especially in the Lateran Council of 1215. So far from any special honour having been given to St. James in the earliest times, the editors of Migne's *Patrologie* append this note to the "Kalendarium Gotho-Hispanum": "*Jacobi non satis constat quo die Gotho-Hispani hunc Apostolum coluerint*" (tom. lxxxv., p. 1053). The story is disbelieved by Lenain de Tillemont (*Mémoires ecclésiastiques*), and accepted by Gams (*Kirchengeschichte von Spanien*, 1879) only in a Euhemeristic manner. He suggests that the name of the convent *Raithu* in Jerusalem, and the epithet *Rathenses* applied to the two monks who brought the body to Spain in the sixth century, were the origin of the miraculous *ratis*, or raft, on which the sarcophagus floated. But the question has been again revived. In January 1879, while making repairs under the apse of the cathedral, a rude stone sepulchre was discovered containing fragments of human bones. A commission of the Professors of Chemistry and of Medicine in the University of Santiago was appointed to examine these remains. Their verdict was that the bones were of great antiquity, and belonged to three distinct skeletons—one that of a man about forty-five, the second somewhat, and the third much, younger (about twenty-five years old); thus agreeing with the tradition that by the side of St. James were buried the bodies of his two disciples, Anastasius and Theodore. The greater part of the volume is occupied with a discussion as to the amount of corroboration thus given to antecedent traditions.

It is necessary to distinguish clearly between the tradition of the visit of St. James to Spain in A.D. 40–41 and that of the translation of his body to Galicia after his execution. The first seems certainly to have been believed by many in the Church, from Didymus of Alexandria, in the middle of the fourth, to St. Aldhelm of Malmesbury, at the beginning of the eighth, century; but none of these authors know anything of a miraculous transportation of the body and its burial at Santiago. This is said to have been revealed by a star-shower in 795 to St. Felix de Lobio; he informed Theodomi, Bishop of Iria, who directed excavations to be made on the spot, and discovered three sarcophagi containing the bodies above mentioned. The discovery brought speedy gifts of land from Alfonso the Chaste (795–843), and so quickly did the fame of it spread that in 844 Galicia is

known to the Northmen as *Jakobsland*. A similar vision to that of St. Felix appeared to Charlemagne, and from his time dates the great pilgrimage thither. The MSS. which contain these traditions are filled with fables of all kinds. To say nothing of the "Miracula Sancti Jacobi," the "Codex Calixtinus" at Compostella has, perhaps, the earliest form of the "Chronicle of Turpin," and of the fabled conquest of Spain by Charlemagne; while the "Epistola Sancti Leonis" in its different versions includes a folk-lore tale common to all the peoples of Northern Spain, and other stories which are ascribed also to the saints of Andalusia. Against these improbabilities may be set off the native names of places, some of Basque, others of Celtic, physiognomy, preserved in these MSS. The earliest name of Compostella, *Libredun*, affords (in its Latin name, *Liberum Donum*) an example of the way in which the Latinists formed their names from native ones with an imitation of the sound without any regard to the meaning. Another singular fact which points to a certain antiquity is that the altar of Santiago itself is of Celto-Roman origin, and the inscription on it (p. 61) was effaced only at the beginning of the last century by Archbishop Juan de San Clemente. Another instance of the same use of a Roman altar in the church of San Pedro in Oporto is given on p. 7. Still more curious is the case of the reliquary of the true cross given by Alfonso III., ornamented not only with Greek and Roman cameos, but also with an Abraxas gem, and, stranger still, considering the early date (874), with stones inscribed with Arabic characters.

In almost every halting-place some Roman inscription is discovered or re-read by our authors. The fact of the "toros" of the old Vettonia being really boars is confirmed by Padre Fita. The original Latin name of Badajoz (*Battalium*) is the subject of a charming little essay by Fernandez-Guerra; and the striking legend of a ghostly congregation in the same town is told by Padre Fita in a style worthy of G. Becquer. On one point we hesitate to agree with him—viz., as to the value of the names of *Liberti* and *Libertae* on Latin monuments as evidence of a Greek population in Western Spain. These seem to us to be sufficiently accounted for by the well-known presence of favourite Greek servants in great Roman houses. Unfortunately, our ignorance of Celtic forbids us to pronounce on the numerous etymologies from that group proposed by Padre Fita. On the main subject of the preaching and burial of St. James in Spain, we feel confident that, if the learning and skill of a trained philologist and theologian like Padre Fita, and of an archaeologist like Fernandez-Guerra, fail in establishing what they believe, there is little prospect of any of their successors being able so to do.

WENTWORTH WEBSTER.

#### CURRENT LITERATURE.

*The Poems of Edgar Allan Poe.* With an Essay on his Poetry by Andrew Lang. "Parchment Library" Edition. (Kegan Paul, Trench and Co.) What we feel upon reading this highly suggestive Preface is mainly surprise

that there should exist upon the part of the critic in relation to his subject so much subtle intellectual grasp with so little positive poetic sympathy. Within "the dim vales and shadowy woods," the vaporous caverns, the death-chambers, and the sepulchres which the genius of Poe inhabits, Mr. Lang's happiest utterances have an uncertain sound. What he writes on Poe's artistic method (as also what he quotes from Mr. Saintsbury on the same point) is harmoniously and admirably done. What he says of Poe as a man is wholesome and robust, although, indeed, we find it hard to follow him when he tells us that of "love such as the poets have known it from Catullus to"—well, "to Coventry Patmore," Poe knew nothing. Where Mr. Lang is chiefly at fault his error comes of an entire lack of sympathy. We think he has missed the fundamental thing in Poe, and that is Poe's art of personification. A tendency to personify every emotion and all natural phenomena displays itself in the poet's earliest verse. He tells us that he can hear the darkness, that he can hearken to the murmur the grass makes as it grows, can interpret the language the waves hold to the sand on the sea-shore, and can hold converse with the wind. Love alone, or almost alone, among the passions proper to poetry had been, down to Poe's time, personified by all the poets; but he projects in concrete shapes every human passion, all the workings of the intellect and all the stirrings of sense. At the outset, this tendency to personify whatever emotion other poets had been content to leave in its vague and abstract condition was a conscious thing on Poe's part, but as his art developed it became an unconscious impulse and a part of his craft, until at length he cared neither to explain his personifications nor account for them. They became an essential element of his poetry, and the sole arbiter in his use of them was taste. It was at this period he alleged that with "intellect or conscience" poetry such as his had only "collateral relations," and that it had "no dependence, except incidentally, upon duty or truth." It was not that Poe's poetry became even less didactic than at first, but that it became even less directly and avowedly didactic. Moral promptings remained, but they took the shapes which beauty found for them. With visible finger they pointed no lessons; as Mr. Lang says, they distributed no tracts; but they were no less surely there for those who had eyes to see them as they lay hidden within the veil the poet wove for them. Mr. Lang seems to say that Poe's poetry was neither moral nor unmoral; that it held itself aloof from nature; that it was the result of the reaction against the "excessively uninspired" American literature which, in the poet's day, was intended to be extremely respectable, to "palpitate with actuality" and "struggle with the living facts of the hour." This is missing the important point. Poe has, within his limits, as much actuality as Longfellow; he has as much life and human fire. If his poetry was the result of a reaction against American literature, the reaction was not provoked by the circumstance that literature was busied with the teaching of moral lessons, but because it was "excessively uninspired." Poe brought inspiration, and brought it in such excess as sometimes to seem to leap quite out of the world of realities into a realm of his own imagining, where few might follow him, and whence fewer still might bring lessons or lore. But for him there was ever a fundamental basis for every poem, a basis in real life, and there exists not a line more in Poe than in the most direct and self-conscious writer of which it may, in fairness, be said that it is "sense swooning into nonsense," or that it "scarcely pretends to remain within the limits of the poetic art, and attracts or repels

by mere sounds as vacant as possible of meaning." Poe was a master of metrical arts, but let us not be so dominated by his music and so indifferent to his thought as to believe that he ever appealed "more to mere sensation than to any emotion that can be stated in words." Once grasp his art of personification, and "Ualume" is not a whit more enigmatical than the "Raven" or either of these than the "Dream within a Dream." Mr. Lang despairs of attaching any rational meaning to the first-mentioned of these poems, and is content to ask no more from what Mr. Henry James calls the "valueless verse" than the vagueness of exquisite music. Read from the right side, nevertheless, "Ualume" has indeed, as the essayist properly says, an "excuse for its existence," and is perhaps the weightiest of Poe's poems in significance. It is Memory, Dead Love, and Living Love personified. In other words, it is a picture of the poet left alone with his soul upon the death of his life's love, and finding himself, after a long night of sorrow, tempted by an unworthy passion, which he follows, in defiance of all that is best in him, until confronted, reproached, and stopped by the ineffaceable memory of the nobler love he has lost. What authority has Mr. Lang for his last line of "Annabel Lee"?

"In her tomb by the side of the sea,"

is scarcely better than *by the sea-side* would have been.

*Visitors' Guide to San Remo.* By John Congreve, British Vice-Consul at San Remo. (Stanford.) San Remo, an Italian town near the French frontier, has long been a favourite winter residence, and is chiefly frequented by English, Germans, Dutch, with a very few French. Dr. Hassall, the eminent chemist and analyst, who has settled at San Remo, has published a most excellent scientific work on the town and its neighbourhood; and Mr. Congreve has now furnished what is an excellent practical supplement. Tourists and persons intending to spend the winter at San Remo have now easily accessible all information that they can possibly wish for, and that from most competent writers, who are well acquainted with the place, and who regard it from all possible points of view. The winter weather at San Remo is more like summer in the North of Europe than the winter that so many English have cause to regret. The summer is cooler than in most parts of Italy. That the scenery is beautiful is proved by the fact that the well-known artist, Mr. E. Lear, has settled there; and the plants and flowers are most attractive. Those who have lived on the hills in South India will find much to remind them of the East. Eucalyptus-trees are common, and many flowers are natives of the Indian plains—e.g., a *Justicia* is as common at San Remo as in India, and the date-palms are common and flourish. What can be done as regards the cultivation in the open air at San Remo of tropical plants is shown by the numerous and most beautiful palms that Baron von Hüttner has in his garden there. Mr. Congreve might have said a little more about the natural history of the neighbourhood of San Remo, for many visitors seek for occupation and amusement in the study of the flora, &c., and it is hard to find out what information exists already. Some interesting and valuable facts are given regarding the capricious and often monstrous taxation in force at San Remo. The enormous increase in prices of late years is also well noticed. This is chiefly owing to French adventurers, who have succeeded in increasing the value of land to the absurd amount of about £6,000 an acre. Visitors will find "red tape" very strong at San Remo; and the general wish seems to incline to the "how-not-to-do-it" system. But they will all be charmed with the place in

spite of such small drawbacks; and Mr. Congreve's "Guide" will effectually aid them to make the most of San Remo.

*Life of Robert Smith Candlish, D.D.* By Jean L. Watson. (Edinburgh: James Gemmell.) It is no offence to Miss Watson to say that she measures Dr. Candlish by a provincial and sectarian standard, and looks at religion exclusively from the "evangelical" standpoint. Let that be granted, however, and her little biography will be found readable, and even enjoyable. It is well condensed, and gives a much better view of Dr. Candlish than the bulky "Memorials," composed mainly of extracts, which were published not very long ago by Dr. William Wilson. The more one knows of this typical Scotch cleric and polemic, who was "always in a triumph or a fight," and therefore unable, according to Cowley's canon "on things remote to fix his sight," the more one likes his sincerity and his quick humour, and regrets that they were so much wasted in arid controversy. However, it is pleasant to think that Candlish preserved to the last his human qualities, his very likeable irascibility and his love of Burns.

*Praenomina; or, the Etymology of the Principal Christian Names of Great Britain and Ireland.* By R. S. Charnock. (Trübner.) A good book on Christian names is greatly needed; and Dr. Charnock certainly has not written it. Miss Yonge's volumes are far better, though by no means free from serious philological faults. But Dr. Charnock's attempt is inexpressibly bad. He begins by telling us that "the Romans" called one man Plato, "from the breadth of his shoulders," and another "Caligula, from wearing the shoe styled *caliga*." Alfred, he says, is "usually translated 'all peace,'" as though it were Eall-frith, instead of Ælf-ræd; and then continues on his own account that it "is rather from *alf-rad*, help in counsel." Under Charles we are told that the word is "corrupted from Carolus," "whence the name Carlomanus, Carlman, by corruption Charlemagne." Of Edith we learn that it was "formerly Eadith, from A.-S. *eadig*, happy;" of course it ought to be Ead-gyth. Edwin is "from the A.-S. name Eadwin, from *Ead-winn*, happy conqueror." Under Henry we are told that "one author renders this name *home-ruler*;" if so, Dr. Charnock may safely neglect to consult that author in future. Martha is "the Greek name *Μάρθα*;" and how precious it looks in real Greek type! Oswald is "from O.-G. *Os-walt*, illustrious magistrate." When Dr. Charnock gets into Gaelic and Cornish we must decline to follow him; but his English is quite bad enough for most people. We had hoped that this sort of etymology was extinct; however, we still find Dr. Charnock writing that Theodoric is "an old German name, from *teut-reich*, powerful lord," and that some derive Neptune "from Japheth, or from Naphtuhim, pr. n. of an Egyptian nation." Frank ignorance is a great deal better than such knowledge as this. The book is, in fact, a careless compilation badly selected from obsolete and untrustworthy sources.

*The Verbalist.* By Alfred Ayres. (New York: Appleton.) This is another of the numerous books published in America purporting to teach us how to speak and write the English language correctly. So far as the present work is concerned, we have nothing to say against it, though we must confess to having been, in some parts, more amused than instructed. The book is aimed rather at the Americans than at the English; and in one instance we note with satisfaction that the author prefers our "railways" and "stations" to the American "railroads" and "depots," though he objects to our non-aspiration of

initial *h* in some cases. He would always aspirate it. We suppose that the division "knowledge" is now recognised in America as correct, for we find it in two consecutive lines on p. 8.

*On the Chronological Sequence of the Coins of Boeotia.* By Barclay V. Head, Assistant Keeper of Coins, British Museum. (Rollin and Feuardent.) This history of the Boeotian coinage is another instalment of the valuable series of monographs which Mr. Head and Prof. Gardner have for some years been preparing on the various branches of Greek numismatics, and of which, so far, Mr. Head's *Syracuse*, *Ephesus*, and now *Boeotia*, and Prof. Gardner's *Elis*, have appeared. The present volume is constructed on the same lines as Mr. Head's previous monographs, and exhibits to the full as much care, accuracy, and thoroughness as those. If the book, on the whole, is not so interesting as the earlier works on Syracuse and Ephesus, it is because the coins are not so replete with artistic or historical data. It is, however, too much the way with numismatists to devote their attention over-closely to the most beautiful and best-known parts of their science, and it is very important that someone with zeal and experience such as Mr. Head's should give his serious study to the less obvious and inviting departments of numismatics. The Boeotian coinage, moreover, is by no means deficient in materials for the historian and the palaeographer, who will find on the coins evidence of the ambitions and downfalls of Thebes and her rival cities which are not always explained in the written records, and proofs of the late survival of archaic forms of letters which are interesting to the student of the development of the Greek alphabet. The artistic merit of some of the coins is finely represented in the six autotype photographic plates which accompany the work.

*Journal of the Derbyshire Archaeological and Natural History Society.* Vol. IV. (Bemrose and Sons.) This society is one of the most active of the provincial bodies which supply the place of the great learned societies of London to those who can be only occasional visitants to the capital. The energy with which the Derbyshire Society works may be measured by the strong action taken by its leading members for the purpose of hindering the destruction of the chancel of Hope Church. The details of the controversy are given in the volume before us. All the efforts of the society were unavailing, but its labour has not been in vain. The controversy attracted much attention, and we feel sure no such wanton exercise of power can occur in Derbyshire in the time to come. The most important paper in the volume is a short one, by Mr. George Bailey, on some fragments of stained glass in Norbury Manor House. They are roundels of enamelled glass of the fifteenth century, and represent the first six months of the year. There can be little doubt that there were once six others, which are now lost. The various ways in which our forefathers represented the months and the seasons is a subject of much interest. Mr. James Fowler communicated an elaborate paper on this subject to the Society of Antiquaries, which appeared in vol. xlv. of the *Archæologia*. He therein gathered together an immense mass of information from almost every country in Europe. The Norbury fragments were, however, unknown to him. The special interest of these consists in the fact that they not only furnish correct data as to costume, but also give us representations of tools and the processes of agriculture which we look for in vain elsewhere. In the Norbury picture of January we have an old man in a furred gown sitting in a massive, but unornamented, chair. His feet are shod with long and heavy wooden

clogs; in his right hand he holds a goblet, and suspended over the fire by what he would have called a "reckin hook" is a vessel in which mead or ale is being warmed for him. The figure representing February is so very ill-drawn that we cannot believe it to be the work of the same artist. It is curious as representing the act of digging with a wooden spade tipped with iron, such as may still be seen in use on the banks of the Ouse and Trent. March is represented by a man pruning a tree—perhaps a vine. April is a youth with corn and flowers in his hands. May, a young person, perhaps a girl, with flowers, and a hawk on the wrist. June, a man wearing a hat like a modern "wideawake" pulling up bulrushes with a strangely fashioned instrument which seems ill adapted for the purpose. The Rev. Reginald H. O. FitzHerbert has communicated a series of early charters relating to his family, and the Rev. J. Charles Cox and Mr. W. H. St. John Hope have edited the sacrist's roll of Lichfield Cathedral. It is an important document, which will be of service to all persons interested in vestments and ritual. The notes are accurate, but a little over-done. It could hardly be necessary to tell anyone who would consult such a document that "the Mass answers to our Communion service." Mr. Bemrose supplies, in facsimile, a poem of little merit written by Charles Cotton, the friend of Izaak Walton.

MR. T. SATCHELL has printed for private circulation a bibliography of Izaak Walton's *Compleat Angler*, extracted from the forthcoming "Bibliotheca Piscatoria," which he is editing in conjunction with Mr. T. Westwood. If it may be taken as a sample of the treat which anglers have in store for them in the book itself, they are to be heartily congratulated. Mr. Westwood, in his well-known *Chronicle of Izaak Walton's "Compleat Angler"*, enumerated fifty-three different editions in 1864. Mr. Satchell has prolonged the list in the eighteen years which have since elapsed to no less than eighty-seven. On casting our eyes over these bibliographic notes we have observed a curious fact relative to Mr. Elliot Stook's facsimile reprint of the first edition of Walton. In the last line of the title-page of this so-called facsimile, "Churchyard" of the original appears as "Churcheyard" in the photographic facsimile. Two miseries of most popular authors seem to have befallen Walton. Moses Browne, in 1750, took upon himself to polish and Bowdlerise the *Compleat Angler*; and every literary fisherman since has thought it his duty to edit the book by overlaying the original with a mass of notes. Through this forest, where the wood cannot be seen for the trees, Mr. Satchell is a safe and amusing guide.

#### NOTES AND NEWS.

LAST Sunday being Mr. Browning's seventieth birthday, 102 of his admirers, members of the seven Browning Societies of London, Oxford, Cambridge, Cornell, Bradford, Cheltenham, and Philadelphia, sent him a set of his own works bound in olive morocco by Proudfoot, and enclosed in a handsome oak case carved with Browning emblems, with a message that, as the works of a great modern poet could never be found in his house when need was to refer to them—(Mr. Browning always gives away all the copies of his books which his publisher sends him)—his friends begged his acceptance of a set of these works, and assured him that they would be found worthy of his most serious attention. Inside the first volume was copied a bit from a letter of Mrs. Owen, of Cheltenham, to Mr. Furnivall: "If, on his seventieth birthday, Browning were allowed to see with 'inward eyes' the living help that he is in many

lives, what a grand birthday present that would be!" The case was designed by Mr. G. Alfred Rogers, and ornamented with seven medallions of the poet's works: a *Ring and Book*, a lyre and palette and brush for the Music and Art poems, a galloping horse for the *Good News*, a dog for *Tray*, a *Star and Gondola*, a *Glove*, and a *Red Cotton Nightcap*, all twined with leafage and *Bells and Pomegranates*. Mr. Browning was touched by the kind thought and good wishes of the givers of this birthday present, as well as amused by the humour of it. He has since written that he "never was so honoured, so gratified, by any action of a similar nature that ever happened to him in the course of his life." And so his 102 friends are happy to have acknowledged by this slight token of their gratitude the great debt they owe him for the help and pleasure they have derived from his works for so many years.

DR. JULIUS JOLLY, Professor of Sanskrit at Würzburg, whose translation of the ancient law-book of Vishnu in "The Sacred Books of the East" has attracted very general attention both in Europe and in India, will go to Calcutta in the autumn to deliver the Tagore lectures on Indian law, and to continue his researches in the ancient legal literature of India.

DR. ABEL, whose linguistic essays are advertised to appear in an English translation, has been appointed to deliver the next course of Ilchester lectures at Oxford on Slavonic literature during the ensuing Michaelmas term.

DR. SCHLIEMANN is about to excavate (or is probably now excavating) the tumulus of Proteilaus, so called, in the Troad.

MR. ROBERTSON SMITH's first article on "The Place of the Old Testament in the Christian Church" will appear in *Good Words* for June.

It is not anticipated that the *Life of Swift* by Mr. Henry Craik will be published before October. A second article on this subject may be expected to appear in an early number of the *Quarterly* from Mr. Churton Collins, the writer of that in the present number.

THE fifth volume of the great work of *Henrici de Bracton de Legibus et Consuetudinibus Angliæ*, forming part of the Rolls Series, will shortly be issued. It comprises the four treatises *de Ingressu, de Brevi de Recto, de Essoniis, and de Defaltis*. The learned editor, Sir Travers Twiss, has prefixed to it an Introduction of considerable historical interest, throwing light upon the new conditions of land tenure under the Angevin Kings, and upon the origin of the Anglo-Saxon "feorme" and the gradual substitution during the Angevin period of the system of letting land to farm for a produce rent instead of granting it as a feud for military service. The Introduction also shows how the substitution of the office of the vice comes in the place of the Anglo-Saxon ealdorman and the shire reeve contributed to the consolidation of the monarchy and the establishment of the legal supremacy of the Crown; further, how the system of mortgage, the *mortuum vadium* of the early Roman Law, was introduced into England by the Romans, and how it has succeeded in maintaining its ground, and has excluded the more modern practice of the *hypothec*, established under the later Imperial system and received everywhere on the continent of Europe; how the practice of essoins operated to protect the tenant under the feudal system from having his land arbitrarily forfeited to his lord for non-appearance at his courts; how the legal division of the hour of the day into forty moments, which was in use in Bracton's time, was a tradition from the eighth century, when it had been adopted by the Venerable Bede, who is reputed to have established in England the system of dating events

from the era of Christ; how the writ of *quo warranto* was introduced in the reign of Henry III. with a view to procure the forfeiture of the lands of the Normans after the cession of the Duchy of Normandy to King Louis of France in 1239; how the *intentio* of the Roman procedure found its way into the English courts in Bracton's time and led up to the system of "counting," which was established in the reign of Edward I., when the duty of "counting" devolved on the serjeants-at-law; and, further, how the practice known in Blackstone's time as "the tender of the demi-mark" became established in favour of the tenant, who was thereby enabled in his turn to put the claimant to the proof of his asserted title, inasmuch as the issue to be decided by the Great Assize was which of the parties had the better title. The information which Sir Travers Twiss supplies in his treatment of these and other cognate questions will be found to be a valuable supplement to Canon Stubbs' *Constitutional History of England*.

THE Report of the Council of the Camden Society, read at the annual meeting on May 2, regretted that unless new subscribers could be obtained it would be impossible to produce as many pages of printed matter as have hitherto been given. The *Catholicon*, an English Dictionary which the society is publishing in conjunction with the Early-English Text Society, will shortly be issued, as well as the portion of the index which was completed before the work was stopped in consequence of the ill-health of Mr. Gough, who had prepared it. Once more the council would urge upon all who take an interest in the annals of their country to subscribe to a society which is engaged in printing the materials of history. Applications for membership should be sent to the hon. secretary, A. Ringston, Esq., Public Record Office, Fetter Lane, E.C. There are at present an unusually large number of interesting works on hand the publication of which is postponed for want of funds.

MESSRS. BURNS AND OATES will shortly publish a new *Life of St. Philip Neri*, translated from the Italian of Mgr. Capececiatro, Archbishop of Capua, by Father Thomas Pope, of the Birmingham Oratory. This work differs from the older biographies of the Saint by presenting him in his relations with the great movements of his own time.

FATHER RYDER, of the same Oratory, has in the press a small volume of poems, original and translated, which will be issued by Messrs. Gill and Co., of Dublin.

MR. MARVIN's new work on Central Asia, which we have already announced, will be issued in about three weeks' time by Messrs. Sampson Low. Although nominally a reprint of the letters which Mr. Marvin contributed to the *Newcastle Chronicle* detailing his discussions with Skobelev, Ignatieff, and other Russian generals and statesmen on the Central-Asian question, the work contains a large amount of fresh matter, throwing light upon Skobelev's ambiguous movements towards Merv last year and his massacre of 8,000 men, women, and children after the capture of Geok Tepe. Accompanying the work will be a map of the new Russo-Persian frontier beyond the Caspian, drawn in accordance with the Treaty of Teheran, recently published.

MESSRS. BICKERS AND SON have in the press a reprint of the last edition of *Arnold's History of the Later Roman Commonwealth*, which has been out of print for some years. It will be uniform with their library edition of *Arnold's History of Rome*.

In answer to a request from the Wyclif Society, the Delegates of the Olarendon Press have reduced the price of Mr. T. Arnold's edition of *Wyclif's Select English Works* (three

volumes octavo) from 42s. to 21s., and the price of Dr. Lechler's edition of *Wyclif's Latin Trilogus* from 14s. to 7s.

A SECOND series of translations from the French and German by contributors to the *Journal of Education* will be published next week, with the title *Prizes and Proximes*. Among the translators are Prof. Jebb, Messrs. E. D. A. Morshead, F. W. Bourdillon, and James Rhoades. It includes, also, a poem by the author of "Betsy Lee."

MESSRS. HATCHARD have nearly ready for publication *A Winter in Tangier and Home through Spain*, by Mrs. Howard Vyse; *Heralds of the Cross*; or, *Fulfilling the Command: being Chapters on Missions*, by Miss F. E. Arnold Forster, adopted daughter of Mr. W. E. Forster; and a revised edition (being the fifty-first thousand) of *Far Off*, Part I., or "Asia Described," by the author of *The Peep of Day*.

MESSRS. GRIFFITH AND FARRAN have in preparation a new series of school reading-books, to be entitled "The Standard Authors Readers," by the editor of *Poetry for the Young*, planned throughout to meet the requirements of the New Code. The distinctive features of the series will be that, in the infants' books, very careful graduation in the introduction of sounds and words will be combined with an interesting narrative form, and that the passages selected in the higher books (both prose and poetry) will be taken from the works of standard authors.

MESSRS. PUTTICK AND SIMPSON were charged with the sale last week of the library of works, musical and on music, collected by Mr. Carl Engel, the historian of "national music." We are glad to observe that it was not totally scattered, nearly the whole of the lots being purchased by Mr. Quaritch. Even a temporary arrest of the dispersion of such a collection, painfully and carefully brought together during many years of intelligent research, is a boon which will be appreciated by students of the history of music.

THE Society for Psychical Research, formed with the object of making "an organised and systematic attempt to investigate that large group of debatable phenomena designated by such terms as mesmeric, psychical, and spiritualistic," has marked out for study by special committees the five following classes of phenomena—thought-reading, mesmerism, Reichenbach's experiments, apparitions, and haunted houses. A sixth committee is engaged upon the work of collecting materials bearing upon the history of these subjects. The president of the society is Mr. Henry Sidgwick; the secretary (to whom all enquiries should be addressed) is Mr. E. T. Bennett, The Mansion, Richmond Hill.

WE hear that Mr. Brandram will give a recitation of Sheridan's "Rivals" on Thursday, May 25, at Grosvenor House, by permission of the Duke of Westminster. The proceeds will be given in aid of the funds of the London Fever Hospital; and tickets can be obtained from the secretary of the hospital, Liverpool Road, N.

PROF. ARTHUR GAMGEE will, on Tuesday next, May 16, give the first of a course of four lectures on "Digestion" at the Royal Institution; and Prof. David Masson will give the first of a course of four lectures on "Poetry and its Literary Forms," on Saturday, May 20.

DURING the last fortnight three new Browning Societies, those of Bradford, Cheltenham, and Girton College, have held their first meetings. The Bradford folk, after Mr. Binns's paper on *Paracelsus*, resolved to have a Browning picnic at Bolton Abbey in the course of the summer, at which a paper should be read on some of the sylvan aspects of Browning's poetry.

At the meeting of the Clifton Shakspeare Society held on April 29, "Julius Caesar" was the play for criticism. Dr. J. E. Shaw gave a communication on II. i. 204. The following papers were also read:—"On the General Character of the Play," by Mr. E. Thelwall; "A Note upon the Style of 'Julius Caesar,'" by Mr. J. W. Mills; "On the Date of the Play," by the Rev. H. P. Stokes; and "On the Character of Cassius," by Mr. Thelwall.

THE May number of *Hibernia* contains an article on "Thomas Moore and the Sheridans," which gives several unpublished letters of the poet.

DR. ROTT, the secretary of the Swiss embassy in Paris, at the instance of the Swiss Bundesrath, has prepared a Catalogue of the despatches and reports of the French ambassadors in Switzerland to their Government. The sources are scattered in the different archives and libraries of Paris. The work will be similar to that which the Swiss Federal authorities have already caused to be compiled from the Venetian State archives. Dr. Rott's labour is confined at present to the period between 1444 (the attack of the Dauphin of France, afterwards Louis XI., upon Basel) and 1610 (the death of Henri IV.), which is illustrated by some 4,500 despatches and 3,000 reports and other documents. The Historical Society of the canton of Neuchâtel has determined to have copies taken at its own cost of all the diplomatic documents which bear upon the history of Neuchâtel, and possess a real historical value, from 1618 to 1740.

THE Association of German Authors has chosen Herr Eduard Engel, the editor of the *Magazin für die Literatur des In- und Auslandes*, to be its delegate at the International Literary Congress to be held in Rome May 20-27.

*An Explanation.*—In the *ACADEMY* of April 22, a quotation was printed from the *New York Herald*, setting out a passage from Mr. Lansdell's *Through Siberia* by the side of a passage from a book by Mr. Knox published in 1870. Mr. Lansdell writes to us enclosing a letter he has addressed to the *New York Herald*, which we have no room to print in full. Mr. Lansdell states that the first sentence in the Preface of his work is—"This book is a traveller's story, enriched by the writings of others;" and he adds—"I have used here and there Mr Knox's expressions, chiefly because I thought them more racy than anything I had at hand for the moment."

#### FRENCH JOTTINGS.

THE duc d'Aumale is now at work upon the two concluding volumes of his *Histoire des Princes de la Maison de Condé*, which will treat of the seventeenth and eighteenth centuries.

A NEW edition of the duc de Broglie's History of the Church and Empire in the fourth century is in preparation. The author will examine in a Preface the present state of Christianity and the attitude of the Republic to religious liberty.

*Le Livre* states that M. Emile Ollivier is writing another book on the Church and State in Italy and France.

THE members of the French Academy have had printed for themselves on china paper forty copies of the seventh and last edition of their Dictionary.

THE Conseil-général of the department of the Nord voted at its recent meeting the sum of 3,000 frs. (£120) towards a statue of Dupleix, to be erected at his birthplace, Landrecies.

M. JAMES DARMESTETER has just brought out (Paris: Delagrave) a critical edition of Byron's *Childe Harold*. In the Introduction is given a sketch of the poet's life and of his

work; the notes explain the many allusions to historical events; at the end are printed illustrative passages from earlier and contemporary poets.

M. SIMÉON LUCE, the author of a well-known book on du Guesclin, is about to publish an essay on Jeanne d'Arc (Paris: Champion).

AN interesting MS. by Vatel, the celebrated *maître d'hôtel* of the seventeenth century, has been printed at the expense and for the use of the Société des Bibliophiles français, thirty copies having been struck off. Ten more copies have been printed by the duc d'Aumale, president of the society, for presentation to public libraries.

VICTOR HUGO's *Les Châtiments* has appeared in the so-called *édition définitive* of his works (Paris: Hetzel—Quantin). The different inedited readings and additions to the original MS. are now published for the first time.

M. E. CAMPARDON has published, under the title *Les Prodigalités d'un Fermier-général* (Paris: Charavay), a work complementing the memoirs of Mme. d'Épinay, which break off at the year 1759. Mme. d'Épinay died in 1783; and hitherto the only facts accessible concerning the later years of one of the most notable women of the eighteenth century were to be gleaned from the letters of Galiani and a portion of Diderot's correspondence.

M. EMILE MONTÉGUT has collected into one volume (Paris: Quantin) the articles he has been contributing to the *Revue des Deux-Mondes* upon Marshal Davout. The work is divided into two parts—"Les Années heureuses (1789-1810)," and "Les Années sombres (1810-1816)."

A CATALOGUE of the MSS. preserved in the archives of the French Admiralty and Colonial Office is now in course of publication.

#### A PARAPHRASE.

MOSCHUS.—IDYLL V.

WHEN the breezes, gently playing,  
Ripple o'er the summer sea,  
Then from land my thoughts are straying;  
Fain a sailor I would be.

But whene'er the deep is sounding,  
And the angry waters foam;  
When afar the waves are bounding,  
Then I welcome land and home.

Quickly then the sea forsaking,  
What delights the wood doth bring:  
There, the waves are wildly breaking;  
Here, I list the pine-trees sing.

Ah! the fisher, be he thriving,  
Wide the sea is forced to roam;  
Wary prey to catch o'er striving,  
And his bark his only home.

Then how sweet to me is dreaming  
In the plane-tree's grateful shade,  
Where the fountain, softly streaming,  
Babbles through the leafy glade.

WILLIAM HOWARD CARPENTER.

Johns Hopkins University, Baltimore.

#### MAGAZINES AND REVIEWS.

THE present number of the *Antiquary* is not up to the average. There are two good papers, and two only. Mr. G. Phillips Bevan discourses upon what he believes to be the earliest industrial census of which we have any record. It was taken in France in 1292. The information he has collected about trades and trade names is valuable from several points of view, and his facts are arranged in an attractive manner. Mr. John Henry Parker has a very learned paper on the Colosseum at Rome. Everything concerning the early antiquities of Rome has been, and still is, the subject of

fierce controversy. We will by no means undertake to say that Mr. Parker's views are not open to exception, but they are the result of careful studies made on the spot, every facility having been given by the Italian Government for the purpose. There are three papers which relate to the popular festivals of the month of May. All are amusing, but there is little or nothing in them which we have not been told many times before.

THE April number of *Le Livre* is remarkable for two excellent portraits—things always welcome either for the portfolio or for insertion in books. The first is a very handsome engraving of a medallion of Petrus Borel by the well-known Romantic sculptor Jehan du Seigneur. It is accompanied by letterpress from Champfleury, which is very slight and decidedly unappreciative. Absurd as were the tricks which "Petrus" played, he had, to support them, a great deal more literary power than, with all deference to him, the author of *Les Excentriques* can boast of. The fact is that M. Champfleury, as an ex-believer in Petrus, is not a fair judge. The other portrait (also accompanied by an article, and, in this case, a very good one) is a crayon drawing of Gavarni by himself, heightened with some splashes of white. To those who only know the artist's elaborate, but decidedly flattered, "Homme à la Cigarette," this portrait will be something of a disappointment. But there can be no doubt which is the truer likeness.

THE long-delayed first number of vol. iv. of the *Revista de Ciencias Históricas* has just appeared. Its articles are mostly continuations of those in former numbers. The fresh ones are a laudatory review of vols. iv. and v. of Stanley Lane-Poole's Catalogue of Oriental Coins in the British Museum. The writer, Señor Codera y Zaidin, takes exception to a few readings only, and remarks on the influence which the Fatimite coinage of Egypt had on that of the "Reyes de Taifas" in Spain. In a short illustrated article, full of good sense, on "The Bronze Arms found in Minorca," Rafael Blasco warns his readers not to be hasty in considering these weapons prehistoric; in so isolated a spot they may well have survived and overlapped the use of iron and steel weapons in other countries. The most important continuations are the supplement, mostly of inedited coins, by Señor Pujol y Camps, to Delgado's *Monedas Autonomas de España*, and that to the *Diccionario trilingüe* of Larramendi, by Padre F. Fita; both these are of great importance. The others are "Felipe de Malla," by F. de Bofarull, treating of the conduct of the ambassadors of Aragon at the Council of Constance; and the History of the Counts of Empurias, by Bishop de Tavernier. In the reviews we notice a valuable one by the editor on the *Catalogue des MSS. espagnols de la Bibliothèque nationale*, by M. A. Morel-Fatio.

THE *Revista Contemporanea* of April 30 publishes the introductory lecture given in the Ateneo by Señor Moreno Nieto. It was the first of a course on history which he did not live to pursue. Dionisio Chauli, in "Scattered Leaves from a Tailor's Ledger," gives an amusing account of the changes of fashion in Madrid since the beginning of the century. The "Notes" of A. Ubique are on the Archivo Histórico Nacional of Madrid. He remarks on the importance of diplomatic seals as an aid to determining the date of a document. The number of these in the Archivo, which was 8,000 in 1876, is now no less than 30,000. Gen. Pavia, in his political reflections, gives a detailed account of the overthrow of Castelar, and of the *coup d'état* of January 3, 1874. Gen. F. de Cordova continues his narrative of the expedition to Italy in 1849, with an account of the capture of Rome by Gen. Oudinot.

THE ONLY ENGLISH PROCLAMATION  
OF HENRY III.

THE MS. of the Oxford copy of this proclamation (of which I spoke in the ACADEMY of April 29) is a slip of vellum twelve inches long and five and three-quarter inches broad, folded over lengthways, at the bottom, to the depth of half-an-inch. The strip of vellum by which the seal was attached is still fastened to it, but the seal itself is gone. It is written, lengthways, in twelve long lines, the last being a little shorter than the rest. Possibly Dr. Ingram consulted the printed version of the Huntingdonshire copy in Rymer's *Foedera*, for he has given letters no longer legible, and the creases in the Oxford copy seem to me to have been made before his time. By "no longer legible," I mean that there is a hole completely through the substance of the vellum; many letters can easily be supplied of which only traces now exist. These traces give clear indications of the letters meant, and I have no doubt as to the substantial correctness of the copy which I now subjoin. I may add that Dr. Ingram has inserted one or two letters which I do not believe were ever to be seen, and that these seem to have been suggested by his knowledge of the other copy. I shall call the copies H. and O.—i.e., Huntingdon and Oxford. MS. O. is as follows, the letters within square brackets being supplied from H. The figures within marks of parenthesis show where each line begins.

"(1) Henri burg Godes fultume king on Engle-  
loande. Lhoauerd on Yrloand'. Duk on Normand'.  
on Aquitain'. and eorl on Anlow. send igreteinge to

wik'. Ioh' Geffrees sune. Perres of Muntford'. Ric'  
of Grey. Rog' of Mortem'. Iames of Aldithel and  
ætforen oþre inoge."

There are two forms of *g*; the usual *g* is left in roman type; the Middle-English *g* (for *y* or *gh*) is printed as an italic letter. The variations from the MS. made by Dr. Ingram are as follows:—(1) burh; king (printed with Anglo-Saxon *g*, the two forms of *g* not being distinguished); Englene loande (divided); Yrloande; greteinge. (2) Curl omitted at the end of -schir'; dots omitted after vnen and þet; us. (3) loandesfolk (not divided); dot omitted after kuneriohe; no notice (which I here give) of the stroke over *i* in *in*. (4) Dot omitted after redesmen; on (after *treowe*; indistinct, but I

read in, as in H.). (6) toforen (not divided); iside (with impossible final *e*); noane (a false form); dot after egte, followed by a capital *w*; (7) mugte (quite wrong); treoweþe (no sense); fean (O. has *f. an*, and no vowel but *e* or *o* will fit in; H. has *ioan*). (8) stedefest; owen (for open, with Anglo-Saxon *w*, but translated by "open"); dot omitted after open. (9) egtetenþe (with small *e*); after *cruninge* Ingram inserts a large cross, but I read traces of "A. d." and H. has And; isworen (but I feel sure there never was *i*). (10) Cantelow'; Wirechestr'; Lepechestr' (but there is room for two letters instead of *b*). (11) Northfolk; Englene-loand; dot after Sauuey; Fort (with capital); Pless' (which I cannot read, but certainly not so). (12) Geffreesune (joined); möge (meant for *monge*, false form for *monige*, many). There is a mark over *i* in three cases only—viz, in *in* (noted above); *werien*, in l. 5; and *inoge*, the last word.

The chief gain is the correction of *inoge* for *moge*, as printed by Mr. Ellis. It is interesting to see that Prof. Earle has already made this correction, as may be seen by consulting his print of H. in his work upon *The Philology of the English Tongue*. Of course the plural of *mog* would have been *moges*, and the final *e* shows that a plural adjective is required. Compare *menn inoghe*, Ormulum, 7932; *oþre treos . . inoghe*, Ormulum, Homily, l. 13; *oþre houses ynowe*, P. Plowman's Crede, 215. Hence Ingram prints "*monge*," but the mark above the word is the usual very fine hair-line above the *i*, not a short thick stroke above the *o*. Probably this fine line may be detected in H., now that we know we are to look for it. It must also be observed that the notice *And al on þo ilche worden*, &c., does not appear in O. at all.

I hope hereafter to add a few notes on the variations between O. and H.

WALTER W. SKEAT.

## THE LATE SAMUEL JOHNSON.

WE reprint the following letter from the *Index*, Boston, U.S., April 20, as a tribute to the memory of Samuel Johnson, the author of *Oriental Religions*, who died on February 19, at the age of fifty-nine:—

"When I saw in your paper the announcement of the death of Samuel Johnson, I said to myself, 'Oh, why is life so short!' Johnson was one of those men with whom I wished to have some day a hearty hand-shaking, not in the body, but the spirit. He sent me his books, he wrote me a kind letter; and I read both, and then put them away, hoping for a quiet day or for a quiet week to find rest to write to him and tell him where I agreed and where I differed from him—telling him, at all events, how strongly I felt that he was doing a great and good work. But, alas! the quiet day or the quiet week never came, and he must have thought me a cold, unsympathising fellow for never having written to him, for never having thanked him, for never having assured him of my sincere admiration and sympathy. It is not the first time this has happened to me. There was another man, very different from Samuel Johnson, but I admired him, too, and I thought he had never had his due; and that was J. F. McLennan, the author of *Studies in Ancient History*. I had made plenty of notes of his writings, and some day, I thought, we should have it all out. And then some day I opened the *Times*, and I saw he was gone. I have still a number of such unknown friends in the world, to whom I have much to say, and who are probably very angry with me; but what are we to do? '*Seid umschlungen Millionen*' is easy to say, but to do it by letter is very hard.

"Well may you mourn for Samuel Johnson. Though he has done brave work, he might have done, he would have done, more. Perhaps I am hardly just to him; for the man who breaks stones on the road, as I have been doing nearly all my life, has not always a very kindly feeling toward

those who drive by in a carriage over the road that he has made or mended. I mean Samuel Johnson's knowledge of Oriental religions was at second-hand, and the little accidents that must happen to an historian or a philosopher who writes on Oriental religions at second-hand are just those that most exasperate Oriental scholars. Still, Samuel Johnson was honest, and to be honest means to be accurate; and there are few things in his volume on the *Religion of India* for which, at all events, he could not give chapter and verse, though chapter and verse may not always come from the right book.

"What I admire most in Samuel Johnson was his not being disheartened by the rubbish with which the religions of the East are overwhelmed, but his quietly looking for the nuggets. And has he not found them? And has he not found what is better than ever so many nuggets—that great, golden dawn of truth, that there is a religion behind all religions, and that happy is the man who knows it in these days of materialism and atheism?

"F. MAX MÜLLER.

"Oxford: March 24, 1882."

## CORRESPONDENCE.

## SHAKSPERE'S "LOACH."

3 St. George's Square, N.W.: May 6, 1882.

The passage in "1 Henry IV.," act II., sc. i., l. 23, "Your Chamber-lye breeds Fleas like a Loach" (Folio, p. 53, col. 1), has always puzzled commentators. Our little loach is too small, and it does not breed fleas as salmon do lice. A friend of mine has seen several other kinds of fish covered with parasites caught in the Mediterranean. It is, however, or is said to be, a prolific fish, and from this fact an explanation has been provided for Shakspeare's words.

But the "Ordinance concerning the Salt Fish of Blakeney"—fish sold at Blakeney Fair—in the thirty-first year of Edward III., A.D. 1357, suggests that some much larger fish than our loach was meant by Shakspeare. That Ordinance enacts that

nulle pesson, appele  
Locheffish, ne soit eslu  
ne trie lors tantoulement  
en trois, centassav-  
oir, Lob, Byng [Lyng],  
& Cod. . . . Et que  
. . . soit certain pris  
mys & assiz sur le  
pesson de Doggerfish  
& locheffish, quen pris  
soit tenuz durante la  
feire.

no Fish called Loych-  
fish shall be chosen or  
tried, but only in three  
parts, that is to say,  
Lob, Ling, & Cod.  
. . . And . . . a Price  
shall be set . . . and  
assessed upon the Dog-  
gerfish and Loych-fish,  
. . . which price shall  
be holden during the  
Fair.

Now, though the doggerfish were doubtless the fish that came in "the Ships called Doggers" (les niefs appelez *Doggeres*), I don't suppose the "Locheffish" or "Loych-fish" were those that came in the "Lodeships." I assume that, as the name "Locheffish" included "Lob, Ling, and Cod," it was a generic term for fish equally big, when salted, if not when fresh. And, if so, I would ask our workers at Shakspeare's natural history—Miss Phipson, Mr. Ellacombe, Dr. B. Nicholson, and others—whether they can find that any of these big fish bred fleas, or whether the eating of salt fish was supposed to do so in men, or that the fleas came from the salt common to the fish and lye.

F. J. FURNIVALL.

## THE INSCRIPTION OF NEBUCHADNEZZAR AT THE DOG RIVER.

Oxford: May 6, 1882.

Mr. Loytved, the Danish consul at Beyrût, has been kind enough to send me fresh photographs and squeezes of the inscription of Nebuchadnezzar on the northern bank of the Nahr el-Kelb, including a squeeze of the inscribed fragment of rock which was cut out of the cliff when the new aqueduct was being made on that side of the river. This fragment happens to be in an unusually good state of preservation; and the portion of the inscription contained upon it is highly interesting, as it is a duplicate of a

passage in the Bellino cylinder inscription of Nebuchadnezzar (*Western Asia Inscriptions*, i. 63, col. i. 20-27), where the Babylonian King gives a list of the countries from which he obtained wine.

I am satisfied that Mr. Loytved is right in thinking that an Assyrian scholar who could examine the inscription on the spot would be able to make out a considerable portion of it; the photographs and squeezes, unfortunately, only allow a passage or character to be deciphered here and there. A long and careful study of them, however, has convinced me that the inscription is not an historical one, but merely relates to the construction of public works in Babylonia and sacrifices to the Babylonian deities. The bad condition it is in, therefore, is not so serious a loss as was at first imagined.

The inscription is engraved on five different parts of the rock, the longest portion of it consisting of four columns. A good deal of the first column of this portion can be made out with certainty, and is to the following effect. I omit the first few lines, which are too much obliterated to yield a connected sense.

"The *sarati* of . . . (and) the *sarati* of . . . at the ford of the rising sun (of Babylon) I caused to approach; I (constructed) the head; its . . . in the fortress (with) stone and brick I fenced in, and . . . stone and brick in its . . . I made. Trees I cut down; and . . . and plates of copper with . . . I founded them. In the low ground (*cišurrie*) of Babylon (for) the durability of the *sarati* . . . *casbu* as far as the . . . in the guard-house (*apraû*), and its . . . I caused to approach . . . I completed it. (With) stone and brick their . . . I fenced in. (From) the city of . . . as far as Sippara (and) as far as the river *Arakhtu* (?) towards the Euphrates, . . . *caspu* as far as"

Here the first column abruptly ends. The *sarati*, the construction of which is described, may be "a bridge." The second column is for the most part illegible. I find, however, mention made in it of wines flowing "like water all the year in the presence (of the gods) I made to pass," where *manis*, "like water," occurs as in *Western Asia Inscriptions*, 66, iii. 15. Then follows the name of Nebuchadnezzar, with his usual titles, "glorious prince," &c. Subsequently, after a reference to "the great gods," the inscription speaks of "the temple of Mas," and then "the 8th day" is named. The third column is almost entirely obliterated; but the fourth column again mentions "Nebuchadnezzar King of Babylon," and calls him the *musadu*, or "master," of a country the name of which is unfortunately lost.

The fragment cut out of the cliff by the native workmen, and now, I believe, in the possession of Rustem-Pasha, contains the following text, completed from the parallel passage in the Bellino cylinder:—

"(The portion of the gods of Bit-Saggil and the gods of Babylon: fish, birds) choice (*usûmu* the product of the marshes), precious *usûmu* (honey and other offerings), . . . *taku*, (and) mead I brought, (vines) of the city, wine, the growth of the countries of (Izal)lum, Tahim, Tsim(mini, Helbon), Arnabanu, and 'Su(kham, like the waters of a river) on the dish of (Merodach) and Zarpanituv (my lords I caused to be lifted up)."

The name of Khilbunu or Helbon shows that the countries, of which a list is given, were in Syria and the Lebanon, and this is no doubt the reason why the wines procured from them for the worship of the deities of Babylon are commemorated on the rocks of the Nahr el-Kelb. The Bellino cylinder adds two more districts to the list—Bit-Oubati and Bitati—which were possibly not in Syria, as they are not named in the Nahr el-Kelb inscription. On the cylinder, Arnabanu is written Arana-banuv.

A. H. SAYCE.

## THE PALESTINE EXPLORATION "NAME LISTS."

London: May 9, 1882.

The criticisms of Mr. Robertson Smith upon the *Name Lists* of the survey of Western Palestine are, in the main, so just that I am unwilling to let them convey, as they do, a false impression as to my own accuracy without a word of explanation. The first sentences of my own Preface would, if Mr. E. Smith had referred to them, have fully answered each of his objections so far as I am concerned. The system of transliteration employed, as is there stated, was prescribed to the survey officers by order of the committee before I had anything to do with the work. They have unfortunately carried it out in a not very satisfactory manner; but, as the map had been engraved before I took the lists in hand, I corrected only the more obvious and grosser faults in transliteration in order to avoid discrepancies as far as possible. The only check I had upon names which I did not personally know was the orthography of the native scribe who had written them down in Arabic, but had left no record as to the source from which he obtained them, whether from the mouths of natives or from the report of the English officers and their subordinates. The only faults noticed by Mr. R. Smith are, in fact, those which I have myself indicated in the first page of the Preface.

E. H. PALMER.

## "THE QUATRAINS OF OMAR KHAYYAM."

Dartmouth: May 8, 1882.

Will you grant me space to say a word of thanks to Mr. Poole for his kindly review of my Omar Khayyam in the *ACADEMY* of April '22, and also to supply an omission noticed by him—my omission, namely, to state the principle on which I have selected quatrains for translation?

Briefly, then, it is this: to exhibit the most striking examples of *all* Omar's leading ideas, not only those of a materialistic, but also those of a religious and spiritualistic character. The influence of Mr. Fitzgerald's brilliant version has been so great that it has become almost an article of faith with the critics to subscribe to his view of Omar, and to reject all the mystical quatrains as interpolations. My reading of Omar has convinced me that this view is wrong. We know from the *Tarikh ul Hukama* that Omar taught "axioms of universal religion," and "exhorted his disciples to seek the One God by self-purification." The testimony of Abul-fed to his discredit may very probably have been prompted by the intense *odium theologicum* necessarily excited by his unorthodox views. The argument that the epicurean and the devotional quatrains could not have been the product of one pen is, to my mind, of little weight. It is the privilege of a poet to be inconsistent, especially of a poet like Omar, who did not write a continuous poem, but merely jotted down epigrams as time, circumstance, and mood suggested. The true parallel to Omar is, I conceive, to be looked for, not in such a poet as Lucretius "denying divinely the divine," nor in Shelley chanting the psalm of revolt, but rather in Tennyson's "Two Voices" or in the Book of Ecclesiastes. If that book had been written, not in the weariness of satiety and old age, but in the contemporary flush of the experiences it records, the parallel might have been even closer than it is. Omar's religion was not, of course, that of the Mollas. To them he would say, as Job did to his orthodox comforters, "Why do ye speak deceitfully for Allah?" But that he had a religion of his own, and that this religion with him, as with most of the Persian poets, took a mystical form, is, I think, clear.

E. H. WHINFIELD.

PS.—Some people, I know, pronounce, "trow" as if it rhymed to "thou;" but I submit that the correct pronunciation is that which I have used—viz., rhyming with "go."

## ROSSETTI'S "HAND AND SOUL."

Cuba Villa, Bickerton Road, N.: May 8, 1882.

I possess a copy of *Hand and Soul*, in the rare pamphlet form, privately printed. There are some differences, though not material ones, between the pamphlet and the story as printed in the *Germ*. If Mr. Wilkins cannot meet with the work in any other way, I shall be glad to lend him my copy.

G. BARNETT SMITH.

[As we learn from Mr. H. Buxton-Forman, Rossetti's exquisite prose sketch, *Hand and Soul*, was first published in 1850, in the first number of the *Germ*. Mr. Barnett Smith is quite right as to the minor variations made in the pamphlet on the story as it appeared in the *Germ*. We may further state that when printed in the *Fortnightly Review*, December 1870, the story was again altered in some particulars.—ED. ACADEMY.]

## APPOINTMENTS FOR NEXT WEEK.

MONDAY, May 15, 4 p.m. Royal Asiatic: Anniversary Meeting.  
7.30 p.m. Aristotelian: "Occam and the Critics," by Dr. J. Burns-Gibson.  
7.30 p.m. Educational: "Pestalozzi," by Mr. T. M. Williams.  
8 p.m. Society of Arts: Cantor Lecture, "Book Illustration: Old and New," II., by Mr. J. Comyns Carr.  
8 p.m. Victoria: "Didactical Scientific Utterances and the Decline of Thought," by Dr. Lionel S. Beale.  
TUESDAY, May 16, 3 p.m. Royal Institution: "Digestion," I., by Prof. Gamgee.  
7.45 p.m. Statistical.  
8 p.m. Civil Engineers: "The Various Systems of Grinding Wheat, and the Machines used in Corn Mills," by Mr. W. Proctor Baker; "High Grinding by Roller-Mills in England," by Mr. H. Simon; "Roller-Mills and Milling as practised in Budapest," by Mr. W. B. Harding.  
8.30 p.m. Zoological: "Additions to the Menagerie in April," by the Secretary; "New Genera and Species of Araneidae," by the Rev. O. P. Cambridge; "Some Points in the Anatomy of the Todidae, and the Systematic Position of that Group," by Mr. W. A. Forbes.  
WEDNESDAY, May 17, 8 p.m. Society of Arts: "The Constant Supply and Waste of Water," by Mr. George F. Deacon.  
8 p.m. British Archaeological: "The Camden Roll of Arms," by Mr. J. Greenstreet; "Ancient Remains on the Site of the New Stock Exchange," by Mr. E. P. L. du Roi.  
THURSDAY, May 18, 3 p.m. Royal Institution: "The Metals," by Prof. Dewar.  
8 p.m. Royal Historical: "The Iberian and Belgian Influence in Britain," by Mr. Hyde Clarke; "Ancient Britain," by the Rev. G. Edwards.  
8 p.m. Chemical: "The Precipitation of Alums by Soda Carbonate," by Dr. E. J. Mills and Mr. R. L. Barr; "Rotary Polarisation by Chemical Substances under Magnetic Influence," by Mr. W. H. Perkin.  
8 p.m. Telegraph Engineers: "Experiments of Attraction and Repulsion due to Sonorous Vibration, compared with those due to Magnetism," by Mr. Augustus Stroh.  
FRIDAY, May 19, 8 p.m. Philological: Anniversary Meeting; President's Annual Address, by Mr. A. J. Ellis.  
9 p.m. Royal Institution: "The Making and Working of a Channel Tunnel," by Sir F. Bramwell.  
SATURDAY, May 20, 3 p.m. Royal Institution: "Poetry and its Literary Forms," I., by Prof. D. Masson.

## SCIENCE.

*Symbolic Logic*. By J. Venn. (Macmillan.)

THERE is much occasional polemic in this book against the "anti-mathematicians" who object "to the substitution of  $x$  and  $y$  for the customary  $X$  and  $Y$ ;" and Mr. Venn has thought it worth while to devote a chapter to the justification of his own essentially mathematical system of notation. He maintains that the few signs which he has borrowed have not undergone a greater change of meaning in his hands than that which they had previously experienced within the limits of the older science. He dwells on the advantages of familiarity with the symbols which have to be manipulated, and points out "the occasional suggestiveness" of a notation already well known and widely used. He has not, however, brought forward the best argument—the intelligibility of his own book,

given the most elementary knowledge of mathematics. There is little difficulty in reading Mr. Venn: to the practised mathematician there can be none.

A more important question is the relation of symbolic logic to other logics. Mr. Venn thinks that it is to be regarded as a generalisation or development of the common logic. Chap. xvii. exhibits the generalisations actually effected: they are the reconstruction of the theories of contradiction and contrariety, whether as regards classes or propositions; the new schedule of propositional forms, intended to take the place of the old AEIO classification; the disappearance of the syllogism under the general formula of elimination so far as regards terms, under the general formula of inference so far as regards propositions. The process by which these results are obtained may be briefly, if imperfectly, indicated as follows:—The logic which is to be generalised is, of course, taken to be formal logic, and that alone. The terms for which symbols are substituted are strictly denotative class terms. The meaning of the signs  $+$ ,  $-$ ,  $\times$ ,  $\div$ ,  $=$ , and of the quantities  $l$ ,  $o$ ,  $v$ , is explained; and propositions, whether affirmative or negative, categorical or hypothetical, are construed "existentially": the boundaries, that is, of every class are held to cut those of every other class lying within the same "universe of discourse," the only question being whether the compartments thus formed are or are not occupied by individuals. "All  $X$  is  $Y$ " passes on this system from "All  $X$  if there be any is  $Y$  if there be any" into "No  $x$  is not  $-y$ ;"  $x$  multiplied by not  $-y$  is equal to nothing: in other words, the compartment open to individuals describable as both  $x$  and not  $-y$  is on this occasion unoccupied. There is some difficulty in disposing of particular propositions on the same lines, but it is surmounted satisfactorily enough, and there is throughout no loss of clearness or consistency.

Ingenuity and ability, indeed, are obvious on every page, but it may be doubted whether the feeling of the ordinary logician who reads this book will not be one of disappointment. He will be pleased with Mr. Venn's admission that the complicated problems which demand the use of symbols seldom occur in practice; he will be interested to find himself in an ideal world—in a world of green men and red horses, a world in which the employment of five terms "gives rise to 4,294,967,295 possible selections." He will agree that the formula  $f(1) f(0) = 0$  is "something more than a mere translation from the Aristotelian logic." But he will not see his way to a reconstruction of his old theories, to a more scientific explanation of familiar facts. The number and weight of the new generalisations are not great enough to justify, say, the neglect of connotation in dealing with the import of propositions. Nor is Mr. Venn's own attitude aggressive; he rather prefers to decline to discuss "thorny questions;" he has no wish to "enter into Serbonian bogs." It is quite possible that symbolic logic may be the true science of logic; but the science has at any rate not yet reformed the old ideas, it has not effected the advance which is

involved in Mr. Venn's own instance of scientific advance—the substitution of the idea of gravitation for the idea of weight. Before it can prove its value it must become revolutionary; until it becomes revolutionary, it cannot be criticised except on the ground of inconsistency; and, whatever its value—as an instrument of education, it must always be open to the suspicion of being what the quantification of the predicate is felicitously here said to be, "a blind alley," leading nowhither.

C. CANNAN.

## IRISH OGAMS.

THE twenty-seventh volume of the *Transactions* of the Royal Irish Academy contains a contribution by Sir Samuel Ferguson, entitled a "Fasciculus of Prints from Photographs of Casts of Ogham Inscriptions," with five plates. The paper appears to have been read so early as June 28, 1880; but better late than never, and we are very glad that the Academy is at last beginning to give the public the results of Sir Samuel Ferguson's examination of the ancient monuments of Ireland. The present instalment is the first fascicule of Ogam texts, and the account Sir S. Ferguson gives of the undertaking is that

"In inscriptions of this kind, when the characters extend, as they almost always do, to two continuous surfaces of a solid, both cannot be adequately embraced in one direct photographic image. If attempted separately, the heavy masses of stone, on which the inscriptions are generally found, should be shifted and brought into lights falling at similar angles across the indentations on their several faces, which, in most cases, would be practically impossible; and where legends occupy several angles, and, as often happens, the top also of the monument, four or six, or even more, separate images should be taken, and put together, to get the entire text.

"The paper cast, besides its capacity for absolute accuracy in the reproduction of the moulded surface, obviates these inconveniences. It is sufficiently pliable to bear being flattened, and so presented to the action of the camera with both faces of the work substantially in one plane, and in whatever light may be found most effective to bring out all its impressions in one image."

A large number of such casts has been procured, and photographs have been taken of, among others, those from the inscriptions in the Lapidary Museum of the Academy. The prints now presented are autotypes of photographs from these casts. It has been considered advisable to begin with this collection, as being easily accessible and admitting of deliberate examination and comparison with the prints, so that the accuracy of the process may be fully tested, and confidence secured for such further reproductions of Ogam writing, in print from cast photographs, as the Academy may hereafter think proper to publish.

The result is that the prints before us form the first representation of Ogam stones that we have ever seen which would enable a person who had never seen such a monument to form a correct idea of it as a whole. It has been considered advisable to exclude, so far as possible, all matter of a speculative nature. This is, of course, not altogether possible in the reproductions of the Ogam legend in the conventional way of printing them in Roman type; but care has been taken to print doubtful letters in a different character, and to propose alternative readings. The five plates now published give us adequate pictures of no less than twenty-one monuments, so that six or seven more fascicules like the present would embrace all the Ogam monuments still existing in Ireland. The only remark we wish to make is that we sincerely

hope that the Academy means this only as a beginning, and that it is resolved to go through the whole work. The publication of all the inscriptions would be highly welcome to Celtists and archaeologists, as well as the only adequate acknowledgment the Academy could make to Sir S. Ferguson for the years he has devoted to the subject. These specimens are so accurate, so handy, and so vivid that it would be a great pity should they be allowed to stand alone.

JOHN RHYS.

## OBITUARY.

THOMAS DUNMAN.

WE regret to have to announce the death, on May 9, at the early age of thirty-two, of Mr. Thomas Dunman, lecturer on physiology at the Birkbeck Institution and physical science lecturer at the Working Men's College. He made himself master of French, Latin, and Greek, and attained considerable proficiency in mathematics and physical science, while working for his living at a most uncongenial occupation, and it was always in spite of his surroundings that he went on adding to his stock of knowledge. About seven years ago he took charge of the physiology class at the Working Men's College in Great Ormond Street, and the attractiveness of his style soon made the class one of the largest and most popular in the college. The like success attended him in courses of lectures in other branches of science, and it is not too much to say that Mr. Dunman has been greatly instrumental in infusing new life into the admirable institution which Mr. Frederick Denison Maurice founded. At the Birkbeck Institution, too, where he succeeded Dr. Aveling as physiology lecturer, his work was much appreciated, although latterly failing health somewhat interfered with his labours there. In 1879 Mr. Dunman published a Glossary of biological, anatomical, and physiological terms, which has sold well among students both here and in America; and last year he commenced to issue his popular lectures on scientific subjects in pamphlet form. In this way four had appeared—"The Mechanism of Sensation," "The Starlit Sky," "The Historic Man," and "Volcanoes and Coral Reefs." He also contributed to Cassell's *Science For All*, to Ward and Lock's *Universal Instructor, Amateur Work*, and several other publications. His career has been cut short when it seemed that at last the tide was beginning to turn that would bring the fame and fortune to which his hard work and untiring industry would justly entitle him.

## NOTES OF TRAVEL.

MR. STANFORD has almost ready for publication, in his "Compendium of Geography and Travel for General Reading," *Asia*, edited by Sir Richard Temple, with an ethnological Appendix by Mr. A. H. Keane. Two new volumes of this series are also in the press: *North America*, edited by Profs. F. V. Hayden and A. R. C. Selwyn; and *Europe*, edited by Sir Andrew Ramsay. Both of these are translated by Mr. Keane.

THE same publisher announces for issue during the present season four new volumes of his handy and accurate series of "Tourists' Guides." These will be *Berkshire*, by Mr. Edward Walford; *Cambridgeshire*, by Mr. Arthur J. Hill; *Dorsetshire*, by Mr. B. N. Worth; and *Warwickshire*, by Mr. G. Phillips Bevan.

MESSRS. SAMPSON LOW will publish immediately *Camps on the Rockies*, by Mr. W. A. Baillie-Grohman. The author, hitherto known for his books about his native Tyrol, here gives a narrative of his last three years spent in the Far West, with special chapters on sport and

cattle-ranches. The book will be illustrated, and will have a map based upon the most recent Government surveys.

IN travel literature, Mr. Stanford has nearly ready *Madeira: its Scenery and How to See It*, by Ellen M. Taylor; and *Holidays in Spain*, being an account of two recent autumn tours in that country.

## SCIENCE NOTES.

*The Wings of Pterodactyles*.—Prof. O. C. Marsh has published in the *American Journal of Science*, and in the May number of the *Geological Magazine*, the results of his study of a remarkable specimen of Pterodactyle which was found some years ago in the lithographic slate of Eichstätt, in Bavaria. This fossil is unique inasmuch as it retains the impression of the membrane which formed the apparatus of flight. It is now clear that the *patagium* consisted of a thin striated membrane, very similar to that of a bat's wing; it appears to have been attached along the entire length of the arm and onwards to the extremity of the elongated wing-finger, while it also stretched from the hind foot to near the base of the tail. The tail carried at its extremity a remarkable appendage in the form of a thick rhomboidal membrane, set vertically and strengthened with spines, and used no doubt as a rudder. From the fact that the caudal membrane is leaf-shaped, Prof. Marsh has given to the species represented by this specimen the name of *Rhamphorhynchus phyllurus*.

THE *Journal of the North China Branch of the Royal Asiatic Society* for 1881 contains an important and exhaustive article on the bibliography of Chinese botany by Dr. Bretschneider of Peking. In it Dr. Bretschneider gives short *résumés* of the contents of the principal Chinese botanical works, from the days of Shin-nung (B.C. 2697) downwards, and adds the titles of such books bearing even remotely on the science as are quoted in them. In common with all students of Chinese literature, Dr. Bretschneider complains of the want of system in the arrangement of Chinese books, and of accurate observation on the part of Chinese writers; but, notwithstanding these drawbacks, the native works on botany, as on most other subjects, yield to the patient student a vast array of facts and details which are invaluable as tools in the hands of European scientists. Accompanying this paper are some notes on the hydrology of the Yang-tze, the Yellow River, and the Peiho by Mr. Guppy, in which it is stated that the Yellow River discharges into the sea 17,520,000,000 cubic feet of sediment per annum, the Yang-tze 6,428,800,000, and the Peiho 80,000,000. Basing a calculation on these figures, Mr. Guppy considers that in 36,000 years the Yellow Sea, with the Gulfs of Pechili and Liau-tung, would be converted into dry land. The volume closes with an article on the climate of Shanghai by the Rev. M. Dechevrens, and a list of ferns found in the valley of the Min River by G. C. Anderson.

## PHILOLOGY NOTES.

MR. HENRY SWEET has contributed three Reports to the Address which will be delivered by the President of the Philological Society at its anniversary meeting, on Friday next, May 19: (1) "Phonetics," (2) "General Philology," in which the Oxford school is dealt with; and (3) "Germanic and English Philology." Prof. Skeat has also contributed to the same Address a History of the English Dialect Society and its work. The President himself reports on Wencker's grand German-Dialect Atlas, &c.

M. REVILLIOUT has begun a course of Demotic and Coptic lectures at the Louvre, and has taken for his text the celebrated "Philo-

sophical Dialogue between an Ethiopian Cat and a Jackal named Koufi." This text he dissects word by word, comparing the grammatical forms of the Demotic original with the grammatical forms of the same phrases in hieroglyphs and in Coptic. The new number of the *Revue égyptologique*, edited by M. Revillout, is nearly ready for publication, and will consist of thirty sheets of eight pages each.

GEN. FAIDHERBE has communicated to the Académie des Inscriptions, through M. Renan, a paper upon the inscriptions to be found in the Canary Islands. These are Libyan or Berber, and not Phœnician, as has sometimes been thought. Some of them have already been published in a work entitled *Antiquités canariennes* (1879); but many others have been discovered since. On one, Gen. Faidherbe claims to be able to decipher the word *Sardident*, which he would interpret as the name of a place, for many Libyan names end in "ent." He went on to point out the need for the French Government to encourage the study of Berber in its different dialects. Half-a-million of French subjects know no other language. M. Barbier de Meynard took the occasion to announce that M. Basset, one of the two savants sent on a scientific mission to Tunis, had collected four Berber vocabularies, in two dialects, from which he hoped to form the elements of a Berber dictionary.

A CHAIR of Romance Philology has been founded in the University of Freiburg im Breisgau, to which Dr. Fritz Neumann has been appointed, now professor at Heidelberg, and editor of the *Literaturblatt für germanische und romanische Philologie*.

PROF. SCHUCHARDT, of Grätz, will shortly publish, with the help of the Academy of Vienna, a Creole bibliography.

PROF. GUSTAF STORM, of Christiania, proposes to found a Review devoted solely to Norse philology. It will be written in German.

M. DE CHARENCEY has communicated to the Académie des Inscriptions an attempt at the decipherment of some inscribed stones from Yucatan, of which rubbings are preserved at the Trocadéro. He claims to have recognised the name of the supreme being—Hunab-Ku—and also certain signs with the numerical value of 20, 60, &c.

UNDER the title of *Rationalism Thukididatch*, Prof. Mitschenko, of Kieff, has published an elaborate study of the historian. The first part is devoted to the facts of his life, with special reference to the biography of Marcellinus; the second part (of 326 pages) is a sketch of the progress of rationalism in Greece down to the time of Thucydides.

IN the *Revue critique* for May 1, M. Michel Bréal notices the "Etruskische Forschungen und Studien" of Profs. Deecke and Pauli, doubting Deecke's interpretation of Etruscan as an Indo-European language.

HERR OTTO SCHULZE, the well-known Oriental publisher of Leipzig, has just issued a translation into German of Prof. Kern's *History of Indian Buddhism*.

## MEETINGS OF SOCIETIES.

ANTHROPOLOGICAL INSTITUTE.—(Tuesday, April 25.)

HYDE CLARKE, ESQ., in the Chair.—The Chairman referred at some length to the great loss that anthropological science had suffered by the death of Mr. Darwin, an honorary member of the Institute. Prof. Flower also offered a tribute to Mr. Darwin's memory.—Mr. E. H. Man read another paper on "The Aboriginal Inhabitants of the Andaman Islands." He touched first upon the important subject of language, and pointed out certain peculiarities connected with the varying

use of several sets of possessive pronominal adjectives with particular classes of nouns. In expectation at an early date of a paper on "The South Andaman Language," by the President of the Philological Society, this subject was briefly dealt with by the author, who next proceeded to describe the Andamanese system of adoption, and the recognised degrees of affinity, especially as bearing on the question of marriage, bringing to notice at the same time the erroneous opinions hitherto held on the latter point, as also concerning their death and burial customs. Numerous superstitions, beliefs, and traditions were related, the latter treating of the account given by the aborigines regarding the Creation, Deluge, and Dispersion. Mr. Man was careful to state that he had taken the precaution to obtain his information from members of distant tribes who had had no opportunity of intercourse with Europeans or other aliens residing at Port Blair; and he added that it was extremely improbable, for the reasons noted in his paper, that any previous generations of these islanders within historic times, by whom these traditions had been handed down, could have obtained their versions from strangers.

#### ARCHAEOLOGICAL INSTITUTE.—(Thursday, May 4.)

T. H. BAYLIS, Esq., in the Chair.—Further notes on the Priory of Dartford, Kent, from the archives of the Master-General of the Dominicans at Rome, by the Rev. C. F. R. Palmer, were read. These extracts, covering a period from 1474 to 1574, are supplementary to Mr. Palmer's elaborate History of Dartford Priory published in the *Journal* in 1879. The following, among other remarkable entries, occurs:—A certain Sister Elizabeth is permitted "to execute last wills, provided only it was for the good of religion."—The Rev. Precentor Venables sent a paper on Carrow Abbey, near Norwich, the remains of which have lately been excavated at the cost of the munificent proprietor, J. J. Colman, M.P., Esq., for Norwich. To the readers of Skelton, Carrow is interesting as being the scene of a humorous poem by him called "Little Boke of Philip Sparrow," which is to be found in Southey's *Select Works of the British Poets*. Photographs were exhibited of the remains, which, until recently, were buried out of sight and forgotten. A plan of the ruins reveals the existence of a cruciform church, consisting of nave, with aisles, transepts, chancel, altar, and chapels to St. Catherine and St. John the Baptist, with bases of piers for a central tower. South of the church and east of the cloister garth was a long building consisting of stye, chapter-house, and day-room. The work of excavation was under the direction of Mr. A. S. King, and the admirable plans and engraved details are by Mr. R. M. Phipson.—The Rev. Edward King exhibited a rare Toft dish procured from the neighbourhood of Werrington, Devon. Though not the largest, being barely eighteen inches in diameter, this dish is considered by Mr. King to be the finest known to collectors, except the example at South Kensington. In addition to the name "Thomas Toft," it bears the initials "T. L.," probably those of one of Toft's potters.—Capt. E. Hoare exhibited a bronze medal commemorative of the first meeting of the British Archaeological Association at Canterbury in 1843. The medal was distributed among subscribers only, and is rare, not more than a hundred having been struck.

#### SOCIETY OF ANTIQUARIES.—(Thursday, May 4.)

EDWIN FRESHFIELD, Esq., V.P., in the Chair.—Mr. F. M. Nicholls contributed an account of an historical poem of the fifteenth century found among the Rawlinson MSS. in the Bodleian Library. The subject is the mutability of fortune, illustrated by accounts of the life and death of Eleanor of Cobham, Humfrey Duke of Gloucester, and the Duke of Somerset. From the mention of the time elapsed since the occurrence of certain historical facts referred to, the poem must have been written before 1462. It is addressed by R. W. to A. L.—Dr. Barron read a paper on the artistic representations of St. George. The dragon does not appear in connexion with this saint in Greek art, nor in Europe until the twelfth century. In England the earliest figures are in the Norman churches of Fordington, Dorsetshire, and Ruardean, Gloucestershire. Dr. Barron then described other representa-

tions of St. George in order of their date—the brass of Sir Hugh Hastings at Elsing, and a MS. in the Bodleian much resembling it, where the devil takes the place of a dragon; a sculpture at St. Martin's, Bowness; a fresco at Dartford, described in the *Gentleman's Magazine* of August 1836; the Spanish reredos of scenes in the life of the saint lately exhibited at South Kensington; and the suit of armour in the Tower, with engraved figures, which formerly belonged to Henry VIII., and of which drawings are given in the *Archæologia*. It was this Sovereign who added the George to the insignia of the Garter.

#### PHILOLOGICAL SOCIETY.—(Friday, May 5.)

A. J. ELLIS, Esq., President, in the Chair.—A paper entitled "Some Notes on Grammar" was read by Mr. E. L. Brandreth. It was contended that words ought to be classed as parts of speech with reference to their functions in a sentence, not by attaching meanings to them independent of such functions, and that some of these functions were primary, others secondary. Thus the primary function of a substantive was to express the (grammatical) subject of a sentence, whereas an adjective could not be the subject of a sentence. On this and other grounds the reader of the paper attempted to show what he considered the error of such teaching as that of Morris, Thring, Smith and Hall, and other grammarians who held, for instance, that in such a construction as *silk thread*, *silk* was an adjective. It was next observed that the grammar, especially of modern languages, was usually treated in accordance with a fixed order of ideas, which order was determined, to a great extent, by the forms of the Latin grammar; whereas it was held that the mode of formal expression of each language should, as far as possible, be made to determine the order of ideas, that the genius of a language could not otherwise be properly represented. It was not a sufficient reason, for instance, for calling a construction in other languages a case or a tense merely because that would be the way in which we should translate a Latin case or tense. The paper concluded with a reference to compound words. It was held that it was form, not meaning, that made true compounds. Such phrases, for instance, as *morning-star*, *silver-fir*, *black-pudding*, were not to be accounted true compounds from the point of view of grammar, however necessary it might be to give an explanation of their meaning in a dictionary.

#### FINE ART.

##### THE ROYAL ACADEMY.

##### (Second Notice.)

ONE at least of the finest pictures of the year was left unnoticed in our first summary article—Mr. Yeames's "Prince Arthur and Hubert." The conception of both murderer and victim is original, and of no ordinary imaginative power. The pathos is neither forced nor lachrymose, and both figures are full of strong feeling from head to foot. Every inch of the boy is alive with appeal, every inch of Hubert with resistance. The young face pleads, not with terror or tears, but with earnestness, and faith, and affection; the gentle touch of his hand on Hubert's arm seconds the prayer, and his very legs and feet join in pitiful, but tearless, remonstrance. The figure of Hubert, with one hand pressed between his knees, and his eyes fixed on the ground, shows the resolution with which he shuts his ears (not easily, but yet effectually) against all tender promptings. He is hard and relentless as a rock against which the waves of pity beat vainly; but he feels their shock nevertheless. It is strange that a painter who can on occasion give us a picture like this, who drew the, in some respect, even finer "Amy Robsart" (one of the best purchases of the Royal Academy under the Chantrey bequest), should so often be uninteresting in his minor works. We know no living English painter who possesses in so great measure the rare gifts of being dramatic without being theatrical, and sentimental without weakness.

Once in a while his genius stirs him to a great and successful effort, and then it goes to sleep. The same cannot be said of the two artists and fellow-academicians with whom he can be most nearly compared—viz., Messrs. Orchardson and Pettie. They are both more original and attractive as colourists, and this goes a long way in making agreeable whatever they may choose to paint; but they have also more spirit and character in scenes from ordinary life. No one could, for instance, pass Mr. Orchardson's "Housekeeping in the Honeymoon" (235) without some sense of attraction, either towards the pleasant quaintness of its fancy or the clever management of its colour. Mr. Orchardson has no work of general interest here, but his sheer power as a colourist makes his other works (all portraits) pictures which can by no means be passed by. The greatest triumph of his pictorial skill is doubtless the life-size portrait of "Mrs. J. P. B. Robertson" (377). If he had confined himself to painting this lady it would not have been easy to make an unattractive picture, but in most other hands even her charm would have been insufficient to fill the large canvas, on one side of which she is seen seated in profile. Chairs and tables, work-basket and carpet flower-vases, and all the paraphernalia of a large, well-furnished room, of which she is the solitary occupant, take up by far the larger part of the composition. As it is, the artist has scarcely overcome the sense of emptiness, but yet so great is the beauty and luminousness of the colour that its clear and refined grays, and reds, and yellows make a splendid setting to the fine figure in its black velvet dress; and the work is charming, whether considered as a portrait or a picture. In like manner it is principally due to his rare skill as a colourist that Mr. Pettie reconciles us to the use of so large a scale for his composition called "The Palmer" (252). To say that the figures are well drawn and the gestures expressive is unnecessary, but the picture is (to say the least against it) not remarkable for its novelty of interest. The palmer, with scallop shell and sandal shoon, brown robe and gray beard, is sitting beside a large open hearth, and, with outstretched hands, is telling a tale to his thirteenth-century host and hostess and their little boy. The breathless interest of this child, contrasted with the indifference of his parents and the energy of the story-teller, is the most telling point in the picture. It is not easy to understand why Mr. Pettie should have chosen to paint this empty invention on a canvas larger than that of either his "Eugene Aram" (18) or his "Duke of Monmouth's Interview with James II." Both are terrible in subject, but in both, as in "The Palmer," he shows his strength as a colourist. It is notable how in the latter the elegance of the room, with gold-gleaming chairs and delicate blue hangings reflected in the rich brown polish of the floor, seems to aggravate the cruelty of the scene; and that, in the former, the artist has chosen to make the usher "talk of Cain" standing instead of sitting beside the lad—standing at a good distance too—as though he were declaiming his fearful story. Mr. Yeames would not, we think, have made such a mistake.

Of Sir Frederick Leighton's "Phryne" we have little to add to what we have already written. It is a true vision of magnificent beauty, realised with great knowledge and skill. To us the colour, though glorious, does not seem quite successful, suggestive neither of flesh nor sun. The brilliant background of blue and white sky seems to demand a more natural treatment. Some such feeling also interrupts our otherwise perfect enjoyment of his exquisite group of "Wedded," in which the very bright blue sea seems slightly out of harmony with the delicate colour of the drapery and the vivid light with the

soft shade in which the lovers stand. Nevertheless, of all the President's pictures of tender sentiment we know of none more lovely in design than this. We prefer it, and this is saying much, to his lovers of last year. Blending something of classical dignity with an almost Oriental luxury of contour and colour, two of his single figures, the one called "Daydreams" (56), the other "Melittion" (1244), are almost equal in beauty. We prefer the face of the former and the drapery (unusually beautiful even for the artist) of the latter. A nobler type is his "Antigone;" but all his pictures this year are poems of line and colour whose charm, like that of music, it is impossible to convey in words.

Poetical also, but with a poetry which needs no specially artistic perception to appreciate, are Mr. Goodall's fine pictures of Eastern life and scenery. This year the place of honour in the large gallery is worthily occupied by his large and solemn picture of the site of Memphis (212), with its tall palms and sandy pools, and colossal statue prone upon the ground. It is difficult not to be pathetic with such a subject, but still more difficult not to overdo the pathos. Mr. Goodall's picture is remarkable for its reticence and dignity, and would be beautiful (as his "Arrival at the Well" is) with any historical sentiment. This, perhaps, closes the list of the works of Academicians (apart from portraits) which seem to us as particularly striking; but some others send works which well sustain their reputations. Among these is certainly Mr. Hook, who has two pictures in his best style, strong and rich in colour, and full of broad sunlight. In "Caller Herrin" (303) some of his fishermaidens, robust and comely as usual, carry baskets full of fish like living rainbows, and the sea and air are fresh as ever. In the "Devon Harvest Cart" (308) he has painted true green fields and trees, and a deep clear-brown river falling over rocks, with unfailing power and charm. If Mr. Vicat Cole has attempted no novel effect, his "Abingdon" (289) and "In Sylvan Solitude" (92) are fine examples of his thorough study of nature, and charm like the real scenes. The painting against the light of the large willow in the latter picture is very thorough; and, if the present rage for splashing continue, it is doubtful whether there will be anybody in the next generation who will be capable of such a piece of honest and careful painting. Mr. G. D. Leslie sends only small work. This artist never dares any high poetical flight, but he never paints prose. He has a personal scale of colour and a generalisation of flesh analogous to those of the President; his tints are as choice and delicate if not so rich and beautiful, and he arranges them with not unskillful artifice; like the greater master also, he sometimes disturbs the keeping of his delightful fiction by a bit of nature too near real strength of hue. An objection of this sort may be made to the cabbage which his "Sally" (281) is carrying in her alley. A graver objection might be urged against both his "Sally" and his "Polly" (202)—viz., that they are too ladylike for the heroines of the famous ballads which they illustrate; but who would quarrel with Mr. Leslie on such a score as this? At least, no fault of any kind can be found with his rosy-cheeked "Foundling" (582), with her sweet, innocent face and bright blue ribbons; and his little picture of "Pique" (512) is a perfect example of his delicate art—figure, landscape, and architecture being alike admirably selected and disposed.

There are few humorists among our Academicians, though, unfortunately, in this Academy, as in previous ones, some of their works raise mirth unintended by the artist. To these there seems no profit in alluding. Mr. Marks is, perhaps, the only name on the roll who

cultivates humour as a profession; and this year he has a very clever scene from Shakspeare, besides two smaller works. "The Lord Say brought before Jack Cade" (242) is a rare collection of quaint faces and gestures—a little too suggestive, perhaps, of stage traditions, but admirably grouped, and full of spirit and character. It is seldom that an artist can attain such well-deserved distinction as Mr. Armitage without either a sense of humour or female beauty; but this would seem to be no less than the truth when we look upon this artist's "One of Raffaele's Models" (803). His learned design and strong drawing are visible to greater advantage in his "Meeting of St. Francis and St. Dominic" (267). Mr. Poynter, besides his designs for the dome of St. Paul's, sends but one small work, "In the Tepidarium;" but this is exquisitely painted, and delicate and choice, if not altogether pleasant, in colour. Of Mr. Briton Rivière's imaginative compositions, the "Magician's Doorway" (25), with its finely drawn leopards, is the most successful. For the rest there is nothing by an Academician which seems to us worthy of special notice except portraits and landscapes, and these will be best considered in connexion with those of the unprivileged.

The portraits make so strong a feature in the present exhibition that they deserve more careful attention than usual. Artists generally seem to be newly conscious of the great—we might almost say supreme—interest which attaches to portraiture. Some of the greatest artists of old were little else than portrait painters, and the portrait is at the root of all except ideal art (and can we except even that?). It is not true as regards art that "the individual withers," for day by day artists find more interest in the study of human individuality, and the search for character has well-nigh superseded the pursuit of the ideal. As long as portrait painters thought only of "favourable" likenesses, and their main object was to make the faces of their sitters conform to the fashionable ideal of society, there was no hope for noble portraiture; but now that they have become alive to the fact that each man has a separate individuality that is more or less expressed in his features, and not only in his features, but in his whole body, the art has become fascinating and fruitful. It has not only gained in sincerity, but it has gained in poetry, for it aims at revealing man to man. The rare power of Mr. Watts is not displayed with any force in this exhibition, but his influence (so long and deep) is observable in not a few portraits by not a few men who, if they do not possess to the full his rare power of divination, have profited by seeing his exercise of it.

If Mr. Millais is not a greater portrait painter than Mr. Watts, he is certainly a more splendid and more certain colourist. His "Cardinal Newman," seen under less fitful and dazzling effects of light than on our first visit, proves nothing less than a masterpiece. Bold as he was to paint these rosy robes in their natural strength, he was perhaps bolder to paint, full face, a countenance whose powers in profile is so marked. But the success is undoubted. By the use of the lights upon the thick sheeny texture he has subdued the heat of the colour, and (by what means it would be rash to say) he has managed to represent the transparent pallor of the complexion and the strong, but yet soft, modulations of the flesh, so that we have the man as well as the robes—a feast of colour and a noble portrait. His portrait of "Sir Henry Thompson" is of a different order; but he has seized the character with his first effort, and executed it with masterly decision. "Mrs. Budgett" is charming in her unaffected freshness; and in "Dorothy Thorpe" the artist has found a sweet, frank face. It is a pity that Dorothy is apparently not in the

least interested in what she is about; but this is possibly characteristic, and the painting of the silver bowl in which she is breaking biscuits for her dogs is superb. Mr. Millais has also a pretty portrait of "Princess Marie, the Daughter of the Duke of Edinburgh." On the whole, his display is a wonderful one. Other portrait painters, like Mr. Oulless and Mr. Holl, may be more patient in their investigation for the man behind the flesh, but no one can rival the force and decision with which he seizes whatever of character may lie on the surface. If he fails in his first magnificent spring—and he sometimes does—he does not, like Byron and the tiger, go growling back to his jungle, but wins by colour or by happiness of expression or attitude, or one or other of his never-failing resources, so that his portraits are more vivacious and striking than those of any other living English painter. Mr. Herkomer seems to come nearest to him in this respect. His "Archibald Forbes" (787) is a fine presentation of the man of confidence, ability, and action, all of which qualities he carries in his face; and the "Master of Trinity" (251) affords him a still more marked and picturesque countenance. Few artists could have made more of either of these fine subjects; but Mr. Herkomer is apt to be careless, especially in his hands.

COSMO MONKHOUSE.

### THE SALON OF 1882.

(Second Notice.)

AMONG the numberless "academics" more or less draped which still people, as of old, the walls of the Salon it is not easy to discover a work which impresses itself on the memory as thoroughly competent and completely carried out. One must, though, specially except M. Henner's "Barra," for so he has christened his study of the corpse of a little lad, thrown across a brown ground, and relieved against shades of the same tint, through which dimly looms on the left the outline of a drum. It is almost needless to say that the flesh-painting, especially in the lights, is of remarkable beauty, laid on with a full and certain brush, and that the contours are suggested after that mysterious system peculiar to M. Henner, which appears slovenly only to a careless observer. His system seems to be to suggest forms, not by affirming them, but by never running counter to them; and to adequately appreciate the science by which he obtains this suggestion of a positive result by an exhaustive series of negations requires, it seems to me, almost as much knowledge and power of observation in the spectator as in the master himself. Besides "Barra," M. Henner contributes a portrait, a half-length. The handsome head of his black-haired sitter and her black satin gown are detached on a hard, crude, blue ground with somewhat brutal force, the throat and arms are bare, and the flesh is isolated by a drapery of copper-coloured plush wound about the shoulders. In these hues and their treatment one sees an exaggeration of M. Henner's habitual choice of colour—brown, turquoise, and black or dull green serving as a foil to flesh. He seems to have at his command only this single set of harmonies; but he has employed them often more skilfully than in the present portrait, which is decidedly inferior to the "Barra," a work which, by its solidity and the beautiful quality of the flesh painting, recalls the memorable "Dead Christ" exhibited by M. Henner, I think, in 1876.

The back of M. Callot's "Le Crépuscule" is carefully studied, and M. Berton's "Eve" is a serious work. The head of Eve, with its chestnut locks seen against the blue sky, shows grave and graceful sentiment and a pleasant quality of colour, but the lower part of the figure

seems insufficiently worked out. M. Berton is, however, a master, if compared with M. Collin, who has a prettily conceived group of Adam and Eve, empty of every other claim to notice except that of pleasant feeling. Among smaller works of this class, M. Priou's little group, "Le Réveil du Printemps," attracts attention, for it is very gracefully composed. The girlish, fair-haired figure of Spring is roused from slumber by blonde and dark-haired Loves, who support her as she sways lazily in her transparent white draperies. The dark one pushes and the fair one pulls to right and left with joyous might and main as Spring stretches herself with arms extended, and coyly averts her head as a third imp, azure-winged, insists on pouring insinuating whispers in her ear. The grace and balance of this little group almost compensate for a certain old-fashioned sort of unreality in the treatment of the flowery bank and other details of the landscape background, for the signs of power of composition, as well as of that searching study of the model which has made the French school famous, are becoming, if I am not much mistaken, rarer every year.

It is now quite evident that the "modern" movement and its allied current—"impressionism"—have deeply affected the whole of the present generation of artists; and they have laid hold of even those who, at first sight, would seem to be beyond the reach of these influences. This is due probably to the extraordinary technical gifts which distinguish several of the leaders. Can one conceive of a painter more happily endowed by nature in certain respects than M. Bastien Lepage? Is it possible for eye and hand to be more true and sure? Every touch is laid with absolute certainty, with astonishing directness; and when his work is fresh from the easel what a world of infinite delicacies of observation are to be found in it! But here arises a question: Do these exquisite refinements in which the charm of his work consists stand the action of time? I am afraid, from what I have observed of M. Bastien Lepage's work, that they do not. I believe that if we compare our memories of special delicacies of hue in pictures of his executed six or seven years ago with the present condition of those pictures, we shall find that a large part of their original beauty has been lost through the inevitable change which has taken place in the colour. If this change is to go on destroying and metamorphosing the delicate relations of value which give such extraordinary charm to M. Bastien Lepage's workmanship, what will remain of his pictures? What will remain, for instance, of the work which he has this year exhibited? An old woodman, stooping beneath his load, walks towards us accompanied by his little grandchild, who turns aside to the left to gather flowers. The two figures are seen almost enveloped in the infinite perplexity of light and graceful growth which marks the edge of a forest; the leafless trunks of the silver rind birch behind show like pillars of gray and silver against the bluish tints of the distant sky. The head of the old woodman tells out forcibly above his dark jacket, and the soft gray of his woollen cap is relieved with marvellous dexterity against the bundle of faggots which he bears on his shoulders. The painting of these faggots, with their innumerable multiplicity of tiny twigs, is just as wonderful in its way as the execution of the old man's head, which is as vital in expression as the lovely movement of the little girl or her no less lovely face. The beauty of these two heads time will probably be powerless to destroy; but as for the rest of this immense canvas, will it exist in ten or fifteen years' time? Will not all these exquisite subtleties of execution have gone the way of the delicate refinements of hue which once distinguished "La

première Communiant" ? And, if so, what will remain? There is no *silhouette*, no beauty or science of design, which may speak to a distant age and explain the wonder and admiration of to-day, when the lovely mysteries of the painter's execution have become a blank.

This line of criticism is, it seems to me, of general application; that which one says of the work of M. Bastien Lepage may be said in altered terms of that of another very remarkable, if less distinguished, talent. The "Coal-heavers" of M. Gervex hangs opposite to M. Ferrier's noticeable "Roi des Juifs." M. Ferrier's work is a magnificent *décor* of a solemn order; Christ, crowned with thorns, is bound to the column against which he has fallen on his knees, and turns his head in anguish towards his persecutors. On the left M. Ferrier has massed hues of deep brown and other neutral tints cooled with blue (on the system generally pursued by M. Munkacsy), and above the heads of the figures is a darkling gleam of sombre landscape distance; on the right, in the immediate foreground, stoops forward a figure robed magnificently in green covered with gold embroidery, and wearing a pale-blue cap, above whom is seen a soldier, whose glittering helmet tells against draperies of purple and red. There is, perhaps, no more dexterous achievement of the brush in the Salon; and the beauty and variety of the colour only enhance the value of the flesh painting—the effect of which, especially in the passage of reflected light on the upper part of the bust (against which the head of Christ is shown in deep shadow), is particularly fine. The flesh painting in M. Gervex's "Bassin de la Villette," which may be shortly translated into English by the word "Coal-heavers," is the remarkable point. The back and shoulders of the centre figure stooping forwards over the basket of coal which he is about to lift form the subject of the picture; on the left a second man stands ready loaded with his burden; on the right we get the back view of a gendarme, and, in the distance, a bit of a quay with barges and shipping. There is enormous talent in this big canvas, and evidence enough, and to spare, that M. Gervex possesses incontestably some of the chiefest gifts of a painter; by these alone does he save a subject which would be dull and ridiculous in other hands. Still, this is a question which one asks oneself about his picture (as about so much else of a similar class in the Salon): Has the painter really succeeded in finding a form of artistic expression for his subject? It seems presumptuous to answer positively "No." Perhaps it would be more presumptuous still to assert that the "modern" and "impressionist" movement in its most strictly defined form offers no prospect of further development, and has, perhaps, already said all that it is ever likely to say. Its office appears to me to be at the present moment that of extending the field of technical achievement in the imitation of every-day aspects of life and nature, and the task is sufficiently gigantic to absorb the energies of a generation; by-and-by, I believe, the eternal principles of art will again assert their power, and bring practice once more within her rules.

Even as it is, one sees that men not standing precisely within the ranks of the fanatics yet take something of value from them; we see that their practice is insensibly affected by the zealous desire to "faire vrai." M. Dagnan-Bouveret's execution is by no means to be placed on the same line of masterly achievement as that of M. Bastien Lepage, but his "Bénédiction des Epoux avant le Mariage"—Franché Comté—is, in its way, a deeply interesting work. M. Dagnan is not content with an "impression," and every part of his picture shows delicate and patient study. The

white robes of the bride, who kneels beside her groom in the sunlight which glorifies the bare boards and whitewashed walls of the best room of the little village inn, are treated with scrupulous perfection of detail, and the tender emotion which bows her young head is felt with rare sincerity. In front of the kneeling couple stand (to the left) the parents, the men holding lighted candles; the quivering flames cast a rosy hue on walls and rafters. The face of the aged mother who stands nearest is instinct with grave sympathy, which is characterised as firmly as the varied shades of interest and amusement which mark the faces of the young men and maidens standing behind the white-draped tables which are ready to receive the wedding breakfast and the wedding guests. The dark mass of colour is obtained on the left by the heavy red curtains which mark the entrance to the room, and by the dark robes of the elders standing in front of it; and this mass is broken and carried across into the sunlight by a group of three old men who look on from an opposite corner. In front of the bridal pair are scattered rose-leaves on the floor; and these hues of rose are carried all round the group by flowers on the table behind them, and by knots of rose or red in the white dresses of the bridesmaids. But M. Dagnan's work, charming as it is in performance, is, above all, a work full of promise.

E. F. S. PATTISON.

#### EXHIBITION OF FANS AT THE FINE ART SOCIETY'S.

HARDLY since the exhibition of fans at Kensington some twelve years ago can there have been exposed to sight so many and so varied specimens of the fan-maker's art as may now be seen in Bond Street. Among countries that would seem to claim representation, only Spain is not represented. There are Chinese fans, Italian fans, French fans, English fans, and fans of all the best historical times, beginning, at least in Europe, with Louis Treize and ending with Louis Seize. There are three or four hundred altogether, so that if ever a collector deserved that highest word of commendation in the collecting world, to be called "diligent," Mr. Walker has been a "diligent" collector. His collection has long been known, and there is some reason to regret its probable dispersion under the hammer. The compensation must be found in the fact that it will now be in the power of many an amateur to possess what has hitherto been withheld from him. Mr. Walker, like most collectors, is in love with his own collection, and we should not like to be called upon to vouch for the correctness of the attribution which the owner has in some instances bestowed upon the delicate works of art it has been his pleasure to assemble. He is naturally somewhat readier than we should be to believe that this pretty thing was from Watteau's own hand and that pretty thing from Boucher's. Who is there that possesses a fan authoritatively known as Watteau's? Even Boucher's can be counted on the fingers, in all probability; though this facile painter of impetuous love furnished, we take it, designs for much more work than with his own hands he executed. The sense of decoration possessed by him and by his school is abundantly evidenced by many of Mr. Walker's treasures; and on many a "chicken-skin, delicate, white," is there depicted those

"Loves in a riot of light,  
Roses, and vaporous blue,"

which a poet who knows the French eighteenth century alike in its weakness and in its charm has so expressively written about. The French contemporaries of M<sup>me</sup>. de Pompadour—the artists who wrought upon the fans that rustled as courtiers flattered pleasantly or women

cleverly acquired the secrets of great Ministers who were but men—these French artists, we say, understood their work as a whole, and even where there is clumsiness in a detail, there is harmonious effect in the *ensemble*. But there are people who will like still better the Oriental decoration, some of which has the glow and the undiscoverable gradation of a fine sea-shell, and some the sharper colouring of a bright bird's wing. For others there is the English, of which some is independent, while much must be perceived to have been modelled on the French. Of that which is most independent, and on that account most interesting if not always most beautiful, there may be cited the work from the designs of Angelica Kaufmann—Miss Thackeray's "Miss Angel." The classical feeling in the nudities she drew was shared by Bartolozzi; and, whatever was its worth, it was totally different from the impulse which stirred the hand of Boucher, and the delicate perception of actual life to which the design of Watteau and his followers owes so much of its charm. The collection, containing, though it does, some specimens of smaller interest, is on the whole extraordinary for variety and completeness.

#### DISCOVERY IN THE ABBOT'S HOUSE, WESTMINSTER ABBEY.

A FEW days ago, when some boards were taken up in the floor of the back library of the Deanery at Westminster, it was discovered that under the wooden floor there is a fine pavement of encaustic tiles covering the whole area of the room. This room is over the Monastic Parlour, which also formed the western access to the cloister. The lower part is vaulted with stone in two bays, and it is on this stone vault that the newly discovered tile pavement rests. The building is of the fourteenth century, though the upper part has been much modernised to fit it for use as the Dean's library. It is probable that this upper room is the one referred to in the inventory of goods belonging to Westminster, made at the dissolution, as "My Lordys [Abbot's] Newe Chapell." The fine encaustic tiles are chiefly in red, buff, and yellow, with geometrical patterns; they appear to be of the fourteenth century, probably contemporary with the room itself. The wooden floor which covers them has caused them to be preserved in a very exceptional state of freshness and freedom from wear.

It is to be hoped that the Dean will have the wooden floor removed so as to expose to view this interesting find. If the eastern part is uncovered, it will probably be possible to decide the doubtful point as to whether this was the Abbot's Chapel or not. It is almost certain that some indications of the altar would remain on the pavement if an altar ever stood there.

J. H. MIDDLETON.

#### ROMAN INSCRIPTIONS IN ALGERIA RELATING TO BRITAIN.

39 Plumptre Street, Liverpool.

The recent publication of vol. viii. of the *Corpus Inscriptionum Latinarum* has been the means of bringing together a number of inscriptions found in Algeria which have a close connexion with those of the Roman period found in our own island, and several interesting facts may be gathered from these memorials of the past.

The historian Herodian, for instance, informs us that the Emperor Septimius Severus divided this island into two parts, or provinces, for the purposes of government. Of this division little has hitherto been known. Two fragmentary inscriptions found at the Roman station at

Greta Bridge, in Yorkshire, referred to a *Provincia Superior*; and this was the sum total of lapidary evidence. But M. Wilmanns, the editor of the new volume of the *Corpus Inscriptionum Latinarum*, gives us (No. 2080) a copy of the inscription on a broken tombstone found at Ksar-el-Birsgaun, in the vicinity of the ancient *Colonia Theveste*, in the province of Numidia, which names a soldier of the Twentieth Legion, EX PROVINCIA BRITANNIA SVPER.

Of the other province, we also find considerable traces in this volume. No. 1578, which is a portion of a large and much-shattered epistyle found at the ancient *Mustis* (now Hr Mest), mentions BRITANNIAE INFERIOR (the word *Provincia* is lost). No. 5180, found on the site of the ancient Zattara, in Numidia, is the tombstone of Titus Flavius Ingenius, a soldier of the Sixth Legion, PROVINCE BRITANNIE INFERIORIS; while No. 2766, found at Lambèse, the ancient *Lambaesis*, names Publius Furius Rusticus, Praefect of the First Cohort of the Astures, PROV. BRITT. INFER. Another praefect of this same cohort (PR. BRITANNIAE) is named in No. 9047, found at Aumale, the Roman *Auzia*. An additional value is attached to the two last-named inscriptions, which consists in their proving the first cohort of the Astures to have been in Britain. This had previously been doubted, as, though the *Notitia Imperii*, places the first cohort at the station of *Aesica*, on the Roman Wall, the inscriptions found there prove that it was the second cohort of the same people which formed its garrison.

Another inscription, and perhaps the most interesting of all, was found on the site of the Roman *Gadiufala*, in Numidia, which is now called Kasr Sbai. With the exception of a few lines at the bottom which are much shattered, I here give the inscription in full:—

D. M. M  
P. LIC. AGATO  
PVS. VETERAN  
VS PRAEFECTVS  
IN. BRITANIA. EQ  
ALARIS. MILITA  
NS. BRAVNIACO  
DISMISSVS  
REPETENS GADI  
AVFALA PATRIAE  
SVAE VIXIT ann.  
LXXXI . . . . .  
. . . . .  
. . . . .  
. . . . .

Here we have the case of a veteran praefect of horse, who had been serving in Britain, and, after having been dismissed at *Brauniacum*, in this country, was sent back to his native town (or district), where he dies, the above being the inscription on his tombstone. *Brauniacum* is unknown as a Roman British town; is it not, as some suppose, the *Braboniacum* of the *Notitia*, and the *Brovonacae* or *Brovacum* of the Antonine Itinerary? There is another point which is peculiar in this inscription—i.e., the first line. Does it read *Diis Manibus Magnis* (or the last M may be for *Majoribus* or *Maximis*)? I suggested this reading lately to Lord Brougham, to whom I had sent a copy of the inscription, he being interested in it as possibly referring to the Roman station adjoining his residence. His lordship, however, was not satisfied with my expansion of the second M, and, I believe, referred it to Dr. Bruce, with what result I have not heard. I have never met with an example of a second M attached to this formula elsewhere.

As to the boundaries of the superior and inferior provinces, it would be an interesting study to endeavour to define them. For various reasons I am inclined to think that the line of the River Tees marked a portion of them.

W. THOMPSON WATKIN.

#### EXPLORATION IN THE DELTA OF THE NILE.

MR. REGINALD STUART POOLE delivered the first of three lectures on this subject at St. Mary Abbott's Vicarage, Kensington, on May 4. His purpose was to speak of the society which is being formed, and of which he is one of the hon. secretaries in conjunction with Miss Amelia B. Edwards, with the object of exploring the unexamined sites of the great cities of Lower Egypt. M. Maspero, the French director of archaeology in Egypt, had consented to allow the society to join in his work of exploration, and had agreed to abandon to them, on certain conditions, the whole of the Delta. Mr. Poole sketched the history of discovery in Egypt, from Napoleon's Egyptian Institute to M. Maspero's wonderful find at Dayr-el-Baharee, and pointed out that, with the exception of Col. Vyse's architectural survey of the pyramids, England had taken no part in this history of great discoveries. The time might soon come when this disgrace shall be wiped out. There was plenty of exploration remaining to be done; the greater part of Lower Egypt was still untouched; and such were the dangers of half-knowledge that, so long as a single temple or tomb remained unopened, our efforts must not be relaxed. Although no plans were yet mature, it was hoped that the work in contemplation would involve but a moderate expenditure. Mr. Poole estimated the annual budget of exploration at no more than the cost of keeping up a pack of foxhounds. The principal forms of religion in Ancient Egypt formed the main subject of the lecture, considered with a view to possible discoveries in the Delta. The ancient animistic cult, which M. Mariette illustrated by his excavation of the sepulchre of the bulls at Memphis, would undoubtedly be further illumined by the excavation of the site of Mendes in the Delta, where was the temple of the sacred Ram, under which would doubtless be found the ram mummies, like those of the bull Apis, and a long line of historical tablets like those found at Memphis. The survival of the ancient fetish worship was shown to have lasted almost to the present day, for it is not half-a-century since a sacred crocodile was revered at the tomb of a Moslem saint. The introduction of solar worship and the growth of henotheism were explained, and the chief characteristics of the priestly religion were set forth. Mr. Poole regarded the social system of the ancient Egyptians as more nearly resembling our own than any other ancient society, especially in respect to the high position held by women. Stress was laid upon the writings of the philosophic prince, whose doctrine of a good principle, instead of a pantheon, may have been known to Moses. In his account of the Hebrew religion Mr. Poole entered upon more debatable ground, as the audience of Dr. Kuenen's Hibbert lectures at St. George's Hall have doubtless discovered; but the argument for exploration is undoubtedly strengthened by the prospect of discoveries which may throw light on the sojourn of Israel in Egypt. To happen upon the mummy of a Hebrew patriarch at Migdol or Ramees would probably reveal something of the Hebrew religion at the time, and undoubtedly would further the cause of research in a substantial manner. Perhaps the most interesting part of the lecture was that in which Mr. Poole spoke of the mysterious Shepherd religion of the border, with its strange gods, Horus of the Triangle, and Typhon, and the grotesque and satyr-like Bes, god of war and music, who appears on ladies' toilet-boxes and other incongruous articles. Mr. Poole said this curious, dark border-religion was neither Egyptian nor Hebrew; and, if the Egyptologists were right in the age of the substantial parts of the first four books of the Pentateuch, there was

no room for any development of Hebrew belief out of this primitive idolatry, which, however, doubtless was the cultus of the many during the sojourn.

#### NOTES ON ART AND ARCHAEOLOGY.

THERE is a charming collection of modern Dutch water-colours now on exhibition at Messrs. Goupil's galleries in Bedford Street. No nation has taken more kindly to the use of transparent colours, or employs them with greater purity or power. Those who love rich but sober colour, the simplicity of peasant life, and the freshness of air and sea and meadow will take unwearied delight in these examples of the modern "little masters" of Holland—Israels, Neuhuys, Artz, Mesdag, the Maris, Mauve, Blommers, Sadée, and the rest. No landscapes are more original and masterly than those by Vrolyk, and du Chattel is another young painter of great promise. At Goupil's, also, may be seen a masterpiece of Rousseau, and the last, and one of the finest, of Mr. Herkomer's portraits.

AT Messrs. Dowdeswell's is to be seen what is probably the finest battle-piece now on exhibition in London. Those who know the art of de Neuville do not need to be told that the composition is very skilful, and the drawing of the various figures thorough. A desperate struggle is taking place at the gate of the little cemetery of St-Privat, where the French made such a gallant and hopeless defence. Not the least moving part of the picture is a row of Frenchmen (some wounded), who have "given up," and are watching the pouring in of the Germans with hopeless but not ignoble inactivity.

MESSRS. MENDOZA, of Duke Street, St. James's, and Mr. Edward White have small exhibitions of some interest. At the former is Focardi's new piece of humorous sculpture; and at the latter a fine and important Constable. There is also an exhibition, in Pall Mall, of the Russian painter Aivasovsky's latest pictures, which are brilliant and bold, and interesting as presentations, and probably faithful presentations, of the scenery of the Crimea.

MILLET's noble picture of "The Sower" has been etched by Matthew Maris, one of the three clever Dutch artists of that name, in a manner which admirably reproduces its grand design. As in Millet's famous "Angelus," the figure is seen in shadow, partly against a field, and partly against a softly glowing sky, and this difficult effect of light is finely rendered. Altogether it reproduces the spirit and handling of the master more completely than any etching we know, except Millet's own. It is on a large scale, and obtains its great breadth and luminousness by extremely minute workmanship. It will, we understand, be published by Messrs. Goupil.

WE understand that during the month of June there will be an exhibition of the works of modern artists at La Belle Sauvage Yard, Ludgate Hill, of the original drawings and paintings collected by Messrs. Cassell, Petter, Galpin and Co. in the illustration of their fine-art publications. The collection will include "The Symbol," by Frank Dicksee, A.R.A.; "Twilight," by P. H. Calderon, R.A.; and "Elijah confronting Ahab and Jezebel," by F. Dicksee, A.R.A. The following artists will also be represented: Messrs. Birket Foster, E. Crofts, A.R.A., A. C. Gow, A.R.A., R. W. Macbeth, W. Small, M. L. Gow, A. Hopkins, G. L. Seymour, A. Barraud, G. G. Kilburne, W. B. Hole, A.B.S.A., C. Gregory, Carl Werner, W. B. Gardner, C. Clausen, E. Blair Leighton, Percy Macquoid, H. M. Paget, Sutton Palmer, W. Balston, C. Burton Barber, and C. T. Garland.

By what would seem to be more than a curious coincidence, the very clever picture by Francesco Vineas called "The Queen of the Revels," No. 852 in the present exhibition of the Royal Academy, is precisely similar in design to one of the illustrations to the Catalogue of the Paris Salon. This illustration is said to represent a picture by G. Fraipont, called "A la plus belle," and is numbered 216.

M. MASPERO AND HERR EMIL BRUGSCH are re-arranging the contents of the Boolak Museum, and lodging the lately discovered treasures of Dayr-el-Baharee in the new halls built for their reception. The work of placing and cataloguing these 6,000 objects will take at least two or three months to complete.

THE city council of Manchester have decided to establish in the Queen's Park an art museum of an educational character. It will contain carefully selected collections both of works of fine art and of industrial products, arranged and ticketed in such a way as to teach their meaning to all visitors. Lectures on art and literature, and musical performances, will also be given in the same building. Messrs. Ruskin, Hamerton, Newton, Sidney Colvin, William Morris, and others have already promised their assistance in the preparation of the explanatory notes, &c., upon which the success of the institution must so largely depend. In no sense will it be a rival to the proposed municipal picture gallery in what is now the Royal Institution.

M. RAFFRAY, the French vice-consul at Massowah, has communicated to the Académie des Inscriptions an account of the churches cut out of the solid rock which he recently visited in the Galla country, and of which he has brought back drawings and plans. They were made by cutting away the surrounding stone, in the same manner as the so-called rock temples of India. Six of them are in the town of Lalibela, capital of the province of Lasta. According to tradition, which is said to be corroborated by a MS. in the Giz language preserved in one of the churches, they were constructed (or rather excavated) by a king named Lalibela, the thirteenth in descent from the founder of the city, and fifth Christian Negus of Abyssinia. He is alleged to have brought 500 workmen for the purpose from Egypt. His date is assigned to the fifth century A.D. Other similar churches in the neighbourhood are stated to be of later date and of native workmanship.

THE June number of the *Magazine of Art* will comprise among its contents an article by Mr. Basil Champneys on "Wren and St. Paul's," an important paper by Prof. Sidney Colvin on "The Drawings of Albert Dürer," an "Art Fable," by Mr. Austin Dobson; and, under the title of "Fitness and Fashion," an account of the recent exhibition of hygienic clothing. The frontispiece to the part will be an engraving of "The Widower," after Luke Fildes, A.R.A.

THE *Portfolio* contains G. P. Jacomb-Hood's etching of "The Combat of St. George and Sanfoy," from the "Faerie Queene," which does not please us so well as his first illustration of that poem. The other plates are one of the Chapel of Nine Altars in Fountains Abbey, by Brunet-Debaines, and a facsimile of a fine study by E. J. Poynter, R.A., for the head of St. John, forming part of that artist's designs for the decoration of the dome of St. Paul's Cathedral. Miss Julia Cartwright continues her very interesting study of Botticelli.

THE best articles in the *Magazine of Art* for May are "A Man of Culture (*cinq cents*)," by the Rev. Mandell Creighton, founded on Charles Yriarte's "Études sur les Lettres et les Arts des Malatesta," and one by Egmont Hake on Boucher, called a "Rosewater Raphael," after

Mr. Dobson. It is written with due appreciation for the supreme gifts of this little-comprehended artist, and in quite the right critical temper. The illustrations to it are also very good. The article by S. G. W. Benjamin, on the clever artist J. G. Brown, called "The Painter of the Streets," is not worthy of the magazine.

THE issue of *The Great Historic Galleries* in German has been commenced by Otto Schulze, of Leipzig, under the title of *Die Schätze der Groszen Gemälde-Gallerien Englands*. The first number seems in all respects equal to the English edition.

M. ANTONIN PROUST, during his brief tenure of office as Minister of Fine Arts in France, abolished what are known as the *ateliers*. M. Jules Ferry has decided to re-establish them, but with a slight change of system. They will not be open to all comers, but only to selected candidates. At the same time it is proposed to institute a course of instruction in the three arts of painting, sculpture, and architecture, to which the student in each one of these arts must conform.

WE have received a half-size facsimile of the inscribed red-granite block found by Mr. G. Wild on December 29 last, near the mosque of Amer at old Cairo (Fostat), where Mr. Wild had permission to excavate. The surface is well preserved, and is sculptured with the two royal ovals of Ouab-Ra—the Apries of the Greeks, the Pharaoh Hophra of the Bible. Above the ovals there runs a line of hieroglyphs, reading "Lord of the Two Lands, the Good God, Pthah;" while below them runs another line, reading "Giving Life Eternal," followed by the two reeds which stand for the letter i. It is evident that another hieroglyph is either effaced or was omitted by the sculptor, and that the missing figure is the hoe, standing for *Mer*, and here necessary to complete the word "*Meri*," or "Beloved." Were this hieroglyph supplied, the sense of the inscription would be: "The Lord of the Two Lands, the Good God Ouab-Ra Ha-ab-Ra, Beloved of Pthah, giving Life Eternal." The inscription is enclosed in a parallelogram formed by the determinative sign signifying the heaven above, and by the so-called *coucoucha*, or greyhound-headed, sceptres. Ouab-Ra was a Pharaoh of the XXVth Dynasty. No other discoveries having resulted from Mr. Wild's excavations in the locality where this stone was found, it may be concluded that the block was originally brought from Memphis for building purposes, when the mosque of Amer was in process of construction.

IN the last week of April a black pot, containing about 3,000 mediaeval coins, was dug up in the yard of Frau Werthemann, of the St. Johann-vorstadt in Basel. About two-thirds of these came from the mint of the Bishop of Basel, and the remainder bore the impress of various cities and lordships from the eleventh to the thirteenth century. This find has excited great interest among numismatic experts, both on account of the unusual quantity and variety of the specimens. The coins, according to Basel law, are the property of the lady in whose ground they were discovered, who has given some of them to the public Münzsammlung, but has resolved to keep the rest, and not allow them to go into the market. Dr. Achilles Burckhardt conjectures that the pot was buried in 1272 or 1273. On August 24, 1272, Count Rudolf of Hapsburg, afterwards German king, was at war against Basel, and burned and plundered the Vorstadt zum heiligen Kreuz, as the present suburb of St. Johann was then called.

THE first number has appeared (Brussels: Muquardt) of a *Bulletin Rubens*, in which a Belgian society propose to publish, periodically, documents relating to the life of the painter and his works. The president of the society is M. Gachard; the secretary, M. Ruelens.

## THE STAGE.

## "FAR FROM THE MADDING CROWD" AT THE GLOBE THEATRE.

If the production of "Far from the Madding Crowd" has revealed to the public some likenesses to a much-talked-of drama which there had not before been any opportunity to trace, it has shown also essential differences. A visitor might say that one of the two plays had been suggested by the novel's main story and by the rustic world in which its action is laid, and that the other was a dramatisation of the novel, with as little modification as possible of its incidents. In some respects "The Squire" may be asserted to be a better stage play—a thing of better construction—than "Far from the Madding Crowd." The real point of the story, as a story for acting, is gone to more promptly. The theme is well exposed. In "Far from the Madding Crowd" there is, for the everyday playgoer, too much of leisurely development of secondary characters. In the first act the country people gossip too continuously for every-day taste, while the story waits. But then, on the other hand, this same leisurely development of character tells in favour of our interest in the heroine. She, in Mr. Pinero's piece, is a very ordinary and well-conducted young woman indeed, who would owe whatever charm she had to one of two causes. She might charm us being beautiful, or charm us being represented by Mrs. Kendal. But Bathsheba Everdene at the Globe Theatre is not an ordinary and well-conducted young woman. She is the original and fascinating young woman of the admirable novel. Her temperament of waywardness and tenderness, of quickly stirred liking, of restlessness, of gentle remorse, counts for the greatest part in her fascination; and it is much to have preserved on the stage the essential part of anything so subtle as a heroine of Mr. Hardy's.

Even with regard to the peasant folk and to their apparent reluctance to contribute too swiftly towards the development of the tale, it must be said that, as a compensation, their own talk remains, as in the novel, characteristic and good. There is local colour in it in abundance. Much of the charm of peasant life—the charm that peasant life seems to present to the citizen—is skilfully kept; and though this is not the sort of thing that has ever before brought success, or even helped to bring success, to an English contemporary drama, it is a quality to recognise, and there should nowadays be playgoers willing and able to recognise it. One feature of the play which was not in the novel at all we are bound to take exception to, and that is the introduction of the gipsy, Will Robin, Fanny Robin's brother, as the instrument that is to compass the death of Sergeant Troy, and set Bathsheba free to reward the constancy of Oak. The presence of this otherwise superfluous youth as a chivalrous relative bent upon avenging the offence against his sister savours distinctly of melodrama. Boldwood, who accomplishes the same object in the novel, was in the novel a character of mark; and the play, in dispensing with him, dispenses with something that, with all its difficulties, was worth keeping. Boldwood's character had artistic value. He

was a true, if a repulsive, study. A countryman, long a bachelor and thinking little of women, he was likely, when at last the thought of a woman grew familiar to him, to be too zealous in his love and too obstinately faithful to the thought of her, even when she was not for him. He was prosperous in affairs: "the ignoble melancholy of pecuniary embarrassment" never sat on him; he had few amusements if he had few anxieties, and it was natural that in his isolated life the love he at last longed for should be everything to him. The gradual mastery which this thought of Bathsheba obtains over his reason is indicated admirably, and in the novel Boldwood stands as the natural solution of the difficulty when Troy re-appears and must somehow be got to disappear. The touch is truly dramatic, dramatic in the deepest sense, when he quietly takes his gun down from its place against the wall, and "click"—there is an end of the devil of the story. It was necessary someone should do this, and this was precisely what Boldwood would have done. Will Robin's chivalry is a much more commonplace and melodramatic solution. But it must not be imagined that we mention this one weakness in art as acting seriously against the general interest of the play. Not at all. The play is on the whole well constructed, which means, in this case, that Mr. Comyns Carr has made thoroughly skilful use of a creation of genius.

And it is excellently acted. Mr. Charles Kelly, who has long been absent from the London stage, finds in Gabriel Oak a part absolutely suited to him. Gabriel is indeed made needlessly uncomely, but there pass over the actor's face expressions of a quiet tenderness and of a force of feeling which denote a really sympathetic art; there is more than one passage of acting, and especially towards the end of the play, which should add to Mr. Kelly's reputation. Again, Mrs. Bernard Beere enters with full intelligence into the part of Bathsheba. A little more subordination of the graces of the lady—of the refinements which belong to gentle life, as distinguished from those which belong to attractive character—and Mrs. Bernard Beere would be a model Bathsheba. Comparisons with Mrs. Kendal are completely unnecessary, for, in the first place, Mrs. Kendal in "The Squire" does not try to be Bathsheba. She gets ample opportunity for the display of her own emotional art, and has no character by Thomas Hardy to embody. Mrs. Beere has tact and is winning, and moves gracefully, and is graceful and natural too in the absence of motion; and as for her gowns, they are as pretty as any that may now be seen in London. She is earnest and intelligent and pleasant, and Mrs. Kendal is great. Mr. Barnes looks handsome enough as Sergeant Troy; but neither his nor anybody else's masculine beauty could quite explain to us Troy's fascination for Bathsheba. That fascination is a secret of her own heart, which proves her to have some weakness no one would suspect, and to be thoroughly a woman.

Miss Alexis Leighton and Miss Hunt—both of them actresses new to our London theatres—contribute to the general refinement of a performance one of whose characteristics

is indeed its refinement. Mr. A. Wood and his comrades enact the peasants with as great success as can attend upon the efforts of artists whose studies from the life must have been few. With some natural touches, and with much of stage effectiveness, they bring before us in skilful fashion that Dorsetshire country-folk which talks quaint wisdom oftener, no doubt, than does the rest of the world, if not quite so often as we should think if we assumed Mr. Hardy's dialogue to be a literal transcript, a direct photograph. But there is no necessity for assuming it to be that, nor for blaming it because it is not that. As Sheridan's dialogue is the quintessence of the wit of an artificial society of drawing-rooms, so Mr. Hardy's is the quintessence of the humour of the village-folk of Wessex. The talk of his characters is nature wrought into art, and the licence he has allowed himself, in the novel as well as in the play, is the legitimate licence of comedy.

FREDERICK WEDMORE.

## STAGE NOTES.

On the occasion of Mr. James Mortimer's benefit at the Lyceum Theatre, on the afternoon of Monday May 22, a new version of "Robert Macaire" will be produced, in which Mr. Henry Irving will appear as Macaire and Mr. David James as Jacques Strop. Though we are informed that no performances of the piece are now contemplated under the regular Lyceum management, it is possible that at a future time Mr. Irving will be seen in a character which he will hardly fail to make his own. On this occasion, Mrs. Bancroft, Miss Ellen Terry, and Mr. Coghlan will appear in the first act of "Money," and Mr. Toole, Mr. Billington, and Miss Effie Liston in "The Steeplechase." These performances, along with that of "Robert Macaire," ensure a satisfactory afternoon to the provincial visitor, as well as to the Londoner curious to see Mr. Irving in Frederick Lemaître's great character.

"ODETTE" is such a strongly constructed piece—so much the work of a skilled mechanic of the theatre—and it is so carefully acted all round at the Haymarket, that, in spite of a certain coldness manifested by the audience on the first night, it is likely to have a run. Its manner of dealing with the always difficult theme of adultery is not, however, so happy as to invest the piece with notable charm—it has at least one scene that savours a little of brutality of treatment—and if Mr. and Mrs. Bancroft and Mr. Arthur Cecil put forth their best skill it must be allowed that it has often been exercised in a more agreeable way. For the part of the heroine, Mdme. Modjeska, with her foreign elegance, her distinction and style, is no doubt well fitted; and it might be ungracious to perpetuate the complaint which, nevertheless, it is not easy to forget—that the delivery of the English tongue by this accomplished and elaborate actress is not such as to give pleasure. Mdme. Modjeska, however, overcomes her difficulties as valiantly as she can.

"LA MASCOTTE," which has some good music, and some not very bad fun, but which really owed its success to Miss Violet Cameron's spirited and clever performance, is to be revived at the Strand, where "Manola" has not had the success that had fallen to the lot of "Olivette" and "Madame Favart." It appears to be the office of Miss Violet Cameron to endow poor material with temporary popularity. Further acquaintance with "Boccaccio," in which this lady and Mr. Lionel Brough are now

appearing with much energy at the Comedy Theatre, convinces us, we are sorry to say, of the dullness of much of that production. The music, without being learned, is not at all "taking." Miss Cameron's cheerful song,

"O! sir, I am but country-bred,  
I'm not much learnt, I'm not much read,"

is the best thing in it—at least from a dramatic point of view; and the piece lasts three hours, or one hour longer than "Romeo and Juliet" lasted in the time of Shakspeare. But, as a spectacle, nothing more gorgeous has been done in the way of comic opera; and many of the dresses are really tasteful. The intrinsic merit of the piece turns out, however, to be slight, and the financial success—as to which there can be no question—presents a curious problem.

### MUSIC.

#### "THE NIBLUNG'S RING" AT HER MAJESTY'S THEATRE.

THE first performance in London of Wagner's "Ring des Nibelungen," the Festival Play produced at Bayreuth in 1876, is an event of great interest, and of the highest importance with regard to the future progress of art. This wonderful music-drama has been for many years a subject of earnest and vehement discussion among musicians. The strong feelings, both of admiration and dislike, which have been called forth by the work testify to the marked individuality of the composer. No shallow theories, no commonplace, every-day music, could have survived so much foolish praise and so many hostile attacks. History repeats itself, and all great men in every department of human knowledge have had to endure the penalty attaching to greatness—that of being at first understood by the few and oftentimes opposed by the many. It is, indeed, difficult to estimate the right value and importance of the art productions of the present; but we may certainly venture to affirm that, whatever may be thought in the future of Wagner's operas or music-dramas, his theories and earnest endeavours to avoid what is superficial and formal in art have already been productive of much good, and are not unlikely to influence, in a most powerful manner, both the musicians and the music of future generations. The enthusiastic and, at times, very extravagant encomiums of Wagner's friends and partisans have done harm rather than good. His blind admirers refuse to see any faults in his works. The length of the "Nibelungen" play is, as Schumann said of Schubert's symphony in C, "a heavenly length;" and the number of notes in it, as Mozart said of one of his own operas, "exactly right—neither too few nor too many." If, however, these partisans would only acknowledge that an opera making such a prolonged and exhausting demand upon the intellect, the nerve-power, and the time of the listener may be possibly regarded as an error of judgment on the part of the composer; and if, moreover, these hero-worshippers would not be afraid to admit that some of the sounds (however justifiable in connexion with the scenes they are intended to depict) are positively painful to listen to; that some of the music is dull and even tedious; that the bear, the bird, and the dragon are puerile mistakes in the direction of ultra-realism; and that the form of the whole work is not to be set up as a model, they would perhaps be able to persuade some who now stand aloof to listen to, and attempt the study of, this really great music-drama. Certainly no one with music in his soul can hear the four great tone-poems of "The Nibelung's Ring" without feeling that some of the music is immeasurably grand and

dramatic, and that the whole work teems with beauties indescribable and abounds in magic sounds never before heard by mortal ears. Many parts of the "Rhinegold" (the prelude to the opera, performed on the first evening) are sweet, beautiful, and highly effective. Such are, for instance, the opening strains and the scene with the Rhine-daughters, the majestic Valhall theme, the "Loge" music, and the conclusion, when the Gods enter the palace built by the Giants. The "Valkyrie" (performed the second night) is, in our opinion, the most wonderful and fascinating music ever written. The first act, depicting the scene in Hunding's home between the ill-fated lovers, Sieglinde and Siegmund, is love-music of immense emotional power. The scene where Brynhildr announces to Siegmund his approaching death is full of dramatic power and pathetic utterance; while for the closing act, with the famous Valkyrie's ride and the scene between the "wandering" Wotan and the unfortunate Brynhildr, no words of praise would be too extravagant. Attempts have been made to prejudice the public mind especially against this portion of the tetralogy on the score of its alleged immorality. Without wishing to defend Wagner from the charges brought against him on account of his choice of subject-matter in this work, and also in "Tristan and Isolde," we certainly think that in this case Wagner was fully justified in preserving the Icelandic version of the story. The union of Sieglinde and Siegmund within the proscribed degrees is not, we think, likely to alarm, or in any way to demoralise, intelligent people or the readers of either sacred or profane history; while those unacquainted with the habits and customs of ancient people may feel quite at ease in listening to the "Valkyrie," for it is but an ancient nebulous myth, not likely to scar virtue, and neither better nor worse than many a well-known Grecian fable. In "Siegfried" we have a most interesting scene between the sword-hero and the ugly dwarf, Mime, a most poetical tone-picture of the woods, and another love scene between Siegfried and Brynhildr, quite equal to, though utterly different from, that in the "Valkyrie." In the "Dusk of the Gods" (the last night's performance) the music rises to heights of immense grandeur and pathos; the weird opening scene of the Norns, and the conclusion, with the deaths of Siegfried and of Brynhildr, are wonderfully interesting.

We have not analysed the plot, because space prevents us doing so, and the whole story has been again and again described in pamphlets, books, newspapers, and in the columns of the ACADEMY in a series of articles written by Mr. Ebenezer Prout on the occasion of the Bayreuth Festival in 1876. We have tried to give our own impressions of some of the most wonderful portions of the work in order to attract the notice of those who have hitherto seen no good in the music, or of those still almost ignorant of the composer and his works. The extraordinary use of *Leitmotive* can only be understood and appreciated by musicians who have the time to study the complicated, but most ingenious, combinations. In almost every note the orchestra speaks with a power and meaning that well-nigh baffles description. Let it be clearly understood that the wonder of this new form is to be judged by the resultant effect. Take, for example, some of Bach's finest fugues. Play them to anyone of ordinary musical education and proper musical feeling. They will not fail to delight and impress. The marvellous contrapuntal combinations and devices of course help to produce the result; but the canon *ars celare artem* is observed, and these can be studied and admired afterwards. And so with Wagner. The music appeals first to the emotions and afterwards to the intellect, or perhaps it would be more logical to say to a

union of both. These combinations, had they been merely a mathematical calculation, a sort of mosaic, might have been clever, but would inevitably have been dry. The power of discovering pregnant themes, and the skill of weaving them together with subtle but lucid artifice, are allotted in no less proportion to Wagner than to Bach. Whole columns could be devoted to the orchestration, but we must refrain from noticing any of the innumerable beauties and magical orchestral effects, the result of years of both labour and thought. There is no great need to dwell upon this particular side of Wagner's work, for his mastery of instrumentation is well known, and is conceded even by his bitterest opponents.

The performance of the "Rhinegold" on Friday, May 5, was good, and the excellent singing and acting of Frau Hedwig Reicher-Kindermann as Fricka gave general satisfaction. The elaborate rôle of Wotan was entrusted to Herr Emil Scaria, who in this and the other portions of the work interpreted his part with becoming dignity, and sang with power and effect the difficult and often unthankful music allotted to him. The Giants, Goddesses, and Rhine-daughters were satisfactorily represented; and Herr Max Schlosser and Herr Otto Schelper, as Mime and Alberich respectively, were excellent. In the "Valkyrie," Herr Albert Niemann created a marked impression by his powerful and dramatic impersonation of the unhappy Siegmund; and Frau Anna Sachse-Hofmeister was especially admired for her charming and sympathetic voice and for her natural and excellent acting. Hunding was ably represented by Herr Heinrich Wiegand. Frau Therese Vogl took the part of Brynhildr. In "Siegfried" Herr Vogl sustained the difficult rôle of Siegfried with wonderful ability; Herr Max Schlosser took that of Mime, and his finished picture of the ugly and mischievous dwarf was one of the successes of the whole series of performances. In the "Dusk of the Gods," Herr Schelper (the Alberich of the "Rhinegold") took the part of Hagen, and Herr Robert Biberti that of Alberich. Frau Scheiber (the Freia of the "Rhinegold") gave a very satisfactory rendering of the Gutrune music. We have said but little about the distinguished actors and singers, Frau and Herr Vogl, but the manner in which they fulfilled their onerous duties is worthy of the highest praise. They both form the chief ornaments of the Opera at Munich. The orchestra of German players under the careful and intelligent direction of Herr Seidl gave a fair rendering of the very difficult music. The stage management was generally very good, and some of the scenery very effective.

The acting has been, throughout the series of performances, exceptionally fine, and indeed in some cases even superior to that at Bayreuth. The orchestra here was, of course, not in any sense so complete as at Bayreuth; and the fact of its coming between the audience and the stage, and not being invisible as at Bayreuth, accounted for the undue prominence at times of the accompaniments. There is, however, no need to dwell in detail on the merits or demerits of the performances. All musicians and lovers of the art have only to be most thankful for the opportunity granted to them of hearing the tetralogy in London; and we must credit Herr Angelo Neumann and Messrs. Schulz and Curtius with great praise for their spirit and energy in undertaking so difficult and costly an enterprise.

We hope that the remaining three cycles will be well attended, and that the final result will be both a financial and artistic success. The second cycle commenced yesterday (May 12); the third will commence on May 19, and the fourth on May 25.

J. S. SHEDLOCK.

## CROSBY LOCKWOOD & CO.'S NEW BOOKS.

### MODERN METROLOGY: a

Manual of the Metrical Units and Systems of the Present Century. By **LOUIS D'A. JACKSON**, Author of "Aid to Survey Practice," &c. Large crown 8vo, 12s. 6d., cloth. [Just published.]

### THE COAL and IRON INDUS-

TRIES of the UNITED KINGDOM. By R. MEADE, Assist.-Keeper of Mining Records. With Maps of the Coal Fields and Ironstone Deposits of the United Kingdom. Demy 8vo, 900 pp., 29s., cloth. [Just published.]

### THE ACTION of LIGHTNING,

and the Means of Defending Life and Property from its Effects. (Suggesting some New and Economical Methods of Defence.) By Major **ARTHUR PARNELL**, Royal Engineers. 12mo, 7s. 6d., cloth. [Just published.]

### MATHEMATICS as APPLIED to

the CONSTRUCTIVE ARTS. Especially prepared for the Use of Practical Mechanics, Students, &c. By **FRANCIS CAMPIN, C.E.** 12mo, 3s. 6d., cloth boards. [Just published.]

### THE JOINTS MADE and USED

by BUILDERS in the Construction of Various Kinds of Engineering and Architectural Works. By **WYVILL J. CHRISTY**, Architect and Surveyor. With upwards of 100 Illustrations. 12mo, 3s. 6d., cloth boards. [Just published.]

### THE CONSTRUCTION of ROOFS

of WOOD and IRON. Deduced chiefly from the Works of **ROBISON, TREGOLD, and HUMBER**. By **E. WYNDHAM TARN, M.A.** Architect. With Illustrations. 1s. 6d., cloth limp. A NEW VOLUME of **WEALE'S SERIES**. [Just published.]

### MECHANICAL DENTISTRY:

a Practical Treatise on the Construction of the Various Kinds of Artificial Dentures. By **CHARLES HUNTER**. Second Edition, Revised, including a New Chapter on the use of Celluloid. With Wood-engravings. Crown 8vo, 7s. 6d., cloth. [Just published.]

### HINTS for INVESTORS: being

an Explanation of the Mode of Transacting Business on the Stock Exchange, with Comments on the Fluctuations of Consols since 1759, and Table of Quarterly Average Prices; also, a Copy of the London Daily Stock and Share List. By **WALTER M. PLAYFORD**, Stock-Broker. Small crown 8vo, 2s., extra cloth. [Just published.]

### ELECTRIC LIGHT: its Produc-

tion and Use. By **J. W. URGHART, C.E.** Edited by **F. C. WEBB, M.Inst.C.E.** Crown 8vo, 7s. 6d., cloth.

### NAVAL ARCHITECT'S and

SHIPBUILDERS' POCKET-BOOK of FORMULÆ, RULES, and TABLES. By **CLEMENT MACKROW, M.I.N.A.** Second Edition, Revised. Fcap. 8vo, 500 pp., 12s. 6d., leather.

### LATHE-WORK: a Practical

Treatise on the Tools, Appliances, and Processes employed in the Art of Turning. By **PAUL N. HASLUCK**. Crown 8vo, 3s., cloth.

LONDON: CROSBY LOCKWOOD & CO.,  
7, Stationers' Hall-court, E.C.

In square 10mo, tinted wrapper, price 6d., post-free.

## HOW TO ESTIMATE THE TRUE WORTH OF A PICTURE.

A NEW METHOD OF SYSTEMATIC CRITICISM.  
By **AN OLD CRITIC.**

LONDON: ELLIOT STOCK, 62, PATERNOSTER-ROW, E.C.

Eleventh Edition, 12mo, cloth, price 3s.

## MARIOTTI'S ITALIAN GRAMMAR.

Revised and Improved by **A. GALLEGA**, late Italian Professor at King's College, London.

A KEY to the Exercises, 12mo, sewed, 1s.

Crown 8vo, price 7s. 6d.

## THE ODES of PINDAR. Translated

into English Prose, with Notes and a Preliminary Dissertation, by **F. A. PALLEY, M.A.**

Third Edition, 8vo, cloth, price 3s. 6d.

## EURIPIDIS ION. With Notes, Introduc-

tion (on the Greek Metres, &c.), and Questions for Examinations, by the Rev. **CHARLES BADHAM, D.D.**

8vo, cloth, price 3s. 6d.

## THE PROMETHEUS VINCTUS of

**ÆSCHYLUS**. Edited, with English Notes, by the Rev. **J. S. WATSON, M.A.**

Ninth Edition, 12mo, cloth, 3s. 6d.

## THNE'S LATIN SYNTAX.—A Short Latin

Syntax, with Exercises and Vocabulary, by **DR. W. HUNE**.

LONDON: F. NOBGEAT, 7, King-street, Covent-garden.

Crown 8vo, cloth, price 3s.

## THE NEW TESTAMENT SCRIPTURES

In the ORDER in which they were WRITTEN: a Very Close Translation from the Greek Text of 1611, with Brief Explanations. The First Portion: The Six Primary Epistles to the Romans, Corinthians, Galatians, and Romans, A.D. 52–58. By the Rev. **CHARLES HERBERT, D.D.**, of Trinity College, Cambridge; Author of "Uninspired Teaching on the Lord's Supper."

LONDON: HENRY FROWDE, Oxford University Press Warehouse,  
7, Paternoster-row

## COMPLETION OF PROFESSOR DORNER'S SYSTEM OF DOCTRINE.

In 4 vols., 8vo, price 42s.

## A SYSTEM of CHRISTIAN DOCTRINE.

By **DR. I. A. DORNER**,  
Professor of Theology, Berlin.

Translated by Rev. Professors **CAVE** and **BANKS**.

"The author's masterpiece, the ripe fruit of a long and thoughtful life. . . . As a system, this work is remarkable; it is the first consistent application of dogmatics of the principle of faith."—**Principal CAVE**.  
"A noticeable power of profound thought."—**Spectator**.

## LITERATURE.

*The Growth of English Industry and Commerce.* By W. Cunningham. (Cambridge: University Press.)

NOTHING could be more instructive and useful than a work which should deal fully and accurately with the history of English industry and commerce. Such a history would be far more valuable than a narrative of military campaigns, of the policy of successive monarchs, or even than an analysis of the facts which have attended or influenced the rise, progress, and occasionally the retrogression of the English Constitution, though it must be allowed that the modern methods of government in all civilised countries are copies more or less exact of the machinery which has been developed by the English House of Commons. But the service which such a work would render to the latest-born of the sciences, political economy, would be still more solid. The historian is apt to interpret the past by the passions or the experience of the present. With abundant materials before him for a critical examination of English history under the light of contemporaneous documents, and by the aid of contemporaneous opinion, few writers have undertaken the labour of writing historical narrative in that dramatic manner which above all things requires an insight into the past; and even when they have attempted this method they have been partial in their research, and have been too apt to interpret their facts by preconceived opinions. The most successful History which has been written, that of Gibbon, was the history of a despotism in the annals of which there was no variety but that of incident, tempered by a theology the regular development of which was exceedingly plain, easily illustrated, and highly susceptible of being exhibited in caricature.

But the case of the political economist is even more difficult. Professing to interpret the condition of society from that necessary point of view which is of the highest interest to classes and even to individuals, he is constrained to dogmatise, and to contend that his conclusions must be accepted in the best interests of society. He offers to aid the legislator in framing laws for the development of trade and for the control of industrial liberty. He frames a theory of population, and he appeals to this theory as supplying the rule under which the relations of law to the distribution of labour, and of labour itself to wages, may be explained and enforced. He develops another theory of

credit and banking, and the Legislature frames rules for the currency in obedience to his utterances—rules which the ingenuity of those whose interests are affected seeks successfully to modify or to evade. He has sometimes been triumphantly in the right, as when he proved to demonstration that a free importation of food into a densely peopled country could do nothing but good to all parties alike; and sometimes scientifically irrefutable, as when he argues that one person gains doubtfully, and many persons lose certainly, under a system of protected industries. But neither his dogmatism nor his demonstrations save him from being constantly proved to be in error, because he has been unable to trace present facts through their history up to their beginnings and through their modifications, and has therefore been led to proffer half inductions from incomplete or unexhausted premises. Hence the old political economy has been assailed on the ground that it is imperfect, partial, and constantly erroneous; and the student of that part of social philosophy which deals with the material interests of men and nations, and with the problem of the distribution of wealth, has been advised, with reason, to betake himself to the study of industry and commerce, and, we may add, to the historical distribution of wealth, in order that he may rightly understand the present and provide for the future.

Mr. Cunningham, in a small volume published at the University Press, Cambridge, has undertaken the great task of describing the growth of English industry and commerce from the earliest times, and has appended a vast list of authorities from whom he has derived the materials for his inferences. It may be fairly allowed that, owing to the very large amount of materials which have been collected on the character of village communities, which appear to have been universal, or nearly universal, in the infancy of agriculture, and the simplicity of the elements which comprised the agricultural unit, to say nothing of the fact that the community survives numerously in many countries up to our own time, there is very little room for misconception on this part of the subject. But the ground becomes more uncertain when an attempt is made to discuss the origin of the intertribal fair, the town market, and the franchise market, where the tolls and other dues were the property of private lords. Of the first, an example is the great fair of Stourbridge, which was for many centuries the most important mart in England, or that of St. Giles, near Winchester, which was similarly, though not equally, renowned; of the second, the numerous markets which surrounded the Guildhall of Norwich, and became the property of the city; of the third, the markets which Roger Bigod founded or permitted on his East Anglian and Irish estates. The survival of the Roman British towns after the English invasion is another obscure question, for it seems clear that the immigrants did not occupy the towns, that many of these towns remained, and that some *modus vivendi* must have been established between the earlier inhabitants and the invaders. Even more puzzling is the growth of the manorial system. That the lord did

not gain his private estate from the waste is, it may be concluded, clear from the fact that the demesne is generally the best land, especially several meadow land in the parish. Now several meadow naturally irrigated—the artificial irrigation of water meadows began very early—was worth ten times as much as arable from the earliest times.

Between the time in which information as to tenures and revenues is given in local laws and in Domesday and that in which annual accounts of agricultural and manorial records are regularly transcribed and preserved, there is an interval of nearly two centuries, for the latter begin towards the end of Henry III.'s reign. At this time everyone cultivated land with his own capital, from the King to the serf, a fact which does not seem to have attracted Mr. Cunningham's attention, though it must have had prodigious effects on the social system of the country. The liabilities of the serf are always, or nearly always, commuted or commutable for money payments; and beyond these it is clear that he had no other liabilities, beyond those which were annexed to his condition and survived long after all the theories of servile dependence had passed into oblivion, except in law-books—such as fines for the licence of his daughter's marriage, his son's entering into religion, or his own removal from the manor. Such payments may be traced to the end of the fifteenth century, or a little later. It is probable that they were generally extinguished by being capitalised, though there are indications, of which the manor of Cheltenham is an instance, that they were resented by the tenants and lowered or abolished by arbitration.

The most remarkable feature in Mr. Cunningham's treatment of the social state of England during the fourteenth and fifteenth centuries is his assumption of certain industrial and economical results for the existence of which there is not a shadow of evidence. In p. 222 he tells us that "rural manufactures decayed as wealth increased." But the facts are exactly the reverse. The fifteenth century was one of general opulence and prosperity; and the manufacturers of exportable commodities, especially weavers, escaped from the oppressive regulations of the town guilds and from corporation taxes, and settled in country villages. In this century, Sir John Fastolfe, a Norfolk landowner, and a well-known partisan leader in the second part of the long war with France, regularly supplied his soldiers with clothing from a small Dorsetshire village; while the Warden of Merton College towards the end of the same century bought cloth for himself and his fellows in an Essex village. Again, there is no proof whatever (p. 221) that the area of land under tillage was decreasing and the production of wool as rapidly increasing "in the fifteenth century" according to Fitzherbert, who is put (p. 201) in the fourth decade of the fifteenth century, and in p. 221 a century later, the fact being that he died in 1538, and that his two works on agriculture were first printed in 1523.

During the whole of the fifteenth century, and for the first twenty years of the sixteenth, the price of corn was exceedingly low and the rate of wages was exceedingly high. Such

a state of things would have been impossible if Mr. Cunningham's hypothesis were founded on fact, for the very reverse phenomena would have been exhibited. During the whole of this period there was only one year of famine (1348-49) and one of scarcity (1482-83), nominal prices during the 120 years being lower than they were for the same period previously—i.e., from 1281 to 1400—while the wages of labour were fully fifty per cent. in excess of the older rates. In the latter half of the sixteenth century it is true that sheep-farming became general, with the result that the price of food was greatly, the wages of labour slightly, enhanced. But Mr. Cunningham has actually printed a table in which he makes the price of corn conform to the reduction of the weight of silver in the monetary unit; though the truth, if he had been at the pains to find it out, is exactly the reverse of his statement. What effect such a discovery would have had on his theories need not be discussed. The information as to the price of wheat from 1259 down to our own days is to be found in the present writer's second edition of Adam Smith, published nearly two years ago.

If Mr. Cunningham had inspected the table of corn prices referred to he would have seen that the rise in them is synchronous with the debasement of the currency under Henry VIII. and Edward VI. There was one year (1547) in which the price of wheat was very low, and in this the harvest must have been exceptionally bountiful. The amount of base money called in by Elizabeth is well known, as is also its nominal or currency value and the amount of new sterling money which was extracted from it.

It is impossible in a brief article to enter into all the misconceptions of fact in Mr. Cunningham's work. The idea is excellent; the result is not commensurate to the design. Authorities of very unequal value are put side by side, and treated as of equal importance. Fitzherbert is an excellent authority on the practice of husbandry in Eastern England, and of the duties of a surveyor at the beginning of Henry the Eighth's reign. But to trust him on the general social condition of England and the continuance of villeinage is to trust gossip. There are numerous accounts of the estates possessed by Margaret Countess of Richmond in the Record Office, perhaps some in St. John's College, Cambridge. The enquirer will find no villeinage there, but plenty of customary payments. The Crown was not a "sufferer by the depreciated [i.e., debased] currency" because it was a purchaser, as is suggested, but because it was a receiver of fixed fee farm rents, and equally fixed customs in a currency which, after the frauds of Henry and Edward and the reforms of Elizabeth, was equally depreciated. Nor is there reason to believe that persons were affected by the influx of treasure from the New World. Foreign treasure cannot be procured but by foreign trade; and to affirm that, by some operation of nature, English producers and consumers obtained American silver because Spanish adventurers stole it or mined it is to utter a fallacy of which the older political economy could disabuse even a beginner.

JAMES E. THOROLD ROGERS.

*The Belgium of the East.* By the Author of "Egypt under Ismail Pasha," "Egypt for the Egyptians." Edited by Blanchard Jerrold. (W. H. Allen.)

It is a pity that all writers on Egyptian affairs are adopting so strong a party tone; but we in England are so much in the power of correspondents and officials wedded to the European régime in Egypt that it is wholesome for us to read a vigorous protest on the opposite side. Those who have read *Egypt for the Egyptians* will know what line to expect in *The Belgium of the East*. The author is an implacable enemy of the Anglo-French control and the eleventh Egyptian plague—the plague of Franks. He mistrusts and despises Tawfik, believes in Halim, and, above all, has fervent faith in the National party. He paints his picture in too telling colours; and it would be easy to point out exaggerations and to adduce counter arguments. But I am so entirely in accord with the general purpose and policy of the book that the errors of manner, and sometimes of detail, do not deter me from recommending it to all who wish to know more about the crisis in Egypt than they can get from their daily papers. It is well that people in general should be a little more alive to the monstrous position towards which we are being hustled by French and English usurers. It is also well that we should realise that what the papers call a military dictatorship may be seriously regarded as the first public appearance of a National party in Egypt, and that the apparent aim of that party is constitutional liberty. It is very unpleasant, after all we have heard preached about Oriental misrule and fleecing the fellahin, to find that it is England and France who are doing the fleecing just now. Nor is it agreeable to be told that all our hopes about the suppression of the slave trade are doomed to disappointment, and that the traffic goes on increasingly in the Soudan and Equatorial provinces under the auspices of high Government officials. The chapter on the slave trade deserves to be well studied and acted upon.

The book, however commendable from a political point of view, is not equally praiseworthy as a contribution to literature. If the truth must be said, the person who has written least in it is the author himself. The volume is made up of a large number of cuttings from various newspaper articles and Cairo correspondents' letters, especially from the *Pall Mall Gazette* and from Mr. Wilfrid Blunt's and Sir W. Gregory's letters to the *Times*. Scissors and paste were in much greater requisition than pen and ink. A collection of extracts of this kind is sometimes very useful, and I believe it will do some good service in the way of correcting English opinion about the National party. And that the author should use his scissors upon another scissors-and-paste book—Mr. Griffin Vyse's *Egypt Political*, &c.—and select but one passage, and that one boiled down by Mr. Vyse from my own *Egypt*, I take to be a delicate compliment. But if the author had used Mr. Vyse's book anywhere, he could hardly have failed to pay a similar compliment to someone else, if not to me.

STANLEY LANE-POOLE.

*Recreations of a Literary Man; or, Does Writing Pay?* By Percy Fitzgerald. In 2 vols. (Chatto & Windus.)

DR. SOUTH told his gracious Sovereign, who wished he could have had time to make his sermon longer, that he could have wished for time to make it shorter. For the sake of his literary conscience, let us hope that Mr. Percy Fitzgerald sometimes wishes he had time to write less. By his own exultant showing, he has been a playwright, a dramatic critic, often "our own reporter," sometimes "special" on the Continent, contributor to "almost every magazine that has been born, died, or exists," and has learned the knack of writing decently and respectably on "painting, music, building, decorative art, dress, the classics, history, travels, the lives of other people, dancing, &c." The test of all this—pay. Mr. Fitzgerald finds that, the first difficulties of his career surmounted, he has been able to earn a comfortable yearly income by his versatility, and is happy. A man may do and be all this, however, and yet not entitle himself to the rank of an author; and books like this under review exhibit more characteristics of slop-work than of any genuine versatility. About a fourth in these two volumes is fairly substantial, and the rest is poor indeed, at times reading like third-rate journalistic work. In one respect the pages differ from the work of the anonymous journalist, for the journalist, like Mr. Weller, always spells his name with a "we," while Mr. Fitzgerald is complacently egotistical throughout. However, though apologies are not always excuses, in his Preface he begs indulgence for this fault; and perhaps he may have come across Richter's *dictum*, that "the author, unlike a partner, should always say 'I,' and no other word."

The problem to which Mr. Fitzgerald here brings the light of his own experience is the same burning question with which Mr. James Payn scorched his fingers in a memorable article. Half the world thinks it can write nowadays; and the hosts of governesses and poor clergymen's unemployed daughters, and ambitious clerks and schoolmasters, and people of the kind, who perpetually assail the letter-boxes of magazine editors, wish to know from some authority in the literature of the day what really is the average income made among men and women who write for their living. You will find, as a rule, that when you ask a man for advice he practically tells you to do as he has done; and that is the advice these anxious people have got from Mr. Payn, and get also from Mr. Fitzgerald. Mr. Payn has been a successful man, and so has Mr. Fitzgerald in his way; and thus, neither of them bestowing any nice care upon the calculation of averages, they both write in a strain that cannot but be very encouraging to such would-be *littérateurs* as wistfully turn to them for guidance. But it is a pity the question is not dealt with more exhaustively and authoritatively. It would form an admirable subject for a "symposium" in the *Nineteenth Century* if Mr. Knowles would get an editor or two, as well as successful authors—and perhaps an unhappy hack or so—to discuss the matter all through the many

grades of either utter failure and disappointment, or hard work and wretched pay, that make up the bulk—though generally invisible and disregarded—of the great society of letters represented to the public by a few favourite names. The literary market is overcrowded and glutted already with most kinds of brain work, except genius. Even Mr. Fitzgerald hints that the successes he had in his early days with Mr. Bentley and *Household Words* could not be expected in the like case at the present time, competition considered; and it is most likely that he is right. Somehow or other, the ingenuous reader of Mr. Fitzgerald's rather flimsy and not too grammatical pages may be apt to think, if he is ignorant of experience to the contrary, that this kind of thing will easily bring in six or seven or eight hundred a-year. That is the impression the book is calculated to give to the unwary, and therefore it has in this regard a mischievous tendency. In a much sounder strain, if rather cruel, was Mr. Tennyson's counsel to a young poetic aspirant: "You might write verses in your leisure hours, if you could find nothing else to do."

The best part of these *Recreations* is a chapter on "Charles Dickens as an Editor," which has appeared elsewhere—though there is no note in the book to indicate the fact, by-the-way. Occasionally, in talking of his friends or his dogs or his books, the author furnishes an anecdote that is amusing. This of Rogers the poet is excellent, though Dickens's high colouring is manifest in it:—

"Sometimes Dickens would go and dine with him, and he described the scene as piteously grotesque, a faithful man-servant cheerily suggesting the old stories which they knew by heart. Thus: 'Tell Mr. Dickens, sir, the story of the Honourable Charles Townshend and the beautiful Miss Curzon.' The old poet would start in a slow, almost Gregorian tone, and in curious old-fashioned phrase: 'The Hon-our-able Charles Townshend' (this name will serve as well as another) 'became enamoured of Miss Curzon. She was beeyewtiful. He beribed her maid to conceal him in her oheeamber, and when she arrived to dress for a ball, emerged from his hiding-place. She looked at him fixedly, then said, 'Why don't you begin?' She took him for the 'air-dresser.'"

There are some three or four stories in the book as good as this; but about the work as a whole there is little to be written in praise. The kindest thing to say regarding it is that those who know Mr. Fitzgerald at his best—as in his most popular novels—cannot but feel sorry that he does not care more to maintain his reputation as a literary craftsman.

ERIC ROBERTSON.

*Historic China, and other Sketches.* By Herbert A. Giles. (De La Rue.)

THE books on China are legion. Most of them have rushed down the steep decline of popular favour, and have been choked in the sea of oblivion. Besides mere journals of tourists, we have had dull books full of information laboriously collected; books, still duller, which displayed industry in collecting misinformation; books in which misinformation was collected without industry, which

were yet as dull as if they had been painstaking and accurate; and, lastly, we have had works of scholars which, caviare to the multitude, have only attracted the interest of a few score of serious students. The work under review belongs to none of these classes. It contains much information condensed into small compass, yet it is as amusing as a novel. The author is a scholar of no mean attainments; industry is, however, more conspicuous in his book than painstaking; the extent of his knowledge rather than his accuracy. Written in a picturesque style and vigorous English, the book is more fitted for the circulating library than for the student's bookshelf; to afford a fleeting entertainment than to be a work of reference. No book has hitherto been published which gives to an uninformed reader so lively and truthful a general idea of the Chinese people as Mr. Giles' sketches; but the reader must remember they are but sketches. The general effect is admirable, but a close inspection reveals many defects in detail; few books written by scholars contain so many mistakes. His system in studying a subject seems to have been to have skimmed through all the authorities close to hand, to have then put aside his books, and to have noted the impression left on his mind. He rarely takes the pains to verify the correctness of his memory or the accuracy of his statements; his conclusions are almost invariably correct, but he often forgets the process by which he formed them; his premisses seem after-thoughts, and are frequently open to challenge.

As specimens of want of painstaking, I note that he renders *Hu lu* by "Fiscal laws"—the *Hu lu* is the code regulating the *Hu* or households. In China, the group, and not the individual, is the legal unit; consequently, the code regulating households embodies all civil duties of households, among which paying dues and taxes is included. A more culpable piece of carelessness occurs in the following passage:—"The language in China is never written down *totidem verbis*;" in a note is added:

"Except in the case of farces, songs, parts of low-class novels, &c., in which a very near approach is made to the colloquial. The Bible itself has been published in the vulgar tongue of more than one province, thus becoming a literary absurdity in the eyes of all educated Chinese."

So far is this from being the case that the translation into the vernacular of the "Sacred Edict" (a treatise on ethics composed under the direction of the Emperor Kanghi) has been officially recognised, and should by law be read to the people at least once a-year. Many of the best-class novels are largely written in the colloquial. Mr. Giles cannot be ignorant of these facts. I can only assume that he "just at the critical moment forgot." Though almost all Chinese books on serious subjects are written in the "book language," it is worse than exaggeration to say that the Bible has become a literary absurdity because it has been translated into local dialects.

I entirely agree in Mr. Giles' conclusions that, without the sanction, tacit or expressed, of the people, no mandarin would venture to connive at outrageous cruelty (the same holds

good in all modern instances of Chinese cruelty; it is not the cruelty of the powerful ruling classes toward the helpless ruled, but the operation of a system intended solely to repress crime, and fully approved by the unanimous voice of the Chinese people); that the mandarins are highly intelligent, are bound to make themselves popular, and are, as a rule, highly respected by the native populace; and that they are generally kind-hearted and good-natured. I as entirely disagree with his premisses that bribery and corruption are not extensively practised; that torture is practically unknown; that the mode of execution known as *lingchih* (slicing to pieces) exists only on paper; that the ruling classes in China are, as a rule, materialists; and that educated and intelligent Chinese have no personal faith in superstitions.

The explanation of the extensive existence of bribery and corruption, the undoubted constant practice of torture and of the infliction of so barbarous a mode of punishment as slicing to pieces, is to be found, not in the moral turpitude of the Chinese mandarins, but in the democratic nature of Chinese institutions. To govern in accordance with the moral instincts of the people is the key-note of Chinese rule; and the moral instincts of the Chinese people are not as exacting as the moral instincts of Irish voters for the New York Municipality, and tolerate more corrupt practices than could exist in America. Although not cruel (except in times of great excitement), the Chinese are quite devoid of modern humanitarianism. To the physical sufferings of criminals and suspected criminals they are very callous; they are no more shocked at the practice of judicial torture and the infliction of death by slicing to pieces than our ancestors were at the practice of putting recusants to the question and of quartering and disembowelling traitors. The extensive existence of torture is proved, not only by its being sanctioned in the Chinese code, but by reports of law cases, by Chinese novels, and by the personal experience of most consular officers in China, and (what to an Englishman will seem most extraordinary) by witnesses sometimes requesting to be tortured to enable them to speak the truth without incurring the resentment of those to whom their evidence may be distasteful. With regard to the mode of execution known as slicing to pieces, I have heard detailed descriptions of it, not only from eye-witnesses, but from an executioner also, who stated he had himself put three criminals to death by that mode. As a general rule, a few flashes of a sharp weapon complete the operation, which only lasts a few seconds. In such cases there is less protracted suffering than in strangulation. The reason why *lingchih* and decapitation are regarded as severer punishments than strangulation is founded on a belief of social contempt entailed in the next world, and not on the consideration of physical pain suffered in this.

With regard to the faith in superstitions of educated Chinese it may be mentioned that only eight years ago the Viceroy of the Two Kwang spent £10,000 on the advice of soothsayers in repairing a pagoda in order to recover from dysentery. Again, it is not long since Li Hung chang, the man whom Mr. Giles cites as the leader of progress and the

embodiment of the most enlightened ideas, wrote a memorial to the Throne stating that several ears of corn had been found growing on one stalk, and proposing that, in commemoration of so auspicious an omen, the dynastic title of the Sovereign should be changed. High officers of State have recorded their solemn belief that departed worthies rose from the dead during the Tai p'ing rebellion, and led the Imperial armies to victory; and edicts from the Throne have been issued giving sanction to these superstitions by ordering temples to be erected to the aiding spirits. That great intelligence and high talents do not save the possessor from subjection to superstition can easily be proved; even in our own country it is not necessary to go so far back for examples as Mathew Hales' belief in witchcraft.

The error into which Mr. Giles falls in denying the possibility of committing suicide by "swallowing gold" is venial. The expression "swallowing gold" is so often used metaphorically that it is very pardonable to suppose that it can never be taken literally. I have, however, come across a case where suicide was actually committed by choking the throat with gold leaf. In 1867, at Ningpo, a clever scoundrel gave himself out as a new incarnation of Buddha; and, under the cover of simulated sanctity, which deceived his believers, he carried on a lucrative traffic in poisons, and assisted his less credulous patrons in the commission of secret crimes. After his arrest, so many respectable families were found to be implicated that the local authorities, not daring to investigate the matter themselves, sent him to the provincial capital for trial. On his way thither he managed to procure some gold leaf, rolled up into very small compass; this he unrolled, and choked himself with it. The body was allowed to be viewed by the public, so that no doubt can exist as to the mode of his death.

Mr. Giles' plan of attaching to each historic epoch a translation from a native work referring to that epoch was admirably designed. It would have been more satisfactory if he had explained the exact nature of the native books from which he gives extracts; the allusion to them in his Preface is not sufficient. The closer resemblance of the novel he terms "History of the Feudal States" to authentic history than other books in the same category says very little for its truthfulness; a man need not be very slim because he is thinner than Daniel Lambert. Again, the native work termed "The Published Edition of Judge Pao's Criminal Cases" is a very low-class book of fiction; the extract given from it is a translation of the first story in it; the succeeding tales are generally so full of the marvellous as to lose all trace of verisimilitude.

If we except the few pages devoted to the penal code, which he himself terms "rapid and insufficient," the least satisfactory portion of Mr. Giles' work is his sketch of the Chow and the Han dynasties. He here follows Mr. Wylie's notes on Chinese literature more than blindly; he is certain where Mr. Wylie exhibits scholarly hesitation. Yet Mr. Wylie only professes to give the views of learned

Chinese, and Mr. Giles professes to give the result of these views when melted down in the crucible of modern criticism. Much more doubt attaches to the authenticity of the alleged ancient books of China than is allowed to appear in the work under review. The author is on much safer ground when he treats of more modern times. English readers who are accustomed to have historic digests at hand can hardly conceive the mass of reading that is condensed by him in a few pithy sentences.

The chapters on "Education," "The Book Language," "Chinese Fans," &c., deserve high praise. Mr. Giles could doubtless have told us much more about them than he has; but, in the laudable determination not to be tedious, he has wisely kept in mind the Spanish proverb, and never writes to the emptying of his inkstand.

CHRISTOPHER THOMAS GARDNER.

#### VANDAL'S LOUIS XV. AND THE EMPRESS ELIZABETH.

*Louis XV et Elizabeth de Russie. Etude sur les Relations de la France et de la Russie au XVIII<sup>e</sup> Siècle d'après les Archives du Ministère des Affaires étrangères de France. Par Albert Vandal. (Paris: Plon.)*

For some years past the history of diplomacy during the eighteenth century has been in France the object of considerable research. The archives of the Foreign Office, instead of being jealously guarded, are now accessible to students; and a careful study of the documents they contain has given birth to some works that throw a new light on the relations of the European Powers during the eighty years immediately preceding the French Revolution. In the front rank may be placed *Le Secret du Roi* by the duc de Broglie, which has enjoyed a great and well-deserved success; and we may add that the further studies on this period now being published by M. de Broglie in the *Revue des Deux-Mondes* fully sustain his reputation. M. Vandal's book, although a maiden work, is worthy of the careful consideration of scholars, not merely because the subject is of great interest, but also for its depth of research, elegant style, and sound judgment.

The reign of the Empress Elizabeth is a landmark in Russian history, for it was then that Russia, having been rescued from barbarism by the genius of Peter the Great, who broke down, as it were, the three barriers—Sweden, Poland, and Turkey—which had hitherto kept his country outside the pale of the civilised world, first became a potent factor in the diplomacy and wars of Europe. Elizabeth was the daughter of Peter the Great; and in the reign of her mother, Catherine I., her hand, like that of many another Princess, had been offered to Louis XV. Although this match was only proposed to be abandoned, the young Princess fell in love with a portrait of the monarch, whose accession raised hopes that were to be cruelly disappointed, and who, in 1725, while yet gifted with the charm of youth, was regarded, not by France alone, but by all Europe, as a model of royal grace and beauty.

In the words of M. Vandal, "She gave him her heart, and never quite took it back." But we know that in that heart many less platonic passions were to find place. Some years later, when she had been dispossessed of the throne which was her birthright, she was greatly indebted to the good offices of the French ambassador—the adventurous marquis de La Chétardie—for the military revolution which restored her father's sceptre to her hands. The planning and execution of this revolution are detailed with absorbing interest by M. Vandal, from the despatches of La Chétardie. It is the opinion of M. Vandal that at this moment a sound and durable alliance might have been concluded between France and Russia; and that this league would have been firmly cemented by the personal gratitude of the Empress. But the necessities of such an alliance would have forced France to abandon one of her most cherished traditions of policy, which was to protect the lesser Eastern Powers who had served her as allies against the House of Hapsburg. Now these Powers—Sweden, Poland, and Turkey—were the natural enemies of Russia, who could increase her territory in Europe only at their expense. M. Vandal maintains that France should have sought an alliance with a young and vigorous monarchy, instead of concluding leagues with decrepit States. This new and bold theory is open to discussion. If a fresh departure in the foreign policy of France was essential, would it not have been better to have acquired the alliance of Austria, a Power whose influence in the East had ceased to be dangerous, and to have defended the rights of Maria Theresa when the War of the Succession broke out? It is needless to say that neither of these alternative policies were adopted. Louis XV. plunged into the War of the Succession without the alliance of Russia, who quickly espoused the cause of Maria Theresa and furnished her with valuable assistance. France fought for the sole advantage of the self-seeking prince, who deserted her before the war was even over—as soon as Silesia had been won. When, eight years later, hostilities once more broke out between France and her persistent foe during the eighteenth century—England—Frederick took the side of the latter against his old allies. Thus France was of necessity surprised, as it were, into a league with Austria and Russia. She had to fight a losing battle. While her different colonies were falling one by one into the hands of the English, the untiring Frederick held in check the allied armies which had invaded his dominions. It should have been the care of France during the Seven Years' War to quicken the zeal of her allies, and to try and balance her colonial disasters by a decisive victory in Europe. Notwithstanding their feeble and halting policy, this was the real aim of the Ministers of Louis XV., the cardinal de Bernis and the duc de Choiseul. But, as we know, Louis XV. had a policy of his own distinct from that of his Ministers. The French envoys at St. Petersburg received not only the instructions of their official superiors, but others in a directly opposite sense from the King or his confidential advisers. Louis was alarmed at the growing military power of Russia, and at the danger it foreboded to Poland, forgetting that

in Frederick the kingdom had an equally dangerous enemy. Not only did the King oppose—as, indeed, did his Ministers—all projects for the aggrandisement of Russia at the expense of Poland, but any action likely to have the effect of “checking the operations of the Russian forces.” Such are the very words of a memorandum by the King to his ambassador at St. Petersburg on the eve of the Russian entry into Berlin. The secret policy of Louis XV. is laid bare by M. Vandal with a fullness of detail that leaves nothing to be desired; and he clearly shows its effect in contributing to the isolation of France after the Seven Years’ War, and in paving the way for the triple alliance between Russia, Prussia, and Austria. This league was concluded on the death of Elizabeth, and was firmly cemented by the first partition of Poland.

M. Vandal’s book throws a new and important light on this portion of the history of the eighteenth century; and although, as has been already remarked, this is not its sole merit, yet that alone should suffice to ensure its careful perusal. CH. DE LOMÉNIE.

#### NEW NOVELS.

*Corbie’s Pool.* By Susan Morley. In 3 vols. (Bentley.)

*A Foregone Conclusion.* By W. D. Howells. (Edinburgh: Douglas.)

*Iris.* By Mrs. Randolph. In 3 vols. (Hurst & Blackett.)

*Changes and Chances.* By Mrs. Carey Brock. (Seeley, Jackson & Halliday.)

MISS MORLEY’S novel is, on the whole, so good that we cannot but wish she had ruthlessly pruned it and made it still better. About half of the second volume might have gone without detriment to the story, and much of the third might have been advantageously compressed. The opening scene, too, strikes us as a little unfortunate. Mr. Carr, vicar and widower, of comparatively humble birth, is discovered by the reader in the act of proposing to the widowed Mrs. Leigh, who belongs to what the Americans call “the first families.” To be more accurate, the proposal itself is not given, but only the subsequent conversation in which the lady is described as “naming and insisting on the day,” while the gentleman is placing before her the drawbacks of the situation in such forcible language that we only wonder why, if he realised them so clearly, he should ever have proposed at all. Once launched on her story, however, Miss Morley sails along smoothly enough. We have noted with gratitude and pleasure that there is not one passage of personal description, and hardly one descriptive of scenery, throughout the book. The characters, with the exception, perhaps, of Mrs. Leigh and the two heroes, are drawn clearly and firmly; and Miss Morley has been specially clever in her sketches of character in conversation, and in showing the slight, but almost inevitable, colloquial distortions of the facts. Her heroine, Alice Brandon, is a growth of modern days, but spirited and pleasant, a girl whom circumstances have forced to bring herself up, and

who has, by way of self-defence, unconsciously exaggerated the hardness natural to youth. The reader does not long remain in doubt as to the romance which is to soften her. When a gentleman in a novel professes his strong (theoretical) disapproval of a given young lady, we all know how it will end, and in the same way discover the obstacle to their happiness; but it would not be fair on Miss Morley to disclose more of her story. As we have said, the pages devoted to the description of Bertie Chaloner’s accident seem to us disproportionate. It adds nothing to the story, nor much to the development of Alice Brandon’s character, and her relations with Colonel Myddleton. We must also object to the behaviour of Mrs. Leigh, afterwards Mrs. Carr. She is represented as a scheming woman whose schemes have been tolerably successful. Now, to a woman of this sort, tact and self-control are the basis of all her success, and we are told that Mrs. Leigh had neither; but, over and above this, she had had the training of a lady, which would surely have rendered it impossible for her to scold as she does in vol. ii., p. 148. In spite of these drawbacks, however, *Corbie’s Pool* has given us much pleasure. It is written in good English, in a straightforward way, and Miss Morley has not fallen into the common mistake of painting monsters who, for good or evil, are unlike anything that exists either in heaven or earth.

*A Foregone Conclusion* is one of those American novels which interest us and pique our curiosity, and leave us a little dissatisfied at the end. We cannot help wondering if American people are such enigmas; and we are a little provoked when a heroine such as Florida Verdain, who on her first appearance is rather uninteresting, develops all kinds of attractions towards the middle of the book. Even to the end, however, we infinitely prefer another of Mr. Howells’ young ladies, Kitty in *A Chance Acquaintance*, who has that charm which is apparently so rare over the water—spontaneity. *A Foregone Conclusion* is, however, rich in all the qualities which belong to books of this kind, and make them preferred by many readers to every other. It is subtle and full of analysis; every touch tells, and the whole is put together with the utmost care; only, in spite of beauty in the covering of skin and flesh, we can see, as we do in some human faces, the shape and form of the skull beneath, and the suggestion is unpleasant. Of the four persons whose fortunes are linked together in the novel, the portrait of the priest is the truest to nature, and he is half a woman. His doubts and vacillations and half-shy enthusiasms are most delicately drawn; while the more vigorous part of his nature, if it existed at all, had been effectually repressed by his training. Ferris, the hero, is by no means so attractive a sketch. Indeed, we are sorry to say that he is by no means a gentleman; most ladies would have shrunk from the familiarity of his manner; and the “conclusion” would most certainly have been “foregone” in another sense than that meant by the author.

*Iris* differs as much from the two novels which we have been considering as they do from each other; yet it is amusing from its

very unreality. Iris Netherleigh is the daughter of one Mrs. Pleydell, and divides the honours of heroine with her half-sister, Eve. Their dispositions are different in every respect. Iris is tall and intellectual, incapable of playing lawn-tennis, afraid of riding, ignorant of cricket, and altogether about as dreary a young person as we were ever called on to admire. Eve is an adept in all sports, particularly in rowing. She is small and slight, and her eyes have the chameleon-like property of changing from “brown and velvety” to “large and blue” (for “brown” see vol. i., p. 55, vol. ii., p. 221; for “blue” see vol. ii., p. 33, vol. iii., pp. 25, 169). This young lady had been brought up by an aunt in London and allowed to do everything that was right in her own eyes and wrong in those of most other people. In consequence of the fraudulent bankruptcy and flight of her uncle, she was sent back to her mother’s house, with a view of “the exquisite outline of the Rockshire Hills”—a mountain chain to which Mrs. Randolph is incessantly referring. Here, while rowing between “the thickets of golden iris which fringed the banks” of a stream (in August!), she made acquaintance with a gentleman with a false name who inhabited a romantic cottage near the river, and speedily fell in love with him. Their endearments were, however, perceived and frowned upon by two men, one of whom was the lover *in esse* and the other the lover *in posse* of Iris, and by a dark lady who likewise inhabited the cottage, and is described subsequently by her reputed husband, Mr. Urban, or Esmond, as he is called, as his sister who had married a cousin of the same name. On his death, she had gone mad—madder than anyone ever went yet, we should say, for she persisted in thinking her brother was her husband; while he, on his part, “thought it would create less scandal in the neighbourhood if he allowed it to be believed that she was wife.” Credulity must have been inherent in the Pleydell family, for not only is this story accepted by Eve, but afterwards we find her cousin Tom entering into partnership and daily communication with a gentleman with swarthy complexion and light blue eyes, who turns out to be the fraudulent bankrupt and his own father. Must we understand that Mr. Pleydell, senior, had been dumb during all the years of his pre-fraudulent existence? Iris, who has been kept a good deal in the background, is ultimately rewarded for the faithlessness of one lover by a coronet bestowed on her by another. We were rather startled by the end of the book, for selfish, egotistical, pleasure-loving people such as Eve, who could only bestow on her lover “all the love that was not centred on herself,” are not the stuff of which suicides are made. We think in real life the conclusion would have been very different.

*Changes and Chances* is not much truer to nature than *Iris*. Mrs. Carey Brock seems possessed with the idea that drawing-rooms are places only to be used for company, and that really well-disposed people are content with a “sitting-room” or “parlour,” wherein each member of the family may pursue his own occupations. She also lovingly describes

"a charming study" made beautiful for ever by a small sum spent on plaster-of-Paris casts and chromo-lithographs. And this is not even all, for we are told how the hero falls in love with a coloured photograph. This work of art must have been strikingly different from all the coloured photographs we have seen ourselves, which were calculated to produce an exactly contrary effect. *Changes and Chances* is a temperance story, full of references to subjects which are better avoided in a work of this sort.

LEONORA B. LANG.

#### RECENT HEBREW LITERATURE.

*System der altsynagogalen palästinischen Theologie aus Targum, Midrasch und Talmud.* Dargestellt von Dr. Ferd. Weber. Nach des Verfassers Tode herausgegeben von Franz Delitzsch und Georg Schnedermann. (Leipzig: Dörffling und Franke.) Dr. Weber's volume, as the editors justly remark, is the first attempt to present a fair and systematic exposition of the later Jewish theology; most previous works, if they were not fragmentary, laboured under the greater disadvantage of being polemical. The treatise before us possesses high merits. It is lucid and methodical; it is based upon an independent study of the original authorities; and care is taken throughout to distinguish historically the successive stages in the growth of particular doctrines. An Introduction describes generally the nature and value of the principal sources. The body of the work is divided into two parts. In the first part are expounded the fundamental principles of post-Biblical Judaism; the unique position assigned by it to the law; the views currently held on inspiration, tradition, interpretation, and authority. The second part deals in order with special doctrines; for example, the nature and attributes of the Deity, the constitution of human nature, the scheme of salvation, and the future life. Among the sections which seem to us particularly interesting or valuable we may specify 19 (the relation of the Gentile world to Judaism), 37 (the "Metatron"), 38, 39 (the Memra or Logos, and the Shechina), 59-63 (good works, the idea of "merit"), and the chapters treating of the Jewish doctrine of the Messiah, and of eschatology. The comprehensive character of the work will be manifest from this sketch. It introduces us, in fact, to the theoretical principles underlying the aggregate of theological opinion which was gradually built up by the teachers of the Jewish nation; it traces for us the influences by which their beliefs, as time went on, were more and more definitely moulded; it discloses to us the processes by which a new and gigantic system was reared on the ostensible basis of the Old Testament, and exhibits its different elements in their logical connexion and development. That the exegesis is often arbitrary, that there is no historical sense, no estimate of probabilities, is obvious. Still, if we are willing for the time to hold our right of criticism in abeyance, we may not unfrequently perceive a true idea expressed in a fanciful or unhistorical form; and, whatever the intrinsic value of the methods employed, it must be recollected that they satisfied those who used them, and that the results obtained became in many cases accepted articles of the Jewish creed. The ideas and phraseology of the New Testament receive frequent illustration, directly or indirectly, in Dr. Weber's pages. We may instance the spiritual prerogatives attributed to Abraham (pp. 257 *et seqq.*), and the theory of justification (pp. 209 *et seqq.*), at once a contrast and a parallel to the Pauline doctrine. On the Jewish belief with reference to Gehenna, Dr. Weber does not add substantially to what has been

recently expressed in this country by Dr. Pusey; he shows that the general opinion has been that for the covenant nation it is a purgatory, but does not trace this view back beyond R. Akiba in the second century. That the passage of Isaiah (lxvi. 23) from which R. Akiba derived the limit of twelve months has no bearing on the question is, of course, apparent; but his exegesis is not more inconclusive here than on many other occasions; and it is more to the purpose to observe that the Targum, which usually embodies the oldest traditions, has no hint of such an interpretation, but translates quite literally. (Those interested in the subject will find a curious rendering in the Targum of the following verse, which may be compared with those given by the Syriac and Jerome.) In spite, however, of its precarious foundation in Scripture, R. Akiba's opinion on this point undoubtedly became the prevalent one. For further particulars we must refer our readers to the volume itself. We have only to add in conclusion that the work abounds in citations, which are nearly always translated *in extenso*, and to express our conviction that it will at once take its place as the standard authority upon the subject.

*A Treatise on the Accentuation of the Three so-called Poetical Books of the Old Testament—Psalms, Proverbs, and Job.* By William Wickes. (Oxford: Clarendon Press.) In the spirit of genuine scholarship, Dr. Wickes, after having devoted many years to the study of his subject, and having visited the principal European libraries for the purpose of a comparison of MSS., states the results of his investigations in the treatise before us. A more lucid or masterly exposition of a complicated subject could scarcely be imagined. Within the compass of 100 pages the nature and functions of the accents generally, and the laws regulating the use of each in particular, are comprehensively discussed and abundantly illustrated. Apart from its method, the characteristic merit of this treatise is the attention paid throughout to the logical value of the accents, which are shown to be the exponent in any given verse of its logical articulation. Chaps. iii. and iv. (on the dichotomy) are, from this point of view, most instructive, and contain much which, so far as we know, has not been observed before. Doubtless the accents were designed primarily as a guide to correct cantillation, but in fulfilling this function they marked also the development of the sense; they "kept apart for distinct enunciation the several members of a syntactical clause, at the same time giving emphasis where it was due" (p. 51). For the expositor this is their most important aspect. Though not of final authority, and occasionally arbitrary, they embody the traditional interpretation which was current in the centuries succeeding Jerome, and which is generally confirmed by its intrinsic probability. Numerous errors have, however, crept into the ordinary editions of the Hebrew Bible in the matter of accentuation; and though many of these have been corrected in the accurate texts of particular books published by Baer, others still remain, which the wide inductions established by Dr. Wickes enable him at once to detect. His lists of "Corrigenda" are interesting; they show how, in almost every instance, the changes demanded by logic are supported by MS. authority. In chap. xvii. (and elsewhere) the curious and important principle of "Transformation" is explained. And in an Appendix is given the original Arabic of the treatise on accents attributed to Ben Bil'am, which Dr. Wickes was fortunate enough to discover in St. Petersburg, and by aid of which many mistakes in the Hebrew translation can be rectified. Technical details would be unsuitable here. It is enough to say that Dr. Wickes' treatise will be indispensable to all who would read aright

the accentuation of the three books, and to express our hope that he may one day supplement it by another devoted to that of the remaining twenty-one.

*Abraham ibn Ezra als Grammatiker.* Von Dr. Wilhelm Bacher. (Strassburg.) An exhaustive and methodical analysis of the grammatical principles by aid of which Ibn Ezra explained the language of the Old Testament, preceded by a sketch of his life and chief philological works. Ibn Ezra's power and originality, the high authority enjoyed by him as a native Jewish grammarian, the important place which he occupies in the history of Hebrew grammar, are well known; and those who have occasion to study the subject will obtain from Dr. Bacher's treatise the fullest information which they can require. No point is left unnoticed, and every statement is confirmed by abundant references to passages in Ibn Ezra's writings. Appendix iv., we may notice, enumerates the Hebrew words derived by him from Arabic, while in appendix v. are collected his principal references to previous grammarians.

*Outlines of Hebrew Syntax.* By Dr. August Müller. Translated and edited by James Robertson. (Glasgow: MacLehose.) We congratulate Prof. Müller on the speedy appearance of the second part of his *Hebräische Schulgrammatik*, which was published by him in 1878, in an English dress. It may be recommended as an able and thoroughly trustworthy introduction to Hebrew syntax. While not intended to compete with the larger work of Ewald (which is only suitable for more advanced students), it is in many respects decidedly superior to the corresponding parts of the Grammar of Gesenius current in this country. Not only is the arrangement more systematic and scientific, but principles obscurely or imperfectly treated in Gesenius are here made duly prominent, so that the student is at once able to appreciate their importance. The explanation of the tenses and moods, of apposition, of circumstantial and conditional sentences, may be referred to as illustrating what we say. Indeed, the framework is so excellent that we regret the author has not allowed himself an occasional amplification in matters of detail; perhaps in a second edition he may be able to do this. Prof. Müller's Syntax will form the natural sequel to Prof. A. B. Davidson's *Introductory Hebrew Grammar*, the exercises in which constitute an invaluable feature; and the two works together cannot be too highly commended as a sound and practical introduction to the language with which they deal.

*Historisch-kritisches Lehrgebäude der Hebräischen Sprache mit steter Beziehung auf Qimchi und die anderen Auctoritäten.* Von Dr. Fr. E. König. Erste Hälfte. (Leipzig.) So comprehensive is the scale upon which Dr. König's work is conceived that the first instalment, though extending to 700 pages, embraces substantially nothing beyond the theory of the vowel-system and the verb. The reason of this diffuseness is that, in addition to affording a complete repertory of the forms, regular and anomalous, occurring in the Hebrew scriptures, Dr. König includes within his plan a discussion of the opinions expressed by the principal authorities upon difficult or controverted questions; thus the views entertained by Kimchi, Ewald, Olshausen, Böttcher, &c., either upon irregular forms or on the origin of different verbal formations, can be learnt at a glance from Dr. König's book. It is, in fact, as he claims in his Preface, "a commentary on the chief current Grammars" of the language; and this feature constitutes its characteristic excellence. It will be most valuable for purposes of reference, and greatly alleviate the labour of independent enquiry. In his treatment of particular anomalies, Dr. König fully

concedes the presence of corruptions in the text—e.g., pp. 160, 266, 430, 455; but while right in refusing to assume such too readily, he appears to us to go too far in defending forms when they are contrary to analogy, and defy reasonable explanation—e.g., pp. 184, 300, 305 (p. 567, it is not clear whether the Rabbinical notes are cited seriously or only as curiosities). But the author's method throughout is too much that of the compiler. His judgment is distinguished by minuteness rather than breadth. His attention is so concentrated within a particular range that facts lying outside it are apt to be neglected. Thus nothing is added by him to the analysis of the tense-forms; and he seems unaware of the superior form in which even his own theory (p. 156) of the 3 impf. is stated by Philippi (*Z. d. M. G.*, xxix., pp. 171-74). No illustrations are offered from the cognate dialects of the perf. in *-an* (p. 151); no allusion is made to Noldeke's opinion on the form *gómém* (*Z. d. M. G.*, xxx., p. 184), or (even in the *Zusätze*) to Delitzsch's article on the epicene *hu'* (*Ztschr. f. kirchl. Wissensch.*, 1880, p. 393), or to Lagarde's conjecture on Isa. xv. 5, &c. Yet to acquaint the reader with such scattered notices would surely be more useful than the continual citation of opinions, to be found in books that are in everybody's hands, upon all sorts of unimportant issues. But Dr. König has no sense of proportion. The most patient reader is wearied at last with trivialities from Mühlau-Volck, and the endless registration of omissions in Stade—to say nothing of minor grammarians—all conscientiously recorded in Dr. König's pages. And the translation of every example throughout the book—a novelty specially alluded to in the Preface—is as tedious as it is useless; for it is certain that no one who requires still to be told the meaning of the commonest Hebrew words will ever make use of the present treatise. These, however, are defects of form which do not affect our judgment of the usefulness of the work as a whole. But we hope that in his next volume the author will be more independent and discriminating, and will discard without commiseration facts which, however true, are not worth recording.

*Notes chiefly Critical and Philological on the Hebrew Psalms.* By W. N. Burgess. Vol. II. (London.) The author is a fair, if sometimes fanciful, Hebrew scholar, who shows that he is able to read his Hebrew Bible not without profit, and that he is alive to the importance of comparing the text with the ancient versions, especially the Septuagint and the Syriac. More praise than this we fear we cannot bestow. The notes are slight and partial; questions of interest or difficulty are very inadequately discussed, and there is throughout a deficiency in originality. The volume will not supersede the many superior commentaries already existing, and its chief value consists in the proof afforded by it of the benefit which the author's studies have been to himself.

S. R. DRIVER.

#### NOTES AND NEWS.

THE two first volumes of Prof. Knight's edition of Wordsworth are in the press; but, owing to the discovery of important details, illustrative of the poems of 1801, 1802, and 1803, chiefly derived from the MS. journals of Dorothy Wordsworth, the publication is delayed for a few weeks.

THE Historical Committee of the General Assembly of the Irish Presbyterian Church have resolved to publish the extant minutes of the Synod of Ulster, which are complete in MS. from the Revolution of 1688 to the Union of the Synods in 1829.

PRINCE KRAPOTKINE is preparing a second article on the "Russian Revolution" for the *Fortnightly Review*. He will also write the chief Russian articles for the new edition of the *Encyclopaedia Britannica*.

MESSRS. SAMPSON LOW are about to publish in two volumes *From Benguela to the Territory of Jacca*, which will be a sequel to Major Serpa Pinto's *How I crossed Africa*. The authors, H. Capello and R. Ivens, are Portuguese naval officers who were with Major Pinto at the outset of his journey.

MR. ROBINSON ELLIS is to receive an honorary degree of LL.D. from Trinity College, Dublin.

MR. T. P. TASWELL-LANGMEAD has been appointed Professor of Constitutional Law and History in University College, London, and Mr. Frederick Pollock Professor of Jurisprudence. Prof. Lankester has been re-appointed to the Chair of Zoology and Comparative Anatomy. The council have instituted a Professorship of Civil Engineering and Surveying.

WE understand that the next part of the *Anecdota Oxoniensia* series will be "Aristotle's Physics, Book VII.; a Transcript of the Paris MS. 1859, Collated with the Paris MSS. 1861 and 2033, and a MS. in the Bodleian Library, with an Introductory Account of these MSS." by Mr. Richard Shute, Senior Student and Tutor of Christ Church.

PROF. SHELDON AMOS has in the press a volume entitled *The Science of Politics*, which will be published in the "International Scientific Series" as a companion volume to his well-known *Science of Law*.

THE third part of Cassell's *Encyclopaedic Dictionary* has just been finished by Mr. Herrtage and Dr. Hunter. It comes down to *Conce*.

MESSRS. LONGMANS announce as in preparation a book upon the Irish Massacres of 1641, their causes and results. It will consist of a selection from the depositions preserved in MS. in the library of Trinity College, Dublin, with an Introduction by Mary Hickson, and a Preface by J. A. Froude.

THE same publishers also have in the press a volume of private notes of Francis Bacon, believed to have been written about 1594, and hitherto unpublished. They have been edited, with illustrative passages from Shakspeare, by Mrs. H. Pott; and Dr. Abbott has written a Preface.

A NEW edition of *Virgil*, with an Introduction and Notes, by the Rev. T. L. Papillon, Fellow and Tutor of New College, will be published almost immediately, in two volumes, by the Clarendon Press. The text is based on that of Ribbeck, with certain modifications; and in the Commentary, which is intermediate in quantity between those of Prof. Conington and Dr. Kennedy, special attention is paid to questions of textual criticism and orthography. The book is dedicated to Archdeacon Palmer.

MESSRS. HURST AND BLACKETT will shortly publish a three-volume novel by Shirley Smith, entitled *Redeemed*, and *Fortune's Marriage*, by Georgiana M. Craik, author of "Anne Warwick," &c., also in three volumes.

MESSRS. TINSLEY BROS. have in the press a volume entitled *Tales and Traditions of Switzerland*, by Mr. William Westall, author of *Tales and Legends of Saxony and Lusatia*.

MR. JOHN MACDONELL, barrister-at-law, and author of *A Survey of Political Economy* and *The Land Question*, has in preparation a work on *Master and Servants*.

MISS TEENA ROCHFORD SMITH, of Cheltenham, will present her fellow-members of the New

Shakspeare Society this year with the Parallel-Text edition of *Hamlet* on which she has been for some time engaged. It will consist of reprints, in parallel columns, of Quarto 1, Quarto 2 (the real *Hamlet*), and Folio 1, with a revised text in old spelling—that of Quarto 2. All differences and changes from Quarto 2, which is treated as the foundation text, will be marked in the other versions by a different type.

THE first meeting of the Oxford Browning Society this term was held at Christ Church on Thursday week last, May 11, the Rev. H. S. Holland being the host of the evening. Mr. Arthur Sidgwick proposed, and Mr. Holland seconded, a vote of thanks to Mr. Furnivall for his present of fifty copies of the second edition of his *Browning Bibliography* to the forty members and ten honorary members of the society. Mr. J. W. Mackail, of Balliol, then read an able and amusing paper on "Sordello," and a good discussion followed. At the second meeting it is probable that "In a Balcony" will be read.

THE Cambridge Browning Society met on Friday, May 12, when the Rev. J. D. Williams read a paper on the "Blot in the Scutcheon." He compared Gwendolen Tresham with Beatrice in "Much Ado about Nothing." Dr. Waldstein, says the *Cambridge Review*, paralleled the play with *The Mill on the Floss*, showing the tragic result in both cases of an attempt to subject human passion to a hard and low idealism—in Browning's work to chivalry, in George Eliot's to respectability as embodied in the mill and its owner.

MR. FRANCIS GEORGE HEATH has accepted the editorship of the *Journal of Forestry*, the new volume of which, just commencing, will give considerable space to all subjects interesting to lovers of the country.

SIR BARTLE FRERE will read a paper on "Systems of Land Tenure in Different Countries" at a meeting of the Anthropological Institute which will be held on Tuesday evening next at 4 Grosvenor Gardens, the residence of Gen. Pitt-Rivers, President of the Institute.

MR. GLADSTONE has been elected an associate member of the Royal Academy of Belgium, in the department of literature, in the room of Lord Beaconsfield.

THE *Critic* states that Mr. Edmund C. Stedman sailed from America for this country on May 6. We trust that he has not come to collect materials for another article in *Harper's Magazine* similar to that in the current number.

THE June number of the *Century* will print an unpublished poem by Longfellow, consisting of a single verse, which the editor recognised above a rustic well at Shanklin, in the Isle of Wight.

MR. CHARLES LELAND will shortly publish with Messrs. Houghton, Mifflin and Co., of Boston, U.S., a volume embodying his studies of Gipsy life and character in Europe and the United States.

A QUARTERLY journal, devoted to historical and antiquarian research, is to be started this summer by the Genealogical Association of Pennsylvania and New Jersey, under the editorship of Mr. O. R. Hildeburn.

THE Historical Society of La Suisse romande has lately held its annual meeting at Morges, on the Lake of Geneva. This place was partly selected on account of the fine collection of "Pfahlbau" remains discovered in the locality. The polished stone and bronze hatchets, and the tools for working ornaments in stone and metal, are worth seeing. M. Huc-Mazalet and M. de Muvalt read papers on Frédéric César La Harpe, the Director of the Helvetic republic of 1798, and the educator of the Czar Alexander

I. of Russia, who belonged to a patrician family of La Vaud. M. Huc-Mazalet treated of La Harpe's diplomatic journeys, and his endeavours to win the Czar to take a firm stand on behalf of the neutrality of Switzerland against the machinations of Metternich. M. Favey gave a sketch of the latest literature upon the St. Bartholomew massacre. The direct participation of the Swiss was declared by M. de Cronsac to be an ugly fact placed beyond all doubt. Three Switzers—a Züricher, a Glarner, and a Freiburger—at the command of the duc de Guise, murdered Admiral Coligny in the night of August 24, 1572. It has been further proved, however, that, although 230 Switzers who were at the time enlisted in the capitulated regiments in Paris may have shared in the plundering of the Huguenot houses, none of them, except the above three, took any part in the work of massacre. M. Favey gave some reasons for believing that the picture of the "Bartholomew Night" in the Arland Museum at Lausanne was painted by an eye-witness.

THE Queen of Roumania has published, under her usual pseudonym, Carmen Sylva, a novel entitled *Ein Gebet* (Berlin: A. Duncker).

M. TAINÉ'S *History of English Literature* has been translated into Hungarian by the well-known Magyar dramatist, M. G. Csiky.

WE have received the prospectus of a new edition of *Du Cange* by M. L. Faure, who has already edited several old French Glossaries. It will be based upon the text of 1733-36, with all available additions and improvements. At the end will be given the German-Latin Glossary of von Westenreider, published in 1811. It is proposed to issue the work in ten quarto volumes of about 600 pages each, at the rate of two volumes a year. Subscriptions will be received in this country by Mr. David Nutt.

M. ACHILLE LUCHAIRE has compiled from contemporary documents an elaborate chronology of the events of a single year (1150) of the reign of Louis VII., thereby correcting many errors that appear in all Histories.

SIG. GENNARO FINAMORE, author of a vocabulary of the dialect of the Abruzzi, has just published (Lanciano: Carabba) the first volume of a collection of "Tradizioni popolari abruzzesi." It contains fifty-two *novelle* or country tales, written down by Sig. Finamore from the lips of the narrators in eleven different places. To each is prefixed a notice of the locality, of the dialect, and of the variants to be found in other parts of Italy. This work forms a worthy complement to those of Comparesetti and Pitre. The author proposes to follow it up with three more volumes, giving country tales in verse, songs, and proverbs.

THE Rev. Dr. Badger has recently delivered a course of five lectures on his own travels in Palestine, at the school-room, West Bradley, Somerset. In the first lecture he described ancient Melita (Malta) and his voyage therefrom to Joppa (Yafa), and thence by the traditional Arimathea (Rámleh) and Emmaus (Emwás) to Jerusalem. The second lecture was devoted to ancient and modern Jerusalem and the interesting Scriptural localities in its immediate neighbourhood. The third, the route to Jericho, the Jordan, the Dead Sea, and the Convent of Mâr Sâba. The fourth, Rachel's Tomb, Hebron, the Pools of Solomon, and Bethlehem. The fifth, the route from the Holy City to Bethel (Baitin), Shechem (Nâbulis), Samaria (Subust), Jezreel, Nain, Mount Tabor, Tiberias, Cana of Galilee, and Nazareth, and from thence by Acos (St. John d'Acres), Tyre, and Sidon to Bairût. The lectures were illustrated by Newton and Co.'s patent phantasmagoria lantern and seventy-two slides, and were attended by a highly appreciative audience from the neighbouring towns and villages. We

venture to think that similar illustrated lectures on Bible scenes and history might be introduced with happy effect in many of our country parishes.

#### ORIGINAL VERSE.

IN MEMORIAM LORD FREDERICK CAVENDISH,  
*Foully Murdered in Ireland, May 6, 1882.*

I LOVED thee, Cavendish! in cloistered halls  
Our youthful steps consorted; afterward  
Our ways were parted, but my heart kept guard  
Over thee, friend, hearing thy firm footfalls,  
Expectant till the hour thy country calls  
To arduous honour, even to watch and ward  
Beside her sacred person; nor too hard  
The post for whom strong-souled no fear appals.  
Ah! leal and gentle, unvaunting, kindly, pure!  
A later Perceval! ah! lovely spirit,  
A white ensign of amity thy hand  
Bore to the poor mad Murderess! no cure  
For frenzy-fire, a very goad to stir it!  
In thy true heart she plunged the treacherous  
brand!

Cold in thy coffin! and the spring is here!  
Blasted in all the promise of thy prime!  
With healthful sinews patient braced to climb  
The loftiest heights of service! on the bier  
Thy brow shows tranquil, as thy soul is clear!  
Remembrance holds thee in thy youthful time,  
Crowned patriot martyr by infernal crime!  
Where thou hast fallen is a field of honour!  
Justice and Peace to yon distracted isle  
Love proffered, and she struck the felon blow;  
Yet there is hope; Saul's demon mood was on her;  
But sobered, shocked to find herself so vile,  
Kneeling she weeps o'er whom she hath laid low.  
The olive branch may rise a sheltering wood,  
Baptised, dear hero, in thy sacred blood!  
While arm-in-arm the sister isles may move,  
Wearing twin roses, sunned in thy warm love.

RODEN NOEL.

#### OBITUARY.

DR. JOHN BROWN.

THE news of the death of the author of *Rab and his Friends* will come as a painful shock to a singularly wide circle of personal friends, and to the yet wider circle of readers, both in this country and abroad, who knew him only through his genial and delightful writings. Though Dr. Brown was an old man, and his health had been for many years feeble and uncertain, it seemed as if he had entered on a period of peaceful and productive evening quiet. He was relieved from the greater part of his professional duties, and had returned to literary work which had been long discontinued, preparing for the press the collected edition of his works recently issued, and writing a Preface to a series of calotype portraits to be shortly published—a task for which he was specially qualified by his interest in art and his comprehensive knowledge of the Scottish society of the last generation. A few days ago he caught cold. At first no danger was apprehended, but congestion of the lungs set in, his enfeebled frame speedily succumbed, and he passed from us on the morning of the 11th inst.

Dr. Brown was born at Biggar on September 22, 1810, the descendant of a long line of Secession clergymen who were well known and greatly respected in Scotland. His father removed to Edinburgh, where he was long the esteemed and eloquent minister of Broughton Place Church. The son was educated at the High School and University; and after serving an apprenticeship with Mr., afterwards Professor, Syme, his attached and life-long friend, he spent a year as an assistant surgeon at Chatham. There is an anecdote connected with this period which is worth preserving. Many years afterwards Dr. Brown met Charles Dickens for the first and, I think, the only time. The

conversation turned on nationalities, and Dickens said that he had been cured of any Cockney prejudice against Scotchmen which he might have had by the heroic conduct of a young Scotch surgeon which he had witnessed at Chatham during the cholera time. Strange to say, this young surgeon was none other than the friend to whom he was telling the story. Returning to Edinburgh in 1833, Dr. Brown graduated as M.D. and began to practise as a physician. His leisure was occupied with literature. The history of the touching little tale with which his name is always associated is a curious one. He had been asked to give a lecture to a country audience, the congregation of a clerical friend. He recalled a memory of his student days, and embodied it, no doubt with this and that touch of "added artistry," in a little story, which was written at speed through one brief midsummer night—much as we have been recently told Rossetti wrote his *Hand and Soul*—and read somewhat nervously and ineffectively to his rustic listeners, upon whom it fell strangely flat. It was only when published that the story obtained immediate recognition as one of the most perfect and pathetic of modern tales, going directly to the hearts of all classes of readers, and attaining a well-nigh unparalleled number of editions. Along with his kinsmen, Dr. Samuel Brown, the chemist, and Mr. John Taylor Brown, Dr. Brown was a contributor to the *North British Review*. Such of his articles as "A Jacobite Family," "Arthur Hallam," and the inimitable "Marjorie Fleming" were collected in 1858 and 1861 in the *Horae Subsecivae* volumes, along with various character-studies of medical worthies which first appeared in the *Edinburgh Medical Journal*; but one remarkable contribution to the *North British* is still to be found only in its columns—an able and eloquent review of the first volumes of *Modern Painters*, the first important public recognition which the work received.

Like Landor, Dr. Brown "loved first nature"—human nature—"and after nature art." Next in value to his studies of humanity and its environments are those which deal with the painter's reflections of them. Among such papers are the essays on Leech and Raeburn and the more fragmentary "Notes on Art" selected from the reviews of the Scottish Academy's exhibitions contributed to the *Witness* newspaper in 1846 at the request of Hugh Miller, its editor. They are full of vital and sympathetic insight, and are brightened by the playful fancy and genial humour which characterise all Dr. Brown's writings, shining, as in the works of all the truest and profoundest humorists, against a background of sadness, and never flippant or frivolous, for always

"The root of some grave, earnest thought is under-  
struck so rightly  
As to justify the foliage and the waving flowers  
above."

They give little prominence to the technicalities of art, though their author was by no means ignorant of these, for he lived in close intimacy with many painters, had studied for at least a short time under J. W. Ewbank, R.S.A.; and his rough pen-and-ink sketches, like the two reproduced in *Our Dogs*, are full of perception and character. It was greatly to be desired that Dr. Brown should have given us a critical estimate of his friend the late Sir George Harvey, P.R.S.A., but his sense of loss on the artist's death was too profound and poignant to admit of this.

The writings of Dr. Brown were the spontaneous outcome of his nature, and their tenderness and sympathy, their insight and humour, were the characteristics of his own individuality. There was a strange and winning charm about him which made itself

constantly felt, and attracted to him all with whom he came into contact. In his prime he was a brilliant conversationalist; and even to those of us who knew him only in later life, and were permitted to spend many hours with him in the little smoking-room at the top of his house, the memory of these evenings, and of him who made them bright with his mirth and genial wisdom, will be preserved for ever as a treasured possession.

J. M. GRAY.

### PARISH REGISTERS AND PUBLIC RECORDS.

Two parliamentary papers which have been recently issued deserve the attention of all antiquaries and literary students. The first is the Bill of Mr. W. Copeland Borlase for the preservation of parish registers; the second contains the rules laid down by the Master of the Rolls for the disposal of valueless documents. The provisions of Mr. Borlase's Bill are of a simple character, and they are based on an article on the subject which Mr. Taswell-Langmead contributed to the *Law Magazine and Review* and Mr. Borlase has now reprinted. They decree that every existing register which may have been kept in any parish prior to 1837 shall, after the passing of the Act, come under the control of the Master of the Rolls. All registers made and entered before 1813 are to be removed to the Record Office at once; those which bear date between 1813 and 1837 are to remain in the custody of their present guardians for twenty years longer. Numerous instances of the mutilation or destruction of these invaluable records of the pedigrees of peer and peasant have been mentioned in print. Mr. Borlase states from his personal knowledge that the register of one parish in his own county was discovered some time ago in a tailor's shop in a neighbouring town, and that another was carried away with the goods and chattels of a deceased incumbent and only restored in a damaged state. There is but one objection which can be brought against his proposals. They will prove fatal in many instances, we cannot but fear, to the prosecution of genealogical research by local antiquaries. The ACADEMY has recorded during the last few years several cases in which incumbents and other gentlemen with a taste for family history have reproduced the whole of, or selections from, church registers in the columns of parish magazines or in separate volumes. One of these transcripts, if we remember aright, related to a parish in the county which Mr. Borlase represents. This is the single flaw in the scheme, but it is a flaw which it will require great ingenuity to remedy.

Sir George Jessel has ordered, under the authority of the Public Record Office Act, 1877, that the documents of the various law courts and State departments shall be inspected by three officers of the Public Record Office, who are to sit in judgment on the documents and settle which of them are of a worthless character, unfit for preservation. The first officers appointed for this purpose are Mr. William Hardy, Deputy-Keeper of the Public Records, Mr. Joseph Redington, Assistant Keeper, and Mr. Luke Owen Pike, a senior clerk in the Record Office. They are to commence their duties by inspecting the documents of the superior courts of common law. One schedule at least of all papers to be disposed of must be submitted to the Master of the Rolls every year, and, when he has approved the schedule, it will be laid before Parliament. After the schedule has been submitted to Parliament for four weeks, the whole of these documents are to be effectually destroyed. Let us hope that these gentlemen will take every precaution against the destruction of any papers of historical or genealogical interest.

### THE "ANTIGONE" AT TORONTO.

Trinity College, Toronto.

On two occasions in Easter week the "Antigone" of Sophocles was produced before crowded audiences at University College, Toronto. The selection was unquestionably ambitious, especially when the mask was absent to cover defects of facial expression; but the result justified the choice, and the success of the performance, the first ever attempted in Canada, cannot fail to increase the taste for classical studies by the insight thus given into the grand simplicity and exquisite pathos of the Greek drama.

The performance was strictly confined to members of the university, all the parts being taken by resident professors and students. Mr. Hutton, as Antigone, well sustained the principal character. The gradual triumph of the stronger will over the shrinking Ismene, and the supreme obligation of natural ties even over loyalty to the State, were finely brought out; but perhaps the greatest success was achieved in the last scene, where Antigone is led off the stage uttering the despairing protest, twice repeated—

την εὐσεβίαν σεβίσασα.

Creon, represented by a young graduate (Mr. Douglas Armour), showed genuine dramatic power in the rapid transition of feeling required of him—e.g., the change from open defiance to consciousness of undefined dread in the dialogue with Teiresias, culminating in the confession—

ἀνάγκη δ' οὐχὶ δυσμαχίτην.

In the last death-scene a bold innovation was introduced, Haemon being carried in on a bier, instead of in the arms of Creon.

A genuine musical triumph was achieved in the adaptation of Mendelssohn's fine music written for the German to the original by Prof. Ramsay Wright. The music was given by a full orchestra, and the bursts of instrumental music at the critical parts of the dialogue were very effective. The intonation throughout the dialogue was clear and expressive; the choruses were less easily followed, owing to the necessity of strengthening the vocal force of fifteen by a large choir of undergraduates.

Dr. Pike did good service as stage-manager, and Mr. Vines led the chorus. Widespread interest was excited in the play throughout the city, and its success will do much to advance the cause of classical education.

C. W. E. BODY.

### CORRESPONDENCE.

#### WYCLIFFE'S PLACE IN HISTORY.

Bamf, Ayr, N.B.: May 10, 1882.

Mr. Bass Mullinger, in his review of Mr. Montagu Burrows' *Wycliffe's Place in History* (ACADEMY, May 6), without directly challenging the writer's estimate of the great reformer, calls for further evidence on the point. Being myself entirely of the opinion that John Wycliffe holds a unique position in "his effect on our English theology and our religious life," I venture to call attention to a few facts. With respect to Wycliffe's influence on the English language I would speak with more caution, because, though he must have had some influence, I do not see any way of gauging it, and because in that field he had many coadjutors. In the latter part of the fourteenth and the early part of the fifteenth centuries the English language was putting forth such thick shoots in all directions that it would be hard to estimate the amount of influence attributable to any one man. But in relation to the religious movement connected with his name Wycliffe stands absolutely alone. What names of followers of his have lived down to the present day? Probably the only names known to the general reader are those of William Sawtre, John Badby, and Sir John Oldcastle, the last being known because he took up arms for freedom of conscience, the two former because they suffered at the stake; but neither of them left any personal mark on the thought of the age. Wycliffe had no coadjutor or follower of any eminence in the world of letters. Perhaps the most learned of his disciples were Philip Repington and John Purvey, the reviser of Wycliffe's translation of the Bible; but both of these recanted under pressure; Repington made his peace so completely with the Church authorities that he was made Bishop of Lincoln in 1405. We are thus left with two salient facts before us; one is Wycliffe, with his writings and his English Bible, and the other is his work, the enduring, undeniable effects of his teaching. I need not refer to the results of his teaching in Bohemia, except to point out that John Huss suffered for holding the pre-eminently Wycliffian doctrine of "Dominion," not for denying transubstantiation; on that point Huss was orthodox; he

did because he refused to submit his right of private judgment to the council, and because he ventured to assert that a bad priest was no priest, and a bad king no king. This side of Wycliffe's teaching, I may remark, played less part among the practically minded people of England; the great questions on which the struggles between the reformers and the Church party in England turned were four—namely, transubstantiation, auricular confession, image worship, and pilgrimages; with a fifth which comprehended all others—the question of the authority of the Church. On the first of these points Wycliffe's followers soon went beyond his teaching; he always held a real presence of some sort, and this it was that saved him from formal condemnation during his life. Sawtre, Badby, and Oldcastle suffered because they refused to admit that the consecrated host had ceased to be "materially" bread. This enables me to answer Mr. Mullinger's first question as to the distinctions between Wycliffe's teaching and that of his followers. There was progress and development on the part of the latter, but no introduction of any new principle, no new departure. In connexion with this I should say that the Socialist views supposed to have been developed by Wycliffe's successors out of his doctrines have no foundation, except in the insinuations of their enemies. Not only was no such charge ever proved against any Lollard; but no such charge was ever preferred against any one of them in all the voluminous proceedings on record. I speak down to the time of Henry V. Jack Straw and John Ball took their inspiration, not from John Wycliffe, but from William Langland, as may be seen by comparing Ball's utterances with "Piers Plowman." The attacks made in and out of Parliament on the possessions of the Church, or, in modern language, the movement for disendowment, was another thing. Of course the Lollards took the lead in this.

As to the extent of Wycliffe's following. During the reign of Richard II. the Lollards enjoyed a certain amount of tacit Court favour, and had their supporters in high life; under Henry IV. the aristocratic Lollards dwindled away; under Henry V. they vanished. In connexion with Oldcastle's rising we trace the names of only two knights beside himself, and about twice as many esquires. At Oxford the Lollards were strong down to the end of Henry IV.'s reign; this is proved by the obstinate resistance offered to Archbishop Arundel's measures, and by the frequent changes of academic officials as the two parties alternately predominated. But the strength of Lollardism, as of modern Nonconformity, lay in the middle classes of the towns. Out of the names of forty-seven persons noticed as implicated in Oldcastle's rising we have representatives of thirteen trades from fourteen counties besides Middlesex; the list also includes a considerable number of clergymen beneficed and unbeneficed, one Oxford scholar, and one ploughman. These were persons to whom pardons were granted *Foedera*, ix. 120, 129, 170, 193). Of the actual numbers of those who rose at Oldcastle's call I can give no estimate; but the fact that men were found to come to London on a given day from every part of England from Yorkshire to Somerset proves that the Lollards were no paltry, insignificant set. In 1415 two Lollards were burnt in Smithfield—one was a baker, the other a skinner (*Chron. London; Foxe*).

As to the "actual circulation and real influence" of Wycliffe's version of the Bible, it is not easy to adduce evidence. I can suggest one line of investigation which might be worked out in various directions. Scriptural quotations are rare in Chaucer's earlier writings, but common in his later writings. I

have compared a certain number of these with the Wycliffite Bible. In many cases there was nothing distinctive, but in other cases there was an amount of verbal coincidence that left no doubt on my mind that the poet must have been familiar with Wycliffe's Bible—as, for instance, the references to 2 Cor. vi. 13 and 1 Tim. v. 6: Pardoner's Tale, ll. 60 and 85. This is the more remarkable as Chaucer was a man who had no sympathy with the Lollards, except in dislike of the friars.

One word as to the spelling of the Reformer's name. The name was distinctly territorial; he was one of the Wycliffes of Wycliffe, near Old Richmond, where the family remained long after his time. Among the many varying forms of the family name it seems best to take that which agrees with the territorial name, which is now fixed; to speak of the Wyclifs of Wycliffe seems absurd. J. H. RAMSAY.

PS.—I should have stated above that at the Council of Constance the proceedings against heresy were announced at the outset as directed against the teaching of John Wycliffe: St-Denys' *Charles VI.* v. 462, ed. Bellaguet.

#### THE MYSTERY AT TANYRALLT.

London: May 9, 1882.

A few weeks ago I picked up a copy of Prof. Aytoun's *Firmilian*, published by Messrs. Blackwood in 1854 as "a spasmodic tragedy by T. Percy Jones." It contains certain MS. annotations, an extract from which may be interesting to students of Shelley.

"There is a tinge of Shelley in the character of Firmilian, perhaps meant; the 'fond du caractère' is the same, egotism, lawlessness of mind, and excessive self-esteem in a restless state, with loose principles about women. . . . Shelley had a character at Oxford as a black sheep, who played dangerous practical jokes by electricity, &c., on the college scouts; higher game would have been unsafe. Soon after I came, he and little Hogg, of University College, his Pylades, were expelled for the joint concoction of a still-born infidel tract. Several years afterwards, he levanted from his creditors at Tremadoc, N. Wales, leaving the servants to answer them; and perpetrating with his own hands and pistol a humbug about his fear of assassination to show cause. His grandfather came to the rescue and paid his debts. But in the schedule he would not include £100 lent him by my uncle-in-law, Mr. Ellis Nanney, of Gwynfryn, defying the latter to produce any acknowledgment.

"'D—n him and the money,' said the latter to me; 'the fellow knew I had no voucher—as if I should have asked for one from a neighbour and a gentleman! (as I thought him). He stated himself as under a temporary difficulty, and of course there the money was. But he utterly disclaimed it to Sir Bysshe, his grandfather; to whom it was his cue to make the best story he could.'"

The writer of this note, whoever he may be, writes forty years at least after the date of the events narrated (the mysterious attempt at assassination took place February 26, 1813), and his evidence, at the best, is but "hearsay" from the lips of an irritated creditor. It was not "several years" after Shelley left Oxford that he stayed at Tremadoc. It was less than two years, for at the latter place he was still a minor. Again, there is no mention made in any biography of the fact here stated with such circumstance, that Shelley's grandfather paid his debts upon this occasion. From what we know of Sir Bysshe it would seem extremely unlikely that he did anything of the kind; though he entertained, it is true, no such hatred of his grandson as of Timothy Shelley, his son.

Making every allowance, however, for lapses of memory, and for the prejudices of the writer, his statement concerning the debt to Mr. Nanney remains highly interesting.

It was while at Tanyralt (in the house of Mr. Madocks) that Shelley exerted himself to repair the embankment at Tremadoc. Biographers express themselves at a loss to understand how our poet obtained the needful moneys for this generous enterprise. Thus Medwin writes:—

"I have no clue to discover in what manner he contrived to raise money for his subscription, and for the acts of charity here detailed. It must have been raised at some great sacrifice."

Mr. MacCarthy, again, a far more critical writer:—

"It is stated that Shelley headed the subscription list with one from himself for £500. This is scarcely credible, unless, indeed, it was understood that the subscription, like his rent, was not to be paid till he came of age."

Communism in matters pecuniary does not much simplify book-keeping, and Shelley's fiscal arrangements are often obscure. At Tremadoc he seems to have been so much involved as to give some colour to the statement circulated in the neighbourhood (and here repeated) that the "assassination" was a got-up hoax to furnish him with a pretext for escape. His letter to Mr. Hookham on the occasion is startling:

"My dear Sir,—I have just escaped an atrocious assassination. Oh! Send me £20 if you have it! You will perhaps hear of me no more."

Mr. Hookham sent £20, and the Shelleys, according to a letter from Harriet to that gentleman, "stayed till everything was ready for leaving the place, at the Solicitor-General of the county's house, who lived seven miles off." I do not know whether Carnarvonshire boasts any such an officer as a "Solicitor-General," but I suppose the gentleman referred to to have been Mr. Ellis Nanney, who was Sheriff of the county at least. There is a single reference to Mr. Nanney in Hogg's *Life* as having given some directions respecting windows at Tanyralt which were broken in the fray. It was during this visit, perhaps, that Shelley borrowed the £100, and represented himself as "under a temporary difficulty."

ERNEST RADFORD.

#### TWO MISTAKES IN LITTRÉ'S "FRENCH DICTIONARY."

98 Rosbuck Road, Sheffield.

The supplemental volume of M. Littré's great work, although displaying the same amazing learning and industry as the four preceding volumes, contains several curious oversights, which are, no doubt, to be attributed to the writer's advanced age. Two of these errors seem to be of sufficient consequence to justify a reference to them in the *ACADEMY*.

Under the article *Clerc* in the Supplement, M. Littré remarks that it is singular that the English expression corresponding to *pas de clerc* is "clerical oversight," which (he imagines) can only mean an error committed by a clergyman, whereas in the French phrase the reference is to a mistake of a notary's or attorney's clerk. In the "Notes Tardives," on p. 375, M. Littré states that he is informed by "M. Ewilkohin, d'Oxford," that the term "clerical oversight" is to be explained by the fact that the art of printing in England had its beginning in a chapel at Westminster, whence the associations of printers are still called chapels, and retain all the names borrowed from the semi-clerical life. A "clerical oversight" is thus "an error committed by a compositor or proof-reader." It would seem that "M. Ewilkohin" is the Rev. G. W. Kitchen, but M. Littré must surely be mistaken in ascribing to that excellent scholar the authorship of this strange piece of information. Every educated Englishman

is aware that a "clerical oversight" ("clerical error" is the more usual expression) does not mean a printer's, but a writer's mistake, in which sense the origin of the phrase is obvious enough. It is a mistake to say that *pas de clerc* and "clerical oversight" are equivalent expressions. The sort of blunder denoted by *pas de clerc* can be committed in speech or action quite as well as in writing. One of M. Littré's own examples is "Ma langue a fait un pas de clerc." It seems possible that the original reference may have been something quite different from what M. Littré supposes.

The other mistake to which I wish to call attention relates to the word *chalet*. In the body of the Dictionary, M. Littré had mentioned approvingly the derivation of this word from the Latin *casa* or *castellum*. In the Supplement, however, he remarks that these derivations must be abandoned, and quotes the following sentence from a letter of M. Berthoud: "L'étymologie latine aurait donné *châlet*; cette faute de prononciation était insupportable à Rousseau; jamais on ne dit *chalet* en pays romand." Of course, the reading should be, "jamais on ne dit *châlet*." M. Littré afterwards became aware of this "clerical oversight," and in the article *Romand* in the Supplement he attempts to correct it. In so doing, he unluckily makes another slip, and bids us "read *jamais* on ne dit *chalet* (and not *châlet*)," thus reiterating his original mistake, instead of rectifying it. M. Berthoud's remark appears decisive against the Latin etymologies proposed. M. Littré does not suggest any other derivation; it seems natural to think of a High-German equivalent of the O.-N. *skáli*, but I am not aware that any such form can be produced. It may be noted that the earlier editions of the Dictionary of the Académie française give the word with the circumflex accent, and in English books it nearly always appears in this form. This, however, is a matter of course, as our printers rarely miss an opportunity of adorning a French vowel with an accent—for instance, they generally give us *Geneviève* with two acute accents, and it is only recently that they have learned to spell the name of M. Renan correctly.

HENRY BRADLEY.

#### EARLY SCLAVONIAN SETTLEMENTS IN GREECE.

London: May 8, 1882.

In reviewing M. Sathas' *Documents inédits relatifs à l'Histoire de la Grèce*, &c., in the ACADEMY of April 29, Mr. Boase sums up that author's arguments against Fallmayr's far-fetched, but now too wholly discredited, theory of a Slavonisation of the Peloponnese between the late sixth and the early ninth century. But he does so in such a colourless way that readers who are not familiar with the original sources for the period, and who, like only too many Englishmen, may be ready to accept without question every would-be new light from the Continent, may be led to infer that Fallmayr's belief was bound up with the use or coining of the verb *σλαβωθῆναι* by Constantine Porphyrogenitus (*de Them.*, ed. Bonn, 53), or that there is some doubt as to whether *σλαβος* has the same meaning as *σκλάβος*—i.e., "Slavonian"—in Byzantine Greek.

The historical evidence from which Fallmayr argued the complete extirpation of the Hellenic aborigines by Slavonian intruders consists chiefly, but not exclusively, of the brief narrative of the reduction of the Slaves (*σλαβίνοι*) of Greece to the position of tributaries during the reign of Irene in Theophanes (ed. B., 707), and the much fuller story of their early settlements, their struggles with the cities that remained Greek, like Patras, and their final subjugation by Michael I. or Leo V., in Constantine's later work (*de Adm. Imp.*, chaps. xlix., l.),

where they figure as *σκλάβοι*, *σκλαβίνοι*, and *σκλαβησινοί*. All that can be certainly ascertained, from the glottological point of view, about the various *κ* and *θ* forms of the Slavonic name is that more Byzantine authors use the former than the latter. Here are a few instances of the employment of the two sets of forms when the same events are described by different writers.

The allies of the Bulgarian Zaberganes, over whom Belisarius won his very last victory under the walls of New Rome (in 558 or 559) are *σκλάβοι* and *σκλαβίνοι* in John of Malala (ed. B., 490), and also in Theophanes (*sub anno* 551), but *σλαβίνοι* in Cedrenus (ed. B., i. 677). The auxiliaries who accompanied the Avar "Chagan hateful to God" to the leaguer of the Imperial city in 626 are *σκλάβοι* in the *Chronicon Paschale* (ed. B., i. 719-25), *σκλάβοι* and *σκλαβηναί* in Nicephorus Copolitanus (ed. B., 20, &c.), but *σλαβων* *πληθὺν* in the metrical narrative of George of Pisidia (l. 409). The military colonists whom Justinian II. (Rhinometus) planted in Asia Minor as a barrier against the Saracens (to whose standards most of them straightway deserted) are *σλαβίκοι* in the verse of Ephraemius (l. 1472), and *σλαβίνοι* and *σλαβοί* in the prose of Cedrenus (ed. B., i. 772, 773). Yet, in the other versions of the same story, Theophanes (ed. B., i. 559), Leo Grammaticus (ed. B., 163), Zonaras (ed. Migne, 1300), Nicephorus Copolitanus (ed. B., 41, 42) they are *σκλάβοι*, *σκλαβίκοι*, or *σκλαβήνοι*. It would be too much even for the courage of a Continental partisan to contend that Nicephorus Bryennius, the son-in-law of the Emperor Alexius Comnenus, when writing of the events of his own time (the late eleventh century), would bring upon the scene skin-clad barbarians, "subject to the Avar conquerors" (who disappeared from the Balkan lands early in the seventh century); yet that historian uses the alternative *θ* form, *σλαβίνοι*, to describe the Slaves of Bulgaria in his own day (ed. B., 100-2).

A. R. FAIRFIELD.

#### THE INSCRIPTION AT THE DOG RIVER.

Oxford: May 17, 1882.

I would suggest for the word *sarath*, which occurs several times in the Dog River inscription published by Prof. Sayce in the last number of the ACADEMY, the translation "pontoon;" and I would connect it with the Aramaic *saritha*, a beam, which is the Targum word for *gorah*, 2 Kings vi. 5 (A.V., "stick"), and in other passages of the Old Testament.

A. NEUBAUER.

#### THE PALESTINE EXPLORATION "NAME LISTS."

Edinburgh: May 16, 1882.

I am sorry that it has been possible for Prof. Palmer to construe my remarks in the ACADEMY of May 6 as holding him in any way responsible for the defects of the Palestine *Name Lists*. I thought that I had quoted from his own Preface enough to show that the defects lay in the first collection of the names; while, by pointing out that fresh enquiry on the spot and the collation of Arabic sources were necessary, I clearly indicated that even the best scholar could not produce a thoroughly satisfactory result by mere redaction of the materials of the survey. It was obviously necessary that the lists should be published, whatever their defects, before this work of control began; and Prof. Palmer deserves all thanks for having undertaken and executed this task for which, as I was careful to point out, he has very special qualifications.

W. ROBERTSON SMITH.

#### APPOINTMENTS FOR NEXT WEEK.

MONDAY, May 22, 2 p.m. Geographical: Anniversary Meeting.  
8 p.m. Society of Arts: Cantor Lecture, "Boat Illustration: Old and New," III., by Mr. J. Comyns Carr.  
TUESDAY, May 23, 3 p.m. Royal Institution: "Digestion," II., by Prof. Gamgee.  
8 p.m. Society of Arts: "The Gold Fields of West Africa," by Capt. Cameron and Capt. Burton.  
8 p.m. Civil Engineers: Discussion, "Corn-Mill Machinery."  
8 p.m. Anthropological Institute: "Systems of Land Tenure in Different Countries," by Sir Bardsley Ferrer.  
WEDNESDAY, May 24, 3 p.m. Linnean: Anniversary Meeting.  
8 p.m. Society of Arts: "English and Foreign Technical Education," by Mr. E. C. Robbins.  
8 p.m. Royal Society of Literature: "The Origin, Manners, Customs, Institutions, and Annihilation of the Aborigines of Australasia," by Mr. T. Henniker Heaton.  
8 p.m. Geological: "The Geology of Costa Rica," by Mr. G. Attwood, with an Appendix by Mr. W. H. Hudleston; "The Newer Pliocene Period in England," by Mr. S. V. Wood; "A Remarkable Dinosaurian Ostracod from the Wealden of Brook in the Isle of Wight, preserved in the Woodwardian Museum of the University of Cambridge, probably referable to *Ornithopsis*," by Prof. H. Seeley; "The *Annelida tubicola* of the Wenlock Shales," by Mr. G. R. Vine.  
8 p.m. Spelling Reform Association: Annual Meeting; Address by Prof. Sayce.  
THURSDAY, May 25, 8 p.m. Royal Institution: "The Metals," by Prof. Dewar.  
8 p.m. Society of Arts: "Recent Passages of Zululand History," by Dr. E. J. Mann.  
8 p.m. Telegraph Engineers: "The Organisation and Operation of the Field Telegraph Corps in the Transvaal, 1881," by Lieut. A. H. Bagnold.  
8.30 p.m. Antiquaries.  
FRIDAY, May 26, 8 p.m. Browning: "Bishop Blougram," by the Rev. Prof. Johnson; "Browning and the Arts—Music, Painting, Sculpture, Architecture, and Poetry," by Mr. W. Sharpe.  
9 p.m. Royal Institution: "The Sacred Laws of the Hindus," by Sir Henry Maine.  
SATURDAY, May 27, 3 p.m. Royal Institution: "Poetry and its Literary Forms," II., by Prof. D. Masson.

#### SCIENCE.

*Studies in the Theory of Descent.* By Dr. Aug. Weismann. Translated and Edited by Raphael Meldola. Part III. (Sampson Low.)

THE third instalment of Dr. Weismann's great work proves in some ways rather disappointing. Perhaps it may sound like a hopeless paradox to say that this is probably because it is the most interesting of all; yet such is really the true state of the case. It deals mainly with the transformation of the axolotl, a subject of far more general interest to biologists than the seasonal dimorphism of butterflies or the phyletic parallelism of metamorphic species. The consequence is, a dozen abstracts gave us the cream of Dr. Weismann's researches in this direction the moment they were first published in Germany; and now that we come to read them at first hand in English, they seem rather like a twice-told tale. To say the truth, too, the Freiburg Professor is afflicted with a very serious type of German long-windedness, which somewhat mars the effect of his delivery; while his schematism quite surpasses that of any other practical writer we have ever known. As everybody has heard, Dr. Weismann and Fraulein von Chauvin made a number of experiments upon axolotls in order to ascertain the nature of the curious fact observed in Paris that these normally perennibranchiate amphibians were capable, under certain circumstances, of losing their gills and assuming a true salamandrine form as Amblystomas. Their object was to discover whether this change was due to external conditions or to internal causes—proof of the latter point being equivalent to the establishment of the theory of an innate tendency towards development in a given direction, to the demolition of which Dr. Weismann has long devoted all his scientific energies. The fact, indicated that almost all the larvae will complete their

metamorphosis into Amblystomas if submitted to the necessary treatment for changing aquatic into aerial respiration. It would be impossible to follow out Dr. Weismann's acute reasoning upon the facts in full; but he shows very good grounds for believing that the change is not really due to a progressive *salutis*, but to reversion towards an earlier, though higher, form. He supposes that the axolotl is descended from a parent Amblystoma, and that it has lost the habit of metamorphosis, and become once more perennibranchiate, not so much through the influence of the great lake of Mexico as through the extreme dryness of the Mexican plateau, which renders the region unfit for terrestrial amphibian life. This first hypothetical change is in itself an example of degenerative reversion, as it supposes the parental Amblystoma of Mexico to have reverted to an earlier and lower ancestral form, through which all caducibranchiate Urodela must of course have passed. At the same time, the reversion was not complete; the new Siredons bore one mark of their descent from a salamandrine type in the presence of an intermaxillary gland, which occurs in all the land amphibians, but in no Ichthyodea. But when these degenerate larval forms are brought to the moister climate of Europe, and subjected to special circumstances, they revert once more, this time upwards, to the later ancestral Amblystoma type. Owing, however, to the great constitutional disturbance thus set up, the Amblystomas so produced are infertile—a case strictly parallel to several of those noted by Mr. Darwin. It must be admitted that Dr. Weismann has proved his thesis with great ingenuity; and that his two new points, as to the intermaxillary gland and the dryness of the Mexican atmosphere—added since the German original was published—make the demonstration as nearly complete as in such a matter we can ever hope it to be. The only remaining experiment would consist in the attempt to breed perennibranchiate Siredons from North American Amblystomas. If this could only be done by the reverse process of keeping the larvae from performing their metamorphosis, the chain of evidence would be absolutely complete. Why does not Dr. Weismann try?

The second essay in the present instalment deals with the mechanical conception of nature, and is mainly in answer to von Hartmann and von Baer. The former has so few followers in England (if any) that serious refutation of his windy pseudo-philosophy is hardly necessary here. Dr. Weismann has an easy task of it. Von Baer stands on a very different platform; but even his defence of teleology in organisms is nothing more than a dogmatic statement, which can scarcely stand for a moment against the solid reasoning of the Darwinian school. Mr. Meldola has performed his part of the work in his usual learned and scholarly fashion, showing himself as much at home among amphibians as among butterflies, and has added several useful notes, bringing the original into closer relation with English thinking on the subject as exemplified by Mr. Spencer, Mr. Wallace, Prof. Ray Lankester, &c. A good Index to the entire treatise concludes the volume. GRANT ALLEN.

## SUMIR AND ACCAD.

Muntch.

ALREADY in the oldest cuneiform-written monuments of South Babylonia (e.g., in the short inscriptions of Ur-bagas published in *Western Asia Inscriptions*, i. 1) the kings of Ur ("Ur of the Chaldees," Gen. xi. 28) and other places call themselves "kings of Sumir and Accad." The language of these inscriptions is the same non-Semitic language also found in a great series of bilingual hymns and exorcisms—bilingual because a literal translation in the Semitic Babylonian-Assyrian is added by the copyists. A considerable number of these texts are given in *Western Asia Inscriptions*, iv. 1-30. The great French Assyriologist, Jules Oppert, was the first to conjecture the truth—viz., that Sumerian, and not Accadian, was the real name of the above-mentioned language; he showed that the ideographic representation of Sumir (not Accad) was a sign originally composed of *eme* (tongue) and *ku* (noble). Afterwards the late George Smith ingeniously anticipated the result now accepted by all Assyriologists, that Sumir was the southern, Accad the northern, part of Babylonia. A long time standing alone in this opinion, he did not live to see the full confirmation of his views by the convincing arguments since brought forward by Friedrich Delitzsch in the Appendix of the German translation of the Chaldaean Genesis (Leipzig, 1876), Eberhard Schrader (especially for Accad = North Babylonia) in his *Keilinschriften und Geschichtsforschung* (Gießen, 1878), and myself in an article concluding this question by a repetition of all the former proofs and addition of new ones ("Zur ältesten Geographie Vorderasiens" in the *Ausland* of 1880, pp. 381 ff.).

Such was the state of things when, in 1878, François Lenormant, the celebrated founder of Sumerian philology, disclosed the existence of a new dialect of the Sumerian language (by him still erroneously called Accadian), in the German augmented edition of his book (*Die Magie der Chaldäer*, Jena, 1878, pp. 399 ff.). I think it necessary to give here an English translation of the whole passage:

"If the ideogram *eme-ku* [see above] really belongs to an earlier period, and is not merely an invention of the later Assyrians, then of course we have here simply a dialectal difference between the idioms of the Sumir and Accad (and not a difference of languages, as was maintained by M. Oppert, who thought Sumerian the language of the non-Semitic, Accadian that of the Semitic, population of Babylonia). For it is incontestable that different dialects were spoken by the pre-Semitic inhabitants of the basin of the Euphrates and Tigris. The lexicological tablets often contain words distinguished by special phonetic peculiarities from the common Sumerian [so I correct silently instead of Accadian]. [M. Lenormant cites here already, as instances, texts afterwards clearly shown by Dr. Haupt to be dialectal: *Western Asia Inscriptions*, ii., pl. 40 (trilingual tablet—viz., Accadian, Sumerian, Assyrian), and iv., pl. 10 (dialectal penitential psalm).] These are always marked by the addition of an ideogram, showing them to belong to a special dialect: *eme-sal*, which apparently means language of women."

By this important discovery, in connexion with some conjectures of Mr. Th. Pinches, of the British Museum (afterwards published in the *Proceedings of the Society of Biblical Archaeology*, 1881, January, pp. 43 ff.), Dr. Paul Haupt, a younger German Assyriologist, was led to a further conclusion necessarily derivable from it. The first impulse to it was given by new trilingual lists of the same sort as those cited already by M. Lenormant; these lists, since published in the fifth volume of *Western Asia Inscriptions*, were immediately recognised by Mr. Pinches as containing in the first column a special dialect of Sumerian.

Dr. Haupt, who was at that time in daily intercourse with Mr. Pinches at the British Museum, and saw the tablets before their publication, was thus able to give the first account of these dialectal peculiarities. He accomplished this task in an excellent little paper, "Ueber einen Dialekt der sumerischen Sprache," in the *Nachrichten der Göttinger gel. Gesellschaft der Wiss.*, 1880, pp. 513 ff., concluding with a list of those texts which are really written in the dialect, and show in accord with the trilingual lexicological tablets the same phonetic peculiarities. (This list can now be augmented by the following:—*Western Asia Inscriptions*, fourth volume, pl. 20, Nos. 1 and 3; 24, No. 3; 26, Nos. 1, 2, and 8; 28, No. 4; 30, No. 2. An important trilingual tablet, containing names of gods, &c., which was also overlooked by Dr. Haupt, is found in *Western Asia Inscriptions*, vol. ii., pl. 59.)

With the communication of this last notice begins, indeed, a new step in the history of Sumerian philology. It is true that we owe the knowledge and the proofs of the existence of the dialectal texts (to which the dialectal columns in the trilingual lexicological tablets were only the guides) exclusively to Dr. Haupt. But where different scholars are engaged in working out successively a new scientific discovery, it must never be forgotten that the last always has the easiest task, and produces the most perfect result, whereas the chief merit should be awarded to the first, who made the original discovery. The honour, therefore, of having discovered a second dialect in the pre-Semitic literature of Babylonia will always remain with M. Lenormant and Mr. Pinches.

The fact itself is of the greatest importance, not only for Assyriology, but also for the history of religion and civilisation, for Biblical studies, and for every department of Oriental learning. But it is first placed in its true light, and becomes useful for history and archaeology, by answering the question: Which of the two, Sumerian or Accadian, was the newly discovered dialect, called by the Babylonians *eme-sal*, or "language of women"? We now pass to this second part of our investigations. Before arriving at our results, we will provisionally call the one and main dialect, to which the non-Semitic system of cuneiform writing was originally adapted, the *eme-x*; the other, in which a great number of the ideograms were written phonetically, the *eme-sal* dialect.

The surest way of finding out the region in which either of these dialects was spoken is, of course, to trace the geographical names in the exorcisms, hymns, and psalms named above. Now we find with few exceptions in the *eme-sal* texts only North Babylonian towns and temples, especially Babel itself and Borsippa, Urak (Erech) and Sippar, then Nippur, Nisin-Karrak, Kalneh (Kul-unu), and others. Babel and Erech (it must be noted that Erech lies really in Accad or North Babylonia—as Prof. Delitzsch has shown, *Wo lag das Paradies*, pp. 134 and 200—in spite of the neighbourhood of Ur and Eridu) occur most frequently, and so play a chief part in them; while in the exorcisms of the *eme-x* texts, in which geographical names are of rarer occurrence, Eridu (beside Ur the most important capital of South Babylonia) is mentioned on almost every page. It is also of great importance that only in the *eme-x* texts do we find the word *apsa*, "ocean, depth of the sea," and likewise the expression *pi nardti*, "mouth of the streams" (the Euphrates and Tigris), again pointing to South Babylonia (the region adjacent to the Persian Gulf). The *shad Makkean*, a hill in South Babylonia, is likewise met with in an *eme-x* text—viz., *Western Asia Inscriptions*, 13, 16; while another, but North Babylonian, hill, *Sabu*, is called in a text of the same *eme-x*, "a hill, a remote place" (*Western Asia*

*Inscriptions*, 14,  $\frac{1}{2}$ , and  $\frac{1}{4}$ ), so not involving a contradiction. This first series of proofs is alone decisive in favour of the identification of the eme-x with Sumerian or South Babylonian, and of the newly discovered eme-sal with Accadian or North Babylonian. The mention of Ur in an eme-sal hymn, *Western Asia Inscriptions*, 4, pl. 9, and the occurrence of Babel in some passages of the eme-x texts, cannot overthrow this result, because, in the first, the Moon-god Sin, the favourite deity of Ur, and known and honoured as such throughout Babylonia, in the other Marḏug, or Merodach, as the national deity of Babel, are invoked or mentioned by the writer (cf. *Western Asia Inscriptions*, 4, 12, l. 13; and 29, l. 21a, these two texts being, besides, of rather late origin).

A second series of arguments for the above identification is of a philological nature, and will therefore only be alluded to here. A lucky accident has preserved for us several non-Semitic inscriptions of the oldest kings and viceroys of Ur and Eridu; and the language of these short but important documents possesses dialectal peculiarities, not of the eme-sal, but, on the contrary, of the common or eme-x dialect of the old agglutinative language spoken in Babylonia. The most striking example is the name of Eridu itself, which is in the eme-sal dialect Uru-zib-ba; in the eme-x, and likewise in these inscriptions, Uru-dug-ga. This, indeed, is a conclusive proof of the correctness of our proposition: eme-x = South Babylonian or Sumerian.

A third evidence, lastly, lies in the agreement between the term "language of the women" (eme-sal) and the term established by Messrs. Oppert and Pinches for the Accadian "language of the servants" (eme-lukh, Melukha), while, on the other side, the long-known ideogrammatical term for Sumir means "language of the lords" (eme-ku). If the eme-sal dialect were identical with the South Babylonian or Sumerian, it would be quite unintelligible that the language of women and that of the lords should both be used in opposition to the language of the servants. Everybody will here be reminded of the similar relation in the Indian dramas, where Prakrit is spoken by the women and the servants, while Sanskrit is the language of the kings and Brahmanical priests. The same antithesis occurs, if the eme-sal, as has already been proved by other arguments, is identical with Accadian or North Babylonian.

We cannot conclude this paper without touching briefly on the hasty conclusions of Dr. Haupt (in his *Keilschrifttexte*) and of Prof. Friedrich Delitzsch (*Wo lag das Paradies*), who both see in the eme-sal the Sumerian, only because of some imaginary peculiarities of the eme-sal dialect in the names Sumir and its older synonym Kingi (also called Kami), and some other inadequate reasons, refutable in two words. On the other side, the names of Babel, Din-tir ("tree of life") and Kadingirra ("gate of God"), are no evidence for peculiarities of the eme-x dialect, because "life" is in the eme-x texts really *til*, not *tin* (cf. *Western Asia Inscriptions*, 2, 17, 42c, and other places), and because the latter can as well be transcribed Kadimirra as Kadingirra.

In conclusion, I think it very significant that the Babylonian towns, known to the early Hebrews according to the oldest sources (the so-called Jehovist)—viz., Babel, Erech, Accad, and Kalneh (Gen. x. 10)—are all Accadian or North Babylonian; and that the penitential psalms of the old Babylonians, so remarkable and so anomalous in early polytheistic literatures, are also written in the same North Babylonian or Accadian dialect—that is, the eme-sal. Who would not see here, with me, the oldest Semitic influence on the pre-

Semitic civilisation of Chaldaea, an influence so often denied altogether by Assyrian scholars? FRITZ HOMMEL.

In one small particular I must correct this interesting communication of Dr. Hommel. The first to point out the existence of two Accadian dialects was myself in 1874 (*Transactions of the Society of Biblical Archaeology*, iii., 2, p. 466). But the first to place the fact on a solid historical ground was Prof. Lenormant, who, with his usual penetration and brilliant powers of combination, saw its connexion with "the language of women," to which Prof. Friedrich Delitzsch had drawn attention in his *Assyrische Lesestücke*. A. H. SAYCE.

#### SCIENCE NOTES.

*Catalogue of Fossil Foraminifera*.—The Trustees of the British Museum have just issued an exceedingly useful Catalogue of the fossil Foraminifera in the Natural History Museum at South Kensington. This Catalogue, forming a volume of 100 pages, has been prepared by Prof. Rupert Jones, late of the Royal Military College, Sandhurst. In addition to an inventory of the collection, there is an introductory chapter giving the characters of the group and describing the structure and mode of growth of the recent forms. At the end of the Catalogue a Supplement contains remarks on some of the more important groups of the Foraminifera, with critical notes on nomenclature.

At the meeting of the Royal Society of Edinburgh on May 15, a paper was read from Capt. Tizard and Mr. John Murray on "The Exploration of the Farcø Channel, during the summer of 1880, in H.M. hired ship *Knight Errant*," with sixteen subsidiary reports by various scientific men. The capital result of the expedition was the discovery, in accordance with anticipation, of a ridge dividing the warm and cold areas in this channel. In the warm area sixty-four animals were found, in the cold area forty-nine; but only three of these were common to both. Altogether, the dredgings yielded sixteen new species and one new genus, and a great many facts with regard to the distribution of marine life. The dividing ridge is believed to be an ancient moraine. It was announced that the Government had set apart the *Triton*, again under the command of Capt. Tizard, to continue the investigations during two months of the present summer.

AMONG Messrs. Smith, Elder and Co.'s announcements is the first volume of a work on *Human Morphology*, by Mr. H. A. Reeves, of the London and other hospitals. The author has been a practical anatomical teacher of many years' experience, and those who have seen the proof-sheets speak very highly of the work. Two more volumes will complete the book, and all will be profusely illustrated. A work containing new views on diseases of the breast, by the same author, will also shortly be issued.

#### PHILOLOGY NOTES.

IN correction of an announcement that appeared in the ACADEMY of May 9, we are asked by Mr. W. A. Clouston to state that his reprint of Sir W. Ouseley's Bakhtyār-Nāma will not comprise the Persian text, but only the English translation, supplemented by notes on variant versions of the tales, and an introductory essay on Oriental fiction. The work will not be published, but issued privately to subscribers. The edition will be limited to 300 copies, of which one-half have already been taken up; thirty copies (numbered) will also be printed on hand-made paper.

PROF. ZUPITZA has begun a useful series of cheap Anglo-Saxon and Early-English texts for use in colleges and schools. The first of these is chaps. i.-v. of the Anglo-Saxon version of St. Mark's Gospel, and chap. ii. of St. Luke, with a glossary; the second, Chaucer's "Prolog" to "The Book of the Tales of Caunterbury," mainly from the Ellesmere MS., and with collations from ten other MSS. Some of the editorial changes of the Ellesmere forms grieve English eyes: "this relikes," l. 70, for the plural "thise relikes" of the three best MSS., "we wer" for the best manuscripts' "we were," are surely needless; and if the MS. final *de* of "hadde" is left in l. 109,

"A not heed hadde he with a broun visage," why should it be cut out of l. 349, and appear as

"Ful many a fat partrich had he in muwe"?

The difficulty of "seint" or "seintū" Loy, formerly discussed in our columns, is solved by reading "seintū" both with Loy, l. 120, and "Peter," l. 697. This is no doubt preferable to the reading "seint." On a few other slight points we should differ from the learned editor, but on the whole the text is admirably edited, and worthy of Prof. Zupitza's high reputation.

THE *Monatsschrift für Geschichte und Wissenschaft des Judenthums* for February-May contains articles on the dénouement of the Book of Esther by Horowitz, and on the Song of Deborah by Graetz (both worth reading), also on the Agada of the Tannaites ("repeaters" and continuators of the tradition) by Bacher, and on Grünbaum's Jewish-German Chrestomathy, vol. i., by Perles.

#### MEETINGS OF SOCIETIES.

CAMBRIDGE ANTIQUARIAN SOCIETY.—(Monday, May 8.)

PROF. BABINGTON in the Chair.—On behalf of the Mayor of Cambridge, two yellow vases (five and a-quarter inches and five and one-eighth inches high) were exhibited, that had been found during excavations in King Street last July, at the depth of nine feet; they probably belong to the latter part of the fifteenth century, and are notable for the unusual perfection of the glaze.—Prof. J. E. B. Mayor, in the course of some remarks on "A Marsupial in Cambridge in 1700," said: "In a note on Lucian's *Vera Historia*, l. 24, Moïse du Soul (Solanus, as he called himself; Souline, as he is also called by Reitz and Gesner) tells us that a live marsupial was exhibited here in 1700. He also cites Aelian, *De Natura Animalium*, i. 17, where the 'sea-dog,' κίων θαλαττία, is said to give shelter to her whelps when danger approaches. Jacobs cites various authorities, the chief of which is Ambrose, *Hexameron*, v., § 7. Add Basil, hom. 7 in *Hexaem.*, § 2 (i. 64b). These describe, e.g., dolphins and seals as marsupial. Passing from the spectacle to the spectator, du Soul, I find that he is unknown to almost all biographers. Meagre notices in Haag, *La France protestante*, and in Nichols' *Lit. Anecd.* iv. 286, are the only voices of the *vates sacer* to do him justice. He was grandson of Paul du Soul of Tours, Rector of the Academy of Saumur in 1657 and 1661. He fled from persecution; was in Cambridge (possibly drawn by the fame of Bentley) in 1700; A. M. per regias litteras 1701 (the year when Bentley was Vice-Chancellor); in 1702 a dissertation from his pen on the style of the New Testament was inserted in the *Synagoga* of Rhenferd; in February 1708 he published at Cambridge a specimen of an edition of Lucian; in 1720 he sent his collections for Lucian to the Wetsteins; in 1722-23 we find him at the Hague; in 1722 he published at Amsterdam a French translation of Pridaux' *Connexion*; after the death of Augustine Bryan, of Trinity, he was engaged by Tanson to complete his edition of Plutarch's Lives (London, 1724-29, five volumes, quarto); at that time he was living in the country. He lived to 1733, or beyond that year. He has

many allusions to events and persons and manners of the day: the *dragonnades*; a learned Syrian traveller, Theoclast Dadichi, at the Hague at the end of 1722; John Ernest Schotte, a soldier who had served under Charles Gustavus of Sweden (1654-60), was born March 12, 1608, and died in February 1723, having been a pensioner for more than fifty years, and walking to the last from Risswick to the Hague every Sunday to attend the Lutheran church; John Laughton, librarian of Trinity; James Upton; Richard Mead; William Sherlock; John Law of Lauriston; John Aagill; Ezekiel Spanheim; William Lloyd, Bishop of Worcester; Thomas Inson, the Maskelyne of the day, who contrived a wooden head that would answer questions put to it in any language; the custom of drinking healths, *à propos* of a scholion *ἡσυχία* *αὐτῆς θεοτόκου Μαρίας*; hour-glasses in pulpits; men employed as ladies' maids, a fashion introduced by that disgrace of the age, Christina of Sweden; Swiss porters; pilgrims to the Holy Land tattooed with the Holy Sepulchre, the crucifix, &c.; dumb-bells used by leapers in Scotland; magical virtue ascribed to the fat of bodies hung on the gallows; a butterfly giving signs of life seven days after losing its head."—Mr. Griffith exhibited a series of rude pottery rings of two distinct types, found near the river at Hareton and Barrington, which appeared to belong to the Roman period, and which he suggested might have been intended for sinking nets. He compared them with rings of the same two types found in the Swiss lake dwellings, which have been supposed to be stands for round-bottomed pottery vessels. Of these rings Mr. Lewis exhibited four which he had brought with other pottery fished up from the Lakes of Bièvre and Neuchâtel.—Mr. Jenkinson gave some account of the discoveries made at Gilton in September last. The traces of the Roman period had culminated in a rubbish-pit, which contained below broken urns of Roman fabric several fragments of sculpture in oolite. He exhibited a lion's head, about the size of life, which showed good work, and which, in spite of pieces knocked off the nose, still looked not unimposing; and the *torso* of a military figure that had stood about four feet high; the broad collar, the belt, the close-fitting coat, apparently of metal, and a short kilt-like garment peeping from under it were clearly visible; one arm had been raised. These features showed a certain similarity with those of the bronze statuette found at Karth in 1826, and published by this society in 1870 (see *Communications*, vol. iv.). Large numbers of Saxon urns had continued to occur, a diagram showing upwards of seventy in an area fifty feet square. One had been made with a square piece of glass in the bottom, for what purpose was not known; a similar one, but smaller, had been procured from Haslingfield. Another had the ubiquitous *svastika* stamped in plain globular punchmarks on the bottom externally; the singular position assigned to this mark, which had not otherwise been observed among the forms of ornamentation occurring on this pottery, seemed to show that it had some special significance. Three spindle-whorls, one of stone and two of bone, two faceted crystal beads, shivered in the fire, were found; and an incomprehensible implement of bone, consisting of two narrow pieces an inch and a-half long, held parallel and six inches apart by a broad brace behind and two narrow ones in front, rigidity being secured by two rivets at either end. The two pieces first mentioned had each two deep notches on their inner edge, the lower of which notches was continuous in outline with a shallow depression cut in the edge of the braces. More beads and brooches had been found; and also a bronze basin, of the usual Saxon type, in company with a bronze-hooped pail; these lay on either side of a body. The cemetery appeared now to have been completely explored; and, although a certain poverty was observable among the objects found as compared with those from cemeteries at Barrington and elsewhere, what there was had been investigated under unusually favourable circumstances. Had it been necessary to carry away at the time all that was found, a comparatively small number of these interesting urns would have survived the journey.

ANTHROPOLOGICAL INSTITUTE.—(Tuesday, May 9.)  
GEN. PITT-RIVERS, President, in the Chair.—  
Mr. G. M. Atkinson made some remarks upon a

palaeolithic implement found eighteen feet below the bed of the Thames at Chelsea, and exhibited by Mr. Lambton Young, and upon a jet ornament from Garvagh, Co. Londonderry, exhibited by Mr. A. G. Geoghegan.—Mr. Worthington G. Smith exhibited a series of large palaeolithic implements recently discovered.—Dr. Beddoe read a paper on "The Evidence of Surnames as to Ethnological Changes in England."—The discussion was sustained by Messrs. Hyde Clarke, Holt, Park Harrison, Prideaux, Atkinson, C. Roberts, and the Chairman.—In a paper on the survival of early racial features, Mr. J. P. Harrison showed, from measurements derived from ancient skulls and tracings from plates in the *Crania Britannica*, that the facial skeleton of the men of the Bronze period in this country differed essentially from that of the Saxons (1) in the greater prominence of their brow ridges, (2) the sharp projection of the nasal bones, (3) the length of the face, and (4) a more pointed chin. Now, a long, but not narrow, face, prominent brows, a high-bridged nose, and a fine chin, accompanied by a stature above the average, fair hair and eyes, and thin lips, characterise a large part of the population of the three kingdoms at the present day. And another equally well-defined type is also seen among us. Its distinctive features are a smooth brow, a straight or slightly incurved nose, ending in a bulb, a rounded face, a heavy chin, moulded lips, light hair and eyes, a stature about the average, with more or less substance. Mr. Harrison said it could not be doubted that living subjects, possessing respectively all these peculiarities, represent the two races above alluded to. The first, considered by the late Dr. Rolleston to be Cymric, would appear to include Danish, Belgic, and, perhaps, Anglian tribal varieties; the second, Saxons, Franks, and Teutons generally. Early Danish and Belgic skulls differ from German in like manner.—Dr. Beddoe, Prof. Thane, Mr. Atkinson, and the President joined in the discussion.

#### SOCIETY OF ANTIQUARIES.—(Thursday, May 11.)

A. W. FRANKS, Esq., in the Chair.—The Rev. W. F. Greeny, of Norwich, exhibited a collection of rubbings of monumental brasses from the Low Countries and Germany. Some of these were of considerable size, and in both design and workmanship much more elaborate than English brasses. In two large fourteenth-century double brasses—one of two bishops, and the other of two knights—from the Museum at Brussels the Gothic canopies and the shafts supporting them are filled with figures of saints, and below is a curious series of groups representing the abduction of a lady by savage men. At Bruges Cathedral, Joris Munter and his wife (fifteenth century) are represented in winding sheets, with the cross of absolution on the breast, not standing on the ground, but as if ascending. In many—as, for example, the fifteenth-century brass of the lord of Gerlichs, and another, late in the sixteenth century, to the Spanish family of de Puebla—the head is supported by a pillow, though the body is not represented as lying, but as standing on a pavement. Another brass shows a professor of the latter half of the fifteenth century giving a lecture to his pupils, who are diligently occupied in taking notes. The monument of an abbot, from a church near Königsdorf, has a mitre of an unusual shape, the peaks being very low and broad. There were two or three specimens of a rectangular brass frame enclosing a coat of arms. One of these frames had an inscription round it on a flowing band, and, in the spaces formed by the curves, scenes of human life from the cradle to the grave. The collection was a most remarkable one, both from the beauty of the brasses themselves and the trouble taken in procuring the rubbings.

#### NEW SHAKSPEARE SOCIETY.—(Friday, May 12.)

F. J. FURNIVALL, Esq., Director, in the Chair.—(1) A paper was read by the Rev. W. A. Harrison on "The Juice of Cursed Hebona" ("Hamlet," I. v. 62), which he described as being complementary to that by Dr. Brinsley Nicholson on the same subject. Premising that the poison intended must be the same as Marlowe's "Juice of Hebona" ("Jew of Malta," III. iv.), he pointed out that the yew is called Hebona by Spenser and by other writers of

Shakspeare's age; that, in its various forms of Eiben, Eiben, Ibben, &c., this tree is so named in no less than five different European languages. He showed by citations from medical authorities, both of ancient and of modern times, that the juice of the yew is a rapidly fatal poison; next, that the symptoms attendant upon yew poisoning correspond in a very remarkable manner with those which follow the bites of poisonous snakes; and, lastly, that no other known poison but the yew produces the "lazar-like" ulcerations on the body upon which Shakspeare, in this passage, lays such stress.—Mr. Furnivall said that Mr. Harrison had produced most important medical testimony on the point, and characterised the paper as "triumphantly conclusive" as regards the meaning of Hebona.—Dr. Nicholson thought that, if we continued our researches, we should find that Shakspeare, in describing the effects of the poison on the elder Hamlet, was quoting from some old medical treatise, as he quotes Holinshed and others on matters of history.—Miss Lathom thought that we might find some information in witch-lore, and quoted "Slips of yew, slivered i' the moon's eclipse," &c.—(2) A paper on Macbeth by Mr. J. C. Gibson, of the Glasgow Monday Shakspeare Club, was also read.

#### ROYAL ASIATIC SOCIETY.—(Anniversary Meeting, Monday, May 15.)

SIR EDWARD COLEBROOKE, President, in the Chair.—The following were elected as the council and officers of the ensuing year:—Sir Bartle Frere, president; Sir H. C. Rawlinson, director; Sir E. C. Bayley, Sir E. Colebrooke, Sir Richard Temple, Col. Yule, vice-presidents; Sir Barrow Ellis, J. Fergusson, A. Grote, Col. Haig, H. C. Kay, Col. Keating, Lieut.-Col. Lewin, J. W. McCrindle, Gen. MacLagan, H. Morris, Sir Lewis Pelly, Sir W. Robinson, Lord Arthur Russell, Lord Stanley of Alderley, T. H. Thornton, council; E. Thomas, treasurer; W. S. W. Vaux, H. F. W. Holt, secretaries; R. N. Cust, hon. secretary.—The Secretary, Mr. Vaux, read the Report of the Council, which stated that fifty-five new members had been elected during the past year; and, at the same time, gave brief biographies of deceased members and of others distinguished for various Oriental researches, including those of Prince Frederic of Schleswig Holstein, Sir Erskine Perry, Profs. Benfey, Dowson, and Gregorief, and Messrs. Muir, Kraff, Bramsen, and Nain Singh. A notice was also added of the progress of Oriental studies since the last anniversary.

#### FINE ART.

##### THE ROYAL ACADEMY.

##### (Third Notice.)

A WORTHY pendant to Mr. Herkomer's portrait of the "Master of Trinity" is Mr. Holl's very powerful presentation of the late "Capt. A. M. Sim" (260), a face old and wrinkled, but full of strength and decision, a fearless old "salt," with that keen outlook which is so characteristic of the sailor and was so well seized by Mr. Millais in his portrait of Capt. Trelawny. This is the most striking of his many fine portraits this year, which are all distinguished by their serious study of character no less than by their artistic qualities. Mr. Holl is not satisfied with catching an expression, and does not attempt to advertise himself. He gives, as far as he is able, the man he paints, and refuses to draw attention to his own skill as a colourist or executant. Notwithstanding, there is no artist who pays more attention to detail. He manages to get not only expression of the figure, but beauty of hue out of the folds of the ugly modern coat; and there is no one who draws and paints hands more carefully and characteristically. His portrait of "Sir Arthur Hobhouse" (466) is no solitary example of his devotion to his sitter and thoroughness of work, but it is a good instance of both. Nor do we think that anyone excels him in the solidity and truth of his flesh-painting. His portrait of "Mr. Robert Few" (150) is remarkable for the transparency of its fair com-

plexion. In his "Sir Frederick Roberts" (223) he has given us the warrior bronzed with the Afghan sun, and the effect is perhaps more truthful than pleasant; but it is what he wanted. Of Mr. Holl's remaining portraits we prefer that of "Vice-Chancellor Sir James Bacon" (269), which is grandly and delicately modelled; but his "Viscount Cranbrook" (1450) and "Sir Charles Herries" (1470) are studied and painted with equal care. We hope that Mr. Holl is not going to leave off painting those scenes from humble life which, if too constantly sad, were so full of serious thought and true sympathy; but, if he does, it will only be to take up a position in the first rank of portrait painters. His principal faults seem to us to be that he represents his sitters, not with villainous faces as one too violent critic avers, but generally with unhappy and uncomfortable ones; a sense of anxiety seems to oppress them mentally and physically; they too often seem suffering from colds in the head or indigestion. Of Mr. Oulless less need be said; he has won his reputation by portraits, and those here show no falling off. His portrait of "Sir F. Roberts" (23) we prefer to that by Mr. Holl, and those of "Mr. Norman" (122) and "Mr. Stephen Ralli" (446) are life-like and individual. The same praise may be given to the thoughtful head of "Prof. Monier Williams" (1498), but the flesh, never very pleasant in Mr. Oulless's portraits, is less so even than usual. Of the other portraits we may mention Mr. Alma Tadema's solitary contribution to this exhibition, representing "Mr. Whichcord" seated in the Presidential Chair of the R.I.B.A. (181), which is no doubt an excellent likeness, and shows much ingenuity in design, but is rather perhaps a gallant struggle with difficulties than a triumph over them. Of Mr. Wells the less said of his large portrait group of "Friends at Yewden" (261) perhaps the better, but his "Ethel" (83) has a sweet face. To M. Fantin, in a year which is remarkable for the absence of fine portraits of the fair sex, we owe one at least, "Mdlle. E. C. O." (588), which is distinguished by the soft harmony of its colour and fine drawing no less than by its force of character. Probably "La Brodeuse" (94) is a portrait also, and, at all events, it is convenient to mention it here; the action of the hands, the beautiful painting of the shadowed face, the perfection of its tone, are alike admirable. The remaining portraits, and, indeed, some we have mentioned with praise, are but tentative and indecisive efforts compared with these. Not the least pleasant are "Mrs. Charles Holland," by Mr. Wirgman, and Mr. H. B. Macbeth's "Mary." The latter is a picture which, for the beauty of its colour, no less than for its grace and expression, deserves special mention.

The pictures of M. Fantin and those of several other foreign masters here contrast forcibly with English work in general by their complete ease. The process of composition and even execution is only too visible in most English work. Such a masterly painting in many respects as Mr. Millais' "Dorothy Thorpe" is suggestive of after-thought in the accessories. The head is put in firmly and at once, but the rest is too plainly added, and the whole composition is but a clever make up of separate finely painted studies. With M. Fantin a picture is a complete working out of one idea without hesitation or change. To some the result may be pleasing, to others not so; but there is no question as to whether one part is in harmony with the other, no feeling that it might be improved. It stands or falls as a whole. This is true even of such work as M. Munkácsy's "Avant la Fête du Papa" (64), in which nothing is clearly drawn or made out. The picture is a mere series of indefinite patches of colour arranged as by miracle so as to produce a vivid impression of a modern room filled with figures and furniture. Whether the

artist had an exact conception of all the details of the scene before he painted it may be doubted. That he added here and altered there is more than probable, but he worked out a showy scheme of colour with forcible contrasts of light and shade; each touch is added with science, and he knew exactly when to stop. The result is a piece of accomplished cabinet scene-painting, with no interest in the figures certainly, and more "bravura" than refinement; but there is no sense of indeterminateness or incompleteness; it is a thorough success of a kind in which failure would have been chaos. It would be difficult to find a greater contrast to M. Munkácsy than M. van Haanen, who draws with great beauty and delicacy, and forces neither his lights nor his shades, whose colour is clear and pure, and whose composition, whether of few or many objects, is managed with such subtlety that nothing seems to have been placed in any particular position for any particular purpose of the artist. Yet how crowded, without confusion, is his "Venetian Sartoria," with its lively girls enjoying their lunch while one reads a letter aloud. What gentle fun and mischief there is in the pretty faces, what dawning distrust, if not anger, in the matron. Instead of the light being carefully trained, so to speak, to fall only where it is wanted (as in Munkácsy's picture), it is free as nature, illuminating everything, from the girls' hair to the corners under the table. Ribbands, snippings, chair and stools and stuffs, cups and saucers—all the disorder of a scrambling meal in a busy work-room is represented to the life with an art equal to every occasion and never obtruding its presence. The girls are delightful; some, as she who is sitting on the table and she who is reading the letter, beautiful; but all full of spirit, without a tinge either of vulgarity or gentility. Nature's ladies some of them, but all bright, graceful, and unaffected. It would seem as though a comparison was intended to be forced by the juxtaposition of Mr. Wood's "Bargaining for an Old Master" (182), a picture so like in style that one scarcely needs to be told that the new Associate has learnt much from M. van Haanen. He has not yet the ease or finish nor the refinement of his master, but this picture and "A Venetian Fan-seller" (526) show that the Academicians were not wrong in enlisting such a strong recruit. The figures in the former are not very pleasing and not very humorous, but they have character; while the painting of the stall, with its heterogeneous assemblage of objects, from a copper stewpan to a *bambino* in glass case, is very clever. In the latter the colour is not pleasant all through; there is crudity in the girl's costume on the right; but the group on the left is admirable. A work similar in class to these, which deals with a somewhat hackneyed subject in a manner fresh and interesting, is Mr. Burgess' "Letter-writer" (294), in which a pretty girl is apparently taking counsel in public of her female friends as to the answer to be sent to the letter in her hand, while a young Spaniard—probably a rival to the lady's correspondent—is watching anxiously, and not with much pleasure, the result of the parliament. It is an excellent little comedy; and the Spanish character seems to us to be admirably caught. As true to Italy as this to Spain appears Mr. Frank Topham's "Content" (38), with its admirably drawn figures and luminous air.

There are many delightful glimpses of foreign life besides these—pictures which are as good as a momentary trip abroad, bringing back to us what we have seen and (perhaps still better in a picture) foreshadowing future holiday experiences. We know at least one artist who objects to the painting of scenes from any foreign land, on the score that he never saw a picture by a foreigner of English in their native

country which was satisfactory to him. Perhaps Mr. Woods, Mr. Burgess, and Mr. Topham have some English accent, so to speak, which would grate on the ear (or eyes) of an Italian or a Spaniard; but what is that to us for whom they paint, if we detect no Anglicism? Shall we on this account fail to enjoy such charming scenes from Holland as Mr. Boughton paints for us? May we not at least feel that he is safe in his landscapes and in his costume? Those pretty maidens carrying vegetables in "A Dutch Seaside Resort" (363) may not be quite as Dutch as they seem to us, but there is no doubt about the cabbages, purple and green, which make such an exquisite play of colour with the girls' frocks and aprons: we may hesitate about accepting the perfect orthodoxy of the loafers on the wall, but we cannot be deceived in the wall itself, with its carefully studied bricks and mortar. If we give up all these as spurious, we have at least left the sky, the moist air, the exquisitely feathery willows in the middle distance. If any Dutchman were to aver that these are not Dutch, we would be bold enough to retort that he does not know his own country. In "Minden" (342) we have perhaps even a better picture: the figures, especially the woman with her arms behind her back and free fearless pose, are excellent; the sea and the sky are true and characteristic. If Mr. Boughton errs in these, so also does Meedag. Perfect also is our belief in Mr. Hugh Cameron's "Children of the Riviera," which, apart from all local character, is a refined bouquet of colour, the dresses of the children repeating with delightful echo the varied hues of the vegetables on the stall in the background; nor have we often seen the play of tree-shadow on wall and ground more lightly and tenderly rendered. But sceptics may, if they so will, look upon certain pictures here, pictures by foreign artists of inhabitants of their own countries, about which there can be no suspicion. One of the best of these is Sig. Federigo Andreotti's "A Village Maestro" (36)—a picture delightful in its humour and a masterpiece of execution. In rendering variety of texture we do not think that there is anything here to rival it: the satin of the music stool, and the lady's dress, the wood and varnish of the piano, the stubby face of the old man, the healthy complexion of his pupil, are all as good as they can be. Moreover, the drawing is accurate and thorough. Another picture of similar quality is "Out of Tune" (618) by Mr. Carl Schloesser.

COSMO MONKEHOUSE.

#### THE SALON OF 1882.

##### (Third Notice.)

"THERE is nothing less true than truth" is the exclamation which rises to one's lips on seeing M. Baudry's brilliant little picture of "La Vérité." The graceful blonde figure has risen from her well, and, seated on its marble edge, carefully averts her gaze from the mirror which she holds in her extended right hand. The lovely fair tone of the flesh is obtained on a ground of gaslight greens and blues; and the little flaxen-haired Love—who stands in the right-hand corner and unveils "La Vérité"—is laden with draperies of reddish-purple lined with golden yellow, which serve a double purpose, and give a strong centre of contrast to the fair flesh tints, while carrying into the lower part of the picture a hue of equivalent value to the dark and forcible tones of the shaft of ironwork which supports the wheel and chains to which is attached the golden bucket lying idle on the farther side of the principal figure. Speaking with full consciousness of the absurdity of making technical criticisms on insufficient technical knowledge, I should say that even in this work—which comes from the

hand of one of the most remarkable artists of the modern French school—there is a noticeable absence of searching drawing, coupled with passages—such as the uplifted right arm of the central figure—which could only come from the hand of a master. I should also add that it is impossible to look at the yellow shadows of the flesh of the little Love without remembering the old witticism which greeted the exhibition of M. Baudry's decorations for the Opera House, "*De Baudry vient baudruche*;" and the general coloration, which gives to his work something of the aspect of a porcelain tile, shows how completely foreign to the painter's interests is the popular desire "*faire nature*." M. Hébert also stands completely outside the modern movement, and dreams his dreams of impossible beauties undisturbed by the failures or successes of the day. His "*Blanche Meclave*" is an over-refined houri as she might appear through the fumes of *haschisch*; she is seen behind the strings of her emerald-green harp, on a green background, to which a little bit of dark-flowered drapery on the left shoulder, and a touch of scarlet in the sash which confines her transparent white robe about her waist, afford the only relief. There is astonishing skill displayed in M. Hébert's rather sickly art; he seems to have an ideal which is not a matter of convention, but which really imposes itself on his imagination, and his wonderful greens show that he must have enjoyed painting them.

M. Jules Breton also goes on his very different way with unchanged calm. "*Le Soir dans les Hameaux de l'Armor*" is a sombre version of evening in the dreary street of a little Northern village. To right, a row of aged crones, ranged against the roadside bank, are roused from their slumbers by the questions addressed by a group of three women to a girl, who advances towards them with her knitting in her hands. A whole history of suspicious fearlessly faced is told in the attitudes of the elder women, who question and scrutinise the calm reply and straightforward bearing of the girl before them. She is unembarrassed and truthful enough to put all doubt to shame; yet she glances beyond her questioners, with an after-thought of dreamy reminiscence in her look, to where a pair of lovers stand leaning against the wall on the left, absorbed in close talk and unheeding the games of the children at their feet. The shades are closing fast over the distant houses, and hardly let us see the figures at the doors; the moon rising above the roofs sheds a weird light upon the dark-robed, witch-like women and the black cats in the foreground, and gives something like a poetic aspect to a scene which is otherwise sordid and miserable, for there is much that is close and dismal in the atmosphere of evening in this village street, and on these daughters of toil there is little trace of their life by day in that blessed expanse of nature which is the lot of those who labour in the field. Perhaps it is well for a man now and again to look close at a page of life all but devoid of its beauty; and M. Jules Breton has so often brought out—in the spirit of a noble artist—those elements in life the vision of which may the best help us to live, that for once we may scarcely regret to be recalled by him to a point of view from which we see only the commonplace weariness of man born to labour and to sorrow.

The subject of M. Jean Aubert's pretty decorative panel, "*Hiver*," brings to mind the verses of many poets, and, among the rest, the opening lines of Greene's sonnet:—

"Cupid abroad was lated in the night,  
His wings were wet with ranging in the rain;  
Harbour he sought to me he took his flight,  
To dry his plumes; I heard the boy complain,  
I oped the door, and granted his desire,  
I rose myself and made the wag a fire."

Not rain, but snow—white snow covering the ground, and lying thickly on every branch and bough—has driven Cupid in M. Aubert's version of the old theme to make his plaint to the foolish virgin, who, veiled in blue, has invited him to warm himself at the golden brazier filled with glowing coals by which she kneels and shivers with hands uplifted. Love has laid aside his quiver and his bow—bound with a band of blue which carries off the mass of the same colour in the draperies of the maiden—and repeats her attitude with an air of childish innocence just dashed with reviving roguery. The little group reminds one of Hamon at his best, and there is also something of Hamon's graceful affectation in its conception and treatment; but M. Aubert's execution is much firmer and more capable than—if memory serves us truly—was ever the case with poor Hamon's work. M. Leroux also gives us this year, in classical garb, a subject old as the hills but ever new. "*Pêcheurs*," shows us a young lady of ancient Rome fishing on the banks of the Tiber; fish has she none, but she has caught a lover, who lies length-long in the well-remembered attitude of Mr. Alma Tadema's "*Question*." The view of the river has the pretty silvery quality of air and light which distinguished M. Leroux's earlier work of "*Maidens fetching Water from the Tiber*," and the deep puce and blue draperies of the girl and her admirer tell with some force and richness against the prevailing hue of delicate gray; but the most original bit of the picture is to be found in the figure of an impertinent little *gamin*, who, with all the impudence and curiosity of an infant Hermes, criticises the scene before him.

But, under the pressure of the "modern" movement, scenes of classical reminiscence are, of course, becoming excessively rare, and poetical treatment of popular themes in a romantic sense, such as exhibited in M. Maignan's "*La Répudiée*," is day by day less and less frequent. M. Maignan's pathetic work shows his unhappy heroine pushing forwards with her child in her arms, and accompanied by an aged nurse, on her desolate journey. Not even the world's disgrace can tame her sovereign air of chastity as she steps, with grave composure of her heart's anguish, on the difficult path which traverses the barren wolds seen beneath a dull gray sky. But M. Maignan's conception of the situation is not only admirably good in point of dramatic insight; it is wrought out with the instinct of a born painter. His figures are well composed, make part of his landscape, and at the same time tell with force and strength the very aim and object of every line and touch. The deep black which he has brought into central contrast with the white veil of the dethroned and repudiated Queen has the rare merit of being in perfect harmony with the sombre grays and greens of the barren land and its chill sky; and this perfect harmony is attained not by means of a graceful slightness of execution, but by careful study of the relative values which have gone to the working out of a general tonality characterised by much admirable sobriety and strength.

Entirely beside the popular current of the moment is also the Belgian painter M. Charlemont's "*Dans la Salle des Gardes*," a brilliant study of costume, and something more. In the first place, there is much clever painting of furs and velvets, of satins and silks. The central note dark, set to the right in rich hues of red and rose and brown, and olive green plush; to the left, in red and rose, passing out into white and varied grays with buff streaked with azure. The whole rich mosaic of colour is laid on the gray and white of a marble floor and against the delicate tones of a faded tapestry background in which fawns and grays predominate. It seems, though, unfair to have spoken of all this feast of variegated hues in the first place,

because the wearers of the lovely stuffs which M. Charlemont has delighted to paint are intrinsically human; his group of pages in the "*Salle des Gardes*," afford him matter not only for a study in tone and texture, but in living nature. To the left, the central figure kneels and picks up the dice which he has thrown with a roguish air of triumphant satisfaction in the high cast which he has made; his companions crowd round and look on with varied expressions of absorption or amusement, and even the dogs held in leash by the negro lad grinning on the right seem to be aware that something of deep importance is going on. M. Charlemont is a pupil of M. Makart, and shows in this instance much of the same brilliant facility in dealing with the splendid stuffs dear to his master's talent, together with a something of wit and refinement all his own.

Pretty colour, also, as fresh and delicate as paint can be, is to be found in M. Clairin's impertinent "*Frou-frou*," and M. Sargent has a portrait of a lady in black which is very noticeable in this respect. M. Sargent exhibits, besides his portrait of "*Mlle. . .*," a very remarkable picture, "*El Jaleo—Danse de Gitanes*," in which he displays qualities hitherto unsuspected even by those who have watched his work with interest from the first. The masterly way in which he has filled in his big canvas without a trace of apparent effort denotes a rare power. The room in which the dance takes place is lighted only from the front by unseen footlights; a little to the left a single female figure closes her performance in a striking attitude, falling backwards with an energetic movement of her extended arms which sends the black fringes and jet of the drapery about her shoulders flying away from her; the broken folds of her cream-coloured satin skirts receive the full glare of the light from beneath. The dancer is relieved against her own cast shadow; and seen by the fitful light, ranged in a line along the wall at the back, are other women and men with guitars in their hands all in various stages of excitement. The black and white of the draperies of the central figure receive additional distinction from the beautiful bits of broken colour which variegates the sombre background, red and pink, strong and of fine quality, to the right, dying away to the left in hues of violet contrasted with yellow. M. Sargent is a pupil of M. Carolus Duran, and seems to have acquired much of his master's vigorous force in handling the brush, without any taint of that vulgarity which sometimes renders M. Duran's work unpleasantly obtrusive. The portrait of "*Lady Dalhousie*," which M. Duran exhibits this year, is a case in point. It is one of those portraits in which the vulgarity has most incontestably got the better of the vigour, and shows, besides, an unusual want of thoroughness in the treatment of his subject. Roses, red drapery, orange plush, and satin trimmed with white lace assert themselves as violently as the head of the wearer; but this head, which appears to have been painted from a young woman, rises above a chest which might have been modelled from the "*damosel of fifty summers*" who always rode forth in Arthurian romances with the youngest knight. In a second work, M. Carolus Duran has tried his hand at a "*Mise au Tombeau*." The flesh painting of the body of the dead Christ, especially about the bust, looks careful, and there is much pretty colour in the surrounding draperies—rose-reds, blues, violets, reds, and browns—of pleasant quality; but as a work of sacred art this "*Mise au Tombeau*" is ludicrously inadequate. The affectation of sentiment in the accompanying figures reaches the point of ridiculous grimace all round; and the absurd gestures of St. John, with a sponge in one hand and his finger on his nose, find a comical

counterpart in the contortions of the Magdalen, who heaves her shoulders out of a Carnival frock of pink, and exposes to view a bewitching thing in shifts—fresh from Doucet's.

E. F. S. PATTISON.

## EXPLORATION IN THE DELTA OF THE NILE.

### II.

MR. R. S. POOLE'S second lecture at Kensington dealt with the bearing of research on the Hebrew settlement in Egypt and the route of the Exodus. The starting-point of reckoning was the date of the Exodus, which the Biblical genealogies, counting back from David, placed at about B.C. 1300, a date consistent with Egyptian chronology. The period of the sojourn was now reckoned at 430 years, and the administration of Joseph would thus fall in the time of the Shepherd Kings, while their successors of the XVIIIth Dynasty would mark the beginning of the period of oppression. All Egyptologists now hold Ramses II. and his son Menephtah to be the great oppressor and the Pharaoh of the Exodus respectively. Their combined reigns correspond with the length of the persecution in the Bible, and their characters in their own records are the counterparts of the Biblical portraits of the inflexible tyrant and his vacillating successor. The evidence of Manetho and the researches of Lepsius and Brugsch have placed this beyond doubt. The Egyptian evidence of the sojourn is very scanty, because excavation in the Hebrew territory has been neglected, and as yet not a single historical inscription of the Shepherd Kings has come to light. Dr. Brugsch's researches have reconstructed the map of Egypt, but a number of names remain to be identified with existing sites, which cannot be accomplished until these sites can be explored. The town of Goshen, the capital of the Arabian nome, has been discovered in the ancient Kesem, and still survives in the village of Tele-Fakoos. The field of Zoan is the adjacent Tanite nome. The only other site mentioned in the Pentateuch which has been identified is Migdol. Mr. Poole referred to the various theories as to the route of the Exodus, and said that the one proposed by Dr. Schleiden in 1858, and defined on new evidence by Brugsch, was no doubt correct, except as to the passage of the sea. The starting-place, Rameses, was identified with Zoan, and Magdalen was certainly the place marked by the mound called Tell-es-Samoot, north-east of Lake Ballah. The difficulty is whether the Yam-Suph of the Bible is the Red Sea at all. No digging would settle this, but it would probably throw light on the direction of the Israelite journey towards Migdol, and, if each station were identified, the passage of the sea itself might be determined.

### ART SALES.

ON Saturday there was sold at Messrs. Christie's an extremely important collection of recent formation. It was described as the Wyfold Court Gallery, and was the property of the late Mr. Hermon. The sale is notable for the high prices which were reached by many pictures, but by none more than by two of Mr. Edwin Long's, "The Suppliants" and the "Babylonian Marriage Market." "The Suppliants" had the more colour of the two, and the "Babylonian Marriage Market" the more entertaining story. The first picture reached the sum of 4,100 guineas, and the second—to which, perhaps, the popular fame of Mr. Long is chiefly due—reached 6,300 guineas, which is, we believe, the highest price ever fetched for modern work sold under the hammer. It should be added, however, to this statement that the prices included the valuable copyrights.

"Gillingham Church," by William Muller—a painter often seen to greater advantage in his brilliant sketches—sold for £614 (Vokins). This was a picture of the year 1843. Mr. Calderon's "In the Cloisters at Arles" sold for £446. It was exhibited, we believe, at the Royal Academy about eighteen years ago. By David Cox there were three pictures of importance—"Changing Pastures" fell to Messrs. Agnew's bid of £1,470, while "Carrying Vetches" fell for £533, and "Going to the Hayfield" for £1,050. One of Mr. Peter Graham's most popular landscapes, "A Spate in the Highlands," sold for £787; Mr. Frank Holl's "Newgate—Committed for Trial," shown at the Academy four years ago, reached £800; Mr. Macwhirter's "Spendthrift" fell for £315; Mr. Millais's picture of "The Deserted Garden" was bought by Mr. Agnew for £945; and Mr. Phil Morris's agreeable canvas, "The Bathers disturbed," fell for £325. Mr. Pettie's "State Secrets"—a red-robed cardinal engaged, with an air of much secrecy, in committing to the fire some papers that might be compromising—sold for £1,050. It is one of the more dramatic paintings of this eminent artist. Tissot's "Chrysanthemums" realised over £300. Turner's picture of "Cicero's Villa," which had been exhibited at the Academy in 1839, and which until latterly had figured in the Munro collection, fetched £1,890. The single day's sale realised more than £37,000.

### NOTES ON ART AND ARCHAEOLOGY.

IT is understood that the Fine Art Society will shortly hold an exhibition of the works of Sig. Costa, a well-esteemed Italian landscape painter, who is but poorly represented by his pictures now in the Royal Academy and the Grosvenor Gallery. Sig. Costa himself may be expected in England almost immediately.

MR. MACCALLUM will have on view next week at the Egyptian Hall a collection of his pictures and water-colour drawings from Egypt and the Holy Land. The private view was on Friday.

THE Liverpool autumn exhibition of pictures, so much looked forward to as an excellent provincial market by artists everywhere, will be opened at the beginning of September. Though this year there must be missing from the walls of the Walker Gallery such an exceptional achievement as the "Dante's Dream" of Rossetti, which was the leading attraction last year, it is confidently expected that the exhibition will, on the whole, prove even more memorable than any previous one held by the corporation of the city. On his recent visit to London, Alderman Samuelson, the chairman, received many valuable promises from artists who are not, as well as from those who are, this year represented at Burlington House and the Grosvenor Gallery.

IN connexion with the Arts Association of Newcastle-on-Tyne, the seventh annual exhibition of modern pictures in oil and water-colour was opened on May 5 at the Assembly Rooms. The collection consists of 220 water-colour and 500 oil pictures. The quality of the exhibition is much higher than usual, and the valuable influence of these exhibitions is clearly shown by the great advance in the technical work of the local artists. Among the water-colours are characteristic examples of Messrs. Alfred Parsons, Henry Moore, W. Pilsbury, O. Brierly, J. Charlton, D. Murray, Walter Paton, E. F. Brawnall, and J. J. Curnock. The oils include works by J. Pettie, Phil Morris, W. Q. Orchardson, H. Herkomer, Van Haanen, Colin Hunter, H. Moore, J. W. Buxton Knight, A. Legros, Spencer Stanhope, C. Hayes, Edwin Ellis, C. Montalba, J. Tissot, F. Barnard, Walter

Crane, J. Aumonier, P. C. Comte, C. Calthrop, Tom Graham, A. Perigal, Arthur Hughes, &c.

MR. REGINALD STUART POOLE has undertaken a course of three lectures on the art of coins and medals, at the Botanical Theatre, University College, on May 22 and June 1 and 8, as an encouragement to the class of medallists formed by Prof. Legros of which we have already spoken. The proceeds are to be given in prizes and electrotypes or casts.

WE are glad to hear that Mr. W. Thompson Watkin has so far recovered from the serious illness that confined him to his bed during the past winter as to be able to resume work on his *Roman Lancashire*. The publication of the book, which we have before announced, has been greatly retarded; but the subscribers may yet hope to get it before the close of the year.

AT the famous picture sale held last week at Brussels, some excellent purchases were made, we hear, for Great Britain. Mr. Burton, the director of the National Gallery, having bought five charming examples of Gonzales Coques—a series—and the director of the National Gallery of Ireland having also been a purchaser.

THE archaeological commission sent by the French Government to Tunis continues busy, though it has not made any discoveries of the first importance. The rubbings of six inscriptions have just been received in France, which M. Renan classes as Neo-Punic. Most of the Roman inscriptions found have already been published, but a new one near Kairouan, copied by M. Cagnat, makes mention of a "civitas Thacensium" otherwise unknown. It is of the time of Hadrian.

THE party of archaeologists commissioned by the American Institute resumed their work of excavation at Assos in March. The "street of tombs" has been thoroughly explored; and in the neighbourhood was found a large collection of archaic urns and vases, of which the smaller ones alone are in good preservation.

THE volume of the *Numismatic Chronicle* for 1881, which is recently completed, begins the third series of this valuable publication, and begins it well. The high standard of archaeological research which has distinguished its pages, especially of late years, is maintained in Mr. Head's treatise on the chronological sequence of the coins of Boeotia (which we have already noticed), his supplementary note on the coinage of Ephesus; Prof. Gardner's papers on Pollux's account of ancient coins, floral patterns on archaic Greek coins, and coins from Central Asia; and Mr. Bunbury's notices of some unpublished coins of Athens and Eleusis. In Oriental and modern numismatics the most important communications are those of the Hon. James Gibbs on the coins of the Bahmani dynasty of the Dekkan, and of M. A. Terrien de La Couperie on the silver coinage of Tibet, which is traced through the several phases which preceded the extension of the Indian rupee to Tibet. The Nepalese mohurs, the Tibeto-Nepalese, Tibetan, and Tibeto-Chinese issues are successively described from specimens in the British Museum, India Office, and the Paris Cabinet des Médailles, with much historical and numismatic illustration. Mr. Thomas writes on coins of Bukhara, and M. Sauvage on a copper coin of the Saffaride dynasty. There are also eleven papers connected with the coinage of Great Britain and Ireland, the most interesting of which is one by Dr. Aquilla Smith, on the Irish coins of Richard III. Indexes have been published to the two preceding series of the *Numismatic Chronicle*, each of which counted twenty volumes. The president's annual address gives an interesting account of the work of the society, and shows the prosperous total of 200 members save one.

## THE STAGE.

## A SCHOOL FOR ACTING.

THE theatrical profession seems slowly moving in the direction of the establishment of a school for acting. Much time had passed since the question was first practically raised, and it was thought that actors had waxed lukewarm on the matter, and that, if a measure promoted in the first instance by intelligent amateurs of the art could be decently dropped, the profession would not be very sorry. It appears, however, that the profession was wronged. Several actors of high note attended at the meeting at the Lyceum on Monday, and urged the desirability of systematic training. That systematic training for the art of acting is wanted in some form or another is, we think, beyond question. The point is, shall it be supplied at some central institution—the university of the theatre, so to speak—or shall it be furnished in separate play-houses after the fashion suggested, if we remember rightly, by Mr. Burnand? The speeches of Monday were encouraging, and they seemed to point towards the former of the two plans; but we are not able to express complete sympathy with all of them. Mrs. Kendal was actuated, of course, wholly by *esprit de corps* in suggesting, as we believe she did, that the children of actors should have the first chance in any school that might be established. It was said that charity should begin at home; but we are unable to see that the children of actors would have any special or paramount claim upon the good offices of an institution which it is hardly likely would be supported wholly by the dramatic profession. If charity began with them, would it be quite “at home”? The scheme would have the assistance of the public, and the opportunities afforded by a school should be open to all. One of the very objects for which such a school would be established would be to enlarge the area from which recruits for the theatre are drawn. Those who want teaching most—those who really stand most sorely in need of it—are not the children of actors and actresses, who can generally get a footing without difficulty, who may fairly be presumed to have some hereditary ability, and who have the support and advantage of personal association with the stage. They are rather the persons whose natural love of the theatre impels them to it from quarters with which it is in little sympathy, and who cannot but experience great difficulty, as things now are, in gaining the hearing of managers and convincing those in authority that there are capable people outside the ranks. For the ordinary amateur in any art we confess to have little feeling. He, whether painter, sculptor, writer, or actor, is a person who is kind enough to insist upon spending his time in doing ill what it is the acknowledged business of somebody else to do better. But, nevertheless, the professional class occasionally receives an accession from the lines of the amateur. To enter the profession seriously must not be made a matter of difficulty—no artificial barriers must be set up. The amateur, as an amateur, is probably worthless; but the amateur determining to be a professional must have his fair chance. Another point that occurs to us *à propos* of the report of the meeting at the Lyceum, is the appointment of professors. It was suggested—obviously with a generous intention—that teaching should be gratuitous. We doubt if the best will be gratuitous, for some of the most effectual and popular practitioners of an art—those who could afford to give their labour if they chose to do so—are often not those most qualified for the particular business of imparting it. Often the most effectual teachers may be found, not among the greater practitioners—genius cannot be taught—but among the intelligent, judicious,

second-rate folk who have never made a great hit, but who have observed their brethren studiously ever since they have been on the stage, and who know how everything has been done any time these twenty years. The services of such people can hardly be asked for gratuitously.

## MUSIC.

## RECENT CONCERTS.

THE programme of the fifth Philharmonic concert, on Thursday, May 11, one of considerable interest, included Weber's incidental music to “Preciosa.” This beautiful and romantic work was composed in 1820—immediately after Weber had finished “Der Freischütz”—for a melodrama written by his old Weimar friend, P. A. Wolff, the celebrated actor. The music forms a wonderful contrast to that of the opera, and shows how thoroughly the great musician could adapt his mode of expression to the particular subject-matter which engaged his attention. The sparkling and graceful overture, with its “bolero” theme, its Gipsy March, and “dance” theme, was capitally played by the band. The choruses are wonderfully fresh and pleasing, and the marked and characteristic rhythms carry us away to the sunny South, the scene of the play. The charming song “Lonely am I now no longer” was rendered with much taste and feeling by Miss Santley. The words were recited by Mr. Samuel Brandram. The Philharmonic Choir did full justice to the work. Sig. Sgambati, of Rome, made his first appearance in England, and played his own concerto for pianoforte and orchestra in G minor. The first movement is peculiar, and not by any means satisfactory. There is a constant straining after effect by means of peculiar modulations and rhythms, and also violent contrasts. The composer seems also uncertain as to whether he should follow Italian or German models: hence the music is patchy; the various themes do not follow one another in a natural and connected manner. The second movement (*andante sostenuto* in E flat), though not remarkable, is pleasing and graceful. The *finale* (*allegro animato* in G) is the best of the three movements. It is in *rondo* form, and contains some very interesting workmanship. The concerto, which is full of showy and difficult passages, was exceedingly well played by the composer. Sig. Sgambati is a pupil of Liszt; and, in the three short solos which he gave later in the evening, he displayed a very delicate touch and finished mechanism. M<sup>me</sup>. Christine Nilsson was the vocalist, and sang an air from “Don Giovanni” and Schubert's serenade. The programme included the Pastoral Symphony and the “Tannhäuser” overture.

The programme of the last Crystal Palace concert contained two novelties. One of these was a fantasia on themes from Beethoven's “Ruins of Athens,” by F. Liszt. It is said to be an early work of the great virtuoso's; and, as it was evidently written as a show-piece, and has no particular merit as a composition, we need only add that it was performed with much dash and brilliancy by M<sup>lle</sup>. Vera Timanoff. The other novelty was “The Storm,” a new movement for the “Ocean Symphony” by Rubinstein. This work originally consisted of the four usual movements. Some years later the composer added two more sections to his tone-picture; and now, as if the symphony were not already sufficiently long, another has been written, making in all seven. The “Ocean Symphony” in its original form contains some of Rubinstein's best music, but certainly this latest addition contains some of his worst. Violent tremolos, chromatic scales ascending

and descending through four octaves, and deafening strokes of the drum give a wild and noisy, but most unpoetical and unmusical, picture of the stormy ocean. We do not ever remember to have heard a more unsatisfactory piece of programme music. The movement, abounding in difficulties, was excellently interpreted by the Palace band, under the able direction of Mr. Manns. The programme included Gluck's magnificent overture to “Iphigenie in Aulis,” with Wagner's effective close. The vocalists were Miss Robertson and Miss Fanny Robertson.

The second of the Symphony Concerts was given on May 12 at St. James's Hall. The attractions of the evening were Schubert's great symphony in C, Beethoven's overture and incidental music to “Egmont,” and Weber's overture to “Euryanthe.” Mr. G. Grove is of opinion that, besides the nine symphonies of Schubert known to us, another was written in the year 1825. Though at present no trace of it has been discovered, Mr. Grove firmly believes in its existence, and hence the great symphony in C is now called No. 10. Beethoven's “Egmont” music, full of beauty and dramatic expression, loses, of course, much of its effect when heard apart from the stage. But, as Goethe's “Egmont” is not to be given in London, we may be thankful for the opportunity of hearing Beethoven's music in the concert-room. The explanatory text was half read, half recited, by Mr. Clifford Harrison; and the two songs were beautifully interpreted by Frau Anna Sachse-Hofmeister, the gifted actress who so distinguished herself in the “Walküre” at Her Majesty's Theatre. The instrumental portions of the work were rendered with the utmost delicacy and precision by the band, under the direction of Mr. C. Hallé.

The third Richter Concert took place on Monday, May 15. The special attraction of the evening was a symphony in D (op. 60) by Anton Dvorak, a composer whose name is now becoming rapidly and widely known. His “Slavonic Dances” played at the Crystal Palace in 1879, the “Slavische Rhapsodie” given at a Richter Concert in 1880, and his chamber music and songs heard at the Popular Concerts and elsewhere have brought his name prominently before the musical public. The symphony is rather disappointing. It contains, it is true, much pleasing melody, and some highly elaborate workmanship, but the musical pearl of great price—individuality—is lacking in the two first movements; and even in the *scherzo*, a specimen of the Slavonic dance called a “Furiant,” the influence of Beethoven is too prominent. The *finale* is the best portion of the work. Some of the instrumentation is interesting, though, taken as a whole, we find the work too thickly scored. The symphony was admirably played, and was conducted by Herr Richter, to whom it is dedicated. Herr E. Rappoldi gave a very solid and artistic, though somewhat cold, rendering of a prelude and fugue in C by Bach. The second part of the programme was devoted to Brahms' “Deutsches Requiem,” with M<sup>me</sup>. Marie Roze and Mr. F. King as soloists.

The second cycle of the “Nibelung's Ring” concluded last Tuesday evening. The performances have been most interesting. Frau Hedwig Reicher-Kindermann, the Fricka of the first cycle, achieved a perfect triumph as Brynhildr, and Frau Vogl sustained with much effect the part of Sieglunde in the “Walküre.” Herr T. Reichmann, who has a pleasing voice, gave a satisfactory and, at times, impressive rendering of the Wotan music. There were other changes in the cast which we are unable to notice. The third cycle commenced yesterday evening.

J. S. SHEDLOCK.

SATURDAY, MAY 27, 1882.

No. 525, New Series.

THE EDITOR cannot undertake to return, or to correspond with the writers of, rejected manuscript.

It is particularly requested that all business letters regarding the supply of the paper, &c., may be addressed to the PUBLISHER, and not to the EDITOR.

## LITERATURE.

*The Reign of William Rufus and the Accession of Henry the First.* By E. A. Freeman. In 2 vols. (Oxford: Clarendon Press.)

IN these volumes Dr. Freeman has worked out in full detail part of the scheme which he sketched in the latter portion of his *History of the Norman Conquest*. It is well that he has done so, for not only is it obvious that without a more complete treatment of the reigns of the Conqueror's successors much of the foregoing period would still remain enigmatic, but it is also clearly of great advantage to have these reigns dealt with by one whose labours have so specially prepared him for the undertaking. We can but heartily wish that at no far-off day the whole work may be brought to its legitimate conclusion by a *History of Henry the First*. For, important in many ways as are the years covered by this book, it will hardly be denied that the reign of Henry, while, on the one hand, it opens up fresh issues, and forms, in some respects, a prologue to a new epoch of British history, is yet, on the other hand, a necessary epilogue to the great drama of the Norman Conquest. It is also a reign which even more than that of the Red King would repay the thorough and ungrudging labour which Dr. Freeman could and would bestow upon it; so that, while we are delighted to hear that there is at last a somewhat definite prospect of having the long-wanted story of the great South Norman kingdom worthily told, we are unwilling to have the completion of the author's present work deferred even for such a desirable purpose.

In this *History of Rufus*, while there are not many absolutely new points, and perhaps few facts that are not to a certain extent familiar to students of Dr. Freeman's former books and of the documents upon which he has worked, yet much is here for the first time set in a clear light and brought into its proper position with regard to the main phenomena of the time. Those best acquainted with the heroic figure of Anselm will probably be the first to acknowledge the masterly way in which he is here treated—to confess that the motives, the character, and even the personality of the saint have never been so ably brought out. Again, the account by the Durham monk of the Unrighteous Persecution of the first Bishop William of Durham has long been accessible (even in English since 1855), but it has never received adequate consideration; and though it may, at first sight, appear to

be of less importance than Dr. Freeman would allow, and to occupy a disproportionate space in his narrative, its numerous and direct bearings upon constitutional and Church history will be felt to justify the prominent position which he has assigned to it. The mission of Geronto, an amusing figure whose Italian diplomacy so easily and lightly outwitted Rufus' stubborn cunning, is undoubtedly a new and notable fact added to the history of the period. When the Vatican archives are rendered more generally accessible, there is no question but that we shall have much fresh light thrown upon ecclesiastical affairs under our mediæval kings, whereby many dark places will be satisfactorily cleared up.

An admirable piece of investigation, and one which will be of the highest value to that future historian of Wales whose advent we are all hoping for, is the sketch of the Norman conquest of South Wales. Dr. Freeman is here a pioneer in ground which has been not only neglected, but deliberately rendered difficult of access by the follies and prejudices of pseudo-patriotism. The pages which deal with the Scottish history of William's reign are also especially valuable, and have cleared up several hitherto unsolved questions, though there are others which still wait solution—the exact position and kindred of Dolfín (Thorfin), for instance. The interesting episode in which Magnus Bareleg appears is fully and finally presented, from the point of view of English history. With regard to the chronological *crux*, the dates and number of the Norwegian King's western expeditions, here left unsettled, there is an essay by Dr. G. Storm (*Magnus Barfod's Vesterhafstog*, Kristiania, 1880) which should have been consulted, for it will be found to go far towards its explanation. One small mistake of Dr. Freeman may be corrected here. In a note (vol. ii., p. xxiv.) he has misread the words of the Orkneyinga Saga and confused the Holy Earl Magnus with his namesake the Barelegged King. It was Earl Magnus, then a young hostage in the King's power and page at his table, who refused to join in the fray, and sung the psalter while the battle went on. The King's anger at the Earl's non-combatant attitude is well hit off in his angry outburst: "Get thee to the hold, and do not lie here cumbering better men's feet, if thou wilt not fight thyself! I cannot believe it is out of pure piety thou art acting thus!" The Sagaman does not omit to tell us that it was not from fear, for "he did not shelter himself;" albeit he escaped without a wound. Soon after the battle, finding that he had incurred the King's anger for his passive courage, Magnus escaped and fled to the Scottish court. For the rest, as the account of the Saga is here founded on the verses of contemporary poets (one of whom—Gísl Illugisson—was in the fight), it may be trusted as to there having been really something more like a battle than a bicker at the Sound. On p. 140, vol. ii., note 5, there are two misprints—"s" for "f" in the quotation from "Johnstone;" and again on p. 147 there are two words wrong in the Old-Norse texts. Several similar errors occur in the Old-Norse citations in the *Norman Conquest*, which

should be corrected when there is an opportunity.

With respect to the character and work of Ranulf Flambard, little is here added to the views first expressed in the *Norman Conquest*; but we feel that what then appeared a somewhat startling theory now becomes, when it is seen in its proper historical position amid the other phenomena of the period, a very probable and almost necessary conclusion. The aims and disposition of Ranulf's master as set forth here have also been propounded in the earlier work, and in this case, too, we are more disposed to agree with Dr. Freeman than we had before thought possible. In the details of the disputes with William and Anselm, we are able to trace out more completely the curve of the Red King's strange character. It is with a little wonder that we note the impartiality with which the historian, whose prepossessions are in many ways so adverse to even the better traits of his subject, deals with William. But throughout these volumes a more delicate analysis of personal character makes itself evident than their author has yet shown himself able to apply. And yet, with the exception of Anselm and Helias of Maine, there is no one with whom he can be fully in sympathy, so that the task cannot have been a wholly congenial one. Helias, by-the-way, must not be left unnoticed here. He has perhaps rather gained in reputation by contrast to the company among whom he figures; but still we are little disposed to question the historian's verdict, especially as it is one which had been already practically pronounced by Orderic, who had exceptional facilities for judging the facts of the case and estimating the opinion of the day.

A marked feature of this book, especially in those parts of it which deal with William's Continental policy and measures, is the use made of geographical and architectural testimony. The good clear maps and the admirable and concise paragraphs in which the features of town or district are impressed upon the reader merit special and grateful mention. The most earnest student is not always able to see for himself places of which definite knowledge is absolutely necessary to his purpose; and though we know very well that "eyesight is better than hearsay," and hold that the historian must be a traveller, yet it is of great advantage to have a skilled and trustworthy witness whose negative conclusions will at any rate prevent serious errors. If anyone should wish to exemplify the necessity of a keen eye for the physical geography of a country, and a sound training in architecture for those who would really study mediæval history, he could hardly do better than cite the pages touching Rochester, the admirable sketch of Maine, and the capital notes upon Le Mans Cathedral which are to be found here.

Turning to another topic, the clever use of the Chronicle and the minute and ingenious criticism upon its phrases are features in this book as they were in the author's former work—see, for instance, the passage as to William's use of money where it would be cheaper than steel, a note of this King's policy which has not hitherto been brought out.

Of course one naturally wishes to find what

can be made out of the last scene of Rufus' striking career, one of the most impressive events in all English history, and one turns eagerly to the chapter and note devoted to it. Here the varying narratives of the Chronicles of the time are carefully weighed, and no attempt is made to "reconcile" or build up a single unsound hypothesis upon such very shifting foundations. The kindly, but apparently flattering, verses of Gaimar are set side by side with the stern brevity of the English Chronicle and the graphic but romantic words of William of Malmesbury. All we know or can know of William's death and character seems to us to be excellently summed up in the words of the fifteenth-century Italian, who has here drawn a portrait not unworthy of his master:—

"Grande, forte, e bel delle sue membra,  
Superbo, avaro, e micidial d' altrui:  
Al padre molto del corpo rassembra,  
Ma di costumi gli fu più contrario.  
Che il foco all' acqua quando sono insembra.  
Tanto ben ebbe, che in arme fu chiaro,  
Molto battaglie fece a solo a solo  
Che tutte all' onor suo atermizaro:  
Me se fu reo, alfin n' ebbe gran duolo,  
Ch' essendo al bosco e seguitando un cervo  
Ed avendo amarrito ogni suo stuolo  
Ferito a inganno fue da un suo servo,  
D' una saetta, e quivi cadde in terra  
La carne fredda e inordato ogni nervo."

With these words we may leave Rufus.

There are two adjuncts to these volumes which ought not to be passed over—an excellent Index and a Chronological Table of the whole period covered. We should have liked to have had also an Itinerary of Rufus, which would not have cost much extra trouble to the author, and would have been of signal use for future students of the epoch.

An impression is left, after a careful perusal of the whole, that the text might have been with advantage a good deal compressed; there are continual repetitions, and, though these may have their justification in a lecture, where it is needful to fix the speaker's meaning upon the hearer's mind, they certainly tend to irritate and even confuse the reader.

The allusions to contemporary politics are quaint and amusing. The Grand Turk gets a well-deserved and heavy-handed castigation, and the renegadoes of doubtful character who have espoused his cause with a by no means disinterested zeal do not escape a fitting phrase of scorn. There is little to quarrel with here, and Dr. Freeman has dealt gently on the whole with such minor offenders as the all too imaginative Thierry. But, in the midst of a note in which Palgrave's labours are spoken of with well-deserved and judicious praise, there is a sentence which would have been far better omitted. Even if it were true that Palgrave held wrong views on the difficult question of the true value and consequences of the Crusades, it hardly becomes him who once endorsed Schlegel's absurd and bigoted view of Buddhism as a "demoniac mockery of coming Christianity," and who even now prefers to speak of Mohammed as the False Prophet, to put down Sir Francis' opinion as a prejudice consequent upon his Hebrew birth. Dr. Freeman certainly has as little love and appreciation of the East, Aryan or Semitic, as Palgrave could ever be supposed to have

of the West, but we should hesitate to accuse him of having come to the conclusions he puts forth on Eastern history and religion through the prepossessions natural to his creed or birth. All the younger students of history in this country have learned so much from Dr. Freeman's honest work and outspoken criticism that it ill becomes any of us to treat him otherwise than with just respect; but it is not well that those who are ever ready to copy a master's weak points rather than his nobler and less attainable qualities should be able to use his authority for raising personal questions where there should only be room for a fair and scientific handling of delicate and complicated problems.

Oxford has never lacked opponents who are ready to question her pretensions to teaching, but as long as the University Press continues to produce works such as that of which this book is an instalment (not, it is to be hoped, a final one) she can well afford, in the matter of history at least, to speak with her enemies in the gate.

F. YORK POWELL.

*A Poet's Harvest Home: being One Hundred Short Poems.* By William Bell Scott. (Elliot Stock.)

WHEN Mr. Scott published a volume of poems seven years ago, collected from the writings of many years expressly to stand as his "credentials" in this kind of art, he did not bid a formal farewell to poetry, but he spoke of putting his poetical house in order, and gave the impression that henceforward he would be a poet not easily moved to song. But it would seem that last year, during a holiday sojourn at the Old Scotch House commemorated in his last volume, the impulse to write in verse came upon him with a force that would not be denied. His thoughts took rhythmical shape almost in spite of himself, and one "short poem" was added to another, giving expression to his incidental meditations on nature, art, human life, the mysteries of the hereafter, till, as the harvest was gathered in, stacked, and thatched in the farmer's yard, the poet's portfolio was filled with the fruits collected in this pretty little volume.

This explains the title of the book and the character of its contents. "Good, if true," Mr. Scott says,

"Good, if true, it seems to me  
Our verses should be judged to be;  
If Nature prompts, not merely Art."

Nature, and not merely Art, has been the prompter of these short poems, in this sense that the subjects have come of themselves out of suggestions in the poet's immediate surroundings, and have not been sought and chosen for any special suitability to artistic treatment or to the powers of the poet. To know the full extent of Mr. Scott's power as an artist in words, to understand how high a place he is worthy of among living poets, we must go to the "credentials" before published. We find here, indeed, many lines that linger in the ear, casual felicities of rhythm,

"Running like a running rill  
Verses free as if they grew."

But the thoughts to be expressed are para-

mount, and the expression has been left to grow freely out of them and round them, and has not been elaborated for its own sake. "Records of a Season," Mr. Scott calls his poems; and they owe their unity, and no small part of their charm, to the fact that they are true musical records of the poet's ruling thoughts during a holiday retreat, when his mind was left free to respond to hints that came to it as he listened to his companions in a quiet country house, or strolled in the old-fashioned garden, or observed the ways of the simple country folk, or mused without effort over favourite themes. The poems receive from these accidents of their suggestion and composition a rare and refreshing individuality; they are interpenetrated with the genius of the place and the time and the man. They are true pastoral poems, genuine idylls; only the shepherd is a scholar, an artist, and a thinker, and the sights and sounds about him have a more richly stored mind to appeal to than that of the ideal tender of flocks. Sometimes, too, he wanders in thought far from the garden and the sea-beach and the simple rustics, and seeks for an aphorism in which to condense his foregone conclusions on such problems as the bearing of the doctrine of Evolution on Morality, or the relation of the Poet to Nature, or the law of Sonnet Structure, or the Kesselstadt Mask, or the theory of Art for Art's sake. We could not have accepted the volume as a true mirror of the holiday moods of an artist and critic if there had been no such excursions away from the direct suggestions of the locality. But, for the most part, his "rhyme-children of the transient hour" owe their birth to some actual incident.

The moods and trains of thought expressed in these short poems are so variable and wide-ranging that to quote any one of them would infallibly be to convey a wrong impression of the individuality of the writer. Free, unpremeditated, unelaborated as they are, there is hardly one of them that does not embody in adequate language some graceful or humorous fancy or profound thought. But the main interest of the volume lies in its revelation of a tender, thoughtful, loving, and lovable personality, solidly centred in large-hearted humane sentiment, by no means indifferent to the humorous side of life, yet profoundly impressed by its mysteries. Not the least beautiful poem in the collection is one suggested by the poet's seventieth birthday:

"So many years I've gone this way,  
So many years! I must confess  
Waste energies, much disarray;  
Yet can I own no weariness,  
Nor see I evening's shadows fall  
Down my much inscribed wall:  
The warm air still is like mid-day,  
And many mournful ghosts are past,  
Laid still at last."

"The fabled fardel lighter grew  
As near the bourne the bearer drew:  
Life can, alas! no more surprise  
By its continuous compromise.  
New faces fill the chairs, and so  
Our interest in the game runs low.  
Quiet pleasures longest stay,  
Experience packs so much away.  
I wait and wonder: long ago  
This wonder was my constant guest,  
Wonder at our environing,  
And at myself within the ring:

Still that abides with me, some quest  
Before my footsteps seems to lie,  
But quest of what I scarcely know,  
Life itself makes no reply :  
A quest for naught that earth supplies,  
This is our life's last compromise."

Mr. Scott has either learnt the secret or been gifted by temperament with the power of setting the years at defiance. We trust that he will bring home many such harvests as the present volume. WILLIAM MINTO.

*Sermons on Special Occasions preached in Westminster Abbey.* By Arthur Penrhyn Stanley, D.D., late Dean of Westminster. (Murray.)

"I COMMIT my soul to the mercy of God through our Lord and Saviour Jesus Christ; and I exhort my dear children humbly to try to guide themselves by the teaching of the New Testament in its broad spirit, and to put no faith in any man's narrow construction of its letter here or there."

In these words, which Dean Stanley quotes from the will of Charles Dickens, is summed up with tolerable accuracy the "simple but sufficient faith" in which the preacher himself lived and died. The Dean, no doubt, would have avoided such exclusive reference to the New Testament, as though through it alone the voice of God had spoken; but, with this exception, the words might have been his own. They express the catholicity of his belief, and also his repugnance to the claims of human authority.

The verdict which his contemporaries have already passed upon Dean Stanley will not be affected by the present volume; and, as the sermons it contains are published in accordance with his own wish, we may infer that he himself was quite content to be judged by them. They are certainly, alike in their excellences and their defects, highly characteristic of their writer. They display to the full his picturesque method of dealing with history, his command of graceful language, his quickness in detecting analogies, and his industry and research; but their most conspicuous feature is the large sympathy they everywhere exhibit. It was the possession of this grace which made the Dean able, without sacrifice of truth, to do ample justice to the many widely differing characters about whom he had to speak. In all of them he was able to find something which made them akin to himself. There was always some point of contact by which the current of sympathy could pass. Himself a many-sided man, he had by nature as well as by culture powers of appreciation which greater men often lack. And so his tributes to the dead are not mere funeral orations or unreal eulogies, but are instinct with truth and, above all, with charity.

The present volume is divided into four sections. The first comprises five sermons, all having reference to the Abbey of which the Dean was not merely the nominal, but the lovingly devoted, custodian. The discourse preached on Christmas Day, 1866, upon "The Coronation of William the Conqueror and its Consequences," is an admirable example of his pictorial skill. We seem to hear the discordant shouts of the two nations in their fierce encounter within the Abbey walls, and

to see the King, "trembling from head to foot in the extremity of fear," waiting beside the altar to receive the crown and the anointing at the Archbishop's hands. Nor less striking is the skill with which the preacher extracts from this incident lessons appropriate to the Christian season, and traces in the moral world the same order which history reveals.

In the second section are some sermons on national events, including one delivered during the illness of the Prince of Wales, which those who heard are not likely to have forgotten. But it is in what are termed the "Funeral Sermons" that the peculiar excellences of Dean Stanley as a preacher chiefly show themselves. Those which commemorate the deaths of Mr. Grote and of Sir Charles Lyell, respectively entitled "The Religious Aspect of History" and "The Religious Aspect of Geology," are of unusual interest. The manner in which personal reference is made in the former sermon to the departed historian is as felicitous as the encomium is deserved. "If," says the Dean—

"if, as has been the lot of other eminent historians, he was an example of that which he described, and grew like to that which he admired; if we feel as though we were reading of himself when he portrays the Athenian statesman, who, 'by his straight and single-handed course, with no solicitude for party ties, and with little care to conciliate friends or offend enemies, and by manifesting through a long public life an uprightness without flaw, had beyond all suspicion earned for himself the lofty surname of the Just;' or that Spartan chief who rose above his countrymen by his 'entire straightforwardness of dealing and his Pan-hellenic patriotism, alike comprehensive, exalted, and merciful;' if we almost fancy that we see living again in him the genius of historical impartiality, which once seems to have been realised among men in the Grecian Thucydides—then of him also, as of those whom he delineated, may those sacred words be repeated: 'The just shall be had in everlasting remembrance.'"

The concluding section deals with miscellaneous subjects, which have at least this common characteristic, that they are treated with uniform taste and liberality of thought.

We welcome this volume as a help towards preserving the memory of one who was no mere popular preacher or successful party leader, but who, by the eloquence of his life, no less than by that of his lips, taught his generation the beauty of Christian charity.

CHARLES J. ROBINSON.

*Essays at Home and Elsewhere.* By E. S. Nadal. (Macmillan.)

ON receiving a new volume of essays in this age of essay writing, one is almost inevitably tempted to speculate upon the meaning attached to the word "essay" by our early essayists and its present rather ill-defined signification. A comparison of the Addisonian or Johnsonian essay with those of our own time will suffice to show a diversity both of subject and style among modern essayists which contrasts remarkably with the strong family likeness discernible among eighteenth-century writers. But it must not be hastily assumed that this is altogether to our advantage; for, if it be an easy transition from

Addison to Steele, the critic who would pass with a light heart from the perusal of Mr. Matthew Arnold to the enjoyment of A. K. H. B. will find his confidence in our age rudely shaken.

The essays in the present volume are written with ease and in a simple, unaffected style. There is a pleasing variety in the large field through which Mr. Nadal ranges; and in most of the essays, particularly those that discuss American subjects, shrewd sense and an observant humour are conspicuous. With the exception of an occasional inelegance, such as the use of "pretty much" for "pretty nearly," their diction is lucid. In "The Old Boston Road" not a little recalls the indefinable charm of Washington Irving; in the mere reading of it there is something of the enjoyment of an infrequent holiday. This essay describes a Sunday ride on horseback from an isolated, old-fashioned village into the city of New York. The halt during the heat of the day is made at an historical old inn, in the neighbourhood of an equally historical church, where the author attends service. Of this church and of the congregation he gives a delightfully picturesque account, in which every touch tells, and the whole forms a charming rural picture. There is something very engaging and pretty in the description of the gathering under the church-yard trees after service, where "young mammas, who had not met for a week, perhaps a fortnight, stood by the gate and pecked each other with many enquiries and many expressions of delight."

Of the articles on literary subjects some will provoke both protest and dissent. The essay on Bryant is in certain respects a remarkable performance. It is remarkable for its fullness and finish of expression, and exhibits not merely an intimate knowledge of that poet's works, but considerable critical sagacity. Everything that can possibly be said by special pleading is put before the reader with the ingenuity of a skilled advocate; there is no exaggeration and no straining of points, and the writer avoids the error of instituting comparisons with the poetry of others. Yet, after all, one is tempted to ask to what purpose is this display of ingenuity on behalf of a writer who, on Mr. Nadal's own admission, possessed as his chief claim to be considered a poet a power of describing the scenery of his native land in correct but cold verse? The essay is likely enough to result in fresh consultations of Bryant's works; but it is improbable that such consultations will arouse anything approaching enthusiasm for the writings of that overrated poet. The neglect, not to speak of the positive injustice, from which Byron's reputation has suffered in recent times, receives further accentuation in Mr. Nadal's strangely narrow estimate of his poetical force. In the first portion of his essay on Byron, he displays an obliquity of critical vision that might be suspected of perversity if we had not been too well accustomed of late to a similar incapacity on the part of other critics of gauging Byron's intellectual powers. What would be thought of a critic of Mr. Tennyson who persisted in founding his judgment of that poet on an estimate of the "Idylls of the King"?

to the exclusion of "Maud;" or who, recognising the beauties of the Arthurian poems, denied Mr. Tennyson's lyrical faculty? Yet Byron has been subjected in our own time to this process; and it is doubtful if he be not more unjustly estimated now than in his own lifetime, when his inferior work was acclaimed with universal voice and the mature and immortal fruit of his genius was received with coldness and suspicion. Mr. Nadal says (p. 44): "I should doubt if there is to be found in Byron's works a line of genuine satire;" and, farther on, he proceeds to deny that Byron possessed wit, saying, "His letters, the records of his private conversations, and his poems are full of a saucy frivolity which Moore and other persons, more sympathetic than discriminating, mistook for wit." This sentence contains its own evident refutation; the author of "The Fudge Family in Paris" was too eminently endowed with the commodity in question to be capable of making any such mistake. With respect to Byron's satire, and putting aside his great satirical epic, comparative critical analysis clearly shows that if "The Vision of Judgment" is not a satire, neither is Pope's "Dunciad." Both poets satirise in these masterpieces the ludicrous disproportion between the pretence and the performances of dulness; and the former poem has the additional merit of satirising the Pharisaic side of self-complacent Philistinism and of being sustained throughout—with all Pope's *verve* and incisiveness—by a fiery sense of righteous indignation the genuineness of which no one has yet doubted. Mr. Nadal's defence of Byron (p. 56) against the charge of cynicism is more happy than his courageous denial of satirical powers; and his remarks (pp. 70, 71) on the truth and habitual honesty of Byron's literary expression are opportune and distinguished by true critical insight.

Among the other literary articles in this volume is a careful study of Thackeray, considered apart from his writings; and this is at once the most thoughtfully composed and best executed of Mr. Nadal's essays. Although the social aspect of Thackeray that is here given is not entirely novel there is much novelty in Mr. Nadal's presentation of it. Thackeray is depicted in the unhappy position of the man who attempts to serve two masters, and as possessed by two conflicting passions—"a love of the world, and a love of that simple and original life of man cared for by the poet." He wished to be considered a great writer; and yet, at the same time, his deepest longing was to obtain the *entrée* into a society where not only was success in literature no passport, but the profession of literature fatal to such hopes. He thought, and honestly thought, when among literary and artistic circles that he was among what was congenial and what was best for him; but no sooner was he away from these influences than the old trouble came over him and he was yearning for something extra-literary that should, to use Mr. Nadal's phrase—"make him more respectable." Mr. Nadal traces much of Thackeray's unique power of delineating the genus snob to this mental confusion; "it was because Thackeray so desired the respect of others, was so anxious for the social consideration of

the people he was meeting, that he thought so much about snobs and snobbishness." That part of Mr. Nadal's essay which deals with Thackeray's intimate acquaintance with snoblore is written with great penetration and force, and the whole paper is an interesting addition to Thackeray literature. A keen summary of the humorous writings of Artemus Ward, a paper on Mr. Matthew Arnold, and a graphic description of a political convention at Cincinnati are the most notable of the remaining articles. A concluding paper on literary criticism in newspapers is written on much the same lines as Zola's essay on the impotency of criticism in "Une Campagne," but it is deficient in the energy and argumentative force of that writer. With the exception of such inconsistencies as the recognition of Thackeray as a great satirist and the refusal of that title to Byron, and of a too frequent interpolation of reflections on the beauty and virtue of modern democracies, there is much agreeable and thoughtful writing in Mr. Nadal's essays.

J. ARTHUR BLAICKIE.

#### VIRCHOW ON THE VEDDAHs OF CEYLON.

*Ueber die Veddas von Ceylon und ihre Beziehungen zu den Nachbarstämmen.* Von R. Virchow. (Berlin: Dümmler.)

THE illustrious author of this work has rendered a new service to science by showing how interesting and important enquiries regarding some of the strange tribes of India and Ceylon can be properly carried out. For half-a-century many of these tribes have attracted attention; and a considerable library might be formed of books which have been written about them. But they are nearly all worthless, for the writers were too often possessed with the most foolish notions, and wrote bulky volumes to prove that such savages are Hebrews, Celts, or perhaps Greeks. Since Capt. Burton, nearly thirty years ago, wrote his admirable *Goa and the Blue Mountains*, and Dr. Tylor, Mr. B. H. Hodgson, and others took up these studies, much real work has been done. But the lunatic-asylum style of literature is, nevertheless, not yet quite extinct; and it is to be hoped that Prof. Virchow's work will render any additions impossible for the future.

It is now evident that, besides the very deceptive test of language, anatomical and physiological researches are essential to a just estimate of the position in which these wild tribes should be placed. In short, the problem is now in the hands of the anthropologists. Students of language have failed to arrive at any satisfactory conclusion; and all that is as yet known of the languages spoken by these tribes is that they present no remarkable or primitive features—e.g., the language of the singular Todas of the Neilgherry hills in South India is now known to be nothing more than an uncouth dialect of Tamil, with a large admixture (some four per cent.) of Sanskrit words; and the language of the Veddahs (or Weddas) of Ceylon seems to be an Indian dialect full of unmistakeable Sanskrit derivatives, and containing also some Dravidian words. But the information available is very scanty as yet, and also, obviously, not exact.

At first sight, a hasty and superficial observer might take these tribes to be degraded families of the races which have reached a higher stage of civilisation, but still use the same languages. But now that the history of the past of India and the neighbouring countries is becoming clearer, the facts known will not admit of such an inference. A careful enquiry in India will soon show that every caste has a separate dialect, and that the existence of a generally accepted literary dialect is a common fact in Indian civilisation, so far as it is possible to speak of a civilisation of any of the numerous peoples who inhabit the vast continent of India. It is, unhappily, now too evident that too much has been made of what little these peoples possess. But it is to be hoped that sentiment has had its day, and that more attention will be paid in the future to facts.

Prof. Virchow has collected all existing information about the Veddahs—good, bad, and indifferent. This must have cost him hard work for a long time; and, if all the facts that he has mentioned cannot be accepted as real and valuable, he has rendered a most important service by collecting what is in existence, but often very difficult to refer to. The most worthless part appears to be the wild series of myths which pass for history in the East, and which are easily seen to be based on the religions current in the different countries.

This treatise begins with an account of the parts of Ceylon inhabited by the Veddahs; their number, &c.; their devil and ancestor worship, and a description of the tribe ethnologically and psychologically. There is also a very complete description of the Singhalese, Tamils, Moors (a mixed race), and Malays who have at different times settled in Ceylon, and possibly affected the Veddahs. By very exact anthropological enquiry Prof. Virchow arrives (p. 129) at the following results:—(1) That there is much alike in the Veddahs and Singhalese, and that the Singhalese have probably arisen from an admixture of Veddahs and Indian immigrants, as history and anthropology both lead us to believe. (2) That the Veddahs, as well as the Singhalese, differ from the Tamils of Ceylon, as well as from those of the Tamil country in India. (3) That the primitive Dravidians (if they can be traced), or, perhaps, the pre-Dravidians, show analogies with the Veddahs. These results are a sure foundation for a history of Southern India, and lead to many important inferences. The first is very valuable, for known facts prove that the Northern Indian civilisation has advanced by an admixture of so-called Aryans with lower races. This process is still going on in Malabar, and has no doubt occurred to a great extent, not only in the Dravidian country, but even in the Malay Archipelago, as well as in Ceylon. The second conclusion is also very important, for it shows that this process, as might be supposed for other reasons, has long ceased in the Tamil country, and that, in consequence, the Tamils have been formed into a distinct race. The very scanty development of their language, so far as it can be historically traced, also proves this. As compared with Malayalam—the language of Malabar—it has a comparatively small admixture of words of

Sanskrit origin. As regards primitive Dravidians or pre-Dravidians, it is plain that only anthropologists can trace them; M. Rousset's amusing, but baseless, speculations can have no result.

This very important work excites a desire for a similar discussion of other races, but it will be difficult to avoid those prejudices which induce students to misinterpret facts. The curious religions of the Veddahs and of similar tribes in South India, generally called "demon worship," has been much misunderstood, as the name given it shows. The higher castes give some countenance to this religion, and have furnished most of the terms used by its devotees; and it is still necessary to enquire what is original and Dravidian, and what has been grafted on it by the so-called Aryans.

In using the languages of these tribes as a means of throwing light on their history, it must never be forgotten that the literary dialects are, so far, of no value, but that a great number of caste dialects exist which must be studied. To fully understand the phonological systems of these dialects, an exact anatomical examination of the castes or tribes is very necessary. It is thus that the problem of phonetic decay will, probably, be solved.

Those who had the happiness to meet Dr. Jagor when he was in India a few years ago, will hope that he has collected sufficient materials for future research in which German science must always take the lead; for it is much to be feared that, in future, it will be almost impossible to collect (from hospitals) the necessary specimens of skulls, &c. It is even now said that the Penal Code has been used to check scientific ardour; and, in the hands of the so-called educated natives, it may prove a most dangerous weapon and ally of silly prejudices. Dr. Jagor's numerous essays have, luckily, exhausted many points respecting which research will, in future, be almost impossible. A. BURNELL.

#### NEW NOVELS.

*Traseaden Hall.* By Gen. W. G. Hamley. In 3 vols. (Blackwood.)

*The Heart of Erin.* By Miss Owens Blackburne. In 3 vols. (Sampson Low.)

*My Lady Clare.* By Mrs. Eiloart. In 3 vols. (F. V. White.)

*Faith, Hope, and Charity.* By Anna Lisle. (Goombridge.)

*More than Coronets, &c.* By Mrs. G. Linnaeus Banks. (Simpkin, Marshall & Co.)

*Prince Saron's Wife, &c.* By Julian Hawthorne. In 2 vols. (Chatto & Windus.)

EVEN Gen. Hamley has not written a healthier or more truly enjoyable story than *Traseaden Hall*, and higher praise than this can hardly be bestowed upon it. Alike as a moralist and as a humorist, using fiction as an organ of expression, Gen. Hamley reminds one of Mr. Blackmore, and this story in particular brings back memories of *Alice Lorraine*. His style is, indeed, more level than Mr. Blackmore's; he does not reach his contemporary's romantic heights of nobility of character; he does not sound such tragic abysses of depravity; he does not possess or revel in such a quaint humour. But the

"note" of the two novelists is the same—high honour in men, patience and moral beauty in women, triumphant over all difficulties, after a struggle in which they are sustained more by the Shaksperian comedy of their surroundings than by anything else. Act as your conscience dictates and keep your eyes open the while—that is what both Mr. Blackmore and Gen. Hamley seem always to be teaching. The latter's didactic was never shown to more advantage than in *Traseaden Hall*, in which the Clowance family, composed of English gentlewomen, with the single exception of a clerical cipher of a brother, come, after long years and indirectly, into the possession of a property of which they have been defrauded by a designing man of the world. This trickster, Chesterfield Salusbury, an adventurer of the Regency period and a friend of Sheridan, is an admirable sketch. Still better is his brother, Sir Wolsey Salusbury, a kind of reduced Sir Frizzle Pumpkin, a dull-witted, but not bad-hearted soldier, who wins the proprietrix of *Traseaden Hall* by his imposing presence and a reputation for exploits in war which has no basis in fact. It would be, of course, unfair to tell how virtue, as impersonated in the Clowances, finally triumphs over Salusbury knavery. But the heartiest praise is due to the portrait of Felix Oakley, the spirited sailor who carries off Una Clowance, and in the matter of strong language is a mild imitator of "the great Duke," and still more to that of "the Spalpeen," a warm-hearted, recklessly daring, and yet instinctively shrewd Irish officer of the days of the Peninsular War. Gen. Hamley attains great success in making Vittoria and San Sebastian live again. At the same time he is not so happy in his revival of Sheridan, into whose mouth he puts some very bad puns, as Mr. Blackmore was in his resuscitation of Jeffreys in *Lorna Doone*. Mrs. Dunstan Salusbury, an adventuress, intriguer, and spy, strikes us as rather a shadowy personality; and there is a stagey abruptness in the manner in which the author brings about the extinction of the Salusbury family by making one of two brothers shoot the other. All things considered, however, *Traseaden Hall* is the best novel Gen. Hamley has written, and is one of the best novels of the time.

Miss Owens Blackburne is, in a literary, if not in a literal, sense, a Land Leaguer. Her novel she describes as "a story of to-day;" and it is, in fact, a protest against landlords and evictions, and a special plea for Mr. Parnell. Much in it, therefore, cannot be criticised here, although it is permissible to express pleasure at the fact that Miss Blackburne vehemently denounces outrage and murder, even the murder of a bailiff. Apart from, or in spite of, the political interest attaching to it, *The Heart of Erin* is a very pleasing novel. The plot is well detailed, and all the persons that figure in it, from Hardinge, the hard-hearted manufacturer, to Terry Short, the generous "assistant" at Covent Garden, are natural and Irish to every fibre of their beings. The central story, which ends in the marriage of Standish Clinton, the Home Rule

member for Dunbellin, with Angela Boyd, the spirited niece of the agent for his enemy—who happens also to be his father—has an admirable foil in the tragic episode of poor Mary Neligan, who dies while establishing the rights of the man for whom she cherishes a hopeless love, and with her latest breath blessing Ireland and her successful rival. It is long since we have read a novel coming more obviously from the heart, or more certain to go to the heart. Miss Blackburne obviously draws from life, as in her striking portrait of Laurence Power, the Irish-American.

Mrs. Eiloart's new story is a strange jumble, in which a morbid Roman Catholic priest, a hypersensitive girl, a very matter-of-fact burlesque actress, and a weak-kneed artist play at cross-purposes. We are evidently expected to greatly admire Dollie Crewe, the "My Lady Clare" of the story, who gives up her property when she finds that it is not hers by law, her father having obtained it only by gross treachery to her uncle. But Dollie's manner of conducting her affairs of the heart is not satisfactory; she makes a mountain of unhappiness for herself out of the mole-hill of her mother's deceit. Her flight at the end of the third volume is not impressive, but ridiculous, as it is clearly intended to lead up to her marriage with the wrong man. As for her successful lover, the weak-kneed artist already mentioned, he deserves no sympathy, but only contempt. The most vulgar of Mrs. Eiloart's characters is also the best—the burlesque actress, Miss Mordaunt Moore. Although she has no "soul," and little delicacy of feeling, and looks with satisfaction on "the exhibition of herself as Prince Perinet in a very showy costume which would give an ample view of her well-formed legs and display her equally well-formed bust to the best advantage," she is perfectly honest and straightforward in her dealings with Randal Crewe, and is the most attached of daughters. Some of the conversational and other inanities of third-rate seaside resorts are also presented with great fidelity in *My Lady Clare*, which will, however, hardly increase the author's reputation.

*Faith, Hope, and Charity* is not so much a novel with a purpose as a terribly long, and what Macaulay would call "hissing, groaning, cat-calling," sermon on Pharisaism and various other and more "presumptuous" sins. Had the author reduced her story to a tenth of its present size, and omitted her preachings and sentimentalisms, her italics and her interjections, it might have been tolerable; as it stands, the reading of it is a positive infliction. Such types of "Calvinism" as Miss Moggridge and her servant Kezia are hideous caricatures; and, instead of wondering that the former should in the end find her way into a lunatic asylum, we are surprised that her friends ever allowed her to be out of one. The author could do better than this, for poor Gabrielle Desanges, the good angel of the whole, is worth knowing, even though she has to resort to her pocket-handkerchief more times than we have had patience to count. At lucid intervals, too, the foibles and follies of pleasure-seekers in the Channel Islands are described in a manner that is very welcome by way of relief.

Of the two stories Mrs. Banks gives us in her new volume, "More than Coronets" and "A Blush Rose," both of which we are assured emphatically are founded on fact, we much prefer the latter and shorter one. There is an artistic completeness, as of a vulgar idyll, in the emotional adventures of Rosa Bateson, the typical behind-counter heroine of a small country town or a third-rate metropolitan suburb, who, after running the gauntlet of petty feminine jealousies and the attentions of young men "wild" and tame, finds happiness for herself and a home for her sister in the establishment of "a dark, handsome" woollendrapery and widower. "More than Coronets," as the name would imply, is much more ambitious. No incident could well be more "thrilling" than the whirling of a child from one ship to another in a tremendous storm; unless, indeed, it be the marriage of this child when grown up to the playmate of her infancy, who luckily turns fireman to save her life. But the story does not move easily; and the scene shifts far too abruptly from London to Ceylon and back again. There is not a really good character in the tale except Brian Stapleton, the hero, and he is too good by half. Mrs. Banks's heroines, Blanche and Hesba, are merely limp bundles of nerves and ejaculations. A stepfather and a servant girl are evidently intended to be very villainous, but they fail to impress us as such, quite as much as in the course of the story they fail in their designs. Mrs. Banks is still too fond of indulging in the asides and moralisations so dear to the female novelist.

Mr. Julian Hawthorne's new collection of stories seems conclusively to prove that the extraordinary beings he is capable of drawing require the elbow-room of the orthodox three volumes to do justice to themselves. Here we have three tragedies and one comedy, all striking in their way, and indicative of the power of the writer. There are characters in each that are original and worth knowing—such as Prince Saroni, the Italian adventurer, with his wonderful sensuous fascinations; Pauline, the *prima donna*, with her April-day moods and loveability; and even the Countess Felicita, ghastliest and subtlest of murderesses. Had they been pictures pure and simple, they would have been reckoned among Mr. Hawthorne's greatest successes. But none of them can, within the few pages of a short tale, develop in the way that genuine flesh-and-blood does and, as the readers of Mr. Hawthorne's longer works know, his peculiar flesh-and-blood absolutely requires. So far as plot goes, the best of these four stories is the last, "Pauline," which is also agreeable by way of dessert after a terrible banquet of murders, a mesmerism, and "the ghost business." But although skill is shown in the evolution of the incidents, and much humour in the by-play, the characters hurry out and in as if they knew they had so much to do and say within a given time, like the men and women of the Robertsonian drama. Still, all four stories are of the kind that the reader must finish reading once he has commenced, for Mr. Hawthorne possesses the nameless power of the Ancient Mariner. Even he has given us

nothing better than Prince Saroni, with his unrestrained hedonism, his fatalism, and his truly "creepy" attractiveness.

WILLIAM WALLACE.

#### MINOR VERSE.

*Ancient Ballads and Legends of Hindustan.* By Toru Dutt. With an Introduction by E. W. Gosse. (Kegan Paul, Trench and Co.) This dainty little book is very welcome, and we only hope that the reception of it will encourage the printing in a similar form of yet another edition of the *Sheaf Gathered in French Fields*. Mr. Gosse's memoir of the lamented Indian poetess is all that could be wished, both in narrative and in criticism. The poems themselves represent a somewhat later stage (for stages were rapid in that short life of twenty years) than the *Sheaf*, and are disfigured by fewer of the occasional lapses of rhythm or expression which, as Mr. Gosse acutely points out, arise less from ignorance than from an unconscious thinking in a language entirely different from that in which the thought finds expression. The longer ballads and legends are not quotable here, though they are often beautiful, as is "Our Casuarina Tree," a very affecting poem of sad remembrance and gloomy foreshadowing blent with keen and almost joyous sense of natural beauty. The sonnet on the lotus is as fair an example of the writer's power of celebrating native subjects in a foreign tongue as we can select.

"Love came to Flora asking for a flower  
That would of flowers be undoubted queen.  
The lily and the rose long long had been  
Rivals for that high honour. Bards of power  
Had sung their claims. 'The rose can never  
tower

Like the pale lily with her Juno mien.'  
'But is the lily lovelier?' Thus between  
Flower-factions rang the strife in Psyche's bower.  
'Give me a flower delicious as the rose  
And stately as the lily in her pride.'  
'But of what colour?' 'Rose-red,' Love first  
chose;

Then prayed, 'No, lily-white, or both provide.'  
And Flora gave the lotus, rose-red dyed,  
And lily-white, the queenliest flower that blows."

*The Human Inheritance, and other Poems.* By William Sharp. (Elliot Stock.) Mr. Sharp's considerable book of verse contains unusually few blemishes, but not any very distinct note of merit. His longer poems suffer from a certain solemnity of subject and treatment, which, not being exactly impressive, too often goes near to be thought dull. But he is never extravagant, never silly, and never merely imitative. He shows, perhaps, to most advantage in a sheaf of short poems which he calls "Transcripts from Nature." The arrows of this sheaf are very numerous: we pluck one from it almost at random.

"Far eastwards broods a darkness black,  
As black a shadow on the west,  
But sleeping on the heaving breast  
Of midway ocean lies a track  
Of glittering, shining, silver light,  
A zone miraculously bright.  
Hung as a lamp before God's ways,  
The moon fills mid-space with her blaze."

This is worth doing, and pleasant when done. Mr. Sharp's gallery of these tiny vignettes is worth walking in.

*A Garland from Greece.* By G. F. Armstrong. (Longmans.) Mr. Armstrong's present work is somewhat less ambitious than those which he used to put forth some years ago. It consists of a medley of poems, some of them very short, none of great length, all dealing with the subject of Greece from topographical, historical, legendary, political, and other points of view. As might be expected, the legendary

and antique poems are the best, especially "Selemnos" (a poem which would give more than one good subject to an artist) and "The Closing of the Oracle." All the book is scholarly and thoroughly readable, and it attains the high-water mark of minor poetry.

*Poems of English Heroism.* By A. C. Auchmuty. (Kegan Paul, Trench and Co.) Except that Mr. Auchmuty in deference to modern commonplaces has made his *cadre* too wide by including subjects like the late Prince Consort, this is an admirable little book. It needs no criticism, because almost everything that it contains is known to everybody already; but no better book for children to learn by heart has fallen into our hands for a long time. It is especially rich in selections from Mr. Tennyson.

*Paradise Found, and other Poems.* By Lady Frances H. Cecil. (Nisbet.) Lady Frances Cecil in her Preface makes the astounding statement that she has "never read either work of England's sublime old poet," and that "the present poem was all but concluded ere she even heard of *Paradise Regained*." We can only say that the course of education in Burghley House by Stamford Town needs a great deal of improvement. Lady Frances is, we believe, very young; and her poems, which are few and unpretentious, show a certain promise which, combined with the fact of the author's youth and sex, makes the critic unwilling to deal harshly with them. She evidently has an ear and some fancy, but the best thing she can do is to set to work and read all the sublime old poets promptly. If there is anything in her, that reading will bring it out; if not, it will probably effectually keep it in, to the great benefit of herself and other people. *Probatum est.*

*The Earl's Revenge; or, Lady Jane Grey.* By the Author of "Tacitus and Bracciolini." (Diprose and Bateman.) There is one striking difference between *The Earl's Revenge* and the ordinary five-act tragedy—that it is evidently written with a certain knowledge of the stage, and with a definite purpose to consult theatrical requirements. The author has, indeed, gone the odd length of adding to his "dramatis personae" the technical indications "Tragedy Lead," "Old Man," "Utility," &c. He seems also to have paid considerable attention to the actual history of his subject, and his notes are copious and instructive. Unluckily, the first requisite of a poetical drama is that it should be poetry. We are afraid that we cannot pronounce *The Earl's Revenge* to be this, or anything like it. For instance, what would be the reception on the stage of such a platitude as this—

"Such men, too common in our court and country,  
Pursue from sanguine youth to callous age  
Improper courses, while corroding cares  
Their spirits gnaw"?

Clearly, if the audience listened to it at all, a roar of laughter.

*Mountain Psalms.* By J. V. von Scheffel. Translated by Mrs. Francis Brinnow. (Trübner.) Whether Scheffel is an author particularly deserving of translation into a foreign language is a question to which there may not be an entirely unanimous answer. However, these *Mountain Psalms* may have their public, and that public will find them very well done. The illustrations (which for so small a book are very lavish) are, in a certain conventional style, extremely pretty, and the book is worth turning over if only for the sake of them.

*The Children of the Throne.* (Ridgway.) We think this is the very biggest book that ever poet sent into the world. But the contagion of much blank verse is gaining on us. It is a very large octavo, loosely printed,

certainly, and in large type, but containing 400 mortal pages. To say that we have read them, or most of them, or many of them, would be to say the thing that is not. The critic, like Mrs. Browning's Euripides, is human; and though not droppings of warm tears, yet certainly droppings of large volumes into laps and of tired eyelids upon tired eyes would be the result of reading much verse like this:—

" 'There scarce is need for aught enquiry here.'  
Exclaimed the Princess, bursting off her veil.  
Whereat the Queen fell over with a groan  
Against her servant, clutching at his arm  
In agony at prospect of a scene  
Most damaging."

Or even like this:—

" And now, the night advancing, every sound  
Toned into sleep, the drowsy answering cliffs  
Alone replied unto the eagle's scream  
As past the fullness of the dipping moon  
He swooped to claim his quarry from the sea,  
Rousing each sense to note the gentle moan  
Of feathery waves, incessant dragging down  
The rolling shingle gradually left  
To dry by inches 'neath those mystic beams,  
Holding the angles of the falling tide."

We beg to observe that we are witnesses of the strictly copyright character of the last image, and that any minor bard who steals it shall be unsparingly exposed.

*Songs from the Sunny South.* By J. C. Grant. (Longmans.) Mr. Grant, who seems to be young, and who evidently writes in India, has produced a book of which we should like to speak better than we can conscientiously do. The author has a good deal of poetical fancy, and not a little power of poetical expression; but he has written much too rapidly. Of the very considerable amount of verse which he has here published at least half should have been cut away, and the other half carefully revised and polished. We are inclined to think that, with this treatment, a book of more than ordinary goodness would have resulted; but, as it is, the work is crude, loose, and unfinished.

*Margaret, and other Poems.* By Maud Eldryth. (Kegan Paul, Trench and Co.) Miss Eldryth is one of the poets who are always asking questions—a most dangerous and reprehensible habit, for the fiend who haunts the chambers of reviewers has a habit of suggesting answers not at all suitable to the views of the bard or bardess. Thus when on the first page of *Margaret* we are suddenly bade to stand and deliver a response to the interrogatory "Is there a gauge for time?" the fiend promptly rejoins, "Certainly; Sir John Bennett will send you one damp-tight, dust-tight, air-tight, keyless, warranted to keep good time, by post for ten pounds." This, of course, is sheer ribaldry, but then, somehow, the good poets put the fiend to fright, and Miss Eldryth does not. We go with her to Ilfracombe, and she surveys the scene, "finding its grandeur pain." We are sorry for her, we possibly think of consoling her in some way, when suddenly she pistols us with this tremendous conundrum:—

"Only when we see amid our praying  
God's love through all nature interfused,  
Can our hearts deem all this grand arraying,  
More than vestments to a corpse-disused."

A more dreadful idea than a corpse disused we never met with (if it really be the corpse that is disused, but perhaps it is the vestments); and whether the stanza is an assertion or an interrogation we know not. Finally, bearing up against these things, we come on a poem of some length headed "Erato," in which that lady has a false quantity committed in her second syllable half-a-dozen times. Why, oh! why, will people write about Greek and Latin subjects without being able to scan a line of either language?

*The Stream of Talent, and other Poems.* By Gilbert Beresford. (Nisbet.) Mr. Beresford is a very odd young man. His "Stream of Talent" is an eccentric account in blank verse of a kind of regatta or procession of boats, each vessel being a poet of the past. "Florina" contains these remarkable lines:—

"And all at once beneath her blazonry,  
I sat as she had given me instant knighthood."

Sitting down, it may be humbly suggested to Mr. Beresford, is not the usual attitude at, or subsequent to, the reception of the accolade, and would, in practice, have an effect both peculiar and slightly disrespectful. Here is another oddity:—

"Youth, worth, and beauty stayed,  
Every hope belayed,  
The soul of music laid,  
Low in the dust.  
Must we for gilded coin  
Girdle our golden loin  
Marry for dust?"

We don't believe Mr. Beresford has the slightest idea of the meaning of the verb to belay; and we are quite sure that we have not the slightest idea of the meaning of the phrase "girdling a golden loin for gilded coin." To do anything for gilded coin would be rash, because the labourer who tried to pass his wages would infallibly be taken up for uttering base money. But what is a golden loin? It sounds like a new and suggestive eating-house sign.

*The Trinity: a Passion Play.* (Cambridge: Johnson.) The author in his Preface anticipates that his critics will say dreadful things of him. We, at any rate, have nothing worse to say than that he does not seem to be quite up to the level of his rather arduous subject. It may be added that this "Passion Play" is devoted to only one person of the Trinity, the sub-title, "The Son: or, Victory of Love," expressing it better.

*Alfonso Petrucci.* By R. C. Jenkins. (Kegan Paul, Trench and Co.) A five-act tragedy of a not unusual kind, careful in plan of form and substance, patiently worked out, and, alas! very nearly null in total impression, and even in impression of detail.

*Saphire: Poesies fantaisistes.* Par le comte de La Houssaye. (Paris: Noblet.) The sapphire is one of the most beautiful of gems, but we cannot say that M. de La Houssaye's muse is one of the most beautiful of muses. She is a virtuous young woman, and smiles now and then not unamiably, but she is rather plain and very prosaic. Here is the first stanza of an address to the late M. Thiers:—

"O vous, dont la grandeur surpasse l'œuvre immense  
Que vous entreprenez de relever la France  
Aux yeux de l'univers;  
Permettez à mon cœur affranchi d'inquiétude  
De vous manifester toute ma gratitude  
Par ces modestes vers."

Now whatever this is, it is not poetry.

#### NOTES AND NEWS.

MR. J. HENRY SHORTHOUSE will contribute an introductory essay on "George Herbert and his Verse" to a facsimile reprint of *The Temple* which Mr. T. Fisher Unwin will publish on June 1. We believe readers of *John Inglesant* will be interested in what will prove to be a supplementary discussion of subjects of vital importance treated in the now famous romance.

THE title of Mr. Aubrey De Vere's new volume of poems will be *The Foray of Queen Meave, and other Legends of Ireland's Heroic Age*. It will be published immediately by Messrs. Kegan Paul, Trench and Co.

WE are glad to hear that (contrary to some statements that have appeared in print) the Rev. J. R. Green has gained health and strength during his stay at Mentone.

WE understand that the late Prof. Green's *Prolegomena to Ethics*, the MS. of which was nearly complete at the time of his death, will, in accordance with his own wish, be edited by Mr. A. O. Bradley, and published by the Clarendon Press. It contains a discussion of the conditions of knowledge, the nature of the will, and the relations of intellect and will, followed by a comparison of the ideals of conduct characteristic of the Greeks, the Romans, and the most modern times.

MR. B. BOSANQUET, of University College, Oxford, will take Prof. Green's place as editor of the translation of Lotze's *Logic and Metaphysics*—the only part that has appeared, or will appear, of the *System of Philosophy*—which has been for some time in preparation, and which is likewise to be published by the Clarendon Press.

MR. SWINBURNE's new volume, *Tristram of Lyonesse, and other Poems*, is in the press, and will be published very shortly. It contains, besides the main poem, a number of lyrics and sonnets.

CAMBRIDGE UNIVERSITY and Magdalen College, Oxford, have lent their MSS. of Wyclif's Latin treatise on the Ten Commandments, *De Mandatis Dei*, being the first book of his *Summa Theologiae*, to Mr. F. D. Matthew for his edition of this work for the Wyclif Society. The Vienna Library authorities have, on the other hand, refused the loan of their MSS. of the third and fourth books of the *Summa*—the treatise *De Dominis Civili*—to the society's editor, Mr. Reginald Poole, although they formerly freely lent Dr. Lechler, of Leipzig, all their Wyclif MSS. that he wanted. The Wyclif Society has now over 160 members, thirty of whom have paid five guineas in advance to enable the copying of MSS. to be got on with. Three hundred members are wanted.

THE Queen and the Princess of Wales have been pleased to accept the two first copies of Mr. Martin Tupper's *Dramatic Pieces*, just published by Messrs. W. H. Allen.

THREE new volumes of the publications of the Index Society will be issued in a few days. They consist of an *Index of Obituary Notices for 1880*, and Mr. Walter Rye's *Index of Norfolk Topography*, which contains references to MS. as well as printed sources of information connected with the county; these are for the year 1881. The third book, which is for 1882, is Mr. B. Daydon Jackson's *Literature of Vegetable Technology*.

MR. J. A. DOYLE, Fellow of All Souls' College, Oxford, is engaged upon a work treating of "The English in America," with special reference to the States of Virginia, Maryland, and the Carolinas.

WE understand that Mrs. Tytler will contribute a Life of Marie-Antoinette to the "New Plutarch" series published by Messrs. Marcus Ward.

THE Library Association will hold its annual meeting this year at Cambridge. The date has been provisionally fixed for Tuesday, September 5, and the following days.

MESSRS. SEELEY, JACKSON AND HALLIDAY will publish, immediately, a sixpenny edition of *Ministering Children*, with twenty-four illustrations by Mr. Birket Foster and other artists.

MESSRS. RIVINGTON have in the press, and will shortly publish—*The Witness of the Passion of our Most Holy Redeemer*, by the Rev. W. J. Knox Little; *The Children's Saviour*, by the Rev. Edward Osborne; *Under the Cross*, com-

piled by C. M. S., edited by the Rev. M. F. Sadler; and *Studies in Philosophy, Ancient and Modern*, by Mr. W. L. Courtney, Fellow and Tutor of New College, Oxford.

THE Rev. Hilderic Friend has a new book in the press under the title of *Flower Lore*, which will form one of Messrs. W. Swan Sonnenschein and Co.'s "Illustrated Fairy Library" series. It will include much curious and interesting information relating to flowers and fairies, chapters on flowers at weddings and funerals, notes on rustic names of flowers, superstitions, myths, tales, traditions, &c. Mr. Friend has paid special attention to the "magic wand" and the "witches' broom."

MESSRS. WILSON AND M'CORMICK have in the press *The Economics of Fair Trade*, by Mr. W. R. Herkless.

WE understand that a second edition of *Moses and Geology*; or, the Harmony of the Bible with Science, by Dr. Samuel Kinns (published by Messrs. Cassell, Petter, Galpin and Co. in February last), has been called for, and will be ready for publication on June 1.

MR. W. HARBUTT DAWSON has in the press a *History of Skipton*, which he proposes to publish by subscription. Special attention will be given to the Clifford family, and to other Yorkshire worthies whom Skipton has produced. Many interesting customs of former times will be illustrated from the local annals. The work will be profusely illustrated.

MR. WILLIAM ANDREWS, of Hull, the well-known author of *Punishments in the Olden Time* and other antiquarian works, announces that he will have ready in the autumn, for publication in a limited number of newspapers, a new serial, entitled *Shadows of the Olden Time*. It will include much curious information on such subjects as Old English Fairs, Merry Christmas-tide, Curiosities of Criminal Law, the Ourfew Bell, Guilds, English Life and Manners in the Time of Shakspeare, &c.

A NEW edition of Mr. Robert K. Dent's carefully written *Old and New Birmingham* is now appearing in monthly parts, with numerous illustrations.

A NEW weekly critical journal has just been established in Yorkshire, under the title of the *Hull Review*.

THE Report read at the forty-first annual general meeting of the members of the London Library on Thursday shows that large book club to be as flourishing as ever. More than 3,000 volumes of literature in all its branches, English and foreign, ancient and modern, have been added in the course of the year to the already extensive collection of books. The increase has necessitated the building of an additional room for the accommodation of the new stores. A Supplement also to the *Catalogue* of 1875 has been published. The quality of the books added is various. Costly county Histories and works on genealogy stand side by side with French novels, German Histories, Latin chronicles, and the more popular works of modern science. There appears to be a good sum in hand to begin the new year with, and we heartily wish continued success to a society that has proved itself so eminently useful to the writers as well as to the readers of our generation.

THE English Dialect Society has issued to its members the first of its publications for the present year—namely, the second part (F to Z) of the *Glossary of the Lancashire Dialect*, by Messrs. John H. Nodal and George Milner. The third part, completing the work, is promised for next year.

WE are glad to hear that Owens College, Manchester, has received a considerable

addition to its wealth, and thus to its career of usefulness, from the governors of Hulme's Charity. This important educational endowment, which was founded by William Hulme, of Kearsley, who died in 1691, has been placed on a new footing under a scheme drawn up by the Charity Commissioners, and approved by her Majesty by Order in Council on August 26, 1881. The estates managers have recently granted to Owens College (under the provisions of clause 15 of the scheme) the maximum sum allowed—viz., £1,000 per annum—towards the payment of the yearly stipends of the Professors of Greek, Latin, and English Literature and History. In consideration of this grant, the council of the college has, with the concurrence of the governors of the charity, established three entrance exhibitions of the value of about £12 each, tenable for two years. The first competition for these exhibitions will take place about the end of next September. The Hulme scheme provides for a further grant of £1,000 per annum towards the endowment of a hall of residence for students attending Owens College, which is to bear the name of "Hulme Hall." It is hoped that this hall will shortly be established.

WE learn from the *Monthly Notes* of the Library Association (Trübner) that the terms of subscription to the printed Catalogue of the British Museum have been revised. The accessions for the year 1882 may be purchased for a subscription of £3, and the portions of the general Catalogue printed during the year for £3 10s. As this Catalogue is being gradually put into print as the volumes of the MS. catalogue become overcrowded, its parts are, of course, taken from different letters of the alphabet.

THE Browning Society is certainly in luck with its work during its first year. Not only has it procured the starting of eight other prosperous Browning societies or clubs, but it has produced a "Browning Bibliography" (by Mr. Furnivall) and several excellent papers on the poet's works; it has assured the publication of a volume of "Stories from Browning" (by Mr. F. May Holland), the compilation of a "Browning Primer" (by Mr. Sutherland Orr), and of a "Lexicon of Browning Allusions" (by the Rev. F. Millson); and now one of its members, Mr. T. J. Wise, comes forward and undertakes to compile for it a "Browning Concordance," after the plan of Mr. D. Barron Brightwell's excellent "Tennyson Concordance." Seeing that the society was not really under way till last October, it can show a fair "log" for its seven months' run.

THE library of the late Mr. John Fitchett Marsh has been sold by Messrs. Sotheby, Wilkinson and Hodge during this and the preceding week. The Milton and Shakspeare sections were of considerable interest. Mr. Quaritch, as usual, was the chief buyer, carrying off a dozen out of the seventeen Shakspeare Quartos, and the first and third of the four Folios. He also bought the collection of Milton papers, which include a long autograph letter in Latin from the poet to Carlo Dati and the reply of the latter in Italian, as well as several signed documents by Milton's widow and daughters concerning his property and their rights in the inheritance.

At the meeting of the directors of the Booksellers' Provident Institution held on Thursday evening, May 18, Mr. John Van Voorst, one of the vice-presidents, presented a cheque for £100 to the funds of the institution. This has come at a very acceptable time, as the applications for assistance are continually increasing; and it is hoped that it may stimulate other persons to come forward to the help of a body which is doing so much to assist its needy members, their widows and orphan children. Subscriptions or donations

will be thankfully received by the secretary, Mr. Samuel Ives, 5, Warwick Lane, Paternoster Row, E.C.

PROF. WELLHAUSEN has intimated that neither the second volume of his *History of Israel* nor a revised edition of the first volume is to be expected "for some years."

THE Académie française has awarded the prix Gobert of 9,000 frs. (£360) to M. Cheruel for his *Histoire de France sous le Ministère de Mazarin*.

THE Emperor of Brazil has nearly completed a book of travel, which, it is said, will be published in French under the title *Impressions de Voyage*.

M. LOUIS BLANC is said to be engaged in preparing a complete edition of his works.

A SELECTION of letters from Charlotte von Kalb to Jean-Paul Richter and his wife have been edited by Herr Paul Nerrlick, and will shortly appear (Berlin: Weidmann). They cover the years 1796–1821, and will supplement the memoirs of the writer published by Herr Palleske, which break off at the year 1791.

HERR KOLOMAN THALY has recently discovered at Pressburg, among the archives of the Esterhazy-Szesnek family, MSS. of great historic interest. They bear dates ranging from the thirteenth to the eighteenth centuries; but the bulk of the collection belongs to the period of Maria Theresa, and includes many autographs of the Empress-Queen, as well as those of several kings of Poland.

ACCORDING to some statistics furnished by M. Zola's publisher, no less than 116,000 copies have been sold of the 3 frs. 50 c. edition of *Nana*, 97,000 of *L'Assommoir*, 43,000 of *Une Page d'Amour*, 24,000 of *La Curée*, and 23,000 of *La Faute de l'abbé Mouret* in the same issue. In comparison with these figures, M. Zola's other novels are a failure, for the recorded sales of the remaining volumes in the cheap edition amount only to 70,000. Considering that in France it is usual for an author to receive 1 fr. for each copy sold of any work published at 3 frs. 50 c., M. Zola's share of the profits accruing from the sales of the cheap editions of his novels may be roughly estimated at £15,000.

THE German Government has suspended the sale of the *Vienna Figaro* for a period of two years.

A NOTICEABLE contribution to Chaucer-study has just been made by Dr. W. Eilers, of Magdeburg, by his dissertation upon the Parson's Tale, in which he carefully compares it with the French treatise, *La Somme de Vices et de Vertus*, by Frère Lorens, A.D. 1279, the original of our *Ayenbite of Inwyrt*, 1340. The enquiry into the relationship of these two begins with an analytic glance at the whole of each; then, taking the three parts—(1) The Seven Deadly Sins, (2) The Seven Remedies, (3) Penance—a chapter is devoted to each sin and each remedium, and confession, &c., while all the "branches" and "twigs" of the texts are tabulated in two corresponding columns, one for Chaucer's "Tale," the other for Lorens. Thus a kind of parallel analysis is given, which shows how far the treatment, general sense, verbal phrases, or expressions were adopted by the author of the Parson's Tale in his translation, or rather free adaptation and compression, of the Friar's work. Dr. Eilers comes to the conclusion that the parts so adapted never came from Chaucer's pen, but were interpolated.

*Correction.*—The author would like the following corrections to be made in his poem on Lord Frederick Cavendish printed in last week's ACADEMY:—l. 2, "feet" for "steps;" for l. 26 substitute "Sobered, appalled to find himself so vile."

## AMERICAN JOTTINGS.

EMERSON has left a large store of unpublished papers. Of these, it is understood that his correspondence with Carlyle will be the first published. It covers a period of nearly forty years. A Life of Emerson, by Mr. J. Eliot Cabot, who is described by the *Literary World* as his literary executor, may also be expected in due season.

THE comte de Paris has nearly completed the third volume of his *History of the Civil War in America*, which will probably be published before the close of the present year by Messrs. Porter and Coates, of Philadelphia.

COL. JOHN HAY AND MR. NICOLAY are engaged upon a Life of Abraham Lincoln in ten volumes, of which two are now ready for publication. The work will be not only a biography, but a history of contemporary events, based upon the official documents which the Government is now publishing.

THE *New York Times* states that Prof. Fiske is writing a History of American civilisation from the sociological point of view.

MARK TWAIN (Mr. Clemens) and Uncle Remus (Mr. Harris) are making a tour through the Southern States of America "in company with a private stenographer."

MR. JUSTIN WINBOR, librarian of Harvard University, is preparing for publication a list of books of reference such as are most constantly used in the cataloguing department of his library. The list will be published in the *Harvard University Bulletin*, under the headings Chronology, History, Biography, &c.

THE *Century* magazine for June will print an unpublished essay by Card. Newman on "The Inspiration of the Bible," together with a portrait of the author for a frontispiece.

THE June *Atlantic* will contain a hitherto unpublished poem by Longfellow on "Decoration Day," a poem on the late poet by Mr. Oliver Wendell Holmes, and an article on his genius and works by Mr. O. B. Frothington, with a fine steel portrait. Mr. Henry James, jun., will contribute an article on Alphonse Daudet, and Mr. John Fiske will write on Darwin.

WE observe that an American edition of Mr. Hamerton's *Graphic Arts* is being issued (without the illustrations) by Messrs. Roberts, of Boston, at two dollars, or eight shillings; while Messrs. Harper, of New York, announce an edition of Mr. Froude's *History of the First Forty Years of Carlyle's Life*, complete in one volume of nearly 600 pages, for one dollar.

THE *New York Publishers' Weekly* for May 6 prints a continuation of the copyright bibliography by Mr. Thorold Solberg, which was begun in the number for April 8. Unfortunately, these two instalments reach only as far as the middle of the letter C.

## ACKNOWLEDGMENTS.

WE have on our table the following:—*Cookery and Housekeeping*: a Manual of Domestic Economy for Large and Small Families, by Mrs. Henry Reeve (Longmans); *Lectures on Credit and Banking*, delivered at the request of the Council of the Institute of Bankers in Scotland, by Henry Dunning Macleod (Longmans); *Familiar Science Studies*, by Richard A. Proctor (Chatto and Windus); *Modern Heroes of the Mission Field*, by the Right Rev. W. Pakenham Walsh (Hodder and Stoughton); *Handbook of Fen Skating*, by Neville Goodman and Albert Goodman (Sampson Low); *The Russian Empire: its Origin and Development*, by S. B. Boulton

(Cassell, Petter, Galpin and Co.); *On Board a Union Steamer*: a Compilation, by Capt. S. P. Oliver, to which is added *A Sketch Abroad*, by Miss Doveton (W. H. Allen); *An Easy System of Calisthenics and Drilling*, including Light Dumb-bell and Indian Club Exercises, by Thomas A. McCarthy (W. H. Allen); *Whist for Beginners*, by C. T. Buckland (W. H. Allen); *The Cure and Treatment of the Insane in Private Dwellings*, by Dr. Lionel A. Weatherly (Griffith and Farran); *The Food we Eat: Why we Eat it, and Whence it Comes*, by Dr. J. Milner Fothergill (Griffith and Farran); *The Young Wife's Own Book: a Manual of Personal and Family Hygiene*, by Dr. L. A. Weatherly (Griffith and Farran); *Story of a Long and Busy Life*, by Dr. W. Chambers (W. and R. Chambers); *Noble Influence, and How to Obtain It: a Manual for Young Men*, by the Rev. James Copner (Wyman); *A Winter Ramble in Beaten Tracks*; or, Ten Weeks among German, Austrian, and Italian Cities (Jas. Wade); *Hints for Investors: being an Explanation of the Mode of Transacting Business on the Stock Exchange*, by Walter M. Playford (Crosby Lockwood); *Political Epigrams, 1874-81* (P. S. King); *Report on the City Day-Census, 1881*, by the Local Government and Taxation Committee of the Corporation of London (Longmans); *Sparks from the Philosopher's Stone*, by James Lendall Basford (David Bogue); *The Science of the Stars*, by Alfred J. Pearce (Simpkin, Marshall and Co.); *The Constitutional and Political History of the United States, 1846-50*, by Prof. H. von Holst, translated from the German by John J. Lalor and Paul Shorey (Chicago: Callaghan; London: Trübner); *Selections from the Latin Poets*, edited by Prof. E. P. Crowell (Boston, U.S.: Ginn, Heath and Co.); *An Account of the Harvard Greek Play*, by Henry Norman (Boston, U.S.: Osgood); *Transactions of the National Association for the Promotion of Social Science, Dublin Meeting, 1881* (Longmans); *Transactions of the Brighton Health Congress, 1881* (Marlborough); *Report of the Ninth Annual Conference of the Association for the Reform and Codification of the Law of Nations, Cologne, 1881* (Clowes); &c., &c.

## ORIGINAL VERSE.

IN MEMORIAM DR. JOHN BROWN.

(Died at Edinburgh, 11th May, 1882.)

BIGGAR, the sun upon thy moors had power  
To sow a human heart with golden seed;  
And heard in distance tenderly, the Tweed  
Nursed with its dews an everlasting flower  
Of such exceeding radiance, such a dower  
Of genial blessing, such a Heavenly breed,  
That where it bloomed all other seemed but weed,  
And barren waste became an angel's bower.  
Not vainly did the pastor's large-eyed child  
Race with the collie, learn the shepherd's stride,  
And bear the yearning in his plaid; who grown,  
Gave audience to each creature's voice that cried,  
Carried his brother's burdens with his own,  
And left the sick ones whole because he smiled.

H. D. RAWNSLEY.

## MAGAZINES AND REVIEWS.

THE current number of the *Alpine Journal* continues Mr. Whymper's summary diary of his work in the Great Andes of Ecuador. His notes are lively as they stand, but they suggest how much more he has to tell us. "An Adventure on the Aiguille du Plan in 1880," by J. Baumann, read before the club a year ago, is next printed. The international character of Alpinist society came out in the language which broke forth from the writer and his guides when they became aware of

their remarkable position—11,500 feet above sea-level, no shelter, provisions low, their wine all drunk in sanguine expectation of finding water, and the weather threatening. "C'est une jolie position!" said Emile Rey. "Teufel!" muttered Andreas Maurer. Mr. Baumann's "own expression was not parliamentary." The editor prints a second chapter of his own explorations among the Cottian Alps, taking Monte Viso as the title of a very expanded account. There is a good wood-cut of the majestic peak from the north-east, which certainly shows that Virgil's characterisation of the "Vesulus" as *pinifer* is no longer true to fact. Mr. D. W. Freshfield has a few chatty pages on "The Sanctuary of San Chiaffredo." The writer would find a very different view of "the marauders" and "heretics" in the letters of Cromwell's agents to Secretary Thurlow and Col. Lockhart in 1655-56. Chiaffredo, or Gottfried, is not mentioned among the martyrs of the *Legio Thebaica* in Reusch's article in Wetzer and Welte's *Kirchen-lexikon*, which gives a full view of the literature; nor in the later and more critical article by Prof. Uhlhorn, published a few months ago in the new volume of Herzog and Platt's *Realencyklopädie*. Every tourist must be impressed with the wide range of the "Thebærkult," of which he finds evidences in so many cities and sanctuaries from the North Sea to the Alps. A chart of the localities of isolated "Theban Martyrs" in Holland, along the Rhine, the Mosel, in Switzerland, and Italy would be interesting and not un-instructive. The present number of the *Alpine Journal* includes a really useful Index to vol. x. (August 1880 to May 1882).

PROF. TEN BRINK opens the present number of *Anglia* with a short contribution explaining the origin, both as to sound and spelling, of the suffix *-ere* in Old English. Miss Toulmin Smith prints, with Notes and Introduction, a long Ballad by Oocleve, addressed to Sir John Oldcastle in 1415, which should be of interest to the Wyclif Society, as it is full of vivid allusion to the new religious difficulties. A. Fritzsche discusses at length the question whether the "Story of Genesis and Exodus" (Early-English-Text Society, 1865) is the work of one author, or of two, as upheld by ten Brink in his *History of English Literature*, concluding that a similarity of treatment throughout points to the probable authorship by one poet only. Questions of authorship are dealt with in several papers, for, besides the concluding portion of E. Eikenkel's enquiry, who was the writer of the Anglo-Saxon legend of St. Katherine of Alexandria, and a noticeable suggestion, also by Eikenkel, that certain pieces in Morris' *Old-English Homilies* were written by women of the twelfth century, Prof. Adolf Ebert gives an interesting literary and historical study of the Anglo-Saxon Genesis, generally said to be by Cædmon, but parts of which he shows were evidently not written by him. Perhaps the most considerable article is a reprint by A. Schroeer, of Vienna, of "A Comedy concerning thre Lawes" (1538), one of Bale's four religious dramas, with full notes; an interesting sketch of Bale's life, and a valuable bibliography of his writings. Though the writer does not mind adopting the epithet "bilious Bale," he greatly objects to M. Jusserand's description of the Bishop's portrait as having "une face bestiale," an expression which he attributes to that gentleman's Roman Catholic proclivities. A tribute to the late William Hertzberg, the Chaucer and Shakspeare scholar, closes an unusually good number.

THE *Theologisch Tijdschrift* for May contains two articles of special interest for English readers—viz., a clear and sensible criticism of Lagarde's recently published specimen of an edition of the Septuagint (Lagarde aims at re-

producing simply the text of Lucian, the founder of the school of Antioch, who died A.D. 311) by Dr. H. Oort, and a critical notice of Dr. Rhys Davids' Hibbert Lectures on Buddhism by Dr. Tiele. Dr. Oort distinctly gives it as his opinion that Lagarde's admirable zeal and laborious collections have, in this case, been of very little service to the Biblical student, Lucian's text being of no critical value. An edition of the Vatican text, with an exhaustive collection of variants, is what Dr. Oort would prefer. Dr. Tiele highly recommends Dr. Davids' accurate and sober sketch of Buddhism, but deprecates the enthusiastic adhesion which he has apparently sworn to the Master Gautama. Buddhism, according to the Leyden Professor of Comparative Religion, is proved by its results to be an inferior religion to the purest forms of Brahmanism. Dr. Tiele also criticises Réville's Lectures on the History of Religions, and Dr. S. Cramer a remarkable catechetical work for public school-boys by one of the most independent German theologians—Albrecht Ritschl. Dr. Loman begins an investigation of the genuineness of the Epistle to the Galatians.

In the *Revista Contemporanea* for May 15 Gen. Pavia concludes his "Political Reflections" with comments on the events which led to the restoration of Alfonso XII. The condition of Spanish political life is judged with great severity. To Serrano and to Martinez Campos equal blame is allotted, and the success of Cánovas del Castillo is attributed partly to his skilful use of women as political propagandists. In his "Expedition to Italy in 1849," Gen. Cordova gives a spirited narrative of his march from Velletri to Nerola to cover the Neapolitan frontier against any attempt of Garibaldi. The notes of Ubique are on medical bibliography, and contain a curious account of a Spanish "Old Parr," who lived to the age of 120, was married five times, and had more than 800 descendants at his death. The Ateneo lecture is by Rodriguez Carracido, on natural science. A suggestive paper on the passions, by Moreno Fernand, treats of them in relation to free-will and moral responsibility.

#### M. LENORMANT AND THE BERLIN ACADEMY.

M. LENORMANT has addressed the following letter to the President of the Royal Academy of Berlin:—

"Paris: 10 Mai 1881.

"Monsieur,—Je me vois dans la nécessité de vous adresser, en vous priant de vouloir bien la transmettre à l'Académie que vous présidez, une réclamation au sujet d'un fait d'une haute gravité.

"Dans les *Inscriptiones graecae antiquissimae*, que M. Hermann Roehl vient de faire paraître sous les auspices de votre Académie, je suis l'objet d'une attaque outrageante au sujet des 202 lames de plomb de Styra d'Eubée que j'ai rapportées de Grèce en 1866 et publiées en 1867 dans le *Rheinisches Museum*, avec un certain nombre d'autres appartenant à M. W. H. Waddington.

"En publiant ces documents épigraphiques, j'avais soin de dire qu'ils étaient entrés en la possession de M. Michel Charles, de l'Académie des Sciences. Il était donc facile de recourir aux originaux, et avant d'en parler, le premier devoir était de les examiner. Si on avait cherché à le faire, du vivant de l'éminent géomètre, on en eût eu communication de la manière la plus libérale. Et depuis sa mort, on eût appris, en s'informant, que M. Henri Charles, son héritier, avait généreusement offert les lames de plomb de Styra au Musée du Louvre, où elles sont à la disposition de tous.

"Mais on n'a pas procédé à cette vérification, que commandait la loyauté la plus vulgaire, aussi bien que le soin de l'exactitude pour la publication qu'on entreprenait. On a préféré jeter la suspicion sur tout le groupe de monuments en question, sans

avoir cherché à s'en informer, attaquant personnellement celui qui les avait publiés. On a été plus loin; on l'a formellement accusé de faux, en arguant d'une des inscriptions, qu'on prétend ne pas pouvoir exister réellement et avoir été inventée d'après une faute d'impression qui se trouverait dans un texte épigraphique donné dans une publication allemande.

"Or, les 202 lames, avec leurs inscriptions, sont toutes au Louvre sans qu'il en manque une seule, et j'ai pu immédiatement y retrouver celle de MOÏSIDES, que l'on inculmine et dont l'authenticité est incontestable pour quiconque a pris la peine de la regarder.

"C'est à quoi je convie tous ceux qui s'occupent de ce genre d'études. C'est ce qu'il eût été à la fois un devoir et un acte de prudence de faire au lieu de forger des romans accusateurs. L'auteur des *Inscriptiones graecae antiquissimae* eût évité ainsi une déconvenue en agissant d'après les procédés de courtoisie et de conscience que les savants doivent observer entre eux.

"J'ai tenu à vous signaler ce fait, car je ne saurais admettre un seul instant qu'un corps scientifique aussi justement respecté que l'Académie de Berlin puisse couvrir de son approbation et de son autorité la façon dont on a agi dans cette circonstance.

"Veuillez agréer, etc.

"FR. LENORMANT."

#### CORRESPONDENCE.

##### VILLON AND CHURCH HYMNS.

London: May 16, 1882.

I am not aware if a curious resemblance between the "Ballade des Dames du Temps Jadis" and "Ballade des Seigneurs du Temps Jadis" and two Latin hymns has been pointed out before. One of these hymns is attributed to Jacopone da Todi, the great Franciscan lyricist of the thirteenth century. Villon begins his most famous ballade:

"Dites-moy où, n'en quel pays,  
Est Flora, la belle Romaine?"

Jacopone begins the passage in question (I am quoting from the *Hymnarium: Blüthen lateinischer Kirchenpoesie*, published by Petersen at Halle):

"Dic, ubi Salomon, olim tam nobilis,  
Vel ubi Sampson est, dux invincibilis?  
Vel pulcher Absalon, vultu mirabilis,  
Vel dulcis Jonathas, multum amabilis?  
Quo Caesar abiit, celsus imperio?  
Vel Xerxes splendidus, totus in prandio?  
Dic ubi Tullius, clarus eloquio?  
Vel Aristoteles, summus ingenio?"

Although Fra Jacopone does not—here, at least—attain the "lyric cry" of Villon, and his moral,

"Superna cogita! cor sit in aethere!  
Felix, qui poterit mundum contemnere!"

is not quite the same, some of his stanzas are remarkably vigorous, and even graceful. From the other hymn, which is by an unknown writer of the eleventh century, I extract this very similar passage:

"Transierunt rerum materias,  
Ut a sole liquescit glacies.  
Ubi Plato, ubi Porphyrius;  
Ubi Tullius aut Virgilius;  
Ubi Thales, ubi Empedocles  
Ant egregius Aristoteles;  
Alexander ubi rex maximus;  
Ubi Hector Troiae fortissimus;  
Ubi David rex doctissimus;  
Ubi Salomon prudentissimus;  
Ubi Helena Parisque roseus—  
Ceciderunt in profundum ut lapides:  
Quis scit, an detur eis requies?"

There is an irreverent vivacity in the last three lines which would not have disgraced even "the golden-tongued gallows bird of Paris." And

"Ut a sole liquescit glacies"

is a distinct suggestion of the refrain:

"Mais où sont les neiges d'antan!"

It will be observed that the names Villon brings forward are different, although he, too, has just before said

"Et mourut Paris et Helène."

That the ballades are burlesques of these or similar hymns can hardly be maintained; Villon, too, has a profound sense of life and of death; but that a *souçon* of parody is present in the ballades seems not at all improbable.

H. HAVELOCK ELLIS.

#### WYCLIF'S PLACE IN HISTORY.

94 King Henry's Road, N.W.: May 24, 1882.

May I say a few words in support of the letter from Sir James Ramsay printed in the last number of the ACADEMY? The evidence which he has adduced to show Wyclif's influence on religious opinion in England does not come down later than the reign of Henry V. By that time, as he notices, the Wyclifite movement had lost its hold on the aristocracy, and the Lollards were a proscribed sect. Under the pressure of adverse authority, when to proclaim one's self a Wyclifite was to risk burning, the Lollards naturally dropped out of sight; and we must be content mostly with indirect proofs of their activity. Yet such proofs are forthcoming, and in more than one line.

First at Oxford. Sir J. Ramsay tells us that the Wyclifite party was strong there till the end of Henry IV.'s reign, and they may be traced much later. Gascoigne's frequent references to Wyclif show that his name was still one of dread, and probably not without justification, since, as the ACADEMY recorded lately, we know that Oriol College bought three of the heretic's books in 1454. I do not know of any similar record as to other colleges, but we may suppose Oriol not to have been singular, as in 1476 a royal mandate ordered a search in Oxford for the works of Wyclif and Peacock. Some of their books were burnt and some of their followers expelled from the university.

It is more difficult to judge of the influence of Wyclif's translation of the Bible. Following Sir J. Ramsay's hint as to quotations, I may note that Mr. Babington tells us that in "the Represser" Peacock usually quotes from the later Wyclifite version. A much stronger evidence (to my mind) lies in the arguments used by Peacock, which are directed against a sect of Bible men, who thought their untrained study of Scripture qualified them to form a judgment on all questions of divinity. In 1485, among a batch of Coventry heretics, we find Richard Hilman accused of having a book which "contained the epistles and gospels in English; and according to them would he live and thereby believe to be saved" (Foxe, iv. 133).

Here, I think, is proof that Wyclif's work and doctrines were active throughout the fifteenth century, and were preparing the people for the great reform which came in from abroad. Of that, too, the chief current is to be traced through Huss and Luther to its source in Wyclif.

Of a man who was thus unique among Englishmen, in the extent and intensity of his religious influence, we ought surely to know what he was and what he taught. I trust that the new Wyclif Society will get support enough to enable it to place the means of answering these questions within our reach.

F. D. MATTHEW.

#### SHAKSPERE'S "LOACH."

Wellington, Salop: May 15, 1882.

Mr. Furnivall's letter (ACADEMY, May 13) on the passage in "1 Henry IV.," II. i.: "Your Chamber-lye breeds fleas like a Loach," in which he gives an interesting extract from the Ordinance concerning the salt-fish of Blakeney, enacted in the thirty-first year of Edward III., A.D. 1357, contains two questions for solution; one pertains to natural history, and the other to philology.

As to the natural-history point, "the loach breeding fleas," I do not think that there is any necessity to seek for the fish which Shakspeare had in mind in any salt-water fish of the kind mentioned in the extract as *Loche-fish*. I have no doubt that the small river loach (*Cobitis barbatula*) is the fish intended. Mr. Furnivall is not, I think, quite right in saying that the little loach is too small to breed fleas as salmon do lice. The fact is that at certain times of the year, chiefly during the summer months, almost all fresh-water fish are liable to be infested with some kind of *Epizoa*. There are two kinds of parasitic creatures which are most commonly seen on various fish caught in the ponds and rivers of this country; and these are the *Argulus foliaceus*, a crustacean, and the *Piscicola piscium*, a small cylindrical kind of leech. At certain times of the year fish of various kinds, as trout, carp, tench, gudgeon, pike, minnows, &c., are sometimes covered with the very beautiful little parasitic crustacean just mentioned. The other leech-like animal is also at times very common on fresh-water fish. I have found these creatures on pike in multitudes, especially when the fish is in poor

condition. It is said that fish of the family *Cyprinidae* are especially liable to the attacks of these parasitic *piscicola*; and, as the loach belongs to this family of fishes, I think that it is not likely to be exempt. I may mention that the *Argulus foliaceus* has been found on tadpoles. It will be noticed, on referring to the passage in Shakspeare, that the same carrier had just before mentioned tench as being similarly troubled—"I am stung like a tench," another fresh-water fish. It may be asked why these two fish should be specially mentioned as parasitically troubled? The tench, as a common and well-known fish, would perhaps suggest itself, not because it is more liable to these parasites than many other kinds of fish, but because it is made by the poet to occur to the carrier's mind. Similarly, the small loach, though of no value, and, comparatively speaking, little known, not inaptly occurs to the mind of the carrier as one he knew well, a fish which, perhaps, he, as a boy, with tucked-up trousers had often caught as he dabbled in some shallow stream, just as modern country lads dabble after what the common people here in Shropshire call *bullyeds* and *stans* (stone) *loaches*.

The philological question, of course, refers to the etymology of the word *loach*, or, according to the older and more correct form of the word, *loche*. Mr. Furnivall's quotation clearly shows that the term *loche-fish* or *loych-fish* was as early as the year 1357 used for some of the *Gadidae*, or codfish, family; so that we should expect to find some character in common between the *loche-fish* and the small river loach; the character which the cod and the ling, two of the specified *loche-fish*, share with the river loach is the presence of one or more barbules on or near the mouth. Is it possible that the word *loche* may be referred to "lock"—i.e., a tuft of hair, Old High-German *loch*, Scandinavian *lokkr* (which Prof. Skeat traces to the Teutonic base *luk*, "to bend")—in allusion to the barbules or hair-like filaments which occur near the mouth of the cod and ling, and others of the *Gadidae*, and notably on the little river loach, which possesses no fewer than six of these barbules? *Loche-fish* would thus simply mean bearded-fish. Our word *loche* has probably come from the French, and is now generally spelt *loach*. The word is used by the French to denote not only the fish, but a slug or snail (see Littré, s. v.); and here, too, we find filaments on the animal's head. *Loch* = the Latin *cirrus*, which is used for a tuft of hair on a man's head, or of feathers on a bird's, or the arm of a polype; and one of the scientific names of the bearded rockling is *Motella triccirrata*. But, after all, this is but a guess, and the real derivation may be something very different. Some of your philological readers may decide.

W. HOUGHTON.

#### ENGLISH INDUSTRY AND COMMERCE.

Trinity College, Cambridge: May 23, 1882.

I am much obliged to Mr. J. E. Thorold Rogers for setting me right on the only point in my small volume on the *Growth of English Industry and Commerce* in which he has shown that I was mistaken; but, at the same time, I must beg leave to correct some of the errors into which he has fallen in his article in the current number of the ACADEMY.

Mr. Rogers is surely wrong in stating that the year of the Black Death was one of famine; perhaps he may have been thinking of the scarcity ninety years later (1438-39), so forcibly described by Holinshed. Again, Mr. Rogers writes—"Nor is there reason to believe that persons were affected by the influx of treasure from the New World." I am inclined to think that somebody must have suffered, and that it

was worth my while to enquire who did so, and in what ways.

From two very important statements Mr. Rogers strongly dissents. I have maintained that the tendency to convert arable fields into enclosed sheep farms was at work in the fifteenth century; and, indeed, it had gone so far that in 1488 the Legislature endeavoured to check it by a statute on the "evils of . . . converting tilled lands into pasture" (4 Henry VII. c. 19). That the evil increased in the time of Thomas More and Hugh Latimer is a matter of common notoriety; yet Mr. Rogers, not content with dismissing my statement as "without a shadow of evidence," asserts that this tendency only operated so as to affect wages, &c., in the latter half of the sixteenth century—in other words, that its results only began to appear some seventy years after it had been restrained by statute!

I have also stated that manufactures on manors were declining (though not by any means dying out), and that a stream of population was flowing from country to town. The statutes of Richard II. against villeins flying to towns, or sending their children to be apprenticed there, fall within the period of which I was writing, and the already cited statute of Henry VII. (not to mention several others in the next century) shows that the rural population was steadily declining. Mr. Rogers, however, asserts, in defiance of the Statute Book, that the stream of population was flowing in the opposite direction, and that craftsmen were being driven from the towns to settle in country districts by the oppression of the craft-guilds. It has yet to be shown that the craft-guilds had so far become oppressive rather than beneficent to the craftsmen as to produce this result in the fifteenth century. I have described this change in the sixteenth century, when it led to the formation of new towns, where trading was less fettered (p. 273). But the growth of new towns at convenient points for trade is a very different thing from the development of manufactures in each village in rural districts, owing to a mere force of repulsion from the older centres of commerce. I argued that the manorial manufacture which had existed from very early times (p. 97) was beginning to decline, but I have said nothing inconsistent with the fact that a country village supplied the clothes in which Sir John Fastolfe's soldiers marched through Coventry or elsewhere. In fact, I described the differentiation between town and country life which was going on in the fifteenth and subsequent centuries, and also the formation of new towns which was, at any rate, taking place in the sixteenth. Mr. Rogers confuses two entirely distinct changes, while he propounds a view which is contradicted by the evidence of several statutes.

Mr. Rogers lays great stress on the fact that wages were high and the prices of corn low during the fifteenth century, as if it were a matter about which there was any reasonable doubt; the same thing is stated on pp. 457 and 459 of my book, and I have "actually printed" a diagram which exhibits to the eye that this was the case. I had not the advantage of using his figures, as I was unaware that the second edition of his "Adam Smith" was more valuable than the first—like the authorities of the British Museum, who have not catalogued it at all; but it is satisfactory to find from his statement of the results that my rough diagram and his laborious investigations confirm each other. He did not discuss how far my "theory" as to the decline of manufactures can be reconciled with these facts, on which we both agree; had he done so he might have seen that they are perfectly consistent. If the decline of rural manufacturing showed itself in less frequent opportunities of employment, it is quite likely that wages might be high and food

cheap on a manor, and yet that the craftsmen would prefer to seek more regular work in a town.

I described in pp. 98, 196, the manner in which farming stock was owned during a very long period. I did not, however, say, as Mr. Rogers does, that "everyone cultivated land with his own capital, from the king to the serf," partly because I do not pretend to know what the resources of every landowner were, and partly because, as I have shown elsewhere (p. 249), the use of the term "capital" in this connexion is misleading.

After writing at such length on Mr. Rogers's manner of dealing with the facts of economic history, it would be unpardonable to occupy more space in exposing his "misconceptions" of the contents of my book. That he should have so completely failed to understand my views is, perhaps, partly my fault and partly my misfortune. Like Rousseau, I can only regret "que j'en sais pas l'art d'être clair pour qui ne veut pas d'être attentif."

Though I have abstained from using any single writer as authoritative for the "general social condition of England" (Preface, p. vi.), I have cited from Fitzherbert's *Boke of Surveyinge* a statement, as "gossip," which had an important bearing on the question as to the continuance of villeinage. The edition of 1539 was the oldest I had seen, and the oldest known to the editor of the reprint I habitually used, and by a slip I alluded to this date as the fourth decade of the fifteenth century. There was, however, an earlier edition (in 1523), so my phrase should have run, the "third decade of the sixteenth century." It is obvious how much more forcible the sentence as corrected by Mr. Rogers renders an argument (p. 201) which he disputes.

W. CUNNINGHAM.

#### KELTIBERIAN AND LIGURIAN INSCRIPTIONS.

San Remo.

The discovery of the bronze plate with the so-called Keltiberian inscription (see ACADEMY, February 4) is doubtless a very important one. As we know nothing about the Iberian language, and next to nothing about Keltiberian inscriptions except what the bilingual inscriptions on some coins have taught us, it cannot be expected that the decipherment of this interesting plate will soon be accomplished. The reading of the so-called Keltiberian alphabet is so uncertain that one and the same legend in coins is sometimes read in four different ways; for instance, CHALMAN, UCSAMAN, CELSTAN, HELEOSCAN. M. Weiss's work on old Spanish coins is certainly splendidly illustrated; it gives a very rich and apparently conscientious series of old coins, but it lacks a knowledge of the Basque language, as also does Boudard's *Numismatique ibérienne*. It would appear absolutely necessary to know something (and even as much as possible) about the Basque language, in order to explain what is supposed to be Old Basque, and in this respect M. Weiss's book is very deficient. On p. 241 one reads: "AREGRADS doit être le génitif de AREGRAD." Certainly not one of M. Weiss's authorities, however superficial he may be, made such a blunder; s is never a genitive. It is therefore to be hoped that we shall be enabled to see before us a reproduction of the inscription which will render an attempt at the reading of it possible to everyone.

Another very interesting discovery made at Este (Italy) will perhaps help us in the decipherment of the Iberian inscriptions. In the *Nuova Antologia* M. Molon gives a short account of what has already been found near Este. Among other interesting objects, different inscriptions, some fortunately bilingual, have been dug up, which present, as far as the author recollects, some analogies with

the Keltiberian inscriptions. This would confirm his theory of a primitive unity of the Iberian and Ligurian peoples. The origin of the Ligurians has been discussed by the author at some length in his "Preistorici e contemporanei Studi paleontologici in relazione al Popolo Ligure," a clear and pleasantly written paper on this subject. By M. Molon's help we shall soon be enabled to compare the two kinds of inscriptions.

W. VAN EYS.

#### A CORRECTION.

19 Westwick Gardens, West Kensington Park, W.

A paragraph in the ACADEMY of May 13 assigns to me the "Ethnological Appendix" only of the forthcoming volume on *Asia*, in Stanford's "Compendium of Geography and Travel for General Reading." Will you kindly allow me to state that I have written the whole work, and that Sir Richard Temple contributes nothing but a Preface, in which my authorship is duly acknowledged? I should not trouble you with this correction but for the fact that various statements have been publicly circulated attributing the work to Sir Richard.

A. H. KEANE.

#### IZAACK WALTON'S "COMPLEAT ANGLER."

London: May 22, 1882.

In a notice of a bibliography of Izaak Walton's *Compleat Angler* in the ACADEMY of May 13, the reviewer refers to the title-page of my facsimile of the first edition of *Walton's Angler*, pointing out that the word "churchyard" is spelt "churcheyard" in it, and states that the former spelling is to be found in the original.

I have consulted the copy from which my facsimile was photographed, and find that the "e" is there. It will be interesting to know of a copy of this edition in which the word is spelt differently, and to trace the dissimilarity of the title-pages. Perhaps your reviewer will state where the copy he has consulted may be seen.

ELLIOT STOCK.

#### APPOINTMENTS FOR NEXT WEEK.

MONDAY, May 29, 3 p.m. Royal Institution: "Digestion," III., by Prof. Gamgee.  
WEDNESDAY, May 31, 8 p.m. Society of Arts.  
THURSDAY, June 1, 3 p.m. Royal Institution: "The Metals," by Prof. Dewar.  
8 p.m. Linnean: "The Ceylon Coffee Leaf Disease," by Mr. Marshall Wood; "Outaneous Nerve Terminations in Mammals," by Dr. G. Hoggan; "Himalayan Ferns," by Mr. H. C. Levinge; "Some Bristle Ascidians," by Mr. H. C. Sorby and Prof. Herdman; "Recent Additions to New Zealand Flora," by Mr. T. Kirk; "Animals allied to *Pleuronema*," by Mr. F. W. Phillips; "New Comatulæ," by Mr. P. H. Carpenter.  
8 p.m. Chemical: "The Spectroscopic Study of Chlorophyll," by Dr. Russell and Mr. W. Lapraik.  
FRIDAY, June 2, 8 p.m. Philological: "Borrowed English Words in the Anglesse Dialect," by Mr. W. Jones.  
9 p.m. Royal Institution: "The Intellectual Basis of Music," by Mr. H. H. Statham.  
SATURDAY, June 3, 3 p.m. Royal Institution: "Poetry and its Literary Forms," III., by Prof. D. Masson.

#### SCIENCE.

*The Mind of Mencius*; or, Political Economy founded upon Moral Philosophy: a Systematic Digest of the Doctrines of the Chinese Philosopher Mencius. By the Rev. E. Faber. Translated from the German, with Notes and Emendations, by the Rev. Arthur B. Hutchinson. (Trübner.)

NEXT to Confucius, Mencius holds the highest place in China as a moral philosopher. Having been born (371 B.C.) rather more than a century after the death of his great prototype, he enjoyed the heritage of the accumulated wisdom of that sage as handed

down by his disciples, while yet the echo of his words was ringing in the ears of his countrymen, and the force of his example was influencing, in the persons of his followers, the national life. On all essential points he adopted, without hesitation, the teachings of the earlier philosopher. With him he held that man's nature is good; that it is within the power of every man so to give free course to the inherent goodness of his nature as to reach the condition of a holy man who is incapable of evil; and that virtuous conduct, and a due observance of the political and social relations, are the highest duties of man.

In some respects, however, Mencius went further than Confucius. He recognised more fully the influence of heaven overruling the evil intentions of men, and leading them onward in the path of duty; and in political matters he displayed a far more democratic spirit than his courtier-like predecessor. But his system, like that of Confucius, was based rather on the cultivation of the external forms by which the minds and hearts of men are manifested, than of those sources of every thought and imagination. Unlike the contemporary philosophers of Eastern Europe who made thought and ideas the basis of their systems, Confucius and Mencius taught that outward conduct and propriety were the starting-points of true philosophy. Wisdom, Benevolence, Righteousness, and Propriety were the four cardinal virtues according to Mencius. But his "wisdom" was not the "wisdom" of Plato, but consisted of that natural and independent knowledge which imparts prudence to counsel, and enables its possessor to employ an advantageous policy and to seize the fitting opportunity. Nor was there any analogy between his Benevolence and Righteousness, and the Sound-mindedness and Justice of the Greek philosopher. Benevolence with him was mainly subjective, and served to guard the heart. "Is there a man who treats me discourteously?" he writes in illustration of this. "The superior man will look into his conduct. 'Surely I am not benevolent; surely I am lacking in propriety. Has this thing been deserved of me?' He considers himself and is benevolent." Objectively considered, it was an excess of Benevolence, according to Mencius, "to carry out the feeling of not injuring others." Righteousness, again, he held was the proper conduct of men. It yields respect and permits nothing improper, and is therefore scarcely distinguishable from Propriety, which, we are told, finds its realisation in the "ordering and adorning, in the first place, of parental and paternal affection."

There is no need to go further to show that the philosophy of Mencius, though enunciating morality of a high order, was a system of externals. Deeper than this the Mongoloid mind finds it difficult to go. It is incapable of idealism, and seeks refuge in a practical realism, which knows nothing of the inner workings of the mind, and recognises only their manifestations in outward conduct. The philosophy of Confucius and Mencius was therefore well suited to the national temperament, and, imperfect as it was, has exercised a deep and abiding influence on every succeeding genera-

tion of Chinamen. No less different than the systems of China and Greece was the manner in which the philosophers of the two countries imparted their instructions. Instead of the Academia and the market-place, Confucius and Mencius chose the courts of kings and the society of their chosen disciples for the scenes of their dialectical displays. Their wits were not keen enough to bear the risk of defeat among mixed assemblies. Even among their own disciples they retreated rather than submit to a reverse. And in this they were right, for, having no inner source of strength, with failure would come contempt; and, by their own teaching, he who drew on himself the contempt of his fellow-men was destitute of Wisdom, Benevolence, Righteousness, and Propriety.

As a politician Mencius is better worth listening to than as a philosopher. On political economy, national defences, and home politics he held views which would be called nowadays soundly liberal, and he enunciated his opinions on these subjects with considerable force and effect. In the Chinese work which embodies his teachings, we find no formulated system either of philosophy or politics, but are obliged to piece them together from his recorded conversations. By his present work M. Faber has saved all future students of Mencius the necessity of so doing. He has laid before us a clear and orderly view of the "principles underlying and embedded in the Confucian philosophy," and has shown us the mind of Mencius in a far more systematised form than it probably ever assumed in the brain of Mencius himself.

ROBERT K. DOUGLAS.

#### SOME MATHEMATICAL BOOKS.

*Elements of Geometry.* By A. C. Clairaut. Translated by J. Kaines, D.Sc. (Kegan Paul, Trench and Co.) *Elements of Geometry.* By Simon Newcomb. "Newcomb's Mathematical Course." (New York: Henry Holt and Co.) *Greek Geometry from Thales to Euclid.* By G. J. Allman, LL.D. Part II. (Dublin University Press.) The first two works above cited appeal to two very distinct classes of students. The first, written originally for the use of M<sup>me</sup>. du Chastellet, a pupil of Clairaut, who has the credit of having translated Newton into French, made its appearance in 1741, and passed through many editions before the author's death in 1765. It is written in an easy style, well preserved in this translation, and, as might be expected from Clairaut's reputation, is a sound work, fairly well adapted even now for the use of students who are not able, at any rate at first, to take interest in the drier details of more abstract treatises. Attempting to follow the line of discovery, the work commences with an account of the measurement and division of land, and of the methods by which accessible and inaccessible distances are determined. These methods, illustrated by numerous figures, occupy the first part. The second part treats of the geometrical method of comparing rectilinear figures, the third discusses the measurement and properties of circles, and the last part does the like for solids. Thus within a small compass the reader is carried over the elementary parts of plane and solid geometry, and a fair knowledge of the subject may be picked up. It is the sort of book that one might perhaps put into the hands of a pupil who asks, "What is the use of geometry?" The translation is almost uniformly clear, but on pp. 31, 33, 39, 40, 43, and 111 may be detected

inelegant versions, as (on p. 46) "but we could not but desire;" we notice also that sometimes *apotheme* is spelt *apothegm*. Prof. Newcomb's book is a capital example of the excellent work that is being done in America in the way of bringing out mathematical text-books. The arrangement, the *lucidus ordo*, the matter, and the get-up are all that we could desire. The book is no mere imitator of our English Geometries; indeed, American mathematicians go rather to the French school for their models of style and matter—in fact, it covers the ground occupied by Euclid, Legendre, and the favourite American text-book, Chauvenet. To enter into a detailed criticism here would take up too much space, but we will just indicate Prof. Newcomb's standpoint. He follows Euclid in "founding the whole subject upon clearly enunciated definitions and axioms and stating the steps of each course of reasoning in their completeness." He admits that Euclid's system fails to meet modern requirements "in the treatment of angular magnitude," and here he goes nearly on all fours with the *Syllabus* of the Association for the Improvement of Geometrical Teaching. "In modern geometry figures are considered from a much more general point of view [than that of Euclid's restriction of the definition of plane figures to portions of a plane surface], as forms of any kind, whether made up of points, lines, surfaces, or solids." Among other innovations are the demonstration of the fundamental theorem of parallels (as in Henrici and German text-books) by the symmetric properties of figures; the division of each demonstration into separate numbered steps; in the treatment of proportion, where the author "has essayed a middle course between the extremes" of Euclid's rigorous, and the usual American algebraic, treatment. The first five books cover Euclid i.-vi.; the sixth book is on regular polygons and the circle, and, after Legendre, maximum and minimum figures. Book vii. is on loci and the conic sections (ellipse and hyperbola from the two foci definition, and the parabola from the focus and directrix definition). The geometry of three dimensions occupies books viii.-xi. There are numerous exercises all through the work. We can confidently commend the book to English teachers, who will find much, we believe, to interest, whether they accept or reject the writer's statements. Dr. Allman's *Greek Geometry*, which is entirely historical, forms, like the previous part i., which we noticed at some length, part of *Hermathena* (vol. iv., No. vii., pp. 180-228). The former part, it may be remembered, carried the history down to Pythagoras; this, on the same lines (if not even with a fuller knowledge and a yet firmer grasp), takes us, with notices of Eudemos and others, to Hippocrates of Chios. Dr. Allman is an independent investigator, has formed his own views from this investigation, and holds his own with great ability against some of his ablest predecessors in this field of research. To all students this second part is indispensable.

*Elements of the Integral Calculus*; with a Key to the Solution of Differential Equations. By W. E. Byerly, Ph.D. (Boston: Ginn, Heath and Co.) As was the case with Dr. Byerly's previous work on the *Differential Calculus*, to which the present is a sequel, this book makes no pretence to originality of matter, being founded on such well-known works as those by Bertrand, Todhunter, Boole, and others. It is a handy and skilfully compiled text-book, we presume primarily intended for Harvard students, treating of subjects not yet included in our own text-books on the calculus; thus chaps. i. and ii. are concerned with symbols of operation and imaginaries, the latter chapter entering rather fully into the subject. With a view to helping students in preparing for the London second B.A. examination, in which examination "imaginaries" play a part not

clearly defined in the prospectus, English students need some such elementary account as is here given. Chaps. iii.-xiii. give what must be given in every similar treatise (in x. we have Holditch's theorem)—viz., all the elementary applications to lengths of curves, their areas, to volumes, and to centres of gravity. A short chapter (xiv.) is devoted to "Mean Value and Probability," reference being rightly made to the admirable chapter on the subject by Prof. Crofton in Williamson's work. A novelty is the Analytical Key to the solution of differential equations (chap. xv.). The Key is based upon Boole's work, and examples are worked out in § 154 (by-the-way, the reference here should be to § 153, and not to § 157, which does not exist) by means of it. The method of using the Key is seen to be analogous to that used in diagnosing a plant by means of the Keys given in Bentham's or Babington's *Flora*. Dr. Byerly's Key appears to us to be a very useful work. In an Appendix is reprinted from the *Differential Calculus* a chapter containing a list of the usual formulæ for direct integration. The work is, we should say, well adapted for American students; it is hardly likely to meet with many readers in this country, though the Key is a good feature.

"*Selected Papers of the Institution of Civil Engineers.*" (1) "The Tidal Gauge, Tidal Harmonic Analyser, and Tide Predictor," by Sir W. Thomson. (2) "Logarithms of the Values of all Vulgar Fractions, with Numerator and Denominator not exceeding 100, arranged in Order of Magnitude," by Sir George Airy. (Vol. LXV. *Proceedings of Session 1880-81, Part III.*) (1) In the columns of *Nature* (vol. xxiii., pp. 467, 482, 555, 578) will be seen a correspondence upon the subject of the Tide Predictor; and this is the paper referred to by Sir W. Thomson (p. 578): "Anyone who feels sufficient interest in the subject to desire full information, will find it in my paper . . . read before the Institution of Civil Engineers, . . . and in the abstract of the discussion which followed it." The paper and accompaniments take up seventy-one octavo pages, which appear to us to justify Sir William's reference, and to embrace all, or nearly all, that can at present be said on the subject in a very handy form. There is a full sheet of illustrative figures. (2) Twenty-eight pages of figures, and nothing more. This is, at first sight, a not very promising tractate to examine, but two examples of its applications are given. These are to find the number of teeth in the gearing wheels of two spindles of wheelwork, which are to rotate in certain proportions of angular speed. We learn from an interesting note communicated by the author to the *Philosophical Magazine* for September, that the table was prepared some years since with the aid of Mr. William Ellis; and a curious fact is pointed out, which gives the title to the article—viz., the "systematic interruption in the order of numerical values of vulgar fractions when arranged in a series of consecutive magnitudes." The pamphlet by itself is very useful for the engineer; the article shows that it is also of great interest to the mathematician. An extract will make this clear. In three columns we have vulgar fraction ( $\frac{1}{2}$ ,  $\frac{1}{3}$ ), logarithms (.08190, .08199), difference (.00009). Now the average value of difference for the first seventy-two fractions is .00010; for the next 116 fractions it is .00014; for the next following groups of 116 each it is .00016, .00016, .00017, .00018, .00019, and was slowly increasing; but when we come to fractions whose denominators are small, 1, 2, 3, &c., the differences are much larger. Thus  $\frac{1}{2}$ ,  $\frac{1}{3}$ ,  $\frac{1}{4}$ ,  $\frac{1}{5}$ ,  $\frac{1}{6}$ ,  $\frac{1}{7}$  give differences .00010, .00436, .00441, .00009. It is to this and the like erratic differences that Sir George Airy draws attention, and anyone having the table

can easily see that the variation obtains in the other cases. The above examples are those given, among others, by the author.

R. TUCKER.

#### SCIENCE NOTES.

*Fossils uniting the Characters of Pigs and of Monkeys.*—Some time ago M. P. Gervais discovered in Upper Eocene strata, near Apt, in France, a portion of an upper jaw with teeth which exhibited an analogy to those of certain omnivorous pachyderms allied to the *Suidae*, and yet resembled in other respects those of the monkeys. For this fossil (*singe-cochon*) he suggested the appropriate name of *Cebochaerus*. In studying the mammalian remains found in the phosphorite deposits of Quercy, M. H. Filhol detected several specimens of *Cebochaerus*, which enabled him more fully to describe the dentition, our knowledge of which was previously very imperfect. But he also discovered other somewhat similar remains, which approached yet more nearly to the monkeys, and to these he gave the generic name of *Dolichocheirus*. Quite lately he has obtained an almost complete head, with lower jaw in place. This unique fossil he described before the Académie des Sciences at their meeting on May 1. It is, therefore, now proved beyond all doubt that there existed during the late Eocene period a group of mammals (*Pachysimians*) which united many of the characteristics of the pigs on the one hand with those of the monkeys on the other—an association of characters which naturally gives to these fossils a peculiar interest to the student of evolution.

We are glad to hear that an influential committee has been formed, with Prof. T. G. Bonney and Mr. P. Edward Dove as hon. secretaries, to promote a Darwin memorial. It is proposed, first, to hand down to posterity a likeness of the man; and, second, to establish a fund associated with his name, the proceeds of which will be devoted to the furtherance of biological science.

The French Government has decided to establish a permanent station for zoological research on the shore of the Mediterranean. The site chosen is Villefranche-sur-mer, near Nice; and the director will be Dr. Jules Barrois, the distinguished embryologist.

MESSRS. LONGMANS will shortly publish the address delivered by Prof. Owen on unveiling the statue of William Harvey at Folkestone, in August of last year. Prof. Owen has added supplementary examples of the application of physiological experiments to the cure and relief of diseases and injury.

THE current number (15) of the "Library of Harvard Bibliographical Contributions" consists of a list of American authors upon geology and palaeontology, compiled by Mr. J. D. Whitney.

#### PHILOLOGY NOTES.

THE first revises of the early sheets of the Philological Society's English Dictionary were laid before the anniversary meeting of the society on Friday week by the present editor, Dr. J. A. H. Murray. The work was begun in 1857 at the suggestion of Archbishop (then Mr.) Trench, as a supplement to the Dictionaries of Johnson and Richardson; but the then editors, the late Herbert Coleridge and Mr. Furnivall, soon gave up the supplement plan in favour of a full dictionary, and appealed to readers for help. Collections of extracts were begun, and the work went on under Herbert Coleridge's editorship till his death, and then under Mr. Furnivall's, till three years ago the Clarendon Press Delegates were induced to take

up the scheme and advance money for its completion. Dr. Murray was appointed editor, a fresh appeal was made to volunteer readers and sub-editors for help—an appeal which has been generously responded to—and now the first fruits of the twenty-five years' labour are in type. The Philological Society and the Clarendon Press may be well satisfied with the results of work so freely given, and with the digest of it by Dr. Murray and his sub-editors. The society's Dictionary is more thorough than either Littré's celebrated French Dictionary or the Grimms' no less celebrated German one, for it treats every word with fullness during its whole existence in the English language, which neither Littré nor the Grimms do. A minute's comparison with Richardson and Johnson shows how entirely the new Dictionary throws them into the shade; they are mere child's play beside it; while the American Webster is sixfolded in bulk, completed, corrected, and turned from a collection of words and definitions into a real historical dictionary of the language, with quotations verifying every point. The immediate etymologies are given with great care, and are up to the latest improvements in phonetic research.

THE three following works will be added immediately to Messrs. Trübner's "Oriental Series":—Schiefner's *Tibetan Tales*, translated from the German by Mr. W. R. S. Ralston. The late F. Anton von Schiefner, of St. Petersburg, shortly before his death, collected his numerous translations from the Tibetan Kanjur, and added corrections and notes with a special view to this English translation. Mr. Ralston has prefixed an elaborate Introduction, in which he connects Schiefner's labours on Indian folklore with those of Benfey, Liebrecht, and Köhler. The *Sarvadarsana-Samgraha*, translated from the Sanskrit, with notes, by Prof. E. B. Cowell and A. E. Gough. This is a review of the different systems of Hindu philosophy by Madhava Acharya, which dates from the fourteenth century, and has always interested modern scholars by its many difficulties. *Linguistic Essays*, by Dr. Carl Abel, being an attempt to discover the origin of language and primitive significance of sounds. As we have already announced, Dr. Abel will this year deliver the Ilchester Lectures at Oxford.

We understand that Prof. Wright's edition of the *Kallitah wa-Dinnah* will probably be published in October next.

MR. JOHN DELAWARE LEWIS's edition of Juvenal's *Satires*, with English translation, notes, &c., having gone out of print several years ago, and the demand still continuing, it has been decided to issue a new, corrected, and improved edition, in two volumes. The book will be published by Messrs. Trübner.

M. WADDINGTON has communicated to the Académie des Inscriptions some details of a discovery made at Palmyra by a Russian traveller, Prince Simon Lazareff, of a bilingual inscription graven on the solid rock. The inscription is of great size, and in four portions—one in the language of Palmyra, two in Greek, and a fourth strictly bilingual. According to M. Waddington, the text represents a decree of the Senate of Palmyra, dated A.D. 137, dealing with fiscal matters. It levies a tax upon camels and upon the right of watering camels; and there are references to the acts of Germanicus and Corbulo when governors of Syria.

THE French Asiatic Society has received from M. Aymonier copies of fifty-two inscriptions collected by him in Cambodia. The majority are in Sanskrit, often mixed with modern vernacular dialects. M. Aymonier has now returned to Cambodia on an archaeological mission from the French government.

PAHLAVI students, whose chief difficulty is to obtain sufficient materials for prosecuting their studies, will gladly welcome the publication of a facsimile of the Pahlavi text of *The Book of the Mainyô-i-khard*, edited by Dr. F. C. Andreas (Kiel: Lipsius and Tischer), from a MS. of the sixteenth century brought from Persia by the late Prof. Westergaard in 1843. This is the only known MS. of the original Pahlavi text of this work, all others being, apparently, mere re-transcripts from the later Pâzand version. The text it contains is, however, not complete, as it has not only lost ten folios near the middle, but has also descended from some previous MS. which had lost its first folio. The facsimile, which is very exact, gives the remaining seventy-one pages of this text, besides three pages of another, and affords an instructive illustration of the Persian style of writing Pahlavi, which differs in some respects from the style usually adopted in India, especially in the forms of the numeral ciphers for two, three, and four, and their combinations. Pahlavi scholars will also be glad to learn that the codex from which this facsimile was made has been finally deposited in the University Library at Copenhagen, and that it turns out to be more valuable than the late Prof. Westergaard supposed. In addition to the last folio of the larger recension of the Bundahish and the greater part of the Mainyô-i-khard, of which Dr. Andreas has given facsimiles, the codex also contains fully one-fifth of the Dinkard (taken from the fifth, sixth, and ninth books of that extensive work), and nearly all the Bahman Yasht. This text of the Dinkard, so far as it extends, is decidedly better than that existing in India, though that of the Bahman Yasht is inferior to the older copy previously existing at Copenhagen.

PROF. SPYRIDION LAMBROS, of Athens, has published a little volume entitled *Κερκυραϊκὰ ἀνέκδοτα ἐκ χειρογράφων Ἀγίου Ὄρους, Κωνσταντίας, Μονάχου καὶ Κερκύρας νῦν τὸ πρῶτον δημοσιευόμενα*, dedicated to Ferdinand Gregorovius. The MS. from Cambridge is a letter of Basil Padiates, metropolitan of Corcyra in about 1200; and it is noteworthy as containing the word *Κορυφαίος* for Corfu. At the end of the volume Prof. Lambros has given a list of his numerous and valuable publications.

#### MEETINGS OF SOCIETIES.

PHILOLOGICAL SOCIETY.—(Anniversary Meeting, Friday, May 19.)

A. J. ELLIS, Esq., President, in the Chair.—The President read his Annual Address. It first noticed the death of Dr. J. Muir, and the tribute paid by M. Gaston Paris to the memory of the late Henry Nicol. It then gave reports by the President himself on the society's papers during 1880-82, on Stanford's Dictionary of Angloised Foreign Words and Phrases, on Wencker's grand Speech-Atlas of North and Mid Germany, on the difference between a dialect and a language, on Mr. Bridges' account of the Yaghan language of Tierra del Fuego, and Mr. Marr's and Lieut. Temple's collections on the language of the South Andaman Island; also reports by Dr. Murray on the society's Dictionary, by Prof. Skeat on the English Dialect Society, by Mr. Pinches on cuneiform researches since 1874, by Mr. Henry Sweet on phonetics, general philology, and Scandinavian and Germanic philology, and by Prof. Hengel, of Marburg, on Romance philology in all its branches since 1874.—The thanks of the meeting having been given to Mr. Ellis for his Address and his many services to the society, the following members were elected officers of the society for the session 1882-83:—President: Jas. A. H. Murray, LL.D. Vice-presidents: The Archbishop of Dublin; Whitely Stokes, LL.D.; Rev. Richard Morris, LL.D.; Alexander J. Ellis, F.R.S.; Henry Sweet, M.A.; Prof. A. Graham Bell, M.A. Ordinary members of council: The Very Rev. Dean Blakeley, D.D.;

E. L. Brandreth; Prof. Cassal; C. B. Cayley; R. N. Cunt; Sir J. Davis, Bart.; F. T. Elworthy; D. P. Fry; E. R. Horton, M.A.; H. Jenner; Rev. Dr. Kynaston; Prof. R. Martineau; Prof. J. B. Mayor; J. Pella, M.A.; Prof. Postgate; Prof. Rieu; Prof. Sayce; Prof. Skeat; H. Wedgwood, M.A.; R. F. Weymouth, D.Lit. Treasurer: B. Dawson, B.A. Hon. secretary: F. J. Furnivall, M.A.

## FINE ART.

J. E. MILLAIS, R.A.—A superb LINE ENGRAVING by H. BOURNE, of the Pre-Raphaelite Picture "ISABELLA," painted by J. E. Millais, R.A., forms one of the Full-page Illustrations to the JUNE NUMBER of the ART JOURNAL. Price 2s. 6d.

VAL PRINSEP, A.R.A.—An ETCHING by LEOPOLD FLAMENG of "A BIENTOT," painted by Val Prinsep, A.R.A., forms one of the Full-page Illustrations to the JUNE NUMBER of the ART JOURNAL. Price 2s. 6d.

LORD RONALD GOWER.—An ENGRAVING of Lord Ronald Gower's Statue of the late EARL of BEACONSFIELD forms one of the Full-page Illustrations to the JUNE NUMBER of the ART JOURNAL. Price 2s. 6d.—25, IVY LANE; and of all Booksellers.

GREAT SALE of PICTURES, at reduced prices (Engravings, Chromos, and Olographs), handsomely framed. Everyone about to purchase pictures should pay a visit. Very suitable for wedding and Christmas presents.—GEO. BARR, 114, Strand, near Waterloo-bridge.

*The Graphic Arts.* By P. G. Hamerton.  
(Seeley, Jackson & Halliday.)

(Second Notice.)

ALTHOUGH Mr. Hamerton keeps always before him the purpose of his book, and does not digress into criticism or theoretical disquisition not illustrative of the main subject, his treatise is by no means confined to the statement of technical methods. It may indeed be divided into three parts—a few chapters on the ethics of the graphic arts, a few on different ways of drawing, and the rest on the different materials and tools. The first section is not the least valuable, as it deals with many questions on which it is of the first importance that all who are connected with art or are fond of it should form clear opinions, or at least opinions free from palpable error or unreasonable prejudice. On such questions, for instance, as "right and wrong," it is well to hear what so thoughtful and sincere a writer as Mr. Hamerton has to say. He not only sifts the arguments, but he arrives at as firm conclusions as perhaps are possible, so long as we are troubled with the desire to apply the morals of real life to that domain of fiction in which art lives. The same may be said of the author's treatment of the question as to whether pleasure or truth is, or should be, the aim of artists. The difficulty of thinking out such problems is much increased by the wide and various senses in which words are used. A new vocabulary would almost seem a necessity for precise thinking in art philosophy. "Beauty" which includes the grotesque, "pleasure" which includes the attraction of the terrible, "truth" which can never be more than relative, are difficult terms to use without ambiguity. As to the special question about truth and pleasure, it seems to us that artists do, and must, aim at both, or they will not be artists at all. The desire to imitate no less than the desire to make attractive is a root of art. Now one seems to predominate, and now the other; but (except, perhaps, in purely geometrical ornament) neither is completely subdued. Sometimes, as in the modern French realistic school, beauty almost disappears; now, as in some of Turner's later work, truth; but both must be present in however unequal proportions, or a work will not give that satisfaction

which only art can give. On the shifting quicksands of the imperfect words and unformulated thoughts of which modern criticism is composed, Mr. Hamerton does not attempt to build any solid dogmatic structure; but he has surveyed the ground with a care and accuracy which cannot fail to be useful to future navigators, and has buoyed some dangerous shoals.

More conclusive, if not more useful, are the chapters devoted to "Outline," "Classical and Picturesque Line," to "Drawing by Areas" and "Drawing by Spots." The last will, we fear, in some quarters lead to denunciation of Mr. Hamerton as a heretic; but he will have to bear it as best he may, for this is not his only taint of heterodoxy. He has dared to show appreciation of the splendid and potent genius of Constable, even to speak of his "fine sylvan forms without any tight or hard drawing," and of the "beautiful painting" of one of his fields. What is worse, perhaps, he ventures to call the method of colouring employed by Raphael and Lionardo "primitive." In the matter of spots, however, we are glad to say, heretics though we too are, that Mr. Hamerton writes without enthusiasm, as the following passage will show:—

"It is hardly necessary to observe that drawing by spots is directly opposed to that tranquillity which has generally been sought for by the greatest artists. Serene great art avoids them as much as it can, and always prefers broad spaces varied internally by well-studied modelling."

It is with greater affection that Mr. Hamerton writes "of the classic and the picturesque line," which is the subject of what appears to us one of the most valuable chapters in the book. There is an eloquent passage as to the beauty of certain lines in landscape which we wish we had space to quote. The chapter is also remarkable for the success with which he has avoided the temptation to transgress the limits of his design. He keeps to the "line" where a writer of less discipline would not have missed the opportunity of expressing views as to the classic and picturesque in art generally.

The rest of the book is technical, but not dry, as most technical books are, for it is not only full of personal experience and anecdote, but it reflects that intimate, and even affectionate, relation which subsists between accomplished workmen and their instruments of labour. Mr. Hamerton writes of materials refractory and docile with something of the kind and learned humanity with which a schoolmaster might speak of his pupils. To charcoal he gives the character of a favourite to whose faults he is by no means blind.

"The qualities of charcoal are exquisite. Its pale tones may be of the most extreme refinement, delicate pure grays, half transparent, showing the light of the paper through, and closely approaching the quality of natural cloud, as may be proved by the ease with which clouds are imitated, or, at least, suggested, in charcoal drawings. The tones become more opaque as they darken, but they have a velvety richness extremely valuable in many textures, such as dark mosses in landscape and dark dresses in *genre*. The line of charcoal when wisely used is a beauty to the eye; it crumbles away from its stronger accents with so becoming a tran-

sience, as if it did not desire to insist rudely, but soon became less positive after every effort of assertion."

It is in this kindly recognition of the assistance of matter in realising human conceptions that the great charm of the book lies, and it is in the perception of the distinct capacities of each of the materials that its value consists. Mr. Hamerton has a very proper dislike to any of the graphic arts being styled "imperfect." This is an epithet which, as he points out, is applicable to all of them if to any. It is to be hoped that a wider knowledge of the peculiar aptness of each art for producing certain effects will not only lead to the encouragement of some, like engraving on steel, which have gone out of favour, but will also teach both artists and amateurs to keep each more strictly to its proper province, which is the production of effects which other arts cannot produce at all, or can produce only at greater labour. The spectacle of water-colours trying to be "oils," of the needle rivalling the "burin," is confusing to the ignorant and unpleasant to those who know the pleasure of "pure blood" in art. Each art is only "imperfect" when it tries to strain beyond its natural compass; its material limitations, like the outline of a circle, constitute its perfection. When this is fully realised, the question, "What is art?" will be no longer a puzzle to the unlearned and the enigma of impostors. What is true of each art in particular is also true of art in general. Its function is not to give nature complete (which is impossible), but to abstract certain of her parts or qualities so that they can be more fully and quietly studied and enjoyed by themselves. Strong colour and glitter of surface are impediments to the enjoyment of form, strength of line to the enjoyment of tone; and if an accomplished picture fails to produce satisfaction it is frequently, if not generally, because it attempts to give two incompatible pleasures at the same time.

The chapter on oil-painting is especially full, as it should be, and by itself an important contribution to the history of art. Mr. Hamerton has made good use of the information he has received from various living artists as to their methods of painting. His reading has enabled him to describe the methods and palettes of some of the greatest of the Old Masters. His knowledge, enhanced by personal practice and critical examination of works new and old, makes a trustworthy base for decided views as to the development of the art which in some modern work appears to him to be "over-ripe." We have no space to do more than express our general concurrence in his views.

Our last word must be in praise of the illustrations. But a few years ago it would have been impossible to illustrate adequately such a book as this. The light but sure touch of Turner's pencil, the bloom of Allongé's charcoal, the delicate lines of Leighton's silverpoint, and the clear incision of Dürer's burin must have been left to the imagination, or rendered but approximately. By the aid of different processes, all called into existence by photography, these have each been reproduced with an accuracy which may properly be described as perfect. Though not chosen

for their beauty as works of art so much as for characteristic illustration of the use of the special materials, there are many of the illustrations which are exquisite. Among these are heads by Leighton and Burne Jones; and the charcoal drawings of Allongé and Lhermitte, Heywood Hardy's "Lady on Horseback" in dry point, C. W. Sherborn's engraving in the old Italian style, Mr. Linton's wood-cut, Lumb Stocks' line engraving, Francis Holl's stipple, E. P. Brandard's engraving of a landscape by Alfred Hunt, and M. Hanhart's lithograph, are, one and all, not only unusually fine specimens of workmanship, but "things of beauty." COSMO MONKHOUSE.

#### DISCOVERY OF ROMAN REMAINS IN WESTMINSTER ABBEY.

WHEN the grave for the late G. E. Street, R.A., was being dug the interesting discovery was made that a Roman villa had once stood on the site of the nave of Westminster Abbey church. Some ten or twelve feet below the level of the present pavement various fragmentary remains of a hypocaust were found; and some of the large square bricks which had formed the pilae, or short pillars supporting the hollow floor, were apparently *in situ*. Fragments also were discovered of the broad flange-tiles which rested on the pilae, and carried the cement and mosaic, which formed the upper layers of the floor. The mortar is of two kinds:—one very coarse in quality, made of lime and gravel, used to bed the pilae-bricks; and another finer variety, made of lime, sand, and pounded brick, such as the Romans generally used to bed the tesserae of their mosaic floors.

The ground where Westminster Abbey now stands must have been, when this villa was built, a small island in the middle of a large but shallow lake, extending over the present St. James's Park, most of Lambeth, the south part of Pimlico, and other land besides. Across this lake there was, in Roman times, a ford, which probably passed from the shore to the island, and then from the island to the opposite side. This ford was on the line of a Roman road, the position and direction of which is still marked out by the long straight Edgware Road, and its southern continuation, Park Lane. After crossing the lake the road passed on, extending through Surrey, and then probably (as suggested by the Rev. W. J. Loftie in his valuable pamphlet on "Roman London") joined the southern branch of the Watling Street from Dover to Canterbury. It is impossible to say when the site of Westminster Abbey ceased to be an island. The term Thorney Island is applied to it till after the Norman Conquest; but this of course proves nothing, as the name "island" often survives long after a piece of land has ceased to be surrounded by water.

This discovery of Roman remains is not altogether unexpected. John Flete, Prior of Westminster, who wrote in 1443, mentions a tradition that a Christian church had been built on Thorney Island in 184, and that in the time of Diocletian's persecutions it was taken from the Christians and dedicated to the service of Apollo—"Thurificat Apollini suburbana Thorneia." Though much reliance cannot be put in this statement, yet the tradition as to the Roman temple may have some foundation in fact.

Another recent discovery, though relating to much later times, is that of two circular ovens, with brick domes, at the south-west angle of the misericord, probably part of the monastic bakehouse. Foundations, too, have been found of a

room adjoining the refectory on the south. This room had two lines of vaulting in three bays each, with pillars down the middle. The buttery hatch opened from it into the refectory, to which this little building may have formed a sort of serving-room. The kitchen, no foundations of which have yet been discovered, probably stood somewhere between this building and the bakehouse. J. HENRY MIDDLETON.

#### EARLY GERMAN WOOD-CUTS AT THE BURLINGTON.

THE contention of Mr. Herkomer that designing for wood-blocks cultivates the artistic faculty much better than any amount of academic teaching derives some support from the astonishing display of intellectual vigour and passionate imagination shown by some of the Germans of the time of Albrecht Dürer. It was used by them, perhaps, rather as a means for popularising their mature genius than as a field for practising their 'prentice hands; but the present exhibition at the Burlington Fine Arts Club shows, at least, how large a scope the art of wood-cutting affords for the display of true drawing and intense feeling. The exigencies of cutting on wood in the old style demanded of the designer a sureness of aim and science of execution which are not favoured by those numerous mechanical resources of the modern engraver, which, while they liberate the hand and mind of the draughtsman, engender much loose drawing and enervated design. The minds of these early designers were braced, and their hands steadied, by the very limits of the "Forme Schneider's" means. They could expect no help from their interpreter; on the contrary, whatever mistake they made was sure to be repeated, perhaps exaggerated; whatever virtue there was in their works was certain to be somewhat impaired. They had to know exactly what they wanted to express, and to express it so boldly and clearly that there could be no mistake, even if the translation was imperfect. This interesting exhibition of choice impressions of the masterpieces of Cranach, Dürer, Burgmair, Holbein, and lesser men is therefore useful beyond its immediate intention of illustrating the history of wood-engraving from the middle of the fifteenth to the end of the sixteenth century.

It is unfortunate that so little is known of the engravers themselves. No doubt the designers not only furnished the drawings, but also superintended the cutting; but, nevertheless, the engravers, with their rude tools (knife instead of burin, pear-tree plank instead of boxwood cut across the grain), were perfect craftsmen. Hans Lützelburger, the cutter of Holbein's "Dance of Death," and Jerome Resch, who, with others, executed Dürer's "Triumph of Maximilian," could not be beaten in their own line by any modern engraver. A few more names we know; but it is to be feared that we shall never learn to whom we owe the perpetuation of some of the noblest designs ever conceived by the imagination of men. He was no mere mechanic who could have "cut out the whites" from Dürer's "Virgin with Angels" (67) or "Trinity" (72) without losing more of the dignified sweetness of the former, or of the exquisitely, but nobly, pathetic expression of the latter; and the carver of the grand Apocalypse of the Nuremberg master deserves immortality. It would have been useful if the scanty information which has come down to us with regard to these engravers had been summarised in the Preface to the Catalogue.

Among the most curious of the works which Messrs. R. Fisher, H. H. Gibbs, and W. Mitchell have withdrawn from their collections for the purpose of this exhibition may be men-

tioned the curious coloured cut of the "Turkish Emperor" (2); the fine impression of the frontispiece of Breydenbach's *Travels* by Erhard Reuwich, with its beautifully irregular composition and charming rose trellis and Cupids over the arch; the first state of Cranach's "Venus and Cupid" (16), printed in *chiaroscuro*; and the still more remarkable "St. George" (13), printed in blue and gold. Other curiosities are Mr. Mitchell's "Titles to the Life of the Virgin and the Great Passion" (25), printed on a single sheet, and the trial proof of the portion of the "Triumphal Car of Maximilian" which contains the Emperor's portrait. Another print in *chiaroscuro* which cannot fail to arrest attention is Burgmair's terrible design of "Death and the Young Man" (92). By Hans Baldung, Mr. Fisher lends a fine impression of "The Witches" (99); and his fancy, more playful, perhaps, than that of any of these artists except Cranach, is well seen in the "Virgin and Child" (100) and "Holy Family" (101) belonging to Mr. Mitchell. One of the most interesting of all is the same gentleman's undescribed state of Michael Ostendorfer's "Pilgrimage to the Old Church of the Beautiful Virgin at Ratisbon."

#### M. TISSOT AT THE DUDLEY GALLERY.

M. J. J. Tissot has an exhibition all to himself at the Dudley Gallery, where, in addition to his etchings, most of which are already well known, he has assembled twelve paintings and a number of works in bronze and *cloisonné* enamel. The enamels are an extraordinary memorial of his patience, ingenuity, and skill of hand. He appears to have worked out the method of their manufacture all by himself. Beginning with the most futile attempts (some of which are shown), he has persevered till he has found out how to produce "the flux and the tints" and become a master of the art. The Catalogue proudly states that his inventions have culminated in the discovery of the "sealing-wax" red, and of this he shows a "trial-piece," on which his initials appear triumphantly in this rare colour, on a ground of fine turquoise blue. Such industry, meeting with such success (technically), commands admiration. The colours are very good, and the workmanship finished, especially in two large *jardinières* mounted in bronze, and a still larger allegorical composition of Fortune sitting on the globe borne by a tortoise. We do not think that representations of sea and sky and young ladies in boats are suitable for *cloisonné* work, nor do we think that flat-sided vases imitating red brick walls and ivy are good art; but there is no doubt about the originality of the design or the boldness and beauty of the colour, even though the works attract us little in other respects. Of the paintings, the most important are a series of four, called "The Prodigal Son in Modern Life." Seen one by one unnamed, they would pass as admirable examples of the peculiar skill of the painter; but taken together, as a modern paraphrase of the grand old parable, they are a failure, and a sad one. The first scene, where the prodigal is about to start on his travels, gives us one of those rooms looking over a river flooded with light from the large bay windows which M. Tissot knows how to paint so well. The "prodigal" is seated on a mahogany table, whose polished surface reflects the complex lights. At one end of it is seated the father, a good-natured old gentleman who is evidently determined that his younger son shall start provided with "everything;" at the other, his elder brother and his wife (or sister), who has "tea-things" before her. In the next scene the prodigal is supposed to be "wasting his substance in riotous living" in a Japanese tea-

house, not one of the most respectable, we suppose, but there is nothing to show more than curiosity on the part of the prodigal and his English male companion, who are taking coffee out of tiny cups. Lanterns shed a rosy light over the Japanese damsels with impassive faces, one of whom is dancing demurely and the rest lolling about. If it is a carnival, it is a very decent, not to say a dull, one; but much praise is due for the strange spell which M. Tissot has cast over the scene. If it be not truly Japanese, it is like nothing else we know. In the next, the father is embracing his son, who has had to work his passage home, and is kneeling in contrition on the deck, with bare feet and a suit of slops. The last scene is "the fatted calf," which, being translated into M. Tissot's rather vulgar English, means a rattling good dinner up the river. M. Tissot is a clever painter, but he is "bad style."

#### PAINTINGS ON CHINA.

THE seventh annual exhibition at Messrs. Howell and James' marks a distinct point in the history of this charming and popular art, and is one of which they may well be proud. The judges, Messrs. Frederick Goodall and H. Stacy Marks, have done wisely in raising the standard for admission; and, though there is a good deal of amateur work which is poor and uninteresting, the general level is higher than in former years. The number and beauty of the various *plaques* and plates is a satisfactory result of a great deal of patronage and encouragement, both of a wise kind. There are fourteen royal patrons, six of whom present prizes of honour; and these are supplemented by prizes given by the *Queen* newspaper, the *Art Journal*, the judges, and Messrs. Howell and James, so that there are nineteen in all for amateurs and eleven for professionals, besides numerous diplomas of merit. The gold medal given by the Crown Princess of Germany has this year fallen to Miss J. Scott Smith for a portrait of the Princess Elizabeth of Hesse and another beautifully painted head. Miss Everett Green gains the "Princess Alice" badge for a decorative plate remarkable for the beauty of drawing and colour—a harmony in green; Miss R. J. Strutt, the "Princess Christian" prize for a pair of panels—"Summer and Autumn." To Miss A. R. Popham has been awarded the "Prince Leopold" badge, to Mrs. Nesbit that presented by Princess Mary, Duchess of Teck, and to Miss Madeline Cook the "Countess of Flanders" prize. The other prizes for amateurs have been allotted to Misses Lucy Whittaker, C. J. Barber, A. K. Barclay, Amy Vigers, and others too numerous to mention if we wish to reserve space to say anything about the exhibition. The same reason must justify us in not saying more about the prizes awarded to the professionals than that the Princess of Germany's silver medal was won by Miss Rebecca Coleman with some "heads," bold in colour and of much delicacy and clearness in the flesh-tints, and that the other chief prizes were awarded to Misses Ellen Welby, Miss Charlotte Spiers, Miss Linnie Watt, and M. Dominic Grenet.

Among the first works to attract attention in the large gallery are the "Nellie" and "Sallie" of Miss E. S. A. McMillan (9 and 28), two well-drawn heads of children relieved against bold grounds of pale blue and yellow; and two clever imitations of Limoges enamel by O. Daubron (17 and 19). An "Oriental Design" (47), by Miss Adelaide Inglis, seems to show some talent for conventional design, which we are glad to see is being cultivated by more than one lady amateur. Miss Dora Crittenden's "Conventional Wallflowers" is a more original effort in this direction (98); but this is not so good as Miss Eleanor James's "Strawberries"

(278), which is again inferior to the same lady's "Conventional Violets" (300). Miss Minnie Wilson's "Conventional Design" (210) and Miss Innes Hadden's "Jumbo Plate" (223) also deserve mention "in this connexion," though the latter is evidently taken from an Asiatic, not an African, elephant, and probably from an Indian carving in ivory. If Miss Elize von Holtorp designed the border as well as the centre of her very clever plate, "The Two Pipers" (57), she has great talent for decoration. Of the flower-painting none struck us as finer than the lilies of Miss Ada Hanbury (383) and Miss Frances Linnell (409). Miss E. Chatfield's "Iris and Guelder Roses" (371) is finely painted, and a beautiful piece of colour, but there are too many good specimens of flower-painting by both amateurs and professionals to extend notice to half the deserving. Indeed, this remark applies to the exhibition as a whole, and we must conclude this notice by calling attention to a few works which at all events should not be passed without more than a glance.

Among these are certainly M<sup>me</sup>. Marie Merkel-Heine's "Portrait of a Young Lady" (377), with its exquisite finish; Miss Fanny S. Baily's "Branch of Auratum Lilies" (107); Miss Florence Voss's "Single Dahlias" (272), good in arrangement and fine in colour; Mrs. R. E. Pownall's "Angelique" (299), Miss Bessie Twynam's "Helen" (326), Miss O. H. Spiers' "White Peonies" (358), Miss M. Gemmel's "Head" (426), Miss Wilson's "Primulas" (436), G. Schuller's "Study of Flowers" (438), Miss K. Kirkman's very brilliant and clever "Salamanders" (440), Miss Ellen Williams' "Study of an Italian Head" (454), Miss E. Lewis's "Listening to the Birds" (843), Miss Belinda Havell's "Ready for the Bath" (926), and Miss K. Sturgeon's "Clodia," with its admirable "ground."

It only remains to say that such well-known masters as M<sup>ms</sup>. Léonce and Grenet are here to be studied in works which are, and are likely to be, unrivalled. Of M. Mallet there is only one specimen, but that is a fine one (1657). Beautiful landscapes are also sent by J. Gautier (1667, &c.) and P. Langlois (410), and the vigour and science of Messrs. Clair and Vialle are shown in several fine works. The admirable imitations of Japanese lacquer work by Mr. A. Hill should not be passed over. These fine designs, though frankly adopting the Japanese style, are original in invention and perfect in execution. It is, we believe, known only to himself how to obtain these various tints of gold, and how to apply them to the surface of the porcelain. The anatomy of the animals and the structure of the feathers are marked with delicacy and precision, and the gilt decorations stand out in low relief against a ground of fine brown. Apart from their artistic value they are triumphs of ceramic handicraft. Another masterly piece of work is Mr. Thomas J. Bott's "Virgin and Child" in Worcester enamel (1032).

Altogether, the exhibition shows improvement in professional as well as amateur work. Among many well-known lady professionals whose accomplished painting we are unable to refer to particularly, Miss Linnie Watt may be mentioned as one who, without losing her old grace and breadth, has advanced both in decision and in colour.

#### EXPLORATION IN THE DELTA OF THE NILE.

##### III.

MR. R. S. POOLE'S concluding lecture at Kensington dealt with the bearing of the proposed exploration on the Greek element in Egyptian history. He referred to the early piratical settlers

who ravaged the Egyptian coast, and finally obtained a footing in the land some twelve or thirteen centuries B.C., and pointed out that excavations in the Delta, where these Greek pirates settled, might reveal tombs similar to those opened by Dr. Schliemann at Mycenae, and thus the origin and development of that early phase of art might be explained. Another opportunity for discovery was presented in the site of Naukratis, which, if not identified, is nevertheless known within narrow limits. This great emporium of Greek commerce in the sixth century B.C. contained temples allotted to the chief maritime states of Hellas, and from excavations on their sites we might expect to find certain evidence of the condition of Greek art a century earlier than the period of its efflorescence at Athens. Finally, Mr. Poole delivered a eulogy of Alexander, Alexandria, and the Alexandrian school and fathers, and commented on the advantages which he believed accrued from the mixture of Christianity and neoplatonism. A notable feature of the Egyptian Church was its asceticism, and this Mr. Poole showed to be of Egyptian origin. The convents attached to the worship of Serapis, which the Ptolemies introduced as a compromise between Greek and Egyptian beliefs, were the direct ancestors of the European monastic system; and the ascetic ideal of life thus came, not from the Essenes, but from the ancient Egyptians. It was to be hoped that excavation on the sites of Serapeums might yield materials to illustrate this interesting phase of Egyptian religion.

#### NOTES ON ART AND ARCHAEOLOGY.

MESSRS. WILSON AND M'CORMICK are about to publish a series of original pen-and-ink sketches of places familiar to the tourist in the Scottish Highlands and to readers of William Black's novels. The book consists of some seventy illustrations, and will be called *From the Clyde to the Hebrides*; or, Sketches by the Way.

UNDER the title of *Rambling Sketches*, Mr. T. Raffles Davison is publishing, in monthly parts, a collection of the drawings which he has furnished to the *British Architect*. Each part contains six plates, with descriptive letterpress by Mr. W. E. A. Axon.

MISS MARIANNE NORTH'S collection of pictures of tropical scenery and vegetation, which she has presented to the nation together with the building at Kew containing them, will be opened on Thursday, June 8, and henceforth at all times when the Royal Botanic Gardens are open.

THE window placed by the Cordwainers' Company in the church of St. Dunstan's, Fleet Street, was unveiled last Tuesday. The subject is "The Good Samaritan," after a drawing by Mr. Taylor, the original of which is now to be seen at the Royal Academy.

THE first exhibition of pictures ever held in High Wycombe was opened by Lord Carrington on Friday. It is a loan collection, from some of the best private galleries, in aid of the Free Library and Literary Institute.

M. MUNKÁCSY is busy on drawings for a Crucifixion which is intended to be on the same scale as the "Christ before Pilate."

IF the hanging of pictures in the great annual national exhibition is not one of those things which they manage better in France, the artists do not seem to suffer their wrongs so patiently as in England. One artist, M. van Beers, whose masterly picture of "The Yacht *La Sirène*" is one of the attractions of the present exhibition of our Royal Academy, covered the glass of one of his pictures at the

Salon with black varnish to show his displeasure at the little respect shown to it by the hangers; another, M. Juan Gonzalez, cut his out of the frame.

An exhibition of the decorative paintings of M. Paul Baudry is being prepared by the Union centrale des Arts décoratifs in a part of the Orangery on the terrace of the Tuileries. They will be exhibited, as decorative work should be—not detached like easel pictures, but with architectural setting.

The death is announced at Paris of M. Lefebvre, at the age of seventy-seven. He was best known as an historical painter, but he also furnished designs for the windows of churches, and his portrait of the late Jules Favre was highly spoken of.

Two important restorations are in contemplation or progress in Paris. One is the Tower of Jean-sans-Peur, the last remnant of the mansion of the Dukes of Burgundy. It stands in the Rue aux Ours, and is the only specimen left in Paris of the military architecture of the fourteenth and fifteenth centuries. The other is the chapel of the Fort of Vincennes, which was commenced in the reign of Saint-Louis and finished in that of Henri II.

The first photograph in the last part of the *Great Historic Galleries* represents a supposed Van Dyck from Castle Howard, which was once in the Orleans Collection, and there known as a portrait of James Duke of York. Lord Ronald Gower thinks it is a likeness of Charles Lewis, the elder brother of Prince Rupert. Earl Spencer's portrait of Murillo, by himself, comes next, and is followed by six miniatures from Windsor Castle.

The sixth number of *American Etchings* contains a plate by Mr. J. M. Falconer representing a picturesque bit of Kenilworth Castle. The next will have a portrait of Longfellow, etched by Mr. Wm. M. Chase.

To the current number of the *Gazette des Beaux-Arts*, M. Charles Yriarte contributes a first article on the important exhibition at Lisbon of Spanish and Portuguese ornamental art. M. E. de Beaumont describes a portion of the famous Spitzer Collection—the arms and armour; M. Charles Ephrussi has an excellent article on the new Botticelli at the Louvre which is well illustrated; and M. Spire Blondel commences a series of papers on modellers in wax.

The recent numbers of *L'Art* have been mainly occupied by M. Ernest Chesneau's admirable account of Delacroix, in which no more than due honour is done to that noble and passionate genius, and by a series of learned and interesting articles, by M. Henri Jouin, on the Hamilton Collection. Among the etchings published in *L'Art* during the last few weeks may be mentioned one, by M. Ed. Ramus, of M. Jean Béraud's clever scene in an English drawing-room, which, under the title of "High Life," is now being exhibited at Burlington House (1434); a clever view of the old port of Marseilles, by M. Lucien Gautier; and a very charming interior, with a figure, by Sig. Pagliano, called "Lavandière."

M. ALEX. PINCHART "chef de section aux archives de Belgique," contributes a very interesting letter to the *Courrier de l'Art*, on the subject of the rare Belgian painter Volders, whose Christian name, it appears, was Lancelot, and not Louis. He adds that there are still two pictures by this artist in Belgium, one in the church of Notre Dame de la Chapelle at Brussels, the other in the parish church of Anderlecht. The former represents Saint Aye adoring the Trinity, the other, St. Rock, St. Christopher, St. Sebastian, and St. Anthony.

## MUSIC.

### GERMAN OPERA.

THE friends and partisans of Wagner have for a long time looked forward to the season of German Opera inaugurated last Thursday week at Drury Lane. The Richter Concerts have fully established the reputation of Herr Hans Richter as a conductor of the highest ability, and great things were therefore expected of him. People who hope for too much are apt to be disappointed; but we think we are expressing only the plain truth in stating that not only have we never had such performances of Wagner's operas in this country, but that it is scarcely possible to expect or to wish for anything better. It is our duty always to avoid extravagant words either of praise or of blame; but in the present case we cannot do justice to the earnest and painstaking efforts to present the Wagner and other operas in as complete a manner as possible before the public without employing the highest possible, and what under ordinary circumstances would doubtless be deemed extravagant, terms of praise. The great services rendered by Mr. Carl Rosa to the cause of Wagner in this country should not be forgotten; they are specially deserving of mention here, because the very careful, and in many respects excellent, representations which he has given in London of Wagner's earlier operas have certainly contributed to the great successes of this new "German" company. Many people have admired "Tannhäuser" and "Lohengrin," but the third act of the former and the second act of the latter have generally proved stumbling-blocks and causes of offence. Some writers have declared boldly against both as being horribly tedious and unmusical; while others, more amiably disposed, have merely styled them dull. With such orchestral playing and such singing and declamation as that now heard at Drury Lane, we fancy that any attentive listener who has hitherto entertained any doubts respecting these acts, but is open to conviction, will come away only regretting that Herr Richter should deem it at all necessary to make "cuts" in the above-named portions of the two operas.

The performance of "Lohengrin," on May 18, attracted an unusually full house. Frau Rosa Sucher gave a very truthful and touching impersonation of Elsa, and her splendid singing and fine dramatic acting made a most marked impression. A few words will suffice for the Lohengrin of Herr Winkelmann. He has a fine presence, a pleasing voice, and his impersonation of the Knight of the Holy Grail was certainly the grandest ever witnessed in London. Frau J. Carso-Dely took the part of Ortrud and Herr Dr. E. Kraus that of Telramund, and both these artists deserve special praise for their powers of declamation and for the earnestness with which they entered into the spirit of their respective rôles. Herr J. Koegel as the King was not, as regards singing, all that could be desired.

On Saturday, May 20, Herr E. Gura appeared in "The Flying Dutchman," and greatly impressed the audience by his powerful and graphic acting. He has a full, deep voice, and sings all the difficult music allotted to him with wonderful power and effect. Frau Sucher did full justice to the Senta music; Herr Wolff as Erik and Herr Landau as the Steersman gave much satisfaction, while Herr Ehrke proved himself a good father and friend.

On Tuesday evening "Tannhäuser" was performed, and obtained a genuine and thoroughly well-deserved triumph. We have not yet noticed the chorus-singing, the stage management, the orchestral playing, and the conducting at the previous nights, for we felt that here was the most fitting moment to speak of all these important matters. The chorus-singing from the beginning has been, with one or two very trifling

exceptions, truly magnificent; but in "Tannhäuser" the rendering of the Pilgrims' choruses and the *ensemble* music of the second act were simply perfect. Herr Carl Ambruster, the chorus-director, may indeed be proud of the results of his labours. Herr Wilhelm Hock has also proved himself thoroughly efficient as stage-director. Fine as were some of the scenic effects in the two first operas, the palm of excellence must be given to "Tannhäuser;" the scenery of the first act and the magnificent *spectacle* of the second will not easily be effaced from the memories of those present. Of Herr Richter and of his band we say nothing, for a few words would entirely fail to do justice to the ability of the former and to the excellence of the latter. We must notice very briefly the effective impersonation of Venus by Fraulein Wiedermann and the excellent rendering of the Wolfram music by Herr Gura. Herr Landau, Herr Wolff, Herr Ehrke, and Herr Koegel sustained in a fairly creditable manner the parts of Walter, Heinrich, Bitholf, and the Landgraf.

The performance of "Fidelio," on Wednesday evening, was naturally looked forward to with great curiosity. Beethoven's great *chef-d'œuvre* still remains one of the most sublime creations in the realm of musical art. Many people are afraid of expressing too great an admiration for Wagner lest it should imply a certain want of respect to Beethoven. Let there be no mistake about this matter. Beethoven could certainly not have written "Lohengrin" or "Tristan," but it is equally certain that Wagner could not write another "Fidelio." The musician who admires the one composer at the expense of the other is prejudiced, and a taste for Wagner ought by no means to produce a distaste for Beethoven. The performance of "Fidelio" was extremely good, though not perfect. Fraulein Th. Malten, as Leonora, was not altogether satisfactory in the first act; but, in the second, her acting and singing were deserving of high praise. Fraulein E. Wiedermann interpreted the part of Marzelline with great intelligence; and the same may be said of Herr Landau as Jacquin. Herr P. Ehrke, as Rocco, sang and acted exceedingly well, but his voice has not sufficient power by the side of the other singers. Herr J. Wolff gave a fine interpretation of the Florestan music; and Herr Dr. Kraus gave a dignified rendering of the important rôle of Pizarro. The first Leonora overture was played at the commencement of the opera, and the third before the second act. The chorus-singing throughout the opera was truly magnificent, and the stage business most effective. The enthusiastic applause at the close proved how satisfactory had been the efforts of all concerned.

We must indeed congratulate Herren Franke and Pollini on the grand results of the first four nights. The production of the interesting novelties announced will, judging from what we have already heard, prove an immense success.

J. S. SHEDLOCK.

### MUSIC NOTE.

THE Chester Musical Festival, in aid of the Cathedral Restoration Fund, will be held on June 7, 8, and 9. The following oratorios will be given in the cathedral:—Mendelssohn's "Elijah," Sullivan's "Prodigal Son," Spohr's "Last Judgment," Haydn's "Creation," Bennett's "Woman of Samaria," and also Beethoven's symphony in C minor; while Handel's "Acis and Galatea," Dr. Bridge's "Boadicea," and several miscellaneous selections will be given in the music hall. Among the singers will be Mme. Marie Roze, Miss Mary Davies, Miss Annie Marriott, Mme. Patey, and Mme. Mudie-Bolingbroke; Mr. J. C. Bridge, organist of Chester Cathedral, will be the conductor.

SATURDAY, JUNE 3, 1882.

No. 526, New Series.

THE EDITOR cannot undertake to return, or to correspond with the writers of, rejected manuscript.

It is particularly requested that all business letters regarding the supply of the paper, &c., may be addressed to the PUBLISHER, and not to the EDITOR.

## LITERATURE.

*The Literary History of England in the End of the Eighteenth and Beginning of the Nineteenth Century.* By Mrs. Oliphant. In 3 vols. (Macmillan.)

THE size and the title of this book challenge attention, and invite a stricter criticism than would be reasonable if it appeared with some such name as "Studies and Sketches of Eighteenth- and Nineteenth-Century Writers." A history demands wide and exact knowledge, a power of grouping large masses of material, of perceiving the deeper relations of facts one to another, of thinking out their true meaning, of discovering their hidden law. A literary history requires a delight in beauty, perceptions alike wide-ranging and penetrative, sympathies both wide and deep, and, behind all these, the intellect of a thinker. But there are histories and histories. A popular account of our chief writers and what they have done from 1790 to 1825 may fulfil a useful purpose—only it is well to understand precisely what that purpose is. In Mrs. Oliphant's three volumes a great deal of information is dexterously conveyed; the biographical portions run on in an easy, informal narrative; the writer's sympathies are neither dull nor narrow; her literary judgments are in general those of cultivated good sense; she is never pretentious nor unreal; her style is lively and unaffected. Everywhere one finds the work of a practised pen. But nothing is added to our knowledge of the period; no new light of truth illuminates familiar facts; little or nothing is felt over again more finely than it has been felt before; little or nothing is said more exquisitely than it has been said already; intellectual power to back up the emotional power of the critic is not present.

With entire frankness and sincerity Mrs. Oliphant acknowledges her inability to deal with the graver literature of philosophy. But the critic of a great poem or a great novel must also be able to deal with thought, or he will perform his work but imperfectly. "Though it is not the power of speculative reason alone that constitutes a poet," wrote Mr. Masson a long while since, "is it not felt that the work of a poet is measured by the amount and depth of his speculative reason?" One cannot give a direct "Yes" in answer to this question; but it starts a number of other questions in our mind which go exploring after the truth. May not the worth of a poet be estimated, Mr. Arnold would say, by the value of his "criticism of life"? And that question, too, we cannot meet squarely with a "Yes,"

but we elude it by a side-movement, which means that we dare not confront it with the absolute "No." "Mr. Locke's *Essay on Human Understanding* would be thought a very odd book for a man to make himself master of who would get a reputation by critical writings"—so Addison admitted when about to show that the critic would be all the better critic if he were to make Mr. Locke's acquaintance. In certain cases artists and philosophers are so related that to know the former intimately the latter must also be known; thus behind Dante lie the great schoolmen; Schiller can hardly be mastered without a comprehension of parts of Kant; and to know Goethe completely one must know Spinoza. So Shelley is related to Plato; and Spenser is related on one side to Plato and on the other to Aristotelian ethics. So George Eliot is related to Comte and to Darwin. But apart from these occasional instances in which a great artist is a kind of free disciple of a great thinker, it is true that the art of every great poet holds, as it were, in a solvent of beauty an important body of thought. In our own century it is not Coleridge alone whom we must take account of as thinker no less than as poet (and through many of his poems one can discern the philosopher thrown, as it were, into an open-eyed trance, yet aware of the movement of the artist by his side). How is it possible to deal rightly with Wordsworth among the elders of our century, how is it possible to deal with Mr. Browning in our own day, unless the student of their poetry can follow them while

"The intellectual Power through words and things  
Goes sounding on a dim and perilous way?"

And Mr. Matthew Arnold, with whom the periods of poetry and prose are, alas! separated by a division almost as marked as with Coleridge, did not make his least important contribution to the thought of our age when he delivered a severe philosophy of life in his "Empedocles on Etna"—a philosophy rising the more nakedly sublime through that loveliness which is the avenue of our approach.

Judged as biographical sketches, Mrs. Oliphant's chapters possess considerable merit. One could wish, indeed, fewer reflections; a more close-knit style; a more serious effort to trace the changes and development in the life and genius of each writer; a happier art in putting the highest periods or moments of each spiritual history into relief. Still—as people say piously when they have sufficiently grumbled against providence—"We have much to be thankful for." No chapters give us pleasanter reading than those on Cowper and on Burns. Mrs. Oliphant, a lover of order, who judges from the strong position of an adherent to established rule the aberrations of Shelley's early life, yet warms towards Burns, in spite of all his passionate errors, far more than towards Cowper, in whose blissful purrings by the domestic hearth she hardly in due degree recognises the pathos of a lulled despair. And this is not solely because Burns was of St. Andrew's crew, ate bannocks, and wore the plaid (though Mrs. Oliphant is not insensible to the merits of all that lies on the superior side of the Border). It is much more for what we may venture to call a woman's reason—that

is, a good reason, but one which does not present itself spontaneously to the male mind. Cowper had no passion, but only affection to give in return for all the womanly devotion lavished upon him. Cherished by Mary Unwin, beloved in another fashion by Lady Austen, petted and played with by his cousin Lady Hesketh, he appears to Mrs. Oliphant to have been one of those gentle yet remorseless egotists who accept with bland acquiescence a woman's ministry or her martyrdom, and, in return, provide at best a lodging for her in the suburbs of their good pleasure. Cowper's selfishness was of a kind to which people generally shrink from giving its right name—"a selfishness so refined and exquisite that the very sufferers by it often adore the amiable attractive weakness." Here are some hard sayings:—

"Cowper had trained himself to incapacity as other men do to work." "A man of generous temper and large heart—one more habitually occupied with the happiness and comfort of others than with his own, has an armour of proof against this mysterious and terrible disease [i.e., Cowper's form of insanity]. But Cowper had laid himself open to its attacks; he had lived the life of a careless egotist for years." "Mrs. Unwin did not ask more than he could give in return. His shy bachelorhood was never invaded. Till their last breath he was Mr. Cowper to the serene matron, who was his Mary, the object of a perpetual claim and demand on his part, the claim of weakness and dependence. But one great charm of the relationship to such a man, no doubt, lay in the fact that there was no balancing claim upon her side." "With all his tender-heartedness Cowper was a man to whom one devoted ministrant was just about as good as another." "His life had been a harmless one; but yet . . . as unsatisfactory a human existence as ever was."

Hard sayings! but if there be anywhere in the spirit world a shining store of knitting-needles, if there be great hooped petticoats such as Mrs. Unwin wears in the picture by Davis, we shall hear a rattling and a rustling; there will be no lack of weapons of offence nor of a shelter of refuge for the timid poet; and let Mrs. Oliphant look to it that her line of retreat be kept open between Olney and the Land o' Cakes.

An excellently conceived chapter brings forward three of Mrs. Oliphant's predecessors in the art of novel-writing, representatives of three nationalities—English, Scotch, and Irish—who are seen contending with one another in friendly rivalry. Jane Austen, it is admitted, was the most perfect artist of the three. Maria Edgeworth was the most important as an interpreter of national character; it was she "who first made known what manner of country Ireland was." Susan Ferrier has a touch more tender and a deeper poetic insight than either.

"She does not spare one eccentricity, or throw one ray of fictitious illumination upon the narrow minds and contracted unlovely living of the Scotch gentry whom she loved. In the house of the Bennets there were at least Elizabeth and Jane, with their pretty manners and cultivated minds, to do credit to the family; but the Scottish novelist is merciless. She makes no effort to harmonise her modern, yet old-fashioned, household with the tradition of Highland grace and breeding that ought to hang about an ancient race. Young and old alike are rustical, narrow, and coarse, if not in

mind at least in externals. There is neither delicacy nor fine perception among them, nor any prettiness either of manners or person. The girls, indeed, are less interesting than their old aunts. Yet having done this with remorseless truth, it soon becomes apparent to us that there is a secret tenderness beneath, which is not in the touch, fine as a diamond-point, of the English writer. The Bennet ladies care nothing for anyone, not even for each other, but Miss Jacky, Miss Nicky, and Miss Grizzy, with all their uncouthness, are overflowing with the milk of human kindness. Miss Grizzy, in particular, goes to the reader's heart. Perhaps it is because she is less wise than her sisters. Her bounty and liberality—with so little as she has to give!—are infinite. When she pays her famous visit to the charitable lady who is a collector of pebbles, her impulse to bestow the brooch which is Nicky's and not her own, and the alarmed struggle in her mind as to whether she has any right to be generous at Nicky's expense, and casuistical self-persuasion that Nicky would certainly do the same were she there—is such a sketch as only that mocking love which we call humour could give. Miss Bates, who is a kind of English Miss Grizzy, has no leisure for any such self-discussion; neither would a similar impulse of generosity have occurred to her. She is perfectly honest and self-sufficing, but her custom is to receive and not to give; while the instinct of Highland generosity—the impulse of a ruling race—is strong in the ungainly bosom of the Scotch spinster. Miss Bates is far more tenderly drawn than the vulgar group of *Pride and Prejudice*, with its unredeemed pettiness and selfishness; but even then, how much below in sympathy this picture, so heart-felt, so foolish, so uncouth, so tender and true! Miss Edgeworth has a kind of partisan kindness for her Irish peasants, of whom she is the advocate, holding a kindly brief, ready to explain away their imperfections; but Miss Ferrier loves her uncouth old heroine, and takes her to pieces with an affectionate and caressing hand."

Macaulay ranked Jane Austen among the writers who in their presentation of character approach closest to Shakspeare. It would have been nearer the mark if he had compared that exquisite writer with Molière, whose unerring good sense appears diminished and transformed to prose in the works of this most infallible of English satirists. Jane Austen knows a fool and every degree of his folly almost as perfectly as Shakspeare; but she does not love a fool as Shakspeare did. No, Shaksperian she is not; but our limited, middle-class, prosaic, English Molière transformed to woman is perfect in her kind; a luxuriant humour could not co-exist with her finest qualities.

Mrs. Oliphant indemnifies herself for keeping in general to the beaten highways of opinion by an occasional little dart into the pleasant byway of a heresy. Thus she denies that there is any important connexion between the French Revolution and the development of the genius of Wordsworth, not perceiving that both belong to a larger force which lay behind them. She thinks that the wonderful grandeur and genius with which Blake is credited have been invented for him by some set of extravagant critical *doctrinaires*. Now it is well to be honest, but it is unfortunate when an honest opinion flatters—under the guise of good-sense—the dulness of the average man. She holds that *Goetz von Berlichingen* was not much worth Goethe's while to write nor Scott's to translate; yet that drama marks an epoch in the

imaginative revival of the past. As for Wordsworth's sonnets, except some dozen, Mrs. Oliphant could dispense with them altogether: "O monstrous! but one halfpenny-worth of bread to this intolerable deal of sack." Burns' "Tam o' Shanter" and the incomparable songs of his later years add little, we are told, to his reputation as poet; somehow, too, the superfine critics have passed the word to each other to praise his "Jolly Beggars," and so that noisome poem has won its fame. Would that Jan Steen were living to illustrate it! Landor's "Count Julian" is a much overrated production; doubtless all those who do not read Landor will assent. Mrs. Oliphant accepts as just much of the old criticism about Leigh Hunt and the "Cockney school;" she finds Hazlitt's books already as old as if they had been written a thousand years ago; she discovers a touch of a kind of quasi-atheism in Shelley's dethroning of Jupiter in "Prometheus Unbound;" happily, however, Jupiter is only an "official god," and so it is not very bad. Strangest—though not newest—critical judgment of all, Keats's mind was that of a Greek! Now it is not in the name of any superfine coterie of criticism that one objects to such opinions as these; it is in the name of reason and common-sense.

The bibliographical lists at the ends of chapters are far from accurate. In general, however, Mrs. Oliphant is careful in her statement of facts. The *Watchman* ran to ten numbers, not two. "Gebir" was derived from Clara Reeve's "Progress of Romance." The following are misprints: "Book of Thol" (ii. 291), General Beaupris (i. 265), Larici (iii. 121), Tamor (i. 373).

EDWARD DOWDEN.

*Songs and Rhymes: English and French.*  
By Walter Herries Pollock. (Remington.)

THIS modest little volume of verse, by an esteemed essayist in prose, is another instance of a tendency which is beginning to make itself felt in favour of restraint and compression in poetical work. There is very little in this book which might not have been composed by one of the elegant and accomplished lyrical poets of the eighteenth century, if he had once been made acquainted with the temper of nineteenth-century sentiment. The note of Mr. Pollock's poems is reticence, simplicity, the desire to say too little rather than seem to say too much. We gather from the small dimensions of a book which must have been in course of formation for many years that inspiration does not fall very frequently upon Mr. Pollock, and that he is too good an artist to force a feeling when it does not come of itself. His content not to be dithyrambic, to sing in a voice that is scarcely higher than speaking, and to draw his themes for song from those personal experiences of emotion which become so rare in our complex and mechanical society. His grace of style is marked, and his treatment of metre just and delicate; he has a fine touch in dealing with the deeper problems of life, and a tender pathos that reminds us of Cowper. If Cowper had lived after Heine instead of

before him, he might well have composed the strain of pathetic reflection, very suavely turned, which is called "Memory," and which is one of the gems of the present volume. "A Conquest" is stronger than this, and is, indeed, unless we are much mistaken, a very powerful study, which will retain a place in English poetry.

"I found him openly wearing her token;  
I knew that her troth could never be broken;  
I laid my hand on the hilt of my sword,  
He did the same and spoke not a word;  
I bade him confess his villany,  
He smiled and said, 'She gave it me.'  
We searched for seconds, they soon were found,  
They measured our swords and measured the ground;  
To save us they would not have uttered a breath,  
They were ready enough to help us to death.  
We fought in the midst of a wintry wood,  
Till the fair, white snow was red with his blood;  
But his was the victory, for, as he died,  
He swore by the rood that he had not lied."

The songs, which form the principal part of the book, comply with the rules laid down for this class of poem—rules which are commonly broken no less by the ambitious poet who weights his words with adjectives and other ornament than by the poetaster who forgets that there is a difference between limpid sense and diluted nonsense. Mr. Pollock's songs are full of tenderness and thought, and yet are, we suppose, perfectly singable. "Father Francis" is a very delightful piece, almost the only one in the volume in which the writer permits himself a touch of humour. Father Francis comes to a party of young bloods who are feasting, and recommends them to think of virtue and mend their ways; but they are too hospitable, and, while he scolds them, they force their canary sack upon him to such advantage that their enemy is borne away, smiling and helpless, on a shutter.

Mr. Pollock will think it very insular of me that I cannot take as much pleasure in his French as in his English verses. One recognises the great difficulties which have been overcome, and the admirable effort; but one reminds oneself of the lady who apologised to Dr. Johnson for the piece she played to him on the harpsichord. She explained that it was difficult, and he, with his wonted gallantry, wished that it had been impossible. Mr. Pollock seems to catch the manner of the modern *chansonnier* no less adroitly than Mr. Swinburne catches that of the companions of Ronsard. But, in each case, we ask, To what profit was this done? Why write in French when one can write so very well in English? After a graceful fashion which was in vogue under James I. and Charles I., and which we are glad to see thus prettily revived, Mr. Andrew Lang introduces Mr. Pollock to the public in some charming deprecatory stanzas. He says, as the critic may be content to say:—

"Oh, Rhymers, skilled on either string,  
In either tongue, to strike and sing,  
Why ask of me an idle thing—  
A rhyme before your *Rhymes* to set?  
For good wine needs no bush; nor these  
Demand my praise to make them please,  
More than the grey anemones  
From fragrant April gardens wet."

EDMUND W. GOSSE.

*Rosmini's Philosophical System.* With Notes.  
By Thomas Davidson. (Kegan Paul,  
Trench & Co.)

MR. DAVIDSON has translated the compendium of Rosmini's system which the author drew up for insertion in Cesare Cantu's *Universal History*, has added notes and illustrations from Rosmini's longer works, and has prefixed a Life of Rosmini, a bibliography of his own books and books about him, and an Introduction in which he sacrifices all previous philosophies to the glory of Rosmini. The whole makes a really pathetic book; it is so able and, at the same time, so fruitless.

Probably Mr. Davidson has more speculative power than nineteen out of twenty of the ablest living disciples of Spencer and Mill; Rosmini narrowly missed being the peer of men who might be pardoned for thinking Mill and Spencer pigmies; and yet Spencer and Mill are in possession of the field, and neither Rosmini nor Mr. Davidson are likely to deliver us out of their hand. Mr. Davidson declines on one occasion to insert Rosmini's refutation of Schelling, on the ground that Schelling and his system are dead and buried. Very likely they are; but at least Schelling had his day, and there is a complete edition of his voluminous works, while many of Rosmini's writings are still in MS. The truth is that the fundamental problems of knowledge are practically the least important; high natures, whether they know it or not, have the solution within them; to common natures the problems are insoluble, and such natures, if sound, as Rosmini observed, do very well without a solution. This is not saying that fundamental problems are never to be discussed; all great philosophers have always discussed them; but since the days of Plato, at any rate, they have always discussed something else, and it is these latter discussions which have left results. The philosophers went to draw Truth from her well, one or two may have tasted her kiss, more had a glimpse of her face, but that is a guess; what we know is, who brought fruit and seed from her garden. And all the fruit Rosmini brought was dry. Rosmini is a formidable critic of all philosophies from Aristotle to Hegel; one may say that he wounds the latter to the heart with the observation that Hegel takes the crude popular notion of "becoming" for granted, after proving to his own satisfaction that the popular notions of knowing and being have to be thoroughly transformed before they can justify themselves in the eyes of philosophy. But, after all, Hegel has something besides his dialectic; his history of philosophy and his philosophy of history, and even his aesthetics, have contributed very powerfully for over half-a-century to the best concrete thinking of the day. Of course he is open to the criticism that he often leads us through thorny thickets only to let us in by a back gate into the famous Prussian State system. For that matter Rosmini leads us back to St. Augustine and St. Thomas Aquinas by ingeniously intricate byways, and we see nothing on the road to repay us for the journey. Dreary as the Prussian State system is, at least it exists, and is terribly vigorous; but in this direction

Rosmini has nothing to promise but an utopia based upon the following five equilibriums:—

(1) Between population and wealth; (2) between wealth and the civil power; (3) between the civil power and material force; (4) between the civil and military powers and knowledge; (5) between knowledge and virtue. And this utopia is to be realised by obedience to two rules:—(1) Direct your government so as to maintain and strengthen the main force on which the existence of your society rests; and, since this force changes according to the different periods of the life of civil society, learn and follow the theory of these changes—in other words, take care of the substance of society and leave the accidents to take care of themselves. (2) Direct your government so that your citizens may attain temporal prosperity in accordance with the principles of morality—this last is worthy of Mencius. But, after all, one or two dim flashes of insight do not justify anyone in constructing a skeleton cyclopaedia; and, if Rosmini is original, apart from abstract speculation, it is probably in Italian politics. (It is true that Mr. Davidson spends almost all his space in illustrating Rosmini's most abstract speculations, so that we must refer to his own writings to find if the skeleton was ever clothed with flesh.)

As a thinker on abstract subjects, Rosmini is singularly acute, perhaps even penetrating, but not impressive. A philosopher need not be eloquent, he need not even be clear, to give a reader who can follow him a sense of power which Rosmini does not give. He is a scrupulous thinker who can never trust himself to his thought; he is always starting questions and answering them, and knows every question has two sides. So, it may be said, do Pascal and Butler, so does Card. Newman, and they are surely impressive writers. Yes, but in all the ethical interest outweighs the intellectual scruples; one might almost say that Rosmini is a sophist because he is anxious for truth, as other men are because they are greedy of victory. The identity of "truth" and "being," which even Mr. Davidson thinks inadmissible, may be separable from his system; but it is an important buttress of it, and it is very like a sophism. The fundamental doctrine of "ideal being" deserves more respectful treatment. Even now, if it should commend itself to a writer with the gift of weighty exposition, it might prove attractive in spite of the endless distinctions with which it is necessary to guard it. Mr. Davidson pathetically confesses that he has found it impossible to convey Rosmini's meaning in words of his own; but one may venture to say that Rosmini has made a very ingenious attempt to turn the standing difficulty of all philosophy since Kant. It is impossible to think of anything without assuming someone who thinks of it; or, again, of any thinker without assuming something to think about; and, as it is quite clear that there was no thinker of the only kind we can be said to know some thousands of years ago, it is puzzling what kind of a world can have existed till there were minds to perceive it. Now here Rosmini comes in with the observation that we cannot think at all without an

*a priori* notion of being in general as the essence of being, which is clearly an idea, because it is not identical with any being in particular. This ideal being is the one *a priori* form of the understanding, superseding the ten categories of Aristotle and the twelve categories of Kant (which last are very shrewdly criticised); and there is a very ingenious explanation of how the matter of thought is subjective (not in Kant's sense, but in Aristotle's), while the form of thought is objective, because ideal being constitutes or informs our thought by being present to it, not by being part of our minds. From this point of view the doctrine is a decided improvement on the Arabic doctrine of the *Intellectus Agens*, to which it seems to have analogies. According to Averrhoes, intellect is one in all men; no, says Rosmini, all minds are enlightened by one ideal light as all eyes are enlightened by one sun. Another advantage is that the objective validity of perception is stated as strongly as possible because, according to Rosmini, perception consists exactly in affirming the independent existence of one term of the unity of sensation, converting it, in fact, into an object by the aid of ideal being, which compromises nothing. Rosmini magnifies perception in less adventurous ways; for instance, he points out that the judgment, "this horse is white," is an analysis of the perception of "this white horse." In general, Rosmini is fond of analytic judgments, and will not allow one of Kant's *a priori* judgments to be synthetic. In all matters of this kind he is fertile and suggestive, even convincing; thus he observes that every idea—"white," for example—is singular in its own nature, and only universal when applied to many white things.

According to Mr. Davidson, Rosmini's *Psychology* is the most valuable of his longer works; but, as he was clearly entirely indifferent to physiology, perhaps it is as well that the Order which he founded have chosen the *New Essay on the Origin of Ideas*, which was published in 1830, for translation into English.

G. A. SIMCOX.

*Notes and Jottings from Animal Life.* By the late Frank Buckland. (Smith, Elder & Co.)

THESE papers possess a melancholy interest, as they were selected by their author shortly before his death from his essays in *Land and Water*. They cannot fail to delight anyone blessed with a taste for the curious and less obvious sides of natural history, and such a one will welcome the editor's notice that a further gleaning from similar sources yet remains. We have said that these essays will please from their dealing with less prominent topics in natural history; but it would be more correct to say that poor Frank Buckland's chief merit was his ability to discern and point out to others the unfamiliar in the familiar. In short, he was a conspicuous example from his own boyhood of the moral contained in that charming tale *Eyes and No Eyes*. His mind was always receptive, and his eager intellect ever working out some problem connected with animal life and structure. A heap of fish-bones in the gutter of a fishing village, the gulls to which he

throws crumbs or the guillemots which dive just as the prow of his steamer is upon them, the rat in the drain of the butcher's shop or the sheep's head on the counter—these contain as many teachings for him, and were as eagerly lectured on to his friends, as some wholly novel animal just wafted to our shores—a manatee, a Banks's oar-fish, or the cub of a Polar bear. He was as fond as Waterton of a popular mystification. A showman with a mermaid, or a unicorn, or a phoenix rising from its own ashes, he would go miles to see. Then, without any use of scientific terminology, but with the most attractive style and winning explanation, he would take his readers into his confidence, lucidly place full particulars of the portent or deception before them, show where lay the most noticeable points of the specimen, help them to laugh or to wonder, and only leave after putting them on the best terms with their own sagacity. It is not matter of surprise that a new book from Frank Buckland was always acceptable to a large circle of amateur naturalists. His own system being so simple—confined, indeed, to the use of eyes, wits, and a pocket-knife—he was proportionably severe upon the fashionable scientific theories of the day—theories recommended, it might be, by great names, but which he regarded as resting on no sure induction, and demanding an amount of credulity offensive to common-sense. He lost no opportunity of making an onslaught upon conclusions which he deemed incapable of proof, and was for ever pricking biological wind-bags. Hence he was called by his opponents unscientific and an empiric; but few men have done more in our generation to show observers the proper use of their senses, to inculcate kindness to the lower animals and reverence to the Creator for the marvellous adaptations and contrivances of His works. His love for Nature was extreme. This is not the place to speak of his personal character; but a very large circle of friends and acquaintances remember his unfailing help when they were in doubt on any question in natural history, the width of his sympathies, his kindness, his geniality.

Essays written by such a man must partake of his extensive knowledge and the large scope of his studies. These papers contain anecdotes about the friendly traits of the monkeys and other pets which used to make themselves at home in his working room in Albany Street; a good many miscellaneous articles on museums, bird-catching, and the like; and, what we think most valuable, because the author was brought into continual contact with them when pursuing the duties of his office, many notices of aquatic creatures—otters, beavers, and whales. He has much to tell, too, about the sea-serpent, investigating the different appearances within the last ten years of this so-called monster. As might be expected, however, his sympathies are ever with fish and fisher-folk. With salmon especially he was on the most friendly terms. When collecting salmon-eggs for New Zealand and Australia, he handles the fish with a lover-like tenderness, taking them firmly above the tail with his right hand, and suffering them to recline gently in the fold formed by the bent elbow of his left.

He wades into ice-cold water when the net containing them is drawn ashore, in order that they may not be injured by beating against the ground should they be drawn into too shallow water. Even when a grand fish, four feet three inches long, weighing over forty pounds, fairly knocks him over with his big tail, he does not resent the blow: "I took the greatest care of him, and he swam off all right." When any have to be detained, he has provided long shallow baskets, such as ladies use to hold dresses when travelling; these have a few stones put in to sink them, then the salmon are carefully shut in, and are none the worse for their temporary detention. It reminds us how William the Conqueror, according to the Saxon Chronicle, "loved the tall stags as if he were their father."

The papers themselves are of varying interest. That on "Pre-Adamite Man" is poor, and contains nothing that was worth reprinting. The "Relics in the Ashmolean Museum," again, consists of little more than two or three pages from a guide-book. Seeing how few Oxford men have ever been inside the Ashmolean, it may have a certain use in calling attention to Tradescant's collection of curious odds and ends. The best essay is a long one on the "Structure and Habits of Whales;" and here Buckland speaks from careful observation and with authority. Scattered up and down the volume are many facts on the most varied subjects, some of which will prove useful to almost every reader, whatever his hobby may be. Thus we note that a hare's foot makes a capital hat-brush; that oatmeal-eating babies always grow up with big bones; that pigs may be fattened upon coal; why goats are frequently kept in stables; how to extract a piece of cinder from the eye; and the like.

The writer's love of the brute creation and his kindness to sick or disabled creatures are strikingly exemplified in the account of his taking a couple of otters to the Brighton Aquarium. His skilful use of illustration may be noted in an attempt to make the reader understand the size of H.M.S. *Jackal*, a gunboat of 340 tons.

"I find that if the roof were taken off the church I attend, St. Mary Magdalene, Munster Square, and the *Jackal* let bodily down into it, she would exactly fill the main aisle. Her bowsprit, however, would project considerably beyond the east window of the church."

The whole book is a good example of a difficult yet fascinating kind of writing—that which details some matter of common life to a reader and then succeeds in showing him how much it contains to interest and instruct him of which he never previously dreamed. Without advancing the cause of science, it will be useful to all who are fond of observing Nature and the phenomena of life, and cannot fail to give those who did not know Frank Buckland a lively impression of his sagacity and kindness.

We recognise as old friends the big salmon and other "properties" surrounding the admirable autotype of the author which forms the frontispiece of this book; but who ever saw Frank Buckland at work save in his shirt sleeves? M. G. WATKINS.

## ARANA'S BASQUE LEGENDS.

*Los Ultimos Iberos. Legendas de Euskaria por Don Vicente de Arana. (Madrid.)*

THE Basques of the Spanish provinces of Biscay and Guipuzcoa enjoyed the benefits of representative government and of enlightened laws framed by themselves and adapted to their needs during a period of upwards of a thousand years. With a stormy sea as one boundary, and a range of rugged mountains as the other, this gallant people succeeded in repelling the invasions of Romans and Goths, of Arabs and Spaniards; and the union of the Lordship of Biscay with the Kingdom of Castille was not due to conquest, but to the fact that the same Sovereign who was Lord of Biscay by inheritance afterwards ascended the throne of Spain.

A free people like the Basques, who had driven back every attempt to conquer them, who had successfully maintained their freedom, and who, alike as sailors and as mountaineers, have ever been distinguished for their hardihood and their intelligence, could not fail to have a history of no ordinary interest to the student and the statesman. This, in fact, is the case, although the records of Iturriza are still inedited, and the story of this free and heroic race has hitherto been neglected. Traditions and tales characteristic of the people have also accumulated round their history, and have become popular. Songs celebrating the defence of Cantabria against the Roman legions, the rout of the rear-guard of Charlemagne in Roncesvalles, and the heroic deeds of Basque warriors in later times, are celebrated at summer gatherings and by winter firesides. In the middle ages, the factions of the Gamboinos and Onecinos in Biscay and Guipuzcoa, like the Guelphs and Ghibelines in Italy, kept the country in a constant state of internecine strife, until, with the help of the people, they were finally stamped out by Ferdinand and Isabella. These feuds form the theme of many a romantic story. But a large proportion of the Basque tales relates either to the domestic life of the people or to legends which partake more or less of the supernatural. The *Baso-jau*, or wood-demon, and the *Maitagarri*, or witch of the mountains, as well as the *Labinac*, or fairies, enter into many of the legendary stories which form the folk-lore of Biscay and Guipuzcoa.

With so rich a store of materials it was to be expected that the Basques, among whom literary capacity and skill are often found combined with patriotic ardour, would produce authors who have devoted their talents to writing works of fiction, as well as to the labour of giving the tales and traditions of their beloved fatherland a permanent and enduring form.

Foremost among the writers of the Basque Provinces of Spain is Don Antonio de Trueba, the archivist and historiographer of the Lordship of Biscay, whose works have become classic in the Spanish language, and are well known to English students through the popular Leipzig editions of Brockhaus. Trueba is the Erckmann-Chatrian of Spain. His charming tales of domestic life in the *caserios* of Biscay have not often been equalled as pictures of the habits and modes

of thought of a people, and their merit is enhanced by his masterly descriptions of scenery. Perhaps the best and most life-like of the novels of Trueba is his latest, entitled *Tal-florido*, for, unlike most authors, the descriptive and imaginative powers of the archivist of Biscay seem to increase and ripen with his years. Another meritorious collector of the traditions of his fatherland is Don Juan V. Araquistain, whose *Tradiciones Vasco-Cántabras* were published at Tolosa in 1866.

A third popular living author of the Basque Provinces of Spain is Don Vicente de Arana, whose *Oro y Oropel* (Gold and Tinsel), appeared in 1876, and whose collection of national tales, entitled *Los Ultimos Iberos*, forms a volume which has just issued from the Madrid press. *Oro y Oropel* consists of translations from Tennyson and Longfellow which he calls gold, and of original tales which the author modestly refers to as tinsel. But his own stories and poetical pieces are not tinsel. They have the ring of true metal. Especially, the "Rosa de Ispaster," a sad but beautiful tale of peasant life, is an exquisite idyll.

The *Ultimos Iberos*, the volume now before us, contains a most interesting Prologue, in which the assembling of the representatives of Biscay, under the oak of Guernica, is picturesquely described; and a series of sixteen tales illustrative of the national history and character. In some of his stories Señor Arana brings vividly before his readers the state of his native land during the middle ages. In others he makes us acquainted with the folk-lore and the domestic life of the people. Among the best of the former class is the story of the sons of Amáandarro, who won the command of the Basque army, when assembled to repel an invasion, by a singular trial of personal strength. The author marshals the forces of the Lordship in the great square of Ochandiano, and, by a few masterly touches, brings the whole scene before his readers—the freemen of the open country, the muscular iron-workers from their forges, and the representatives of great families with their several cognizances. Then follows the description of the battle, of the arrival of news bit by bit, until the climax is reached, and two fair girls receive tidings that the gallant brothers whom they loved were dead. There are some other historical episodes of great interest admirably told, such as the "Legenda de Lelo" and the "Juicio de Dios." The latter is the story of the death of the second Lord of Biscay, who insisted upon the trial of his son by mortal combat. The son dutifully took the point from his spear, but nevertheless the unjust father fell dead.

Able and skilfully as is Señor Arana's treatment of these historical traditions, he is perhaps at his best when he is narrating a tale of domestic life, and bringing before his readers the customs and manners, the feelings and affections, of his people. In this respect he is a worthy disciple of Don Antonio de Trueba; a master who, it is to be hoped, will found a school of imitators in the same branch of literature. For in no way can a patriotic Basque more worthily and more efficiently serve his countrymen than by making their

high and noble qualities, their industry and perseverance, their virtuous domestic lives, and their love of real freedom more generally known. In one of his tales Señor Arana weaves the popular fairy and goblin superstitions into a touching narrative of domestic joys and sorrows with remarkable literary skill. The reader of this volume will obtain more than a cursory idea of the historical traditions, the popular legends and superstitions, and the domestic life of one of the most interesting, and certainly the most ancient, of the European races.

To those who have acquired a knowledge of the Spanish language, or who intend to study it, the works of Don Vicente de Arana may be confidently recommended. His style is pure and agreeable, while his powers of description and of depicting character, and the skill with which he constructs the plot of each story, are sources of unmixed pleasure and enjoyment.

CLEMENTS R. MARKHAM.

#### NEW NOVELS.

*Castle Warlock.* By George MacDonald. In 3 vols. (Sampson Low.)

*A Prodigal's Progress.* By Frank Barrett. In 3 vols. (Bentley.)

*Donovan.* By Edina Lyall. In 3 vols. (Hurst & Blackett.)

*Flattering Tales.* By Egmont Hake. (Remington.)

*Christopher.* By Helen Shipton. (S. P. C. K.)

DR. MACDONALD'S new book is described as "a homely romance," and the description is fairly accurate, though the homely element is stronger and larger in *Castle Warlock* than the romantic, and though the romance is not so good and true as the homeliness. It must be added that, for one reason or another, the book is not altogether successful. The homeliness does not mix well with the romance; where the one goes out and the other comes in the "solutions of continuity" are a great deal too manifest not to be irritating; there is too much of the combination itself, and not enough of either one of the principal elements to make it dominant and absolute. Hence it is that the reader soon loses his interest in the romance, and resolves to depend for edification entirely on the homeliness; and, being interrupted in his pursuit of what he has elected to consider the main business of the book by the continued introduction of other and unsympathetic matter, he presently becomes impatient, and is glad to have done with the whole affair. Perhaps, too, Dr. MacDonald has been a little too anxious to be pietistic to be altogether successful as an artist in romance. He has a habit of making his heroes as much like Broad Church seraphs as he conveniently can; and in certain cases and under certain circumstances it is not to be denied that his creations are acceptable enough. In *Castle Warlock* the state of matters is the reverse. A Scottish seraph with a pure heart and wonderful eyes is all very well in his way and at his proper work—of Scripture reading in the slums, and saving souls, and teaching people not to swear, and reclaiming the girl of his heart, and so forth. But a Scottish

seraph in connexion with a mysterious cane, and a family ghost, and a hidden treasure—seems somehow a seraph gone astray and fallen upon ill company. It suggests at once the Apostle John and the Count of Monte Christo; with a flavour of *Facino Cane* it blends an overpowering odour of the New Jerusalem; and the results are discomforting. What makes matters all the worse is that in *Castle Warlock* the hero is by no means the only seraph on the premises. His father and his tutor are seraphs likewise—are seraphs both, and equal in high moral tone—so that the mysterious cane, the family ghost, and the hidden treasure are felt to be impertinent, and even superfluous. This is the more to be regretted as in themselves these romantic properties are capable of having done good service had they only been displayed "in a concatenation accordingly." They are not altogether so romantic as Dr. MacDonald would have us believe, it is true; but their seraphic associations are enough to rid them of such romance as they have, and do so with great dexterity and complete success. For the rest, the book is in the main exceedingly well written. It contains some admirable description, and not a little dialogue of a high order of excellence; and one at least of the characters—the old servant—is equal to any creation of Dr. MacDonald's I know. Told in one volume, as a story pure and simple, the tale of *Castle Warlock* would have been uncommonly good reading. Told in three, as a something that is part romance and part sermon and part *étude de mœurs*, it seems to fail as art, and it is certainly unsatisfying as literature.

In *A Prodigal's Progress* Mr. Frank Barrett has a capital story to tell, and tells it capitally; has some pleasant people to sketch, and sketches them pleasantly; has a great deal of natural and clever talk to report, and reports it cleverly and naturally. Altogether, his book is exceptionally brisk and readable. It is not probable of course; but that is of no sort of consequence. It pleases, interests, entertains; and that is enough. The time is towards the end of the eighteenth century. Between London and Devonshire the swift scene flies, alighting now in one place and now in the other. The incidents are partly sensational and partly amorous. The hero is a certain Blase Godwin. He is young, brave, handsome, of gallant inches; but he is the victim of a dreadful plot, and when the curtain rises upon him his chances of happiness are but few and small. His enemy is a kind of Jesuit, one Father Dominick. He is a person of the worst morals imaginable. He is more than suspected to have been the death of Blase's mother; he has married Blase's father to a mistress of his own; he has placed Blase himself under the care of the Rev. Thomas Tickle, a prodigal parson; he has seen ward and governor go dancing down the broad road that leads to destruction without so much as lifting a finger to warn them. More than this, he has got his thumb upon Godwin senior, and keeps him drinking and cudgel-playing from morning till night, so that from the first it is evident that his one object in life is to ruin the Godwins utterly,

and become possessed of their estate, which he means to bestow upon his son Eugenius—himself a Godwin in name but a Father Dominick in fact. For a time his machinations seem likely to be successful. Blase is defeated at every point, and he and the Rev. Thomas go down the hill faster than ever. Then Blase goes out to make a marriage *à la mode*, and under false pretences, with a delightful heiress. He falls honestly in love, however, and that he does so is the saving of him. His sweetheart (she is such a nice creature that it seems only natural to describe her by one of the prettiest of English words) rejects him when she finds out that he has been behaving unworthily; he sells his birthright to Father Dominick; he enlists, and goes away to Ireland to fight the rebels and the French. But Lydia (that is her enchanting old-world name) steps in to the rescue. She out-manœuvres the Jesuit; she releases Blase's father from a living tomb; she marries Blase. In fact, she sets matters right all round, and in the bravest and most charming manner imaginable. She would brighten a much duller book than *A Prodigal's Progress*.

Miss Edna Lyall's hero, a certain Donovan Farrant, is in many ways an original conception. He is a fellow of good understanding, an iron will, some special aptitudes, and a warm heart. But nobody takes the trouble to understand him; he is badly trained and badly treated, and he develops into an Agnostic first of all, then into a professional gamester, and then into a hard-working practical Christian. Miss Lyall's story is the story of this development. She tells it with vigour and intelligence, and with an earnestness that impresses the reader, if it does not altogether persuade. Throughout, her book is well imagined and well written; throughout, it is evident that in the story of Donovan Farrant she has done her very best, and the result is on the whole satisfactory in no mean degree. Compared, indeed, with the *Average Novel*, *Donovan* is a book of sterling merit, being fresh and original in conception, thoroughly healthy in tone, interesting in detail, and sincere and capable in execution. The fault of it is that it is a woman's work, and that it professes to set forth the spiritual history of a man. This is as much as to say that, to men at least, the figure of the hero—clever and well considered as it unquestionably is—seems shadowy and incomplete. Miss Lyall may possibly be right in the master lines and the broader tones of her sketch; she does not make us feel that she is right in the finer and more subtle touches, that she has understood the processes by which she obtains certain results, that her effects are always justified by their cause. It is plain, in point of fact, that she has written and understood as was to be expected of a woman, and that a man would have understood and written differently. And though she wins our respect, she is hardly able to command our confidence.

In *Flattering Tales*, Mr. Egmont Hake does something more than put in a creditable first appearance as a story-teller. He breaks new ground, and his little volume is original both in matter and style. He has not only something to say; he has his own manner of

saying. Thus he writes with an even fluency, an indifference to points for points' sake, an old-fashioned elegance of phrase, that, in these days of fine writing and impertinent cleverness, are really refreshing. His matter is invariably ingenious, and often fanciful in no mean degree. Each of his stories has been conceived as a whole, and in each the interest is peculiar, appropriate, and self-sufficing. Now and then—as in "The Jesuit's Dream" and "The Life-Phantom"—Mr. Hake hardly seems to have succeeded in developing his idea so as to attain the end he has in view. Others, however—as, for instance, "The Juggler of St. Cloud," "The Friend-Fancier," and "The Wages of Affection"—are so clearly imagined and so well and clearly told, each after its kind, as to be excellent both as narrative and as invention. I should add, I think, that the book is remarkable for the novelty and freshness of its several interests. The characters and incidents that have attracted Mr. Hake are altogether "by ordinar"—are altogether unusual and eccentric. They are handled, moreover, in a manner entirely personal, and applied to peculiar uses; and the impression produced by the little volume in which they appear is pleasantly unhackneyed and individual.

Considered as a piece of "improving literature," Miss Shipton's *Christopher* is meritorious enough; considered as a study of character, or as a study of manners, it leaves a great deal to be desired. It is the story of a large man, wilful and energetic, and the reverse of religious, who begins as a kind of modern imitation of "the giant Offero in the legend—the heathen—the 'bearer of burdens,'" and who ends, after struggle and victory, by winning the object of his affections and the right to bear his name—"the Christ-bearer"—*Christopher*—with propriety and a touch of an heroic significance. It contains a little mild love-making, some not very passionate doubt and scepticism, a great deal of morality and example, and some very pleasant studies of child-life and child-character; it is brightly and correctly written; it is absolutely inoffensive; its intention is undeniably good. Of its kind it is, as I have said, a meritorious little book.

W. E. HENLEY.

#### CURRENT LITERATURE.

*Land Nationalisation, its Necessities and Aims.* By Alfred Russel Wallace. (Trübner.) Mr. Wallace has expanded into a book the scheme of land reform which he first proposed about a year ago in one of the monthlies. It is his fault, rather than ours, that we cannot give the exact reference; but we remember having remarked at the time that more would be heard of the scheme. The larger portion of this book is devoted to a description of the evils of "landlordism," which Mr. Wallace denounces not less vigorously, if more articulately, than Mr. Michael Davitt. With this denunciation are mingled some speculations in political economy, chiefly derived from Mr. George's *Progress and Poverty*, about which we do not feel called upon to say anything here. The last chapter (pp. 175-233) contains the gist of the whole, and we think it might have been more concisely and effectively put. The "nationalisation of land" means that the State should assert its right to become the single absolute owner of the soil. This has often before been

proposed, nor in theory can it be seriously contested. The objections are admitted to be of a practical character; but they are so great that no body of sober men have ever yet felt themselves justified in agitating for the change. Mr. Wallace evades, rather than overcomes, these practical difficulties. The essence of his scheme is to divide property over land into two parts. One of these parts represents the bare right of occupying the soil, whether for agricultural or residential purposes; and this alone he vests in the State, which would levy therefor a moderate quit-rent. The other part is the artificial value added to the soil by the labour or capital of the occupier; and this Mr. Wallace would hand back absolutely to the occupier as his tenant-right. It is also essential to the scheme that this "tenant-right" should be inseparable from the actual occupancy, and incapable of mortgage. Occupying ownership, whether in small or large holdings, whether in country or town, is Mr. Wallace's panacea—in short, an improved *rayatwari* tenure, of which the outlines may be seen in more than one province of our Indian empire. Judging from Indian experience, we doubt whether Mr. Wallace has overcome (though he has certainly diminished) the great practical difficulty of "land nationalisation"—the incapacity of the State to manage land, or, in his words, to assess the quit-rent. We entertain yet stronger doubts whether his method for carrying his scheme into effect here in England is possible. In certain of the colonies, and to some extent in India, the land question lies ready to the hand of the reformer, who may suggest what is inexpedient, but cannot suggest what is unjust. Here in England the existing landowners stop the way. Mr. Wallace would buy them out compulsorily by giving them an annuity, terminable after three lives, which may be expedient, but is certainly not just. Why not "compensate" fundholders and the owners of railway securities in a similar way? Or, indeed, why not resume all personal property on the same easy terms? Mr. Wallace has thrown new light upon the problem, but we are unable to admit that he has solved it.

*The Classification of Statistics and its Results.* By Patrick Geddes. (Edinburgh: A. and C. Black.) Every country collects statistics, but no two countries classify them in the same way. The facts of several countries are therefore much more difficult for individuals to ascertain, compare, and reason from than they would be if all were thrown into the same forms. Various schemes of classification have been suggested by various authorities, and Mr. Geddes now proposes another, which he maintains to be more scientific and, at the same time, more practically satisfactory. For the details of his plan we have not space; all we can do here is to say that it is based on four propositions, which he considers to state, in general terms, the most fundamental attribute of all societies, and which run as follows:—

"First, a society obviously exists within certain limits of time and space. Secondly, it consists of a number of living organisms. Thirdly, these modify surrounding nature, primarily by seizing part of its matter and energy. Fourthly, they apply this matter and energy to the maintenance of their life—i.e., the support of their physiological functions."

Mr. Geddes seems, however, inclined to claim for his classification that it will do something more than classify, and in this part of his interesting little paper we have some difficulty in following him. After dwelling on the many doubts and disputes with which political economy is infested, and on the want of an "art of conduct" in the widest sense, he appears to argue that a more scientific method of classifying social facts will terminate the controversies,

and create the art. We cannot think that any mere classification is so potent. It is the reality of the facts, or their meaning, or their relative importance, that is in dispute, and no arrangement of them under new heads can have much effect. We should be glad to see Mr. Geddes explaining more at large "how the fundamental conception of organisms utilising the matter and energy of nature clears up such time-honoured disputes as those concerning the nature of interest and intrinsic value," or what mere method of classification, as distinct from the facts ascertained and stated, will turn a protectionist into a free-trader.

*Capital and Population.* By Frederick B. Hawley. (New York: Appleton.) Mr. Hawley explains in his Preface that he occupies the peculiar position of being at once a strict disciple of Ricardo and Mill and a dissentient from many of their conclusions. He "antagonises"—to use his own expression—"the results of one side and the methods of the other." His argument turns mainly on the possibility of a general over-production, or, as he prefers to say, over-accumulation. He holds that capital has a tendency to "press upon" population with injurious results. He denies that an increase of capital other than fixed capital always gives proportionately larger employment to labour, because (he says) much of it may be "dead stock"—that is, if we rightly understand him, capital locked up in the shape of goods that do not sell. We grant, of course, that this sometimes happens; but we cannot admit that, with the use of judgment in production, it need occur more frequently when capital is increasing faster than population. If producers will only produce the right things, there is no practical limit to the market, and that market a remunerative one. Profits may fall, but those who have capital want to make something of it, and the remunerativeness of markets is a relative term. Mr. Hawley argues that all commodities but one—namely, labour—may be produced in excess. The answer is that the thing is impossible, and that, even if possible, it would be so improbable as not to fall within the range of practical economics. It may be quite true that trade and industry occasionally suffer from over-production, but the remedy is to be found in employing capital, not less, but differently. We ask for bread, and the producers give us pig-iron. Those who wish to see the practical conclusions deduced by Mr. Hawley from his general principle must refer to the book itself, though we feel bound to warn them that he has not the art of making his meaning clear; and, if the adoption of his views depended at all on the comprehension of his arguments, we should feel very secure against the prevalence of the errors which he endeavours to defend.

*Logic for Children, Deductive and Inductive.* By A. J. Ellis. (C. F. Hodgson and Son.) This pamphlet, printed in 1872-73, but not published till the present year, is an account of a method for teaching logic to children, but it is not meant for children themselves to read. Until practical experience shall have shown how far children are really capable of taking in logical teaching, it behoves a critic to speak with caution of the prospects of any method; but our own impression is at present that, while logic cannot be at all very successfully taught to children (as distinguished from big boys or girls), the present attempt is one of the least promising ways of undertaking the task. The childish mind is perhaps not fit for logic; the idea of a theory of reasoning sprang up too late in the development of the race for us to be able to communicate it early in the development of the individual; but, if the effort is to be made, the study must be rendered as little dry and as

little abstract as possible. But Mr. Ellis has an elaborate system of signs more terrible to look at than anything in Aldrich. It is fair, however, to say that we think Mr. Ellis more successful in adjusting induction than deduction to the age of his pupils, and that teachers themselves will assuredly gain from studying what he has to say, although they will have to recast his lessons before passing them on.

*History of Shorthand.* By Thomas Anderson. (W. H. Allen.) A good history of shorthand would be a useful addition to English literature. But it is clear that Mr. Anderson is not fated to give us that boon. His book is bad, and bad with few redeeming qualities. Neither matter nor manner are commendable. The style is stilted and pretentious; and if the author had known a little more about his subject it would have saved him from the ridiculous speculations as to the Divine origin of tachygraphy on p. 9, and from many errors of fact and of taste. It is humiliating for an Englishman to compare such a puerile and unsatisfactory performance with the masterly production in which Dr. Zeibig has dealt with the same subject (*Geschichte und Literatur der Geschwindigkeitsschreibkunst*; Dresden: Dietze, 1878). If Mr. Anderson had given us a translation of Zeibig we should have been grateful; but as it is, —

*Forensic Anecdotes; or, Humour and Curiosities of the Law and of the Men of Law.* By Jacob Larwood. (Chatto and Windus.) This book does not profess to be more than a compilation of anecdotes already in print. These have been collected with a considerable amount of industry, but without much discretion. Above all, we miss that accuracy of reference which is the only justification for such a work. It might be an interesting theme to compare the qualities of English, Irish, and Scotch humour contained in these pages. The Irish undoubtedly bear the palm, though we would refer anyone interested to the original sources, such as Mr. J. Roderick O'Flanagan's *The Irish Bar* (Sampson Low; 1879). The English, strange to say, are very poorly represented; but the grimness of genuine Scotch "wut" is well brought out. Mr. Larwood, it is easy to infer, is not himself a "man of law." The best circuit stories still live only in oral tradition, and not a few of them would blush to see themselves in print.

*A System of School Training for Horses.* By Edward L. Anderson. (W. H. Allen.) The author is an enthusiast for the *manège*, and seems to think that its mysteries can be explained by the not very clear explanations which he offers on the subject. There appears little in the book which he had not already stated in his previous work, *How to Ride and School a Horse*. It would be amusing to see Leech's "Mr. Briggs" in real life attempting to reduce Mr. Anderson's theoretical teaching to practice. It is to be hoped, for the author's sake, he may find many enthusiastic scholars of that type.

*The Giant Raft.* Part II.—The Cryptogram. By Jules Verne. Translated by W. J. Gordon. (Sampson Low.) The first part of this story, called "Eight Hundred Leagues on the Amazon," appeared at Christmas time; and we were compelled to say of it that it was extremely dull reading. This second part shows some improvement. As may be inferred from the subtitle, the plot turns upon the interpretation of a cypher-writing, which would suggest Poe even if the "Golden Bug" were not referred to in the text. There are also one or two subordinate incidents worked out with the author's characteristic ingenuity. But, on the whole, we must repeat that M. Jules Verne's last story is his worst. For the benefit of bibliographers, we add that it has already appeared in the *Boy's Own Paper*.

## NOTES AND NEWS.

THANKS to the exertions of the commissioner at Larnaka, Mr. C. Delaval Cobham, something is going to be done at last for the dialect and folk-lore of Cyprus. He has induced the editor of the weekly paper *Stasinós* to open his columns to lists of Cypriote words, folk-stories, ballads, and local names, of which, at present, we know but very little. Collectors have been tempted to come forward by the hope of prizes for the largest and most correct collection of such lists, all foreign matter being strictly excluded from them. Attempts at etymology are wisely forbidden. Every scholar will wish success to the enterprise; facts of the highest importance to the philologist and comparative mythologist must be hidden away in Cyprus, and unless they are speedily registered, they are likely to disappear without record before the advent of British civilisation.

SIR C. WILSON AND MR. W. M. RAMSAY have started on a tour of exploration in Cappadocia. Among other places they will visit the site of Comana, near Shar, where numerous remains of the classical age are known to exist. It is rumoured that Sir C. Wilson has recently discovered some new Hittite monuments of great importance.

At a public meeting held at Oxford on May 17, it was resolved to honour the memory of the late Prof. Green by some permanent endowment in connexion with the Oxford High School, and also to place a tablet in the chapel of Balliol College. The committee then appointed has decided to found two exhibitions at the High School, in addition to the two founded by Mr. Green himself and by Mr. Montefiore at his instigation. There will then be one exhibition, tenable for four years, offered annually among those pupils who are desirous of going to the universities. The following are the hon. secs. of "the Green Memorial Fund":—J. L. Strachan-Davidson, Balliol College, Oxford; C. A. Fyffe, Lancaster House, Savoy, W.C.; and J. J. Bickerton, Town Hall, Oxford.

MR. J. ADDINGTON SYMONDS will shortly publish a volume of sonnets, prefaced by an essay on the sonnet (its history and potentialities as a form of verse), arising in part out of questions raised by Mr. Hall Caine and other writers on the subject. Only some half-dozen of the sonnets to be included in the forthcoming volume have already been printed, two or three of these having appeared in the *Cornhill*, and the others in *Sonnets of Three Centuries*. Mr. Symonds is now on a visit to England from his home at Davos Platz.

MR. J. W. MACKAIL, B.A., tutor of Balliol College, Oxford, is now engaged on a translation of the *Aeneid* into English prose. He has just published the first book for private circulation. The text followed is, with few exceptions, that of Conington. We hope shortly to notice the work.

MR. ERIC ROBERTSON is at present engaged on a work to be entitled *English Poetesses*. Messrs. Cassell, Petter, Galpin and Co. are the publishers, and it will probably appear during the Christmas season.

*Faith: the Life-Root alike of Science, Philosophy, Ethics, and Religion*, is the title of a new work by Henry Griffith, which will be published by Mr. Elliot Stock in a few days.

NEXT week Messrs. W. Swan Sonnenschein and Co. will issue Mr. F. Ryland's edition of Locke's Essay, book iii., *On Words*, with critical Introduction and Notes. From the same publishers will come a new treatise of Mental Arithmetic by Mr. Frederick J. Edwards, and the *Child's Pianoforte Book*, by Mr. H. Keatley Moore. This last adopts a new method for

teaching the piano to very young children, introducing, as subsidiary to the text and music, a large number of pictures.

Messrs. W. Skeffington and Son have in the press a new and revised edition of the Rev. S. Baring Gould's volume of translations in verse of various mediæval legends, entitled *Silver Store from Ancient Mines*.

A PEOPLE'S edition of the *Leopold Shakspeare* is about to be published in ten sixpenny monthly parts, of which the first will be issued on June 26. In this edition the poet's works are arranged in chronological order from the text of Prof. Delius, with the addition of "Edward III." and the "Two Noble Kinsmen," and an Introduction and Life of Shakspeare by Mr. F. J. Furnivall, founder and director of the New Shakspeare Society.

A THIRD edition of Mr. A. Arthur Reade's little manual, *How to Write English*, is in the press. It will contain additional exercises for paraphrasing and punctuating, which should increase its value to pupil-teachers. Messrs. John Marshall and Co. are the publishers.

MR. WILLIAM M'DOWALL, editor of the *Dumfries and Galloway Standard*, historian of Dumfries, and author of several works in poetry and prose, has a new book in the press under the title of *The Mind in the Face: an Introduction to Physiognomy*.

ON and after June 3 the *Christian Opinion and Revisionist* will be permanently enlarged to thirty-two pages, and will appear as an illustrated weekly. The illustrations will be chiefly drawn from early Christian art relating to the history, antiquities, and festivals of the Christian Church. The series will commence with the "Tongues of Fire" as the symbol of the festival of Whitsuntide. The first illustration in the *Revisionist* will be the "Raising of Lazarus," which will commence a series of "Notes on the Miracles and Parables of Our Lord," chiefly from a revision standpoint.

THE Browning Society is to have an extra meeting on Friday, June 30, for readings and recitations of Mr. Browning's poems, and the singing of some of those that have been set to music. It is hoped that Mr. Stanford's music to the "Cavalier Tunes" will be sung.

WE learn from the *Nation* that Mr. John Bartlett, author of *Familiar Quotations*, has printed for private circulation a Catalogue of Books on Angling in his own library. These number about 600 volumes, many of them rare, and nearly all standard authorities. Of Walton's there are fifty, including the very scarce first edition; of Berners, Bowker, and Venables' "Experienced Angler," five each; and the second to the thirteenth edition of Thomas Best. The modern works on angling have also been carefully selected.

THE International Literary Congress, which has just concluded its meeting at Rome, seems to have adopted two practical proposals. The one was to call a conference—this time of both publishers and authors of all countries—to be held at Berne in September of this year, in order to consider a project of forming a universal code for the law of literary and musical property. The other was to found an international literary museum, which should contain portraits of authors ancient and modern, facsimiles of first editions, autographs, artistic memorials of great literary events, documents illustrating the history of literature, &c., &c.

It is rumoured that Count von Beust, on his retirement from political life, will devote himself to preparing his Memoirs for publication.

THE commission which was appointed some time since in Frankfort, under the presidency of the Oberbürgermeister Miguel, to examine

into the evidence which assigned a certain grave to Goethe's mother has come to a disconcerting judgment. It has decided that the grave which was provided with a new memorial stone in 1849 is not after all that of the honoured "Frau Bath."

As a sign of the times may be noticed the forthcoming appearance at Berlin (Eisenschmidt) of a work on *The Russian Army in War and Peace*, based on the most recent and most trustworthy authorities, by First Lieut. A. von Drygalski.

THE centenary of the annexation of the Crimea to the Russian empire will be celebrated next year in April. A History of the Crimea, to be published on the occasion, is now being prepared by several professors at St. Petersburg and Odessa; and a museum of Crimean antiquities will then be opened at Sebastopol.

THE first volume has been published of an important work by M. Semevsky upon the condition of the Russian peasantry during the reign of Peter the Great.

THE *Reform*, a journal in which German is spelt phonetically, according to Frikke's system, states that the number of students in the nine Prussian universities amounted to 11,894 during the winter term of 1881-82, showing an increase on previous terms. Berlin has 4,421; Breslau, 1,444; Halle, 1,361; Göttingen, 1,071; Bonn, 875; Königsberg, 836; Griefswald, 654; Marburg, 646; Kiel, 321; and Münster, 321, matriculated students.

THE number of books and magazines published in Germany during the year 1881 is 15,191. The same journal, the *Reform*, calculates that, if every book were published in an edition of 1,000 copies, this would give one copy only for every three persons now living in Germany.

THE Historische Verein of Bern will hold its annual meeting this year at Biel on June 25. The third part of vol. x. of the society's *Archiv* is announced. It will contain a carefully edited collection of all the Bell inscriptions in the canton of Bern by Dr. Büscheler-Usteri, of Zurich.

MR. TRÜBNER, of Strassburg, announces a contribution to Dante literature from the pen of Prof. Paul Scheffer-Boichorst, entitled *Dante im Exil*.

M. WELSCHINGER, whose work on the Revolution Drama has reached a third edition, has just published a book upon the threefold censorship under the First Empire of newspapers, books, and theatres (Paris: Charavay). It is based on unpublished documents, and contains anecdotes of Benjamin Constant, Chateaubriand, Camille Jordan, M<sup>me</sup>. de Staël, the Duke de Rovigo, &c.

AMONG the forthcoming publications of the Librairie des Bibliophiles are *Rachel d'après sa Correspondance*, by M. Georges d'Heylli, with four portraits of Rachel etched by Léopold Massard, and a reprint of Guillaume Tardif's *L'Art de Fauconnerie et des Chiens de Chasse* (1492).

LE MONNIER, of Florence, announces for publication a collection of Gino Capponi's correspondence, edited by MM. Carraresi and Guasti.

MM. ERCKMANN-CHATRIAN's last novel—*Les Vieux de la Vieille*—which has recently been appearing in the *Revue des Deux-Mondes*, is now published in book-form, with illustrations (Paris: Hetzel), for 1 fr. 40 c., or little more than one shilling.

A SPANISH translation of the *Nibelungenlied* is now appearing in the *Revista Germanica*, a Spanish Review published at Leipzig.

## ACKNOWLEDGMENTS.

OF foreign books we have on our table:—*Le Roman de la Femme chrétienne: Etude historique, avec une Lettre-préface de M<sup>lle</sup>. Hubertine Auclert* (Paris: Auguste Ghio); *Etudes napolitaines*, par John Peter (Naples: F. Furchheim); *Vorlesungen über Aesthetik oder über die Philosophie des Schönen und der schönen Kunst*, von Karl Chr. F. Krause, edited from the author's remains by Dr. Paul Hohlfeld and Dr. Aug. Wünsche (Leipzig: Otto Schulze); *Passionschule*, von E. A. Süskind, Vol. II. (London: Williams and Norgate); *Jordanis de Origine Actibusque Getarum*, edidit Alfred Holder (London: Williams and Norgate), being Vol. V. of the Germanischer Bücherschatz; *Filadelfos: Ricordi e Ragionamenti d'alcuni Savi della Magna Grecia*, di Giovanni Gemelli (Naples: F. Furchheim); *Teoria fisiologica della Persezione*, da Giuseppe Sergi (Milan: Dumolard); *La Criminalità nelle sue Relazioni col Clima*, da Giuseppe Orano (Rome: Botta); *Il Signor Io: Novella*, da Salvatore Farina, Seconda Edizione (Turin: Roux e Favale); *De Monadenleer van Leibniz*, door Pierre Henri Ritter (Leiden: S. C. van Doesburgh); *Een Vlaamsche Jongen*, door Wazenaar (Dr. Amand de Vos), Tweede Uitgaaf (Ghent: W. Rogghé); *Ergänzungs-Wörterbuch der deutschen Sprache*, von Prof. Dr. Daniel Sanders, 1. Abtheilung, Lieferung 1-12 (London: Williams and Norgate); *Lambert Daneau: sa Vie, ses Ouvrages, ses Lettres inédites*, par Paul de Félice (Paris: Fischbacher); *Manuel d'Electrométrie industrielle*, par R.-V. Pigou (Paris: G. Masson); *Les Révolutions du Droit*, Tome II., l'Enfantement du Droit par la Guerre, par Henri Brocher de La Fléchère (Geneva and Bale: Georg; Paris: Thorin); &c., &c.

## ORIGINAL VERSE.

TO WILLIAM BELL SCOTT, GREETING.

Rondeau.

HIS "Harvest-Home" the poet brings,  
Harvest of rich and lovely things,  
Piled high upon the loaded wain  
That bears the fruitage of the brain,  
Begirt with flowery garlandings.

With generous hand its gifts he flings  
To all with gracious welcomings;  
And so to scatter wide its fain

His Harvest-home.

Not like the niggard's grasp that clings  
To hoarded gold is his who sings,  
Sings for pure love, and not for gain,  
Then sing we too, with glad refrain,

His Harvest-home.

R. F. LITLEDAL.

## OBITUARY.

JOSEPH LEMUEL CHESTER.

THOUGH Col. Chester had long been ill, the announcement of his death must have come upon most of us with surprise. The treacherous climate of his adopted country had for many years kept him within doors for weeks together during the greater part of the year; and even when he could allow himself greater freedom in his movements, it was only during the warmer part of the day that he was enabled to leave his house. To him this was no special hardship, for, as he himself was the first to acknowledge, his work was always chiefly in his library; but his confinement in a remote suburb of London had this effect, that familiar though his works were to every genealogical student in England, and extensive as his correspondence on points of family history might be, his person was known to only a few of those who looked up to him as their master

in genealogy and biographical history. It was said of Thomas Baker, the *ejectus socius* of St. John's College at Cambridge, that his name might be found mentioned in the Preface of every antiquarian work published in his lifetime as having laid the author under obligations which he could never repay; and it has always seemed to me that if this was true of Baker it might be said even more emphatically of Col. Chester. I doubt if a single work treating on pedigrees or matters of family research has been published in the English language during the last twenty years which has not benefited by the stores of knowledge accumulated by his unwearied labours. I can speak with experience on the promptness and readiness with which his collections were freely opened to every enquirer, whoever he might be.

Col. Chester was a voluntary resident among us, and the sole object with which he lived in this country was to collect accurate biographical facts on our ancestors. His first published work was a memoir of John Rogers, the proto-martyr under Queen Mary's rule; and it is a curious incident, as showing the bent of his tastes from the first, that he devoted special attention to the genealogy of the martyr, tracing his family back to William the Conqueror, and noticing the careers of many of his descendants. His primary pursuit in this country was—I may be pardoned for quoting his own expressions in a letter to me—"the history of the early New England settlers." He wanted to know, and by the time of his death he had ascertained, "what was the character and social condition *en masse* of the founders of the great country on the other side of the Atlantic." The origin of the first colonists of America was an open book to him; and, if his life had been spared, the world might have been presented with discoveries from his industry which would have put into the shade all that has been collected by Mr. Savage or the Rev. Joseph Hunter. He was eager and enthusiastic on the subject of all the distinguished colonists and statesmen connected with his native country, but to the elucidation of the ancestry of Washington he directed all his energies; and it is earnestly to be hoped that the result of his labours may be made known to us.

Not until the publication in the summer of 1876 of his *Registers of Westminster Abbey* was his name generally familiar to the literary world; but from that time forwards there was no one to contest the position which he had acquired of being the chief genealogical student in England. The work which he had selected allowed him abundant opportunity for displaying his wealth of biographical information. Nearly every distinguished name in our national history has been connected with the Abbey, and in every instance Col. Chester had something to say which was both novel and valuable. The accuracy of his researches was beyond question. No kindred volume has ever appeared—none is ever likely to appear—so free from blunders. A flaw in the correctness of his statements made him wear sackcloth for days. When I pointed out to him on one occasion that he had committed the slight error of speaking of Dr. Johnson as the "younger son of Michael Johnson" he remarked, of a slip which would have affected an ordinary author but slightly, that it was "indefensible and unpardonable," and referred to the scandalous blunder in the parish register of Bromley (March 1753), which buries Dr. Johnson himself, instead of his wife. This grand volume on the registers of the Abbey was received with a chorus of praise from every literary journal in our land. It carried the learned annotator's fame far and wide, and secured for him (what he particularly valued as a recognition of his fame by his own people) the distinction of LL.D. from a college in America. This

work was included in the *Transactions* of the Harleian Society—of which he was one of the founders—but a large number of copies were at the same time printed for the benefit of his friends. The collection of his materials had cost him ten years of hard labour, and by this and the printing of the volume he was at least £2,000 out of pocket; but he grudged neither his time nor his money. He still laboured at the subject, with the intention of printing a supplementary list of such persons as were probably buried within its walls, and of issuing any further particulars which he might obtain concerning the persons named in the registers themselves.

The progress of the Harleian Society was very dear to Col. Chester. For the Register section he edited more than one of the records of the London parishes. The first volume of the *Visitation of London, 1633-34*, supervised by him jointly with Dr. Howard, has already appeared, and the second may confidently be looked for next summer. Everyone must hope that the death of Col. Chester will not prevent the publication of the extensive notes which he had amassed on the families and fortunes of these City merchants of two centuries and a-half ago. There is indeed but one other student in England whose biographical collections can vie, in extent or in value, with those of Col. Chester. The researches of the other indefatigable annotator relate chiefly to printed books. Those of Col. Chester have been collected from every heraldic visitation in England and from hundreds of parish registers. Many of the registers in London have been copied for him *in extenso*; and during a long residence in Oxford he had extracted with his own hand the whole of the biographical information which is buried in the matriculation registers of that university. For this, and for his services in elucidating the family history of so many distinguished Englishmen, the university last year conferred on him the honorary degree of D.C.L.—a distinction of which he was justly proud.

Col. Chester died at 124 Southwark Park Road, on May 26, aged sixty-one. We had all hoped, until a few weeks ago, that he would have been spared to give us many more fruits of his patient labour and patriotic regard for the two countries of England and America; but it became evident then that all such expectations must be dismissed. He has done more for the history of the land of his birth and of his adoption than any other person of his time, but he has not effected all that he desired or intended.

W. P. COURTNEY.

We must add to this notice that the ACADEMY has lost in Col. Chester a generous friend. We owe to him not only valued contributions, but also the kindest expressions of good-will, one of which was received almost from his death-bed.

ED. ACADEMY.

#### MAGAZINES AND REVIEWS.

THE current number of the *Contemporary* suggests the extent to which the heavier magazines have taken the place of pamphlets. It contains no less than twelve papers, nearly every one of which would only have found publication as a pamphlet fifty, or even twenty, years ago. We can only except with certainty Mr. Alfred Austin's three sonnets, from which we may quote these notable lines:

"Take ocean in reverse, and, basely bold,  
Barrow beneath the bastions of the brine."

There is but a single literary article—on "Henri [*sic*] Heine"—which tells us something that is new, but much more that is old. The two articles on Ireland are very slight. Indeed, none of the magazines for this month seem to

have risen to the occasion. Mr. E. A. Freeman has a characteristic article on the Channel Tunnel, deprecating any modification of our national insularity. There is a very curious paper by Mr. Francis Peck on "Science and Religion," to which both Prof. Ball and Mr. Proctor contribute antidotes. Mr. Quilter gives a criticism of the Royal Academy which, if we are not mistaken, he has already given elsewhere. Dr. Fairbairn has a second paper on "The Philosophy of Religion," chiefly interesting as showing how great has been the influence of Hegel upon our best minds. Prof. Leone Levi says very little that is striking about "The Revival of Italian Industry." The paper by Mr. Seton-Kerr seems to us an opportunity missed. He contrasts the procedure under the permanent settlement in Bengal with that of the Irish Land Commission. But the essence of the Bengal settlement is that it did *not* (except in theory) establish tenant-right for the cultivators. The Act of 1859 has protected those who can establish continued occupancy for twelve years; but the majority (at least in many districts) still remain tenants at will. Bengal has not yet received its Land Act.

THE only full-page illustration of the *May Livre*, a reproduction of a statuette of Rabelais, is worth noticing if only by way of protest. The portraits of Rabelais are all of doubtful authenticity, and are by no means easy to reconcile. But so long as anyone chooses to represent the greatest writer of the French Renaissance and (except Shakspeare) the greatest writer of the sixteenth century as a grinning ape, without a single feature indicative of anything but the lowest and most unrelieved sensuality, so long will the general error as to one of the greatest books of the world receive support of that intangible kind which is hardest to deal with. The influence of vulgar errors on the portraits of great men is a subject which we present gratis to any university or academy in need of a theme for a prize essay. As to the letterpress of the number, M. Paul Lacroix' interesting sketch of his acquaintanceship with Balzac, and the charming specimens of Renaissance initial letters which "Gluck" has reproduced, deserve mention.

THE last number of the *Revue de Droit international et de Législation comparée*, which is the second of the series for 1882, commences with a paper by Prof. Brocher de la Fléchère, entitled "La Guerre et le Droit international." It is rather an Academic discussion, in which the learned Professor examines the tendency of parliamentary government to become a veiled form of imperialism. This result he considers to be brought about by the executive, under the pretext of a certain necessity of harmonious government, influencing the constituencies to return as their representatives men who, instead of controlling the executive, which is the true *raison d'être* of parliaments, falsify their mission, and thereby parliament itself becomes a mere governmental machine. It is when this fact grows patent, and a nation becomes aware that it is governed in the interests of a faction, that overt imperialism is welcomed as a preferable alternative. This, according to the Professor's view, is the true explanation of the success of Caesar, and of Cromwell, and of Napoleon. Prof. Bulmerincq, of Heidelberg, contributes a fourth article on a "Projet de Règlement international des Prises maritimes." It appears that the Professor's project has been submitted to a commission of the Institut du Droit international, which met at Wiesbaden in the autumn of 1881, when Germany was represented by the regretted Dr. Bluntschli and Great Britain by Sir Travers Twiss. A brief note of the deliberations of the commission—in which Profs. Arntz, of Brussels; Martens,

of St. Petersburg; Gessner, of Dresden; den Beer Portugael, of the Hague; Alberic Rolin, of Gand; and Prof. Bulmerincq himself took part—has been annexed to the *Projet*. A letter from Mr. F. S. Reilly, the draftsman of the British Ordinance of January 1879 establishing a High Court of Justice in the Island of Cyprus, is intended to correct several errors in an article by Prof. Saripolos, of Athens, which has appeared in a previous number of the *Revue*. An article by Prof. Léon-Caen gives a detailed account of the provisions of a convention for the protection of industrial property, a draft of which was prepared by the International Conference assembled at Paris in 1880. A *compte-rendu* of the deliberations of this Conference has been already published at the Imprimerie nationale at Paris. A scheme for a memorial to the memory of Prof. Bluntschli, of which the details are not at present complete, is the next paper, after which a chronicle of international facts of juridical interest has been supplied by Prof. Teichmann in respect of Germany and by Prof. Léon Renault on behalf of France.

### THE POLE FAMILY IN EXILE.

ARTHUR and Edward were the two sons of Geoffrey Pole, the Cardinal's brother; of their early history we know something—how their father obliged the person who brought him a summons from Queen Elizabeth to swallow the writ and thereby render ineffectual the service of it; how an abortive Roman Catholic movement was got up on behalf of Arthur Pole in 1562. Arthur Pole was a profligate youth. He married a daughter of the Earl of Northumberland, and was always agitating; then he wished to enter the service of Philip II. under de Quadra; he proposed to join the Duke of Guise, professing great things of the assistance he could render in England; and, finally, with his brother and his brother-in-law, Antony Fortescue, he attempted to leave England, but was arrested and lodged in the Tower. Arthur Pole was tried for treason and condemned to death, but Elizabeth spared him. Thus much we know of Arthur Pole and no more. A letter written in the year 1600 to Philip II. of Spain, and now reposing among the Spanish MSS. in the British Museum, throws some light on his son's career, as well as on the estimate the Roman Catholics placed on the services of Father Parsons, Card. Allen, and other upholders of the fallen Papal power in England. The letter is as follows:—

"Thomas Fitzherbert an Englishman, servant of your majesty, having heard by letters from Rome, that the Duke of Parma has requested the hat for an Englishman called Arthur Pole, because his Holiness had promised to make six Cardinals at his instigation, I cannot help pointing out to your majesty the disadvantages which might arise from this both for God and your majesty, without its being able to be remedied by time. For the said Arthur Pole is son of a nephew of Cardinal Pole of the royal blood of England, a youth of 25 years, who has been brought up from a child in the house of the Cardinal Farnese now dead in company with Don Duarte (Edward) who now lives, having been very well received and favoured by him, and by the Duke of Parma [Card. Farnese's brother], but at the same time apart from all news of the affairs of England, as if he did not belong to that nation, so that he has neither the age, nor the other qualities, which are required in one who has to be the chief mediator of the reformation of the Church of God in England; and besides this it is very likely that he will not be amenable to any proposition for helping to attain those ends, which are desired by all good Catholics in that country for the service of God and of your majesty from the well known fact that he is on most intimate terms with diverse Englishmen, two or three of whom are ill affected to the crown of your majesty; hence we may infer that if he were

at the head of these, with the authority of Cardinal, he might attract good Catholics to his party, seducing them from the service of your majesty. The only remedy for this is that your majesty should send, and procure that his Holiness should make a Cardinal of Father Parsons, of whose prudence and zeal in the service of God and your majesty we have had such well proved experience. From this it would follow that even if Arthur Pole were made a cardinal he could do no damage, because Father Parsons being equally one, he would arouse all the good Catholics of England from the great contentment that all men have in his known virtue and prudence, and everything would go on (as it has gone on hitherto without doubt) for the greater glory of God, and for the benefit of your majesty. In addition to all this he would assist much with his prudence and authority in repressing the French party in Rome, and in breaking up also the intrigues and designs of the King of Scotland as well as that of France, performing always the offices which alone are to be expected from a most faithful servant and creature [lit. creation] of your majesty's.

"This petition to your majesty has in fine two parts—firstly that your majesty would be pleased to give orders to the Duke of Hesse that he on his part may treat with his Holiness, and beg that he with all prudence may make a Cardinal of the said Father Parsons, because if he were to make the other one a Cardinal before him it would be feared he might procure the prevention of Father Parsons's promotion whereas now he could make it with more facility than then. The second part of this petition is that it may seem good to your majesty to smooth over the greatest difficulty which could prevent this, namely to use towards Father Parsons the same liberality which your glorious majesty used towards Cardinal Allen with the same object in view. By this means God and your majesty will be served, and all the English Catholics will receive the only one remedy which your majesty can procure for them.

"Now that I have discoursed of this in confidence it will appear that Father Parsons from his great virtue, letters, and religion is most deserving of the hat, and that it will be well filled in his person. Yet we must not carry on this business by contradicting the promotion of Arthur Pole, which would do more harm than good; but let the Duke of Hesse be written to with a copy of this letter, with orders to perform those offices which have been agreed upon in favour of Parsons, on the plea that it will assist towards reanimating the Catholics of England, and bring about the reduction of that kingdom to the obedience of the Apostolic See, and that he will advise your majesty of what he shall do, and your majesty can then consider what action will be most suitable to take.

"In Madrid 26 of Sep<sup>r</sup> 1600."

### CORRESPONDENCE.

#### MR. CHARLES DARWIN'S LETTERS.

Down, Beckenham: May 25, 1882.

Will you allow me to mention that I am collecting my father's letters with a view to a biography? I shall be greatly obliged to any of my father's friends and correspondents who may have letters from him if they will allow me to see and make copies of them. I need hardly add that no letter shall be published without the full consent of its owner.

FRANCIS DARWIN.

#### BUST OF SHELLEY.

Cuba Villa, Bickerton Road, N.: May 29, 1882.

I think it will interest the readers of the ACADEMY to know that Mrs. D. O. Hill—the sculptor of the Burns statue at Dumfries, recently unveiled by Lord Rosebery—has executed in bronze a fine heroic bust of Shelley. It has been suggested that this bust should be purchased, by public subscription or otherwise, and placed over Shelley's grave. Failing that, that it should find some prominent resting-place in England where the public should always be able to view it. The bust has been seen by a number of persons eminent in letters and art, and also by several ardent admirers of Shelley, and the unanimous opinion is that it represents the poet and the man as he might have been—I may say doubtless was—in his finest moods. This truly beautiful work should not be lost to Shelley's countrymen.

G. BARNETT SMITH.

## THE RESTORATION OF ST. MARK'S.

St. Mark's, Venice, Committee, 9 Buckingham Street, W.C.:  
May 30, 1882.

I have received from the committee of the Venetian artists a copy of an *ordine del Giorno*, of which the following is a translation:—

"The Venetian artists, in association with the resident foreign artists, assembled in meeting this April 20, 1882, resolve:

"1. That the MS. *L'Avvenire dei Monumenti in Venezia*, which has been read before this meeting, be printed, and copies sent to all the artistic societies of Italy.

"2. When the adhesion of these shall have been received, we will call the attention of the Government to the restorations of our monuments, especially those executed in the interior and exterior of the church of St. Mark, which cause serious apprehensions to all those cognisant of them, in spite of the recent regulations for their control.

"The Venetian artists, in alliance with those of the rest of Italy, will seek to protect their national monuments as they would guard the honour and glory of the nation."

Then follow fifty-eight signatures, of whom eight appear to be foreign names.

The *Avvenire dei Monumenti in Venezia* (published by Fontana, Venice) is an ably written manifesto, especially referring to the restorations of St. Mark's and the Ducal Palace.

This movement of the Italian artists may prove to be the most important step yet taken in the cause of the protection of ancient monuments. If conducted in the same practical spirit with which it has commenced, it cannot fail to receive the recognition and adhesion of the Italian Government. I need not say how it will strengthen the hands of those in England who have been working in the same direction.

HENRY WALLIS, Hon. Sec.

## A LOLLARD SERMON OF THE FOURTEENTH CENTURY.

Oxford: May 18, 1882.

All who have dipped into the Lollard controversy of the fourteenth century will be interested in learning that the official report of an important sermon preached in Oxford on Ascension Day, 1382, by Dr. Nicholas Herford, one of the most zealous of Wyclif's followers, may be read in a Bodleian MS. (Bod. 240). While examining the contents of this ponderous volume, of the variety and interest of which no existing catalogue gives an adequate idea, I stumbled on the report in question.

That such a notarial report of the substance of Herford's preaching was made we knew already from a statement to that effect in the *Fasciculi Zizaniorum* (p. 296, Rolls ed.). "His [Herford's] heresies, errors, and other enormities were reduced to a definite form by notaries at the instance of a certain Peter Stokys, a Carmelite friar and doctor in theology." But no one seems to have been aware that the document so described had survived to the present day. The writer in the *Fasciculi* goes on to say, "At length, on the festival of the Ascension, he [Herford] preached many wicked and detestable things publicly in St. Frideswide's churchyard, exciting the people to insurrection, and excusing and defending Wyclif." The last words raised my curiosity, for it seemed reasonable to expect that in the report—not a very brief one—of the sermon which I had found, some abstract of this contemporary defence of Wyclif (who was then living) would be given. Unfortunately, it is not so. The reporter confines himself to those portions of the sermon which would be likely to serve the purpose of Friar Stokes, his employer, in the proceedings against Herford before the Archbishop which he contemplated. Mention is made of "Ricardus"—that is, Fitz-Ralph

formerly Chancellor of Oxford, and afterwards Archbishop of Armagh—as having been Herford's predecessor in attacking the friars, but the name of Wyclif does not occur. Nevertheless, there is much that is interesting in the report, as will appear from the following translation of the opening passage:—

"In the name of God, Amen. Be it known to all by the present public instrument that in the year from our Lord's incarnation, according to the course and computation of the English Church, MCCCLXXXII., in the fifth indiction, in the fifth year of the pontificate of . . . Pope Urban VI., on the fifteenth day of May, that is, on the day of the Ascension of our Lord, at the cross in the churchyard of St. Frideswide,\* in the town of Oxford, in the diocese of Lincoln, in the presence of me, a public notary, and the witnesses whose names are subscribed, and before the venerable Master Robert Rugge, professor of divinity [*sacrae pagine professor*], Chancellor of the University of Oxford, and no small multitude of clerks and laymen, regulars and seculars, then and there assembled together to hear the Word of God, Master Nicholas de Herford, professor of theology, preaching to the people in the English vulgar tongue, amongst many other things touching the different states and ranks of the Church, said specially these following things."

The rest of the report is chiefly taken up with the invectives of Herford against the friars and monks, especially the former. It is also charged against him that in the bidding prayer (the form of which is still preserved in university sermons at Oxford) he omitted the Pope. This passage is curious:—

"He recommended the states of the Church under this form: 'Ye shall pray' [*orabitur*],—he said to the people—'for the lord the King, the lady the Queen, and the lady mother, and for the lord Duke [John of Gaunt] ye shall pray, that God would give him the grace of obeying the King, and enticing him to what is good; and next ye shall pray for all the temporal lords of this realm; afterwards ye shall pray—he said—'for all who are spiritual officers of God' [the chancellor, the university, the mayor, the citizens, &c.], and in the whole recommendation he made no special mention of the supreme pontiff [*non fecit mentionem de summo pontifice speciale*]."

T. ARNOLD.

## DERIVATION OF THE NAME "PYRENEES."

Taylor Institution, Oxford: May 27, 1882.

The true origin of the above proper name has always been a matter of controversy. According to the authority of Strabo and Diodorus Siculus this appellation would have come from *πῦρ* = fire. Silius, on the other hand, finds its source in the proper name of Greek mythology, or popular tradition, Πυρρα, daughter of Bebryx, who was beloved by Hercules, and buried upon the mountains called after her name. Considering that mythological names are not seldom the offspring or result of local proper names, modern researches have recognised the real etymology in the Celt-Iberian root-word "bryn" or "byrin," denoting a hill or mountain (*cf.* Welsh "brynach" = mountainous region, highland). Hence the original meaning of the appellation

\* This church is now included within the precincts of Christ Church, and known as the cathedral of Oxford. As to the churchyard, or cemetery, "the cemetery would seem to have been on all sides of the church. Wherever the ground is turned up in the garden between the choir and Dr. Heurtley's garden, human bones are found. . . . In the last summer a complete skeleton was found *in situ* and undisturbed between the fountain and Dr. King's house." The above is extracted from a letter which the Dean of Christ Church has been good enough to write to me in reply to my enquiries. The exact position of the cross cannot be identified.

Pyrenees, as given by the first neighbours and inhabitants, would be "high or steep mountain" (Pape's *Wörterbuch der griechischen Eigennamen*, ed. Benseler; Pauly's *Real-Encyclopädie*; Obermüller's *Keltisches Wörterbuch*, Larousse; *Grand Dictionnaire du XIX<sup>e</sup> Siècle*).

I need hardly remark that the identification of the name with "Pics noirs" (as if from the patois "Pics nérés," and, by corruption, changed into "Pyrénées") which has been suggested by N. Boubé (*Zlatagorskoj's Dictionnaire des Homonymes*, Paris, 1882, p. 482) must be rejected as arbitrary and untenable.

H. KREBS.

## IZAAK WALTON'S "COMPLEAT ANGLER."

My statement that on the title-page of the first edition of the *Compleat Angler* "churchyard" appears, and not "churcheyard," as in Mr. E. Stock's professed facsimile, was based on the bibliography under review. I find in the transcript there given of the title-page of the first edition "churchyard." The same spelling appears in the transcript given by Mr. Westwood in his *Chronicle of the Compleat Angler* (p. 1), and in the same gentleman's transcript of the advertisement of the book which originally appeared in the *Perfect Diurnall* (*id.* p. 2). It again occurs in the beautiful facsimile on steel of the title-page given at the beginning of "Ephemera's" edition of the *Compleat Angler*. I write far from the British Museum, but the same spelling will be found, I believe, in the copy of the first edition which is there exposed, open at the very page, in a glass case in the King's Library. Is not the question rather where did Mr. Stock find a copy of the first edition which contains the *e* in "churchyard"? THE REVIEWER.

## THE LATE THOMAS DUNMAN.

4 Bryanston Street, Portman Square, W.: May 30, 1882.

The recent death of Mr. T. Dunman has already been noticed in your columns. He may be said to have sacrificed his life to his self-denying zeal in the work of popular education, and to an intense interest in the teaching of science. Will you allow me to mention that a fund is being raised to help to place his widow in a position to support herself and her two children? Several members of the Council of the Working Men's College are on the committee, and I am authorised, as treasurer, to receive contributions.

R. B. LITCHFIELD.

## APPOINTMENTS FOR NEXT WEEK.

- MONDAY, June 5, 3 p.m. Royal Institution: General Monthly Meeting.  
7.30 p.m. Aristotelian: Discussion, "Will."  
TUESDAY, June 6, 3 p.m. Royal Institution: "Digestion," IV., by Prof. A. Gamgee.  
8 p.m. Biblical Archaeology: "The Epoch of Joseph: Amenhotep IV. as the Pharaoh of the Famine," by Mr. E. Land; "The Decipherment of the Hittite Inscriptions," by Prof. Sayce.  
8 p.m. Shortland.  
8.30 p.m. Zoological: "Some Points in the Anatomy of the *Deluroidea*," by Prof. St. George Mivart; "A Collection of *Laridae* from the Coasts of Peru and Chili, made by Capt. A. H. Markham," by Mr. Howard Saunders; "Crustaceans collected by M. V. de Robiliard at the Mauritius," by Mr. E. J. Miers; "An Attempt to apply a Method of Formulation to the Species of the *Comatulidae*, with the Description of a New Species," by Prof. F. Jeffrey Bell.  
WEDNESDAY, June 7, 7 p.m. Entomological.  
8 p.m. Geological: "The *Annelida tubicola* of the Wenlock Shales," by Mr. G. H. Vine; "Description of Part of the Femur of *Notocherium mitchelli*," by Prof. Owen; "The Girvan Succession," I., by Prof. C. L. P. Worth; "*Helicopora laticipitalis*, a New Spiral Fossellid from the Upper Silurian Beds of Ohio," by Mr. E. W. Clappole.  
8 p.m. British Archaeological: "The Sculptures of the West Front of Lichfield Cathedral," by Mr. J. T. Irvine; "Guddy's Cove, Northumberland," by Dr. Alfred C. Fryer; "British Urn Burials at Basingstoke," by Dr. Josh. Stevens.  
THURSDAY, June 8, 3 p.m. Royal Institution: "The Metals," by Prof. Dewar.  
8 p.m. Society for the Encouragement of the Fine Arts: "The Present Position of Sculptural Art in this Country," by Mr. H. P. MacCarthy.

8 p.m. Mathematical: "A Definite Integral, and Equation to the Director Circle of a Conic," by Prof. Wolstenholme; "The Extension of Certain Theories relating to Plane Cubics to Curves of any Deficiency," by Mr. A. Buchheim.  
 8.30 p.m. Antiquaries.  
 FRIDAY, June 9, 2.45 p.m. Society for the Protection of Ancient Buildings: Annual Meeting; Report by Mr. William Morris.  
 8 p.m. New Shakspeare: "Some of Shakspeare's Thoughts on Life and Death;" "The Oruxes in Shakspeare's Early Comedies," by Mr. F. J. Furnivall.  
 9 p.m. Royal Institution: "Excitability of Plants," by Prof. Burdon-Sanderson.  
 SATURDAY, June 10, 3 p.m. Royal Institution: "Poetry and its Literary Forms," IV., by Prof. D. Masson.  
 3 p.m. Physical: "Experiments on Vibration," by Mr. W. F. Stanley; "A Wind Integrator," by Mr. Walter Bailly.

## SCIENCE.

*Outlines of Primitive Belief among the Indo-European Races.* By C. F. Keary. (Longmans.)

MR. KEARY writes in an interesting way upon an interesting subject. Some readers may think him a little too diffuse, but it is difficult to be clear without incurring this charge. It is not a history of religion or of mythology that he has taken in hand, still less a system of theology, but a history of the capacity for worship among the ancestors of our Aryan race. With him belief is rather a sense of mystery in the universe than the theory which seeks to explain that mystery as Mr. Herbert Spencer would explain it. Consequently, he is not concerned to show how myths have arisen, or even what religion is or ought to be; he aims simply at being the chronicler of those phases of religious belief through which the early Indo-Europeans must have passed. But since we have no contemporaneous record of these phases, we must have recourse to the inductive method if we would discover what they were. By working backwards from known facts we may be eventually able to reconstruct the past history of Indo-European belief.

It is here that Mr. Keary, as it seems to me, lays himself open to criticism. At the outset it is incorrect to speak of "Indo-European races." If we choose to confound philology and ethnology in the old fashion we may, indeed, talk of "an Indo-European race," and assume that the men who spoke the hypothetical parent-Aryan language were all united by the ties of blood. But in this case they would constitute one race, not races.

Let us grant, however, that Mr. Keary means that group of tribes which, for the sake of convenience, we are accustomed to term the primitive Indo-European race. In order to discover the outlines of their belief, he appeals to the evidence of language, of mythology, and of the hymns of the Rig-Veda. Language, as he argues very truly, enshrines the past ideas of mankind, and, if rightly questioned, therefore, will reveal to us early beliefs and conceptions imbedded in it like flies in amber. Myths, too, when interpreted by the comparative method, will tell us what the first framers of them believed concerning the world around them; while the Rig-Veda, the earliest literary monument of the Aryan stock, doubtless contains survivals from an older period of life and thought. But in dealing with these three sources of evidence Mr. Keary has not been so successful as he himself appears to think. His knowledge of Vedic Sanskrit is confessedly second-hand, and he betrays little acquaintance with

the progress made by comparative philology during the last few years. In spite of the insistence with which he claims the support of language for his views, his etymologies and linguistic statements are almost always wrong. Thus he falls into the old fallacy of supposing that "if the same word does not pervade the children languages it has not pre-existed in the parent one" (p. 40); he thinks that "Sanskrit is the oldest among the brother languages," and that Sanskrit words are consequently the most likely to resemble those of the parent speech; he derives *θεός* from the same root as *Dyads* and *deus*, and assumes that Zeus was invented "before *theos*;" and he couples Okeanos with Ogyges, which he holds to mean the sea. Tritogeneia, from the Vedic Trita, who harnesses the horses of the sun, becomes the "water-born;" the Greek Moirae "are connected with the Celtic Mairae, from *mar, meir*, simply 'a maid';" Rhea "is unquestionably connected with the Sanskrit root *ira*, earth;" Kerberos is the Sanskrit "Cerbura, 'the spotted';" and "*θάλασσα*, 'salt water,'" looks as if Mr. Keary derived the word from *ἄλς*. The vowel of *Iavones*, which probably signifies "emigrants," shows that the word has nothing to do with *yavan*, "young," and Hellas (for Sellas) bears no relation to *ἔλος*, "a marsh," while, if we are to hold that Triptolemos is *τρίτολος*, "the thrice-ploughed furrow," we must call in the aid of false analogy. How little, indeed, Mr. Keary knows of modern scientific etymology is shown by his admitting even the possibility of a connexion between the Greek Hades and the Sanskrit *Aditi*. We are, therefore, not surprised to find him omitting Armenian in a classificatory table of the Aryan languages (into which he introduces "Graeco-Italic"), or supposing that the "proto-Greeks" travelled from the Caucasus across the central tableland of Asia Minor into their Western home.

I have dwelt on these philological shortcomings of Mr. Keary, not only because he bases his theory of the original fetish-worship of the Aryans in chief measure upon the evidence of language, but also because he taxes Mr. Herbert Spencer with neglecting the testimony of comparative philology in his doctrine of the origin of religion. Whatever we may think of the particular form in which Mr. Spencer presents his views, the hypothesis that religion began with the worship of ancestors has a large array of facts in favour of it, and is certainly not contradicted by comparative philology. In fact, comparative philology has nothing to say to it, either for or against.

I am again obliged to differ from Mr. Keary in his view of the assistance to be derived from the Rig-Veda in the reconstruction of primitive Aryan belief. For the interpretation of Indo-European mythology the Rig-Veda has proved to be of the same value as Sanskrit itself was for the interpretation of Indo-European grammar; but the case is quite different when we try to discover in it indications of the primitive belief of the Aryan people. The hymns of the Rig-Veda belong to a settled and comparatively cultured people, and I much doubt whether survivals from a barbarous past are not to be found more easily in the Sagas of the Norsemens than in

the philosophic hymns of the Punjab. At any rate, the "henotheism" which Prof. Max Müller has so happily pointed out in the old hymns of Hindustan can have nothing to do with "the shortness of the savage's memory" (p. 43), unless we are to use the word "savage" in a new sense.

There only remains now the evidence of mythology. But this evidence, in spite of what Mr. Keary urges, really depends upon our interpretation of the myths. I am at one with him in believing that myths have their origin in the explanations given by early man of the phenomena and operations of nature—explanations which a later age misunderstood and consequently transformed. But this general agreement covers a disagreement in detail. It is important for Mr. Keary's argument that a considerable number of myths should be shown to relate to the water and the wind. A large and influential class of scholars, however, refuses to see in them anything but myths of the sun and dawn. In some cases, I believe, the analogy of early Babylonian mythology raises the presumption that these scholars are right. Thus Mr. Keary maintains that the *Sārameyas*, the two dogs of Yama, are the winds of morning and evening rather than the twilight of dawn and sunset. Now, in Accadian mythology Merodach, the Sun-god, is also provided with "four divine dogs" whose names are curiously suggestive—the Avenger, the Devourer, the Seizer, and the Carrier Away. I have lately copied a broken tablet in the British Museum (K 2546) which contains the fragment of a hymn about these very dogs, and seems to show unmistakably their true character. The fragment runs as follows:—

"May thy heart rejoice . . .  
 O messenger of Hea . . .  
 The gods Hea and Merodach . . .  
 He establishes thee . . .  
 He causes thee to dwell, O Ennun-gu-til . . .  
 As for the great dogs . . .  
 O Ennun-gu-til, the shepherd . . .  
 Seize their back and (stay) their going;  
 Combat them and overcome them;  
 Smite their skull, wound their breast.  
 From the journey they go may they never  
 return!  
 With the wind may they go, with the storm  
 above it.  
 Take their road and cut short their going.  
 Seize their face! seize their face! seize their  
 weapons!  
 Seize their feet and make them ascend!  
 At the command of Hea the lord of the deep,  
 at the command of the Sun-god, the lord of  
 the height;  
 (in) the house of Merodach the lord of  
 legions."

The argument from mythology has another drawback besides that arising from the uncertain meaning of individual myths. There is the further uncertainty as to whether a myth is native or borrowed. Some of the myths employed by Mr. Keary are certainly not of pure Aryan derivation. He modestly disclaims acquaintanceship with what lies outside the charmed circle of certain Indo-European languages and legends; and such statements as that *ashéra* "also signifies a grove," that Adôn is a form of Dionysos as husband of the earth-goddess, or that Isaiah is the author of the psalm of Hezekiah (p. 268), show that the disclaimer is justified.

But in the present state of comparative mythology it is impossible to neglect the Semitic element in the mythologies of the two nations with which Mr. Keary principally deals. Let him be assured that scholars have associated Hēraklēs with the Tyrian Melkarth with good reason; the adventures of the Greek hero, "the Teutonic Thor" notwithstanding, can be traced back to the twelve books of the ancient Chaldaean epic and the feats of its solar hero. It was inevitable that Greece should derive a good deal of its mythology from Phœnicia and Asia Minor along with the germs of its art. Some of its folk-lore even, of which the story of the Kyklōps may be taken as an example, probably comes from a yet more distant source, as I have pointed out elsewhere. But the recent labours of scholars in this field of research, extensive and fruitful as they have been, seem to be quite unknown to Mr. Keary. His exclusive attention to things Aryan has even blinded him to what I should have thought would be obvious to everyone—the Christian origin of the Ragnarökr or "Twilight of the Gods," and the story of Balder. In a forthcoming work Dr. Vigfússon will show that the whole idea of Valhalla, with its great god, its Valcyries or armed angels, and its heroes or "elect host," emanates from Christianity like the Pai-Marire religion of the modern Maoris. Ygg-drasil, the world-tree, which figures so largely in Mr. Keary's pages, has always seemed to me out of place either in Norse or in any other Aryan system of mythology, and I am, therefore, not surprised to learn from Mr. York Powell that it originates in a simple blunder. Ygg-drasil, "Woden's horse," is properly the gallows, which were shaped like a clothes-horse, and on which the victims devoted to Woden were made to ride. "When Christian ideas filtered northwards," says Mr. Powell,

"the rood—'Jesus' palfraye' as an English fourteenth-century poem has it—was mixed up with 'the horse of Woden,' and a poet who lived about A.D. 1000 has the notion of a rood-tree filling the worlds. But the idea of a world-tree is confined to him and his imitators, and is not a part of Teutonic mythology at all."

It is due to the blunder which confounded the rood-tree with the old Ygg-drasil of Northern mythology.

If I have confined myself to what seems to me the faulty side of Mr. Keary's book it is because the book is one of those rare ones which are worth criticising, while in no other way could I make it clear why I do not feel able to accept its conclusions. At the same time I am the first to admit that it is highly suggestive, and full of passages which well deserve quotation. But I cannot disguise my conviction that its method is defective, and that the author has not sufficiently equipped himself by wide reading and research for the great and difficult task he has undertaken.

A. H. SAYCE.

#### SCIENCE NOTES.

*A Palaeolithic Age in Egypt.*—The May number of the *Journal of the Anthropological Institute* is one of unusual value. Among the original papers which it contains is one by Gen. Pitt-Rivers, the president, who describes his discovery of stone implements in Egypt under such conditions as to demonstrate the existence of a palaeolithic period in the Nile Valley. Stone implements of palaeolithic type have from time to time been found in Egypt, but they have occurred only on the surface, and their high antiquity was consequently not placed beyond discussion. While carrying on some explorations near Thebes in the early part of last year, Gen. Rivers unearthed several flakes and one implement, undoubtedly of human workmanship, from a depth of several feet beneath stratified deposits of mud and gravel. The gravel was hardened into a conglomerate; and, although this alone does not necessarily bespeak its high antiquity, there were not wanting other marks of the great age of these deposits. It is true that no animal remains were found, so that the character of the contemporary fauna does not help us to solve the problem of age. But the conglomerate had been cut into chambers used as tombs certainly as early as the Eighteenth Dynasty, and perhaps earlier, so that the implements found *in situ* beneath these tombs have one limit of age assigned to them; while it appears from geological considerations that their antiquity may be carried far into prehistoric times.

WE understand that Magdalen College, Oxford, has determined to found forthwith the Waynflete Professorship of Physiology provided for by the new statutes, and that an election to the post will therefore take place before long.

THE arrangements are now well advanced for the fifty-second meeting of the British Association for the Advancement of Science, which will be held this year at Southampton from August 23 to 30. The president-elect is Dr. C. W. Siemens; the presidents of sections will be—Mathematical and Physical Science, Lord Rayleigh; Chemistry, Prof. G. D. Liveing; Geology, Mr. B. Etheridge; Anatomy and Physiology, Prof. A. Gamgee; Zoology and Botany, Prof. M. A. Lawson; Anthropology, Prof. W. Boyd Dawkins; Geography, Sir R. Temple; Economic Science and Statistics, Mr. G. Selater-Booth; Mechanical Science, Mr. John Fowler. The evening discourses will be given by Sir William Thomson on "The Tides," and by Prof. H. N. Moseley on "Pelagic Life." On two other evenings *soirées* will be held; and excursions are arranged, as usual, for the Saturday of the meeting and also for the day after the meeting formally closes.

THE Council of the Society of Telegraph Engineers has determined to offer three prizes annually for the best original papers sent in to the society on telegraphic or electrical subjects by all persons not themselves members of the council. The prizes will consist of books or scientific apparatus.

#### PHILOLOGY NOTES.

THE *Etymological Lexicon of Classical Greek* by Mr. E. B. Wharton, of Jesus College, Oxford, to which we have before referred, is now in the press. It will give the derivations, so far as known, of all words used by Greek authors down to 300 B.C. These amount to 41,000; but, after excluding manifest compounds, the total is reduced to only 5,000. Continuing the numerical analysis further, 2,300 more are found to be derivatives, or bye-forms, nearly 500 are of doubtful or unknown origin, and about 630 are loan-words. The remaining 1,600 words have cognates in other languages of the Indo-

Celtic family. Mr. Wharton gives these cognates, where possible, from Latin, Irish, Gothic, Lithuanian, and Sanskrit, the Armenian and Zend forms being mentioned only when they have any independent value. The work is divided into two parts; in the first the words are arranged alphabetically, in the second according to the etymological processes involved in them. There are also two Appendices, one containing a list of the ninety-four onomatopoeic words found in classical Greek, the other a list of the 630 loan-words classified according to the languages from which they were taken. Mr. Wharton's book will be entitled *Etyma Græca*, and will be published by Messrs. Rivington in the autumn.

THE Académie des Inscriptions has given its support to a petition addressed by M. Victor Guérin to the French Government for official assistance in a new expedition which he contemplates to the Lebanon, Arabia Petraea, and Lower Egypt.

DR. KÖLBING's edition of the Early English romance of *Sir Tristrem* is nearly ready, and will be published at the end of August, at Heilbronn.

PROF. A. MÜLLER, of Halle, who is already known for his work on Arab texts, has sent us the prospectus of a considerable undertaking that he hopes to accomplish by subscription. This is the publication, in Arabic type, of a complete and critical edition of the "History of Doctors" of Ibn Abî Useib'a, known as *Kitāb 'Ojūn-el-anbā fī tabaqāt-el-atibbā*. This work, written in the fourteenth century, is one of the chief authorities for the history of science in the early Middle Ages; and it also contains many valuable references to general history and the state of civilisation. Portions of it have been both printed and translated, but never yet the whole. Prof. Müller has collated all the MSS. to be found in the libraries of Germany, Austria, England, and France; but he places special reliance upon a codex in the possession of Mr. J. Nicholson, of Penrith. The text will be printed in Cairo, from the types of Mustafa Effendi Wahbi; and the editor will add a critical appendix and an index. The subscription price for the volume of about 600 pages will be twenty-five shillings; and it will probably be ready for issue before the close of next year. Spitta Bey was to have superintended the process of printing at Cairo; but it is hoped that his regretted dismissal will not prevent the due execution of the project.

A REVIEW entirely devoted to Assyriology will shortly appear at Paris, under the editorship of M. Jules Oppert.

#### MEETINGS OF SOCIETIES.

ANTHROPOLOGICAL INSTITUTE.—(Tuesday, May 23.)

GEN. PITT-RIVERS, President, in the Chair.—A paper was read by Sir H. Bartle Frere on "Systems of Land Tenure among Aboriginal Tribes of South Africa." The writer indicated the points regarding which further enquiry is needed, and urged the importance of recording observations while it is still possible to obtain information from sources which, in the course of another generation, may be closed for ever by extinction of races. The Zulu title to the lands in South Africa rests simply on force, the land being the property of the occupant only so long as he can hold it by himself, or with the assistance of the chief who protects him. The tenure cannot be transmitted by inheritance without being constantly sapped by the influence of two institutions universal among the Zulus—viz., polygamy and slavery. Christianity has a special bearing on the subject of land tenure, because it is mainly through its agency, indirect as well as direct, that we may look for such changes in the customs of the races of South Africa as may civilise and settle them, and put an end to the ceaseless wandering which have

tended so powerfully to keep them in a state of ever-recurring barbarism. The writer's impression was that the advancement and civilisation of the native tribes of South Africa depend greatly upon the extent to which individual tenure of property can be extended, while a certain patriarchal authority, such as seems inherent in the head of a family or kraal, is recognised and invested with some sort of magisterial and judicial functions sufficient to meet the every-day exigencies of village life.—The President opened the discussion with some remarks on the peculiarities of land tenure in various parts of the world, and was followed by Dr. Rae, Mr. Hyde Clarke, and Miss Buckland.—On the motion of Prof. Flower, a cordial vote of thanks was given to the President and Mrs. Pitt-Rivers for their kindness in allowing the meeting to be held at their house.

ROYAL SOCIETY OF LITERATURE.—(Wednesday, May 24.)

SIR P. DE COLQUHOUN in the Chair.—Mr. J. Henniker Heaton read a paper on "The Origin, Manners, Customs, and Languages of the Natives of Australasia," in which he gave a rapid survey of the early history of Australia, contending that, though various voyagers had touched at different places on the coast, the determination of founding a colony was due to the reports brought home by Capt. Cook. Sydney was the first place that was proclaimed a colony—on January 16, 1788. Mr. Heaton gave an interesting account of the native population from the time when they first came in contact with the Europeans, and showed the usual consequences of such contact in their rapid extinction. He then treated of the customs of the people, and of the animal and vegetable life indigenous to Australia, at the same time entering very fully into the possibility of colonising the interior, which he considered to be more feasible than has been usually supposed.

SOCIETY OF ANTIQUARIES.—(Thursday, May 25.)

W. C. BORLASE, ESQ., V.-P., in the Chair.—The Rev. W. C. Lukis exhibited a series of plans and drawings made by him of the remains at Stonehenge and Avebury, and discussed the previous plans and descriptions in existence, made by Stukeley, Wood, Aubrey, and others, with reference to the present condition of the monuments. Mr. Lukis does not believe that the Friar's Heel, on which the astronomical theory is based, is part of the original Stonehenge, as it is not shaped by tools like the other sarsen stones in the group. Another disproof of that theory is the certainty that another stone formerly stood between the Friar's Heel and the centre of the circle, which must have prevented the view of the sunrise over it. The monument is probably unique, unless some megalithic remains in Arabia, mentioned by Palgrave and a French traveller, are similar to it, but they have not been examined with sufficient care to institute a comparison. The trilithon at the mouth of the Loire, to which it has been likened, is really the remains of a chambered barrow. Mr. Lukis's examination of Avebury showed the errors of Stukeley's plans, in consequence of his preconceived opinions as to the arrangement and purpose of the group.

BROWNING SOCIETY.—(Friday, May 26.)

REV. H. R. HAWES in the Chair.—The first paper was by Rev. Prof. Johnson, on "Bishop Blougram's Apology." The writer considered that the form of the "dramatic monologue" might be considered a novelty of invention in Mr. Browning, obviously gaining over the soliloquy in allowing the artist greater room to work out his conception of character. The gravest subjects in the piece under consideration are relieved by the careless ease of the treatment, and the keenest satire of human vices or foibles conceals deep sympathy for human nature itself. Why does Blougram apologise for his life after his statement—

"Thus I am made, thus life is best for me,  
And thus that it should be I have procured;  
And thus it could not be another way,  
I venture to imagine?"

The answer is that the Bishop has been stung by hearing a voice which clearly says, *Your life is not*

*ideal.* We may, for convenience' sake, divide the apology as follows:—(1) The problem of life; what it is, and how Blougram has solved it. (2) Criticisms of this view of life examined and replied to. (3) Defence of "imperfect faith" as a spring of action. (4) Defence of worldliness as a species of action. All that the Bishop says in his real character—as a thinker—is deeply true, but when he speaks in his representative character—as an actor of an absolute faith which he has not—he resorts to a duplicity which infects his whole apology. But when he assumes that the real should be the first object in our thoughts, he is ironical, wishing to give Gigadibs a severe lesson. It seems unfair to take him at his word when he avows his gross worldliness. He suppresses also instincts hell-deep as well as those heaven-high. He has been brought to bay by the assault on his character, and this is not the moment in which to expect the severest candour or the loftiest recognition of truth in the abstract. Blougram does not deserve contempt; the intellectual position of the Roman ecclesiastic nowadays must be one full of trial to a powerful mind like the Bishop's. It demands some sympathy from all serious men.—The second paper was by Mr. William Sharp, on "Browning and the Arts." I. Poetry. The poet is referred to personally in two poems as "The Mermaid," "House," "The Two Poets of Croisic" (vers. 155, 156), and especially in the latter part of the third book of "Sordello;" impersonally, in the characters of "Aprile," "The Two Poets of Croisic," "Eglamor," "Sordello," and others. Aprile is the dreamer; Eglamor, the priest, the lover; Sordello, the maker, the transmutter. II. Music. Music is evidently to Mr. Browning the ultimate expression of the soul's yearnings by virtue of that subtlety therein which is too indefinite for words to render adequately—that power of giving expression to the unformed and floating fancies of the mind. The poems of Mr. Browning treating specially of music are "Abt Vogler," "A Toccata of Galuppi's," "Master Hughes of Sax-Gotha," and "Saul." III. Painting. This would seem, on the whole, the art of which Mr. Browning has most thorough knowledge. Mr. Hamerton says that Mr. Browning thoroughly enters into the artistic mind, and sees it from the inside as no other English poet has ever done. The poems which deal with this art are "Old Pictures at Florence," "The Guardian Angel," "My Last Duchess," "Fra Lippo Lippi," "Andrea del Sarto," and several others. It would be a good thing if Mr. Browning's poems constituted a part of the regular study of all young artists. IV. Sculpture. This is represented by "The Bishop orders his Tomb at Saint Praxed's," "The Statue and the Bust," "Deaf and Dumb," and part of "Pippa Passes." All through what Mr. Browning has written in connexion with art it is impressed on us how the ideal must ever be before the true artist, the fact of perfect achievement being impossible to the painter, poet, or sculptor; for he must ever see, if he would see fully, beyond the symbols which he uses to express himself.

"A man's reach should exceed his grasp,  
Or what's a heaven for?"

FINE ART.

THE ART JOURNAL for JUNE, 2s. 6d.—ILLUSTRATED PAPERS: MR. SETHOUR HADEN'S ETCHINGS, by FREDERICK WEDMORE. THE CITY OF TOURS, by Mrs. ALFRED HUNT. EXAMPLES OF ARTISTIC METAL WORK. CHILDHOOD AND ART, by J. H. POLLEN.

THE ART JOURNAL for JUNE, 2s. 6d.—PLATES: "ISABELLA," by J. E. MILLAIS, R.A., engraved by H. Bourne. "A BIENTOT," by VAL PRINSEP, A.R.A., etched by Leopold Flanng. "LORD BEACONSFIELD," from a Statue by LORD RONALD GOWER.

THE ART JOURNAL for JUNE, 2s. 6d.—ESSAYS: DRAWING and ENGRAVING on WOOD, by HUBERT HERKOMER, A.R.A. SIR J. SOANE'S MUSEUM, by ALAN S. COLE. THE EXHIBITION of the ROYAL ACADEMY. THE WATER-COLOUR EXHIBITIONS, ART NOTES, REVIEWS, &c.—3s. 1/4 LANE; and of all Booksellers.

THE ROYAL ACADEMY.

(Fourth Notice.)

THE fresh green landscapes of Mr. Frank Walton are delightful. Content with effects which we all know and enjoy, he has studied them with great care and love, and gets his reward in making the familiar scenes of our

beautiful country more interesting than anything less common can be. Scenes of foreign lands may be more striking and wonderful to us, and may attract more at the first glance, but we come back to his with something of the delight of coming home after a holiday abroad. His "Noontide's Hush and Heat and Shine" (17) is but a tree in a field, but we do not remember to have seen any more truly enjoyable landscape for a long while. The grass is just the rough green grass we have trodden a thousand times; it grows not in undistinguishable mass, but in pleasantly broken clumps and patches; the unevenness of the ground is as carefully rendered as the vegetation upon it; the tree has air between all its leaves; and, above all, the "shine" is there, not striking only on this point and that, but permeating the whole luminous atmosphere. It is a field to walk and breathe in. In his larger and still finer picture "The Happy Valley" (779), with its beautiful distance and admirably painted foreground (so moist and tangly), the light and air are just as fully felt; and his "Still Waters" (187) is not less worthy of notice as a picture in which the skill of the painter is lost in the completeness of its achievement. Notwithstanding the fullness of their effect, there is no sign of effort or of mere paint. Mr. Oakes is as natural and thorough as ever. In his "Porchester Pool" (70) the light bright sky and limpid green water are rendered with rare simplicity and breadth, and it appeals to us at once by its freshness and truth. His "Road through Wastdale" (117) is not so striking in composition as Mr. M'Whirter's "Ossian's Grave" (219), but we feel that the one artist has been in search of truth and the other of effect, that the one has achieved his intention and the other has missed it. In such a matter as this we would not be dogmatic. Mr. M'Whirter's picture is a fine one, and should perhaps impress us more than it does; but although all his four contributions this year are attractive, there is none which seems to us so successful as his "Rainy Day—Venice" (839). We must not leave Mr. Oakes without mentioning his "Mewstone" (427) and his "Wild March Morning" (467). The latter, with its cold steely sky and warm brown earth, is as delightful in colour as it is true to nature. Of Mr. Brett we have already spoken. He is a painter of such well-known and strongly marked individuality that there is little to be said of him but that he shows no failing in the keenness of his sight and the firmness of his hand. The most definite and objective of painters, he leaves nothing to the imagination. His truly drawn and truly coloured clouds, his sea, with every dimple full of innumerable and variegated reflections, his rocks and seaweed, with which neither geologist nor botanist could find a fault; his sunshine that seems to strike upon you almost as much as on the mussels, whose purple bloom forms such a distinct feature of his "Grey of the Morning" (506), are examples of imitative skill such as has never been surpassed by any artist alive or dead. When we turn from these manly, true, and self-respecting exercises of a supreme gift to the many works of weak and false sentimentality by men to whom the Academy have awarded their full honours, we cannot help thinking that sectarian prejudice is as strong in art as in religion. No greater contrast to Mr. Brett's aim and manner can be found than those of Mr. Cecil Lawson, one of the few landscape artists who, with all his faults, ever strives after grandeur of design and mental impressiveness of effect. His "Blackdown, Surrey" (99), has a fine bold sky and a strong scheme of light and shade, and its colour is rich and beautiful. There is poetry also in his wild view of "The Doone Valley" (1512), but neither work seems to rise to the level of his last year's performance. A picture which unites much poetry of concep-

tion with careful painting of fact is Mr. C. E. Johnson's "Wounded Stag" (793), with its grand oak rooted in a rocky hill, and fine, if rather too broken and glittering, effect of sun. The range and strength of this artist are shown by the contrast between this bright romantic forest scene and the quiet sentiment of his "Evening Solitude" (1513). If there is not much sentiment, there is a good deal of strength of design in Mr. Keeley Halawelle's landscapes. Of the three we prefer "Inverlocky Castle and Ben Nevis" (413), with its well-painted reflections in the middle distance; but they are all cold and clayey in colour, contrasting singularly in this respect with his fine water-colours at the Institute. His bellying black clouds begin to pall by repetition, and we should welcome his return to figure subjects. Altogether, the landscapes at the Academy show the completeness of the breach with that old classical and conventional school which Turner caressed with one hand while he destroyed it with the other. Neither is there any trace of that great artist's influence as a colourist and renderer of the more evanescent and gorgeous effects of light. The idealism which he followed and the idealism which he created are alike dead. Only by Mr. Alfred Hunt's view of "Sonning" are we reminded of the marvellous refinement of Turner's best and most distinctive style. This picture is so light in key and delicate in its gradations that it seems pale and ineffectual, almost a ghost of a picture, after looking at the lusty labours of the new school; but it will well repay a little concentrated attention till the eyes get acclimatised to its more gentle atmosphere, and can feel the sunlight vibrating in the thin air. Then it will be seen that every inch of it is more full of thought and beauty than many a yard of the coarser and more effective canvases with which it is surrounded. There can, however, be no doubt about the vigour and true vitality of the newer school, which seems to be passing out of that stage of blunt materialism which was the natural reaction against the pretty artificiality of the immediate successors of Turner, just as its broad handling is a reaction against the niggling minuteness of the pre-Raphaelite school. They are accomplished painters and faithful students of Nature, boldly interpreting her in their own way, and with results at once beautiful and astonishing. In the work of many of the younger men there are distinct traces of foreign influence. It was in France, if we mistake not, that Mr. W. H. Bartlett learnt to treat so seriously and skilfully the meagre bit of sandy soil in the foreground of his masterly picture of "Young Poachers" (275); and, rightly or wrongly, we are reminded of the Dutch school, especially of Mauve, in "Waiting," by Mr. Miles Mason (657), with its somewhat uncouth cattle. Opposite to the last-mentioned work is another picture of oxen called "On the Road" (648), by Mr. Robert Meyerheim, remarkable for its fine colour and vigorous composition; and in the same room are two fine large landscapes, to which we cannot afford the attention which they deserve; one is Mr. Charles Stuart's "Sunny Autumn" (627), the other Mr. Edwin Ellis's "Waiting for the Boats" (610).

The rest of the oil pictures we must treat somewhat summarily. In the first room is Mr. Marcus Stone's best picture of the year, "Il y en a toujours un autre" (5), a very pretty picture, dainty in colour and finished in execution. Mr. Charles Lutyens's portrait of "Miss Louisa Galloway" (13), and Mr. Horace Cauty's "My First Sitting" (37), seem to us to deserve a special word. So also do Mr. Munn's clever little landscape called "Pumpkins—South of France" (44) and Mr. Hugh Cameron's delightful interior with a little girl going to bed (48), which, in its way, is almost as good as his "Children of the Riviera" (41) before noticed.

On the other side of the room are Mr. John Smart's large and effective "In the Track of the Storm" (69), and the best of Mr. Peter Graham's contributions of the year, "The Inflowing Tide" (77). Not to be missed are Mr. D. Pesenti's "Interno di Casa" (84), Mr. Henry Vincent's "What is it?" (87)—two bright, pretty, mischievous children looking out of window, who are brilliantly painted in the manner of an early Millais—and Mr. R. W. Macbeth's sunny "The Ferry Inn" (93). Mr. Tremayne Lark's "Monk of the Order of St. Francis" (88) appears to be a picture of promise.

In room 2, one of our most serious omissions is Mr. W. L. Wyllie's picture of barges and steamers on "Our River" (118), which (whatever may be its real name) is sufficiently like the Thames. It would be difficult to overpraise the cleverness with which a really beautiful picture has been got out of sooty boats and ships and smokes of various volume and dirtiness; but there is the sky behind, very tender and true in colour, and the moving, bronzed water to aid the charm. Another picture, larger but quite equal to this in quality, is the same artist's "Port of London" (1506). We have never seen such subjects treated with so much skill and success, and these pictures certainly deserve to be noted as among the most remarkable of the year. Mr. Arthur Bell's "Feeding-time" (135) is bright and pretty; and Mr. Walter D. Batley's "Old Crag Pit, Suffolk" (140), warm and solid in the sun's rays, reminds us of Old Crome. In this room also are several delightful pictures of cottage life by Mr. Joseph Clark, which would each need more special mention if the charm of his children, and the honest cheerfulness of their parents and guardians, were not so well known. He carries on, but with his own peculiar grace of style and sober sweetness of colouring, the delightful art of Wilkie, Mulready, and Webster; and we know not, unfortunately, where to look for his successor. "The Tempting Offer" (164) is perhaps the most delightful of these little masterpieces. Mr. E. Byrne de Satur's capital donkeys, called "Members of the Commons" (174), hangs just above a little landscape, by Mr. G. Costa, of very unusual delicacy of colour and artistic refinement, "Sunrise on the Carrara Hills" (172). We have the less scruple in passing lightly by this tender little painting, as the forthcoming exhibition of the artist's works at the Fine Art Society will give us an opportunity of studying his genius more seriously. Mr. Thomas Ireland's bare birches by a stream, called "January—A Marshy Meadow" (188), is the most beautiful of many other pretty landscapes in this room. Here also are Mr. H. W. B. Davis's best picture of the year, "In Ross-shire" (145), very striking in its effect of sunlight on the fleeces of sheep, and Mr. Prinsep's "At the Golden Gate" (163), the pleasantest of his contributions. It is one of those graceful arrangements of form and colour, with no sentiment in particular, which have been so popular of late years. Sir Frederick Leighton and Mr. Albert Moore are perhaps the only perfect masters of this kind of design; but Mr. Perugini is a good third, as his very charming "Dolce far niente" (78) proves. Of Mr. Albert Moore there is only one example, but it is a masterly one (107). The type of beauty, despite the lazy lolling of the young ladies, who seem suffering from the exhausting effects of a Turkish bath, is pure and even noble, and the arrangement of the draperies and notes of colour are as "musical" as ever.

Mr. Frank Dicksee has, as usual, a distinct sentiment. It is no little praise to his "Love Story" (290) to say that it would be a worthy illustration of Coleridge's well-known verses beginning "All thoughts, all passions, all delights." It is sentimental without "spooniness," and the drawing and colour and effect of moonlight are alike beautiful. It is a healthy

sign that there are two pictures of lovers in this exhibition, this and Sir Frederick Leighton's "Wedded," so tender and yet so healthy. With Mr. Long's large composition, "Why tarry the wheels of his chariots?" (302) we are not in perfect sympathy. Its feeling seems to us to be entirely modern, not to say English. The ladies of Sisera's mother seem to us anything but "wise," and the composition is scattered and empty. Opposite to it, and directly over Mr. Pettie's "Palmer," is a very masterly work by Mr. A. Achille Glisenti, "Maize Harvest, Lombardy" (253). The figure of the woman is splendidly drawn. Noticeable for its successful effort to produce a striking effect of light is Mr. Shrubsole's "Crown of Fire" (306); and among the other "innocents" in the same gallery which we are compelled to murder for want of space may be named Mr. Adrian Stokes's strong bright "Winter Afternoon in the South of France" (320), Mr. Bridgman's clever "Interior at Biskra" (288), Mr. John Collier's bold but brazen "Clytemnestra" (272), Mr. John Scott's vigorous but only half-poetical "Wild Swans" (270), Mr. Luke Fildes' charming "Nina" (268), and Mr. Knighton Warren's masterly "Guard of the Royal Harem" (237). Even then the names of William Padgett, James Archer, A. F. Grace, Herbert Dalziel, and Flitcroft Fletcher rise to reproach us. The last-named artist's "Old Snuff-mill on the Wandle" is excellent.

In room 4 we passed unnoticed two of the best of this year's *genre* pictures—Mr. Van Haanen's "Cobbler's Shop" (344) and Mr. Ferdinand Fagerlin's "A Deserter" (416). Of the former's skill we have already spoken; Mr. Fagerlin's subject is Dutch, and is sufficiently fine in colour and light to remind one of De Hooch. His humour is his own. Mr. Arthur Lemon's "Threshing in Tuscany" (348) is a vigorous and clever picture; but the best of this refined artist's contributions is his "September" (1500), with its fine design and admirably drawn cattle. Mr. Noble's well-grasped heads of horses and donkeys at a trough (378), Mr. Van Beer's "Yacht La Sirène" (391), a very plain but masterly work, Mr. O. Hindley's "Suspicious" (401), Mr. Yeames' "Welcome as Flowers in Spring" (418), good in colour and expression, a pretty example of Mr. Mark Fisher's pleasant orchard scene (412), and Mr. P. R. Morris's pathetic "Sale of the Boat" (417) are all delightful in very different ways. Mr. Morris, though not well represented at the Academy this year, has a charming portrait of his wife and daughter (705).

We hope, in our final notice, to conclude our remarks on the pictures, and to add to those we have already made with regard to the sculpture. COSMO MONKHOUSE.

#### THE SALON OF 1882.

##### (Fourth and Concluding Notice.)

"QUELLE DÉCADENCE!" is the cry of the Parisian *bourgeois* before Jean-Paul Laurens' "Derniers Moments de Maximilien empereur de Mexique." The death of Maximilian is a page of history, but tragedy in a frock coat shocks the popular taste deeply; and the first unfavourable impression is so strong that few care to look a second time, or suffer themselves to be recalled by the pathos of the situation, or attempt to discover the merits certain to be found in any work from the hand of M. Laurens. One thing is certain—whether we may like his version of a subject or no—on those whom he paints for us he has the power of conferring life. To look attentively for ten minutes at this presentment of the unfortunate victim of the Third Napoleon is never to forget something which M. Laurens alone has the

power of showing us. The materials with which he has to deal do not lend themselves readily to pictorial treatment: the Emperor stands between his valet and his priest; on the left, the valet kneels and kisses his master's hand in an agony of farewell; to the right, the priest stands—he would bid courage, and cannot for very anguish; the door is opened, the glare of tropical sunlight floods the little room and brings out the three black-robed figures in startling contrast; the messenger of death stands on the threshold, the orange and red of his dress add to the savage character and bilious hue of the typical features seen beneath the broad shadow of the Mexican hat. In this man's face, and in that of the Emperor, the whole story of the situation is told: the one worn and channelled with lines of bitter anguish, but resolute and nerved by the high courage which is one of the noblest products of civilisation; the other unmoved, every muscle cast in a mould of stolid savagery. The sunlight effect is rendered with admirable force and truth; and M. Laurens has had to rely wholly on skilful massing of light and shade in giving depth and colour and something of a pictorial aspect to this scene, over and above the incontestable merit which it acquires from the force of his dramatic insight and powers of vigorous delineation.

What is the quality which determines the sense of plenitude in light; what is the defect which causes us to feel as if there were a something thin, insubstantial, and empty in the garish day which floods the breakfast table in M. Flameng's "Camille Desmoulins"? There is any amount of steady, patient work put into this representation of the moment when Gen. Brune vainly tried to rouse his friend to a consciousness of danger; when Lucile cried, "Let him alone, Brune; he owes all to his country;" and Camille, tossing his baby in his arms, jestingly answered, "Edamus et bibamus, cras enim moriemur." The three are still seated at the table—Lucile to the front in pink; behind her, on the right, stands the maid in gray and white; Brune sits facing us, his brown coat tells between the white linen of the table and the window which occupies the centre; Camille turns his chair round on the left and also fronts us, the white robes of the little girl in his arms showing against the puce of her father's coat. The light falling on these figures from the large opening in the centre must necessarily be scattered; and it seems as if the only possible way to obtaining a certain coherency of general effect would have been by ingenious massing of light and dark shades of tint. Now pure white, in M. Flameng's arrangement of colour, is as scattered as the light from his window: it appears in the centre, and re-appears to left and right in a most distracting manner; not only so, but at each appearance and re-appearance it comes in contact with passages of deep colour, all of which are of nearly equivalent strength, so that the eye cannot find a point on which to rest. Herein lies, in part, I think, the cause of that defect of quality, well described by the phrase "une lumière crue," which strikes one at first sight of M. Flameng's "Camille Desmoulins."

M. Bonnat's portrait of "M. Puvis de Chavannes" must not go without mention. It is a very forcible reading of his subject, more forcible than life itself. M. de Chavannes stands with one hand resting on the table, which bears some glass vessels on the left; to the right, a corner of his easel is seen behind him; the floor is light; and the background—against which the head tells with admirable strength and solidity—is dark. As a mere example of strong painting and of masterly skill and thoroughness in workmanship, this portrait must take the first rank among those of the year, although it may be questioned whether M. Bonnat's version of the character of M. Puvis de

Chavannes' head will commend itself to those of his friends who feel that the signs of a virile energy and constructive power have been accentuated by M. Bonnat at the expense of indications of refinement and idealism.

The other less important portraits of the year are so many and in many ways so good that it is difficult to make a selection from them; it may, however, be predicted that M. Cabanel's pupil, M. Humbert, is likely, before long, to take his master's place as the favourite "peintre des dames."

The number of foreign contributors is this year more than ever remarkable; every country in Europe has sent its contingent. Chelmonski has varied his snowy landscapes by "Devant le Cabaret—Paysage d'Automne;" but in his "Halte de Cosaques de Ligne" he returns to the violent contrasts afforded by troops of horse and their dark-robed riders bedded in the white drifts of mid-winter. The road, along which the Cossacks have trampled the snow to mud, stretches out to the horizon on the left, and a range of white roofs and snow-laden trees rises above the crowd, just in the centre of which occurs a break where steps lead up to the open door of the roadside inn. Another Polish painter—M. Brandt—sends "Marché aux Chevaux à Balta (Podolie)," a work the *ensemble* of which is attractive and which will bear examination in the minutest detail. The strong sunlight effect under which the vast horse-fair appears, with its innumerable huts and tents to right and left, is remarkably golden and true in tone. The Eastern carpets, utensils, and all the little details of the tent interiors are rendered with wonderful grace and fidelity; and even the little groups which are placed here and there on the rising ground in the middle distance show delicate and lively powers of characterisation. The chief attention, however, is fastened, as it should be, on the tremendous rush and whirl of the horses driven into the centre; and the eye is fixed there at once, not only by the lines of the general arrangement, but by what seems the one brilliant touch of positive colour in the picture—the red cap which tells above the striped jacket of the rider wheeling round in front.

M. Brandt's master, M. Adam, seems to bestow an admirable technical training on all his pupils, while respecting their individuality. Nothing can be more different, for example, from M. Brandt's work than M. Geoffroy's "En Quarantaine"—a good bit of quiet character study. A sulky boy sits in exile on the garden bench outside the school-house door, whence he is curiously inspected by his comrades. The figure is well arranged, the comedy not overdone, the child's air of moody concentration admirably delineated, and the execution sound and thorough, equally free from affectation of refinement, or of force.

Mr. Hawkins has followed up the success he obtained last year by a graceful picture of an orchard in spring, in the foreground of which figures "La Paysanne et les Oies." All the charming details of the meadow, full of bloom and verdure, are observed with much grace and fidelity, becoming more and more homely in character until we reach the distant enclosure, where the mistresses of the homestead is busy with the white linen bleaching on the boughs. The long gray roofs are seen through the branches and against a narrow strip of clear sky; they speak of the peaceful security of domestic life, and enhance the character of gravity and chastity which Mr. Hawkins has imparted to the dream of the young girl, the central figure in the foreground, whose thoughts, prompted by the birds caressing each other at her feet, are filled with forebodings of the mysteries of human life and love. The picture is framed somewhat pretentiously in a band of old tapestry; and the painter has purposely

kept his general effect very flat, after the method specially appropriate to decorative art, but which in the treatment of a picture of this class has something of an air of modern affectation.

The landscapes this year are above the average of excellence. M. Harpignies has outdone himself in his "Bords du Loing à St-Privé;" he has painted a quiet turn in the river, with a glimpse of rocky banks and far distance seen under a clear blue summer sky, traversed here and there by little white puffs of breezy cloud; on this groundwork a couple of splendid elms, planted on the left bank, are laid in with magnificent precision. Although "La Loire," M. Harpignies' second contribution, can hardly be compared in point of striking effect to the "Bords du Loing," yet so great is the beauty of the river curves, far winding into lovely distance, that one lingers longer before the work which at first sight seems the least attractive. M. Yon is also at more than his best in his smaller contribution. The drawing of the flat surface of the water in "La Rivière d'Eure à Acquigny" is no less admirable than the fine choice which he displays in the treatment of his masses and the great purity of his tone. The fine vaporous motion of M. Loir's autumn sky, and the excellent drawing of the curves of quay and bridge, make of his "Fin d'Automne" a noticeable work; and as representatives of landscape proper, MM. Girard, La Vielle, Pelouse, and many other names are worthy of mention. "Les Bords de l'Ellé—Finisterre," by the last-named artist, is, in some respects, a masterly work, marred by what seems to be the painter's incurable insensibility to the simplest elements of pictorial arrangement. M. Montenard's "En Provence" is admirable for its truth of peculiar local atmospheric effect. He has painted the barren crown of a spur—say of the Basses-Alpes—gray with thyme, the thin grass gnawed close to the stones, which render cultivation impossible, by successive troops of goats; on the mule-track, in the foreground, lies the cast shadow—blue in the sunlight—from an unseen hut, the inmates of which have come out to do reverence as, above the distant ridge, surmounted by a way-side chapel, a solemn procession appears, heralded by a crimson banner. "En Provence" is not a very strong performance, but shows throughout a capacity for steady and delicate observation. For strength—among the landscapes with figures—M. Clairin's vigorous and well composed "Brûleuses de Varché à la Pointe du Raz" deserves great attention.

Of the two works contributed by M. van Marche, "Vache normande" must be cited with special distinction. The dark hide of this cow is a marvel of rendering; great force is given to the rich brown colour by touches of white about the belly, feet, and head, and by the little tan cow drinking peaceably at a distant pool undisturbed by the excitement of her companion. For the "Vache normande" is bellowing with all her might; and the movement of her throat and flanks is so true that her roar seems to pass over the quiet meadow pasture, over the heads of the figures ploughing in the far-off corn-field, and to stir the lowering sky, echoing and re-echoing against the hills.

The extraordinary influence of painting on sculpture was never more plainly exemplified than by this year's gathering, not only in choice of subject and mode of treatment, but even in the method of execution. The run upon Camille Desmoulins which is a little tiresome upstairs is even more conspicuous in the garden, where four enormous statues represent him in different degrees of frenzied declamation. M. Vital Cornu places his hero on a simple pedestal, brings his left arm across his chest, and uplifts the right in an ordinary oratorical gesture; M.

Doublemard gives him a hat and makes him posture with extraordinary violence; M. Dumaige has presented him with a rush-bottomed chair; and M. Carrier-Belleuse, not content with one chair, has seized on two, one of which he has placed at the side, while the other is tumbled under the table on which Camille stands. Seriously speaking, if this is the kind of thing that we must have from the modern sculptor, then M. Carrier-Belleuse does it best. His figure has a sinewy grace, as well as energy; Camille stands well, and seems yet instinct with the spring which has landed him on the table which serves as a platform. M. Mercie's colossal group also speaks of the powerful influence of modern fashion. "Quand-même" is the motto borne by his Alsatian dame, a strapping woman in full costume, tremendous in head-knots. She supports with her right arm a dying youth who has fallen at her feet; and, with his musket clasped to her breast, faces round erect and defiant of the common foe. It is almost needless to say that, in all practical points, M. Mercie is an accomplished artist. His group holds well together, and the points of dark are found with great skill and much picturesque effect. Choice of form seems also to have been as much modified by the modern movement as choice of subject; and the "Aurore" of Delaplanche shows limbs which recal the taste of M. Courbet's nymphs. With arms above her head, she casts backward an enormous sheet of plaster, which it requires some effort of the imagination to take for drapery. The "Diane" of M. Falguière also shows what may be called a vulgar choice of form, which is, unfortunately, but in too good keeping with the features and expression of the face. The figure stands easily and firmly poised on the left leg; her left arm falls with the bow from which she has just discharged the shaft; her eyes seem to watch its flight; and her right arm is still uplifted. M. Lanson's marble group, "L'Age de Fer," is a remarkably well-composed study of two athletes, and wants only something more of searching workmanship to be a thoroughly satisfactory achievement.

Very little of that careful working out of every detail which we are told was once a thing of course in French sculpture is now to be seen in the Salon. M. Cordier has a portrait-statue of a lady very carefully worked out, which looks like a "pendule de l'empire moins le stil;" and M. Injalbert's "Amour" is studied with much delicacy. Love sits, supporting on his knees a dish, which he holds with one hand, and over which he bows his head to watch the movements of two doves which have alighted on it, and which he teases with a switch poised in his left hand. The little head of the figure is very original looking; but the general aspect suffers from an over-zeal for delicacy in finish, which has all but effaced anything like character.

On the whole, the bit of finished work which pleased me best this year was M. Chapu's "Le Génie de l'Immortalité," not a very original design, but remarkably improved in execution on the project which appeared at the Salon in plaster two years ago. The spring upwards of the figure personifying Immortality is extremely beautiful; the extended arms, and the whole of the upper part of the body, are an admirable example of good workmanship. From among the busts I should select M. Dubois' bronze head of Baudry, and that, notwithstanding the style of the execution, is unpleasant to the eye, for it is unsuggestive of the material in which it is carried out, or rather suggestive of a quite different material. Still, there are various ways of speaking true, and this head speaks true; the vitality of the look is extraordinary, and every touch laid on it is full of intention, of character, of colour. E. F. S. PATTISON.

### THE ART OF COINS AND MEDALS.

MR. REGINALD STUART POOLE gave his first lecture on "The Art of Coins and Medals" at University College, London, on May 22. The course owes its origin to the revival of medal work by Prof. Legros, whose portrait-medals of Darwin and Tennyson show the spirit of Pisano, the greatest artist of the Renaissance in this province, while indicating a wholly independent method. They are in the great style, yet original in design and execution. Once this beautiful art was universal in the Greek world, nor was it scarcely less widespread in Italy during the earlier Renaissance. Greek coins, however, are, far more than Italian medals, a grammar of art, for they give us in excellent works the succession of styles and the extension of schools. Hence their value in education, for no other productions of the Greeks have the same range either in time or in place. They reflect the beautiful sculptures and paintings which were before the engravers' eyes, who developed and adapted ideas, but never blindly copied. The Italian medals, for their truthful love of individuality, are only less useful to the student, who in the province of portraiture could not find nobler examples as his guide. All these earlier works owe their force to their being executed by handwork and not by mechanism.

The art of medals is relief, and so intermediate between sculpture and painting, influenced by one or the other according as it ruled at any given time. Therefore the different modes of relief should be carefully studied, especially in the Greek examples. With the older artists, Greeks or Italians, material and every detail of form were carefully thought out. The pure circle was wisely avoided; the surface of the field was so treated as to give an atmosphere in which the subject lived. The obverse and reverse had a proper relation of mutual support, yet were individually complete. The subject of the obverse was the head, the Greek usually ideal, and always so in the best age; the Italian realistic. While the three-fourths face was best suited to the circular limits of a coin, none but the greatest artists ventured beyond the profile, treated with extraordinary skill by the Greeks. A long series of diagrams illustrated the details of the head as represented on Greek coins and Italian medals. The more varied subjects of the reverse were similarly shown, and gave an opportunity for explaining the principles of design under the conditions of medal art.

### NOTES ON ART AND ARCHAEOLOGY.

PROF. BARNABEI writes to us from Rome that a fragment has been discovered of nothing less than a shield of Achilles, bearing not only the sculptures, but also a portion of the text of Homer. We are compelled, by pressure on our space, to reserve Prof. Barnabei's full communication till next week.

WE are pleased to know that the national memorial to Lord Beaconsfield is in an advanced state, Mr. Raggi, to whom the task of executing a statue was entrusted, having finished the colossal model in clay. This will be cast in bronze, and placed in Parliament Square. The statue will, we are glad to say, be found by the public to be a work of much dignity. Of course, it is not easy to discover new attitudes for politicians; and, as Mr. Bruce Joy represents Mr. Gladstone in a position of fervent and rhetorical appeal, so Mr. Raggi represents Lord Beaconsfield as the prudent and sagacious counsellor, brooding, it may be, on the latest phase of an Asian mystery. The great statesman is in his peer's robes, which cover a diplomatic or court dress. His head is drooped, and an expression of meditation overspreads the aged features.

Comparisons have been made between this and other portraits of Lord Beaconsfield; and it has been remembered that in the present Royal Academy Mr. Hamo Thornycroft has exhibited a pretty little *genre* figure, very natural and tasteful, and that the pathetic or even tragic side of Lord Beaconsfield's character and circumstance was displayed with nothing less than genius by the celebrated artist of *Vanity Fair*. Mr. Millais, too, painted a portrait; but he had not the sittings he could have desired, and his success was very partial. Mr. Raggi is really to be complimented upon the skill with which he has overcome the obstacles to full-length portraiture in the round. His statue of the Conservative leader will probably interest more than one generation of the Tory party. Indeed, it may generally satisfy.

MR. DENNIS has been excavating three of the tumuli near Sardes, but with little result. Two of them turned out to have been rifled at an early period, while the objects found in the third were, on the whole, disappointing. They exhibit, however, Assyrian influence upon the early art of Lydia. Mr. Dennis is now about to set to work upon the Temple of Cybele, if he can obtain the necessary funds. The labour of excavation here will be heavy; but, in view of the importance of uncovering one of the noblest and most perfect temples of the ancient Greek world, it may be hoped that it will not be allowed to remain unaccomplished for want of money.

MESSRS. ROBERTS BROS., of Boston, have in the press a new and uniform edition of Mr. Hamerton's works in ten volumes square 16mo. This edition will be much cheaper than the previous editions issued by the same firm, but the volumes will not be sold separately. The edition at two dollars a volume will still be kept in print.

THE annual meeting of the Society for the Protection of Ancient Buildings will be held in the hall of the Society of Arts on Friday next, June 9, at 2.45 p.m. The chair will be taken by Mr. James Bryce, M.P. Mr. William Morris will read the Report of the society's work during the past year.

THE general arrangements for the meeting of the Archaeological Institute at Carlisle, from August 1 to August 8, under the presidency of the Bishop of Carlisle, are now completed. The section of Antiquities will be presided over by Mr. John Evans, that of History by Mr. Freeman, and that of Architecture by Mr. Beresford Hope. The vice-presidents of sections are the following:—Antiquities: Sir C. Anderson, Dr. Bruce, Sir W. Guise, Mr. A. Mitchell, Mr. E. Peacock, the Rev. Prebendary Scarth, and the Rev. Canon Simpson; History: the Bishop of Bath and Wells, the Rev. M. Creighton, the Dean of Ely, Mr. R. Ferguson, M.P., Mr. J. Heywood, Mr. W. F. Skene, and Mr. Tucker (Somerset); Architecture: the Dean of Carlisle, Mr. G. T. Clark, Mr. C. J. Ferguson, the Rev. J. T. Fowler, Mr. J. T. Micklethwaite, Mr. J. H. Parker, C.B., and the Rev. Precentor Venables. The temporary museum will be formed under the direction of Mr. R. S. Ferguson (happily Mayor of the great Border city) and of the Rev. T. Lees. The following are some of the places and objects of interest which will be visited:—Kirkoswald Castle, "Long Meg and her Daughters," Brougham Castle and Camp, Mayborough, Yanwath Hall, Lowther Castle, Penrith Castle, Rose Castle, Birdoswald Camp, Roman Wall, Lanercost Priory, Naworth Castle, Burgh-by-Sands, Holm Cultram Abbey, Hexham Priory, Housesteads (Bordovicus), Northumberland Lakes, Melrose Abbey, &c.

It is a pity that the exhibition of modern English pottery now being held by the Society

of Arts should be restricted to a few firms. It represents very inadequately the progress in pottery recently made in England. An annual exhibition of English ceramics, somewhat analogous to the exhibition of pictures at the Royal Academy, which would be thoroughly artistic in spirit is a want, and a want which the Society of Arts, with its perfect freedom from commercial interests, could supply. The present exhibition, however, is one which in variety and beauty could easily be beaten by many large shops in London. No exhibition of modern English art-work in pottery can be satisfactory which ignores Mr. De Morgan, Mr. Martin, Mr. Elton, or Mr. Brannam. If Messrs. Maw and Co., of Broseley, are represented, why not the firm at Gateshead; if Linthorpe, why not Dunmore; if Burslem, why not "Burmantoft"? Of course, Messrs. Doulton, with the Misses Barlow, the Misses Lewis, Miss Linnie Watt, Mr. Tinworth, and the rest of their gifted staff, are a host in themselves, but in their Lambeth ware there is a tendency to over-decoration and much bad design; and we regret to see this firm, hitherto so remarkable for the purity as well as the variety of their designs, lending themselves to foster the production of those shapeless realistic monstrosities which have lately disfigured the shop windows. It is bad enough when an attempt is made at naturalistic flowers in china, the material being less fitted even than wax for attempting to give the transparency and consistency of flowers; but even poppies, when modelled in clay, are not so obviously unreal as sea anemones. Equally bad as art and as fine in execution is Messrs. Minton's large vase with men chained to the handles. In looking at them one is each moment expecting the figures to slip off and hang heels upwards by their chains, if their weight does not carry away the handles with them. It is a pleasure to turn from these things to the delicate reproductions of Messrs. Wedgwood's old jasper *plaques* and the pretty inventions of M. Solon.

MOST of our readers will, we believe, remember a picture by Mr. Eyre Crowe, called "Brothers of the Brush," depicting an incident so familiar that its appearance on canvas took us by surprise, and had something comic about it on that very account, the brothers of the brush being mounted one over another on a great ladder against the wall of an old-fashioned house in the spring-time of the year, and their intention being to make the dingy fresh and the old look young again. Mr. Crowe's incident is an idyll of town life, reminding us of Dr. Johnson's reply when asked to walk into the country: "No, sir; when you have seen one tree, you have seen any other tree—let us walk down the Strand, and study human nature." This picture, once seen never forgotten, has been admirably etched by Mr. Victor Lhuillier, and published by Mr. Lefevre. The etching possesses all the vigour and sharp realism of the original.

THE death is announced at Paris, at the age of eighty-two, of the eminent engraver, M. Narcisse Lecomte. His engraving of "Dante and Beatrice," after Ary Scheffer, has obtained universal recognition; but he also engraved many works of Raphael and modern portraits, and his "Tintoret" is considered to be his *chef-d'œuvre*.

THE ceremony of unveiling the statue of the late Mariette-Pacha at Boulogne has been fixed for July 16, when it is hoped that not a few of Mariette's English admirers may be present. The statue, which is in bronze and the work of M. A. Jacquemart, is the gift of the State; but subscriptions are still asked for to complete the details of the monument.

M. EUG. MÜNTZ has published as a pamphlet

the two articles which he contributed to the March and April numbers of the *Gazette des Beaux-Arts* upon "The Rivalry between Michael Angelo and Raffaele at Rome." He has added a facsimile of the portrait of Michael Angelo in extreme old age which the late M. Graux discovered in the library of the Escurial.

THE panorama of the Battle of Champigny, by MM. Detaille and de Neuville, is now on view at Paris, and is said to be worthy of the fame of those accomplished artists.

THE first volume has appeared at Moscow of an important work by Count Uvaroff upon Russian archaeology. The present instalment deals with the Stone Age.

M. SCHERZER, French vice-consul at Han-Léu, in China, has received a mission from his Government to visit the town of Kint-Tcheng and there study the processes of porcelain manufacture.

## THE STAGE.

### MDME. SARAH BERNHARDT AT THE GAIETY.

MDME. SARAH BERNHARDT's return to London is the theatrical event of the week, and nothing, indeed, can be more extraordinary than the long-continued artistry of an actress who was seemingly so fragile half-a-dozen years ago that her mere survival among us to-day should be a matter for wonder. But not only does Mdme. Sarah Bernhardt live—she lives in perhaps fuller possession than ever of her curious and admirable powers. Time and travel have dealt kindly with her; the Parisian critic complains a little too minutely of some lessening of the "exquisiteness" of the "curve of the cheek," but even the Parisian critic has to admit that the *voix d'or* retains its true ring and betrays nothing of a baser metal. In a word, Mdme. Sarah Bernhardt is still herself, as of old time. She has appeared during the week in two parts, in "Adrienne Lecouvreur" and in "La Dame aux Camélias." With the second, which is alike offensive and trivial in whatever dress or tongue it is presented, we could profitably have dispensed. "La Dame aux Camélias" should have seen its day, and its day has been already too long. It is a vision of sickness that is pitifully sentimental, and of vice that is superfluously stupid. We have nothing more to say to it.

"Adrienne Lecouvreur" is another matter, however. While the "Dame aux Camélias" was written by M. Dumas almost in the morbid infirmity of adolescence, "Adrienne Lecouvreur" was produced not by a poet at all, but by a craftsman and a playwright in a healthy time when his judgment was clear. Like much of its author's work, it is a little dull, but it is sound. The studious listener is rewarded for his patience as the second act progresses, and by the time the curtain falls full opportunity has been given to many players besides the leading actress to exhibit skill with good effect. But Mdme. Sarah Bernhardt is not well supported, and so the play at the Gaiety is not as interesting as it might be. Two of the fellow-players of the great actress are people of some reputation. These are Mdme. Fromentin and M. Talbot. But Mdme. Fromentin is occasionally stiff, and M. Talbot is not seldom heavy. It has been said, with truth, that distinction is lacking to M. Guitry as Maurice de Saxe, and that the Abbé of M. Pascal is not the Abbé of the boudoir. The whole weight of the piece falls, then, on Mdme. Sarah Bernhardt; and, if she invests her part with something less of reality than she can succeed in giving to a part in modern life, nothing worse can be said in her dispraise.

Adrienne with her is not throughout so effective as is Frou-frou in the quarrel scene; but inequality is a characteristic of Mdme. Bernhardt in any prolonged rôle—her Frou-frou itself is unequal—and as Adrienne she has wonderful moments and opportunities, which she seizes to the utmost. Of these, two, we take it, are particularly worthy of mention. The first is Adrienne's recitation to her lover of La Fontaine's fable of "Les deux Pigeons." The second is Adrienne's denunciation of her rival through the medium of a strong quotation from Racine. In both Mdme. Bernhardt makes exhibition of the excellence of her art. She is tender and plaintive in the first, that wonderful instrument, her voice, uttering duly, note by note, an *adagio* or *andante*. And she is passionate and embittered in the second. On the whole, "Adrienne Lecouvreur" is performed by her as it can hardly have been performed by anyone since Rachel. It is perhaps a pity that Mdme. Sarah Bernhardt's appearances have so often been made the occasion of sensational displays, and that she has been spoken of in so many connexions in Paris first, and since then in half the great cities of Europe and America. To the minds of simple people, who like art rather than advertisement, and care more for the performance than for the *réclame*, this has tended to vulgarise her. It is possible, and even natural, to be disinclined to associate artistic excellence with so tremendous and constant a publicity. Yet the people who have known, only too well, that the trumpet has been blown only too loudly over the achievements of the commonplace, must take courage in the present instance. Neither Paris, nor America, nor Italy, nor Spain has spoiled the art of an actress whose accomplishments are as phenomenal as her success.

## STAGE NOTES.

MR. THOMAS THORNE is introducing at the Vaudeville Theatre a custom we have more than once ventured to recommend; that is, he has broken on more than one occasion the run of a successful piece. This plan reposes the performers, who weary of the uninterrupted acting of the same part; and by the variety introduced into the playbill it allows the theatre-goer a greater chance of desiring to see the entertainment at any particular theatre. Lately at the Vaudeville "The School for Scandal" was performed for two nights during a week in which "London Assurance" held the principal place in the bills, and now again a performance of "Money" has been introduced at what is probably an early stage of the run of "London Assurance." Mr. Thomas Thorne is disposed to establish for the Vaudeville Theatre a repertory of comedy; and, if he can succeed in making his most agreeable little playhouse assume the functions which the Haymarket discharged until the regular troop was disturbed by the advent of Mr. Sothorn, he will be doing a distinct service to the English stage. Meantime, he has certainly assembled a strong company for the performance of high comedy, and the movements of the company are controlled with intelligence.

THE reports that Mdme. Ristori would not appear in London after her very long absence are, we are glad to hear, unfounded. The great Italian tragedian will be seen on the boards of Drury Lane, playing Lady Macbeth in English, within about a month from this time; and she will afterwards undertake a short tour in the provinces.

MESSRS. REMINGTON will shortly publish a volume of essays on theatrical subjects by Mr. Mowbray Morris.

## MUSIC.

## "DIE MEISTERSINGER" AT DRURY LANE.

HAYDN, after working two whole years upon the "Creation," said to someone who was impatient to see the work concluded, "I spend much time over it because I intend it to last a long time." The "Creation" has stood the test of nearly a century. If the success of a work depends upon the time bestowed upon it, a long life is in store for "Die Meistersinger," for it engaged the attention of Wagner for more than twenty years. It was first sketched out in 1845, but not completed till 1867. The first performance of this opera took place at Munich on June 21, 1868, under the direction of Dr. Hans von Bülow. In 1845 Wagner, having finished "Tannhäuser," resolved, "almost without premeditation," that his next should be a comic opera, and his first idea was to present the Mastersingers, with Hans Sachs at their head, as a satirical supplement to his "Battle of the Bards at the Wartburg." In the interesting Preface (signed C. A. B.) to H. and F. Corder's excellent rendering into English of Wagner's poem, it is explained that, as in "Tannhäuser," the victory of virtue over vice is typified, so "Die Meistersinger" represents the victory of genius, aided by good sense, over pedantry and conventionalism.

Walter von Stolzing, a young Franconian knight, is in love with Eva, the beautiful daughter of Veit Pogner, the wealthy goldsmith of Nuremberg. As the curtain rises for the first act, service is being concluded in the church of St. Catherine. Eva, with her maid, Magdalena, comes out of her pew, Walther advances, and, after a few introductory words, eagerly enquires, "Are you betrothed?" He learns that on the following day her hand will be offered as a reward to the winner in a contest of song. Only Mastersingers can compete, and poor Walther is in despair; he is a poet and musician by nature, but knows nothing of the "Tabulature," the table of rules to be observed and faults to be guarded against by the scholar. Magdalena's lover now appears—David, apprentice to Hans Sachs, the celebrated Nuremberg shoemaker and poet of the sixteenth century. David and other apprentices commence arranging seats in the church for a meeting of the Masters, and Magdalena soon persuades him to do his best to prepare Walther for his examination. David explains the "tones" and the "modes," the "stanzas" and the "stave," but Walther has neither time nor inclination to listen to his jargon, and resolves to wring victory "only through verse with the proper strain." The Mastersingers arrive; Walther is introduced to them by Pogner, to whom he is well known, and sings his trial song. His failure is complete; Beckmesser, one of the Masters, as "marker," exhibits his slate covered with marks showing faults both of rhyme and rhythm committed by the candidate. Beckmesser, as a poet, not of nature, but of art, could not understand, and therefore could have no sympathy with, the wild and formless, though powerful and passionate, strains of the youth taught by nature; and moreover, as a suitor himself for Eva's hand, he was not likely to see anything good in a dangerous rival. Walther is declared "out-sung and outdone," although Hans Sachs tries to plead for the new-comer. Sachs admits that all in Walther's song is not according to rule, but not on that account necessarily bad.

In the second act Walther meets Eva, confesses his failure, and proposes flight. They are about to depart when the tuning of a lute is heard. It is Beckmesser, who has come to entertain with a serenade the lady of his love. Sachs from his shop has seen the meeting of the lovers, and, favourably disposed to both, resolves to help them, but in his own peculiar

way. He interrupts Beckmesser in his serenade, and marks all his mistakes (just as Beckmesser had marked Walther's faults in the morning) by violent blows with a hammer on his last, for he is working at a pair of shoes for Beckmesser. Sachs sings at the top of his voice a quaint old song; Beckmesser shouts out his serenade; the noise of the two, combined with the strokes of the hammer, awakens the neighbours. The quiet street is suddenly filled with people, fighting, singing, and shouting. This is the shoemaker's opportunity. In the general confusion he seizes hold of Walther, drags him into his shop, and then sees that Eva enters her father's house opposite. The crowd disperses, and the Watchman, with his horn, appears in the now silent and deserted street.

In the third act Walther relates to Sachs a wonderful dream. Sachs writes it down, and this extemporary poem, slightly altered and arranged, becomes a master-song. Beckmesser now arrives, sees the paper with the words, and imagines that Sachs is going to enter himself as competitor. He puts the document in his pocket, but Sachs comes in, and, after listening to Beckmesser's accusations, tells him he may keep the paper and make what use he likes of the poem. At the great contest in the Pegnitz meadow outside the town, Beckmesser sings this song, but putting it to the commonplace strains of his own music, and, moreover, making ridiculous mistakes of words, he ignominiously fails; and thus the defeat of Walther on the previous day is avenged. Sachs declares the poem is good if only sung properly. Walther comes forward, and with his own melody interprets the words. He has conquered; he is declared victor. Sachs is crowned with a laurel, Eva is radiant with joy, and thus everything ends well for all, except for the jealous and narrow-minded Beckmesser.

The leading motives of the opera are heard in the magnificent prelude (Vorspiel). As a piece of abstract music, clear and concise in form, and remarkable for its elaborate and effective workmanship, it has often filled us with admiration and delight. Now that the stately Mastersingers, the merry apprentices, the noble-minded youth, and the fair maiden have all appeared before us in a series of exquisitely graphic pictures, this overture whenever performed in the concert-room will be listened to with double interest and pleasure; the titles of the motives will no longer be mere names, but will stimulate our imagination, and help us to recal the scenes with which they are connected. The use made of *Leitmotive* in the course of the opera is most interesting and ingenious. The short interludes between the lines of the *chorale* sung by the congregation assembled in St. Catherine's Church at the opening of the first act reveal to us the thoughts and feelings of the handsome youth leaning against a pillar of the edifice; and so throughout this first scene, in the conversation between Walther and Eva, the incessantly heard love-motives naturally explain the situation. The characteristic little figure in Pogner's charming song concerning the Feast of St. John the Baptist is employed with delicious effect. It is heard an immense number of times, but no feeling of monotony is produced, so delicately and naturally is it interwoven with the rest of the accompaniment. Towards the end of the song it is effectively combined both with the Mastersinger's and with the Herald's motive. Another interesting and felicitous use of a leading theme occurs in Sachs' monologue in the second act. He is pondering over the melody sung by the Knight at the meeting of the Masters, and the whole of the accompaniment consists of snatches from that piece. Not less attractive, and perhaps even more wonderful, is the accompaniment to Sachs' long meditation in the third act before the entry of Walther. To notice all the beauties

of the opera would indeed be difficult, for every scene is so full of charm and interest; yet we would single out for special mention Walther's lovely song, "Am stillen Herd," in the first act, and David's comical explanation to Walther of the mysteries of the "Tabulature;" Beckmesser's immensely funny serenade in the second act; also Sachs' quaint song, Walther's composition, and the quintett in the third act. The *finale* of the second act is a grand specimen of polyphonic music; and the lovely closing strains after the Watchman has sounded his horn are beyond the power of description in words. The instrumental introduction to the third act is most expressive; and the great chain of choruses in the last scene, sung by the various trade guilds as they arrive at the meadow where the contest of song is to be held, make us regret that Wagner should have all but abandoned that particular form in his later music-dramas. "Die Meistersinger" is a long work, but certainly not a tedious one; it is full of pleasing variety and charming melody. Wagner's scores are generally spoken of as noisy. In this opera the orchestra employed is the usual one, with the exception only of a third trumpet and bass tuba. The score is anything but noisy; it is full of the most delicate effects, rich combinations, marked and wonderful contrasts. Wagner shows at times in his orchestration the grace of a Mozart, the grandeur of a Beethoven, and the ingenuity of a Berlioz.

The performance of the work last Tuesday night at Drury Lane, under the direction of Herr Hans Richter, was a perfect triumph, and will render the annals of this first season ever memorable. Frau Sucher in the part of the heroine, and Herr Winkelmann in the arduous part of the hero, both achieved a great and well-deserved success. Herr Gura as Hans Sachs sang and acted with very great effect. The important and difficult rôles of Beckmesser and David were played to perfection by Herr P. Ehrke and Herr L. Landau. The parts of Magdalena, Pogner, and Kothner were interpreted in a most satisfactory manner by Fräulein J. Schefsky and Herren Koegel and Kraus. Something more than plain, common words is needed to do justice to the excellence of the chorus-singing and of the orchestral playing. We must, however, be content to say that all concerned in the production of this masterpiece must have worked with marvellous patience, energy, and good-will. The difficulties in this work are simply enormous; and from the beginning to the end the strain on the singers and players, to say nothing of the conductor, must be intense. J. S. SHEDLOCK.

## MUSIC NOTES.

THE last performances of the "Nibelung's Ring" at Her Majesty's Theatre are now ended; and we are glad to learn that Herr Angelo Neumann is so far satisfied with the result of his first visit that he intends to return next year, and to give the "Ring," "Parsifal," and possibly other Wagner operas. There was a marked improvement in the attendances at the two last cycles, and there is every reason to believe that, had the prices of admission been more moderate the audiences would have been still larger. Herr Neumann deserves great credit for his spirit and enterprise, and English musicians are greatly indebted to him for the opportunities afforded to them of hearing Wagner's trilogy without the trouble of a pilgrimage to Germany.

THE St. Cecilia Choir, under the direction of Mr. Malcolm Lawson, will give its third annual concert on Monday evening, June 12, at the Royal Academy Rooms. The chorus, which is composed entirely of ladies, will be accompanied by a string band, also of ladies. As far as we know, this is the first ladies' orchestra that has been formed in London.

## THE ATLANTIC MONTHLY.

Devoted to Literature, Science, Art, and Politics.

JUNE, 1882. Price 1s.

Containing Chapters V.—IX. of

MR. THOS. HARDY'S NEW SERIAL STORY, "TWO on a TOWER."

## LITERATURE.

*The Future of Islam.* By Wilfrid Scawen Blunt. (Kegan Paul, Trench & Co.)

THE five chapters into which the contents of this book are divided are of very unequal calibre and merit. The first two, namely, the "Census of the Mohammedan World—the Haj," and "The Modern Question of the Caliphate," save where the author has here and there given the rein to his imagination, are mainly based on facts, new and old, illustrated by the past history of Islām, and its fluctuating phases of thought and operation. The former of these gives a brief summary of the actual composition of the Muslim world, numerically and sectionally; a fair digest of the four orthodox schools and principal sects, together with an estimate of the influence which these have severally exercised, and may yet exercise, on the body politic of Islām. In the latter respect, Mr. Blunt is somewhat vague and puzzling. Of the by no means homogeneous Arabian element he remarks (p. 8), "How necessary it is to count with it, in any estimate we may form of Islam's possible future." Then (p. 21), "Egyptian influence must be reckoned as an important element in the forces which make up Mohammedan opinion." Next (p. 23), under the heading of the "*Malekite* school," we read: "It is conceivable that, should the revival of Islam take the form of a religious war, the races of Africa may be found taking a leading part in it." The "*Shafites*," too (p. 28), with their stronghold at Cairo and preponderating numbers in India, form another element to be reckoned with in the reconstruction of the Muslim polity, for, among these, "ideas of a moral reformation find a footing, and they speak more openly than the rest their suspicion that the house of Othman, with its fornications and bestialities and contempt of justice, has been the ruin of Islam." Judging from the almost universal sympathy manifested by the Indian Muslims for the Ottoman Sultan during the late Russo-Turkish War, it is difficult to believe that their "Shafism" is of the same type as that just described; nevertheless, "it may safely be affirmed," writes Mr. Blunt (p. 32), "that the course of events in India will determine more than anything else the destiny of Mohammedanism in the immediate future of this and the next generation." Further, the thirty millions of Malay Muslims must not be overlooked as one of the components of Islām, destined to exercise an influence on its redintegration. They are now the subjects of Holland, which "must in a few years find

her fate linked with that of Germany, and so, too, her colonies." But these Malays "are a dark element in the future, which it is equally easy to under as to over rate" (p. 33). The "heretical sects," also, must be taken into account. The most notable of these are the "Shiites," or followers of Ali, estimated in round numbers at fifteen millions, the large majority of whom are Persians. "Beginning merely as a political schism, the Shiite sect is now distinctly a heresy, and one which has wandered far from the orthodox road" (p. 35). "Everywhere the sect of Ali stands apart from, and almost in a hostile attitude to, the rest of Islam" (p. 40). Lastly, there are the "Wahhabites" of Arabia, who are reduced in numbers and political importance, though "the spirit of their reform movement still lives, and exercises a potent influence on modern Mohammedan ideas" (p. 42). The followers of this sect "accuse [all] other Moslems of polytheism and idolatry" (p. 13). Carefully analysed, Mr. Blunt's interesting "Census of the Mohammedan World" exhibits so formidable an array of heterogeneous and mutually repellent elements that it requires his "supreme confidence in Islam, not only as a spiritual, but as a temporal system," to anticipate the day when the great body of the Muslims shall be "enlightened, reformed, and united in sympathy" (ix., x.).

The "Question of the Caliphate," the origin and import of the title, the vicissitudes through which it passed until its temporary subsidence subsequent to the era of the Abbasides, its revival in the early part of the sixteenth century under the Ottoman Sultan Salim I., its second lapse into comparative oblivion, and its resuscitation under the late 'Abdu-l-'Aziz and his successor, the reigning Sultan 'Abdu-l-Hamid—all these phases of the subject are discussed in the second chapter with admirable perspicuity and praiseworthy impartiality. Mr. Blunt indicates the radical change originated by the Omáyyah Khalifah Mu'awiyah, when, in view of election, "he introduced the system of dynastic heredity into the Caliphate" (p. 62), a system which was continued by the Abbasides. This was regarded as "a religious falling off;" still, "the character of the Khalifah was essentially sacred. He was of the Koreysh and of the blood of the Prophet, and so was distinct from the other princes of the world" (p. 63). Mr. Blunt repeatedly refers to this consanguinity as an unanswerable argument in favour of a Khalifah who shall derive descent from that tribe. But he cannot be ignorant that no subject has been discussed with greater warmth by Muslim jurists than this claim of "blood" relationship, and that those who reject it are as numerous and eminent as their opponents. Despite all divergent theories, however, "the Hanefite Ulema . . . succeeded in proving, to the satisfaction of the majority of Sunites, that the house of Othman had a good and valid title to the rank they had assumed" (p. 66). The author adds that the arguments of the Hanefite school, in defence of Salim's claim, "seem to have been generally accepted by the world at large" (p. 71). The review of the state of abeyance into which the title and functions of the Ottoman Khalifate subse-

quently fell, and of the various causes which led to their revival under the late 'Abdu-l-'Aziz, contains much interesting matter, and will well repay a careful perusal. It is regrettable to read that "the reforms attempted and partly effected in the Ottoman Empire between the years 1839 and 1869, as a concession to the clamour of Europe" (p. 78), including "the proclamation of the Hatti Humayoun and its kindred decrees," failed to find acceptance anywhere with religious people, owing to their illegality from a Muslim standpoint, and that these different concessions to liberal principles are to be regarded "as points in the history of the Ottoman Caliphate's decline." (If such is the case, one may fairly despair as well of Islām as of the Ottoman Empire; but Mr. Blunt will explain later "the manner in which alone a true reform can find acceptance.") Still more regrettable it is to learn that the reigning Sultan's recognised piety, intelligence, conformity to the "Sheriat," and increased popularity are so many stumbling-blocks in the way of Muslim reform. On this head the author formulates his opinion thus:—

"The advent of this last scion of the house of Othman to the spiritual succession of the Prophet, though a godsend in appearance to religious Moslems, cannot but be regarded by all who wish Islam well as a very great misfortune. It is almost certain that if Abd el Mejid and Abd el Aziz had been succeeded by another of those senseless monarchs who have so often filled the Imperial throne, the Ottoman Caliphate would already have been a thing of the past. . . . Arabia would in all probability have by this time asserted its independence, and, under a new Caliphate of the Koreysh, would have been attracting the sympathies and admiration of the Eastern world" (83).

The prognosticated doom of the Ottoman Khalifate has, strange to say, been averted, for the time at least, by the "spiritual position" taken up by 'Abdu-l-Hamid, by his irreproachable private character, and by his strict adherence to the ordinances of Islām—

"For all these reasons it will be readily understood that Abd el Hamid has gained not only the support of the Turkish Ulema, but the sympathy of a considerable section of opinion outside his dominions. From a traitor to the cause of religion the Ottoman Sultan has come to be looked upon, east and west, as once more its champion. . . . Abd el Hamid has played his cards successfully in Greece, in Albania, and with the Kurds. He has not been afraid of England, and has shown a bold front against infidel reforms. . . . Lastly, the French have played into his hands in Tunis, and he has gained a footing of sympathy with the Mussulmans of North Africa, a population which has for centuries opposed his claims. . . . Now the Malakites themselves, the puritans of Kerwan [Kairawán], are moving at Abd el Hamid's nod. He would seem, too, to be stirring with some success in Egypt, and Indian Mussulmans are praying for him publicly in their mosques" (pp. 87, 88).

But all this, according to Mr. Blunt, goes for next to nothing—

"Turkey and the Hanefite school are far from being the whole of the Mohammedan world; and side by side with the fanatical obduracy of the Ottoman State party, and the still fiercer puritanism of the Malakites, there exists an intelligent and hopeful party favourable to

religious reform. Shafite Egypt is its stronghold, but it is powerful too in Arabia and farther east. With it a first article of faith is that the house of Othman has been and is the curse of Islam, and that its end is at hand. In spite, therefore, of Abd el Hamid's appeals to the Sheriat, they look upon him as one who troubleth Islam. . . . The death or fall of Abd el Hamid, whenever it may happen, would immediately decide a movement counter to the Ottoman Caliphate" (pp. 88, 89).

The unprejudiced reader of the foregoing extracts will hardly share in the author's favourable estimate of the "Shafites," and will further require some adequate proof that he has correctly described what he states to be the first article of their faith.

If in the first two chapters of his book Mr. Blunt has not hesitated to prophesy, in the remaining three he indulges in postulates which, to use his own language, may aptly be styled "enormous" (p. 114). In the third, on "The True Metropolis—Mecca," he takes it for granted that, on a new advance of the Christian Powers from the Balkan, Constantinople would fall, and the Sultan be driven to seek a new capital either at Baghdâd or Damascus. Others, however, "dream of Cairo as the new seat of the Caliphate;" and others, again, including "the majority of far-sighted Mussulmans," are beginning to judge that "the only true resting-place for the theocracy is in Arabia, its birthplace and the fountain-head of its inspiration"—

"There, alone in the world, all the conditions for the independent exercise of religious sovereignty are to be found. In Arabia there are neither Christians nor Jews nor infidels of any sort for Islam to count with, nor is it so rich a possession that it should ever excite the cupidity of the Western Powers. A Caliph there need fear no admonition from Frank ambassadors in virtue of any capitulations; he would be free to act as the Successor of the Apostle should, and would breathe the pure air of an unadulterated Islam. A return, therefore, to Medina or Mecca is the probable future of the Caliphate" (p. 100).

This Mr. Blunt considers "the necessity of the day" (p. 99), consequent upon the presupposed disappearance of Abdu'l-Hamid, and with him of the Ottoman Khalifate, together with the extinction of Turkish rule in Arabia; for "the Sultan, reduced to Asia Minor, even if he retain Armenia and Kurdistan (which is extremely improbable), would be quite unable to afford himself the expensive luxury of holding his Arabian conquests and buying the patronage of Mecca." But who is to succeed to the Muslim Khalifate? "Enormous postulates must be granted before we can look on anyone now known to fame in Africa as a probable candidate for the future Caliphate." Then, "Mussulman India could never give that protection to Mecca that Islam needs, and could not assert its sovereignty anywhere but at home in arms." As regards the viceregal family of Egypt, Mr. Blunt doubts if Mohammed Towfik, albeit by repute a sincere Mussulman and an honest man, "be big enough a man to aspire as yet with success to Abd el Hamid's succession." In fine, "we are driven to Arabia for a solution of the difficulty where to establish a Mussulman theocracy, and to the Sherifal family of Mecca itself for a new dynasty" (p. 117).

That the Sharifs are "surrounded with a halo of religious prestige," owing to their alleged descent from the al-Kuraish, is unquestionable. On the other hand, it must be borne in mind that they recognised the alien Salim I. as a rightful representative of the Khalifate, have continued their allegiance to his successors up to the present day, join in the solemn *Khutbah* for the reigning Sultan as their Sovereign, and that even the "Grand Sherif" receives his investiture from Constantinople. But supposing all these claims to be abrogated by the disappearance of the Ottoman Sultanate; supposing, further, that a clique of the Sharifs, supported by a party of the Muslims of the al-Hijâz, should proceed to elect one of their number as Khalifah, what would be his position in the world of Islâm? Rival and more powerful claimants may arise elsewhere, who, failing to gain the ascendancy, might, nevertheless, create additional divisions among the ranks of the Muslims. Mr. Blunt, in his romantic conception of a Sharif Khalifah, ruling in an elysium of peace at Makkah or al-Madinah, with no Frank ambassadors to worry him, overlooks the stern fact that he would be encompassed by warlike tribes, such as the al-Harb, the al-Asair, the al-Atabah, the Wahhâbis, and others, all more powerful than the al-Kuraish, who are at present mainly kept under by Ottoman troops, but who, if freed from such restraint, would doubtless recommence their old game of indiscriminate plunder and outrage. "It has always been a difficult matter," writes our author, "to keep these unruly elements at peace with each other and with the citizens, nor could the Sherif hope to effect it were he not himself of Bedouin and noble blood" (p. 109). A trace to all such sophistry! Just as if the excesses of these turbulent tribes had ever been curbed to any appreciable extent even during the palmy days of the Abbaside Khalifats. Then, again, there are the schismatics to be reckoned with. Does Mr. Blunt imagine for one moment that the election of a Khalifah from among the Sharifs would be the signal for the return of the Shi'ah, the Zaidiyyah, the Ibadhiyyah—sects older than the Abbaside dynasty—to the ranks of orthodox Islâm? "It is surely not beyond the flight of sane imagination," as our author says, "to suppose in the last overwhelming catastrophe of Constantinople a council of Ulema assembling at Mecca, and, according to the legal precedent of ancient days, electing a Caliph" (p. 131); but it is certainly beyond the region of common-sense to suppose that such a choice would be generally acceptable, or that the chosen candidate would be able, unaided from without, to maintain his position. And what is the position assigned to him? One of perfect isolation among the wild tribes of Arabia, where he would certainly not be "free to act as the Successor of the Apostle should," supposing that the Successor had to do as his prototype did, and where "the pure air of Islam" would still be adulterated by the vapours of irrepressible heterodoxy—a position for the Khalifah and Commander of the Faithful which would hardly satisfy the aspirations of any section of the Muslims, especially "the learned classes," who, our author tells us, "are shocked and

alarmed at the political decline of Islam" (p. 139).

In the fourth chapter of Mr. Blunt's work, entitled "A Mohammedan Reformation," the thesis discussed is the "possibility of anything like general reform for Islam in her political and moral life." On this point the reviewer is glad to find himself substantially in accord with the author, believing, as he does, that such a reform is not only feasible, but that it has actually been at work for some time past in the world of Islâm. Just as Christendom, in its onward development, while preserving intact the Canon of Holy Scripture, has broken loose from some of the hard-and-fast dogmas whereby Councils and Schoolmen in the early ages sought to fossilise their wire-drawn views of Inspiration, even so there are indications on all sides of thoughtful Muslims seeking to widen the basis of their faith and practice, and to free "the intelligence of believers from those scholastic trammels" which have hitherto kept them apart from the world at large, narrowed their sympathies, and retarded their moral progress. These efforts, moreover, on the part of the pious learned have not failed to react on the masses, inasmuch that Muslims generally at the present day, albeit still firm in their loyalty to Islâm, are far more liberal and tolerant than they were twenty years ago. It would be a work of supererogation to trace the numerous causes which have led up to this issue. There can be no doubt, however, that the Ottomans—*pax* Mr. Blunt, who never mentions without grossly vilifying them—through their closer contact with European civilisation and modes of thought, have contributed in no small degree to this hopeful result. That result having been brought about by the quiet action of time, and without any direct effort to produce it, prudence would seem to suggest that the same influences should be permitted to carry forward the desirable work of "Mohammedan Reformation," so that "in time a true reconciliation might be effected with Christendom, perhaps with Christianity" (p. 161). Mr. Blunt himself is not in favour of violent means to bring about this desirable result. Hence, he rather deprecates such a militant reform as the traditional *Muhdî* is likely to preach. What he judges to be wanting is "a legal authority" to sanction the changes which are rapidly taking place in the mind and practice of Islâm. Here the author reverts again to his favourite catholicon:—

"Since we are imagining many things we may imagine this one too—that our Caliph of the Koreysh, chosen by the faithful and installed at Mecca, should invite the Ulema of every land to a council at the time of the pilgrimage, and there, appointing a new Mujtahed, should be opened to them certain modifications of the Sheriat, as things necessary to the welfare of Islam, and deducible from tradition. No point of doctrine need in any way be touched, only the law. The Fakh ed din would need hardly a modification. The Fakh esh Shariat would, in certain chapters, have to be rewritten."

Let the reader call to mind the deplorable failure of all similar attempts on the part of Christian churches and sects to establish a common Concordat between them, and then let him calculate the chances of a Muslim representative council at Makkah, composed

of still more widely divergent opinions, drawing up an Eirenikon which would be acceptable to their respective co-religionists.

In the concluding chapter of his book, entitled "England's Interest in Islam," the writer discusses "the course which duty and interest require us to pursue in regard to the vast Mussulman population of our Indian Empire." Here, again, apart from another batch of Mr. Blunt's "enormous postulates" and suggested modes of intervention in the concerns of Islam generally, the reviewer thoroughly agrees with him that our forty millions of Muslim subjects in India have a special claim on the consideration of the British Government. No intelligent Englishman can doubt that they may prove an element of danger as well as of strength to our sovereignty there; and he must be a short-sighted statesman who, while recognising that fact, fails to adopt every means consistent with the fundamental principles of a Christian administration and its duty towards other subject nationalities to secure their loyalty. That such has been the policy hitherto generally pursued towards them is indisputable; and it may fairly be questioned whether the followers of Islam, even in the much-vaunted age of the Abbasside Khalifats, were as free in the exercise of their religion and as safeguarded in their persons and property as are the Muslims of India at the present day. Moreover, they are said to be contented; and, if so, what inducement has the British Government to mix itself up with the burning political and religious questions of Islam beyond its own territories, even were it certain, which it is not, that its intervention would be generally acceptable? *Quæta non movere*; but Mr. Blunt thinks otherwise, and the following is a concise programme of his "imaginings" and recommendations. *Delenda est Carthago*: Constantinople must fall, and with it the Ottoman dynasty and Khalifate, to be replaced by a Khalifate having its seat at Makkah. His position is thus described:—

"The Caliph of the future, in whatever city he may fix his abode, will be chiefly a spiritual and not a temporal king, and will be limited in the exercise of his authority by a few conditions of the existing material kind. He will be spared the burden of despotic government, the odium of tax-gathering and conscription over unwilling populations, the constant struggle to maintain his authority in arms, and the as constant intrigue against rival Mohammedan princes. It is probable that all these would readily acknowledge (?) the nominal sovereignty of a Caliph who could not pretend to coerce them physically" (p. 190).

The reader of the above would infer at first sight that this model spiritual sovereignty might be left to take care of itself; but it is not so, for

"on the downfall of the Ottoman Empire . . . the rôle of England in regard to Islam seems plainly marked out. The Caliphate . . . must be taken under British protection, and publicly guaranteed its political existence, undisturbed by further aggressions from Europe. . . . England is a naval Power, and the seat of the Caliphate must be one secured from all attack by land. . . . Established at Mecca, our duty of protecting the head of the Mussulman religion would be a comparatively easy one. Hejaz for all military purposes is inaccessible by land for

Europeans; and Mecca, were it necessary at any time to give the Caliph a garrison of Mussulman troops, is within a night's march of the coast" (pp. 190, 206).

In all these speculations it is tacitly assumed that the Khalifah of the future will be left undisturbed by the pestilent rival tribes of the al-Hijâz; that France and Russia, and the Eastern sovereignties generally, will abstain from intervention on behalf of their Muslim subjects; that British protection will be universally hailed as a godsend, and will alone suffice to insure the absolute freedom and immunity of the spiritual head of Islam. These, again, are "enormous postulates," conceived by a sympathetic mind in the region of utopia, which it is useless to discuss further. They may pass muster as theses for intellectual disquisition, but will scarcely attract the serious attention of the practical politician or statesman.

Mr. Blunt's transliteration of Oriental words, from the motto on the title-page to the end of the volume, is sorry in the extreme. Apart from the names introduced, which the author may have preferred to write in the loose popular style, such renderings as "ijtihad" for *ijtihād*, "mujtahed" for *mujtahid*, "Muwahhedin" for *Muwahhidin*, "Muttaleb" for *Muttalib*, "Dewy" for *Zhouiy*, "Fakh" for *Fikh*, and "Musherrakin," which signifies "those who go eastward," for *Mushrikin*, those who associate another with God, polytheists, evince either a deplorable ignorance of Arabic or an inexcusable carelessness.

GEORGE PERCY BADGER.

*The Praise and Blame of Love, with other Verse.* (Glasgow: Wilson & M'Cormick.)

WHEN the weary critic, tired of drawing sand-carts, expatiates and browses on the common of minor poetry (the minor poet is requested to observe that this rather elaborate comparison is by no means too flattering to the critic), he sometimes, though not very often, comes across vegetable growths of which he hardly knows what to make. They are not mere weeds—that he can both see and taste; but whether they are actually of an authentic species of flower he hardly knows. He must wait till the next year's blooming to determine that, and to see whether the flower-like qualities are constant. Of these dubious books the one before us is one of the most remarkable that we have recently met with, and it seems worth while to put a few specimens of it before the reader. The anonymous author is not altogether free from the charge of imitation, but he imitates with a certain independence. He is very unequal, but then most of his kind are remarkably equal in badness. He is refreshingly free from the silly cant of Republicanism and Freethought which makes much minor verse of the day as dull as a hymn-book, and not half so honest. His love-making is neither mawkish nor prurient, and the bathos yawns for him in vain, except in one astounding little poem which begins,

"Dr. Augustus Tempest was the first,"  
and which we charitably suppose to have been written in his sleep after reading the parody on Crabbe in *Rejected Addresses*.

All these things are good, but they are most of them negative. Now for the positive. Here is the first piece in the book, not by any means the best:

"LOVE NEAR.

"By twilight ways, O Love, that pass  
Through dreamland vines and myrtle palms  
I strained to hear thy low-sung Mass,  
Or echoes of the sweet Alas  
That ends thy people's trembling psalms.  
"Yet here these hawthorn leaves below  
And gleaming to these gloomy skies,  
I see the carving of thy bow:  
Ah, Love, with what intent of woe  
Await'st thou here my startled eyes?"

This is, of course, to a certain extent, second-hand in style, but it is a remarkable advice to a painter, and, in a certain *Parnassian* kind, deserves high rank. It must be a dull imagination which does not see before it the tangled background of the palm-land and the hawthorn brake in front, with Love armed and meaning mischief. But the following is in a very different style:—

"Not the naked dame who rose  
Once a maid from foamy seas,  
Not the little god who throws  
Loveward his dizzy woes  
Taught your gentle eyes to please."

If anybody is deaf to the sudden melody of the first two lines, that body may be assured that he is deaf, and there's an end of it. Here is something quite different again in the shape of a sonnet on the "Imitation."

"DE IMITATIONE.

"Where is the church that once made brave the world  
With rainbow sails and flying dignities?  
What of the Fathers, fierce-browed captains, is  
Left for a solace now? With sails unfurled  
On safer seas the church her commerce plies  
Of tidings glad from holy morning lands,  
Nor claims with bitter loss of brains and hands  
An easy north-west passage to the skies.  
How were they named, these captains? Who  
can tell?  
The stories of their victories and wrecks  
Charm us no more. These only love we well  
Whose ship The Imitation, with its decks  
Of peace and love-pure sails and helm of grace,  
So gently voyaged to God's own blessed place."

Here the expression might be improved in places, but the whole is not every-day work. A fourth extract strikes again a different note.

"LOVE AND TIME.

"Two lovers watched the sunset die  
In happy clouds that floated west;  
His lips caressed her silken hair,  
Her head lay nestling on his breast.  
"Ah, Love," he said, "I see that men  
Should make no count of hours and days;  
They live most when their sleepy hearts  
Do leap like mine in proud amaze."  
"Yes, yes," she whispered, "all in vain  
I hear the bells of hollow towers,  
But your heart swiftly beating here  
Tells all too well the flying hours."

While, for a final specimen, it may be said that when a man has the courage to write of the sea he might do worse than this:—

"THE SEA.

"In sunlight and in storm the giant sea  
Breathes with the equal breath of yearlong sleep;  
From breath to breath it is a day, so deep,  
So utter deep his rest. The winds in glee  
May pass like fairy dreams across his face,  
Or winds in wrath may stir the spumy hal:  
That hoary was ere toiling peoples were  
Or flowers or grass or any pleasant place,

But still he sleeps, with breath on equal breath,  
And still he sleeps till now we scarcely fear;  
Yet once he rose and swept the green earth  
clear  
And laughed alone the surging heavens beneath.  
Dream'st thou again to tumble thrones and creeds  
Deep down together 'mid the tangled weeds?"

Far be it from us to announce "a new poet" with blare of trumpet and waving of banners. *Ne fait pas ce tour qui veut* either in the way of being a new poet or discovering one. But the author of *The Praise and Blame of Love* is, at any rate, worth pointing out to those who take an interest in poetry as a person on whom an eye should be kept.

GEORGE SAINTSBURY.

*A Selection of Cases from the State Trials.*  
Vol. II. Parts I. and II., 1660-81. By  
J. W. Willis-Bund. (Cambridge: University Press.)

It has been stated more than once that the history of England from first to last shows that we have been, when dealing with our own people, less cruel than any of the nations of continental Europe. This may be so. We are not concerned on the present occasion to hold a brief against our countrymen; but, if things were worse during the reign of Charles II. in any other Christian land than they were here, it is not a little surprising that the conservative forces of society were able to hold human beings together under any conditions of social order. Little as we may respect most of the actors in the Revolution of 1688, we cannot believe that any reasonable person can read the pages before us without having the conclusion forced upon him that organic change was inevitable. A religious revolution such as that which the middle of the century had seen could not be enacted over again. The fervent faith, or unreasoning fanaticism—call it which you will—of the Puritans was dead. The choice lay between that change which threw the control of England into the hands of a few great families and another and far deeper revolution then unthought of.

The treason trials of the reign of Charles II. read more like a series of horrible dreams than anything which we, living in a purer and happier age, can imagine as taking place in our midst. Mr. Willis-Bund thinks that the lawyers and judges of the Restoration have had hard measure dealt out to them. The seventeenth century has undoubtedly been the playground of the partisan historian, and all sorts of wild things have been written by men who were determined to see no good in the restored monarchy. We will most readily concede that strong language has been used without discrimination, that it has often not been of the right kind, and that the populace—and by populace we mean nearly the whole people, without regard to social degrees—were far more to blame than the unhappy persons who carried out its will. The government, thanks to the fanaticism of the Restoration, had become almost an absolute monarchy. The 12th of Charles II., chap. 13, had declared that neither "the whole people collectively or representatively, nor any other persons whatsoever, ever had, or ought to have, any coercive power over

the persons of the kings of this realm." Not only was this solemnly set forth in an Act of Parliament, but throughout the length and breadth of the land the clergy were preaching a doctrine of the Divine right of kings which was in absolute conflict with every notion of civil liberty. The country lay, as it were, in a trance. Men were content to submit to a despotism, and even give their intellectual assent to some of the arguments by which sophists sought to defend it; but this was only because the despotism was weak, and made itself the exponent of the popular passion in a way that it would be hard to parallel in any land where free institutions were a reality. A strong despot who would have ruled with stern justice would have been a great immediate gain to the country. A weak one such as Charles, who was content that clamour should rule so long as his personal enjoyments were not restrained, was at that juncture a mischance of which it is hardly possible to exaggerate the evil results. The trials for the "Popish Plot," which form the more important part of the volumes before us, are as horrible an example of mob-rule as anything in the annals of the French Revolution. They are perhaps, indeed, more revolting, for we cannot but remember that the crimes of the French Terror were the result of ages of unutterable wrong; while in England the judicial murders were brought about by a few cunning statesmen fanning the madness of the people. As we have remarked before, Mr. Willis-Bund does not speak so unfavourably of the legal officials of that time as most of those who have gone before him have done. We believe he is, in the main, right in his contention that the law, as law, was more fairly administered; and it is at least probable that the judges were carried away by the madness of the time almost as completely as the jurors and the howling rabble who watched the trials are known to have been. It is none the less certain, however, that Oates, Bedlowe, and their companions were perjured wretches, and that everyone who went to his death on their evidence was murdered. It does not by any means follow from this, as a matter of course, that the judges were judicial murderers. That they were not so is evidently the opinion of Mr. Willis-Bund. He has even a good word to say for the best hated man among them—Sir William Scroggs, the Lord Chief Justice. "As a judge, does he merit the unqualified censure pronounced on him?" we are asked; and a very fair reply is given.

"His judicial career was mainly taken up with trying prisoners for the Popish Plot, and it is on his conduct on these trials that his condemnation mainly rests. It must be premised he was always unfeeling, often brutal, in his behaviour and remarks to prisoners, and that he was a strong Protestant, and never lost an opportunity of reviling Catholics or their religion. In neither of these points is Scroggs an exceptional judge. . . . The real question is, Did he administer bad law? Were the prisoners by his means unfairly tried or illegally convicted?"

The contention is that, on the whole, and with exceptions, the trials were conducted according to law. His victims might have exclaimed with De. Sale in *The Successful*

*Pyrate*, had they been in a mood to quote contemporary verse:

"Ye empty tools of arbitrary power,  
Why do you use these silly forms of justice?"

For the forms were used, and the arbitrary power which murdered them was not the judges or the King, but the maddened populace who ruled both. What we are to think of a king who, knowing that the victims were innocent, was too much of a coward or too idle a voluptuary to intervene and save them is another matter. Scroggs, we believe, was himself fully under the influence of the delusion, and really thought the prisoners guilty. That Scroggs was a man of more intellectual capacity than has sometimes been thought is proved by his *Practice of Courts Leet and Courts Baron*, a work which was once highly thought of, and is still of no little service to those interested in the old laws relating to manors.

We have left ourselves but little space in which to speak of the earlier part of these volumes—namely, that portion devoted to the trials of the Regicides. They are given here with but little abridgment, and are very fairly presented to the reader. Whatever our opinions may be as to the character of the act for which they suffered, we apprehend that, so far as those of them are concerned who signed the warrant for the execution of the King, no legal plea can be put in. The position of Peters was different. We have never seen arguments which convince us that his conviction was even good law. Vane's case is also exceptional. It was more outrageously unjust than that of any of the others. If he was to die for acts done during the Interregnum, one cannot see on what ground a hundred others were spared. Mr. Willis-Bund holds that the restored monarchy was not above measure severe on its enemies.

"Twenty-nine convictions and thirteen executions for the greatest rebellion the country has yet experienced is as nothing when compared with the wholesale executions after the Pilgrimage of Grace, the Northern rebellion under Elizabeth, or even those which followed the rebellions of 1715 or 1745."

For the atrocities of the eighteenth century we have no manner of excuse to offer; they are among the very vilest things in our annals. But we would submit that there is a world of difference between the position of Vane and the Regicides and that of the men who followed Aske in the reign of Henry VIII., or who rallied to the banner of the Cross and the five wounds against Anna Boleyn's daughter. The one represented a settled government which had ruled England for ten years; the others, though highly dangerous for a time, had never gained power enough to have the rights of belligerents.

We must not conclude without saying that the author has carried out very thoroughly the task he has imposed upon himself. The commentary is always useful, and written without a particle of religious or political bitterness. It is impossible to gather from his pages what may be his convictions on any of the important questions which divide modern Englishmen. This is no little gain to the student who has to use his volumes.

EDWARD PEACOCK.

*An Etymological Dictionary of the Scottish Language.* By John Jamieson. A New Edition, carefully Revised, &c., by John Longmuir and David Donaldson. (Paisley: Alexander Gardner.)

THE *magnum opus* of the energetic Paisley publisher, whose efforts to revive an interest in the literature of Scotland are deserving of hearty praise, is virtually completed by the publication of the fourth volume, although we are promised a supplementary one, containing additional material which may have been discovered, a memoir of Dr. Jamieson, and an essay on the Scottish language. The three first ponderous instalments of the work have been noticed here as they came out, and of the fourth it is sufficient to say that it is marked by the same excellences and defects as its predecessors. Mr. Donaldson, who is mainly responsible for the work of revising the original dictionary by Jamieson—his colleague, Dr. Longmuir, having been incapacitated at an early stage by weak health—has erred chiefly in not condensing the original lengthy and discursive definitions of Jamieson, and in dragging too much into his net. Almost every third page one comes upon huge boulders of antiquarian lore (which may be interesting enough in themselves, but are undoubtedly out of place in a dictionary), and upon mere corruptions of English words reckoned as Scotch vocables. Mr. Donaldson might further have drawn much more largely, and to greater profit, than he has done on familiar Scotch authors, such as Ramsay, Burns, Scott, and Wilson, for illustrative quotations. Thus, to deal only with the last volume, why should not “stank,” in the sense of “pond” or “loch,” lead to the quotation of Burns’s “Muses’ stank”?

Whatever defects or mistakes minute examination may detect in the new edition of “Jamieson,” the preparation of it has been a very laborious and successful enterprise. The brackets and other devices by which the fresh material in the new edition is indicated of themselves prove what pains Mr. Donaldson has been at; while a very good idea may be formed of the additions and corrections made, and of the improvements effected in the arrangement and grouping of words, by comparing the old edition with the new under the headings Ga, Ill, Nab, Put, Set, Win, and Yok, or, indeed, by comparing any large group of words in the one edition with the corresponding one in the other. Mr. Donaldson has further been very successful in collecting and embodying in the present work large numbers of provincial, and more particularly of Orkney and Shetland, peculiarities. The enormous size of the book, although it may be an objection in some respects, is, in others, an advantage. Above all, it is now not only a complete dictionary, but a *thesaurus* of Scottish antiquities, manners, and customs. As has been already said, it is in type and quality of paper at least equal to any dictionary that has appeared of late years. As a Scottish lexicon, it is hardly possible to conceive of its having either rival or successor. What the Scottish—the Lowland Scottish—language now needs is a movement for the foundation of Chairs throughout Scotland to render the literature expressed in it intelligible to an English-speaking generation of

Scotsmen. A second Prof. Blackie is at least as urgently required as a new “Jamieson.”  
WILLIAM WALLACE.

#### FOUR COLLECTIONS OF STORIES.

*Bimbi: Stories for Children.* By Ouida. (Chatto & Windus.)

*Summer Stories.* By Mrs. Molesworth. (Macmillan.)

*The Prince of Wales's Garden-Party, and other Stories.* By Mrs. J. H. Riddell. (Chatto & Windus.)

*Old Faces in Odd Places.* By Urban Rus. (Wyman.)

SHORT stories naturally suggest holiday reading. The book that is to be the companion of the parasol, or of the softfelt hat; that will be connected with benches by the sea, or long railway journeys, or Rhine steamers; that will go out on fishing excursions or picnics, and probably come home unread till some hopelessly wet day helps it to assert its claims, is very likely to be a volume of short stories. But readable volumes of short stories or sketches are very hard to find at the exact moment they are wanted. Such collections as those of Mrs. Thackeray-Ritchie or of the late Dr. John Brown are read immediately on publication, in hurried snatches of leisure and in the midst of hard work, few people having the self-control to keep them for holiday-reading. But when the holidays have come how constant is the cry for “something light” or “something short that will do for a journey!”

Ouida has done something for these holiday-readers as well as for the children in her volume called *Bimbi*. So delightful are some of the stories that they create a wish that she had spent more of her undoubted talent in this direction than on meretricious pictures of society. She is a poet at heart; and there is genius in so much that she writes that we naturally expect to find her at her best when writing for children, to whom both genius and poetry would only offer their purest and truest gifts. Whether the stories are probable or not, children and their elders will care for the little August hiding in his dear Hirschvögel stove, for the baby skill and love of Raffaele in the old town of Urbino, for the poodle “Moufflou,” and for the dreams of the tender-hearted Findelkind, who neglected the duty that lay at hand while he wandered through a heartless world begging alms for impossible benevolence. There is a great charm in Ouida’s pictures of foreign life—of the old German towns “with the green meadows and great mountains all about them, and the gray-green glacier-fed water rushing by them”—of the old quarter in Florence in “that picturesque zig-zag which goes round the grand church of Or San Michele”—of life in Urbino when Raffaele was seven years old and majolica was in its glory—of Martinswand, “where the short summer passed as fast as a dragon-fly flashes by, all green and gold in the sun.” The children will, perhaps, feel there is too much poetry for them and too much description; they may not appreciate the Florentine setting of the delightful poodle Moufflou and his little

crippled master; they may think the little August and Findelkind too sentimental for their tastes; but the stories will fascinate them, nevertheless—at least, those which are of foreign parts. There is more strain for effect and less charm in those of English life. “In the Apple Country” and “The Little Earl” could well have been spared from a collection otherwise so pleasant.

Mrs. Molesworth always writes delightfully, and, if she has nothing special to say, still ripples on with the small details in which children find their joy; but *Summer Stories* are rather disappointing as coming from her. They are threaded on the old string of children wanting occupation and reading aloud stories which the most unlikely people produce with prodigality which never comes true in the experience of real children. The stories read in “The Dingle” are five in number—“The Swallows,” which will please the very little ones; “Not exactly a Ghost Story,” which seems exactly like a great many ghost-stories in its unaccounted-for touch of the supernatural, which the children will hardly appreciate; “The Goose-Girl,” a fairy-tale like some others of both Danish and Swedish origin; “Left Behind,” the story of a very small boy who finds himself left at a station friendless and penniless, while the merciless train carries his mother and sister away from him; and “The Toymakers of Bergstein,” telling of the children who make dolls. But children are easy to please, and Mrs. Molesworth’s name is dear to them for much better work than *Summer Stories*.

Mrs. Riddell has put together a volume of stories for grown-up people under the name of *The Prince of Wales's Garden-Party*, which means the *fête* at Chiswick in honour of the Shah, and might just as well have been any other garden-party, or, indeed, none at all, for it does not seem probable that a disfigured hero, who is represented as morbidly sensitive, would choose that opportunity for revealing himself to the heroine. Such a leading title is not worthy of the author of *George Geith*; nor, indeed, is the book, though it may while away the hours of some long and dusty journey. “Lady Dugdale’s Diamonds,” “Far Stranger than Fiction,” and “Captain Mat’s Wager” are all stories of tricks—the first two with intent to deceive, the last for a joke; but perhaps the cleverest of the stories is “Mrs. Donald”—the widow of a would-be literary turn of mind whose futile dreams of fame are dissipated by loss of fortune and friends—which contains a solemn warning against clever Irishmen who, for their own reasons, call the aspirant “a woman of janius.”

Urban Rus has written cleverly of some phases of English country life which are rapidly passing away. There are probably few villages left, even in the remotest parts, where brooms are kept at the door for foot passengers to clean their boots upon, and where the rector is to be seen coming from his house to the church in “full white surplice” and “scarlet hood,” surmounted by a tall hat! But such things have been, and it is amusing to have them preserved in such graphic little pictures as that of “Who is going to church this morning?” though

the rest of the stories have in them something of the flatness and the agricultural monotony of the Midland counties.

F. M. OWEN.

### SOME BOOKS OF TRAVEL.

*A Flight to Mexico.* By J. J. Aubertin. With Seven Illustrations. (Kegan Paul, Trench and Co.) No rival is so formidable to an author as his own previous success. Much of the disappointment which we have felt in reading these hastily written pages by the translator of *The Lusiads* and of *Seventy Sonnets of Camoens* may be due to this cause. We had not expected to receive a work of travel from Mr. Aubertin which contains not a word of the literature and poetry of the country which he traverses. It is, however, perhaps unreasonable to ask of an author more than he professes to give; a more just cause for complaint lies in the interminable digressions and comparisons with which the book is filled, and which materially reduce the portion really devoted to Mexico. Thus, the first chapter is occupied with a detailed route of the Royal Mail and Pacific steamers round South America in order to show that no portion of the route has so long a sea-passage as that from Southampton to St. Thomas. The chase and lassoing of a bull in Mexico introduces seven pages of description of two bull-fights which the author saw in Madrid, as if such scenes were not sufficiently depicted in every work on Spain. The most valuable portion of the work, and that nearly a quarter of the whole, is a narrative of the last days of Maximilian at Queretaro. Mr. Aubertin, by fortunate encounters, was able to converse with some of the chief actors in that dismal tragedy. He incidentally gives us an instructive example of the difficulty of arriving at the truth of historical details even in the highest quarters. In Sir T. Martin's *Life of the Prince Consort* there is a touching account of Maximilian's giving his watch to his confessor to be carried to the Empress Charlotte. But Mr. Aubertin learns from the confessor himself, Canon Soria, and from others, that Maximilian died believing, as most people in Mexico did at the time, that the Empress was already dead. It was his wedding ring and scapulary which he sent to his mother through his physician, Dr. Basch, not by Canon Soria, a native Mexican, who had never thought of journeying to Europe. The climate of the Mexican plateau is highly praised by our author, and though the lower lands, the *tierra caliente*, can never be healthy, its cattle and vegetable products are magnificent, and a great future is predicted for the country. A curious, but not wholly satisfactory, vein of humour runs through the book, and detracts much from its value. Thus, a long journey is undertaken to visit a silver mine, but when at the place Mr. Aubertin will not make the descent. In like manner he visits a *maguay* plantation, but cannot bring himself to taste the *pulque*, the national Mexican drink made from that plant, though prepared expressly for him in the most delicate fashion by a charming hostess. Instead of information on the country, trivial personal confidences are obtruded on the reader. "Coffee sticks are sold in Mexico; and under the arcades of the Plaza I purchased one of most unusual dimensions." On p. 187 the writer wonders at his having eaten bull beef, and at having found it good, and on the next page he wonders whether he had previously done so in England or elsewhere. We are told the hour of his taking his early cup of coffee, of his bath, of his iced water, and of his breakfast on his journey home, and three reasons are detailed why he landed at Plymouth instead of at Southampton. A slighter book written by a man of talent we have seldom read, and the

present work is certainly no measure of Mr. Aubertin's power as an author.

*The Land of the Bey: being Impressions of Tunis and the French.* By T. Wemyss Reid. (Sampson Low.) When a special correspondent, being a practised writer, has re-arranged his materials, and discarded superfluities—in fact, when he has "had time to make it shorter"—the result is sometimes, as in the present case, very successful. The author's impressive account of the state of Tunis at the critical moment of the French occupation of the capital claims especial attention; but even the usual traveller's experiences, a rough sea-passage, the characters he meets with, the ordinary scenes of Oriental life—here certainly more striking and unalloyed than in the haunts of the average tourist—are all rendered interesting by a careful choice of incidents and a happily condensed style, with a judicious mixture of humour and sentiment. On his way out to Tunis everyone he met was delighted at the news of Mr. Parnell's arrest; he does not mention what they were saying in the "favourite corner of the Reform Club," where the last chapter was written, about his release. His view of the Tunis question, shortly, is that, though both France and Italy have long had an eye to an eventual occupation, the French had no deliberate intention to annex, but that events were precipitated by certain stockjobbing and financial intrigues of the most unsavoury character. Being in possession, however, the French will not give up what has been acquired at such a sacrifice not only of blood and money, but of honour,

"and even the Englishman who has been educated by recent transactions in Afghanistan and South Africa must admit that there is some force in the prevailing French sentiment on the subject."

The author, however, comments strongly on the "amazing ignorance" of those English newspapers which professed to see a resemblance between the conduct of the French in Tunis and that of their own countrymen in Afghanistan. He sees much difficulty in store for France, both in the ill-will which her action has excited in Italy and also in the hatred of the Musalman world—the latter danger being one which our joint action in the East with the French may easily extend to ourselves. Mr. Reid describes in glowing terms the satisfaction with which he passed from an atmosphere of suspicion and danger for an Englishman, and from the dirt and confusion of Tunis, to the order and cleanliness of Malta, with its pervading sense of English power. It is to be hoped that his ideas on the impregnability of the place, and its readiness "to face a whole world in arms," represent the facts not merely as they ought to be, but as they are.

MRS. HOWARD VYSE'S *A Winter in Tangier and Home through Spain* (Hatchards) is one of a class of books of which there is always an abundant supply. The author, in her Preface, speaks diffidently of her work as "rough notes," and adds that in writing them she did not contemplate their publication, but was led to publish because she believed "that little is known of Tangier and the surrounding country, and still less of its climate." It cannot be affirmed that Mrs. Vyse's experience adds much to our knowledge, and her book is destitute of any literary style. A fair idea, however, may be gained of Tangier and the many picturesque aspects of its inhabitants; and the sketches of the *vis intime* of the Jewish and Arab communities are portrayed with skill and fidelity, while a description of the country about Tetuan must be commended for its intelligent observation, particularly of the rich and diverse flora of that district. The winter climate of Tangier is spoken of in deservedly high terms as exercising a salutary influence in pulmonary complaints; and Mrs. Vyse also notes the remarkable and

exhilarating quality in the air of Morocco, so grateful to the jaded spirits and so beneficial in imparting tone to the exhausted nerves. As in Algeria, this tonic and stimulative nerve-influence is a far more notable feature in the climate than its curative power in lung disease. Those who may be anticipating a sojourn in Morocco will find *A Winter in Tangier* useful in several particulars as supplementing the guide-books.

*Tourist's Guide to Dorsetshire.* By R. N. Worth. (Stanford.) Apart from the quiet charms of its characteristically English scenery, the county of Dorset is unusually rich in remains of the most varied historical and antiquarian interest. The land of the Durotriges, or "dwellers by the water-side," as Ptolemy calls them, was one of the parts of Britain most thickly inhabited by Roman colonists, who have left abundant relics of their occupation—fine villas with mosaic pavements, great quantities of coins and other objects in silver and bronze—which are constantly being discovered in every part of the county. It is worthy of note that in Dorsetshire more Roman objects with Christian symbols on them have been found than in any other part of Britain. The fine mosaic pavement at Frampton is an instance of this, and so are the ingots of mixed metal and silver rings recently dug up near Blandford and Sturminster Newton. The great Via Iceniana, connecting the province of the Iceni in Norfolk with Exeter and the South-west, passes right through Dorsetshire, while a net-work of other roads joined the numerous Roman camps and towns, of most of which some vestiges still remain. Nor is Dorsetshire less rich in remains of British work, and in specimens of the grand ecclesiastical architecture of the Middle Ages. Mr. Worth's little guide-book supplies in a convenient and portable form a great deal of very useful information to anyone who may wish to explore the district. It is well and clearly arranged in a series of excursions planned to suit the lines of railway, and gives the tourist a very fair notion of what to look for, though in so limited a space but little room can be devoted to the history or description of any special thing. The weak point of the book is its very limited antiquarian value. We are not told, for instance, under the head Wimborne, that this was one of the chief Roman towns of Dorsetshire, *Vindogladia* by name; and the grand old collegiate church (a college of secular canons) is called vaguely a "minster," without any information as to what order of clergy it belonged to—a point of the greatest interest in every monastic building, the plan and arrangement of which depends on the rule and customs of the special religious Order that built it. But little is said, and that not with the most careful accuracy, about the many interesting old churches, such as Milton, Cerne, Bridport, Beaminster, and others. The wish to keep the book in a portable form is no doubt partly the cause of this; but a little careful information about some of these historically interesting remains would have been more useful to the reader than the quotation of Dr. Arbuthnot's jokes, eulogies on Hardman's stained glass, or praise of the hideous destruction perpetrated by modern architects under the name of "restoration." There is, however, an excellent account of Corfe Castle, the scene of the murder of Edward the Martyr, one of the most complete and picturesque of all the remains of military architecture in England. The stately Norman keep is still well preserved, and the lines of the inner, middle, and outer wards are easily traceable. Its position is very striking, and must have made it almost impregnable, standing as it does on a mass of rock rising alone among gently sloping hills, while on three sides the base of the rock is washed by meeting streams,

*Tourists' Guide to Berkshire.* By Edward Walford. (Stanford.) Berkshire is a county bounded and divided by rivers. From Lechlade to Windsor the noble Thames—if Thames it can be called above the little village of Benson—forms its northern limit. The "Kennet swift" crosses the county from Hungerford to Reading, and for a part of its course its waters are joined by those of the Lambourn. Near Wargrave the "Loddon slow" runs into the Thames after having crept along from Basingstoke. Another river of less note, the Ock, loses itself in the Thames near Abingdon. All these rivers are the resorts of anglers; and Mr. Walford, with a keen perception of the wants of the class of tourists likely to visit Berkshire, describes the scenery and the villages on their banks with sufficient detail. The main roads lead the traveller over the healthy downs in the heart of the county, and descend at last into shady vales, in which many pleasant villages lie buried. Windsor and its forest stand out as of surpassing interest; with that exception, the three most striking towns are Abingdon, Newbury, and Wallingford. Mr. Walford's descriptions of their antiquities afford enough information for the angler or pedestrian while on his travels; but it might have been well if some indication had been given of the fuller Histories which he could consult on his return home. Such references would have been of greater value than the long tables giving the populations of the various hundreds and parishes. Mr. Walford's remarks on the scenery of Berkshire are not borrowed from his predecessors; during the last two years he has visited almost every corner of the county, and the purchaser of the last addition to Mr. Stanford's excellent series of pocket handbooks may thus rely upon the accuracy of the compiler's assertions on all points of local topography. In matters of history Mr. Walford has sometimes inadvertently adopted the error of someone who has gone before him. The list of Camden Professors of History at Oxford does not include the name of Hearne. The statement of Kelly's chronicler that Lord Chancellor Olerendon wrote the greater part, if not the whole, of his *History of the Rebellion at Swallowfield* may at once be dismissed as unworthy of credence. Nor does chronology allow us to accept the assurance that a portrait of Archbishop Laud at Wallingford can be by Holbein. These slight blemishes can be removed in a second edition, and the popularity of the other guide-books that Mr. Stanford has published justifies us in the hope that a second edition will soon be required for this description of the royal county.

*The J. E. M. Guide to Switzerland: The Alps and How to see Them.* By J. E. Muddock. (Simpkin, Marshall and Co.) This volume pretends to be "the cheapest, most comprehensive, useful, and interesting Swiss Guide ever offered to the public." Its editor appeals with confidence to "the discrimination of the public" to bear out this broad statement. By this he probably means the ignorance of those who are about to be taken "a round tour." Older travellers, on going behind the audacious flourish of its Preface, will speedily recognise the true character of the *J. E. M. Guide*. It is a flimsy, insufficient, and inaccurate compilation, full of mistakes, omissions, and misprints, even on well-known routes. To criticise it in detail would be a waste of space. When we have pointed out that the Gries Pass—one of Brokedon's "Passes of the Alps"—is not even alluded to, and that neither the Rieder Alp, Axenstein, nor Monte Generoso are mentioned as resting-places with excellent inns, we have done enough to show that no tourist who has not more half-crowns, and more room in his portmanteau, than he knows what to do with should purchase the *J. E. M. Guide*. To one fact we must call special notice. The editor

states that "the maps, plans, and panoramas are the very best of their kind;" that "neither expense nor pains have been spared." Several of these maps are antiquated—we had almost said obsolete. For instance, on the general "New Map" the carriage-roads over the Oberalp and Furka are absent; while, although it professes to "show all the railway routes," the projected railway under the Lukmanier, long ago given up in favour of the St. Gothard, is shown, and the St. Gothard Railway itself omitted, together with the continuation of the Rhone Valley Railway beyond Sion and the junction of the French and Swiss lines by Delle and Porrentruy.

*Country Rambles and Manchester Walks and Wild Flowers.* By Leo H. Grindon. (Manchester: Palmer and Howe.) If a book like this were written for each of the great towns of the country, the result would be a substantial addition to the potential pleasures of the nation. Mr. Grindon writes in a smooth fashion that engages the attention of even the careless reader, and yet with a fullness of knowledge and a grasp of the points involved that will make him a welcome companion to even the most devoted student of botany or ornithology. He has shown Manchester people how they may wisely employ such leisure as falls to them, and, by escaping from the mirky streets to the pleasant valleys, green mosses, and heathery hills that still exist within easy distance of the cotton metropolis, gain renewal of health and strength. If any of these rural rambles acquire a taste for some form of natural history Mr. Grindon will rejoice, and for their benefit he has added a chapter on the aids to the study of biology in the public libraries of Manchester. The book is illustrated by engravings from drawings by Mr. W. Morton and Mr. T. Letherbrow. Where the work is, on the whole, so satisfactory we are not disposed to dwell upon the blemishes that hypercriticism might possibly detect. Mr. Grindon has produced a book equally pleasant and profitable for the reader.

*Arctic Sunbeams; or, from the Broadway to the Bosphorus by way of the North Cape.* By Sam. S. Cox. (New York: G. P. Putnam's Sons.) The author of this book is one of the members of Congress for New York, and is well known in his own country by his writings. At p. 342 of the volume before us will be found a mysterious allusion to the word "Sunset;" all the reader can possibly make of it is that it is a "pet name," the explanation being that the author is well known in America as "Sunset Cox." This has resulted from his two initials of S. S. having got mixed up somehow with his constant references to "sunbeams" and "sunsets." He has dealt so much in sunbeams that it would be easy to prove that the Member for New York has never existed, and was nothing more than a "solar myth." The present volume is to be followed by another, to be called "Orient Sunbeams," which will give the continuation of the journey from Constantinople through Palestine to Egypt. *Arctic Sunbeams* describes a tour to the North Cape in order to see the midnight sun, from which the author, accompanied by his wife, travelled through Norway and Finland to St. Petersburg—"Why St. Petersburg?" the author says, like others before him, for Peter the Great was not a Saint. The journey was continued via Moscow and Kief—"The Jerusalem of Russia"—on to Odessa, where they took the steamer to Stamboul. The book does not pretend to "novelty in research, description, or illustration." Yet it is the work of a keen observer, who brings the clear, practical ideas of his country to bear on the Old World scenes he comes across; and, being a politician by profession, his criticisms on the present condition of Russia are of some value.

One of his previous works is an almost exhaustive one on the subject of "Why we Laugh," which will indicate that he is not without the power of appreciating the humorous side of things; and the reader will find plentiful illustrations of this in the journey from the Broadway to the Bosphorus.

#### NOTES AND NEWS.

MESSRS. MACMILLAN AND Co. intend to issue early in the winter season a volume on Dante Gabriel Rossetti and his influence and work in art and literature. Its appearance will probably be contemporaneous with the projected exhibition of the artist's works at Burlington House. It will be written by Mr. William Sharp, who has the advantage of having had the intimate friendship of Rossetti.

As Mr. Browning's house at Warwick Crescent, in which he has written almost all his works, is soon to be pulled down by a railway company for a new line, the Browning Society has ordered photographs to be taken of the house, of the view over the canal-basin from it, and of the poet's study and drawing-room. The house at Camberwell where Mr. Browning was born, and where he wrote *Paracelsus*, is also to be photographed for the Browning Society.

MESSRS. LONGMAN will issue next week a second and revised edition of Mr. J. Theodore Bent's *Life of Garibaldi*.

MISS SARAH TYTLER is writing a *Life of Marie-Antoinette* for the "New Plutarch" series of biographies published by Messrs. Marcus Ward.

PROF. WELLHAUSEN, of Greifswald, has just published, under the title of *Muhammad in Medina*, an abridged translation of Waqidy's *Kutub al Maghazy*. The edition of von Kremer (Calcutta, 1856) contains only the first third of this important work, and is in many respects imperfect. Prof. Wellhausen, who in 1880 transcribed the remainder of the work from *Prestonianus* in the British Museum, gives us hopes of a complete edition at some future time; and, meanwhile, he has supplied the historical student with a most valuable store of material. We understand that Prof. Wellhausen's reading of the history of Muhammad, based on very extensive studies in published and unpublished sources, will first appear in the *Encyclopaedia Britannica*. Prof. Nöldeke has promised the same publication a section on the Koran, while the Muhammadan empire will be treated by M. Guyard, one of the editors of *Tabary*.

*The Orders of Chivalry* is the title of a new work by Capt. J. H. Laurence-Archer, which will be shortly issued by Messrs. W. H. Allen and Co. The book will contain illustrations of the various orders, supplied direct by foreign Governments and other official sources; and it is brought down to the latest date, with an Appendix of extinct orders.

THE last literary work in which the late Dr. Hanna was engaged was the preparation of a popular edition of his *Life of Christ*, which will be issued very shortly by the Religious Tract Society.

MESSRS. W. B. WHITTINGHAM AND Co., the publishers of Money's standard work on *Tea Cultivation* and the recently issued *Tea Cyclopaedia*, announce a new handbook for which there have been frequent enquiries. It is entitled *The Art of Tea-Blending: a Guide to Tea Merchants, Brokers, Dealers, and Consumers in the Secret of Successful Tea-mixing*.

In commemoration of the twenty-fifth anniversary of the Social Science Association, which will be held in September at Nottingham, the

secretary, Mr. J. L. Olifford Smith, is preparing for publication a narrative of the past labours of the association and their results.

THE Rev. J. T. Jeffcock, of Wolverhampton, proposes to publish shortly by subscription the earliest baptismal, marriage, and burial registers of the collegiate church of Wolverhampton. These consist of two books covering the period from 1603 to 1660; and the later of them is said to be much better kept than is usual during the period of the Great Rebellion. The editor will add a few notes, with an Index of Christian and surnames.

MR. J. HORSFALL TURNER, of Idel, near Leeds, to whom we are indebted for several local publications of more than local interest, has now nearly ready for the press a volume on *Ilkley, Ancient and Modern*, compiled by himself in collaboration with the Rev. Dr. R. Collyer, of New York. Chapters on natural history and the prehistoric aspect of the country will be contributed by specialists.

A MEETING was held at Leeds last Saturday to protest against the removal of old parish registers to London as proposed in Mr. Borlase's Bill now before Parliament. On this matter we have already expressed our opinion (ACADEMY, May 20). We are more interested to observe that at the same meeting it was proposed to form a Yorkshire Parish Register Society, having for its object the immediate transcribing and publishing of such registers as may be permitted by their custodians.

THE Cumberland and Westmorland Antiquarian and Archaeological Society have resolved to print an occasional series of scarce tracts or MSS. relating to their district. The first of the series, which is now ready, consists of Fleming's *Description of the County of Westmorland* (1671), edited, with copious notes and Index, by Sir George Duckett, from the MS. in the Bodleian Library. It may be obtained from Mr. T. Wilson, Kendal.

THE annual meeting of the Society for the Promotion of Hellenic Studies will take place at 22 Albemarle Street, on Thursday next, June 15, when the chair will be taken, at 5 p.m., by Prof. C. T. Newton, vice-president. The Annual Report of the council will be read, and the council and officers elected for the coming year.

At the meeting of the Clifton Shakspeare Society held on May 27, the play for criticism was "All's Well that Ends Well." A report on rare words and phrases was presented by Mr. L. M. Griffiths. An anonymous paper on Helena was read by the Secretary. This meeting was the last one of the society's seventh session.

THERE will be a few tickets for the Browning Society's extra evening (Friday, June 30) of recitations, &c., remaining after sending members theirs for themselves and friends. They may be had on application to the hon. sec., Clifton House, Pond Street, Hampstead.

DR. DE PRESSENSÉ will give three lectures in French on "The Origin of Man, in View of Current Discussions," by arrangement of the Christian Evidence Society, at Willis's Rooms, in the afternoons of June 15, 17, and 19. The first lecture, with the Duke of Argyll in the chair, will discuss the state of the anthropological question, especially as it is in France, with reference to evolution and creation. The second lecture, when the Archbishop of Canterbury will preside, will point out the resemblances and the differences between man and animal, between intelligence and instinct, and will describe the conditions of human and animal society. The French ambassador will preside at the third lecture, when Dr. de Pressensé will refer to man as a moral and religious being,

discuss the morality of materialism and utility, show the origin of the religious sentiment, and describe how man is truly a child of God, fallen indeed, but with a tendency towards his Father.

MR. HIRZEL, of Leipzig, has undertaken the publication of a series of notes on the late Prof. Lotze's lectures, taken by his pupils, and edited by Prof. Rehnisch, of Göttingen. He has just brought out the "Elements of Practical Philosophy;" and this will be followed in the course of the present year by other parts containing "Elements of the Philosophy of Religion," "Elements of Aesthetics," "History of German Philosophy since Kant," "Elements of Natural Philosophy," "Elements of Logic and Encyclopaedia of Philosophy," and "Elements of Metaphysics."

MR. ARTHUR NAPIER, the well-known English lecturer at Berlin, has printed, for his Doctorate dissertation, an essay on the sermons of our Saxon Archbishop Wulfstan. This is only preliminary to an edition of all the fifty-three homilies attributed to Wulfstan by Wanley; but it robs the old Archbishop of much of his literary reputation, for the fifty-three sermons in question are mainly mere compilations, amplifications, and distortions of other folk's homilies, old ecclesiastical laws, &c., and are due to the fertile pens, and less fertile brains, of the eleventh-century scribes of Worcester. In one of the homilies, for instance, Mr. Napier has found a very mangled and scarcely recognisable version of the Anglo-Saxon translation of Bede's "De die Judicii," *Be dōmes dæge*, while some others are sermons by Ælfric, disguised by having a different beginning put to them, and so on.

In the ACADEMY of March 25 it was announced that the Royal Academy of Moral and Political Science of Naples had offered a prize of 1,000 frs. for a memoir on the Ethics of Aristotle. We are now requested to state that the memoir may be written in English, as an alternative to the languages formerly specified.

WITH reference to a paragraph in the ACADEMY of last week under the heading of "Magazines and Reviews," Mr. Harry Quilter writes to us that his criticism on the Royal Academy in the current number of the *Contemporary* has not been previously published.

A CORRESPONDENT writes:—

"I venture to offer to all Browning societies the following suggestion:—That the study and critical examination of Elizabeth Barrett Browning's works should be embraced in the scheme of each society. Who that remembers the wife's splendid series of 'Sonnets from the Portuguese' and the husband's 'One Word More,' exquisite and unique, but must feel how much each of these fine spirits owes to the other, how in their diverse gifts of insight and of song they supplement and explain each other? Surely they who love and study together these double stars of poetry will be gainers thereby. And to Robert Browning we could bring, I think, no tribute of honour and reverent sympathy more grateful than this association with his utterances of that voice he holds so dear and so divine."

#### AMERICAN JOTTINGS.

THE *New York Herald* announces that Mr. James Gordon Bennett has signified his intention of providing for the widow and children of Lieut. De Long, and also for "every widow and every orphan of the men who sailed in the *Jeannette* and have perished."

A NATIONAL subscription, limited to one dollar, has been started by a Longfellow Association, of which Mr. Lowell is president. The objects proposed are to purchase a vacant piece of ground opposite the poet's house, and to

convert it into a public park with a monument, and also to preserve the house itself if it should ever pass out of the hands of the family.

MESSRS. A. WILLIAMS AND Co., of Boston, are about to publish the proceedings of the Massachusetts Historical Society with reference to the deaths of Longfellow and Emerson. The work will be illustrated with the Notman and Warren photographs of the dead poet and philosopher, the last pictures for which they sat. It will contain the proceedings of the April meeting of the society in memory of Longfellow, at which addresses were delivered by Dr. G. E. Ellis, Dr. O. W. Holmes, &c.; and the proceedings of the meeting of May 12. Dr. George E. Ellis, the vice-president, in opening the latter proceedings, portrayed in vivid language the last appearance of Emerson in public. The occasion was the day of the burial of Thomas Carlyle. At the very hour at which his remains were being consigned to the tomb, Emerson was reading before the Historical Society his celebrated essay on Carlyle which had lain in MS. for thirty years. In addition to these addresses the memorial pamphlet will contain the above-mentioned essay on Carlyle by Emerson.

THE next volume, being the third, of the series of "American Statesmen," published by Messrs. Houghton, Mifflin and Co., will be *John C. Calhoun*. It will be written by Prof. H. von Holst, of Freiburg im Breisgau, author of the *Constitutional and Political History of the United States*, the third volume of which, covering the period from 1846 to 1850, has just been issued in this country in an English translation by Messrs. Trübner.

MESSRS. GINN AND HEATH, of Boston, will shortly publish an edition of *Bowulf*, by Prof. J. A. Harrison, of Washington and Lee University, based mainly upon the text of Hayne's fourth edition. This will be followed by a glossary, compiled by Profs. Harrison and Robert Sharp, of Louisiana.

#### A TRANSLATION FROM HEINE.

FÜR DIE MOUCHE.

(Heine's last poem, written a week or two before his death.)

I DREAMT a dream upon a summer night,  
Where pale, dissolving in the moon's cold glance,  
Lay works of ancient beauty and of might,  
Old ruins from the time of Renaissance.

And here and there in that encumbered place  
Rose some bold Doric column all alone,  
And looked the frowning firmament in face,  
As if it could defy the thunderstone.

Prono on the earth lay shattered all about  
Doors, gables, roofs, with sculptures from an æra  
When man and beast were mingled in a rout  
Of centaurs, sphinxes, satyrs, and chimæra.

And in an open tomb of marble, fair,  
Whole 'mid the ruin and the carven creatures,  
Wrapped in his shroud, but to the night-winds bare,  
A dead man lay, with pale, long-suffering features.

Strong caryatides, with throats upreared,  
Held him aloft as if with might and main;  
And on the coffer's either side appeared  
In low relief, a wild and motley train.

Here, glorious from Olympus, came the band  
Of heathen gods, all flushed with lawless passion;  
But Adam and his Eve are close at hand  
In modest aprons of the fig-leaf fashion.

Paris and Helen, Hector too, are here,  
Troy's fall and fire what next we may discern is;  
Moses and Aaron also hover near,  
With Esther, Judith, Haman, Holofernes.

Here likewise is the god of Love to see,  
Phoebus Apollo, Vulcan, lady Venus,  
Pluto and Proserpine, and Mercury,  
God Bacchus, and Priapus, and Silenus.

Here Balaam and his ass wait further on,—  
The likeness of the ass is really speaking ;—  
And Abraham about to slay his son ;  
And Lot for whom his daughters twain are seeking.

Here before Herod sways the nimble child  
Of her to whom the Baptist's head was given ;  
Here Hell broke loose, and Satan here beguiled ;  
Here Peter showed and shook the keys of Heaven.

And further change there was to ponder on,  
When wanton Jove, bent at all costs to win his  
Lascivious will, chased Leda as a swan,  
And Danae in a shower of golden guineas.

Here Dian heads herself the eager press  
Of kirtled nymphs, and deep-mouthed hounds in-  
toning ;

And here sits Hercules in woman's dress.  
The distaff in his hand, the spindle droning.

Here Sami his cloudy front uprears,  
There at its foot is Israel with his ox ;  
And in the Temple here the Lord appears,—  
A child disputing with the orthodox.

The contrasts side by side are sharply set :  
The Greek light-heartedness, the stern God-fearing  
Spirit of Judah, and the woven net  
Of ivy-tendrils over all careering.

Then, wonderful ! The while, as I have said,  
These carven fancies in my dream went by,  
Sudden it seemed to come into my head,  
The dead man in the marble tomb was I.

And bending down towards my resting-place  
There stood a flower,—a flower of such strange  
fashion,—

A flower that had so wild a charm and grace,  
That people call it flower of the Passion.

Purple and sulphur-pale, from out the sod  
Of Calvary, they say this blossom burst  
When men had crucified the Son of God,  
And shed His blood to heal the world accurst.

Blood-witness it is named, and you will find  
That every several instrument of malice,  
All tools of martyrdom of various kind,  
It carries counterfeited in its chalice.

Each requisite of pain the flower adorns ;  
From out its torture-chamber nothing fails :  
The spittle and the cords, the crown of thorns,  
The cross, the cup, the hammer, and the nails.

And at my grave there stood a flower like this,  
And bent above my corpse so still and cold,  
With woman's sorrow, and with woman's kiss,  
Prest hands, brow, cheek, and wept on unconsoled.

Then, sorcery of dreams ! this flower of mine—  
This blossom from the heart of passion blown,  
Had changed into a woman's likeness, thine,  
Yes thine, my best and dearest, thine, thine own.

Thou wert that flower ; yes thou, beloved child,—  
That from thy woman's kisses I was learning,—  
No flower had ever lips so soft, so mild,  
And never, never flower had tears so burning !

Closed were mine eyes, and yet with inward gaze  
My soul beheld thee standing still before me,  
Ghost-like, illumined by the moon's pale rays,  
A beatific vision bending o'er me.

We did not speak ; but ah ! I could perceive  
The inmost secret of your spirit clearly ;  
The spoken word is shameless, may deceive,  
Love's pure unopened flower is silence merely.

Voiceless communing ! who could ever deem,  
In tender converse which no ear might hear,  
That time could fly as in my happy dream  
That summer night so full of joy and fear ?

What we then said, oh ask it of me never !  
Ask of the glow-worm what it says in shining ;  
Ask what the wavelet whispers to the river ;  
Question the west wind of its soft repining.

Ask the carbuncle of its fiery gleam ;  
Ask what coy sweets the violet is betraying ;  
But ask not what beneath the moon's sad beam  
The martyr-flower and her dead are saying !

I have no thought how long I may have known  
The calm refreshment of that marble chest  
And happy dream. But oh, the dream was flown,  
And down the all unwonted boon of rest !

Oh, Death and Silence ! bring my soul release,  
Thou, only thou, canst give voluptuous bliss ;  
The storm of passion, joy that knows no peace,  
When life would give its best, it offers this.

But woe is me ! for sudden from without  
Loud cries broke in upon my still delight ;  
I heard a scolding, stamping, noisy rout,  
And, ah ! my flower was trembling in affright.

Yes, just outside my tomb there rose and fell,  
Disputing, swearing, yelping, idly jangling,  
Loud voices, some among them known too well,—  
The bas-reliefs upon my tomb were wrangling.

Must lies still haunt the very stones, and can  
These marble shadows fight for outworn glories ?  
The startled shriek of the wild wood-god Pan,  
Contending with anathemas of Moses !

Ay, this same battle rages evermore,  
War 'twixt the True and Beautiful has been  
And will be, and mankind as heretofore  
Ranged in two camps—Barbarian and Hellene.

They shouted, raved, swore,—all the rest of it,  
There was no end of tedious controversy ;  
But Balaam's ass had still the best of it,  
And brayed down gods and saints, and knew no mercy.

And at this vile eh-aw, which never ceased,—  
This odious discord, truculent, defying,  
In desperation at the stupid beast  
I too cried out, and—woke myself with crying.

EMILY PFEIFFER.

#### OBITUARY.

JAMES THOMSON.

It is with much regret that we record the sudden death of Mr. James Thomson, the author of *The City of Dreadful Night*. On Thursday last, while visiting a friend, Mr. Thomson was taken ill, and, on medical aid being summoned, it was found that he had broken a blood-vessel. He was removed to University College Hospital, where he died on Saturday night, June 3. The funeral was to take place on Thursday at Highgate Cemetery.

Mr. Thomson was born at Port Greenock on November 23, 1834. He served in the army as regimental schoolmaster for about ten years. It was here that he first became acquainted with Mr. Charles Bradlaugh, who was then also serving as a private soldier. This led to his contributing to the *National Reformer* when that paper was established in 1860. The first of his poems that appeared in that paper was "The Dead Year," a poetical review of the events of the year 1860. Afterwards, his poems entitled "Our Sisters of Death," "Vane's Story," "Sunday at Hampstead," "Weddah and Om-el-Bonain," "The City of Dreadful Night," besides many prose articles, appeared in the same paper. Readers of the *ACADEMY* may remember that it was in its pages that attention was first drawn to the fine qualities displayed in "The City of Dreadful Night." Although Mr. Thomson's poems as thus published excited a considerable amount of admiration and interest, it was not till 1880 that a publisher could be found to bring them out in book form. In that year Messrs. Reeves and Turner, at the instance of one who had from the first appearance of the poems in the *National Reformer* recognised their great merits, published *The City of Dreadful Night, and other Poems*. Since then another collection of poems, entitled *Vane's Story, and other Poems*, and a volume of *Essays and Phantasies* have been issued.

We understand that Mr. Thomson has left a considerable number of unpublished poems, most of them written in his youth, but some composed within the last few months. It may be hoped that these, and also a second volume

of his prose writings, may be soon given to the public.

THE death is announced, on May 27, at the age of seventy-four, of Mr. Edwin Abbott, who some time ago resigned the head-mastership of the Philological School, London, which he had held for forty-five years. He was known to the literary world as the compiler of a concordance to the poetical works of Pope, to which his son, Dr. Abbott, of the City of London School, wrote an Introduction. He was better known as a schoolmaster. He was one of the first to advocate a more thorough English training in schools, and himself prepared for his own pupils a handbook of English grammar, which at the time it appeared was unrivalled within its limits, though the recent rapid advance in English philology would make revision necessary if it were reprinted. Mr. Abbott was also the author of Latin and arithmetic handbooks, likewise written for his own pupils.

Of Prof. Reinhold Pauli, of Göttingen, who died on June 3, we hope to say something next week.

#### MAGAZINES AND REVIEWS.

MR. WILLIAM GEORGE BLACK contributes a careful and graphic article on "Midsummer" to the June number of the *Antiquary* ; but the really important paper is "The Domesday of Colchester," by Mr. J. H. Round. It would not be easy to exaggerate the merits of this most painstaking addition to our knowledge of that important survey. It has long been known that Domesday was a valuable legal document, but it is only this generation which has discovered that it is an almost inexhaustible mine of knowledge as to the past. Its full value can only be estimated by confining our studies to some small area, and learning from it all that it has to tell about that circumscribed space. Colchester has probably been inhabited continuously from the Roman time until the present ; and if the Roman municipal traditions lingered anywhere we are far more likely to find them there than at Exeter, Lincoln, or York, all of which must have suffered, not merely decay, but temporary obliteration. Mr. Wheatley's "Story of Rome and Juliet" begins well, but it is only a first part. One feature of the *Antiquary*, which improves in each number, is the accounts given of provincial historical societies, and of the progress of archaeological discovery. As time goes on these notes will form a most valuable body of material for future workers. We gather herefrom that there is great danger that the citizens of York, bent on improvement, may be permitted to sweep away the church of Saint Crux. Mr. George Gilbert Scott says that it is "a particularly beautiful specimen of what is, in many respects, the most perfect phase of our mediæval architecture." We hope there is sufficient loyalty to the past in Yorkshire to hinder such a crime from being perpetrated. It is stated by Drake in his *Eboracum* (i. 143) that the body of Thomas Percy Earl of Northumberland, who was beheaded for the Rising in the North, was buried here by two of his servants. This fact alone, if it be beyond doubt, should be a sufficient reason why Northcountrymen should hesitate before they destroy so venerable a landmark of history.

THE *Revista Contemporanea* of May 30 opens with an excellent lecture on "Prehistoric Times," by Don Juan Villanova, with especial reference to discoveries in Spain and Portugal. In a short essay on the method of teaching theatrical declamation Alvaro Romea shows that mere imitation even of the best actors will not suffice. The "Diary of a Tour in Italy in

1839," by the Conde de Toreno, is marked only by its notices of the artistic remains of the Spanish occupation of Naples and Sicily. Gen. Cordova continues his narrative of the Spanish expedition to Italy in 1849, and states that he found some of the country clergy, and even some bishops, of the Papal territory favourable to the projects of Garibaldi; he also condemns the cruel reprisals attempted by the clerical party. There is a pretty little love-poem, "The Two Suns," by P. Langle.

THE *Euskal-Erria* of San Sebastian of May 30 has an engraving, by R. Becerro de Bengoa, of the Hermitage of San Roman in Ascarza, Alava, the spot where Peter the Cruel was armed knight by the Black Prince.

### BOOK SALES.

MESSRS. SOTHEY, WILKINSON AND HODGE sold a few days ago, by auction, the valuable and finely bound library of Mr. Henry F. R. Yorke. The sale was comprised within the limits of a single day, and the books sought after consisted, for the most part, of first editions of the English classics, such as it is already the custom to buy at high prices. There were, of course, a few exceptions—foreign books, or books not of literature proper—and one or two of these, together with the English classics, will be found mentioned below. Bewick's *Birds*, the first edition (Newcastle, 1797), fetched £21 15s. (Quaritch); Burns's *Poems, chiefly in the Scottish Dialect*, a fine copy of the extremely rare first edition, printed at Kilmarnock in 1786, sold for £67 (Stevens), while the first Edinburgh edition, which followed the provincial at an interval of a single year, fell for £6 2s. 6d. *Robinson Crusoe* appeared at Mr. Yorke's sale in the first edition, and realised £34 10s. (Pickering). The first editions of Dickens are already largely sought for, but only two appeared; first, that of the *Pickwick Papers*, not only with the Phiz plates, but with the two rare Buss illustrations, of which a member of the Buss family gave some account in the ACADEMY not very long ago. This first edition of *Pickwick* sold for £8 15s. A first edition of *Sketches by Bos*—the copy presented by the publisher to Mrs. George Cruikshank, and bearing the autograph of that lady's husband—fetched £15 10s. Dorat's *Les Baisers*, a fine impression of the pretty vignettes by Eisen, sold for £44 (Ellis). Of Fielding's works, the first editions of *Amelia*, of *Tom Jones*, and of *Joseph Andrews* were sold together for £15 10s. (Stevens). A first edition of Gay's *Fables* sold for £5 12s. 6d. (Sotheman). The rare pre-Raphaelite magazine, the *Germ*, which is recognised as containing the first draft of Rossetti's "Blessed Damsel," as well as some of his minor poems, fetched £5 2s. 6d.; this is one of the most difficult to obtain of modern books. The *Vicar of Wakefield*, in the much-sought-for Salisbury edition of 1786, was knocked down to Mr. Quaritch at £14 5s. The first edition of Gray's *Elegy wrote in a Country Churchyard*, of the date of 1751, fell to the bid of £11 (Pearson); a copy had been sold two years previously for £21 10s. Hamerton's *Etching and Etchers*—the first edition, which continues to be the one sought for—fetched £13 (Stevens). A copy of the first edition of Keats' *Endymion* sold for £4 16s.; the like early issue of his *Lamia*, *Isabella*, *The Eve of St. Agnes*, and other *Poems*, for £5 10s. The great edition of La Fontaine's *Contes*, the edition of the *Fermiers généraux*, illustrated by Eisen, fetched £28 10s. (Robson). The extremely rare first edition of *Fables choisies mises en Vers* sold for £36 10s. (Pearson); it was stated that in the Laing sale a copy in old calf had sold for £101. The first edition of *Paradise Lost* realised £22 15s. (Pickering); that of *Paradise Regained*, £7 7s.

(Wilson). A first edition of Molière's *L'Étourdy* fetched £16 10s. (Robson). A specially luxurious copy of Gladys' pretty edition of the *Manon Lescaut*, with plates by Flameng and an engaging Preface by Dumas fils—one of his best pieces of writing in his lighter manner—sold for £8 17s. (Sotheman). The Shelleys offered for sale were mostly luxurious reprints, the prices of which it is not necessary to give. The first edition of all the volumes of Sterne's *Tristram Shandy* fetched £15 10s. (Stevens), and the first edition of the *Sentimental Journey* fell for £6 2s. 6d. *The Travels of Gulliver*, the earliest issue of Swift's masterpiece, fell for £8 2s. 6d. (Bain). The first edition of Mr. Swinburne's *Atalanta in Calydon* reached £2 16s. (Robson). A first edition of Thackeray's *Comic Tales and Sketches* reached £17; that of the same writer's *Adventures of Philip*, £6; and that of *Emond*, £8 8s. *Vanity Fair* attained the sum of £10 10s. The *Poems of Villon*, done into English verse by John Payne, and issued to the Villon Society for a guinea, has now reached £4 2s., the demand for this extremely limited edition having doubtless been increased by the recent publication of an edition greatly "Bowdlerised"—that is to say, imperfect. Wordsworth's *An Evening Walk*, first edition, 1793, sold for £10 5s. (Bain); and the first edition of his *Lyrical Ballads, with a few other Poems*, including "Rime of the Ancient Mariner" by S. T. Coleridge, fetched £6 15s. (Bain).

ON May 31 Messrs. Sothey, Wilkinson and Hodge sold Canon Lysons' library, and with it the important collection of Hardwicke Papers, of the whole of which Mr. Quaritch seems to have become the fortunate possessor. Indjudiciously split up into a number of lots, roughly and unscientifically classified, this mass of historical MSS. realised a mere trifle in comparison with its intrinsic value and the expectations of the owners, who it was said had estimated the collection as worth £10,000. It consisted partly of the original papers and correspondence of ambassadors and diplomatic agents at foreign Courts during the reigns of George I. and George II., and partly of a set of transcripts made for Lord Chancellor Hardwicke (continued by his son, the second earl) from documents illustrating the history of England from the middle of the sixteenth to the middle of the eighteenth century. Among these transcripts several contemporary copies of the older papers were inserted, and each volume was rendered useful by a list of contents. Altogether there were about 150 folio and quarto volumes; and the rich store of material which they would furnish, especially for the history of Europe in the time of the first two Georges, may be imagined from the fact that among them were the original correspondence of Lords Whitworth and Polwarth, Sir Luke Schaub and Lord Carteret, Secretary Orages and Lord Stair, with many letters in the handwriting of the Walpoles and Stanhopes, Count Hoym, Count Königsegg, Mr. Bubb, the abbé Dubois, besides two autograph letters of King Stanislaus and the Regent Duke of Orleans.

BETWEEN May 26 and June 1, Messrs. Puttick and Simpson sold the library of the late A. W. Morant, F.S.A., a civil engineer by profession, but by taste a student of heraldic and genealogical lore. He was a scholar and antiquary of high order; and in his own special line of research he had probably no rival, at least in our time. On the subject of family history and armorial bearings his knowledge was extraordinarily great; and we should have to look back to the days of Sir William Dugdale to find a parallel to his patient and unwearied toil in that department of historical antiquities. Mr. Morant's library was useful as well as valuable, and eminently characteristic of his studies.

It comprised several MS. collections of armorial bearings, including his own extensive collections, full of neatly drawn escutcheons, and illustrated with copies of innumerable inscriptions, monograms, shop-signs, and other curious relics of bygone times and customs. These, with his MS. volumes of historic peerages and family pedigrees, constituted the chief interest of the sale, and were for the most part bought by Mr. Quaritch at comparatively low prices.

### THE ONLY ENGLISH PROCLAMATION OF HENRY III.

It has already been shown (ACADEMY, April 29 and May 13) that we have now two copies of this Proclamation—viz., H. (the Huntingdonshire copy) and O. (the Oxford copy). We also learn, from a note at the end of H., that copies "all in the like words" were "sent into every other shire over all the kingdom of England, and also into Ireland." The facts, that this note does not appear in O., and that it forms no proper part of the document, show us that the particular copy on which this note has been made is the very one that was retained in London (where it still is) as a record of what was proclaimed.

As a large number of copies had to be made, it is probable that they were multiplied in the usual manner—viz., by employing some official to dictate the words of the proclamation to a number of scribes at once, who wrote them down to the best of their ability, each man according to his own fashion. As it was especially intended by Simon de Montfort—for it is to him that we may fairly attribute the notion—that the proclamation should be thoroughly understood by the people, we may be sure that all the persons employed were, on this special occasion, conversant with English. But, as there was at that time no one dialect which was considered as being the best for literary purposes, each scribe was personally responsible for the *spelling* and *inflections* which it pleased him to use, though he had no power over the actual wording. For the purpose of exhibiting the variations between H. and O. in the simplest manner, I shall assume that the person dictating used the Southern dialect, sufficiently represented by H., while the scribe of O. was best acquainted with Midland English, and consequently altered *some* (but not *all*) of the Southern forms to suit his own ideas. This theory is only assumed for convenience; the facts remain the same, however they are to be accounted for.

If we now collate the two copies, we find, first of all, certain variations which are purely graphic, and of no linguistic significance. Thus, in H. we have *Henr*, but in O. *Henri*; with other variations of no consequence.

Besides these, we have the following readings of H., where, as before, the figures between marks of parenthesis refer to the numbers of the lines in O.:

- (1) *hise*; *ilærde*; (2) *Huntendon'schir*; *þæt* (*passim*); *rædesmen*; *dæl*; *beop*; (3) *habbeþ*; *gode*; *loande*; *to foreniseide*; (4) *stedefæst*; *ilestinde*; *ænde*; *stedefæstliche*; (5) *isettnesses*; *imakede*; *makien*; *to foren iside*; *rædesmen*; *dæl*; (6) *biforen*; *done*; *þan*; *oþe*; *done*; *foangen*; *loande*; (7) *ilet*; *ifoon*; (8) *stedefæst*; *iseined*; *halden a manges*; (9) *þane*; *geare*; *idon*; *isworne*; (11) *Marescal*.

It remains to sort out these variations so as to show clearly to what they amount. We may at once dismiss the reading *Huntendon'schir*, since this varied for every copy. We cannot be sure that H. twice has *done* where O. has *don*, because in both places O. is hardly legible. There is but one real variation of wording—viz., that *biforen* in H. becomes *toforen* in O.

But all the other variations show a most surprising regularity, and are not without instruct-

tion to those who are interested in orthography and grammar.

Orthographical differences are as follow :—

O. puts *e* for *æ* in twenty-three instances—viz., in *ilærde*, *bat* (fourteen times), *redesmen* (O. *redesmen*, twice), *dæl* (twice), *stedefæst* (O. *stedefest*, thrice); *ænde*.

O. puts *o* for *oa* in *foangen*; but, contrariwise, *oa* for *o* in *ope*. Also *oa* for *a* in *amanges*.

O. puts *e* for *ei*; in *sened* for *iseined*. Also *ea* for *a*; in *healden* for *halden*. Also *e* for *a*; in *pene* for *pæne*. Also *sch* for *sc*; in *Mareschal* for *Marescal*.

Grammatical differences are as follow :—

O. drops the final *e* of a grammatical inflection in seven instances. Of these, two are plural endings—viz., *hise* and *iswoorene*; and five are datives singular—viz., *gode*, *loande* (twice), *ope*, and *geare*.

Again, O. drops the Southern prefix *i*. (A.-S. *ge*.) in ten instances—viz., *iseide* (twice), *ilestinde*, *iseetnesses*, *imakede*, *ilet*, *ifoon*, *iseined*, *idon* (once), *iswoorene*. It may further be remarked that it retains the prefix in seven instances—viz., *igrettinge*, *ilerde*, *ileawede*, *ichosen*, *idon* (once), *iseid*, *iwereed*; but it nowhere inserts it.

Again, O. has *bat* for *þan* in the construction *bi þan iche ope*, where *þan* is the dative of the definite article.

Lastly, O. has three unmistakable instances of Midland grammar as distinguished from Southern—viz., in the forms *beon*, *habben*, and *maken*, as compared with *beoh*, *habbeþ*, and *makiæn*.

I venture to submit that all these variations follow much more regular laws than might, perhaps, have been expected. The spelling and grammar of Middle English are less capricious and chaotic than they are generally believed to be.

## CORRESPONDENCE.

### A LETTER FROM MR. CHARLES DARWIN.

Lathom, Ormskirk: June 3, 1882.

It has been suggested to me that a letter which I received from Mr. Darwin on the day before he died, though not important in itself, derives from the accident of being among the latest things he wrote an interest such as entitles it to publicity. Written by return of post in answer to the mere casual communication of a stranger, it has, at all events, the interest of being one of the many illustrations of that almost proverbial courtesy which characterised the greatest, since Newton, of "those who know." I had taken the liberty of pointing out to him what seemed to me, for certain reasons, a false conclusion arrived at in a paragraph of "The Expression of the Emotions in Man and Animals," where Darwin certainly seems to imply that the familiar canine practice of throwing up earth by backward ejaculations of the hind-feet is a "purposeless remnant" of a habit, on the part of the dog's wilder progenitors, of "burying superfluous food." Mr. Darwin's reply was as follows :—

"Dear Sir,—You have misunderstood my meaning; but the mistake was a very natural one, and your criticism good. I ought not to have interpolated the sentence about the burying of food; and, if inserted at all, it ought to have been at end of paragraph, or in a separate one. The case was instanced solely to illustrate a long-continued habit, for, as far as I have seen, well-fed domestic dogs do not revisit their buried treasures. A dog when burying food makes a hole (as far as I have seen) with his front-legs alone, and thrusts in the earth with his nose, so that there is no resemblance to the supposed excrement-covering movements.—Dear Sir, Yours faithfully, "CH. DARWIN.  
 "I see that I have omitted to thank you for your very courteous expressions towards me."

The foregoing letter Mr. Darwin wrote on April 17. It will be remembered that he was seized with his mortal illness on the 18th, and on the 19th he died. WILLIAM WATSON.

### HENRY III.'S PROCLAMATION IN ENGLISH.

London: May 12, 1882.

Prof. Skeat queries the word *Plecc* or *Pleas* in this document. John de Plessensis is called a Norman, who rose to importance by his marriage with Margaret de Newburgh, the heiress of Warwick and widow of John Marshal. This John de Plessensis, as the name is abbreviated, thus became Earl of Warwick, and died 1263. His son Hugh, by a former wife, and a grand-

son Hugh were barons of England; but this branch has not been traced further. There was, however, a relative styled Robert de Plecy, living 1290-91, perhaps a brother, who held a manorial property at Wimborne, in Dorsetshire, which was called Upwinborne Placy, and the present Earl of Shaftesbury is his lineal descendant and representative. Possibly the name is from Plessis, near Tours.

"Perres of Sauueye" is Peter of Savoy, uncle of Queen Eleanor, a well-known historical character, sometimes, but erroneously, called Earl of Richmond. He was brother to Boniface, Archbishop of Canterbury, who also appears in this very interesting connexion. A. HALL.

### THE NAME "PYRENEES."

Llanwrin, Machynlleth: June 3, 1882.

If the name "Pyrenees" is of Celtic origin, it probably has no connexion with the Welsh *bryn*, a hill, but with *Berwyn*, the name of a somewhat extensive mountain range in Merionethshire. The latter name is derived from *bar* (top) and *gwyn* (white), and signifies the "white-topped" (mountain), a term as applicable to the Pyrenees as to the Merionethshire range. In Modern Welsh the Pyrenees are generally called *Y Barwynion*. D. SILVAN EVANS.

### PRIMITIVE BELIEF.

British Museum: June 6, 1882.

Prof. Sayce's strictures upon the etymologies contained in my *Outlines of Primitive Belief* seem to be grounded upon two suppositions. First, that I set up for being a philologist; and, secondly, that I find fault with Mr. Herbert Spencer for not being one. I should never dream of doing the one thing or the other. Comparative philology, with its accompanying comparative mythology, has cast lights upon the history of thought which cannot be neglected. But that he may appreciate this fact it is not necessary that the student of that history should be a professed philologist. The entire object and tenor of my book are very different from what Prof. Sayce conceives them to be. They are essentially to present the phase of belief called Nature worship, in a shape more human and, if I may use the expression, more historical than the abstract forms which they take in the hands of mythologists. All writers upon Aryan mythology have detected this Nature worship, and explained it more or less truly, and with etymologies more or less false. At present, however, ethnologists pretty generally refuse to have anything to say to it, and Mr. Herbert Spencer notably sets it all upon one side. Among his reasons for doing so, he alleges not unnaturally the impossibility of finding agreement upon the etymologies which bear upon the matter. Neither Mr. Herbert Spencer nor any other enquirer can reasonably be expected to verify the disputed questions of modern philology in order to come to a conclusion upon the subject of Nature worship. And this is, no doubt, the reason why, outside a charmed circle of students, no account of it is taken.

But despite all the philological disputes there remains the general agreement among these students, that the phase of Nature worship has been passed through. What is useful, therefore, for us is to see how it may be incorporated into the history of human thought. If we leave it out, we shall have to put in its place some other system of belief—ancestor worship, animal worship, medicine-man worship, or what not; and we shall thus, as I hold, raise these systems into a prominence which is wholly factitious. Almost all that I have attempted has been to present to my mind a picture of this Aryan Nature worship, which had about it some features which one could

recognise as human. And this, otherwise expressed, was an attempt to translate mythology into *belief*. The conditions of the problem required that this should be done for a group of races which—whatever ethnology may eventually determine about them—are shown by their languages to have passed in common through certain stages of thought. It could scarcely happen but that the standard authorities on these various creeds should contain many false etymologies.

I cannot expect much sympathy from Prof. Sayce in this undertaking. If it is the case that comparative philology (and its resulting comparative mythology) "has nothing to say either for or against" Mr. Spencer's theory touching the place of ancestor worship in primitive belief, then, indeed, the undertaking is wholly unnecessary. But is this the case? I venture to think quite otherwise. Mr. Spencer's theory of ancestor worship is intimately related to his general theories of psychology. Comparative philology in the hands of Max Müller, Lazarus Geiger, and Noiré has cast upon all psychological questions of this kind a light which everyone is capable of appreciating, a light almost entirely independent of the correctness of their etymologies in individual instances. Comparative mythology, again, has its theory of Nature worship, which, if it is really a phase in the history of belief, must be taken into account by Mr. Herbert Spencer. These sciences can have "nothing to say to" the doctrine of ancestor worship only on the supposition that they are concerned with words and names only, and enshrine no relics of real human thought and human experience. I cannot wonder, therefore, though I must regret, that Prof. Sayce has wholly misconceived the object of my book, and has failed to understand the train of argument which it contains. Let me, however, assure him that I have considered and spoken of the relationship of Ragnarök and Balder to Christianity—not, certainly, with reference to any paper not yet published, which could hardly be expected of me. Without anticipating what Dr. Vigfússon may be able to prove (by more cogent reasons than those yet brought forward by Prof. Bugge), I think I can appreciate the difficulties of his task better than Prof. Sayce does. I do not think that the Valkyriur, with their close connexion with the pre-Christian Aurinias and Veleas on the one side, and with the Brunhilds, &c., of German legend upon the other, can be accounted for by the simple phrase "armed angels;" nor that the world-tree, with its relationship on the one side to the sacred trees and village trees spoken of in the Lives of early missionaries such as Boniface, and on the other side to our own "roof tree," can be shown to have been invented by a "simple blunder" occurring in the tenth century. The blunder could at most account for the name, certainly not for the conception, of Yggdrasil. C. F. KEARY.

#### THE TITLE-PAGE OF WALTON'S "COMPLEAT ANGLER."

It is unfortunate that your reviewer should have been contented with references at second hand to the title-page of Walton's *Angler*, in his allusion to the word *churchyard* on the title of my facsimile reprint; as, if he had referred to the original, or, better still, had compared several copies of the first edition together, he would have found that his very confident position was a somewhat rash one.

I have had the opportunity of comparing six different copies of the first edition since his reference to the subject was made in the *ACADEMY*, and find that the title-pages are all imperfectly printed, the imprint being very indistinct in some cases.

The line in which the word "churchyard"

occurs is so indistinct that, in some copies, it is impossible to tell whether the space between *church* and *yard* is filled with a - or an e, so blurred is the imprint.

The question, however, which your reviewer raises as to the accuracy of my reprint, and what example it was taken from, needs reply. It was taken from Mr. Halford's copy, which is the cleanest and the tallest copy I have ever met with, and is still in the original sheep binding; it has the e in churchyard distinctly, as will be seen by the following reproduction, which I have had taken, by Mr. Halford's kind permission, by photography:—

Printed by T. MAXWELL for RICH. MARSHALL,  
5, DUNSTON Churchyard Fleet Street, 1853.

This copy of the *Angler* appears to be a very early impression; and, from some peculiarities which occur in it, such as the condition and position of the plates and other features, it is probably one of a small number which were printed off before the book was more widely issued to the public. If this is so, it may account for such variations as the one pointed out by your reviewer. ELLIOT STOCK.

#### APPOINTMENTS FOR NEXT WEEK.

MONDAY, June 12, 7.30 p.m. Education: a paper by Mr. C. H. Lake.  
8.30 p.m. Geographical: "Explorations in South-Central Madagascar," by the Rev. W. Deane Cowan.  
TUESDAY, June 13, 8 p.m. Anthropological: "Nepotism in Travancore," by the Rev. S. Mather; "The Laws of Madagascar," by Mr. G. W. Parker; "Cummer, Co. Wexford," by Mr. G. H. Kinahan.  
8 p.m. Colonial Institute: "Imperial Defence in Our Time," by Mr. G. Baden-Powell.  
8 p.m. Victoria Institute: Anniversary Meeting.  
WEDNESDAY, June 14, 8 p.m. Microscopical.  
THURSDAY, June 15, 8 p.m. Society for Promoting Hellenic Studies: Annual Meeting.  
8 p.m. Historical: "The Conquest of Norway by the Ynglings," by Mr. H. H. Howorth; "Periods of Intellectual Activity," by Prof. F. Guthrie; "Ancient Britain," by the Rev. G. Edwards.  
8 p.m. Linnean: "Oscutubou-yielding Plants of Malaya," by Prof. W. T. T. Dyer; "Sense of Smell in *Actinia*," by Messrs. W. Pollock and G. J. Romanes; "Fungi of Australia," by Messrs. Berkeley and Broome; "Tasmanian Plants in South Australia," by Mr. J. G. Otto Tepper; "A Marine Caddis Fly in New Zealand," by Mr. R. M. Laoblan; "Habits of Scorpions," by Prof. E. Ray Lankester; "The Genus *Pleurochinus*," by Prof. Duncan.  
8 p.m. Chemical: "The Preparation of Amido-β-naphthol and β-naphthaquinone," by Mr. C. E. Groves; "Some New Compounds of Brazilin and Haematein," by Messrs. J. J. Hummel and A. G. Perkin; "The Determination of Nitric Acid as Nitric Oxide by means of its Reaction with Ferrous Salts," II., by Mr. E. Warington.  
8.30 p.m. Antiquaries.  
FRIDAY, June 16, 8 p.m. Philological: "Latin and Greek Etymologies," by Prof. Postgate; "Keltic Place-words," by Mr. W. B. Browne.

#### SCIENCE.

##### RECENT WORKS ON PHYSICS.

*Elementary Treatise on Natural Philosophy.* By A. Privat Deschanel. Translated and Edited, with Extensive Modifications, by J. D. Everett, Professor of Natural Philosophy in the Queen's College, Belfast. Sixth Edition. (Blackie and Son.)

*An Elementary Treatise on Electricity.* By James Clerk Maxwell, Professor of Experimental Physics in the University of Cambridge. Edited by W. Garnett, formerly Fellow of St. John's College, Cambridge. (Oxford: Clarendon Press.)

*Elementary Lessons in Electricity and Magnetism.* By Silvanus P. Thompson, Professor of Physics in University College, Bristol. (Macmillan.)

PROF. EVERETT'S translation of Deschanel's *Natural Philosophy* is so well known to, and appreciated by, students and teachers of physics that it is hardly necessary to give a lengthened description of its character and scope. Suffice it to say that the work consists of four parts, which treat of (1) mechanics and hydrostatics,

(2) heat, (3) electricity and magnetism, and (4) acoustics and optics; and that it is admirably adapted, by its exposition of scientific principles, and by the absence of any but elementary mathematics, for the higher forms of schools, or for non-mathematical university students. It will be found, on comparison, that the new edition, although in the main reproducing the old, differs from it in several important particulars. A good deal of new matter has been introduced. In those parts where the matter remains substantially the same, a marked improvement has been effected by judicious re-arrangement; several portions of the work, indeed, have been entirely rewritten. In the former edition, the additional matter introduced by the editor was contained in separate paragraphs indicated by an asterisk. These special marks have now been removed, and the editor's additions merged in the text, which, as a consequence, runs more smoothly and continuously. In part ii., on heat, considerable additions have been made, among which we may notice the full explanations given on the subject of thermal conductivity and diffusivity, including Prof. A. Herschel's results on the conductivity of rocks, and those of Mr. J. T. Bottomley on that of water. Illustrations and descriptions are given of Mr. Dines' hygrometer, and of the Otto gas engine, from which the principle of action of the latter is readily understood. In part iii., on electricity and magnetism, a great improvement has been effected by re-arrangement of the chapters. The chapter on potential no longer appears as an interloper, but coheres with its environment. The chemical relations of the current are discussed much earlier than in the previous edition, and the sections on thermo-electricity amplified and made clear by the addition of a discussion of the thermo-electric diagram. In connexion with the practical applications of electricity, accounts are now given of the Siemens and Gramme dynamo-electric machines, duplex telegraphy, the telephone, induction balance, &c. The work has been further improved by the addition at the end of each part of an Index and a collection of examples. Each part may be obtained separately. Deschanel's *Natural Philosophy* is probably the best text-book on general physics we possess, and this new edition will not only maintain, but will extend its popularity.

A perusal of the late Prof. Clerk Maxwell's *Elementary Treatise on Electricity* makes us feel very acutely the loss which all interested in the study of electrical theory have sustained by the death of its distinguished author. The greater part of the larger *Treatise on Electricity and Magnetism* is accessible only to those who are familiar with advanced mathematical processes; and the present work was intended to provide for the non-mathematical student an elementary exposition of the principles of electrical theory, which, based on the experiments and conceptions of Faraday, have been so ably developed and extended by Prof. Clerk Maxwell. Unfortunately, the work, as designed by its author, is very far from complete, and the greater part of that which is now published was written more than seven years ago. "During the last three or four years of the author's life," as the editor in his Preface tells us,

"little was added with the exception of a few fragmentary portions at the latter end of the work. This was due partly to the very great amount of time and thought which he spent upon editing the Cavendish papers, nearly all of which were copied by his own hands, while the experimental investigations which he undertook in order to corroborate Cavendish's results, and the enquiries he made for the purpose of clearing up every obscure allusion in Cavendish's MS., involved an amount of labour which left him very little leisure for other work."

We also learn that it was for some time under consideration by the friends of Prof.

Maxwell whether the MS. should be published in its fragmentary form, or whether it should be completed by another hand, so as to carry out as far as possible the author's original design; but it was finally decided that the book might be made to serve the purposes of students by a selection of articles from Prof. Maxwell's *Electricity and Magnetism*, so as to make it in a sense complete for the portion of the subject covered by the first volume of the last-mentioned work. Accordingly, we find that, out of the thirteen chapters of the book, portions of chap. ix., the greater part of chap. xi. (chiefly on electrometers), and the whole of chaps. xii. and xiii. (on electrical resistance) consist of articles taken from the larger treatise. In connexion with electrostatic phenomena, with the theory of which nearly the whole of the book, with the exception of the chapters enumerated above, is occupied, great prominence is given to the part played by dielectric medium. If we have a charged conductor separated from another conductor which entirely surrounds it by any dielectric, and if we suppose lines or tubes of induction as well as the equipotential surfaces to be drawn in the medium, it is shown that there is a remarkable correspondence between the number of "cells" into which the dielectric is thus cut up and the electrical energy of the system. This leads us to enquire whether the electrical energy may not have its true seat in the dielectric medium which is thus cut up into cells. We have only to suppose that the electromotive force, when it acts on a dielectric, puts it into a certain state of constraint, from which it is always endeavouring to relieve itself. Maxwell regards all media, whether conductors or non-conductors, as being occupied by electricity, but supposes that electrical phenomena are only produced when this electricity is displaced through the action of electromotive force.

"The displacement takes place in the direction of electromotive force, and is proportional to it in amount. When the electromotive force is removed, the electricity resumes the position it had before displacement. We don't know how far any particular portion of electricity is displaced from its original position. The only thing we know is the quantity which crosses a given surface. The greater the amount which we suppose to exist in, say, a cubic inch, the smaller the distance which we must suppose it displaced across a square inch of area fixed in the medium. It is probable that the actual motion of displacement is very small, in which case we must suppose the quantity contained in a cubic inch to be exceedingly great. If this is really the case, the actual velocity of electricity in a telegraph wire may be very small, less, say, than the one-hundredth of an inch per hour, though the signals which it transmits may be propagated with great velocity."

Again, on p. 97, when speaking of the transfer of electricity along a conductor, the author says:—

"We are unable to determine whether the 'velocity of electricity' in the wire is great or small. If there be a substance pervading bodies, the motion of which constitutes an electric current, then the excess of this substance in connexion with a body above a certain normal value constitutes the observed charge of that body, and is a quantity capable of measurement. But we have no means of measuring the normal charge itself. The only evidence we possess is deduced from experiments on the quantity of electricity evolved during the decomposition of one grain of an electrolyte, and this quantity is enormous when compared with any positive or negative charge which we can accumulate within the space occupied by the electrolyte. If, then, the normal charge of a portion of the wire the millionth of an inch in length is equal to the total charge transferred from A to B, the transference may be effected by the displacement of the electricity in the wire whose linear extent is only the millionth of an inch."

Hence the same conclusion is arrived at—viz., that the velocity of electricity in a telegraph wire may be, and probably is, extremely small. It will be seen from the above quotations that the "velocity of electricity," in Maxwell's sense of the expression, bears no relation to the rapidity of signalling through a telegraph wire. It would occupy too much space to discuss in detail the many matters of interest presented to us in this volume. We earnestly recommend it to the careful attention of students; every chapter will repay diligent study. Had the author been spared to carry out his original plan, he would doubtless have given us also a simple exposition of the theory of electro-magnetic phenomena and of his electro-magnetic theory of light. But, instead of deploring what we have lost, we should rather be thankful for the very much we have gained. The work of the editor has probably been more laborious than may at first sight appear. The whole of Prof. Maxwell's MS. had to be copied for the printer in order that the original might be preserved, and the labour of verifying references, adding dates, and completing the tables has not been slight.

Prof. Sylvanus Thomson's *Elementary Lessons in Electricity and Magnetism*, is an admirable little book, and will no doubt become widely known and appreciated. The author deserves our hearty thanks for the labour and discrimination he has bestowed on its production. The ideas of Faraday and Maxwell are prominent throughout; but these have been so well assimilated by the writer, and are presented in so interesting and judicious a manner, that the reader cannot fail to be attracted, and is likely to be led on to the larger treatises for more and wider information. This is an admirable quality in an elementary text-book. The style throughout is clear and vigorous, the language and method strictly scientific without ever ceasing to be simple and intelligible. By careful selection, and by the exclusion of much that might have been thought desirable in an elementary text-book, the author has contrived to put before the reader within the limits of a small volume an extraordinary amount of information. The arrangement of the subject-matter of the book is peculiar, and we think the author is to be congratulated on having deviated from the beaten path. In the Preface he says we have three distinct sets of phenomena to observe—viz., those of frictional electricity, of current electricity, and of magnetism, and yet it is impossible to study any one of these rightly without knowing something of them all. Accordingly, the first three chapters of the work are devoted to a simple exposition of the prominent experimental facts of these three branches of the subject, reserving until the later chapters the points of connexion between them and such parts of electrical theory as are admissible in a strictly elementary work. After the first three chapters comes a chapter on electrostatics, including the theory of the potential, electrometers, specific inductive capacity, the phenomena of discharge, and atmospheric electricity. In chap. v., on electro-magnetics, we have the theory of magnetic potential, the relation between a magnetic shell and a closed circuit, and the mutual potential of the circuits. The remaining lessons in this chapter, on electromagnets, electro-dynamics, and diamagnetism, are, taking into account the space they occupy, very complete. Chaps. vi., vii., and viii. treat of the measurement of currents, &c., heat, light, and work derived from electrical currents and thermo-electricity. The strength of a current is generally stated in terms of webers per second (amperes we suppose it will be now), and Joule's law is given in such a form as to enable the student to determine from the electrical data of a circuit the heat developed in any part

of it. In chap. ix., on electro-optics, a short account is given of Dr. Kerr's discoveries that a dielectric is strained when subjected to powerful electrostatic stress, and that a beam of polarised light is rotated when reflected at the surface of a magnet. The properties of selenium in relation to light are also noticed, and enough is said of Maxwell's electro-magnetic theory of light to arouse the interest of the reader and make him wish for more information. The remaining chapters deal with induction currents, magneto and dynamo machines, electro-chemistry, and telegraphs. At the end there is a well-arranged set of problems, carefully designed to exercise the thinking faculties of the student, which greatly enhance the value of the volume. A. W. REINOLD.

### HITTITE INSCRIPTIONS.

At a meeting of the Society of Biblical Archaeology on June 6, a paper by Prof. Sayce was read on "The Decipherment of the Hittite Inscriptions." Thanks to the bilingual boss of Tarkondemos, and the accurate copies made by Mr. Rylands of the casts from Hamath and the three inscriptions from Carchemish now in the British Museum, he has succeeded in partially deciphering these curious texts. The bilingual boss furnished him with the phonetic values of four characters and the meanings of two ideographs—those for "king" and "country;" while the sculptures of Boghaz Keui had already given him the determinative of divinity. He found that in the three inscriptions from Carchemish the words "king of the country" are preceded by a certain group of characters, obviously denoting a royal name, the first three of them being always the same. After these sometimes comes a goat's head, which is sometimes replaced by two other characters, sometimes by three. The goat's head is shown by the bilingual boss to have the value of *tarku(s)*; and since, when it is replaced by other characters, the first character is in each case the same, it is plain that we must assign to the latter the value of *tar*. The position of the name at the beginning of sentences shows that it must be in the nominative; and, as according to the Egyptian and Assyrian monuments the nominative of Hittite proper names terminated in *-a*, Prof. Sayce read the characters which follow *tar* as *kus, ku, and es*. The character denoting *es* is also affixed to other nouns which from their position seem to be in the nominative, and frequently also to each of a consecutive series of nouns. At the beginning of an inscription a proper name ending in this *es* is preceded by an ideograph which sometimes represents a human head with the hand pointing to the mouth, sometimes a face with a lozenge-shaped word issuing from the mouth. The ideograph plainly means "he says," and the phonetic complement *-me* which is often added to it will be the suffix of the third person singular. This Prof. Sayce further verified by other evidence. He then pointed out that the determinative of divinity is occasionally omitted, especially where a divine name forms part of a name. At Ibreez the determinative appears only once, before the picture of a serpent and close to the face of the god sculptured on the rock. As the serpent also adorns the god's cap it clearly symbolises his name. Coins of Tarsos which represent the same deity show that he was the Kilikian Sun-god, whose native name has been demonstrated by Ed. Meyer to be Sandas or Sandan. Now the seal-impressions bearing Hittite hieroglyphs, found by Sir A. H. Layard at Kouyunjik, mostly contain repetitions of the same legend. This begins with the picture of a writing-tablet, which apparently signifies "seal," after which comes the figure of a

serpent, followed by a phonetic complement (which a variant passage in one of the Carchemish texts proves to be the vowel *u*) and an ideograph of unknown value. Another legend on the seal-impressions commences with the figure of a serpent, after which we find an unknown ideograph and the characters *me* and *es*. It is evident that we have in the first case a genitive—"the seal of Sandu-*mes*,"—and in the second a nominative—"Sandu-*mes*." Now the only foreign prince, so far as we know, whose seal-impressions were likely to have been preserved in the record-chamber of Assur-bani-pal was Sanda-sarmes, King of Kilikia, who came to Nineveh in person, and whose daughter married Assur-bani-pal. The seals may have been attached to the marriage contracts. We thus have proof that the Hittite mode of writing was practised in Kilikia at least as late as the middle of the seventh century B.C. Prof. Sayce next proceeded to determine the phonetic values of some other characters; that, for instance, which resembles the Kypriote *ne* is shown by a variant passage to have the value of *e*. The grammar of the Hittite inscriptions was also discussed, so far as it could at present be made out. *Ku* is the suffix of the first person singular of the past tense, the boot (of unknown phonetic value) denoting the third person plural. *Kus* is the patronymic suffix, and in two parallel texts from Hamath the name of the father with this suffix replaces the name of the son. The plural accusative ended in *e*, like the Cappadokian *a*, but the plural was also denoted by a special ideograph which was used alike with nouns and verbs. The copulative conjunction occurs rarely, its place being taken by adjectives, the terminations of which are the same as those of the substantives with which they agree. A suffix *er* seems to represent the dative. As the country over which the kings at Hamath are said to rule is the same as that of which the princes of Carchemish are called kings, it would seem that Hamath must at one time have been conquered by Carchemish. All three monuments from Carchemish now in the British Museum belong to the same monarch.

#### SCIENCE NOTES.

*The Formation of Agates.*—A step towards the solution of this enigma has apparently been made by Messrs. J. I'Anson and E. A. Pankhurst, whose experiments on the artificial formation of siliceous deposits closely resembling certain kinds of agate will be found in the last number of the *Mineralogical Magazine*. By introducing, through a pipette, some strong acid into a solution of an alkaline silicate, which contains also a certain amount of alkaline carbonate, a stream of bubbles of carbonic acid is disengaged, and around the ascending stream of gas a tube of gelatinous silica is rapidly formed. The continued addition of acid causes a growth of silica, which forms a series of concentric tubes suggestive of the stalactitic forms often seen in agates. If a cavity containing a solution of an alkaline silicate exist in a rock which is permeated by an acid solution, silica will be deposited in successive zones around the internal walls of the cavity; and thus the origin of banded agates, of the endogenous type of growth, may be explained. Some of the artificial specimens illustrate this mode of deposition, just as others imitate the stalactitic or exogenous form of growth. When the acid solution, or the gas, within an agatiform deposit bursts through the bands of silica an effect is produced similar to that of the so-called "inlets of infiltration" in natural agates. By adding various metallic salts to the solutions from which the silica is precipitated, the artificial agates may be variously coloured so as to imitate more faith-

fully the natural products. Some interesting illustrations accompany Messrs. I'Anson and Pankhurst's paper.

MESSRS. MACMILLAN will shortly issue in their "Nature Series" a little book by Mr. Grant Allen on the Colours of Flowers, which aims at showing not only why flowers have colour at all, but also why they have their own particular colours.

MR. L. F. VERNON-HARCOURT has been appointed to a Chair of Civil Engineering and Surveying in University College, London. Mr. Kennedy retains the Professorship of Engineering and Mechanical Technology.

THE Council of the Royal Society of Edinburgh has awarded the biennial Keith prize to Prof. Chrystal for his paper on "The Differential Telephone;" and the triennial Neill prize to Mr. John Murray for his paper on "The Structure and Origin of Coral Reefs and Islands."

#### PHILOLOGY NOTES.

DR. A. C. BURNELL has undertaken to write Grammars of the Dravidian languages for Trübner's "Collection of Simplified Grammars." A Grammar of the Malagasy language is in the press, and a distinguished scholar is likely to write a Grammar of the Basque language for the same series. Full particulars will be published ere long.

WE hear from India that Mr. Malabari's scheme of translating Prof. Max Müller's Hibbert Lectures on religion into Sanskrit and five of the Indian vernaculars has evoked much interest from the educated classes of that country. The task is a formidable one; but, to judge from the translator's antecedents and the success of his Gujarati translation of the same lectures, there is reason to believe that the entire scheme will be no less successful. Mr. Malabari is well known as a vernacular poet, and as a scholar who adds to his natural advantages an intimate acquaintance with modern thought both in Europe and in his own country.

THE publishing house of Calvary, of Berlin, has just issued the first volume of a new critical edition of the *περί μουσικῆς* of Aristides Quintilianus, an important authority upon Greek music, which has hitherto only been known in the *Antiquae Musicae Auctores* of Meibomius. The editor, Dr. Albrecht Jahn, of Berne, has examined for this edition fifteen new MSS. The present volume contains the text and an *apparatus criticus*; the second will consist of notes.

M. HALÉVY is communicating a series of papers to the Académie des Inscriptions, in which he re-asserts his old position in Assyriology—that the languages known as Sumerian and Accadian never existed, and that the inscriptions said to be in these languages are merely Assyrian written according to a special alphabet.

PROF. ERNEST TRUMPF, to whom we are so much indebted for our knowledge of the religion of the Sikhs, is now engaged upon a work on Muhammad and Islam, which will be published by Herr Otto Schulze, of Leipzig. The same publisher also announces *Zoroaster und die Religion des altiranischen Volkes*, by Dr. K. Geldner.

WE take the following Slav notes from the *Revue critique*:—M. Kuhacz-Koch has just published at Agram the fourth volume of his "Popular Songs of the Southern Slavs," with music. Prof. Klaić, of the Agram University, is bringing out a History of Bosnia to the time of the Mussalman invasion. The publishing house of Ivanovitch, of Pancevo, has undertaken a complete edition of the works of

Dositheus Obradovich, the second founder of Serbian literature. The *Transactions* of the Serbian Society of Novisad, edited by M. Hadjich, will, in the future, be issued quarterly.

THE first volume has appeared (Paris: Leroux) of the text of the *Mahavastu*, published for the first time in Sanskrit by M. E. Senart. We hope to notice it soon at some length.

#### MEETINGS OF SOCIETIES.

CAMBRIDGE ANTIQUARIAN SOCIETY.—(Monday, May 22.)

THE REV. R. BURN, President, in the Chair.—A paper by Mr. C. W. King was read upon an antique cameo of agate-onyx (of which a cast was exhibited) measuring eight inches by seven inches. The bust engraved upon it was identified, by the flowing and massy curls, by the *aegis*, and especially by the prominent forehead wreathed with chestnut-leaves, as Jupiter of Dodona, under which type it was added that a portrait of the Emperor Antoninus Pius may possibly be adumbrated.—Dr. Bryan Walker exhibited a Terrier of Landbeach drawn up in 1549 by order of Matthew Parker, who was then Master of Benet College and Rector of Landbeach. The parish contained at that date two manors, of which the lands were intermixed, one belonging to the college, the other—now the manor of the Worts Trustees—to Sir Richard Kirkby. The arable land of the parish was 884 acres, divided into four fields, or *campi*, containing respectively 279, 259, 229, and 117 acres. There was also a field of meadow, containing 189 acres. These fields were each subdivided in fifteen or twenty smaller portions called *quarentelae*, and each *quarentela* into *selions*, averaging about half-an-acre each, but not uniform in size. Thus the 894 acres of arable land lay in 1,806 separate portions, separated by balks or strips of grass. A proprietor seldom had even two of his *selions* contiguous, but had his land scattered all over the fields. The Terrier, being drawn up for the lords of one manor, merely gives the position of *selions* belonging to the other manor; but is most minute in its description of each portion of its own land, stating its area, whether it is freehold or copyhold, and the name of its present and former tenants. Any *selion* of peculiar situation or shape is carefully described, and those over which there was a right of way are specified as *haveden*, *favrea*, or *balca*. The tenants appear to have been allowed to cultivate such plots at their own risk, and subject to the right of passage over them. There is also a description of the houses and crofts of the village, which is so accurate as to enable almost every tenement in the village to be identified even now, and shows how slowly changes take place in the country. The land was cultivated under a three-course system, the two smaller fields being worked together, the cropping being in rotation wheat, barley, and fallow. The fallow third of the land was turned into common pasture for a whole year, and so also the other two-thirds for a while after harvest. In consequence of the obliteration of boundaries during the fallow year, the Terrier contains some curious entries about lost or misappropriated plots. There is considerable allusion to the practice of assarting and approving—i.e., of taking in fresh arable land from sheep-walks, &c.; assarting being when it was divided among the manorial tenants for cultivation; approving, when the lord took it for his own use. The Terrier also illustrates the growth of foldage enclosures, the tenants obtaining permission to enclose permanently small plots in the arable fields, and subtract them from the common customary agriculture. About seventy of these are mentioned, none (or only one) of very large extent; and in these no doubt were grown crops requiring particular attention, the foldage of sheep within them at night also fertilising the ground.—Mr. Jenkinson exhibited two Roman rings from Chesterford. One of these was of brass; and the device, a mask, was embossed upon a thin plate of metal, which had been soldered to the ring. The other was of iron, and exhibited in two places a simple form of decoration, the metal being worked to

resemble two ends meeting, one of which is forked to receive the other, which tapers, and a few transverse lines convey the appearance of binding or lashing.

#### SOCIETY FOR THE PROTECTION OF ANCIENT BUILDINGS.—(Annual Meeting, Friday, June 9.)

JAMES BRYCE, ESQ., M.P., in the Chair.—The Report of the work of the society during the past year was read by Mr. William Morris. The society has carried on its work with increased vigour during the last twelve months. Although it has had to protest against several schemes for the mere unnecessary or wanton destruction of ancient buildings, it must not be supposed that the fact of these being more in number than usual has any significance as showing backsliding in public opinion; on the contrary, there are hopeful signs of the impression which the society has made in awakening a keener interest in the preservation of those relics of art and history which yet remain to us. On the other hand, it should not be forgotten that this matter of the preservation of ancient buildings is one of those cases in which there is no time to spare. Every year of apathy and disregard of the society's principles is replete with the greatest dangers to our ancient buildings. Every year which leaves the guardians of these buildings ignorant or careless of their duties adds to the list of those irreparable losses to art and history which cultivated people are now beginning to perceive and deplore, but which they are too often quite powerless to prevent. All those who agree with the principles of this society should therefore do their utmost to further those principles actively and busily, since, in spite of all that has been destroyed or falsified, there are still left, even in this country, many genuine works of ancient architecture, not one of which, it must be repeated, is safe until the principles of the society are generally acknowledged and acted upon, even in remote country places. At the beginning of the year, in order to raise money for necessary expenses, it was determined to give a series of lectures on matters connected with art. Several gentlemen kindly offered their services to the society, and the receipts of money from this source were considerable. Messrs. Macmillan have undertaken the publication of these lectures, which are now in the press. They are as follows:—Mr. Reg. S. Poole on the Egyptian Tombs; Prof. W. B. Richmond on Italian Fresco-painting; Mr. E. J. Poynter on Decorative Painting; Mr. J. T. Micklethwaite on English Parish Churches; Mr. William Morris on the History of Pattern-designing and on the Lesser Arts of Life. The Report read by Mr. Morris contains a long list of cases in which the society took steps to prevent the destruction of, or injury to, some ancient building; in many cases a deputation of two or more members of the society visited the building and made a careful survey and report about it. These reports formed the basis for practical suggestions as to what ought or ought not to be done in the special case. In many cases the advice of the society has been thankfully received, and then carefully acted upon. In other less successful instances the society's protests have acted as a check, and prevented a great deal of harm which would otherwise have been done. The labour and expenditure both of the money and time of the few really active members of the society falls very heavily upon them, and help in these ways is very much needed. For some time the society has been anxious to extend its operations to the Continent, especially to Italy, a country rich above all others in priceless monuments of art and history. The difficulties of any effectual action seem almost insurmountable, and as yet the society has been able to do but little. But while many of the Italians themselves appeal to us for help, and while we in England are constantly receiving news of fresh acts of wanton destruction, it is impossible to remain silent. Papers explaining the principles of the society, and protests against such doings, have been written and translated into Italian and other languages, and will soon be circulated in Italy and other countries. In Egypt letters from the society were sent to the Khedive, pleading for the remains of Arab art; and to the Coptic Patriarch, begging him to protect the early churches of the Copts. Friendly answers were received to both these communications.

#### FINE ART.

GREAT SALE OF PICTURES, at reduced prices (Engravings, Chromos, and Otopographs), handsomely framed. Everyone about to purchase pictures should pay a visit. Very suitable for wedding and Christmas presents.—GEO. REES, 115, Strand, near Waterloo-bridge.

#### *The Life of George Cruikshank.* By Blanchard Jerrold. (Chatto & Windus.)

AN artist in any art, if he is to be understood completely by his contemporaries, must be a specialist, and narrow. He must do one thing well—it does not matter if it is a small thing—and to the end of his life he must go on doing it. He will find his public then with promptitude, and it will be tolerably faithful to him. He poses, perhaps, as a successor of Michael Angelo; there are always some people who will accept his muscular draughtsmanship as having Michael Angelo's virtues, and who will take at his own valuation of them his dull heroes suspended in air. Or he could desire, perhaps, that this unfortunate world of ours had not outlived Piero della Francesca, and so he paints—adroitly imitative—Piero's themes; and there will be some people to enthusiastically agree with him that these are the themes for ever, and that it is a conclusive proof of keenness of observation to have decided that there is nothing paintable in our London to-day. Or, if he is of humbler mind, he may perhaps acquire some reputation by representing calceolarias; and, if he goes on painting his calceolarias steadily, there will be somebody to admire his calceolarias till the end of the chapter. But, if he is a man of range and of many interests—alas! for the acceptance of him. Why did he not go on being the follower of Michael Angelo, or the tasteful imitator of Piero della Francesca, or the successful painter of the calceolarias? The public would have understood him then, as well as paid him. But now he has baffled the *dilettanti* and confused the writers of the Saturday newspapers. It is difficult to class him. His versatility is an affront. He is actually not to be disposed of by a glance and two jokes.

Many artists have suffered in the way I have suggested by their affluence and their variety. Cruikshank suffered, perhaps, more than many others, because he lived so long, and was so terribly ill-disciplined that it became absolutely impossible to him to simply reproduce himself in the acceptable fashion. His *Comic Almanack* was the work of one artist. To the big public, his tragic illustrations to *Oliver Twist* seemed the work of another. And what had either to do with the pathetic fancy of the "Death of Falstaff"? And had not that to be clean forgotten by the critical mind when the poor old man came out as the tremendous advocate of New River water-drinking? How was it possible to remember the "Fairy Connoisseurs" when you were looking at "The Bottle" and the "Drunkard's Children"? Why, apart from the very few dozen collectors who have really studied Cruikshank, there is hardly anyone who does not ignore one part of his art, while holding in remembrance the other. To most people, "Cruikshank was a caricaturist," or "Cruikshank was a teetotaller." Yes, he was both—and a great deal besides.

Mr. Blanchard Jerrold, however, who has

just lately issued Cruikshank's Life—an agreeable compilation, interspersed with original criticism and with new facts—is not to be charged with this narrow and partial view of him. The element of truth, the amazing element of penetration, in Cruikshank's caricature does not escape him. Cruikshank is more than a funny fellow to him, and more than a satirist of George IV., and more than a teetotaller. He sees, and he describes, the master's excellence at many points. Yet one thing has escaped Mr. Jerrold, unless I have read him carelessly or remembered him ill. Cruikshank was a great artist in water-colour. He painted villainously in oils, but with water-colour he produced his effects. It is true that the most finished water-colours of Cruikshank are often the least attractive—when he works in water-colour with the fullest lines and the most persistent detail the result may disappoint—though to this rule a "Beadle" and a "Falstaff" which I have seen at Mr. Edward Barrett's are very notable exceptions, and other exceptions there must of course be. But Cruikshank was none the less a quite excellent master of water-colour sketching. As I have had to say already in *Studies in English Art*—from which Mr. Jerrold quotes somewhat too largely for the peace of mind of a Saturday newspaper—Cruikshank enriched with delicate colour, singularly conservative of aerial effect, the spaces left by the scanty but significant lines of his pencil drawing. His manner of handling the brush, in pure sketches, was masterly. The beauty and tenderness of his out-of-door background of city street or square or of the fields beyond Pentonville, though remarkable enough in his etchings, are yet more apparent in many of his tinted designs. This was shown to the student of Cruikshank when so many of these designs appeared in the auction-room about three years ago. It was then almost for the first time possible to compare the original designs in pencil and colour with the etching on the copper with which people were better acquainted. And the student then saw that the art which was displayed in the one was on the whole equal to the art displayed in the other. Most of Cruikshank's water-colours are illustrations to popular novels. But some he executed without reference to possible reproduction. Some were done for their own sakes. Nor does the fact that most were done for reproduction lessen the importance of Cruikshank as an artist in water-colour. So few people having placed themselves in a position to judge his water-colour art at all, that I must be suffered to insist a little upon the facts that it existed and that it was very delightful. By water-colour, as by other means, Cruikshank could express his inventions and his teeming fancies.

In turning over Mr. Jerrold's pages, with their renderings of so many designs, of all periods and of many subjects, it is impossible not to be struck again with the great volume of Cruikshank's achievements, with their unprecedented variety, and with the artist's untiring energy and continual elasticity and freshness. Born in 1792 and dying in 1878, Cruikshank lived eighty-six years, and worked more or less for nearly seventy—it is no slight task even to be acquainted with his labour. In 1812, besides doing small original

plates, he was copying the last plate but one of the "Harlot's Progress," and copying it, moreover, with touching and significant variations; and only a very little while before his death he executed for Mr. Bell, the publisher, the "Family Window" and a plate for *Lob lie by the Fire*. Between these dates, what a world of experience and of effort! Mr. Jerrold, it seems to me, divides the life somewhat too sharply into a teetotal and an ante-teetotal period. The laying of so much stress upon Cruikshank's prudent abandonment of cordial drink could only be thoroughly justified if there were a very marked difference in the character or the amount of the work done before and after. But Cruikshank's whole life was industry and production; there were no long spells of time during which his work suffered from his indulgence in that particular "pleasant vice" which all his life long, though in different degrees and with a different measure of earnestness, he was given to satirise. Nor did he live perpetually in Society, with the easy art of the charlatan, and dine out six days of the week, only to paint upon one. If the "Worship of Bacchus"—an effort and invention of age—had been preceded by the more truly tragic "Bottle"—a work of middle life—that in its turn had been preceded, many years before, by more than one representation of the "first gentleman in Europe" seen under circumstances in which the fascination of his manner would not have been the earliest subject of remark. And, to find one other fault with volumes which are, of course, highly readable, though they may not be precisely final, Mr. Jerrold has chosen as a representative portrait of Cruikshank the portrait of Maclise, and has reproduced it. It is a taking portrait, and there would seem nothing unnatural in the selection of it, yet Cruikshank himself did not like it. In 1873 he was under the impression—but it is, of course, possible that his impression was wrong—that the sketch was made by Maclise "before we became acquainted." One reason why he did not like it was because it represented him doing "what I never did in the whole course of my life—that is, *making a sketch of anyone*. All the characters which I have placed before the public are from the *brain*, after studying and observing Nature, and not from any sketches made on the spot." He wrote this in his later years in a private letter which I believe has not yet seen publication. But, fortunately, the volumes contain other portraits of Cruikshank—portraits by himself—for Cruikshank drew his own portrait as often as did Rembrandt. Sometimes they were quite careful and studious remembrances of the face he was accustomed to see in the looking-glass, as in the picture of himself sitting comfortably before the fire in the "Triumph of Cupid;" but more frequently they were but sprightly suggestions, such as that which was drawn at the bottom of a note to Laman Blanchard, or that other picture of himself in the "Triumph of Cupid" in which a pigmy master is at work on a colossal canvas. And, indeed, very often in Cruikshank's imaginative designs—in the lively fairyland to which his genius takes us—a tall, slight, demonstrative little figure, in a frock coat and with bushy whiskers, friaks

about the page, and reminds us of the outward semblance of the ever-green artist, the familiar "G. Ck," who taught and entertained a couple of generations, and whom the latest generation has so much misunderstood.

FREDERICK WEDMORE.

#### THE PICTURES OF PROF. COSTA.

THE pictures of Prof. Costa gain by being seen together, and apart from the works of other artists. Their delicacy needs a special atmosphere for its enjoyment which it is difficult to create when they are surrounded by others aiming at more clamorous effects. They have all a poetic quality, idyllic, sometimes lyric, which is essentially gentle and restful, and demands not only an undisturbed attention, but a sympathetic mood for its full enjoyment. There is a rhythmic undulation in his lines and an interwoven harmony in his colours which give satisfaction little less than exquisite to eyes that care for such pleasures. To these beauties born of a delicate artistic sense Prof. Costa adds a high degree of technical skill and devout study of Nature for its own sake, so that his pictures give us little truth that is not beautiful, and little beauty that is not true. Compared with the pictures of his fellow-countrymen, his colouring is sober and his effects subdued. Violent contrasts he eschews with the feeling of the true artist, who always prefers to conciliate rather than startle the eyes. The midday fierceness of the sun, with its hard shadows scarcely less blinding than its rays, the metallic brilliance of colouring so dear to the mainly imitative artist, are avoided by Prof. Costa. It is early and late in the day, when the dew of the morning or the mists of evening dissolve into pearly iridescence the slanting shafts of light; when the profiles of the deep blue mountains show clearly but softly against pale skies suffused with amber and shot with pink; when the lake's gentle azure lies in unglittering quiet like an uncut sapphire, and the reedy grasses on its sandy shores take golden beauty from the sun—it is at times like these that Prof. Costa loves to watch the expression of Nature and to make numberless studies of her always beautiful but ever-changing face.

It seems that not at once did Prof. Costa reach his present mastery of sober brilliance. A tendency towards the more striking effects of the French school, especially of Decamps, is visible in his earlier pictures. This is well pointed out by Mr. George Fleming in his enthusiastic but discriminating notes, with which we have little fault to find, except that such very good wine scarcely needed such a very large bush. A born colourist, as several of his earlier works prove—not least a gem of a little picture belonging to Sir Frederick Leighton called "Fishermen sleeping before the Work of the Night" (38)—a greater suddenness of transition and stronger contrasts had their attractions for him before his genius refined and mellowed. Mr. Stopford Brooke's fine and important example of the master, "On the Sea-shore near Rome—A Sirocco Day" (12), is very forcible and yet very tender; and the large frank design of the figure of the man sweating under his burden of faggots appears to us imbued with much of Millet's spirit. Less grand, but more graceful, is the design of Mrs. Percy Wyndham's "Evening on the Sands at Ardera" (15), with its rhythmical procession of women bearing and trailing their troves of firewood in the rich half-light. In this picture, as in many others here, the visitor will be reminded of the late George Mason, whose short life was brightened by Prof. Costa's friendship. The influence which the Italian master had in developing the genius of Mason should be a sufficient recommendation of his own. With-

out Prof. Costa, Mason would not have failed to produce charming and enduring work; but it would be ungrateful not to recognise that the charm of such pictures as the "Evening Hymn," that exquisite interfusion of classic grace and modern sentiment, could scarcely have been attained by Mason without artistic communion with his Italian friend. In Prof. Costa's pictures of English scenery the artist has preserved his individuality and his skill, but he has changed his sky. His love of sandy foregrounds is seen in "Bamborough Castle" (6), his sense of line and colour in a little picture of an English lane not at present catalogued; but it is England, with its moist air, and not Italy, that Prof. Costa gives us in these and his beautiful study of the "Old Garden at Naworth" (43). In the latter picture the boldness and success with which he has introduced a figure in a green dress against a background of verdure are alike remarkable. The same refinement and sweetness of colour which charm in his landscapes are not wanting in his portrait studies. These—especially, perhaps, "After reading Petrarch" (49) and the portrait of his daughter (5), one of his latest and most elaborate works, in which he has dared (not wisely, we think) to introduce gold into the hair—are frank but subtle in expression, and have a quality of daintiness neither affected nor effeminate which is seldom seen in English art, except in the work of Sir Frederick Leighton and the too rare drawings of Mr. F. W. Burton.

COSMO MONKHOUSE.

#### NOTES FROM ROME.

At the last meeting of the Reale Accademia dei Lincei the Comm. Fiorelli read a paper by Dr. G. Ghirardini on the recent excavations in the archaic cemetery of Tarquinii. A notice of the pit tombs, containing some hut-shaped urns, which first came to light last autumn, appeared in the ACADEMY (No. 506, p. 33), and a detailed account of the first excavations by Dr. Ghirardini was published in the *Notizie degli Scavi* (1881, pp. 342-71). As these researches were extended, the many points of similarity between the Tarquinii cemetery and the archaic Latin tombs on Mount Albanus became more apparent. It was on Mount Albanus that last month another prehistoric sepulchre was discovered, on the very spot—the "pascolare di Castello"—where was found, in the years 1817-19, the archaic pottery now preserved at the Vatican in the Museo Gregoriano. In this sepulchre was a hut-urn containing calcined bones, fibulae and other personal ornaments, fifty-five flint vases of various shapes, and some fragments of a large terra-cotta vase which had held the funeral utensils and the urn itself, as may be seen from a plate in the second edition of Dennis's *Cities and Cemeteries of Etruria* (vol. ii., p. 457). A monograph on this find is promised by the Cav. Michele Stefano de Rossi. All these relics have been acquired by the municipality of Rome for the museum of the Capitol. It may be mentioned that the archaeological committee of the town council of Rome proposes to devote a special room in the Palazzo dei Conservatori to receive prehistoric antiquities found in the cities of Latium, and especially any relics that may be yielded by the archaic tombs on the Esquiline.

The meetings of the Society of Christian Archaeology, of which Padre Bruzza is president, were brought to a conclusion in May; and at the last meeting Prof. G. Tomassetti exhibited some antiquities that came from a Christian tomb of the sixth century discovered at Sutri, being a pair of gold earrings, a fibula enamelled after the Merovingian fashion, a large bronze fibula set with little bits of glass

fashioned to imitate red enamel, and a gold cross that seems to have been sewn to the garments of the wearer. Beyond doubt the most interesting objects found in this tomb are the relics in glass, including, as they do, two *rhytons*, one of which is in excellent condition.

Another find of great interest has only very recently been brought under the notice of scholars. At the meeting of the Pontifical Academy of Archaeology held May 25, in the Palazzo Sinibaldi, Comm. G. B. de Rossi in the chair, Prof. G. Gatti exhibited a marble fragment bearing a sculptured presentment of a round shield. We possess about one-half of the original. The upper portion bears in relief a number of groups on a small scale, divided into two distinct sections. The shield is traversed by a belt running through its centre, and this band bears the legend ΑΞΙΠΣ ΑΧΙΑΛΛΗΟΣ engraved in well-shaped characters. Doubtless the inscription, if complete, would read ΑΞΙΠΣ ΑΧΙΑΛΛΗΟΣ ΘΕΟΔΩΡΙΟΣ ΚΑΘ ΟΜΗΡΩΝ; for on the lower section of the shield we get these words repeated several times as we trace the component letters through 514 divisions. In short, here is a sculptured effigy of the shield of Achilles as it is described in the eighteenth book of the "Iliad," the upper part representing scenes of peace, and the lower battle groups. Not the least interesting feature of this relic is the border of the shield, scarcely an inch in breadth, which is inscribed with verses from the above-mentioned book of the "Iliad." On the fragment preserved can be read seventy-five lines in very small but clear characters. Prof. Gatti stated that the scholars who have examined this inscription have found but few variations from the accepted text; and, without dwelling further on this point, he proceeded to speculate as to the meaning of ΘΕΟΔΩΡΙΟΣ. In his opinion, the groups on this shield are copies from the designs of Theodoros on the *Porticus Philippi* at Rome in illustration of Homer's "Iliad." The designs of Theodoros are mentioned by Pliny. The shield exhibited by Prof. Gatti may be regarded as the earliest specimen of the antiquities known as *tabulae Iliacae*, and as preserving the most ancient known text of Homer's description of the shield of Achilles. It is probable that an exhaustive monograph on this relic from the pen of Padre Garrucci will be shortly published.

F. BARNABEI.

## THE ART OF COINS AND MEDALS.

### II.

MR. REGINALD STUART POOLE gave his second lecture on "The Art of Coins and Medals" at University College on June 1, treating of the successive and contemporary schools of the Greek world. The coins afford, on the whole, the fullest and most authentic series of examples of the sequence of the archaic, transitional, early fine, later fine styles, and that of decline. In these the influence of the great masters may be traced, as the designers of coins lived in the atmosphere of their works. For the student, the transitional style, with its steady growth towards excellence, is specially useful and fruitful in encouragement, though he will perhaps find greater pleasure in the splendid examples of the two periods of fine style. Coins, however, do more than complete the scanty list of instances of the progress of art afforded by sculpture. They reveal the existence, which we might reasonably have expected, of local schools during the period of excellence. The school of Central Greece, with Macedon and Thrace, powerfully reflects the influence of sculpture, whose masters were born and worked within these limits. To the east we find on the nearer coast of Asia Minor a school we may call the Ionian, showing, in the form of the designs

and the expressive quality that marks them, how, in the country which produced the great painters, their art ruled as the sister art in Hellas. From these coins far more than from any other source do we gain an insight into the nature of Greek painting. To the west, in Magna Graecia and Sicily, there flourished a school which, in elaborate finish and masterly technical skill, shows the influence of engraving, which may well have been the favourite art in the luxurious marts of the West, which, in the great age, produced neither sculptor nor painter. Besides these three leading schools, Crete had its own peculiar art. In the life of her undeveloped society there grew up a marvellous power of naturalistic design, recorded only in the often rough, but constantly interesting, devices of the coins, subjects fresh from the fields, and moving with a life which idealism often loses. With Alexander all local energy disappeared, for artists were drawn to the great centres by the patronage of kings; and thus, with the rise of the later fine style, the schools disappear. We speak, indeed, of the school of Pergamus; but this was really a style, for it ruled the whole Greek world, although it owed its existence to the love of art of the Attalid Sovereigns.

### NOTES ON ART AND ARCHAEOLOGY.

WE have reason to hope that, despite the unfortunate rejection of the new statutes of Lincoln College, Oxford, the university may yet obtain a professorship of archaeology at no very distant date.

WE understand that Messrs. Macmillan and Co. have in the press a volume containing the lectures delivered at Kensington in the early part of the year on several subjects connected with art on behalf of the Society for the Protection of Ancient Buildings. Mr. J. H. Middleton will contribute a Preface.

MR. MULLINS is engaged on companion figures of "Mignon" and "Marguerite;" and little that is already known of plastic representation of the heroines of Goethe has promised better than Mr. Mullins's works.

It is proposed to commemorate the sixtieth birthday (June 24) of the eminent Roman archaeologist, Comm. G. B. de Rossi, by presenting him with a gold medal.

ONE of the most beautiful works of the English school, the late George Mason's "Evening Hymn," has been etched on a scale and in a manner worthy of it by Mr. Waltner. The plate is published by Messrs. Colnaghi, of Pall Mall. Another fine etching recently issued is by Mr. Lowenstam, after the "Suspense" of Mr. S. E. Waller.

THE huge study of an oak by Mr. Andrew MacCallum, called "The Monarch of the Forests," which, with a number of other works in oil and water-colour by the same artist, is being exhibited in a room at the Egyptian Hall, scarcely repays the labour that has been spent upon it. Seen against a vivid evening sky, its leafless branches look charred and lifeless. There is nothing among the other pictures exhibited which will do more than sustain the artist's reputation.

MESSRS. CASSELL, PETTER, GALPIN AND CO. have a very pretty exhibition of drawings, principally in black and white, for the illustrations of their numerous and excellent periodicals. Among them we may notice many very refined designs by Mr. M. L. Gow, and others by Mr. E. Crofts, A.R.A., Mr. Glindoni, Mr. Small, Mr. J. D. Linton, Mr. Arthur Hopkins, and Mr. Percy Macquoid. Among the drawings of landscape and architecture, the vignettes of Mr. Hatherell, several views by Messrs. Barraud, the sketches in Palestine by

Mr. G. L. Seymour, a few clever strokes by Miss Clara Montalba's pen, and a beautiful little sepia drawing by Mr. Sutton Palmer are not the only attractive items of this modest but interesting gallery.

A SERIES of water-colour drawings by Mr. Ascoug Wilkinson is now on view at Messrs. Barnard's Art Gallery, 233 Oxford Street. The private view is to-day, and the exhibition will remain open till June 29.

MESSRS. SOTHEY will sell on Monday next a collection of Egyptian antiquities, some of which possess considerable interest from their age and rarity. Among them is a blue porcelain statuette of King Pepi-Merira, of the Sixth Dynasty, with an inscription attesting the worship of Amen-Ra at this early date; a turquoise blue porcelain vase of Nesi-Chonsu, royal priestess of Amen, said to come from the find at Dayr-el-Bahree; an ivory scarab bearing the cartouche of Thothmes III., of the Eighteenth Dynasty; and a tablet of the Lady Pernefert, assigned to the Third or Fourth Dynasty.

THE Direction of the Louvre will shortly publish a Catalogue of the *His de la Salle* drawings, drawn up by Vte. Both de Tanzia, conservateur des dessins. It is preceded by a gracefully written memoir of the late M. His de la Salle; and in the body of the work, among much valuable matter, is an interesting notice of Vittore Pisano, from whose hand there are some remarkable drawings in the collection.

THE July number of the *Magazine of Art* will contain an article on the pictures of the year, illustrated with full-page engravings of "The Favourite," by Seymour Lucas, and "Prince Charlie's Parliament," by W. B. Hole; also engravings after F. Barnard's "Sidney Carton," John Collier's "Clytemnestra," Mrs. John Collier's "Rehearsal," Geend King's "Question of Rent," and Oscar A. Junck's group of "Jacob wrestling with the Angel." Messrs. Andrew Lang, Edmund Ollier, A. S. Murray, Richard Heath, and Austin Dobson will also contribute to the number.

THE current number of the *Art Journal* has a fair steel engraving of Mr. Millais' celebrated "Isabella," one of the most representative works of the so-called pre-Raphaelite school. The first article is one of Mr. Frederick Wedmore's careful studies of English artists. The subject is Mr. Seymour Haden, and the paper is marked by the author's usual thoroughness of analysis and finish of execution.

THE proposal to erect a memorial in Paris to Admiral Coligny has taken a fresh form. Instead of a statue, it is now decided to have a cenotaph, in which the bones of Coligny, now at Châtillon-sur-Loing, may some day be placed. The cenotaph will have a marble façade, with allegorical figures of France and Religion, and medallion busts of Card. Odet, of Châtillon, and d'Andelot. The whole will be appropriately placed in the little garden of the Oratoire du Louvre opening upon the Rue de Rivoli. The Government have promised a grant of 30,000 frs. (£1,200) towards the monument, which will be executed by M. Crauk. The Oratoire, we may add, is the Protestant church in which a Scottish Presbyterian service is held every Sunday afternoon.

BARON DE WITTE has been reading before the Académie des Inscriptions a series of important papers upon the Conquest of Southern Gaul by the Romans. He is of opinion that the celebrated arch at Orange was originally erected in commemoration of the triumph of the consul G. Fabius Maximus and the proconsul Cn. Domitius Ahenobarbus over the Arverni and Allobroges in 121 B.C. The arch was a second

time consecrated in the reign of Tiberius (A.D. 21), to celebrate the subjugation of the revolted Treviri and Aedui. The bas-reliefs belong to this latter date, and the soldiers in Greek armour who appear among the Romans are the men of Marseilles. M. de Witte exhibited a silver coin bearing a naked warrior, with buckler, lance, and *carnea*, or Gaulish trumpet, riding in a chariot drawn by two horses at a gallop. This he holds to represent, not the god Mars, as commonly supposed, but Bituitus, King of the Arverni, who figured conspicuously, with his chariot and variegated armour, in the triumph of the Fabius above mentioned.

A REMARKABLE work has lately been published in Germany. Thirty-three years ago, the Prussian King, William IV., conceived the idea of printing a magnificent royal edition of the works of Frederick the Great. This was not intended for public circulation, but was to be kept as a gift for princes, ambassadors, and others whom the King delighted to honour. Adolf Menzel received the commission for its illustration, and it was brought out in sumptuous form in thirty folio volumes. Little, of course, has been known of this work during all these years. Lately, however, the Emperor has given permission to Herr R. Wagner, the well-known art publisher of Berlin, to issue a limited edition of the work in reduced form, but with all the original illustrations printed from the blocks preserved in the royal collections. Some of these illustrations are given in the *Zeitschrift für bildende Kunst* this month, and one—the portrait of Grumbkow—is wonderfully clever and characteristic.

## THE STAGE.

### CORRESPONDENCE.

#### A SCHOOL FOR ACTING.

London: June 3, 1882.

I had the pleasure of reading the article in the ACADEMY of May 20 on the proposed dramatic college, but, while agreeing with all that it said, I feel that on one point it hardly said enough.

I was present at the meeting for considering the proposed scheme at the Lyceum on Monday, May 15, and listened with much interest to the various speakers. But I heard with regret that nearly all wished the college to be especially for the benefit of the children of actors or actresses, who are to be admitted for a nominal fee, with no preliminary examination, and are to be pushed on in their profession with all the power of the institution. "Outsiders," to quote Mrs. Kendal, are to be charged more highly; and, while it is hoped that they will be a source of income to the college, they are not to be equally the objects of its care and interest. It is, in fact, a scheme for the protection of the future actor against "outsiders."

At this moment it is almost impossible to get an opening in the dramatic profession without strong theatrical interest. The best theatres in London are, practically speaking, close boroughs. In this there is nothing unjust. But what should we say to an institution for training men for the bar, which, while appealing to the public for funds, professedly reserved its attention and influence for the sons of barristers only? Why, then, should the theatrical profession claim to be a race apart? Of late years it has expressed a desire to break down the barriers between itself and the world; if this is so, it must be open to all who choose to enter it.

If the dramatic college is intended as a charity for the children of needy members of the profession, it has the same right as any other charity to appeal to the public; but let it then be known as such. If it comes to us as a new institution for the benefit of the world, aiming at incorporation by royal charter, the

funds given by the public must be used equally for the benefit of all, and all must have a free field and no favour. GRACE LATHAM.

## MUSIC.

### RECENT CONCERTS.

THE programme of the fifth Richter Concert included no novelties, but the evening was nevertheless a most enjoyable one. Beethoven's great "Leonora" overture and eighth symphony, as Alpha and Omega, satisfied the classicists; while the approaching representation at Drury Lane of Wagner's great, if not greatest, music-drama naturally imparted special interest to the introduction and closing scenes from "Tristan and Isolde." All these grand pieces were admirably played by the band, and were listened to with rapt attention. Herr Georg Haenflin, a violinist, made his first appearance, and performed Spohr's concerto in A minor, known under the title of "The Dramatic." The slow movement was rendered with rare delicacy and refinement, but in the introduction and *finale* the executant did not display sufficient power and passion. Fräulein Malten and Herr E. Gura were the vocalists. The former sang with much taste and expression songs by Brahms and R. Becker, while the latter was heard to advantage in Schubert's "Wanderer" and a ballad by O. Löwe.

The sixth Richter Concert opened with Gluck's overture, "Iphigénie en Aulide," with Wagner's ending. The programme-book gave some interesting particulars about this clever and effective *coda*, and, moreover, stated, on the authority of Herr C. F. Pohl, the well-known biographer of Haydn and Mozart, that the brilliant but illogical *coda* attributed to Mozart "was not written by Mozart at all, but by one John Philipp Schmidt." After the overture came Liszt's Hungarian Rhapsody No. 1 for orchestra. It has been arranged by the composer for piano and orchestra, and in this form was first played in England in 1873, at one of the Wagner concerts, by Dr. von Bülow, whose brilliant performance on that occasion evoked extraordinary enthusiasm. We have hitherto only considered the Rhapsody as a brilliant and, when well played, effective show-piece, but the performance at the Richter Concert revealed to us for the first time all the merit of the composition. Liszt has so thoroughly caught the spirit of Gipsy music—the characteristic intervals, rhythms, modulations, and ornaments—and shown such talent and inspiration in his treatment of the orchestra, that the work must certainly rank as a most bewitching and successful specimen of programme music. To produce its proper effect, this Rhapsody, with its technical difficulties and constant changes of *tempo*, requires good players and an intelligent conductor. We need scarcely add that full justice was done to it by Herr Richter and his splendid band. The piece was unanimously redemanded; and, much as we disapprove of *encores*, we could not but feel pleased at this genuine and spontaneous acknowledgment of Herr Richter's unrivalled powers as a conductor. The programme included a scene, "Waldfräulein," for solos, chorus, and orchestra, by J. Sucher, husband of the accomplished *prima donna*, Frau Rosa Sucher, who is now achieving so great a success at the performances at Drury Lane. The solo parts were excellently sung by Frau Sucher and Herr H. Winkelmann, another star of the German Company. Herr Sucher, a pupil of the celebrated contrapuntist Sechter, has worked industriously at his art, and composed masses, cantatas, and many other works. The "Waldfräulein" cantata was written in 1869, and shows the composer to have ability and taste. The opening chorus contains some good contrapuntal writing, but the music allotted to the Forest-maiden and to the Knight

points too constantly and directly to Wagner to lay claim to any great originality. Some of the orchestration is very effective. The chorus of the German Opera took part in the performance, and sang with both delicacy and spirit. The work was well received, and Herr Sucher was called to the platform at the close. The concert concluded with Beethoven's noble symphony in O minor.

At the Crystal Palace last Saturday was heard for the first time in England a grand symphony, "Funèbre et Triomphale," for military band, an orchestra of strings, and chorus, by Berlioz (op. 15). This work was written in 1840 for the canonisation of the victims of the Revolution of July 1830, and the translation of their remains to the column on the Place de la Bastille. Berlioz does not here, as in the "Symphonie fantastique," riot in scenes of extravagant fancy, but merely writes to order two stately and sober marches, the one of funereal, the other of triumphal, character. Between the two comes a short movement entitled "Oraison Funèbre," consisting chiefly of massive chords and snatches of solo for tenor trombone. The opening march contains some clever writing and, as might be expected, some effective orchestration. It begins in the key of F minor with a solemn and dignified theme. The second subject, assigned to the clarinets, is tuneful though not very original. The last movement, entitled "Apothéose," contains the celebrated *fanfare* which the composer informs us in his *Mémoires* "he wrote and rewrote till he was weary." This flourish leads to the triumphal march, ending with a short but showy chorus. The whole of the music is broad and massive, but not in any way remarkable, or equal to that of Berlioz' other symphonies. It was a work written for a special occasion, and must not be thought of as a symphony in the usual acceptance of the word. The marches are procession marches, and not intended for the concert-room. We must, however, be thankful to Mr. Manns for letting us hear the only one of Berlioz' orchestral works hitherto unperformed in England. Mme. Sophie Menter was the pianist, and gave a brilliant rendering of Liszt's Hungarian fantasia. Mme. Menter has, on several occasions, played classical works with sundry alterations, or so-called improvements, but the travesty which she gave of Chopin's beautiful A flat waltz (op. 34, No. 1) surpasses in foolishness and daring all her other sins of text-tampering. She played an arrangement of Bach by Tausig and a transcription of Schubert by Liszt. The names of Tausig and Liszt were properly stated in the programme. If only the waltz had been marked in a similar way, however much we might have disliked the noisy and commonplace *coda* substituted for the quiet and dreamy ending of Chopin, and the numerous alterations of bars, notes, and scales, there would have been no just cause for complaint.

Mme. Menter gave her third pianoforte recital at St. James's Hall on June 2. Her interpretation of Beethoven's characteristic sonata (op. 81a) was good. From a varied selection of pieces we would briefly mention her delicate performance of two movements by Scarlatti, her finished rendering of Chopin's *étude* in G flat on the black keys, and her wonderful playing of the "Tannhäuser" overture.

Mlle. Vera Timanoff's piano recital took place last Tuesday at St. James's Hall. She plays with taste and finish; her mechanism is satisfactorily neat and delicate. She interpreted with a good deal of success short pieces by Chopin, Liszt, &c., but the Chopin sonata in B flat minor was certainly not all that could be desired. This terribly difficult composition is only safe in the hands of a Bülow or a Rubinstein. The Funeral March and the *finale* were certainly the best played of the four movements.

No. 528, New Series.

THE EDITOR cannot undertake to return, or to correspond with the writers of, rejected manuscript.

It is particularly requested that all business letters regarding the supply of the paper, &c., may be addressed to the PUBLISHER, and not to the EDITOR.

## LITERATURE.

*Unexplored Baluchistan*: a Survey of a Route through Mekran, Bashkurd, Persia, Kurdistan, and Turkey. By Ernest A. Floyer. (Griffith & Farran.)

HERE is a book of travels calculated to excite mingled feelings of curiosity, disappointment, and satisfaction. Considerable curiosity will naturally be created by the leading title, announcing a renewal of geographical research in the interesting land of the Baluchis, which has been so strangely neglected since the days of Pottinger, Grant, and Masson. Unfortunately, this title is not only altogether deceiving, but is, in fact, at variance with the sub-title, in which Mekran and Bashkurd alone can by any courtesy be said to form part of "unexplored Baluchistan." Mekran itself, including both the western division, now definitely annexed to Persia, and the eastern, nominally assigned to the Khan of Kelat, is tolerably well known, having been in recent times repeatedly traversed in several directions by Bellew, Walter, Goldsmid, St. John, Ewen Smith, Lovett, and others connected with the Perso-Afghan and Perso-Baluch Boundary Commissions of 1870-72, and with the extension of the Indo-European Telegraph to the Iranian plateau in 1873-74. Bashkurd, however, or Bashakard, as the author, with curious inconsistency, writes the word in the text, had been left untouched on all these occasions, and consequently still remained one of the least-known tracts in Asia. If this debateable land between Persia and Baluchistan proper may be taken as a sufficient justification of the leading title, then our disappointment need not be excessive, for here at least Mr. Floyer has done some excellent exploring work, although he did not quite succeed in solving the interesting hydrographic problems connected with South-eastern Persia. In other respects he has given us one of the most delightful books of travel that have appeared for many years in the English language.

A sound scholar and ardent naturalist, possessing high scientific attainments, besides an accurate and colloquial knowledge of the Arabic, Persian, Baluchi, and Hindustani languages, together with a long experience of the natives extending over many years' residence on the Persian coast in connexion with the Indo-European Telegraph, Mr. Floyer was in every way exceptionally qualified for the work of exploration in Southern Asia. Hence it is not surprising that his very first essays in this arduous career should be attended with such signal success. Having obtained a well-earned respite from his

monotonous duties at the dreary station of Jask, on the Gulf of Oman, he undertook three expeditions during the years 1876-77 in West Mekran, the Persian Gulf, Bashakard, and South Persia, the results of which are told with rare force and vivacity in the present volume. His first trip, from Jask to Bampur, in the autumn of 1876, although affording little scope for actual discovery, was nevertheless far from void of interest. Geographically, its chief fruit was an enlarged knowledge of the river systems east of Bashakard, and especially of the Sadaich (Sadich), which, although not traced to its source, was ascertained with reasonable certainty to flow from the Shahri district through the Shimani Pass in the Band-i-Marz range southwards to the coast. The importance of this northern extension of the Sadaich basin will presently appear.

Even the second excursion, in the summer of 1877, to the familiar waters of the Persian Gulf, was rewarded by the rediscovery, so to say, of the remarkable island of Henjam off Kishm. Although now uninhabited, this rocky islet was evidently at one time densely peopled, as shown by the ruins of many thousand stone huts, besides hundreds of large tanks hewn out of the solid limestone, which are found scattered over the whole surface. Of the builders of these works the very name has long perished, although the peculiar masonry of a large ruined town on the north side seems to justify the lingering tradition that they were Persian colonists exterminated by a plundering expedition of Arabs at some time subsequent to the Muhammadan era.

But the geographical interest of the work naturally centres in the third expedition, from Jask through Southern Persia to Turkey, and more especially in the early section devoted to the exploration of Bashakard. Among the noteworthy results here recorded were:—(1) The removal of the chief town, Angurhan, some forty miles from the position assigned to it on Major St. John's map; (2) the discovery of the Shafiri, a considerable head-stream of the Jagin, flowing from the Aphen-Band range; (3) the determination of this range itself, which was found to run east and west under 26° 30' N. at an elevation of 3,600 feet; (4) a survey of the Ab-washur water-parting between the Minab basin and Bashakard, thus exploding the theory that the Bampur River reaches the coast through the Minab; (5) lastly, the exploration of the Upper Haliri and its head-waters draining from the Isfanaka hills and the southern slopes of the Jamal Bariz range.

Where Mr. Floyer crossed the Haliri in 28° N., 57° 40' E., it was already thirty yards wide and four feet and a-half deep, and was found to be flowing in a south-westerly direction to the fertile and well-peopled Shahri district. Here it would almost necessarily form a junction with the stream flowing south-west from Bampur, whose further course has hitherto been the subject of so much speculation. Mr. Floyer rejects, apparently on good grounds, the Jagin and Rapsh (Bint) outlets, and argues with much force that the united Bampur-Haliri is in fact the Upper Sadaich, which he had already ascertained to flow from the Shahri plains

through the Shimani Pass southwards (p. 262). Although not yet completely cleared up, it seems pretty certain that we have here the true clue to the mystery, which can be absolutely removed only by traversing the hitherto unvisited districts of Rudbar and Shahri between Bampur and the Ab-washur water-parting.

Beyond the Haliri valley the Jamal Bariz range was soon crossed at an elevation of 9,310 feet, after which the homeward route lay along tolerably beaten tracks through Kirmán and Yazd to Ispahan, and thence by the less frequented line of Daulatabad and Kirmánshahán to Baghdad. Even here, where less novelty might be expected, the interest of the reader is kept alive by a narrative teeming with incidents and anecdotes of every sort, enriched with many shrewd and original observations on men and things, and related in a simple, vigorous style the unstudied grace of which is peculiarly refreshing. Sympathy is enlisted from the first in the traveller's rude but honest Baluchi followers, and especially in his faithful henchman, Ghulamshah, to whose really noble qualities full justice is done. Ghulamshah accompanied Mr. Floyer to England, and thence to Egypt, where the enterprising explorer has been appointed to the direction of the Telegraph department. Among the illustrations is an excellent photograph of the traveller and his inseparable young Baluch attendant, whose invaluable services are thus briefly summed up:—

"He accompanied me during a journey of seven months, and crossed the lofty snow-clad mountains of Kurdistan in the depth of winter. During this time he cooked all my meals for me, packed and unpacked all my instruments every day, and took charge of and wound the chronometer when I had to leave camp. He never broke anything, and never but once left anything behind. He was trusty in mutinies, never tired and never frightened" (p. 156).

The natural honesty, fine patriotic feeling, manliness, ready wit, and keen sense of humour of Ghulamshah's fellow-countrymen are well brought out by the many little characteristic scenes with which the pages of this entertaining volume are constantly enlivened. The Baluchis are described as the best fellow-travellers in the world, full of jokes, "chaff," and absurd stories; in times of difficulty, excitable, vociferous, and working "like demons;" in camp, ever merry, with a strong appreciation of the ridiculous, and "inexhaustible good nature." A Persian "swell" from Kirmán sneeringly remarks to Brahim, one of them: "I suppose the Sahib has enormous quantities of money; all these boxes are full of it, eh?" To which Brahim gravely retorts: "No! these are all full of sand, which the Sahib has brought as a present for the Governor of Kirmán, whose country hasn't got any!" (p. 291). On another occasion, when the weather was intensely cold, this same Brahim, "disgusted at the complaints of one or two of the men, gave them every rag he had, and slept in a thin cotton shirt, rather than that the Baluch reputation for hardihood should suffer at their hands!" (p. 308). Elsewhere a remarkable instance is related of their absolute trustworthiness.

"I wanted to send a large sum of money back

Jask; and, as I was on the point of sending Brahim with it, he happened to look out of the tent. 'There's a man,' he said, 'just going; he'll take it;' and he ran out and called to a man just disappearing among the bushes. This was a perfect stranger to all of us, but he duly delivered the money; and when in secret I hinted to Brahim doubts about its safety, the tone of his reply, 'He's a Balúch,' made me feel quite ashamed. One tribe of Balúchis will 'chapaó,' or plunder, another tribe directly they get a chance; but petty theft is unknown among them" (158).

Many striking instances occur of the explorer's exceptional tact and skill in dealing with the natives under difficult circumstances. When some of his followers begin to grumble and threaten to go back, harsh measures, rough words, or bullying being useless, he gains his point by a clever appeal to their honour as Balúchis.

"Calling up Brahim, I told him vehemently that I could never believe it; that I had known the Balúchis for years; and as for their ever doing such an unmanly thing as giving their word to accompany a man and then running away at the beginning, it was impossible. If, now, it had been Alishah (object of their special contempt), or any of the common herd, why, perhaps, they might do such things, &c., &c. It had the desired effect, at all events for a time" (p. 175).

The work is illustrated with a few good sketches by the author, some, however, out of place, or unreferred to in the text. There is also a tolerably good map of the routes traversed by the explorer, besides botanical, meteorological, and linguistic appendices, which contain much useful matter. Philologists will be specially interested in the comparative tables of forty-four short phrases in Persian, Kurdish, Afghan, and more than one Balúch dialect, throwing light on the mutual relations of the various Iranian members of the Aryan linguistic family. As might be expected from his proficiency in the Eastern languages, Mr. Floyer has adopted a sound system of transliteration, which is adhered to with great uniformity throughout. Among the few exceptions are—*Yazd* at pp. 34 and 142, and *Yezd* elsewhere; *Lingah* correctly in the text (147), but *Linjah* on the map; *Eelaut* (91) and *Iliat* (246, 269) for *Ilidit*; *Dowletabad* everywhere for *Daulatábad*; the Urdu causal *samjána* (475) for *samjhána* from *samajhna*. But a more serious defect is the omission of an index, which was specially needed in a work teeming, as this does, with valuable details of all kinds.

A. H. KEANE.

#### IRELAND'S RECOLLECTIONS OF EMERSON.

*In Memoriam: Ralph Waldo Emerson.* Recollections of his Visits to England in 1833, 1847-48, 1872-78, and Extracts from Unpublished Letters. By Alexander Ireland. (Simpkin, Marshall & Co.)

No book could well be more unpretentious than Mr. Ireland's pleasant little monograph, which does not profess to be either a formal biography of Emerson or an adequate criticism of his work. It contains, however, much interesting biographical material that is not to be found in the larger volume lately written by Mr. G. W. Cooke; and it can hardly fail to be an aid to that criticism, alone final and

satisfying, which surveys any notable literary product, not as standing alone and unrelated, but as the outcome of a certain personality with some peculiar quality of value or interest. For those admirers and disciples of Emerson who make large personal demands upon their literary hero there is clearly no such shock of disappointment in store as that which awaited enthusiastic worshippers of Carlyle in the pages of his own *Reminiscences* and of Mr. Froude's record of his earlier years. Everything that has so far been said or written concerning Emerson testifies to the beautiful graciousness and gentleness of his nature, to the utter absence from it of irritating roughnesses and humiliating affectations, to its harmonious exhibition of all "things lovely and of good report." This unanimous verdict is amply supported by Mr. Ireland's book, and the writer may claim to speak with the authority conferred by the close intimacy which grew out of a friendship extending over nearly half-a-century.

Mr. Ireland's acquaintance with Emerson dates from the year 1833; and though the latter had, twelve months before, resigned the charge of the Unitarian congregation in Boston to whom he had ministered, he was still known as the Rev. R. W. Emerson—now a strange-sounding title—from whom persons of discernment in Boston and thereabouts expected great things. It fell to Mr. Ireland's lot to be the American visitor's cicerone in Edinburgh, whither Emerson had found his way; and in the course of conversation it transpired that there were two men with whom he was specially anxious to hold converse before he turned his steps homeward. One was well known, and could be easily found—the poet Wordsworth; the other was the altogether unknown author of certain articles which had appeared in the *Edinburgh Review*, and had been characterised by an individuality of treatment not very common in the pages of that respectable organ of Whig opinion. Enquiries were set on foot, and it was discovered—not without some enterprise of research—that the author in question was a Mr. Carlyle, then residing somewhere among the wilds of Dumfriesshire. This ascertained, Emerson made his way to Craigenputtock, and his account of the visit given in the *English Traits* is here supplemented by a letter written to Mr. Ireland shortly after his return to Boston. Emerson writes:—

"I found him one of the most simple and frank of men, and became acquainted with him at once. We walked over several miles of hills, and talked upon all the great questions that interest us most. The comfort of meeting a man of genius is that he speaks sincerely, that he feels himself to be so rich that he is above the meanness of pretending to knowledge which he has not; and Carlyle does not pretend to have solved the great problems, but rather to be an observer of their solution as it goes forward in the world. I asked him at what religious development the concluding passage in his piece in the *Edinburgh Review* upon German literature (say five years ago) and some passages in the piece called 'Characteristics' pointed? He replied that he was not competent to state it even to himself; he waited rather to see. My own feeling was that I had met with men of far less power who had got greater insight into religious truth."

This glimpse of Carlyle in his pre-oracular days, waiting for such knowledge of the mystery of things as might be vouchsafed to him, is decidedly interesting, and much more edifying than that picture of his later years, drawn by himself in his *Life of Sterling*, when "pantheism" and "pottheism" had become the Carlylean equivalents for "tweedledum" and "tweedledee." The friendship which had its beginning at Craigenputtock was destined to be long-lived and fruitful. The first American edition of *Sartor Resartus* was published at Emerson's risk; and the Preface to the first series of Emerson's *Essays* was written by Carlyle, whose name had then acquired a marketable value. Mr. Ireland gives several of the letters despatched from Concord to Chelsea between the years 1859 and 1864 which have an almost pathetic interest. Emerson's loyalty to his friend never wavered, but there is a tone of wistful sadness mingled with the large magnanimity of his protests against Carlyle's blind antagonism to a cause which Emerson knew to be the cause of liberty and progress; and it is more than possible that Carlyle's after-acknowledgment of his error may have resulted from doubts first suggested by his friend's searching remonstrances.

There is a singularly attractive unity in the impression stamped upon the mind by these letters from Emerson's pen, by the characteristic anecdotes with which Mr. Ireland brightens his pages, and by the testimonies concerning him given by those who knew him best—the impression of a soul of rare purity, transparency, and simplicity. One anecdote must be given. Emerson had been delivering an address to a literary society, and at its conclusion the president called upon a clergyman to pray. The prayer, delivered from the pulpit which the speaker had just vacated, was remarkable throughout, and, among other curious utterances, was this sentence: "We beseech thee, O Lord, to deliver us from ever hearing any more such transcendental nonsense as we have just listened to from this sacred desk." After the Benediction, Mr. Emerson asked his next neighbour the name of the officiating clergyman; and, when falteringly answered, remarked, with gentle simplicity, "He seemed a very conscientious, plain-spoken man," and went on his peaceful way. I am inclined to think this little story is one of the most charming I have lately read. It has the quality of illumination, the *cachet* of character; and so long as men are men, and not merely critics, Emerson's utterances will be all the more weighty for being known to have character behind them.

JAMES ASHCROFT NOBLE.

*Quatre Bras, Ligny, and Waterloo.* By Dorsey Garduer. (Kegan Paul, Trench & Co.)

AN American account of the campaign of Waterloo must in itself be interesting, independent of any intrinsic merit, from the reasonable expectation that the author is free from the patriotic feelings which must (even unconsciously) more or less bias an Englishman, a Frenchman, or a Prussian. It is

therefore slightly disappointing to read in Mr. Gardner's Preface that he makes no pretensions to military science, and merely writes for the benefit of the general reader. Such accounts for the general reader abound—from Mr. Gleig's well-known *Story of Waterloo* to Ereckmann-Chatrian's novel—but military descriptions are only to be found in Jomini, in Charras' *Waterloo*, and Chesney's *Waterloo Lectures*. However much it is to be regretted that an authentic military history of Waterloo has yet to be written, sufficient time has now elapsed for it to be possible to construct a narrative free from the personal animus of Siborne or of Thiers.

It may be said at once that Mr. Gardner tells nothing new of the great battle, or of the preliminary campaign. He adopts Kennedy's division of the battle of Waterloo into five distinct stages, and follows Siborne implicitly (and with good reason) in all details, but not in his diffuseness or the looseness of his style. He adds nothing to any of the chief Waterloo controversies. By a careful collation of documents, he proves that Ney was in no way to blame for the wanderings of d'Erlon's corps on the day of Quatre Bras and Ligny, following in this Col. Heymes' account. He palliates the conduct of Grouchy during his pursuit of the Prussians after Ligny, and gives reasons why it was impossible for that corps to have reached the field of battle in time to be of any use after its fatal deviation towards Wavre. He acknowledges the importance of the Prussian attack on Napoleon's right, and points out that their losses at Planchenoit alone exceeded slightly that of the English (exclusive of the King's German Legion) through the whole battle. He points out clearly the error of Wellington, or rather of his staff, in not providing better for the defence of La Haye Sainte; and of Napoleon in wasting his force in isolated attacks. He adds nothing to the heated discussion as to the respective shares of the 52nd and the Guards in the repulse of the Old Guard, but quietly adopts Siborne's and Chesney's view.

But if he tells nothing new, and only goes over the ground taken up by Siborne, Charras, and Chesney, his view of Wellington and Napoleon in the field is novel, and explains much which seemed inexplicable to earlier writers. Wellington is no national hero to him, and the English but a snobbish race. He dwells almost exultantly on the destruction of the 69th at Quatre Bras, and of Ompteda's battalion at Waterloo through the orders of the Prince of Orange, as a just requital to the English for giving him a command; and the Prince himself, he declares, had but followed the example of the three kings of Chickensaboo in the *Bab Ballads*. Wellington's dispositions he censures for the waste of Lord Hill's divisions at Hal, which had been placed there on the expectation (as he told Greville in 1820) that he would be attacked on his right; and he thinks that the idea he gave Ziegler in 1821, which is quoted in Chesney's third edition, of falling back on the Prussians if defeated, was only an after-thought. Further, Mr. Gardner decidedly condemns Wellington for not going in person to Quatre Bras the moment he heard the news of Napoleon's crossing the frontier, and

simply ridicules the Duke for stopping at a ball, and even for establishing his head-quarters in a gay city so far in his rear as Brussels. A more serious imputation on the Duke is his neglect to give just credit to those who deserved it, which seems but too well founded. The omission of any mention of the gallant behaviour of the 52nd is the most glaring instance; but Mr. Gardner notices also a similar neglect of Capt. Mercer, Sir Augustus Frazer, and (according to a conversation reported by Mr. Greville with the Duke of York) of the Marquis of Anglesey.

Mr. Gardner's treatment of Napoleon's conduct during this campaign is more noteworthy. He attributes his hesitations and frequent indecision and petulance to ill-health, and makes out a strong case. That Napoleon was in this last campaign incapable of prolonged action or thought was stated by Col. Charras. And his statement is much strengthened by Mr. Gardner, who cites, on the evidence of Grouchy, Napoleon's heavy sleep after Ligny, from which no one dared awake him; and the still more important evidence of Gen. Gudin (who had been page to Napoleon at Waterloo), which is transcribed from Lord Albemarle's *Fifty Years of my Life*. This key-note, the ill-health of Napoleon, explains what Jomini and others wonder at—the difference of the military ability displayed by the victor of Arcola and Austerlitz and the defeated general of Waterloo. For this bright, clear light Mr. Gardner deserves the highest praise; and it is of itself sufficient to give his book an historical value.

At the end of his book Mr. Gardner has appended a quantity of what he calls Waterloo poetry, which contains such diverse strains as Byron's magnificent stanzas in "Childe Harold," Tennyson's "Ode on the Death of the Duke of Wellington," and Thackeray's "Chronicle of the Drum," side by side with many flat verses of Scott and Southey, the unsuccessful prize poem of Macaulay, and the successful one of G. E. Scott for the Chancellor's prize at Cambridge in 1821. The book is written in an easy style, though much encumbered by foot-notes, and deserves reading by anyone who has not time to study Charras or Chesney, or patience to wade through Siborne, and who is dissatisfied with the one-sided descriptions of Gleig and Thiers.

H. MORSE STEPHENS.

*History of China.* By Demetrius Charles Boulger. Vol. II. (W. H. Allen.)

IN his present volume Mr. Boulger brings down the History of China to within measureable distance of our own times. The last volume closed with an account of the expiring efforts of the Mongols to maintain their hold upon the throne against the aroused antagonism of the people. Given the forces in the field, and there could be but one result of the contest. Not only had the Mongols inherited a traditional sequence of dynastic vigour and decay, but, as a race, they were incapable of maintaining an empire. No race of men has conquered and swept over a greater extent of territory than the Mongols, and yet not only have their horsemen entirely disappeared from the subjugated countries,

but no trace of their rule is to be found. They acquired mastery over the greater part of Asia and over a large portion of Europe, but, except in the displacement of tribes, no signs remain of their former presence. Created by brute force and supported, for the most part, by plunder, their empire lacked those elements of stability which are essential to permanence.

When, therefore, the Chinese people rose with the intention of driving their Mongol rulers into exile, and of placing a native dynasty on the throne, the fate of the successors of Jenghiz Khan was sealed. Their armies fought with the personal bravery that has always distinguished them; but they had lost heart in their cause, and, after sustaining an unequal contest in many battles, they were finally driven back to the home of their race, leaving the successful representative of the national cause in possession of the field. At such a juncture it might naturally have been expected that a descendant of the last Chinese dynasty—the Sung—would have come forward to claim the throne; but none such appeared to dispute the right of the successful soldier (originally a plebeian priest) to the prize he had won. Of the struggles and turmoils of this period Mr. Boulger gives a full and vivid account. It is not his fault that in it we are deprived of those side-lights of history which brighten and reveal the whole picture. The official records, as translated by de Mailla and others, were all the authorities which were within his reach, and of these he has made skilful use. When, however, he traces the fortunes of the dynasty founded by the warrior-priest, and named by him the "Ming" or "Bright" (1368–1644), he is able to illustrate events and amplify details by the writings of the Jesuit missionaries who, during this period, for the first time established a footing in Peking. To these men must be ascribed the honour of having laid the foundation of that scientific knowledge which is destined to change the whole system of mental training among the Chinese.

The Ming dynasty presents few special characteristics. Its leading feature was the re-awakening of the artistic genius of the people, which had slept during the rule of the rude Mongol emperors. Painting and the manufacture of porcelain reached an artistic development to which they had never before attained. Literature also revived; and, as if the minds of men had been gathering strength in the barren period of the Mongol supremacy, that incubus was no sooner removed than a bright literary light overspread the empire, and numerous works of scientific, historical, and scholarly value issued from the great literary centres. With these exceptions, however, there is nothing in the Ming annals to distinguish it above other dynasties; and the dethronement of the last Emperor of the line by the Manchoo chief who founded the present dynasty of China may, when read by the light of subsequent events, be considered to have been a gain, rather than a loss, to the empire.

Want of space will not allow us even to indicate the many subjects of interest which occur in the present volume. The establishment and development during the period

described (1368–1795) of relations between Europe and China inspire it with a more general interest than could perhaps be claimed for the last volume, which dealt exclusively with matters in which Europe had neither lot nor part; while a wider range of authorities furnishes an additional guarantee for the authentic nature of the narrative. In the management of his very difficult subject, Mr. Boulger shows the same grasp of the facts as was manifest in the pages of vol. i.; and the purity and even flow of his English leave, in these respects, nothing to be desired.

ROBERT K. DOUGLAS.

*The Viking-Ship discovered at Gokstad in Norway.* Described by N. Nicolaysen. Maps, Wood-cuts, and Plates. (Christiania: A. Cammermeyer.)

AT Gokstad, in the old kingdom of Westfold, close to Sandefjord, between two farms, there stood a large mound known as the King's Howe ("Kongshaug"), wherein tradition declared that a king, with all his treasures, lay entombed. In January 1880 the sons of the man who owned the greater part of this barrow resolved to test the truth of the old story. M. Nicolaysen, president of a Norwegian antiquarian society, fortunately heard of their resolution, and induced them to allow his society to undertake the operation of exploring the mound. The work was begun as soon as the frost was out of the ground; and, on April 29, the diggers were rewarded by the most important find that has yet been made in the North—a real wicking's ship in good preservation. It is an account of this great discovery that M. Nicolaysen, to whose patriotism we owe it, here gives us, together with a careful and minute description of the ship itself and the various articles which were found with it, and a plain, sensible, and instructive essay on the extant documentary evidence regarding the ships of the North during the early and mediaeval periods.

In the beautiful plates which accompany the text one can see with one's own eyes what manner of craft it was that brought those terrible heathen colonists to our islands in the ninth century. It is as interesting to an Englishman as to a Norwegian to look at this "16-benched" war-ship and her fittings, for, after all, it is more likely that the descendants of the man who built her, rigged her, and sailed her are to be found this side of the North Sea than the other.

The vessel herself, so luckily preserved by the blue clay in which she was sunk by the mound-makers, is of great beauty—an oaken clinker-built boat, 23·80 mètres from stem to stern-post, 5·10 mètres broad, and 1·20 mètres deep amidships, resembling in form the Nordland and Trysil fishing-boats, but excelling them in the proportions necessary for speed and stability, pierced for sixteen oars aside, one-masted, and undecked. She was steered by a rudder fixed on the starboard quarter, had a most ingeniously constructed mast-step, was furnished with a row of painted wooden targets running along either gunwale, and fitted with an awning that ran fore and aft. She was well found in all

necessary articles—cooking vessels, bilge scoops, mainsail and yards, spare spars, oars, anchor, and three small ship's boats with their oars and rudders complete.

Just aft the mast the mound-builders had built a large sepulchral chamber of logs carefully fitted together; and here the great captain was laid on his couch armed and clothed, with such of his possessions as, during life, he had set greatest store by. His twelve horses, his favourite hounds, and his pet peacock (memento of a cruise to the South) were killed and laid in or by the vessel, but no human victims were sacrificed. Indeed, most of the buried wicking's own bones are missing, for the mound was broken into and plundered of its golden treasure and arms long, long ago. However, from an excellent report by Dr. J. Heiberg, Professor of Anatomy at Christiania, who has examined the human and animal remains, we learn that the honoured hero must have been a man of great height and strength, standing over six feet three inches, well past middle age, and a sufferer from chronic rheumatism in the muscles; every joint discovered being marked by traces of arthritis, like those of some old caged lion.

There are many points of interest connected with this ship and its contents for which one must refer students to the book, or, still better, to the original articles all lying safe and sound in the Christiania Museum. Only, with regard to the vessel herself, it would be well to see her before the inevitable changes of temperature have done their work and warped the delicate lines and fine design of this the earliest existing clipper yacht.

The decoration on the sledge (found in the ship), the tiller, the tilt-props, the rowlocks, trenchers, and the personal ornaments of bronze and iron are of no very high age, and consonant to other finds of the wicking-tide or "late iron age." Among other things is a draught-board, thirteen places square, and on its reverse side a table for nine men's morris (the earliest North European evidence for the existence of this ancient and scientific pastime).

The publisher, printer, and, indeed, all concerned in this book are to be thanked for their work, but we feel especially grateful to the draughtsmen, Messrs. H. Hanson and H. Schøyen. The translator, Mr. T. Krag, has also done his task well. It was distinctly a happy thought of M. Nicolaysen to accompany his Norwegian text with a full and literal English version. It is to be hoped that Englishmen will show their appreciation of his forethought.

There are one or two small oversights, which I only mention in the hope of seeing them corrected in a second edition. Anlaf Tryggwason built the Serpent himself; the Rand story is apocryphal and of mediaeval origin; the Old Gula-Law must not be referred to as of the tenth century (the older references to a Gula-Law being concerned with the constitution of Gula, not the Custumae); Thorolf Kweldolf's ship is only supported by the shadowy authority of Egla. There is one rich source of information left unnoticed—the Thulor (Gradus-lists in verse), composed in the twelfth century, which give more than a hundred words, many not yet identified or explained, relating to various parts of a ship,

besides abundance of names of different kinds of vessels.

It is certainly a curious coincidence that there is in the tenth-century verse of Thiodolf of Hiom and in the eleventh-century prose of Ari the Historian, an indisputable historical record of a ninth-century king of Westfold, Anlaf the Gar-stead Elf (ancestor of the two later and even more famous Anlafs, missionary and saint), who died of "foot-wark"—by which chronic rheumatism affecting the joints seems to be meant—was buried on the shore in a huge mound by his loving subjects, and regarded as a divinity for at least a century after his decease. But parallels such as this must not be pushed too far, and we should expect to find Anlaf's howe at Garstead, though there is no positive evidence on that head. At all events, we have here, thanks to M. Nicolaysen, an authentic and remarkable burial of a wicking prince of the days when that mighty sea empire was a-founding which spread from the Baltic to Limerick Sound and from the south of Sicily to the shores of Greenland—an empire of which this Viking ship is the noblest and truest emblem.

F. YORK POWELL.

#### NEW NOVELS.

*The Martyrdom of Madeline.* By Robert Buchanan. In 3 vols. (Chatto & Windus.)

*Graystone Abbey.* By E. Foster. (Wyman.)

*Tempted of the Devil.* In 3 vols. (Remington.)

*A Paladin of Finance.* By Edward Jenkins. (Trübner.)

*Unknown to History.* By Charlotte M. Yonge. (Macmillan.)

*Michaelmas Daisy.* By Sarah Doudney. (Griffith & Farran.)

MR. BUCHANAN'S books have a sort of fine sentimental humanitarian something or other about them which may be, and very likely is, what is usually called Genius, but which to us appears much more like the Higher Charlatanism. In this novel with a purpose, his text is good, his doctrine is sound; it is only because we hold with him that his theme is so sacred and so delicate that we shrink from the carelessness, the rudeness, the trivialities of his treatment. Careless indeed! for the whole story belies the pretentious promise of his Preface, where he proposes to deal with the subjection of the female to the lusts of the male sex, "a problem as great and sad" as that which he treated in his *Shadow of the Sword*, "for," he says, "what the creed of Peace is to the State, the creed of Purity is to the Social Community." After this and some further remarks about Masculine Purity and the state of certain streets by gaslight, which keep recurring like a Wagnerian subject-motive throughout the book, one traces with amazement the actual career of the Martyr. A big-eyed virago of sixteen, in one of her tempers, instead of scratching out the eyes of her French school-mistress, decides to elope with the music-master, a card-sharping fellow who—*mirabile dictu*—has assumed the tutorial disguise with a view to picking up a rich English miss.

This Belleisle marries her merely for her supposed fortune; she him from foolish temper, spite, and folly. After using her as the decoy for a Parisian gambling-house, he casts her off on the pretence—whether true or false is never cleared up—that the marriage was a sham. Rescued by her old guardian, she poses for the rest of the book as a poor, polluted, martyred Clarissa, becomes a great actress, and marries a rich man. Belleisle then turns up in London in a still more impossible disguise as M. Gavrolles, the disciple of Gautier and Baudelaire, petted and worshipped by our author's old friends the fleshly poets. Gavrolles absurdly threatens to prove his marriage, and sets the low society journals upon Madeline, who, instead of confiding in her husband, though he had already learnt the worst from her own lips, decides to fly on suicidal thoughts magnanimously intent. She changes shawl and bracelets with the first street-walker she meets, who some weeks after is fished out of the Thames in an advanced state, &c.—a most nauseous description—and by these tokens identified. The Martyr wanders to Sister Ursula's Home, where the husband calls and finds her risen from the tomb. Now what all this has to do with Masculine Purity and the state of the streets we cannot conceive, but it has everything to do with Feminine Temper, Folly, and Conceit. And so the "great sad problem" dwindles down to this: That if a young woman is cursed with enormous eyes and a fine temper of her own; if she spites her governess and desolates her friends by eloping with a vulgar rascal for whom she does not care twopence; if, to the discomfort of her family circle, she chooses to consider herself defiled when she is nothing of the kind; if she repays her husband's confidence with heroic concealment and desertion—her life will inevitably prove the martyrdom she richly deserves. This superb carelessness extends even to details; however, we will only just hint that strict Ritualists do not "hear morning and evening mass" every day in the year, and that the Kentish peasantry are not wont to walk home through blood-red sunsets to dine upon a boiled leg of pork. We reluctantly refer to two episodes which Mr. Buchanan has dragged in by force, and for which he offers in his Preface an excuse that we can hardly accept. He there professes "to construct out of the editorial chit-chat of a journal an amusing personality." "Of the real editor," he adds, "I know nothing, and I certainly bear him no ill-will." This "amusing personality" is Mr. Lagardère, editor of the *Plain Speaker*, who is painted as a profligate, boastful, ignorant, lying, cowardly monster, often whipped and universally despised. Society will never, we fear, grow ashamed of its shameless journals if the moralist thus stabs them with their own poignard, and that, too, in the dark. We figure to ourselves the teetotal pharisee, inflamed with drink and righteousness, braining the publican with his own quart pot. Again we are told that "all the other characters are purely fictitious," among them "the representatives of the cant of aestheticism." In this latest—we do trust it is the last—of the tedious satires on a movement which has scarcely had any real existence except in

satire, we find among these "purely fictitious characters," whose opinions are so ruthlessly travestied, the transliterated names—we decline to repeat them—of men who are by no means Mr. Buchanan's inferiors in genius or reputation; one, indeed, if we mistake not, a poet and painter, whom the stern Censor of the society journals can now neither mend nor mar.

*Greystone Abbey* is a case of the revival of the unfittest—a relic of the exploded school of cheap fiction of the last generation; ignorant, bungling, and unreadable.

*Tempted of the Devil*, by the author of *A Fallen Angel*, appears duly robed in Mephistophelian black and red. A foolish title, nevertheless—for after all it was not the devil, but the fallen angel, who tempted the hero, as he murdered his mistress when she pressed him for money. His wife is the usual faultless wife of the usual faulty husband. Religious converse, and the astounding dialogue of the ball-room—that strange blending of Mabilite and the zenana, immodesty and dulness—form a vast background to the tragic climax, which is positively a barefaced chronicle of the Wainwright murder compiled at full length from the newspaper reports. A bad, stupid, and feeble book.

Mr. Jenkins, however, knows his world much better, and fastens on his prey almost before it is cold—certainly long before the other literary eagles have gathered. Poor M. Bontoux and his *Société générale* can scarcely have tottered to their fall ere Mr. Jenkins had marked them down as a suggestion for a really fresh and interesting novel. With a certain prejudice against his previous works, we must own that here he has written very strongly, fluently, and pleasantly. There is an excellent unity in the main thread, the fortunes of the Catholic financial scheme, piloted by the two forces—the scheming Italian swindler-visionary and the obstinate *dévoté* marquise. It is a clever and thoroughly satisfactory piece of work, the more so because it is not in the least original. Lord Lytton's *Parisians* was a desperate attempt to launch the sham French novel. It has found in Mr. Jenkins a more wary and less self-conscious follower. Indeed, it is probable that the *Paladin of Finance* in a French translation would obtain considerable success, for it has caught much of the spirit and manner of Balzac, as well as of Daudet, upon which it is more immediately modelled. Mr. Jenkins has visited the Hôtel Nucingen as well as the Court of the Nabab; his notaries, priests, and financiers keep suggesting the typical figures of Balzac; but then what well-drawn characters do not? This sort of imitation is perfectly justifiable, and even laudable. Only once he seems to have gone too far; the relations between the Marquise and her *libre-penseur* secretary, though adroitly varied, are too palpably copied from those of the Queen and the tutor in *Les Rois en Exil*. The closing pages of the book are precisely what Daudet would have written—something supremely quick, tragic, commonplace, yet striking; something, indeed, utterly un-English. Mr.

Jenkins may be congratulated as the author of the first good French novel in English.

So inherent in women is the faculty of imaginative narrative that it is really difficult for a good and sensible woman, whose native confidence does not pass into conceit, to write a very bad novel. Those who never turn over the goody stories written for the young can hardly believe how much they contain of originality, ability, and grace, in spite of their mannerism. Miss Yonge, whose earliest works have unfortunately caused her to be classed with the "John Halifax" school, has sometimes laboured to much better purpose, especially in the field of historical romance. We remember how eagerly we used to look out for *Macmillan* while her "Dove in the Eagle's Nest" was appearing. To-day her *Unknown to History* does not excite us overmuch. But, then, neither would *Ivanhoe* nor *Kenilworth*. But they are none the worse for that, for the fact is, historical novels are only meant for boys and girls, and the more boyish and girlish they are the better. In this story of the captivity of Mary Stuart the author bases everything on a mere rumour which is quite unhistorical, but she maintains a vivid and fairly correct local colouring and grouping. This means no little study, care, and experience. The young people for whom this pleasant book is intended will not object to its prolixity, nor to the straightforward morality and kindly affections which it breathes. They will like it, and it will do them good.

Older readers might do worse than devote an hour to the earlier part of Miss Doudney's sweet little story. Usage, alas! has ordained that such simple heroines should, towards the end, find out rich uncles, and go to live in fine houses, with a vista of love and gravely amorous earls and rectors. Otherwise these unnoticed little books are by no means commonplace, but exhibit work of a very high order. *Michaelmas Daisy* is a book which would do Mr. Buchanan good to read. This stout-hearted, God-fearing, simple-minded orphan girl, thrown among unkind strangers, could have played the Martyr quite as well as any of the hysterical, surly, palavering Madelines or Magdalenes; but she had far too much sense for that. Her determined courage, and cheerfulness, and patience outshine the Martyr's tarnished aureole. It is delightful to read about her; it is cheering to feel that in many a decent home she may still be found, and always will be found, so long as mothers bring up their girls in the ways they should go, and put no worse books than Miss Doudney's in their way. E. PURCELL.

#### SOME CLASSICAL BOOKS.

*Thirteen Satires of Juvenal translated into English.* By H. A. Strong and A. Leeper. (Macmillan.) This is a welcome addition to the number of scholarly and faithful translations of classical poets into English prose. Whatever may be said as to the comparative advantages of prose and verse as the medium of reproduction of a poet's work in another language, there is no doubt that it is well that the English reader should have the opportunity of knowing exactly what the Greek and Latin poets said, apart from the licences inseparable

from all renderings which attempt to represent the form as well as the substance. In the case of Juvenal, the task of translation is not a difficult one, thanks to the very full help given by Prof. Mayor's admirable edition; and Prof. Strong has shown his competence for more taxing work in the prose versions which he has already published. He and his colleague, wiser in this than the late Mr. Maclean, have recognised Prof. Mayor's "almost instinctive perception of the shade of meaning which the satirist means to convey;" and we have noticed no instance in which they materially depart from his interpretation. The result is a version which is well worthy to stand by the side of such masterpieces of faithful rendering as Munro's *Lucretius*, Lang's *Theocritus*, and Butcher and Lang's *Odyssey*. It is unfortunate that, dating as they do from the University of Melbourne, the translators do not seem to have been acquainted with Prof. Mayor's school edition of *Satires x.-xvi.*, which supplies the critical commentary that they desiderate. Occasionally there is a jarring touch, as in the rendering of *lacernata amica* by "a Bloomer mistress"—a phrase, one may hope, which is not destined to become classical or permanent. And if the translation appeals, as we may suppose it does, to English readers, a few explanatory notes would have been a welcome addition. The point of "a bare-footed Fabius" or "Jove's fellow-burghers" will be missed by many who, if they could have used Mayor's notes, would not have needed the translation. But the rendering is both close and vigorous; and it would be easy to quote many happy turns from this excellent piece of work.

*Tacitus.* By A. J. Church and W. J. Brodribb. (Macmillan.) This latest addition to the series of "Classical Writers" edited by Mr. J. R. Green is a disappointing book. A very meagre summary of the few facts known as to the life of the author, and a chapter of about ten pages on Tacitus as a historian, serve to introduce and to conclude a bald analysis of the various works of the author, which is entirely devoid of anything like helpful or suggestive criticism. If the object of this series is to bring into prominence "the personality of the men themselves, and the circumstances under which they wrote," the volume on Tacitus must be pronounced to have altogether failed in attaining it. It is not fair to expect from everyone either the independent original research of Prof. Nettleship's monograph on *Vergil*, the fresh vigour of Prof. Mahaffy's *Euripides*, or the finished criticism of Dr. Campbell's *Sophocles*. But, if the series is to be of any real value to students, the volumes included in it must contain more than a mere abstract, such as everyone is competent to make for himself; and we find very little more than this in Messrs. Church and Brodribb's *Tacitus*. The writers have deserved well of their author by their scholarly, though by no means faultless, translation of his works; but they have added little or nothing to their services by the present publication.

*The Nicomachean Ethics of Aristotle.* Books I.-IV. and Book X., Chaps. VI.-IX. With Notes. By E. L. Hawkins. (Oxford: Thornton.) This handsomely printed book is intended specially for the Oxford Pass School, and the editor expressly says, "These notes are written for Passmen from a Pass point of view." He observes the limitations which he has imposed upon himself so strictly that the only note on one whole chapter is "Ch. 6. is not read in the Oxford Final Pass School." In many respects the book seems well adapted to its end. The notes are to the point; obscure passages are clearly explained; and the occasional illustrations are well chosen. We have tested the work in many places, and have found

that in most of them the explanations and translations are correct. Indeed, the only considerable error of interpretation that we have noticed is in iii. 1, where "mixed actions" are classified as a third species of "involuntary actions"—a classification which was certainly not intended by Aristotle, and which the editor, in a subsequent note, seems himself to doubt. He is, perhaps, hardly alive to the true meaning of *ἐλκασσι* δὲ μᾶλλον ἐκουσίαις, for in x. 9, 20, he translates *ἐλκασσι* "resemble," when it really means "seem to be." Some other misconceptions may be pointed out here and there. In i. 7, 10, and 13, for instance, he gives the meaning of "take into consideration" to both *ἀνθεῖν* and *θεῖον*; but the first means rather "ascertain" or "settle," and the second, as he translates it himself in i. 10, 2, "adopt." In i. 7, 17, *διαφθεῖναι τὰ καλῶς ἔχοντα τῇ περιγραφῇ* cannot mean "fit in what suits the sketch," and in the same chapter *ὁρθή* is a right angle, and not a straight line. In iii. 3, 3, the rendering "no one deliberates about . . . the diagonal and the side of a square, because they are incommensurable" mistakes the meaning of *δὲ*, "no one deliberates about the fact of their being so." In spite of some errors of this kind, which seem few in number, the general accuracy of the book deserves recognition. But it strikes us as being, perhaps, inadequate to the wants it is meant to satisfy in not explaining, except in about half a page, the general argument of the *Ethics*, and in not dwelling at some length on those main points of the theory which are too large to be disposed of in a short foot-note. A certain amount of introductory matter to the whole volume and to the various parts is clearly wanted, and the addition of it would render the book a very useful help to the Oxford Passman.

*The Republic of Plato.* Books I. and II. By G. A. Wells. (Bell and Sons.) Mr. Wells seems to lack the sense of proportion which is not the least among an editor's qualities. To a school edition of two books of the *Republic* he has prefixed not only thirty-four pages of miscellaneous remarks on the subjects therein included, and on others, but also an analysis in seventy pages of the whole *Republic*. There is no intimation that this book is the first instalment of a complete edition; but, unless it is so, such an amount of introductory matter is surely excessive. The same fault must be found with his notes, which strike us not seldom as being discursive and lengthy. The Introduction is not badly put together, and the notes are by no means foolish or incorrect, so far as we have noticed; but, if both had been retrenched by one-half, the book would have been all the better for it. When, for instance, Socrates incidentally remarks that he has no money, there is no need to tell the story about Thales from the *Politics*. Mr. Wells is, in fact, too much bent on bringing in anything and everything that he knows. In spite of occasional errors, such as a reference to "three *τρίκοιται*" (p. 6), or the rendering of *τί ἀξίους παθεῖν* by "how ought you to be treated" (p. 146), the scholarship of the book seems fairly accurate, and the grammatical notes are carefully done. Indeed, Mr. Wells appears to have taken pains throughout, and by no means without success, though we venture to recommend the additional labour of liberal omission. We do not doubt that the book may be useful.

*The Catiline and Jugurtha of Sallust.* Translated into English by A. W. Pollard. (Macmillan.) Mr. Pollard's crib to Sallust appears to offer in sufficient amount all that a crib is bound to offer. We have tested both parts of it in several places, and found it generally accurate. But there are a certain number of notes given into the bargain, and these seem to us inadequate on the side on which we tried

them—namely, the explanation of usages, technical terms, and so forth. Thus the military titles of M. Petreius in c. 59 of the *Catilina* want some comment; and c. 86 of the *Bellum Jugurthinum* has no notes, not even on that condensed passage in which Sallust describes Marius' innovations in the matter of recruiting. Mr. Pollard does not notice the possible view that *per satumam* in *Bell. Jug.* 29 means that the acceptance of the King's terms was put to the council in the lump, not clause by clause. He rightly follows Dietsch in being suspicious of the ascription (*Cat.*, c. 51) of punishment by scourging at Rome to Greek example, and is willing to omit *Graeciae morem imitati*; there is, perhaps, something to be said in favour of Döderlein's proposal (in *Philologus*, 9) to move the offending words into the next sentence. Mr. Pollard's Introduction to the *Catilina* mixes up Autronius with Antonius in some extraordinary way; also G. Antonius with M. Antonius.

*The Fourth Book of the Meditations of Marcus Aurelius Antoninus.* By Hastings Crossley. (Macmillan.) Many writings of late years have either shown or helped to awaken a fresh interest in the Emperor M. Aurelius. The novels of Mr. William Black and the lectures of M. Renan have little in common, but they have both done something to make the greatness and the morality of the Emperor familiar to people who are not professed students of philosophy. The present edition of *The Fourth Book of the Meditations* will do something to gratify, but more to whet, curiosity about the author, and the editing itself is such as to make us regret the postponement or abandonment of that entire edition on which Prof. Crossley has been working. The present instalment consists of a revised text, a translation, and a commentary; but there has been no fresh collation of MSS.

*Aristophanis Plutus.* Rec. Adolphus Velsen. (Leipzig: Teubner.) This edition aims at little more than giving the variants of the four principal MSS., and a very few conjectures by the editor and former critics. Hence the *adnotatio critica* is the scantiest possible; and the various readings occupy half the page, mostly with perfectly trivial or obvious or impossible variations. It is high time that editors should learn to rate this sort of collation at its true value. To a special student of the play who desires to edit it these minutiae may be important, as he can discover from them the comparative value of the MSS., and what kind of mistake each several scribe was likely to make. In the case of Aristophanes the superior value of the *Ravennas* is so long acknowledged that part of the problem is already settled. There is a good copy at the Ambrosian Library in Milan, which might help us where the *Ravennas* itself is effaced or illegible, but this Velsen does not include in his recension. He gives us not a word more than the bare description of the four MSS.; here and there he introduces a conjecture in his critical notes with a modest *nescio an*. His most important suggestions—and they are not very important—are on vers. 540-46, 876, 1069 *et seqq.*, 1189. In the first case he suspects a fusion of the two editions of the play. In the third he has recourse to the favourite receipt of transposition. His *αὐτόματος* for *αὐτόματος* in 1189 is good. But the impression left by the book is a feeling of regret that so careful and conscientious a worker should not have thrown more real light on this interesting play.

HAVING received but a few weeks ago a new edition of Conington's prose translation of *Virgil*, we must confess that we were hardly disposed to regard the field as open to a new competitor. Mr. J. W. Mackail, however, in a privately printed version of the first book of

the *Aeneid*, has conquered our prejudice. Styles of translation rapidly change in favour; and that adopted by Mr. Mackail may be regarded as, in some sort, the natural development of Conington's own. A keen perception of the niceties of the original is combined with command of literary English and bold simplicity. Such translation is something more than a *tour de force*. Of its success, our readers may judge from the description of the storm:—

"As the cry leaves his lips, a gust of the shrill north strikes full on the sail and raises the billows to the sky. The oars are snapped; the prow swings away and gives her side to the waves; down in a heap comes a broken mountain of water. These hang on the wave's ridge; to these the yawning billow shows ground amid the surge, where the sea churns with sand. Three ships the south wind catches and hurls on hidden rocks, rocks amid the waves which Italians call the Altars, an ugly reef banking the sea. Three the east forces from the deep into shallows and quicksands, a piteous sight, dashes on shoals and girdles with a sandbank. One, wherein loyal Orontes and his Lydians rode, before their lord's eyes a vast sea descending strikes astern. The helmsman is dashed away and rolled forward headlong; her as she lies the billow sends spinning thrice round with it, and engulfs her in its swift whirl. Scattered swimmers appear in the vast eddy, armour of men, timbers and Trojan treasure through the water. Ere now the stout ship of Ilioneus, ere now of brave Achates, and she wherein Abas rode, and she wherein aged Aletes, have yielded to the storm; through the shaken fastenings of their sides all draw in the deadly water, and their opening seams give way."

#### NOTES AND NEWS.

CAPT. R. BURTON's long-promised book on "The Sword," or, at least, the first instalment of it, may be expected before the close of the year. It will be published by Messrs. Chatto and Windus, and will be handsomely illustrated.

WE hear that a prose extravaganza, the work of a new writer, will be published immediately by Messrs. Smith, Elder and Co. It is entitled *Vice Versa*; and its appearance is awaited with some interest.

A PEOPLE'S EDITION of Garibaldi's novel *The Rule of the Monk*; or, Rome in the Nineteenth Century (which passed through several editions when published in two library volumes some years since) will be issued by Messrs. Cassell, Petter, Galpin and Co. in a few days at sixpence.

PROF. MONTER WILLIAMS will contribute an article on "Muhammad and his Teaching" to the July number of the *Nineteenth Century*.

PROF. HIRAM CORSON, of the Cornell University, has come across the Atlantic on purpose to read his paper before the Browning Society on Friday next. His subject is, "Browning's Method of revealing the Soul to itself by means of a Startling Experience."

THE most important results of the Oxford University Commission, so far as the Commission will have any important results, are now appearing. The election of several married tutorial fellows is already announced, and the speedy election of several more will follow.

WE are glad to see that M. D. Bikelas, of Athens, has resumed his enterprise of translating Shakspeare into Modern Greek. Three plays—"Romeo and Juliet," "Othello," and "King Lear"—appeared in 1876, and were duly announced in the ACADEMY at the time. He has now issued "Macbeth" and "Hamlet," and we hope that more are to follow. To English readers, M. Bikelas is best known by his *Loukis Laras*—an episode, half historical, half fictitious, of the war of independence in Ohio—of which a translation by M. J. Gennadius was published by Messrs. Macmillan last year.

UNDER the title of "Histories for Children," Messrs. W. Swan Sonnenschein and Co. are issuing a series of short histories by different authors, adapted to the use of very young readers. The volumes are designed principally for educational purposes, but, being largely illustrated and prettily bound, they will serve equally well for presentation books. Their uniform price is one shilling; and the volumes to be published next week are the Histories of France, Greece, and Rome, to be followed shortly by those for Sweden, Germany, and the United States.

*Holidays in Holland*, to which Mr. Thomas Purnell contributes an introductory chapter, and another on North Holland and the Dead Cities of the Zuyder Zee, will be published on July 1, as No. 2 of "Holiday Handbooks," now being issued at one penny.

THE New Shakspeare Society has, on Dr. P. Bayne's recommendation, resolved to give five of its nine nights next session to the discussion of the textual difficulties of five of Shakspeare's plays. The other meetings will be for more general subjects; and the first of the session, on October 13, will be given to Dr. Bayne's address on "The Supremacy of Shakspeare," and will be open to the public.

MESSRS. SOTHEY will begin on Friday, June 30, the sale of the first portion of the Beckford Library, which will last for twelve days, ending on Thursday, July 13. Mr. Beckford was a collector of the modern French type. His library is specially rich in books that belonged to famous libraries, bearing the devices of French Kings, or of Popes and Cardinals, and gorgeously bound. There are also many rare books relating to America, for which there is a special demand just now. The collection of Aldines and Elzevirs is very complete, and the copies are in fine condition. But the great prize of this first portion of the sale will be the three volumes of Van Dyck portraits, containing no less than twenty-two of his extremely rare etchings, in several states. Among them is a first state of the Vander Wauwer, an impression of which was bought by Baron Edmund de Rothschild at the Bale sale last year for £450. This is said to be a yet finer impression than that, and has been touched upon in bistre by the painter himself for the guidance of the engraver.

WE are glad to hear that Mr. Arthur Napier, whose dissertation for the degree of doctor in the University of Berlin we noticed only last week, has been appointed "extraordinary professor" at Göttingen. This is said to be the only instance of an Englishman having attained such a position in Germany.

FROM an official return it appears that the total number of works licensed to be printed in Japan during the past year was 4,910, as against 3,792 in 1880. School books take the lead with 704; then poetry, 556; political, 545; drawing and writing, 339; history, 276; medicine, 267; law, 255; *belles-lettres*, 193; geography, 164; commerce, 113; mathematics, 107; ethics, 93. Unless included under this last heading, theology and religion would seem to be entirely unrepresented. One hundred and forty-nine newspapers were born during the year, but only thirty-four survived. Among the translations were Mill's *Three Essays on Religion*, Buckle's *History of Civilisation*, Lord Chesterfield's *Letters*, Roscoe's *Chemistry*, Smiles's *Character*, Leone Levi's *International Commercial Law*, and Palgrave's *Chairman's Handbook*.

WE hear from Rome of two recent applications of the Pacea law in the case of historic libraries. Both Prince Barberini and Prince Massimo, having failed to find purchasers in Italy, were negotiating abroad for the sale of their libraries, when the Government intervened and, in accord-

ance with the provisions of the law referred to, laid an embargo upon their export.

THE Bibliothèque royale at Brussels will shortly be illuminated by the electric light.

THE Prussian Government, always liberal in granting historians access to its archives, has now permitted the publication of the most authentic materials for a very modern chapter of history. This is a volume, edited by von Poschinger and published by Hirzel, of Leipzig, containing the confidential correspondence between Prince Bismarck and Count Manteuffel during the years 1851 to 1854, when the former was the Prussian representative at the German Diet at Frankfurt, and the latter Minister of Foreign Affairs at Berlin. A second volume will carry the correspondence down to 1859.

THE *Gegenwart*, of Berlin, gives expression to a somewhat novel complaint against the German universities. They are overcrowded. During the season of financial speculation that followed the French War, the attendance seriously fell off. But now students are coming in larger numbers than ever, with the result, it is said, of injuring productive industries and depreciating the standard of examinations. It is the wrong class of students who come, hoping to find an easy entrance into the professions or public service.

SIG. BARBERA, of Florence, will shortly issue the first volume of Giuseppe Guerzoni's *Life of Garibaldi*, which has been in preparation since the last days of 1879. The second and concluding volume will follow within a few weeks.

DR. A. BRANDL, of Vienna, has recently contributed to the *Goethe-Jahrbuch* an account of the reception of Goethe's earlier writings in England which goes far to supply a yet unwritten chapter of English literature in the eighteenth century—viz., the beginnings of German influence. Dr. Brandl has ransacked the periodical and minor literature of the time with very great industry and success. His first section deals with the English career of *Werther*, from the first tentative translation, in 1779, to the furore period, 1785-90—a record of the uncritical enthusiasm of obscure people, which has a still greater value for the social than for the literary history of the time. The section on Goethe's Dramas traces in the same way the fortunes of *Clavigo* and *Stella*. With the third section, on the Ballads, we approach more distinguished ground; and Dr. Brandl criticises with great nicety the versions of the *Erl-könig* by Lewis and Scott, and illustrates very pointedly, from Scott's deviations from his original, his defective feeling for the charm of naively indefinite expression. After dwelling on the "Reaction" which was typified by the *Anti-Jacobin*, he discusses in the fifth section the influence of Goethe in his quality of Romantic poet upon Scott, and especially traces the signs of Scott's familiarity with *Götz* in the *Lay* and *Marmion*. Dr. Brandl, who is still at work upon this period, intends, we believe, to follow up his penetrating and suggestive study with a work on a subject which no Englishman has yet had the courage to attack thoroughly—the relation of Coleridge to German *Aesthetik*.

A COLLECTION of the works of M. August Trefort, the Hungarian Minister of Public Instruction, is now being published at Budapest by the Hungarian Academy, under the title of *Emlékbeszéd és tanulmányok*. M. Trefort belongs to the Liberal party; and his essays show a keen appreciation of the writings of both English and French publicists.

HERR KARL FAULMANN has just published (Vienna: Hartleben) an elaborate History of printing from Gutenberg to the present day, with special reference to technical improvements. The work is illustrated with fourteen plates and more than 300 wood-cuts.

## AMERICAN JOTTINGS.

A POSTHUMOUS volume of poems by Longfellow is announced for immediate publication, entitled *In the Harbour*. It will contain all the poems published since "Ultima Thule" appeared, with some that have never been printed.

EMERSON'S literary executor, Mr. J. Eliot Cabot, announces that he has not yet decided what use he will make of his unpublished papers, among which are included his university lectures at Harvard. Meanwhile, Mr. Cabot will be glad to receive any letters of Emerson, whether with or without permission to publish them.

GEN. MEREDITH READ, formerly American Minister at Athens, is engaged upon a book describing (partly from unpublished materials) the life of the men of letters of the eighteenth century on the Lake of Geneva. The work will be published in two volumes, with numerous illustrations.

THE fifth annual Convention of American Librarians was held in College Hall, Cincinnati, from May 24 to May 27. This was the first meeting of the Convention in the West, where libraries are by no means less numerous, though perhaps less highly organised, than in the Eastern States. In the West, public libraries are generally under the charge of the School Boards, which is said to lead to political jobbery. We learn from the *Nation* that,

"as a result of a little enquiry among the librarians present, it appeared that with nearly everyone politics had led to his appointment, or had nearly led to his dismissal, or was likely to lead to it, or had given him an incompetent board."

A valuable paper on classification (upon which matter some remarks of the *Saturday Review* seem to have caused considerable soreness in America) was read by Mr. Larned, of Buffalo. But the most important subject treated was the connexion between libraries and schools. Mr. Green, of Worcester, Massachusetts, explained how his library was used not only to continue the literary life of the scholars after graduation and to afford assistance to the teachers, but also to form part of the curriculum, being visited by the pupils during school hours as a regular portion of their studies in certain subjects.

FERDINAND FREILIGRATH, the German poet of democracy, left behind a choice library, numbering nearly 5,000 volumes, which was purchased *en bloc* by Mr. J. M. Sears, of Boston. Of this interesting collection a Catalogue has been compiled by the well-known American bibliographer, Mr. J. L. Whitney (Cambridge: Wilson). Its chief strength lies in the works of German and English authors (especially the poets) of the eighteenth and nineteenth centuries. Of Goethe and Schiller there are no less than 127 different editions; and there are also many rarities of Milton, Byron, and Shelley, besides carefully preserved presentation copies from various sources.

MR. KRISTOFER JANSON, the Norse poet, novelist, and preacher, who has settled at Minneapolis in Minnesota, is said to be engaged on a series of novels illustrating the life and surroundings of his Norwegian fellow-countrymen in America. The first of these will be published in the course of the present summer at Copenhagen.

THE Concord School of Philosophy will open this summer, as usual, from July 17 to August 13. The list of lecturers includes the names of Mr. Harris, Mr. Alcott, Mr. Sanborn, President Porter of Yale, and President Seelye of Amherst, as well as several women.

THE *Century* will shortly commence the publication of a series of papers by Mr. Edward

Eggleston, entitled "A History of Life in the Thirteen Colonies." These papers cover the period from the settlement of Jamestown to the French and Indian war; but they are intended to be only introductory to a general history of society in the United States down to the present time.

## FRENCH JOTTINGS.

M. RENAN, having completed an elaborate index to the seven volumes of his *Histoire des Origines du Christianisme*, has now begun to work upon a new undertaking—a History of Israel before the birth of Jesus. It is hardly necessary to state that his *Marc-Aurèle*, the last of the former series, was promptly placed in the Index.

THE election to the Académie française last week of Mgr. Perraud, the Liberal Bishop of Autun, has called attention to the fact that he is the fifth of a brilliant set of contemporaries at the Ecole normale who have attained this distinction. The others are MM. Prévost Paradol, Caro, Mézières, and Taine. Four of his class fellows are professors at either the Sorbonne or the Collège de France; six have seats in the Chamber or the Senate; and the list further includes the following prominent journalists:—MM. About, Francisque Sarcey, J.-J. Weiss, Edouard Hervé, D. Ordinaire, Villetard, Maxime Gaucher, and Eugène Yung.

THE sixth volume of the *Discours et Plaidoyers politiques* of M. Gambetta, edited by M. Joseph Reinach, will be published next week (Paris: Charpentier). It covers the period from July 1876 to December 1877, and includes a great number of speeches and reports connected with the Budget Committee, of which M. Gambetta was then president.

NEXT year the Institute will, for the first time, award the prizes founded by Thiers and by the widow of Jules Janin. Each is of the value of 3,000 frs. (£120), and is to be awarded triennially, the former for an historical work, the latter for a translation from the Latin.

THE monument on the tomb of Michelet at Père Lachaise will be formally inaugurated on July 14 with a discourse by M. Jules Ferry, Minister of Public Instruction. On the same day Michelet's widow proposes to publish a cheap selection from his works, entitled *Les grands Jours de la Révolution*.

ANOTHER evidence of Michelet's popularity at the present day may be inferred from a contract just signed by a printer at Paris for an edition of 10,000 copies of his *Histoire de France* and his *Histoire de la Révolution française*, with illustrations by Vierge, at the price of 196 frs. per volume. This is said by *Le Livre* to be without precedent.

M. JULES FERRY has ordered that busts of the following, by eminent sculptors, shall be placed in the vestibule of the Institute:—Thiers, Michelet, Littré, Jules Janin, de Sacy, Leverrier, L. Cogniet, Baron Taylor, Deville, and Auber.

INSCRIBED tablets are to be placed in Paris on the houses where Voltaire, Benjamin Constant, and Alfred de Musset died, where M<sup>me</sup>. de Sévigné lived, and on the house occupying the site of that in which Jean de Meung wrote the *Roman de la Rose*.

M. DE FREYCINET, Minister for Foreign Affairs, has decided to permit the publication of certain papers in the archives of his department. The first to appear will be a series of six volumes, containing the instructions given by the King of France to his foreign agents from the Treaty of Westphalia to the outbreak of the Revolution. They refer to England, Prussia, Russia, Poland,

Austria, and the Holy See. The work will be edited, with notes, by MM. Baschet, Laviisse, Rambaud, Sorel, and Hanotaux.

AN historic document, long believed to have been lost, has just been discovered in the château de Chantreine (Sarthe) in an old clothes press. It consists of a MS. history of some of the kings of France, with frequent marginal notes written by the Dauphin when a prisoner in the Temple. The history of the document is curious. It was given to the family of Chantreine by the duchesse d'Angoulême, stolen from them in a robbery, returned years after as the result of a death-bed confession, and then secreted by the late head of the family so that its very existence was almost forgotten. It has now been placed in the museum at Mans.

THE Société de l'Histoire de Paris has decided to issue, among its first publications, the *Polyp-tique d'Irminion*, edited, with geographical notes and an index of names, by M. Longnon.

THE last number of *Romania* contains a paper by M. Paul Meyer upon the verse chronicle of William Marshal which he was fortunate enough to discover in England last year. We shall say something more about this in our next number. M. Meyer will contribute another paper on the subject to the forthcoming *Annuaire-Bulletin* of the Société de l'Histoire de France, discussing specially that portion of the chronicle which treats of the relations between Richard Cœur de Lion and Philip Augustus.

## ACKNOWLEDGMENTS.

WE have the following on our table:—*The Parallel New Testament* (Cambridge: University Press); *Hudson's Critical Greek and English Concordance of the New Testament*, revised by Dr. Ezra Abbot (Bagster); *Should the Revised New Testament be Authorised?* by Sir Edmund Beckett (Murray); *Moses and Geology*; or, the Harmony of the Bible with Science, by Dr. Samuel Kinns, with 110 Illustrations (Cassell, Petter, Galpin and Co.); *The Perfect Way*; or, the Finding of Christ (Field and Tuer); *The Day-Dawn of the Past: Six Lectures on Science and Revelation as seen in Creation*, by An Old Etonian (Elliot Stock); *An Argument for the Divinity of Jesus Christ*, translated from "Le Christianisme et les Temps présents" of the abbé Em. Bougaud, by C. L. Currie (Murray); *Study of the Church Catechism*, adapted for use as a class-book, by C. Sherwill Dawe (Rivingtons); *Chapters from the Autobiography of an Independent Minister* (Williams and Norgate); *Preaching: What to Preach and How to Preach*, by the Rev. J. Edward Vaux (G. J. Palmer); *Sowing and Sewing: a Sexagesima Story*, by Charlotte M. Yonge (Walter Smith); *Sacred Similes: being Notes for Teachers of Bible Classes*, by E. P. Vizard (Sunday School Association); *Stories from the Life of Moses*, by Richard Bartram, and *Short Sermons to Children*, by Three Cousins (same publishers); *Hereafter*, by A. F. Heaton (Provost); *Infant Baptism, Demonstrated to be Reasonable, Historical, and Scriptural*, by James Malcolm (Houlston); *The Anniversary Text-Book: a Manual of Scripture Verse and Sacred Song* (Griffith and Farran); *Theotokos: the Example for Woman*, by M. A. Meredith (Kegan Paul, Trench and Co.); *Lectures and Discourses*, by the Right Rev. J. L. Spalding (New York: Catholic Publication Society); *The English Revisers' Greek Text*, shown to be Unauthorised except by Egyptian Copies discarded by Greeks, and to be Opposed to the Historic Text of all Ages and Churches, by G. W. Samson (Cambridge, U.S.: King; London: Trübner); &c., &c.

## A TRANSLATION.

RITOURNELLE.

(From the French of François Coppée.)

With a fitting welcome sweet June to greet  
 Over meadows flooded with summer light,  
 We'll chase winged things with swift-falling feet,  
 I, verse,—thou, butterflies' glittering flight.  
 And we'll seek for the tempting paths that turn  
 By rushes and reeds 'neath the willows gray,  
 To listen to all singing things and learn,  
 I, cadence,—and thou, the birds' glad some lay.  
 Where the whispering waves of the river wind  
 Amid banks half-hidden in leafy gloom,  
 We will gather all fragrant things, and find  
 I, song,—and thou, clusters of woodland bloom.  
 And serving our fancy, love graciously  
 To that summer's day shall add heightened glow,  
 I, poet,—thou, poetry's self shall be,  
 Thou, fairer, and I shall more loving, grow!

I. O. L.

## OBITUARY.

REINHOLD PAULI.

THE news of the sudden death of Prof. Reinhold Pauli, of Göttingen, comes with a painful shock to his many English friends. In this country he was known to most people by his excellent works on English history, by his continuation of Lappenberg, his *Geschichte von England seit den Friedensschlüssen von 1814 und 1815*, his *Bilder aus Alt-England*, his *Life of Alfred the Great*, and his monograph on Simon de Montfort. To him also we owe an edition of Gower's *Confessio Amantis*. In his own country he will be remembered not only as a writer and editor, but also as a great teacher, who knew how to inspire his pupils with his own energy and enthusiasm for the studies which he pursued.

The time which, when a young man, he passed in England as private secretary to Chevalier Bunsen may be said to have made him more than half an Englishman. Our language he spoke and wrote with unusual fluency. But this was not all. He closely studied our ways; and his quick sympathy helped him to that understanding of English character which a foreigner seldom acquires, and which was of peculiar advantage to him in dealing with our history.

Such a nature as his quickly makes friends, and rarely loses them. His social qualities rendered him a general favourite. His varied knowledge and ready wit made him an excellent companion. His good humour and high spirits were contagious. The sudden extinction of this bright and genial, as well as useful, life calls for more than an ordinary expression of sorrow.

E. MAUNDE THOMPSON.

THERE died recently in Livonia a man almost unknown in Western Europe who, nevertheless, had exercised immense influence over a great part of Russia. This was Jacobson, editor of the *Sakkala*, a newspaper written in Esthonian, which he had founded to propagate his dream of a national Finn kingdom, under the protection of the Czar, extending from the White Sea to Moscow, and eastward to the Ural Mountains. The Russian Government is said to have allowed him every liberty, as the effect of his teaching was to diminish the influence of the German element in Livonia. Jacobson's funeral was celebrated with great popular enthusiasm.

## THE ORIGIN OF THE INDIAN ALPHABETS.

MANY readers of the ACADEMY will, no doubt, be glad to hear of a most important discovery, due to Prof. A. H. Sayce, by which new and complete light will be thrown on the difficult question of the origin of the Indian alphabets.

To show the importance of this discovery it is necessary to state, briefly, how the question stands at present.

The numerous alphabets that have been used, or are now in use, in India can all be traced back to two, which may be termed the North and South Açoka alphabets. The first, of undoubted Phœnician origin, has disappeared, without leaving any successors or developments. To the second can be traced all the alphabets now in use in India, and some in use in other parts of the East. The origin of this alphabet has never been clearly settled, though several hypotheses have been put forward. It is impossible to trace these alphabets farther back than about 250 B.C., or to put their introduction into India earlier than about 300 B.C. A third distinct alphabet was early used by the Tamil people in South India in the early centuries A.D. This has almost disappeared, and, except, perhaps, in Malabar, has left no traces in India proper. For reasons that it would be tedious to give here, though this third alphabet has the same method of marking the vowels in the middle of words as the other two alphabets, which, in some ways, recalls the Semitic way of effecting the same object, it is impossible to trace its origin to either of the other alphabets, or vice versa. It is, however, impossible to doubt that all three are from the same original source, though derived, probably, at different periods.

That we can read these alphabets is due to most illustrious names—the second was deciphered by Prinsep; the first by Edwin Norris; and the third by F. W. Ellis. Mr. Edward Thomas has chiefly created the history of the first, and has shown what may probably be done in the future. But many differences of opinion have arisen.

The discovery of Prof. Sayce has now put the key-stone to the arch that has been so long waiting its completion. It is as follows:—As many will know, there are some Babylonian contract tablets in the British Museum; one of these has a docket by one of the contracting parties in a hitherto unknown character. This person is called Urmanû (Prof. Sayce informs me) in the cuneiform part of the document. This had, no doubt, been seen by others, but to Prof. Sayce is due the suggestion that it might be an Aramaic character subsequently imported into India. With this discovery, he most kindly sent me a specimen in March last; which, directly I examined it, disclosed a character closely resembling the South Açoka alphabet, with vowels marked as was done in the Indian alphabets. Here at last, then, was the long-wished-for original of these Indian alphabets that had puzzled Orientalists for so many years! I could at once, besides the vowel signs, identify several letters, k, m, r, s, &c., but the language does not in any way seem to be Sanskrit or Indian. At the end is what Prof. Sayce identified as a signature, and this appears to me to be Urmanû, which the cuneiform part shows is the writer's name. The document is dated in the reign of Artaxerxes II. (?) Thus it is earlier than any Indian inscription, but, as the language is not Indian, it cannot, anyhow, be of Indian origin. Everything points to a foreign origin for the Indian alphabets, and it therefore clearly follows that Prof. Sayce has discovered the source.

This brilliant discovery of our leading Orientalist will, I have no doubt, give as much pleasure to others as it did to me. I must apologise for the delay in communicating it to the ACADEMY. Though I received it in March, I have been prevented by circumstances out of my power, including long-continued illness and a change of residence, from communicating it earlier.

Prof. Sayce tells me that Mr. Pinches has promised a facsimile of the whole document in

the *Proceedings* of the Society of Biblical Archaeology.

As questions of palaeography now appear to be attracting attention, I would point out that the physiological side remains to be considered. This new branch of science has been founded by Prof. C. Vogt (*La Revue scientifique*, 26 Juin 1880) in an article "L'Écriture considérée au point de vue physiologique," though Dr. Gaetan Delaunay (somewhat later in the same periodical) has questioned part of Prof. Vogt's conclusions.

A. BURNELL.

PS.—Prof. Sayce has just found in the British Museum some other tablets of an earlier date—viz., before 640 B.C.—inscribed in a similar character. But these seem to be earlier forms, in which the system of marking the vowels was not fully developed, or, at least, is not so evident as in the other tablet.

## ARABIC JOURNALISM.

A NEW Arabic monthly, or rather an Arabic monthly with a new name, was issued in London during the last month, called *al-Itihādū-l-'Arabīyyū*, or "The Arabian Union." Judging from the address on the title-page, the editor is no other than the Syrian Catholic ecclesiastic, the Rev. J. L. Sābunjy, who formerly edited the now defunct *an-Nahlah* and the *al-Khildafah*, of which papers a detailed account was given in the ACADEMY of March 19, 1881. The last-named publication, "with a capital of £10,000," was to have been "printed for ten years at the expense of a friend of the Arab people." Its main object was to vilify the Ottomans and their Khalifah, and to stir up rebellion among the subjects of the Sultan. Its successor, "The Arabian Union," which scrupulously eschews any reflections on the Turks or their Sultan, is obviously written in support of the so-called "National Party" in Egypt, albeit the writer emphatically declares that it is "simply an *exposé* of his own personal sentiments;" that "he prints it at his own expense under the nose of the British Government;" and, further, that "he would not sully his honour by taking a bribe, or say that black was white, no not for the wealth of the whole world." A wood-cut representing the al-Ka'abah at Makkah forms the frontispiece; and three of the five illustrations in the paper, including that of his Excellency the Sayyid Ahmad 'Arāby Pasha, are portraits of the principal instigators of the Egyptian mutiny. Among the outsiders specially marked out for reprobation are the ex-Anglo-Indian officials now employed in Egypt, "who judge that the Egyptians should be treated, like the Indians, with rigour and tyranny." But all indiscriminately who have ventured to call in question the doings of the "National Party" come in for a large share of abuse. Neither is the British Ministry spared for having listened to the perverse counsels of light-witted politicians, whereby they brought disgrace upon the English nation in Afghanistan, Natal, Zulu-land, and among the Boers:—

"Had these men been the experienced politicians they profess to be, they would have followed the example of the noble-minded Sir William Gregory and his party, by counselling their people to assist the Egyptians, thereby making them strong defenders of their road to India."

The foregoing extracts sufficiently disclose the purport of "The Arabian Union." What English readers, however, will be astonished to hear is the alleged perfect accord existing between 'Arāby Pasha and the Khedive:—

"It is stated by some that H.H. the Khedive hates H.E. 'Arāby Pasha, and is disgusted with his present Ministers. . . . On the contrary, H.H. the Khedive urged the Bey to accept the title of

'Pasha.' . . . Those who make such statements display their lamentable ignorance, for H.H. the Khedive (may God defend him!) knows full well that the Egyptian army are his staunch supporters, the heroes upon whom he may implicitly rely, and that the National Party, consisting of the Notables, are loyal in their affection for him, are striving for the welfare of their country, and doing their utmost to strengthen the cause of their Amir and father, who is well aware that any protection afforded him by foreigners does not, and cannot, differ from the protection afforded by France to the Bey of Tunis. . . . We, on our part, are persuaded that H.H. has acted up to his dignity, has fathomed the depth of the foreigners, has joined himself heart and soul to his people, has made himself the corner-stone of that building, has placed himself in the van of the free National Party, and is prepared to support it."

It is superfluous to remark that this roseate, and perchance *gilded*, description of the harmony existing between the Khedive and the Egyptian rebels gives the lie direct to the statements of all foreign correspondents at Cairo and Alexandria, and stultifies the official utterances of the English and French Ministries on the subject. But "The Arabian Union" is evidently designed for Oriental readers, who are told where to apply for it; nevertheless, the printer's name is prudently, and withal illegally, withheld.

### CORRESPONDENCE.

#### GARIBALDI IN THE FOURTEENTH CENTURY.

Highgate: June 9, 1882.

At this time, when all Europe is occupying itself with paying the last honours to Italy's great hero, his name wherever met with attracts interest. In the *Libri Magistrorum Bullarum* at Malta (Acts of the Grand Masters of the Knights of St. John), vol. ix., we find in an endowment of a chaplaincy, July 4, 1389, mention made of "Anthonin de Garibaldis, heredes Opicini de Garibaldis burgensis Rodi." The names occur more than once in the volume. I do not know if the genealogy of Garibaldi could be traced back to Rhodes, but it is a curious coincidence to find another of the name a citizen of the Mediterranean, so to speak, 500 years ago. The simple citizen of Capriera would probably not have been ill-pleased to find his ancestry among the burgesses of Rhodes.

Allow me to add my grateful tribute here to the memory of Col. Chester, whose rich friendliness on questions of this sort will be missed by many an enquirer. LUCY TOULMIN SMITH.

#### WAS ROGER OF MONTGOMERY AT SENLAC?

Somerset, Wells: May 31, 1882.

One sometimes lights on corrections of oneself in a rather roundabout way. A little time back some one was good enough to send me a scrap of a New York paper, in which I was shown up in a slightly lordly fashion for having "uncritically" followed the statement of Wace that Roger of Montgomery was present at Senlac, and commanded the French division of Duke William's army. I ought to have learned better, because my "uncritical" treatment had been pointed out in the second number of the *Palatine Note-book*. Of the publication so named the New York paper spoke most highly, but it did not say how the writer in the *Palatine Note-book* had made out his case, or even whether the *Palatine Note-book* was of British or American origin. The name suggested the Bishopric of Durham; so I wrote to a learned friend there. He had never seen the *Palatine Note-book*, but believed it was "a Lancashire publication." The shire which was made up after my day by adding a piece of Yorkshire to Roger of Poitou's land between Mersey and Ribble did not come into my head so naturally as the ancient patrimony of St. Cuthbert. So I wrote to another learned friend at Manchester, who has kindly sent me the number. I am therefore now able to judge of the force of the upsetting which the New York writer thought was so thorough. I find that my critic, who signs himself H., is a little confused in his way of reasoning and in his way of dealing with authorities. But I am bound

to say that his objection is not a cavil, but a real objection which deserves an answer. H. moreover does not charge me with neglecting any authority, but simply with interpreting one of my authorities "cavalierly." It is just possible that this "cavalier" treatment may be the result of long and intimate acquaintance. I should certainly feel more bound to stand on my best behaviour towards a wise man from Mongolia than I do towards my dear old friend Orderic, known in religion as Vital.

The argument lies in a very short compass. Wace brings Roger of Montgomery on the field at Senlac, and he not only brings him on the field, but assigns him a special and characteristic part. Roger, as H. goes about to prove at somewhat needless length, was something more than an ordinary Norman noble. The husband of Mabel, the son-in-law of William Talvas, had interests beyond the Norman duchy. Bellême, as H. truly says, though the name does not seem very familiar to him, and though he places it in the Hiesmois, was a French and not a Norman fief. Therefore William set Roger to command the French division of his army, the men of Boulogne and Poix and the mercenaries (Wace, ed. Pluquet, 12784-92; ed. Andresen, 7668-78). But he joins with him in command the trustiest of all Normans, William Fitz-Osbern. Roger performs several notable exploits in the battle, which H. quotes, as I have quoted them long ago, and (see *Norman Conquest*, iii. 495, third edition) addresses his followers as "Franceiz."

On the other hand, there is a passage of Orderic (509 C) which literally implies that Roger was not at Senlac, but that he was left behind in Normandy. It runs thus: "Rex in illa transfretatione [his return from Normandy in December 1067] Rogerium de Montegomerici, quem tutorem Normanniae, dum ad bellum transmarinum proficisceretur, cum sua conjuge dimiserat, secum minavit."

It is on these two passages that the whole stress of H.'s argument lies. H. also remarks that the name of Roger of Montgomery does not come in William of Poitiers' list of the chief warriors at Senlac, a list which, he might have added, is copied by Orderic (Duchesne, 202 D, 501 C). This objection, though the list does not pretend to be exhaustive, has real force. But it proves nothing when H. goes on to tell us that Roger's name is not found "in the well-known battle-roll of the warriors at Hastings, published by Duchesne from a charter at Battle Abbey, nor in those published by Brompton and Leland." "Published by Brompton" is an odd phrase for a writer who, whoever he was, belongs to the days of manuscript; but it is more odd to find anybody in 1882—anybody, I mean, out of a peerage or book of genealogy—quoting a "Battle Abbey roll" as if it proved anything. In those impudent forgeries, among the crowd of imaginary names, it is impossible to find out, and it does not the least matter if we could find out, which of the real warriors of Senlac are entered and which are not.

On the other hand, H. is candid enough to quote a passage from the so-called eighth book of William of Jumièges—that is, the continuation by Robert of Torigny, which looks the other way, and which I believe I had not quoted anywhere. It runs thus (viii. 35): "Praedictus autem Rogerus de Monte-Gummerici bello Anglico interfuit." According to the mediaeval use of "bellum," I have little doubt that these words do mean to assert that Roger was at Senlac; but they would be satisfied by Roger's presence in William's later campaigns, some of which more immediately concerned Roger himself. We must take this statement of one who wrote more than a generation later, but who was specially concerned with personal history, for what it is worth. It may possibly go some way to

balance the negative argument from the silence of William of Poitiers.

But how stands the case between the very emphatic assertion of Wace and the implied denial of Orderic? According to H., I "rely on Wace too closely, forgetting that he is a poet, and that the exigencies of rhyme were to him more pressing than those of absolute accuracy." I must explain to H. that I am not in the habit of "forgetting" anything about such old and intimate friends as Master Wace. I do remember a case where he did sacrifice absolute accuracy to the exigencies of rhyme—namely, where he consented to speak of his own church of Bayeux as an abbey (see 9367, ed. Pluquet, and *Norman Conquest*, ii. 273). But the several notices of Roger of Montgomery in his account of the battle are not brought in for the sake of the rhyme; they are rather too long and minute. And assuredly no writer of his time sought more diligently and honestly after "absolute accuracy" than Wace did. He made mistakes undoubtedly, as when he puts William Fitz-Osbern's horse into armour, and when he brings the old Roger of Beaumont into the battle. And I have always had a little fear and trembling about the presence of Neal of Saint-Saviour. But Wace always tried to be right, and it is wonderful how much of "absolute accuracy" he reached, even in points where we could hardly have looked for it. H. must have "forgotten" a good deal about Wace before he so "carelessly" cast him aside on the ground of his being a "poet." Roger is not merely mentioned in a list; he is specially brought in; he is put in the most likely part of the army to find him; he acts, he speaks, and he speaks according to his special position. This is no mere exigency of rhyme. If Roger was not in the battle, Wace must have been taken in by a very elaborate fiction on the part of somebody or other.

Now does the incidental and implied denial of Orderic set aside this direct statement and rather minute narrative of Wace? H. goes about at needless length to prove that Orderic lived nearer to the time than either Wace or Robert of Torigny, and that he had special advantages through his father's connexion with the house of Montgomery. It might be easy to answer that neither Orderic nor Wace was absolutely contemporary, and that, though Orderic was much the older man, yet Wace had some special advantages over him. Orderic, at the stage of his story with which we have to do, did, as far as England was concerned, little more than follow William of Poitiers, with some references to Guy of Amiens. He does not seem to have made any special researches. But Wace sought for minute information everywhere, and it must not be forgotten that his father was in William's fleet. Still, if Orderic, in his account of the battle, had distinctly said or distinctly implied that Roger of Montgomery, his father's patron, was not in the battle, that would indeed have been a most emphatic and unanswerable denial. But Orderic does nothing of the kind. His implied denial comes long after, when he is describing William's return from Normandy in December 1067. He is there following William of Poitiers, who says nothing of Roger of Montgomery, but mentions Roger of Beaumont as the head of Matilda's council during her husband's absence. "Illius prudentiam viri adjuvare consilio utilisimi, in quibus locum dignitatis primum tenebat Rogerus de Bellomonte." Orderic, in the parallel passage, leaves out Roger of Beaumont, and puts his own Roger instead. I still think, as I thought when I wrote my History, that, strange as it may seem, Orderic confounded the two Rogers, or, rather, wrote the name of that Roger whom he knew best. The suggestion of H., that

William left both Rogers behind, has nothing to support it.

To my mind, knowing Orderic as I do, this passage proves nothing. If H. is anxious to prove that Roger of Montgomery was not in the battle, he had better keep to the fact that William of Poitiers, who speaks honourably of him elsewhere, does not mention him there. This is, to my thinking, by far the stronger argument of the two.

If Roger of Montgomery was not in the battle, then the account in Wace is pure fiction. H. is carried away by a perhaps commendable local zeal to suggest that the person meant was his own local lord, Roger of Poitou, Earl Roger's third son. But as Robert of Bellême, the Earl's second son, was knighted only in 1073, it is not likely that his younger brother would have held a great command in the Norman army seven years earlier. It is odd that H. does not see that Wace has really made about Roger of Beaumont the same mistake which he fancies him to have made in the case of Roger of Montgomery. That is, he puts the father instead of the son. Wace brings in Roger of Beaumont, and leaves out his son Robert of Meulan, who really did great things in the battle (see *Norman Conquest*, iii. 487). Roger of Beaumont was an elderly man, who could do better service as counsellor to the Duchess than he could do on the field. His son therefore went in his stead. Roger of Montgomery was a much younger man, none of whose sons could yet have reached manhood.

H. goes on at some length about Earl Roger and other matters. Any one familiar with the originals will see that H. has not lived among them. Above all, does the rivalry of York and Lancaster go so far as that a writer in the *Palatine Note-book* is bound to have hard words for the Yorkshiremen who fought for England in 1069, and to charge them with burning their own city, which the Normans certainly burned for them?

But one generally learns something from every dispute. I am not prepared to alter the passages in my History which assert the presence of Roger of Montgomery in the battle. For I still think that Wace's story is, on the whole, to be trusted. But I should now think it right to call more attention than I have done to the fact that Roger's name is not on William of Poitiers' list. That certainly throws some measure of doubt on Wace's story, which the passage in Orderic, to my mind, does not.

EDWARD A. FREEMAN.

#### THE POLE FAMILY.

15 Brunswick Terrace, Brighton: June 8, 1882.

Mr. Bent's discovery is a valuable addition to the history of the Pole family, but what authority has he for speaking of this later Arthur Pole as a son of Arthur Pole the conspirator of 1562? The younger Arthur, being twenty-five years old in 1600, must have been born about 1575. Now the elder Arthur was arrested in 1562, and (though sentence of death was remitted) was kept a close prisoner in the Tower for the rest of his life, being buried there not long after 1568 (the exact date is unknown), probably before 1570, as he is not alluded to in his mother's will. Mr. Bent's sketch of his life is derived exclusively from Froude (vii. 427-29), and consequently perpetuates Mr. Froude's errors. Mr. Froude states that "Geoffrey . . . had left two sons behind him, Arthur and Edward, . . . Arthur, the eldest, . . . had married a daughter of the Earl of Northumberland." Now Geoffrey left not two, but five sons, of whom the three omitted by Mr. Froude were all living in 1570 (as proved by their mother's will). Again, there was no son Edward. His name has always, and rightly, been given as Edmund (he

writes it "Edmonde" in the Tower). Again, what authority has Mr. Froude for making him marry a Percy? Diligent search among the pedigrees of Percy fails to reveal any such alliance. Indeed, it seems improbable that he was ever married. It may be added that Mr. Froude is also mistaken in making Reginald Pole the second son of the Countess of Salisbury (vii. 23), and in making "the Earl of Huntingdon the child of Lady Salisbury's daughter" (who married Henry Lord Stafford). These errors emphasise the maxim, which is now being generally recognised, that the historian can never afford to dispense with the humble labours of the genealogist.

The Poles seem to have been provided as a special stumbling-block for historians, Ranke himself being their latest victim. An article in the *Antiquary* of this month adds to the existing corpus of error, and it is to prevent this newly discovered Pole being also wrongly affiliated that I venture to send you this note. I propose to investigate the history of this unfortunate family, which rose suddenly from mysterious obscurity, only to relapse into it as suddenly after a strangely troubled career of three-quarters of a century. J. H. ROUND.

#### THE TITLE-PAGE OF THE "COMPLEAT ANGLER."

London: June 10, 1882.

May I venture to point out that Mr. Elliot Stock must produce a very different facsimile of the title-page to Walton's *Angler* before he will succeed in convincing those acquainted with title-pages of the period of the presence of the e in the word "Churchyard"? The specimen he gives is clearly one of the use of the double hyphen = between the two words—a usage so common in books of this date that it is surprising that he should have misread it.

J. BASS MULLINGER.

Trinity College, Cambridge: June 13, 1882.

In the copy of Walton's *Angler* in the library of Trinity College, Cambridge, the imprint has quite distinctly the word "Churchyard" with a hyphen. There can be no doubt about this, for the title-page is very clearly printed, and the book is in remarkably fine condition.

W. ALDIS WRIGHT.

Hull Subscription Library: June 12, 1882.

Will you allow me to state, in reference to the spelling of the word "Churchyard" on the title-page of the *Compleat Angler*, that on the copy in our library, which is the first edition, "Churchyard" is spelt with a hyphen—thus "Church-yard"—and not with an e, as stated by Mr. Elliot Stock? The imprint is as follows:—"London, Printed by T. Maxey for Rich. Marriot, in S. Dunstan's Church-yard Fleet street, 1653."

W. G. B. PAGE.

#### "A FLIGHT TO MEXICO."

London: June 12, 1882.

The notice of my *Flight to Mexico* in the ACADEMY of last Saturday is written in so fair a spirit, with reference to a book that has disappointed my reviewer, that I am anxious to set myself right with him on the main point of the intended scope and character of my volume. I had not the slightest intention of publishing it as "a work of travel," strictly so called. I thought the title I gave it, with my motto from Cowper, would serve to point out this, and to guide the expectation of my readers. It is difficult sometimes to fix upon a proper title. I well remember my good friend the late Mr. Darwin once telling me that he had found this to be "absurdly difficult." Perhaps I should have added a Preface. Had I intended to write a studied "book of travel"

(so many of which are so very over-studied sometimes), it could not have occurred to me to choose Mexico as a theme on which to elaborate chapters. My volume was intended purely as a pleasant introduction of the Mexico of to-day to the general reader, and to be read throughout as though I were conversing with him. The "comparisons" I cannot but consider as essential to my pages; and I must confess that the "digressions" had not appeared to me as forced or foreign to the general subject, but rather as affording the alleviation of kindred variety. Judged by this standard, I did not anticipate that the book would disappoint my critics; but, if judged by the severer one which my reviewer in the ACADEMY had in view, and supposing that I had aimed at such a one, then I admit I must have suffered judgment by *nil dicit*. J. J. AUBERTIN.

#### APPOINTMENTS FOR NEXT WEEK.

MONDAY, June 19, 7.30 p.m. Aristotelian: "Descartes," by Mr. E. Hawkeley Rhodes.  
TUESDAY, June 20, 7.45 p.m. Statistical: "Two Hundred and Fifty Years of Small-pox in London," by Dr. W. A. Guy. 8.30 p.m. Zoological: "Additions to the Menagerie in May," by the Secretary; "The Valves of the Heart of *Ornithorhynchus paradoxus* compared with those of Man and the Rabbit, with Some Observations on the *Fossa oralis*," by Prof. E. Ray Lankester; "The Respiratory Organs of Apteryx," by Prof. Huxley; "Contributions to the Anatomy of Passerine Birds," VI., by Mr. W. A. Forbes.  
WEDNESDAY, June 21, 8 p.m. Geological: "The Cause of the Depression and Elevation of the Land during the Glacial Period," by Mr. T. F. Jamieson; "The Rhaetian of Nottinghamshire," by Mr. E. Wilson; "Organic Remains from the Upper Permian Strata of Kargalinsk, in Eastern Asia," by Mr. W. H. Twelvetrees; "The Silurian Species *Glaucomea*, and a Suggested Classification of the Palaeozoic Polysca," by Messrs. G. W. Shrubsole and G. R. Vine; "The Silurian and Cambrian Strata of the Baltic Provinces of Russia, as compared with those of Scandinavia and the British Islands," by Prof. F. Schmidt; "The Dorsal Region of the Vertebral Column of a New Dinosaur from the Wealden of Brook, Isle of Wight, preserved in the Woodwardian Museum, Cambridge," by Prof. H. G. Seeley.  
THURSDAY, June 22, 8 p.m. Society for the Encouragement of the Fine Arts: "The Philosophy of Music," by Dr. Bernhard.  
8.30 p.m. Antiquaries.  
FRIDAY, June 23, 8 p.m. Browning: "Browning's Method of revealing the Soul to itself by means of a Startling Experience," by Prof. Hiram Corson.  
SATURDAY, June 24, 3 p.m. Physical.

#### SCIENCE.

FLACH'S EDITION OF MARTIAL'S EPIGRAMS. *M. Valer. Martialis Epigrammaton librum primum*. Recensuit commentariis instruxit Joannes Flach. (Tubingae.)

MARTIAL is an author who has not received his fair share of attention from modern editors. Since the seventeenth century the only editions produced have been those of Schneidewin (1842 and 1853) and Messrs. Paley and Stone (1868). The former confined itself to a criticism of the text; the latter contained a short commentary on select Epigrams for the use of schools, following the text of Schneidewin. A good modern commentary, therefore, on the whole of Martial was much wanted; and it is in regard to this part of an editor's work that the edition produced last year by Prof. Flach will be of considerable service. The text of Martial as constituted by Schneidewin in his smaller edition after he had received collations of the *Codex Vossianus antiquissimus* and the *Codex Edinburgensis*—the latter from Sir W. Hamilton at the instance of Prof. Lushington—will probably long continue to be regarded as the *textus receptus*.

The work of Prof. Flach contains a revised text of the First Book of the *Epigrams*, a short critical apparatus (constructed rather

with a view to the requirements of the ordinary reader than to completeness), and a commentary, besides some introductory matter. The editor writes in Latin—a practice which in the case of Martial carries the obvious advantage of being able to treat matters *quae patrio sermone dicere non est*. Unfortunately, the book seems to have been produced in some haste, if we may judge by the numerous misprints and occasional "lapses." There is a modest remark of the editor in the Introduction, "editionem non emisi nisi rogatus ab auditoribus." This being so, it would perhaps be unfair to treat it as one would treat the *Ibis* of Mr. Ellis—the mature and deliberate result of years of work. Nevertheless, the editor would probably wish that his work should be considered on its own merits, not only with a view to a future edition, but also that its strong points may receive due recognition.

A commentary on Martial, as has been said, is the chief desideratum, and the notes of Prof. Flach are good and, on the whole, tolerably complete; with their help, the competent student ought to find few positive difficulties. At the same time there are passages in which further consideration would probably have led him to make additions and corrections. Thus more help would be welcome on lxx. 10 (*torus*) and xxvi. 2 (*totiens*). The notes might frequently have been enriched by further illustration—e.g., on xxii. 2 *frangere* might have been compared with the same word in civ. 19 ("to crunch with the teeth"); on i. 4 the editor might have quoted Ovid's *Ad vos studiosa reverter pectora* (*Trist.* iv. 10, 91) to illustrate *lector studiose*; on xxxvii. 2 (*bibis vitro*), Virgil's *gemma bibat* (*G.* ii. 506). Similarly on iv. 2 we miss the *terrarum dominos* of Horace; on iv. 3 (*premsus blando a dente rediret*) he might have compared civ. 19 (*timidos tenere dentes*) and Lucr. v. 1069 (*suspensis dentibus*); on xliii. 11 (*tantum spectavimus omnes*) Ovid's *Virgilium vidi tantum* (*Trist.* iv. 10, 51). On lxxx. 2 he should have mentioned that *esse* (= to eat), for which he quotes Juvenal and Quintilian, is also used by Plautus (e.g., *Trin.* ii. 1, 27, and *passim*) and Cicero. On xlii. he has misquoted his Plautus (*Mil.* ii. 2, 60, *age si quid agis*). Generally, Prof. Flach is a safe guide; but he should not have written the note on *excusarem, si meum esset exemplum* (Praef. 9), in which he implies that *incusarem* would be more in place. The poet clearly means that the "licentia verborum" requires no apology. Again, Prof. Flach is distinctly napping when he remarks on the line—

"Flacce, Antenorel spes et alumne laris"

(lxxvi. 2),

"hiatum loei et interpunctio et nomen proprium excusant." There is another curious slip in the note on civ. 8, where he says, "usitatio forma est esseda primae declinationis: sed temporis huius auctores, imprimis Suetonius, essedum dicunt." On the contrary, *essedum* is the common form; and Seneca ("huius temporis auctor") uses *essedum* once. Some English readers will not be sorry to find that a German professor is, after all, human. On the whole, however, the careful student will recognise the general utility of the notes, which show a wide

acquaintance with the works of Martial and contemporary writers.

In the matter of his text Prof. Flach cannot be congratulated. In one or two places he gives us ingenious and successful emendations—e.g., in xxxiv. 7 (*Thaide* for *ab Alide* or *Leda*), in Praef. 9 (*suavissimum* for *novissimum*); but, as a rule, he is far too reckless in introducing conjectures of his own and others which are sometimes unsuccessful, sometimes wholly uncalled for. Thus, in xxi. 2 he changes *ingessit* into *imposuit*, in xli. 6 *madidum* into *tepidum*, pleading in favour of these words that they appear in other places in Martial; but that is no reason for altering the reading of the MSS. in the passages under consideration: *madidum cicer* has a very intelligible sense ("half-boiled peas," "gequellte Erbsen"); and *ingessit* suits its context well enough. In xli. 10 he changes *tepidis* into *madidis*; but *tepidis popinis* is a good enough phrase. Other instances of a similar tendency are to be found in xxvii. 4, xlviii. 3, lxxxv. 3, cix. 20. In xxix. 4 our editor calls Schneidewin's reading (*en eme, ne mea sint*), which is nearer to the best MSS. than his own (*hoc eme, quod mea sunt*), an absurdity, and refers to lxi. 14. But why should not the poet say in one place "let him [the plagiarist] buy my book"—i.e., the copyright—and in another "let him buy my silence"? Again, in vi. 3 he prefers the reading *exarmat* for *exorat*. *Exarmat* can only mean "disarms;" but then *sua praeda* must be the hare; and against this Martial himself might be quoted (xxii. 5)—*praeda canum lepus est*. E. A. SONNENSCHNEIN.

#### CORRESPONDENCE.

HEBREW ׁ AND THE NASAL GUTTURAL CONSONANT.

6 Norfolk Terrace, Bayswater, W.

Before I speak of this strange corruption of the two, originally, non-nasal sounds of ׁ, it will be as well to enter into some particulars regarding the guttural "n" when it belongs to other languages. This sound, which, either voiced or voiceless, for convenience' sake I shall represent by [n], may occur in the following positions:—(1) Before another guttural sound, as [k, g]; (2) at the end of a word, after a vowel; (3) between two vowels; (4) before the nasal "alveolar" (alias dental) sound [n]; (5) before the sounds [f, v, s, sh, zh, l, m, n, r]; (6) at the beginning of a word, as an initial permutation; (7) at the beginning of a word, or a phrase, before a vowel.

1. In the first instance [n], represented by "n," occurs in almost every language, with the exception of those, such as French and Portuguese, which replace it by vocal nasality [̃], or vocal semi-nasality [̃̃]. The following words, all meaning, with a single exception, "tongue, language, bank (of money)," are, in fact, written in French and Portuguese *langue, banque; lingua, banco*, but pronounced [l̃ag, b̃ak; l̃igwa, b̃aku], while in Italian, Spanish, English, German, Dutch, Swedish, and Danish, they sound [l̃ingwa, b̃anko; lengwa, b̃hanko; længwidz̃n, b̃ænk; bank; bank; springa ("to run"), bank; bank, although written *lingua, banco; lingua, banco; "language, bank;" bank; bank; springa, bank; bank*. In German, Dutch, and Danish, [n] always replaces [ng] before a vowel, as in *zunge; tongeloos* (tongueless); *tunge, pron. [t̃aune; t̃auneoos; t̃aune]*. Sicil. *ngannà* "to deceive" [ngannà], may be quoted.

2. The second instance is shown by the value

given in English, German, Dutch, Swedish, and Danish to final "ng," in "long," *lang, lang, lång, lang*, pronounced [lɔŋ, lan, lan, lɔn, lan]. Italian and Spanish replace final [n] by the sound [ŋ], and Portuguese, as well as French, by vocal nasality. In Italian *suon* "sound" (for *suono*); in Spanish *son* "they are;" in Portuguese *som* "sound;" in French *son* "id.," the pronunciation is [ssuɔn; /ɔn (with one of the "backward" Spanish "esses"); sɔ (with the rather shut Portuguese nasal "o"); sɔ (with the rather open French nasal "o")]. Among some of the Italian, Spanish, and Portuguese dialects, however, final [n], written "n," makes its appearance. Venetian, Asturian, and Galician *pan* "bread" is pronounced [pan]. The case is the same with *pan*, pronounced [pan], in Genoese, Mentonese, Piedmontese, Friulano, and almost all the Occitanian living dialects, when they do not suppress entirely the final consonantal sound; while Franco-Occitanian, in several of its own dialects, shows a decided tendency to replace final [n], always written "n," by the vocal French nasality, [-̃]. On the other hand, the vocal semi-nasality, [-̃], similar to that of some German dialects, and not so full as the French, obtains in several Gallo-Italic dialects other than Piedmontese, particularly in Milanese, Bolognese, and Romagnuolo. In these, *pan* does not sound [pan], but [pā]. In Milanese, moreover, the verbal plural termination, written "an," is pronounced [ān], as in *san* "they know," *cantaran* "they will sing," pronounced [sān, katarān]. In fact, these three Milanese words, written: (1) *san*, and having the meaning of the Italian adjective *sano* "healthy;" (2) *sann*, meaning *sane*, the Italian feminine plural of the same word; and (3) *san* "they know," *sanno*, in Italian, receive, according to Cherubini, the first authority in respect of Milanese, these three very distinct pronunciations: [(1) sã; (2) san; (3) sãn]. With regard to the Romanese dialects, they also give the sound of [n] to their final "n," as in *paun* (Oberland), pronounced [paun]; *panq* (Oberhalbstein), pronounced [pan]; *pan* (Lower Engadine), pronounced [pan]; *paun* (Upper Engadine), pronounced [pæn]; *pang* (Gardena Tyrolean), pronounced [pan].

3. Between two vowels [n] may occur not only in English, German, Dutch, Swedish, and Danish, where it is represented by "ng," but also in Galician, Genoese, and Piedmontese, which indicate it by "nh." The Germano-Scandinavian words "singer," *sünger, zanger, sângare, sanger*, are pronounced [sɪŋ, zɪŋer, zaner, sɔŋer, saner], while Galician *unha*, and Genoese or Piedmontese *ünha*, sound [un-a, ün-a], and mean "one," as a feminine. The other Neo-Latin dialects do not possess, as a general rule, [n] between two vowels, and this applies also to Mentonese, in spite of its Genoese nature.

4. Before [n], [n] may occur in Swedish, where it is represented by "g," as in *regn* "rain," pronounced [rɛnn]. In this position [n] is hardly known in other languages (see "wrongness," in 5).

5. Gartner, at p. 55 of his *Die Gredner Mundart* (Linz, 1879), quotes [n] before [f, v, s, sh, zh, l, m, n, r], as in [infiern "hell;" invern "winter;" inseñe "to teach;" inshtë "summer;" sonzhæ "grease;" nloutæ "then;" mezonmënter "indifferently;" nño "nowhere;" dinræ "seldom." In Mentonese, according to what Mr. J. B. Andrews writes me, "n" may be pronounced as [n] before [d, f, s, r], as in *cundã, gunfiã, cunsei, genre*, pronounced [kundanã, gunfiã, kunsei, dzhenre], "to condemn, to inflate, advice, son-in-law." The Germano-Scandinavian tongues, only in derived words, may offer [nt, nth, nf, ns, nl, nn], as in English "length," [lenth]; "wrongful," [rɔnful]; "songster," [sɔnstæ]; "longly," [lɔnti]; "wrongness," [rɔnnes]; German *junger, "maid," [junfer]; Dutch zangster, "songstress," [zanster]; Swedish långt, "far," [lɔnt]; Danish fangst,*

"capture," [fanst]. Compound words, as "long-wise, wronghead," or Dutch *jongman, jongerow, jonggezel*, "young man, young lady, bachelor," as presenting [nw, nh, nm, nv, nɔ], &c., are not taken into consideration.

6. The Celtic languages possess [n], expressed by "ng" or even "n," not only at the end and in the middle, but also at the beginning of a word, as an initial permutation; for instance, in Welsh *llong* "ship" [lhɔn]; *llances* "young woman," [lhawkes]; and in Irish *ting, tingham* "anoint, anointer," [uun, ununhoir]. These two languages, being the only ones, among the Celtic, that possess initial [n], always expressed by "ng," the following examples will suffice:—(1) Before a vowel, as in Welsh *fy ngaf* "my goat," derived from *gafr* "goat;" and in Irish *bhur ngabhar* "your goat," from *gabhar*; (2) before "l," as in *fy nglo* "my coal," from *glo*; and in Irish *bhur nglas* "your lock," from *glas*; (3) before "r," as in *fy ngras* "my grace," from *gras*; and in Irish *bhur ngrian* "your sun," from *grian*; (4) before "n," as in Irish *bhur ngnotha* "your doings," from *gnótha*; (5) before "w," as in Welsh *fy ngwlad* "my country," from *gwlad*; (6) before "h," as in Welsh *fy nghalon* "my heart," from *calon* "heart."

7. Coming now to the very corrupted [n] pronunciation given by a great number of modern Jews to the two originally non-nasal sounds of y, I must remark that no initial [n], before a vowel, ever occurs, in radical words, in any of the languages now spoken where the Jews, availing themselves so naturally of this corrupted sound, have been settled for so many centuries. It is true that such an initial [n] occurs in Celtic only in non-radical words, but this takes place exactly as in the modern Hebrew words, either radical or not, presenting y, as is shown by יל "upon;" יע "to hear;" יע "companion;" יע "evil," pronounced [nal; shaamán; réan (although written "réna"); raanáb]. It is also to be observed that [n] is not in general use among the Polish, German, and other Northern European Jews settled in countries in which Celtic has not been spoken, as it has been in Southern Europe and other European countries previous to the existence of the Neo-Latin dialects and when the Hebrew pronunciation might have been influenced by Celtic. All these facts, after being taken into due consideration, embolden me to form the hypothesis, which I am ready to abandon if a better can be suggested, that it is, if not probable, at least possible that the corrupted Jewish European pronunciation of [n] for y is very ancient and due to Celtic, a language which, even in its baric alphabet, was in possession of a symbol peculiarly shaped and exclusively expressing this non-radical nasal sound.

L.-L. BONAPARTE.

#### NOTES OF TRAVEL.

THE June number of Petermann's *Mittheilungen* is devoted almost exclusively to Central Asia. In addition to an account of Oshanin's exploration of Karategin in 1878, it brings us a highly interesting map of Eastern Tibet and the adjoining regions of China and India. Herr Hassenstein, it is evident, has devoted much time and thought to the compilation of this map, and has succeeded fairly well in combining the older Chinese documents with the results of modern European exploration. The accompanying text furnishes ample details on the authorities consulted. In an early number we are promised an equally valuable contribution to the geography of Equatorial Africa, consisting of maps showing Dr. Emin-Bey's explorations on the Upper Nile, in Western Galla Land, and in the Bahr-el-Ghazal province.

HERR FLEGEL writes to the editor of the *Mittheilungen* that he left Loko, on the Benue,

on March 9, for Adamawa. Unfortunately, the ivory caravan, with which he had hoped to be able to travel, deserted him, as a possible rival; and he did not, under these circumstances, look forward to a very successful journey.

THE Rev. J. Brodbeck, a Moravian missionary stationed at Friedrichsthal, in Southern Greenland, reports in *Nach Osten* (Niesky) on his discovery of what are evidently remains of Northmen, on Kangerdlugssuatsiak Fiord, on the east coast of Greenland, in lat. 60° 30' N. The building discovered by him is forty paces long by ten wide, and its foundations consist partly of stones of cyclopean dimensions. The plain of Narasak, upon which this building rises, is a verdant spot, abounding in grass, water, and berries. Farther north, at Umanak, in lat. 60° N., the natives say, there are ruins of a similar description. Thus, after all, the "Österbygd" of the Northmen occupied the eastern coast of Greenland, and not the western coast to the south of Julianehaab.

#### SCIENCE NOTES.

*Anthropological Relics from America.*—Mr. Mann Valentine, of Richmond, in Virginia, who is now on a visit to this country, has brought with him a remarkable collection of stone figures which are of great interest to anthropologists. We understand that some two thousand of these objects have been discovered. Only a small number are now in England, but photographs of many others enable us to form a fair idea of the entire collection. The figures are carved in micaceous schist, in statite, and in sandstone. To what people they may be attributed is at present an anthropological puzzle, but they are probably not all of the same age. It has been conjectured that one of the animals represents a mastodon, and this would suggest a very high antiquity; but, on the other hand, one of the men evidently carries a gun, showing that this figure, at any rate, is modern. The collection was exhibited at the last meeting of the Anthropological Institute, and described by Mr. A. H. Keane.

At the meeting of the subscribers to the memorial to the late Prof. Rolleston held on June 1, it was resolved that the money subscribed (which amounts to a little over £1,100) should be paid to the University of Oxford, as trustees, to found a Rolleston Prize, to be awarded every alternate year for the best memoir showing original research in any one of the following subjects:—animal and vegetable morphology, physiology and pathology, and anthropology. The prize is to be open to all members of Oxford and Cambridge under ten years' standing.

#### PHILOLOGY NOTES.

M. JAMES DARMESTETER contributes an interesting paper to the *Revue critique* for June 5 upon five Persian MSS., written in the Hebrew character, which were recently acquired in Paris by Dr. A. Neubauer, of Oxford. The Bibliothèque nationale already possesses about twenty MSS. of the same kind, containing translations of the Bible and the Apocrypha. They were evidently written by Jews, between the thirteenth and sixteenth centuries; and their interest is chiefly philological, as throwing light upon the growth of modern Persian out of Pehlvi. Of Dr. Neubauer's MSS., one contains a short vocabulary of difficult words in the Bible, arranged in the order of the books; another, the Pentateuch, with the Haphtaroth and the Psalms, dated 1483, which may throw light upon the history of the Massorah; another consists of sacred legends in verse, one of which gives the story of Joseph and Zuleikha, while another tells how Hiram, "King of China,"

sends gifts to David. But the most interesting of all is a translation of Ps. i.-cxxxvii., with a dedication to the King of Persia. This King, M. Darmesteter thinks, must be one of the Mongol dynasty, who reigned in the latter half of the thirteenth century, and who were as celebrated for their religious tolerance as was Akbar the Great.

At a recent meeting of the Académie des Inscriptions M. H. Weil read a paper upon a parchment leaf found at Medinet-el-Fares, the site of the ancient Arsinoë, which contains the text of a portion of the second parabasis of the *Aves* of Aristophanes. As many other fragments of MSS. coming from the same source belong, at the latest, to the sixth century A.D., this may also be assigned to that date. The earliest codex of Aristophanes that we possess is not earlier than the eleventh century. This fragment is carefully written; the words are accentuated; and the lines are not only separated, but "justified" with reference to their length. A comparison of the readings with those of the MSS. and the best editions shows that certain traditional errors have already crept in; but, on the other hand, there are some readings described by M. Weil as both good and never before suggested. In the margin are some scholia, now scarcely legible, one of which confirms the existence of a word to be found in some of the oldest MSS., but doubted by modern scholars.

MR. H. GRATTAN GUINNESS, of the Livingstone Mission, will shortly publish a translation of the grammar of the Congo language written in Latin by the Capuchin preacher Brusciotto, and printed at Rome in 1659.

THE Brunet prize, for a bibliography of Aristotle, has been awarded by the Académie des Inscriptions to M. M. Schwab, of the Bibliothèque nationale.

#### MEETINGS OF SOCIETIES.

SOCIETY OF BIBLICAL ARCHAEOLOGY.—(Tuesday, June 6.)

DR. SAMUEL BIRCH, President, in the Chair.—MR. L. LUND read a paper entitled "The Epoch of Joseph: Amenhotep IV. as the Pharaoh of the Famine." His first argument was that the statements of the Bible imply that Joseph diminished or abolished the power of the magnates, and made the monarchy absolute. Such a political revolution he discovers in the inscriptions of the XIXth Dynasty, especially in those of Amenhotep IV. (Khuenaten). Secondly, can any of the incidents mentioned in the Bible be identified with inscriptions and pictures of this period? Mr. Lund thinks he can find indications both of large collections of grain and of its distribution among the people, an official personage being prominent in each case by the side of the King. In support of his general position—that Amenhotep IV. was the Pharaoh of the Famine—Mr. Lund had collected a great body of evidence from divers quarters.—In speaking to the paper, Mr. Villiers Stuart, M.P., exhibited a large coloured drawing, three feet by two, of the remarkable funeral canopy lately discovered near Thebes. Some fragments of the original were also produced. He stated that Queen Isi-em Kheb, in whose honour the canopy had been made, was a contemporary of Solomon, being mother-in-law to Shishak, who took Jerusalem after Solomon's death. He further exhibited original casts from the bas-reliefs of the tomb discovered and excavated by himself at Thebes. The casts represented the heads of Amenhotep IV. and Khuenaten, which respectively occur on the opposite sides of the tomb façade. Mr. Villiers Stuart pointed out that there could not well be a greater contrast between the two heads, although up to the present time Egyptologists had been of one mind in thinking that the two royal names, Amenhotep and Khuenaten, were but the earlier and later names adopted by the disk-worshipping Pharaoh. But on this tomb Amenhotep was remarkably stout

and burly, while Khuenaten was a lean, effeminate-looking man, just as he is represented in the well-known Tel-el-amarna bas-reliefs. Mr. Villiers Stuart pointed out what he deemed a fatal objection to Mr. Lund's identification. The Bible told us that from Joseph's death to the Exodus the children of Israel increased from seventy to 1,000,000; and Mr. Villiers Stuart remarked that the 430 years assigned by St. Paul to the Egyptian bondage would be none too much to allow for that increase, and would just correspond to the interval between Amasis, the founder of the Eighteenth Dynasty, and Menephtah, in whose reign the Egyptian chronicler Manetho dated the Exodus.—A paper was then read from Prof. Sayce upon "The Decipherment of the Hittite Inscriptions," of which an abstract was given in the ACADEMY of last week.—A letter was also read from Prof. Sayce upon the names of the numerals in Sumerian and Accadian.

#### NEW SHAKSPEARE SOCIETY.—(Friday, June 9.)

F. J. FURNIVALL, Esq., Director, in the Chair.—DR. B. NICHOLSON read a paper, "Was Hamlet Mad?" Mainly on the strength of Hamlet's apology to Laertes for his behaviour to him at Ophelia's grave, Dr. Nicholson contended that Hamlet was mad. The alternative was that Hamlet lied to Laertes, and that could not be admitted. The Doctor argued that Hamlet's madness was supported by the view of him taken by Shakspeare's own company and Shakspeare's contemporaries; also by Hamlet's extreme melancholy, which Batman and Andrew Boorde both reckoned as a form of madness. His want of any sense of moral responsibility—as shown by his unconcern for killing Polonius and getting Guildenstern and Rosenkrantz murdered—his continual irresolution and inventing excuses for it, his thinking Ophelia his love and his enemy, his suspiciousness—all standard evidences of madness still—confirmed the view that in these points Hamlet was mad, though sane on all others.—In the discussion that followed, Mr. Furnivall, Dr. Bayne, Miss Phipson, and others argued strenuously against Dr. Nicholson's view, which simply destroyed Hamlet; but Mr. Harrison supported this view to the extent that Hamlet was a "melancholiac," and liable to bursts of excitement quite beyond his own control. On a vote being taken, two were for Hamlet's madness, all the rest for his sanity.

#### FINE ART.

##### THE ROYAL ACADEMY.

(Fifth and Concluding Notice.)

MR. JOHN WHITE's beautiful landscape, called "Silver and Gold" (428), the gold of a corn-field brought tenderly against the silver of the sea, is one of the most promising pictures of the year. Near it hangs a design by Mr. N. H. J. Westlake—"The Assumption" (430)—which should have been mentioned before for its rare refinement and sweet feeling. In the same room is Mr. John Reid's "Homeless and Homewards," a picture of strolling musicians, with their children, in a field by the side of the river. The figures are well studied; the landscape is excellently painted. Here, also, besides good specimens of the manly art of Mr. Fred Morgan (518) and Mr. Tom Lloyd (507), is one of the finest pastorals of the year—viz., Mr. Emalie's "Harvest Field" (498). With a notice of Mr. Henry Moore's grand study of a stormy sea (557), some bright views of Bude by Mr. Charles Stoney (635, &c.), Mr. Leader's beautiful landscape (737), Mr. Hamilton Macculum's tender and poetical "Music on the Water" (773), Miss Margaret Hickson's striking and beautiful "Shady Lane" (785), Miss Alice Havers' "Trouble," Mr. Arthur Stock's humorous "Unknown Species" (795), and Mrs. Alma Tadema's exquisitely painted "Asleep," we must pass on to the sculpture.

We have in our first notice already drawn attention to the fine work exhibited by Messrs. Armstead, Hamo Thornycroft, and others, but

we omitted to refer to one of the most notable contributions to the present exhibition—viz., the head of John the Baptist, by M. Rodin (1586), a portion of his large figure at the Salon. Two other works by M. Rodin are to be seen at the Grosvenor Gallery. They are all distinguished by their frank realism, their largeness of style, and a force of presentation. There is no art so conservative as sculpture; and in England there are probably many who will be not only puzzled, but shocked, at modelling which aims neither at the pretty nor the classic. But, whatever be their faults or their merits, M. Rodin's sculptures deserve no little attention as accomplished examples of a new school, which, while holding fast to the true principle of the ancient art—viz., expression by form only—yet chooses the forms and expresses the sentiments of the modern world. Abandoning the ideal of physical perfection as the only aim of sculpture, it finds that such forces as strength of character, spiritual energy, and passive endurance have such power over the human frame as can be only adequately expressed by modelling in the round. M. Legros, actuated by this revived, though by no means wholly modern, spirit of sculpture, finds something eternally grand and monumental in the patience of the weary "Sailor's Wife;" M. Rodin's imagination conceives St. John the Baptist as the palpable embodiment of a "voice crying in the wilderness." This phase of sculpture, which may be called the sculpture of humanity, has many opponents, who dub and damn as picturesque or pictorial all imaginative modelling that does not strive after an ideal of physical perfection. M. Rodin's "St. John" is not ideal in its beauty, but it is typical and spiritual; and it is certainly not picturesque in any sense fatal to sculpture. If anyone wishes to see what improperly picturesque sculpture is, he has only to look on either side of this grandly modelled head and see bust after bust which owe their attraction, mainly, to deftly chiselled cavities in the eyes and life-like imitations of beards and moustachios. They grin, and smirk, and frown all round the room, and whatever purely sculptural merit they possess is concealed by the success of contrivances to rival the effects of colour and brush-work. In M. Rodin's "St. John" there is no trick of the kind. The hair is treated broadly and simply, without concealing the contours of the face, which are modelled with great boldness, the sockets of the eyes are simple cavities, and all the strong expression of the head is legitimately gained by pose and structure alone. The same may be said of M. Legros' "Sailor's Wife," the solemn grandeur of whose figure is not enhanced by any "picturesque" trick. The weary eyes are concealed beneath the heavy lids, and the drapery is treated with the greatest severity. It is one of the most encouraging signs for the future of sculpture that the present exhibition contains such fine specimens both of the sculpture of beauty and the sculpture of humanity. The cause of the excellence of both kinds, so different in spirit, is due to similar sound principles acting on different artistic natures. As in other branches of art, sculptors (i.e., a few of them) have determined to go to Nature for their models and to follow their own artistic impulses. Mr. Hamo Thornycroft, no less than M. Rodin, has burst the bonds of tradition; and his "Teucer," though an abstract work of art, would never have been so fresh and lifelike as it is if Mr. Thornycroft had borrowed his *motif* from Praxiteles and taken an ancient marble instead of a living man for a model. His sympathies are all with beauty, refinement, and distinction, and he has managed to impart all these qualities to his statuette of the late "Lord Beaconsfield," which is alive with the spirited grace of a witty

courtier. Mr. Woolner's noble medallion of "Mr. James Spedding" (1837) is, in its way, unsurpassed by anything here; and among the rest which seem to us to deserve most praise are Mr. Frederick Callcott's beautiful group called "A Mother's Love" (1820), Mr. Alfred Gilbert's "Kiss of Victory" (1897), Mr. H. Richard Pinker's semi-statue of the late "Prof. Rolleston" (1868), and Mr. Onslow Ford's "Proposed Sketch for a Statue of Sir Rowland Hill" (1860). Among the busts remarkable for purity of style may be mentioned "Lord Hatherley" by Mr. W. Day Keyworth, Jun. (1855), "Miss Blanche Hughes" by Mr. C. B. Birch, A.B.A., and "An Old English Lady" by Miss Gertrude Crockford. As an example of purely "picturesque" sculpture may be noticed the bust of the late "John Landseer, A.B.A.," by Mr. John Adams Acton. This is but a translation into marble of Sir Edwin's memorable portrait of his father—a fact not noted in the Catalogue. The fertile and effective talent of Mr. Boehm is conspicuous in many places here, and there are numerous other interesting plastic works which we are obliged to pass over. Fortunately, they can all, with one exception, be well seen under the new arrangements. The exception is Miss Grant's medallion of the late "Dean Stanley" (1850), which is hung in a position that makes it impossible to judge of its merits.

The average merit of the water-colours is high; and, though anything like a thorough examination of them is impossible here, we can mention a few which appeared to us of unusual merit. The two drawings by M. Jules Trayer, "The Sempstresses" (895) and "An Infant School" (913), are delightful as quiet studies of character and gesture, and perfect in technique. Mr. C. Robertson gives us another version of "The Shoes of the Faithful" (866). Mr. Arthur Croft's "On the Lledr" (902), the "Silent Lake" of Mme. Georgina de l'Aubinière (905), some bold drawings by Miss Kate Macaulay, Mr. Bott's "When Autumn scatters his Departing Gleams" (918), Mr. E. Wake Cook's very beautiful and finely finished scene on "The River Ure" (937), the "Edge of the Stream" by Mr. George Marks (985), the "Silvery Morning" by Mr. James Watts (987), Mr. Alfred Grace's "Winter's Afternoon" (991), and the bold sunny landscapes of Mr. Galofre are all of a high class. Some of the best of the figure subjects are Mr. Edwin Bale's "A Winter's Day" (998), Mr. Caffieri's "Boulogne Women" (1002), Mr. Arthur Melville's "Pilgrim's Prayer" (1023), and "A Sannyasi" by Mr. J. Griffiths (1073). Among the still life we noticed some dead "Wood Pigeons" by Mr. John Sherrin, some "Haddock" by Mr. B. O. Stocks, and a bullfinch and tomtit by Miss K. Griffith (927), very skilfully executed.

We wish we could conclude our notices of the Academy by praising the designs of Sir Frederick Leighton and Mr. Poynter for the decoration of the dome of St. Paul's Cathedral; but the general scheme seems to us to be poor without being simple, a collection of detached forms without grandeur or unity, leaving blank spaces of awkward shape. In the design of the President, of the sea giving up its dead, the figures have an appropriate upward movement, but they are neither grand nor distinct enough to tell at a distance.

COSMO MONKHOUSE.

#### MISS NORTH'S GALLERY AT KEW.

A LARGE concourse of people, including distinguished members of the scientific, literary, artistic, and fashionable world, attended the opening of Miss Marianne North's Gallery at Kew on June 7. This gallery has been built by Miss North, at her own expense, on a site in

Kew Gardens granted by the Government, to receive the unique collection of sketches in oils made by her from plants in all quarters of the globe. The building contains an exhibition-room, fifty feet by twenty-five, a studio, and apartments for the caretaker. It was planned by the famous architect and historian of architecture, Mr. Fergusson, who generously made a present of his designs and superintended the execution of the work. The gallery illustrates his theory of the method used in lighting temples by the Greeks, and is certainly one of the best-lighted rooms in existence. It now contains upwards of 600 paintings in oils, which Miss North has made in the course of many years' wanderings through the Tropics, Australia, North America, Brazil, New Zealand, India, Ceylon, Japan, Jamaica, Teneriffe, and elsewhere. Her principal object was to represent the vegetation of these regions, from forest trees down to the minutest herbs; but, while she realised this aim with a scientific accuracy which justifies Sir Joseph Hooker in saying that her portraits of plants and flowers are of the greatest value to professed botanists, she determined to bring the haunts and habitations of each specimen vividly before the student. Ordinary spectators, after enjoying the rich masses of colours offered by rare orchids and rhododendrons, the grotesque forms of pitcher-plants, the sensational curiosity of gigantic sun-dews, or the complicated foliage of bamboo-brakes and palm-groves, will turn with even keener interest to landscapes of the Himalayas, sandy tracts of Arizona, land-locked caves and distant glaciers in New Zealand, a North American forest glowing with autumnal tints, a Javan holy city, or a quiet hill-side of Japan. Every taste will find in this room some object worthy of attentive study; and on each picture there is the same incontestable mark of scrupulous accuracy. Whether it be a landscape or a shrub in flower, it has been painted from the object in the open air. So important were Miss North's services to science known to be that the British Government furnished her with letters and introductions to consuls and Residents, who provided for her transit through regions rarely visited by any travellers. The results of these numerous journeys, in the shape of her collected pictures, she has now presented to the nation. Her gallery is a remarkable monument to her industry, artistic skill, and munificence. The time and money spent upon her travels, and her exposure to risks of all sorts in some of the most trying climates of the world, must be reckoned together with the liberality which has induced her to erect so handsome a building at her own cost, and to hand the whole over unconditionally to the nation. It must be added that a Catalogue has been drawn up for the "Marianne North Gallery," with scientific accuracy and patient attention to detail, by Mr. Helmsley, prefaced by a few words explaining its importance by Sir Joseph Hooker. From the pages of this book we gather that some specimens previously unknown to botanists, and brought to light by Miss North, have received her name—notably the extraordinary pitcher-plant, or *Nepenthes northianum*. This Catalogue abounds in curious information respecting the plants figured in the pictures; and by its size alone enables us to estimate the industry, enthusiasm, originality of aim, and thoroughness of method with which this remarkable Englishwoman has performed her self-appointed task. May she live long to explore what still remains of the globe unvisited by her, and to add fresh objects of interest to her already unrivalled collection.

#### THE ART OF COINS AND MEDALS.

III.

MR. REGINALD STUART POOLE gave his third and concluding lecture on "The Art of Coins and Medals" at University College on June 8. The subject dealt with was "The Medal Work of the Renaissance." It should be well understood that the first impulse to the revival of letters and art was due to the large ideas of the Emperor Frederic II., which led him to shelter the learned men who fled to Sicily from the Muslim persecutions in Spain and Irak. His money shows a distinct effort to restore the Imperial coinage of Rome. At no great distance of time we find in Dante the aspect which the classical world presented to the newly interested Italian mind. In all art the leading idea is now, as has been well remarked, individuality; hence the desire for a true portrait in form or words. Thus Italian art threw off the limitations by which Greek art attained a higher excellence, but, if less successful, failed from its greater ambition. Up to this age architecture alone had maintained its place; now sculpture and painting began to make sure progress. Less than a century after Dante, struck medals appear at the Court of the Carraras of Padua, with whom Petrarch had lived and collected Roman coins; but it was not till the middle of the fifteenth century that the cast medals of Pisano stand at the beginning and summit of mediæval achievement in this art. Pisano, though a painter, shows in his work the qualities of a true sculptor. In an age without archaeological discrimination, he does not blindly follow the classical. In the portraits of Sigismondo Malatesta, lord of Rimini, of Alfonso the Magnanimous, of John Palaeologus, and of the great humanist Vittorino da Feltre, he is unsurpassed. His skill in modelling gives a sculpturesque dignity to his heads. The reverse subjects are more pictorial, but not less admirable, particularly the eagle and vultures and the unicorn. Matteo Pasti and Sperandio are far inferior. This may be seen, in the case of Pasti, if we compare his portrait of Sigismondo Malatesta with that by Pisano. He shows the cruel qualities of the tyrant; Pisano, the capacity of the great patron of learning. Even Gentile Bellini, in his remarkable portrait of Mehmet II., the conqueror of Constantinople, the finest of the three known, is far inferior to the head of the Italian school. The great merit of the work of the second half of the fifteenth century makes its historical portraits of the highest interest. A speedy decline followed. The struck medal became a mechanical work executed by a goldsmith, and an indiscriminate admiration of the classical art astray. In Germany a school arose which, under Albrecht Dürer, rivalled the Italian. Admirable for truth, it never, however, attained the dignity and grace of Pisano. France, under the later Sovereigns of the House of Valois and the first Bourbon, produced work which worthily begins the modern period; but Dupré is at once the leader and the only great master of this last epoch. As portrait-medals in the modern style, his works have never been equalled.

#### OBITUARY.

CECIL LAWSON.

VERY unexpectedly to a public which was anticipating a great future of work from a gifted young painter of only thirty years of age, Mr. Cecil Lawson died on Saturday after a short and severe illness. Much interesting and fascinating labour which had been sometimes looked at in the light of a preparation and a promise has therefore suddenly become final, and the *œuvre* of Cecil Lawson—to use a word for which there

is no proper equivalent—is prematurely complete. It is only about five years ago that the enthusiastic and original young artist whose death is greatly lamented to-day came at all into notice. This present year, save for one noble picture at the Grosvenor Gallery—a bit of the Riviera under ardent sunshine—he has hardly been up to his old mark; yet the few years during which he could exhibit in the fullness and the happiest exercise of his power have sufficed to give his work a position from which it will not be easy to disturb it. His labour was often tentative, yet always original, and not the least original, in the best sense of originality, when he was adapting the conventions of a bygone art to pictures full of a modern spirit and poetry. He may have learnt from the masters of two hundred years ago—from Hobbema, from de Koning, and from Ruysdael—the primary importance of tone, the charm of aerial effect; but his colour was his own—as much his own as his poetical vision of Nature—and he hardly ever completed a satisfactory and fairly representative work which did not evidence at once both his cultivated understanding of the elder masters of the seventeenth century, whom Crome in some measure followed, and the individuality of his own impressions of the world. We have here at present neither time nor space to recalc in detail the list of his achievements—it would be a long list for a painter cut off so young—but we may remind the readers of the ACADEMY that the less effectual representation of the painter during the actual season is but an unfortunate accident. On the whole, so far from having neglected to fulfil his earliest promise, he fulfilled it most richly; last year he was absolutely at his strongest, his contributions of last summer to the Academy and the Grosvenor combined making such a display of landscape art as it would have been difficult for any other living landscape-painter to have rivalled. He contributed, in especial, to the Grosvenor the passionate landscape of the “Valley of Desolation”—a stretch of forlorn country above Bolton, peopled with the writhing forms of wind-torn trees—and the radiant yet solemn landscape of “The Strid,” in which, amid a world of woodland, a hurrying thread of water catches the blue of the sky. He exhibited at the Academy that generalised impression of “Barden Moors” which justifies the comparison of his art with that of some of the greatest of the Dutch landscape-painters and of “old Crome” in many a “Mousehold Heath.” Little was in the foreground, and little reached to the horizon, but the brown expanse of uncultured land under a clear sky, bluish-green, flecked with white cloudlets, high and lightly floating. To recal these pictures—even to forget for the moment the “Minister’s Garden” and the moonlight pieces of an earlier occasion—is to remain assured of the poetical intention of Cecil Lawson’s work and of its profound impressiveness. Doubtless it was occasionally faulty or defective in *technique*, but its qualities were at least incomparably greater than the drawbacks which attended them.

#### SALE OF MR. ROBERT WALKER’S OLD FANS.

THE cabinet of fans belonging to Mr. Robert Walker, of Uffington, Berks, was sold during the last three days of last week by Messrs. Sotheby, Wilkinson and Hodge. The owner had issued an illustrated Catalogue, with fifty autotypes, which is not only useful for purposes of identification, but which is interesting and attractive in itself as presenting at least the major lines of the composition traced by artists on many of these graceful “sceptres of the world.” This Catalogue will still be sought for and saleable now that the cabinet is dispersed.

The collection, as we indicated in a brief notice of it while it was yet on view at a Bond Street picture-dealer’s, was extremely unequal; and a pedigree was lacking to some of its most important examples. Thus the prices fetched for the fans were in many instances below what had been expected. No one responded to the offer to acquire the cabinet *en bloc* for a couple of thousand guineas, and the fortunes of the three days’ sale were various; for, while certain fans reproduced in the illustrations to the Catalogue were sometimes bought on commission at extravagant prices for people of little knowledge, others of beautiful colour or design fell unnoticed for almost insignificant sums.

The English fans of most interest were sold chiefly on Thursday. Among them we note a fan, with silk mount, subject the Arts personated by beautiful women, £5 10s.; a large ivory fan, painted, it was said, with “subjects of Mrs. Fitzherbert’s marriage relations with the Prince of Wales, by Cosway,” £18 18s.; an attractive fan, painted with the theme of a poet receiving the commendations of beauty, professedly by Angelica Kauffmann, £11 11s.; an ivory fan, painted in bistre with subjects after Peters and Angelica Kauffmann in five medallions, £10 10s. (Fine Art Society); an important fan, skin mount, with lovers in a harvest-field, stick ivory, £3 12s. 6d. (Stuart); a tasteful fan, skin mount, delicately and harmoniously painted with the “Graces crowning the Bust of Pope,” after Angelica Kauffmann, stick ivory, and gilt with variegated gold, £1 14s. (Barrett); a delicately painted fan, the subject a village scene with classical ruins and studied foliage, £2 12s.; a fan, skin mount, a landscape with children at play, stick ivory, and parcel gilt, £1 3s. (Aked); a fine fan, skin mount, a sacrifice to Ceres, stick mother-of-pearl, £3 3s. (Valentine); an important fan, skin mount, subject Charles Edward claiming the inheritance of the English Crown, stick ivory, £7 (Fine Art Society); a beautiful fan, Aeneas relating his adventures to Dido, £14 10s.; a fan, subject “The Golden Age,” stick ivory, festoons painted in colour, £15 (Fine Art Society). On Friday there followed other English fans, among which one of the most interesting was a fan with paper mount and engraved view of the two Parades and old Assembly Rooms at Bath, the company assembled, and Beau Nash, master of the ceremonies, among them, £12 (Burdett-Coutts); a bridal fan, said to be that of a daughter of George II., skin mount, stick mother-of-pearl, £26; and a fan, stick ivory, painted in the taste of Vernis Martin, £10 10s. (Burdett-Coutts).

The third day’s sale was the most important. It consisted, with hardly an exception, of foreign fans, most of them French, though here again the attribution was often open to question. The Empire fans fetched absolutely insignificant prices. It was then the fashion to have them very small, and they are, moreover, unattractive. The fans of the Revolution were hardly more highly esteemed; but of the time of Louis XVI. there were a few good examples in the cabinet of Mr. Walker. One fine one, with silk mount, subject a Happy Marriage, in cartouche of gold and coloured spangles, stick ivory, and variegated gold enrichments, fell for £8 10s. (Dr. Parr); another very fine one, yet not appearing in the illustrated Catalogue, subject Fêtes at Versailles, stick of mother-of-pearl, carved with love subjects, £10 10s.; a beautiful fan, subject, in cartouche, Jupiter and Calisto, attributed to Greuze, and possibly from that master’s hand, £50 8s.; two bridal fans, announced as fans of Marie-Antoinette, reached £35 15s. and £37 16s. respectively. In the mode of Louis XV. was a once beautiful fan, subject a pastoral after Boucher, the stick mother-of-pearl, carved in open work, with

Chinese children playing on instruments, £8 15s.; a fan design on skin, Vulcan forging the armour of Mars, fine and well drawn, £10 10s. (Gen. Pitt-Rivers); a charming fan, painted with a pastoral by or after Boucher, the stick ivory, and variegated gold enrichments, £11 11s. (Heywood); a fan, with a miniature portrait of Pompadour, but ugly in colour, £11 (Isaacson); a bridal fan, announced as that of the wife of Louis XV., £75 (Hawkins)—the subject represented the altar of Hymen, decorated with festoons of flowers in a beautiful landscape, the King, the Queen, and a Cardinal standing near; a fine fan, subject the Happy Marriage, attributed to Lancret, £31 10s. (Fine Art Society). The Louis XIV. fans were naturally somewhat less numerous: one, with skin mount, painted with an Arcadian scene, greenish, and not rich in colour, but conspicuously well drawn, sold for £16; a sumptuous fan, skin mount, harmoniously painted, subject the End of the Golden Age, the mother-of-pearl stick magnificently ornamented in the taste of the period (Louis Quatorze), £10 15s.; a beautiful fan, subject an Assembly of the Gods, in a cartouche, £27 6s. (Currie); an important fan, representing the Triumph of Alexander, the picture drawn with a pen, stick mother-of-pearl, £29 (Chardin); a bridal fan, said to be that of the mother of Louis XV., a very small, highly finished example of the Vernis Martin style, £82—this was esteemed by the owner among the treasures of his cabinet. Last of all there was sold a fine Venetian fan, painted with a view of the Piazza of San Marco, extremely well executed, and ascribed to Canaletti. The collection as a whole was undoubtedly interesting, though it would have gained by the judicious rejection of many examples of which we have omitted mention.

#### NOTES ON ART AND ARCHAEOLOGY.

MR. BROWNING has promised to sit to Miss Clara Montalba for a bust, for which she has a commission from one of the poet’s admirers.

M. RAGGI, to whom, as our readers have been made aware, has been entrusted the business of executing the statue of Lord Beaconsfield for the National Memorial, is well advanced with a bust of Lord Frederick Cavendish in which an excellent likeness and an agreeable work of art will probably be recognised.

THE water-colour drawings of the volunteer reviews last year at Windsor and Edinburgh, which were made by Mr. W. Simpson at the request of the Queen, will shortly be published in coloured lithographs by Messrs. Colnaghi.

THE exhibition of German wood-cuts of the fifteenth and sixteenth centuries now on view at the Burlington Fine Arts Club will close on July 1.

THE marble fragment of the shield of Achilles, described in the last number of the ACADEMY, has been presented by its possessor to the municipal museum on the Capitol. A reproduction of it will shortly be published in the *Buletino* of the Commissione archeologica comunale di Roma.

MR. ARTHUR LUCAS’s desire to secure the production of two more specimens of the great English school of landscape line-engraving before death puts an end to the few survivors of that grand band of artists who so finely interpreted the colour-dreams of Turner is worthy of a gentleman who is not only an art publisher, but an art lover. The two plates which Messrs. Saddle, Brandard, and Willmore are still engaged upon will, if we may judge from the far-advanced impressions now on view at Messrs. Gladwell’s in Gracechurch Street, bear comparison, in the matter of technical skill, with the masterpieces of a quarter-of-a-

century ago. Unfortunately, it is impossible to reproduce a Turner; but Mr. MacWhirter's "Lady of the Woods" and "Lord of the Glen" are fine and well-contrasted studies of trees. To define the inner meaning of the pictures we must call to our aid the diction of the prospectus. From this we learn that "in these works Mr. MacWhirter has sought to express poetically—in arboreal life—the dual system permeating Nature through every diversity of organic structure."

Those who take an interest in the progress of the American School of Art, but are unable to cross the Atlantic to visit the exhibition of the National Academy of Design, which is to New York what the exhibition of the Royal Academy is to London, may, by the aid of the excellent illustrated Catalogue published by Messrs. Cassell, Petter, Galpin and Co., obtain some notion, and that a pleasing one, of its contents. One of the prettiest designs is that of "Love's Crown" (301), by Henry A. Loop, N.A. (National Academician); there are both humour and good drawing in Alfred Kappe's "Is this Life worth living?" (682); and J. H. Moser's "Readin' Class" (123), a study of a "coloured" scholar, is very clever; but perhaps the number of beautiful little landscapes is the most remarkable feature of this pleasant little Catalogue, which is the second of its kind. The list of the artists gives not only their places of residence, but the schools and studios in which they have studied.

In the *Magazine of Art* for this month an article by Mr. Cosmo Monkhouse on Alphonse Legros is remarkable as one of the best and truest appreciations which this distinguished, but not always popular, artist has ever received from criticism. Mr. Monkhouse's serious order of mind would naturally make it easy for him to be in sympathy with the work of a genius far more grave and penetrating than it is attractive; and few, if any, of the artist's qualities have been overlooked in a paper of unusual quality. Both artist and author have enjoyed the advantage which attends upon competent illustration. The reproduction of "Le Repas des Pauvres" is excellent.

The pictures represented in the June number of the *Great Historic Galleries* are the famous Chiswick Madonna by Memline, with Sir John Donne and his wife, the donors; Hugh Robinson's "Piping Boy," exhibited at Burlington House last winter from Downe Hall; and Philip Fruytiers' portrait group of the family of Rubens from Windsor Castle.

*L'Art* has, for the last week or so, been mainly occupied with articles on the collection at Hamilton Palace, the palace of Pandolfo Petrucci at Siena, and the Salon. An interesting paper has also appeared on a little picture known as the "Madonna of Santa Chiara," a copy of a work by Perugino, which tradition ascribed to Raphael. Doubts were cast upon this ascription by Pungileoni in 1822, and later writers, including Passavant and Calvacaselle, have favoured them. The article, which is signed by Mary Agnes Tinckner, proves that these doubts were based upon an error in the interpretation of an inscription on the back of the little painting, and states exhaustively the arguments, which are many, in favour of it being a very early work of Raphael. It is now in the possession of Mr. Hooker, an American banker living at Rome, and an etching of it by M. Ferdinand Leenhoff appeared in *L'Art* of June 4. The picture remained at the convent of Santa Chiara at Urbino, jealously preserved as a work of Raphael's down to 1860.

The current number of the *Zeitschrift für bildende Kunst* contains, besides the article on "Menzel's Illustrations to the Works of Frederick the Great," mentioned last week, an in-

teresting account of the Tiberneum Museum at Rome, giving plans and specimens of wall decoration. Notices of art exhibitions and art books fill the rest of the number. It is enlivened by a beautifully soft and delicate etching by C. T. Meyer, from a picture by Roth called "On the Amper"—nothing but an ordinary river scene, with two men in a boat among the reeds, but rendered delightful by its pleasant graduated lights and shades and the soft evening air that seems to fill the whole.

THE grand prix de Florence, founded by our contemporary *L'Art*, has been awarded to the young Swedish painter, M. Hans Heyerdahl, whose "Dying Child" in the present Salon has attracted much notice and also a good deal of criticism.

M. EUGÈNE GUILLAUME has been appointed Professor of Aesthetics and the History of Art at the Collège de France in the place of the late Charles Blanc.

### THE STAGE.

MDME. SARAH BERNHARDT concludes her engagement in London to-night. She has appeared, since we last wrote, in "Frou-frou" and in "Le Sphinx." Her Gilberte of "Frou-frou" was an old impersonation, which we took occasion to criticise a year or two ago. Her Blanche of "Le Sphinx" was a novel one, for she had been wont, when appearing in that piece, to enact the part of Berthe. Mdma. Bernhardt's change of rôles has not been an unmixed advantage, for if Berthe, the suffering wife, is not precisely suited to her, neither is Blanche, the paramour, who dies violently of poison. So great is Mdma. Bernhardt's ambition to do successfully all that has been done by predecessor or contemporary that it is by no means wonderful she should have desired to make us forget Croizette in "Le Sphinx" as well as Desclée in "Frou-frou." But in neither effort has she been entirely successful. Mdma. Bernhardt is an artist of genius; but her forerunners in the parts of Gilberte and of Blanche were at least capable artists; indeed, Desclée was herself a genius. The most, therefore, that the great French actress of the day has been able to do in these her most recent efforts has been to prove herself worthy to make the attempt she has made. She has nowhere failed; her performances have independent merit of a very high kind; but they are hardly unique. To see Mdma. Bernhardt at her best throughout, we must still see her in poetical plays like "Hernani" or "Rome Vaincue," in plays of historical romance like "Adrienne Lecouvreur," and in the lighter but often pathetic one-act pieces like "Jean Marie" or "Le Passant." On the stage she covers much ground in a way that nobody can cover it; but even her undeniable genius has its limits—she cannot excel at every point. What is perhaps most encouraging about her recent performances of known parts is that they display her in something even more than undiminished possession of her art. Her Gilberte of "Frou-frou," unequal as it was, and unequal as we have always considered it, at certain points roused her audience to a passion of enthusiasm. The reality of the quarrel scene—the scene with her sister in which Gilberte is first irritated, then satirical, and then upbraiding—has always been great, but on the latest occasions it has been greater than ever before.

THE boards of Drury Lane are the scene of a fantastic experiment. Rossi, the Italian tragedian, is unable to act in English, and Londoners have shown no great disposition to witness his acting in Italian. There has accordingly been essayed at Drury Lane the singular plan of performing "Lear" with everything spoken in English except the words

of Lear himself, and these in Italian. Rossi is probably not precisely the actor to whom Lear could best be entrusted, even if he possessed our mother tongue; but any effect more ludicrous than that which is presented by the mixture of the two languages in the delivery of the text of Shakspeare can hardly be imagined. It is a pity that several good English actors are mixed up with the business. Miss Moodie is painstaking and intelligent, if she rarely rouses enthusiasm; Miss Lydia Cowell, who plays Cordelia, is a young actress of singular skill, capable both of piquancy and pathos; and Mr. John Ryder is not only a veteran in the service of Shakspeare, but is actually the best representative of the Kent of "Lear" that we could hope to encounter. But, on the whole, the attempt to present "Lear" under the conditions described cannot but end in discomfiture. As far as concerns the performance of the elderly Italian tragedian, whatever may be its qualities, they are hardly to be discovered under the circumstances of the moment. We forbear from detailed criticism.

As we had to thank Mr. Poel and his amateurs last year for the acting of the First Quarto of "Hamlet" for the first time since Shakspeare's death, so we have this year to thank Mr. Edmund Routledge and his "Strolling Players" for the first performance—at St. George's Hall last Saturday—of "Much Ado about Nothing," divided into its proper acts according to the scheme laid down by the late James Spedding in the *New Shakspeare Society's Transactions* for the year 1877, pp. 20-24. The performance was one of the best amateur ones we have ever witnessed, Miss Helen Maude (as she calls herself) acting Beatrice with great piquancy and spirit, Mr. Charles H. Lamb making an excellent Claudio, and Capt. FitzGeorge an admirable Dogberry. Miss Vyvyan threw a good deal of pathos into the part of Hero; and, if Benedick had but been twenty years younger, he would have played the part as perfectly as the looks of his "Boy" were charming. Verges and the Watch were very good, and the amateur band effective. Act I. was made to end with its first scene, thus avoiding the impossibility involved in the ordinary arrangement "that, while the scene was merely shifting, the Prince and Claudio have had time for a second conversation in Antonio's orchard; and that one of Antonio's men, overhearing it, has had time to tell him of it." Act II. ended with its usual second scene. Act III. opened with Benedick in the garden, and Act IV. with Hero's dressing-room and the preparation for the marriage. As Act V. opens in the right place in the old arrangement, it did so last Saturday evening. Mr. Routledge is to be congratulated on his courage in departing from a bad tradition and carrying out Mr. Spedding's sensible views. We only hope that he will reprint Mr. Spedding's remarks as an Introduction to the excellent sixpenny text of the play that he edited for the Strolling Players' performance.

### MUSIC.

#### "EURYANTHE" AT DRURY LANE.

IN November 1821 Weber was asked to write an opera for the Kärnthnerthor Theatre in Vienna; and from that moment, as Baron Max Maria von Weber informs us in his father's biography, the composer "was engaged, heart and soul, in a chase after an opera-book." The choice of a subject proved a matter of no small difficulty; and the preparation of the *libretto* was, from first to last, a source of trouble and annoyance to Weber. The authoress Wilhemine Chezy placed before him a variety of subjects, chiefly borrowed from Schlegel's *Romantic Poems of the Middle Ages*; and he selected the story

taken from the old French romance, *Histoire de Gérard de Nevers et de la belle et vertueuse Euryanthe sa mie*. The original legend is quaint, and the tale, as related by Schlegel, entertaining; but W. Chezy's *libretto* is uninteresting, and in some parts all but unintelligible. Lysiart Count of Forrest is in love with Euryanthe, the betrothed of Adolar Count of Nevers; but, failing to turn the current of her affections, compasses her ruin. He meets with Eglantine, who has been slighted by Adolar, and they both breathe threats of vengeance against the unfortunate lovers. Eglantine has stolen a mysterious ring from a vault. This she gives to Lysiart, and reveals to him a love-secret connected with it—a secret which, by false professions of love and pity, she has wrung from the ingenuous Euryanthe. Lysiart produces the ring in presence of King Louis, Adolar, Euryanthe, and the whole Court. It is at once accepted by Adolar as a proof of the maiden's faithlessness, and he leads her away into a desert to kill her. She saves his life by warning him of the approach of a horrid monster; he will not, therefore, take hers, but abandons her to the mercy of Heaven. The King finds her alone, and hears her protestations of innocence. Adolar, by a conversation which he overhears, discovers the guilt of Eglantine. The lovers are re-united, and the mischief-makers are punished: Lysiart stabs Eglantine, and is himself led away to die. We have given only a very brief description of the plot, which contains many dramatic incidents, but is weakened by the foolish and inconsistent conduct of the heroine, the fickleness of the lover, and more especially by the absurd story of the ring. Adolar's sister Emma, hearing of the death of her lover, Udo, touched her lips with a poisoned ring; and, until that ring was "bath'd in tears of injured innocence," their wandering souls could find no rest. This ring is the cause of all Euryanthe's troubles, but through her vicarious suffering the mysterious ghost-lovers find peace and happiness. Our interest and attention are thus divided, throughout the whole of the play, between the earthly lovers and these wandering spirits, and the unsatisfactory result may be easily imagined.

"Euryanthe" was first performed at Vienna on October 25, 1823. Sir Julius Benedict, who was present, gives an interesting account of this memorable evening in his recent biography of Weber. He also tells us that the opera "limped with great trouble through twenty performances, and was then withdrawn for years." The unsatisfactory *libretto* certainly interfered with the popularity of the work, but the main cause of its failure lay undoubtedly in the fact that it represented a new phase of art. Franz Schubert, who was also present at the first performance, complained that it had "too little melody;" others found fault with the lengthy recitatives, the elaborate orchestration, and the interminable length of the work. History repeats itself, and the same things are now said about Wagner's operas. In the letter to M. F. Villot, Wagner speaks of the very evident relationship of "Tannhäuser" to some of the works of his predecessors, among whom, he says, "I would call your attention particularly to Weber." "Euryanthe" was undeniably a work which exercised the strongest influence on Wagner, not only in "Tannhäuser," but also in "Lohengrin." Weber sought to free himself from the fetters of operatic form, and to attempt something "quite new." The work thus commenced was taken up and continued by Wagner. "Euryanthe" came too soon for the generation in which the composer lived, and comes too late for the present generation, for its glory is eclipsed by the later revelations of "Tannhäuser" and "Lohengrin." The historical interest attaching to "Euryanthe" is, however, very great, and its production at the

present moment, when the works of Wagner are attracting so much attention, is most opportune. When the Musical Union of Breslau wished to perform the opera in the concert-room, the composer wrote as follows:—"Euryanthe" is a purely dramatic attempt, seeking its effect from the co-operation of all the sister arts, and most certainly void of effect if deprived of their help." It was therefore intended by the composer, not as an opera in the ordinary sense of the word, but as a music-drama. It contains many unfortunate concessions to public taste, but is full of lovely music, lyrical charm, and dramatic power. The first act, with the pleasing opening chorus, the beautiful Romance of Adolar, and the exquisite Cavatina of Euryanthe, is very fine; but the second and third acts are still finer, and only a very few passages remind us that Weber "was frightened at the consequences of his method."

It is now nearly forty years since this opera was heard in London, and the performance at Drury Lane last Tuesday evening naturally attracted a large audience. Frau R. Sucher's Euryanthe was a thoroughly satisfactory performance, and the dramatic acting and brilliant vocalisation of Frau M. Peschka-Leutner as Eglantine were much admired. These two ladies were warmly applauded at the end of their respective solos, and also at the close of each act. Herr F. Nachbaur as Adolar acted well, but was unable to do proper justice to the music. Herr E. Gura as Lysiart proved himself an accomplished actor and vocalist. He has, however, one little failing—a tendency to drag in his singing. The small characters of Bertha, Rudolph, and the King were satisfactorily filled by Fräulein Wiedermann and Herren Landau and Noldechen. The overture to the opera was played with great spirit, and Herr Hans Richter had some difficulty in resisting the attempt to *encore* it. The lovely orchestral accompaniments were, with one or two exceptions, admirably played. Some of the choruses were given with great effect, but the rendering of the *ensemble* music in the last act was not altogether satisfactory.

J. S. SHEDLOCK.

#### RECENT CONCERTS.

SCHUMANN'S "Faust" music was performed at the fourth Symphony Concert on Thursday, June 8. Mr. Charles Hallé had the courage to give the work in its entirety. The third part, consisting of seven numbers, has been heard at the Philharmonic Concerts, the Hackney Choral Association, and elsewhere; but the first and second parts have hitherto been omitted. They contain many striking passages, but also much that is dull and laboured. The power of Schumann's genius is stamped upon every bar of the third part, which was composed between the years 1844 and 1848. The rest of the music belongs to a later and unfavourable period of the composer's life; the overture, indeed, was not written till 1853. The performance of the work under the conductorship of Mr. Hallé was good, but wanting at times in light and shade. The principal solo vocalists were Mrs. Hutchinson, Miss Orridge, Messrs. Shakespeare and Santley, and Herr Elmlblad. The singing of the last-named gentleman is rough, and his pronunciation of English somewhat defective. The programme of the concert included Mendelssohn's "Meerestille" and Beethoven's pianoforte concerto in G, beautifully played by Mr. Hallé.

The sixth and last Philharmonic Concert was given on Friday, June 9. The programme consisted of Schubert's unfinished symphony in B minor and Rubinstein's sacred opera or oratorio "Paradise Lost." We had last year

one specimen of Rubinstein's oratorio writing, and it certainly did not make us ardently long to hear more of the composer's efforts in this branch of composition. "Paradise Lost" is a longer and more ambitious work than the "Tower of Babel;" but the music is laboured and monotonous, and the composer signally fails whenever he tries to be specially impressive and dramatic. There are some pretty tunes and plenty of good part-writing, but no beauty, no real grandeur, no genuine inspiration. Rubinstein strives hard to say great things, but does not say them. A detailed account of the music would be useless; and the wretched *libretto*, "free after Milton," as stated on the score, is not worth noticing. Mdme. R. Hersee sang the Eva and Angel music with much taste. Mr. Barton M'Guckin was effective as The Voice, Mr. Ludwig as Adam, and Sig. Foli as Satan. The work was conducted by Mr. Ousins.

Sig. Sgambati's symphony in D was performed last Saturday at the Crystal Palace, and created a most favourable impression. It is a work of considerable merit and originality, and gives a far higher idea of the composer's powers than the concerto for pianoforte played by him at the fifth Philharmonic Concert. The opening movement, *allegro vivace*, seemed to us, on a first hearing, the least interesting portion of the symphony. The principal theme is not sufficiently profound and striking, and hence the movement, despite its many points of beauty, does not quite satisfy us. The *coda* is very delicate and effective. The *andante mesto* is very charming. The principal subject given out by the oboe is graceful and romantic. The composer is very happy in his tone-colouring of the second theme. A third melody, of a *chorale* character, combines well with the other two. The *scherzo* is lively and pleasing, but not particularly original. Of the two trios, we much prefer the first. The *finale* consists of two parts—a serenade and an *allegro con fuoco*. The serenade is simple but most effective, and the *allegro* exhibits much cleverness and imagination. The work was conducted in a most efficient manner by the composer.

At the second Easter Term concert given by the enterprising Cambridge University Musical Society, Dr. Garrett's sacred cantata "The Shunammite" was performed for the first time. The composer has written some good and serviceable church music, and this cantata shows considerable knowledge of counterpoint and form; but there is throughout the work not only a marked absence of originality, but a great many uncomfortably striking reminiscences of Mendelssohn. There is all the difference between a short anthem and a long cantata. A composer should know how to measure his own strength, and not attempt the highest forms of art without the commensurate power of producing something new and interesting. The soloists were Miss Anna Williams, Miss Hilda Wilson, Mr. Abercrombie, and Mr. F. T. MacDonnell (Clare). Herr Richard Gompertz gave a most excellent rendering of Beethoven's violin concerto, and at the close received an enthusiastic recall. The concert was well attended. Mr. C. V. Stanford was, as usual, the conductor, and Mr. Burnett leader of the orchestra.

#### MUSIC NOTE.

WE are informed that Messrs. Franke and Pollini have arranged to give a concert on a grand scale at the Royal Albert Hall on Saturday afternoon, June 24, when they will introduce to the public the whole of the artists and chorus of their company. The orchestra will be increased for this occasion, and conducted by Herr Hans Richter.

SATURDAY, JUNE 24, 1882.

No. 529, New Series.

THE EDITOR cannot undertake to return, or to correspond with the writers of, rejected manuscript.

It is particularly requested that all business letters regarding the supply of the paper, &c., may be addressed to the PUBLISHER, and not to the EDITOR.

## LITERATURE.

*The Science of Ethics.* By Leslie Stephen. (Smith, Elder & Co.)

THE critic who reads Mr. Leslie Stephen's most frank and modest Preface after, instead of before, the book itself will be tempted to feel his occupation gone. The most general characteristics of the work are exactly those which the author admits and avows. We agree with him (though he "cannot be certain of even this negative statement") that there is not a single original thought in the book from beginning to end; but it is also true that he has gone over the whole ground honestly for himself, or, as he himself expresses it, has trudged "steadily through the alternate platitudes and subtleties into which every moralist must plunge." Then, again, he has never allowed himself to abridge familiar arguments by a curt reference to their chief representatives. But it is not without intention that he risks real diffuseness and apparent indifference to the work of contemporary thinkers; his only wish was to avoid subsidiary controversies and set down "systematically a statement of the ethical theory which had commended itself" to him. The result is a respectable work, too long not to be sometimes a little dull, but likely enough to be read with interest and profit by young, and with interest by omnivorous, students of ethical literature. The worst that can be said of it, from a literary point of view, is that it reminds us of French books of a certain type—clear, intelligent, eminently respectable, but somehow just a little too much all-over-alike—which usually prove on enquiry to consist of articles reprinted from the *Revue des Deux-Mondes*. It is not a collection of reprints, but it has the same want of proportion and perspective, of structural emphasis, so to speak, as books hampered with that fatal defect of origin. Many of the chapters might have stood precisely as they are, even though the purpose of the book had been reversed; they would have been just as much in place (and just as ineffective in relation to the main argument) if the author's intention had been to vindicate moderate Utilitarianism, instead of, on the whole, to reject Utilitarianism in favour of a purely Evolutionist theory. Hence, even while agreeing with his conclusions, there is a latent sense of disappointment in the reader's mind as if the author of the *Essay on Plain Speaking* might have been expected to deliver himself more vigorously and confidently, though certainly not more candidly.

The discussion practically begins with the "Theory of Motives"—first of the individual

man, and then of man as member of a social organisation. Mr. Stephen seeks to substitute for the "erroneous proposition that conduct is determined by the agent's judgment of his happiness" the "true proposition" that conduct is determined by the feelings of the agent at the moment of action. He is not quite so careful as an evolutionist should be to include, under this head of feeling, those states of nerve and muscle which, without being, strictly speaking, conscious, predetermine the direction of the next discharge of nervous force. We have so far a "feeling" in favour of allowing this discharge to take place along the line of least resistance that we shall yield to the subconscious impulse or inclination that way, unless some other stronger conscious feeling intervenes on the other side.

The extent to which the reason can be said to aid in determining conduct is next considered, and a short sub-section on "Types" introduces an essential feature in the author's scheme of ethics. As appears further on, the evolutionist criterion of morality is the health, not, as with Utilitarians, the happiness, of the society to which moral agents belong; but the health of society depends upon the healthy action of its component organs and tissues. Mr. Stephen does not use these phrases figuratively, but as describing a real analogy for which there does not seem to be exactly place in his system. There is, however, no objection to the terms if we treat them as a simple metaphor, and in this sense the various units making up the society may be likened to the cells composing living tissue. And just as the health of an animal depends upon the normal and healthy development of all its component parts, so a healthy state of society presupposes health, or the predominance of sane and normal qualities and tendencies, in the individual men composing the society. It is a question here, again, whether the author makes the best of his argument. The process of evolution tends towards "the typical form, any deviation from which is a mistake;" and if morality is a normal product of social life, the action of the typical or normal man will be moral. But there is a needless appearance of circular reasoning given further on when we read: "The truly virtuous man is the typical man whose character conforms to the conditions of social vitality. The question what is right is, in all cases, equivalent to the question what the right-minded man would do." Mr. Stephen seems to think that the chronic variability of types makes it impossible to answer this latter question *a priori*, so that ethical science might have to hold its decisions in suspense till an opportunity for their practical solution presented itself to a sufficiently typical individual. But the apparent platitude must be interpreted by the light of an intermediate discussion on the basis of morality and the internal character of the moral law. The subjective aspect of the moral law, which is so curiously ignored by Mr. Spencer, is fully recognised here. In order for an act to be morally right or meritorious in the agent, it must have been done in accordance with the spontaneous prompting of feelings permanently incompatible with mischievous or anti-

social action; and we are supposed to have satisfied ourselves concerning the natural history or evolution of virtuous character before we are invited to define virtuous conduct as the natural outcome of virtuous character. The author, however, goes too far when he adds: "Conduct, it is inferred, is truly virtuous when, and only when, the action is done because it is virtuous. The motive must be the pure love of virtue, or of virtue for its own sake." Almost on the next page he claims that, upon his theory, "the recognition of the general rule follows from the specific intuitions instead of preceding them." Intelligent virtue must include recognition of the general rule, and in the shorthand of practical life it may be a sufficient reason to give for any act that it is enjoined by the general rules of virtue, but the motive must, surely, be the actual presence of those same feelings and intuitions which precede and found the moral law; otherwise the act may be morally worthless, the product of pharisaic formalism, carrying no implication of a virtuous character.

It is curious that Mr. Stephen, who is obviously anxious to escape from the optimistic trammels of Utilitarianism, should not have annexed more of those conclusions in the *Data of Ethics* which threaten (or promise) to swallow up the Utilitarianism even of their eminent author, and which will, at all events, free the next generation of his followers from the unconscious tone of apology and deprecation still characteristic of contemporary criticism on that phase of orthodox philosophy. Mr. Stephen insists that it is not the business of an ethical philosopher (as such) to persuade people to follow what he explains to be moral courses; he has to trace the origin and history of moral ideas and feelings, not—except so far as a luminous statement of moral truths must have such a tendency—to create these ideas or feelings where they are accidentally undeveloped. We are not to confound the sphere of science and art, the functions of the theoretical instructor and the practical guide. He also points out that it is both unreasonable and unscientific to talk as if all sources of "happiness" were equally open under all circumstances to different persons. A pleasure naturally enjoyable may be effectively spoilt or rendered unattractive to a scrupulous person by the conditions under which it is attainable; and when this is the case, as a man cannot, even if he would, change his whole nature at a moment's notice, he is not making a sacrifice of possible happiness in rejecting the undesirable enjoyment. But after satisfactorily establishing both these points the author's courage seems to fail him towards the end when he has to discuss the relations of happiness and virtue, and the problems of moral discipline and self-sacrifice. In the earlier chapters it is fairly argued that moral liking or aversion "is a feeling as much as any other which so far justifies itself that the pains and pleasures due to it must be reckoned in our calculation;" so of sensibilities belonging to the higher types of character, "to get rid of the sensibility you must lower the whole tone of the character and destroy the perception of consequence;" the pains and pleasures of sympathy are indissolubly

associated, and if keener sympathies are among the fruits of evolution, their existence as a permanent factor must be reckoned with. A man may be forced by concern for his own happiness to go out of his way to lessen the suffering of others, merely because he cannot dismiss the painful thought of such suffering "without such a dislocation of his whole system of thought and feeling as may, for some reason, be impossible." But after noting this hopeful feature, the inevitably altruistic applications of the normal man's egoistic feelings, Mr. Stephen seems to forget his own position in his anxiety to give fair play, and something over, to two well-known men of straw who are admitted to plead on the other side.

The first of these is the imaginary person who disclaims all ordinary moral feeling, and, as children express it, "would rather be naughty;" and who asks, with a show of Utilitarian candour, why he should take the trouble to be at all good when he likes being wicked best. It is not, perhaps, surprising that a *ci-devant* Utilitarian should take this personage too much *au sérieux*; and Mr. Stephen gravely admits that, given a sufficient degree of congenital depravity, "it cannot be said with any confidence that if we were to consult the happiness of the agent exclusively" we should try to cure him of his depravity. Still, to give even virtue her due, "it may be necessary to add that there is no sufficient reason for not trying to do it"—a rather languid tone of defence which is likely to prove stimulating to young gentlemen like Mr. Mallock who are fond of threatening moral science with vague hints of the dreadful things they are capable of doing in its despite. Surely the answer to this stock objection from the evolutionary point of view is short and matter-of-fact. The existence of a few "human brutes" may be admitted; but very few of these are absolutely brutal all through, and if they are to be fitted for human life and society it can only be by the development of their human at the expense of their brutal propensities. The more of his propensities a man has to sacrifice, the less his chance of happiness; and so a human brute has no reason to thank the fates that made him such, but he can only adapt himself to his environment by sinking the brute. As the proverb has it: "On peut être plus fin qu'un autre, mais pas plus fin que tous les autres;" and it is clear, even on Utilitarian grounds, that the criminal classes miscalculate their chances. No one man can hope to get the better of society and succeed in indulging all his personal tastes in defiance of the social exigencies which find expression in law and morals. Persons who are sufficiently vicious or sufficiently stupid make the attempt; and therefore, as Mr. Stephen rather naively expresses it, "I think it highly probable that there will be bad men for a long time to come." But one is unpleasantly reminded of the proceedings in the trial of Guiteau when grave philosophers go out of their way to meet the bad arguments by which they assume these bad men might—for they very assuredly do not—defend their miscalculations. Society refutes the philosophy of murderers by hanging, and of thieves by imprisonment; and,

to show the murderers to be logically right we must prove society to be morally wrong.

Still more open to criticism is the author's manner of dealing with the other extreme of the moral hierarchy. "Admitting that it is worth while, say, to be respectable, we may doubt whether it answers to be a moral hero." Intrinsically, the man who introduces a higher moral type is superior to his fellows; but, as he therefore has to live in the society of his inferiors, he is imperfectly adapted to his surroundings, and "he may find his moral squeamishness conducive to misery." "Be good if you would be happy" seems to be the verdict even of worldly prudence; but it adds, in an emphatic aside, "Be not too good" (p. 418). Mr. Stephen has himself answered this difficulty in advance. The moral hero has to choose, like ordinary mortals (only maybe more frequently than they), between a present act of self-sacrifice or self-denial and an impossible "dislocation of his whole system of thought and feeling." The heroic life is naturally more exciting, more full of critical moments and agitating alternatives, than that of the common herd; but it does not follow that it is less happy. In what we call the heroic ages, the idea of its being so would have seemed a sheer absurdity; and it is obvious that the very strength of character which makes a hero must also make it more than commonly painful to the hero to sacrifice his own impulses and beliefs in the interests of conformity; it will be easier and pleasanter to him to go his own progressive gait, overruling opposition as far as he can, and enduring what he cannot overrule, rather than submit to be himself overruled by the *vis inertiae* of his fellows. Add to this consideration the further fact that the normal hero represents tendencies and aspirations which exist in embryo in his contemporaries, and it becomes obvious that the happiness as well as the health of society is promoted when everybody, heroes included, try to be as good as they can.

When all deductions are made, *The Science of Ethics* may be recognised as doing all its author has aimed at. "It is enough," he says, "and more than enough, if one can communicate the very slightest impetus to the slowly grinding wheels of speculation." We may complain of his writing sometimes rather as an inconsistent advocate of Utilitarian ethics than as a consistent advocate of evolutionary ethics; but students who receive their first bias from him will find it infinitely more easy to proceed to a disinterested scientific theory than it was for militant Utilitarians to lay aside the weapons prepared for the destruction of intuitionists and supernaturalists and study human nature in its place in the natural world.

EDITH SIMCOX.

*A Birth-Song, and other Poems.* By William Freeland. (Glasgow: MacLehose.)

So far as they form a subject for literature, children may be said to be an invention of the moderns. It is particularly in our own day that they have attracted so much attention, and in the country of Longfellow and Whittier the number of tributes in prose and

verse paid to child wisdom and child beauty has been quite a marked feature in the history of American letters. As the world grows older, it seems to take a fonder interest in things that are young; and out of the mouths of babes and sucklings we are gathering innocent wisdom more and more. It would be hardly going too far to say that some of the deepest utterances of the times on theological questions have come from the unconsciously daring lips of children. Somebody should collect such sayings into a book. Their freshness would have a wonderfully stimulating influence on our thinking, since, as speculators, children enjoy advantages their older friends do not possess, and to the thoughtful they are teachers of a strange authority. For every child is a try-back after innocence, and acts as if it were the long-expected heir to the world's lost Ideal.

Mr. Freeland's "Birth-Song" touches this tender subject with a great deal of love, and no little skill. If there is any effort or even affectation manifest in it, this does not arise, at any rate, from want of subtle sympathy with the theme. In short, Mr. Freeland begins and ends in such a way as to leave no room to doubt that his poem is a dedication of genuine fatherly affection for a child of flesh and blood. There is thus a natural note throughout the piece that bespeaks one's favour from the first.

The author's modest Preface, which crowns the year as a king and judge, concludes thus:—

"But still,  
Drawn by the kindly glamour of his eye,  
And urged by one dear voice from the sweet  
heavens,  
I bore me on. Nor stooping low, I said,  
'This little Book of Song—I give it thee!'  
'Thou darrest!' 'Yes, I dare!' And then he  
tossed  
One after one the leaves, and hummed and smiled—  
As April smiles on buds wherein he sees  
Some glimmer of a summer that may come—  
Then whispered, as I passed into the crowd:  
'In all the noblest strivings of the bards,  
The first still follows one that goes before,  
The last still hears a toiling foot behind.'"

Of the poems that accompany the "Birth-Song," the best are still those which touch on young life; and Mr. Freeland's finest line occurs in "The Cabin Boy"—

"Newly apprenticed to the fearful spray,  
He stalked about and watched the brightening  
beams  
Kiss the top-gallant with a golden tone  
That winged his fancy to romantic skies,  
Where pearly isles made music in his dreams;  
He sniffed the gales that murmur round Ceylon,  
While all the Indies flashed within his eyes."

The vigour of this last fine suggestion tells very well, and there are many single lines throughout the volume characterised by the same breadth of effect. It cannot be said that Mr. Freeland is always successful when he essays unconventional styles, as he seems rather fond of doing. "The Earth is the Lord's," for instance, is more grotesque than meritorious. It begins in this way:—

"Lord of the lambkin and the lion,  
Lord of Benlomon and Mount Zion,  
Of Israel and Italy,  
Watching in sweet tranquillity,  
I worship Thee!"

Coleridge said wit was the linking of extremes, but some extremes can be linked without

either wit or poetry. There is no need, however, to accuse the author of wishing to be irreverently smart in this poem. It is apparently a hymn prompted by the simplest motives; but it is a mistake.

On the whole, it may be said of Mr. Freeland's volume that it is a work marked by pure and pleasant poetical feeling. Though it never strikes a deep note, and contains few long passages free from flaws of workmanship which a firmer judgment than the author's might have avoided, the book is healthy and good.

ERIC ROBERTSON.

*An Anglo-Saxon Primer; with Grammar, Notes, and a Glossary.* By H. Sweet. (Oxford: Clarendon Press.)

WE have much pleasure in welcoming this addition to the not very numerous books which are suitable for the student of Anglo-Saxon who wishes to make a good beginning. Such students should be, and probably are, much more numerous than they were some ten years ago. English writers will not much longer be able to avoid such study, if they wish to touch upon questions of etymology without making mistakes which become every year more easily detected by an increasing number of readers. The author's object is so well expressed in his Preface that we cannot do better than quote the beginning of it.

"The want of an introduction to the study of Old English has long been felt. Vernon's *Anglo-Saxon Guide* was an admirable book for its time, but has long been completely antiquated. I was therefore obliged to make my *Anglo-Saxon Reader* a somewhat unsatisfactory compromise between an elementary primer and a manual for advanced students; but I always looked forward to producing a strictly elementary book like the present one, which would enable me to give the larger one a more scientific character, and would at the same time serve as an introduction to it. Meanwhile, however, Prof. Earle has brought out his *Book for the Beginner in Anglo-Saxon*. But this work is quite unsuited to serve as an introduction to my *Reader*, and will be found to differ so totally in plan and execution from the present one as to preclude all idea of rivalry on my part."

The spelling has been normalised, as is necessary in a book for beginners, who must be taught upon a uniform system which they can thoroughly understand, in order that they may duly appreciate the variable spellings of the MSS. Such spellings, while they are full of instruction to the more advanced students, and should receive all due deference from editors, can only distract and perplex the beginner who has not yet learnt the phonetic laws of the language.

The most valuable part of the book is, as might be expected, the account of the sounds of the language and the phonology; but the whole of the grammar is admirably and very carefully compiled, with a full list of the strong verbs (as in the *Reader*), an account of prefixes and suffixes, and a syntax abounding in examples illustrating the rules, each of which is accompanied by a translation into Modern English. The student would do well to read over this syntax at least once, if not twice, before beginning to translate the extracts; and if he were to learn some of it

by heart it would be no bad plan. It is precisely what boys are expected to do who are beginning Latin. The short sentences which begin the text are very characteristic and well chosen, and have to a teacher a familiar ring about them. Just at the beginning we find, "Swá swá wáter ádwāscþ fýr, swá ádwāscþ séo ælmesse synna." Of this famous sentence we find the following translation in Fitzherbert's *Book of Husbandry*: "As water slecketh fyer, soo dothe almesdede slake synne." Such was the alteration in our language in the course of little more than five centuries.

There are a few interesting improvements upon the *Reader*, of which the most striking is the adoption of the symbols *éa*, *éo*, in place of the more usual and familiar *ea*, *eo*. There are reasons, founded upon a comparison with other languages, for supposing that the former values are, after all, more correct; and they will probably come into use hereafter, now that Mr. Sweet has set the example in England, and Prof. Zupitza (as, e.g., in his editions of Cynewulf's *Elene* and Ælfric's *Grammar*) has done the same in Germany. It makes a considerable difference to the pronunciation, and is easily remembered by the rule given on p. 2, that "the diphthongs are pronounced with the stress on the first element."

Another interesting point is the discrimination, by help of the *Early West Saxon MSS.*, between *ie* and *y*, and between *ie* and *y*. These distinctions are especially useful, because in the later MSS. the symbol *ie* was disused, and the symbol *y* had to do double duty, a confusion which points to a confusion of the sounds in the later stage of the language. For the purposes of etymology, it is a great gain to have the earlier spellings thus exhibited. Thus from *eald*, old, is formed *ieldran*, elders, just as from the German *alt* we obtain *ältern*; but *synn*, sin, is cognate with the German *sünde*. If we write *yldran*, we no longer distinguish between words which, in German, have vowels so different as *ä* and *ü*. Similarly, by writing *hieran* instead of *hyran* for the verb "to hear," we distinguish the diphthong from the *y* as appearing in *fýr*, fire; compare German *hören*, *feuer*, and the very different sounds in the Modern-English *hear*, *fire*.

The Glossary contains a large number of words, and supplies a sufficient vocabulary for all that the beginner can want. It contains no references, but this may be justified by the fact that most of the words are of extremely common occurrence. It becomes, however, a question whether a few references might not conveniently be supplied in cases where a word occurs which is comparatively rare, for such references never come amiss. This is the only suggestion we have to make; and it may fairly be replied that the book, as it stands, is marvellously compressed, and has been purposely brought within such a compass as allows it to be sold at a very moderate price.

WALTER W. SKEAT.

## TWO "COUTUMIERS" OF NORMANDY.

*Le très-ancien Coutumier de Normandie.* Par Ernest-Joseph Tardif. (Rouen: Cagniard.)

*L'ancienne Coutume de Normandie.* Par William Laurence de Gruchy. (St. Helier: Le Feuvre.)

WE welcome with great satisfaction both these works, not merely by reason of their combined historical and juridical interest, but from the circumstance that they have been edited by learned men whose peculiar studies have rendered them most competent for the task which they have undertaken, which in one case has required great critical research, and in the other a comprehensive and practical knowledge of a living system of law. We have given precedence at the head of this article to the *Très-ancien Coutumier*, although it is the more recent of the two publications, on account of its earlier origin. M. Tardif has, for the first time, shown that this most ancient collection of Norman Customary Law is divisible into two parts, the first of which is of an origin nearly contemporaneous with that of the *Tractatus de Legibus Angliæ* attributed to Ranulf Glanvill, the Great Justiciar of King Henry II., while there is internal evidence that the second part was composed shortly after the separation of Normandy from England, and possibly before the death of King Philip Augustus of France (1223). The existence of such a work may be a surprise to many English lawyers, who are familiar with the comments of Lord Coke and Sir Matthew Hale upon the "Coutumier" of Normandy; but the remarks of those eminent judges have reference to a more recent and more complete collection of Norman Customary Law, which is elsewhere styled by them the "Grand Coutumier de Normandie," and which is identical with the work which Judge de Gruchy has published under the title of *L'ancienne Coutume de Normandie*. There are, in fact, three ancient collections of Norman Customary Law. The earliest is the work published by M. Tardif, of the French Archives, under the title of *Le très-ancien Coutumier*; the second in order of origin is commonly designated *Le grand Coutumier*, and the third is *Le grand Coutumier réformé*. The latest of these, of which the extended title is *La Coutume réformée du Pays et du duché de Normandie*, is a revision of the *Grand Coutumier* of the thirteenth century, and was completed in 1585; but with this work we are not directly concerned on the present occasion. We may, however, add a word here on the different meanings assigned by writers on the history of French Law to the terms "Coutume" and "Coutumier" respectively. M. Tardif has adopted for his edition of the earliest customs the term "Le très-ancien Coutumier" on the ground that the practice has been to reserve the title of "Coutumes" to official digests of Customary Law, and to style private compilations of such law "Coutumiers." On the other hand, the phrase "L'ancienne Coutume," which Judge de Gruchy has adopted, seems to have been employed in the Channel Islands to distinguish "Le grand Coutumier" of the thirteenth century from "La Coutume

réformée," although the origin of *Le grand Coutumier* is unknown further than that the ancestors of the present inhabitants of the Channel Islands in the reign of Edward III. spoke of their laws as being contained in an ancient book called *La Somme de Mancael*. Who Mancael was is an enigma, the solution of which still awaits its Oedipus. Le Geyt, however, and other eminent juriconsults of Jersey, in discussing this question two centuries ago, maintained that the *Summa* of Mancael was but another name for *Le grand Coutumier*. There is another theory, however, which deserves attention—namely, that the *Summa* of Mancael was a selection of chapters from the Latin text of *Le grand Coutumier*, a copy of which may still be found among the Harleian MSS. in the British Museum.

To return, then, to *Le très-ancien Coutumier*, of which M. Tardif has published the Latin text. It is not altogether the first time that this text has been made public, as Warnkönig appended to the second volume of his *Französische Staats- und Rechtsgeschichte*, published at Bâle in 1848, among other sources of the ancient "Coutumier de Normandie," a series of articles, which he entitled *Statuta et Consuetudines*; but he unfortunately published *uno tenore* all the contents of a Latin MS., preserved in the Bibliothèque nationale at Paris, known as the Codex Bigotianus No. 292, as if they were constituent parts of the Coutumier. For instance, the first article of the MS. is an Ordinance of St. Louis, known as "L'Ordonnance pour la réformation des Mœurs," issued 1254, which has no particular reference to Normandy; and among other interpolations is a decree of the Norman Exchequer of 1299. M. Tardif has exercised more discrimination, while he has not confined himself to the examination of this MS., but has collated two other Latin MSS. in the same library; and, further, he has compared the Latin text of those MSS. with the French of a MS., also in the Bibliothèque nationale, which formerly belonged to the Library of Ste-Geneviève, and of which the text was for the first time published in 1839 by avocat A.-J. Marnier, the librarian of the Order of Advocates of La Cour royale at Paris, under the title of *Etablissements et Coutumes, Assises et Arrêts de l'Echiquier de Normandie au treizième Siècle*.

The Codex Bigotianus is unfortunately the only MS. which contains an entire Latin text of the *Très-ancien Coutumier*; but this circumstance is not to be regretted, inasmuch as it has led M. Tardif to undertake a more careful examination of what he considers with good reason to be the first part and the second part of the text, the second part alone being contained in the other two Latin MSS. Of these MSS. one was originally in the library of the Chapter of Notre Dame at Paris, and the other once formed part of the library of the Minister Colbert, and was before his time most probably the property of the abbots of Préaux. Our space will only allow us to skim the surface of the comments which M. Tardif has made upon the sources which he has consulted. The MS., on the other hand, which contains a French text of the *Très-ancien*

*Coutumier*, the assistance of which M. Tardif has invoked to enable him to winnow the chaff from the wheat in the Latin MSS., has no date nor any indication of its origin; but the archaic hand in which it is written, and the character of the tongue with which the scribe was familiar, lead M. Tardif to assign to it a date about 1290.

M. Tardif avows his conviction, with good reason, as far as we can judge, that both parts of the *Très-ancien Coutumier* are the work of private persons, and have no official character. He assigns the compilation of the first part, upon a critical examination of its contents, to a period shortly before June 9, 1200, the date of the death of Guillaume Fils-Raoul, the Seneschal of Normandy, who held that office for twenty years, and, during the absence of King Richard Cœur de Lion in the Holy Land, introduced many reforms after the example of Ranulf Glanvill's reforms of the procedure of the Curia Regis in England. The second part M. Tardif refers to a period between the years 1218 and 1223, in order to bring it within the lifetime of King Philip Augustus, who is mentioned here and there in terms which suggest that he was still alive. M. Tardif, however, is confronted by a difficulty which he admits to be not easy to surmount—namely, by the presence of a plaint and a Royal Writ, evidently extracted from a Record in the Court of Bayeux, in which the coronation of King Richard I. is mentioned as marking the time within which a certain class of actions for the recovery of land were limited. This limitation, however, was not introduced into Normandy before Michaelmas 1229. M. Tardif cuts the Gordian knot in this case by suggesting that the name of King Richard is in both cases an interpolation for that of King Henry; but we rather prefer another suggestion made by M. Tardif himself in a later part of his Introduction—namely, that, while the author of the first part was a juriconsult of Evreux, the author of the second part was a juriconsult of Bayeux, and that each author has inserted legal forms with which he was practically familiar. We do not appreciate M. Tardif's difficulty in supposing that an Ordinance of the Norman Exchequer of the year 1218 could not well be spoken of in the year 1230 as "Nova Constitutio." Our own Bracton (fol. 312 b) uses the very same phrase in speaking of the Statute of Merton, which had been enacted twenty years at least before his treatise *De Actione Dotis*.

Judge de Gruchy's work is of a different character, but is excellent of its kind. It is, in fact, a revised edition of *Le grand Coutumier de Normandie*, the work with which Lord Coke and Sir Matthew Hale were familiar, and respecting which the latter high authority, in his History of the Common Law of England, says that it contains not only those laws and customs which were in use in England in the time of King Henry II., King Richard I., and King John, but such also as were in use in Normandy after its separation from the Crown of England. Judge de Gruchy has based his work upon the second of the two editions of Maître Guillaume le Rouille Dalencon, published in 1539 by Nicolas le Roux at Rouen. It is this

work, coupled with the *Commentaire* of Terrien, who was Lieutenant-Général of the Bailli of Dieppe in 1581, that has moulded the jurisprudence of the Royal Courts of the Channel Islands, without, however, having the authority of a Code. Jersey, in fact, remains to the present day without any authorised body of positive law, while Guernsey possesses an official selection of customs based on the Commentary of Terrien, and sanctioned by an Order in Council of Queen Elizabeth of October 27, 1583. But even in Guernsey, according to M. Julien Havet's excellent treatise on "Les Cours royales des Iles Normandes," published in the *Bibliothèque de l'Ecole des Chartes* for 1877 and 1878, the Royal Court of Guernsey pays little attention to the official selection, which is styled "L'Approbation des Loix," where it differs from any actual custom of the island.

Judge de Gruchy had not the advantage, when he published his work, of perusing the results of M. Tardif's researches among the MSS. in the Bibliothèque nationale, but he was acquainted with the French text of the *Etablissements et Coutumes* published by M. Marnier in 1839. As already mentioned, the author of the *Grand Coutumier* is unknown; and Judge de Gruchy finds himself embarrassed in fixing the date of it by a similar circumstance to that which has embarrassed M. Tardif—namely, a possible interpolation of the text by a later hand. He has been led by the general tenor of its contents to assign to it a date prior to the grant of La Charte aux Normands in the first year of the reign of Louis Hutin (1314), but in the chapter "De Emptionibus et Vadiis," p. 58, there is this passage: "Nullum autem vadium potest in Normannia requiri, nisi post coronationem Regis Ricardi vel post quadraginta annos fuerit invadiatum." If the words "vel post quadraginta annos" be not an interpolation, their presence suggests that *Le grand Coutumier* was not completed until after the accession of King Louis X. of France, who by his Charter of March 19, 1314, confirmed the ancient customs of the Duchy of Normandy, and enacted "La prescription de 40 années sera à l'avenir un titre compétant en Normandie." The difficulty which Judge de Gruchy feels in admitting the words "vel post quadraginta annos" to be part of the original text is that they are not quite consistent with certain recitals of the law as to prescriptive title in other chapters.

Judge de Gruchy has published the Latin and the French texts of *L'ancienne Coutume* in parallel columns. He inclines to the opinion that the Latin is the earlier text, and M. Tardif has come to a like conclusion in regard to the priority of the Latin text of the *Très-ancien Coutumier* over the French text which avocat Marnier has published. One word more may be added as to both works. M. Tardif's researches have thrown a flood of light upon the legislation of Henry II. of England in respect of the Duchy of Normandy, and upon the identity of the method of Glanvill's treatise *De Legibus Angliæ* with that of the second part of the *Très-ancien Coutumier*. Judge de Gruchy's work, on the other hand, enables us to trace the commencement of a divergence between the consuetudinary law of England

and that of Normandy, more especially as regards the institution of the jury, which divergence has culminated in the Channel Islands in the conversion of the jury into a magistracy, in which the voice of the majority prevails. In England, on the contrary, the spirit of the Great Assize has predominated throughout the changes which the jury system has undergone, and has maintained the principle that a verdict ought to be by the concurrent voice of twelve men, which Sir Matthew Hale recognised as the ancient principle of the laws of Normandy.

TRAVERS TWISS.

#### NEW NOVELS.

*A Faithful Lover.* By Katharine S. Macquoid. In 3 vols. (Hurst & Blackett.)

*The Minister's Son.* By M. C. Stirling. In 3 vols. (Blackwood.)

*In a Cathedral City.* By Bertha Thomas. In 2 vols. (Bentley.)

*Coals of Fire.* By David Christie Murray. In 3 vols. (Chatto & Windus.)

*A Fair Exchange.* By Henry G. Gifford. (Remington.)

IN *A Faithful Lover* Mrs. Macquoid has had the ingenuity or the good hap to hit on a comparatively unworked lode in fiction, though all the materials she uses have been common property for many years. The prelude is a complete story in itself, very gracefully and pleasantly told—how a young travelling Englishman falls deeply in love with a beautiful French girl in a Norman château, and succeeds in winning her affection in turn, and also the good-will of her father, but fails to propitiate the invalid mother, who compels the rejection of his suit in favour of a wealthy Breton Marquis of half-English birth, with large estates in England. The girl, who has promised fidelity to her lover, yields to her mother's pressure, and does marry the Marquis de Kerjean, but not till his own merits and evident attachment to herself, added to the absence and silence of her English lover, have really led to the transfer of her own liking. The discarded suitor hears the married pair billing and cooing in a balcony as he casually comes across them while travelling, and also hears himself offered up on the shrine of conjugal affection—whence he becomes a misanthropic hermit. The main story finds him shut up in a dilapidated old grange, which had been a mill for a time, burdened with the guardianship of the orphan daughter of a sister who had displeased him by a runaway marriage. How the child crosses his morbid and unsocial ways is cleverly told, as also how the difficulty is not found to lessen when she returns, a woman, to his charge after a long period of schooling. Her beauty causes her to be sought by the local squire, but the son of the woman who had wrecked her uncle's life appears on the scene with youth in his favour, and secures the girl's affections. The discovery of his name sets the uncle strongly against him, especially as he looks to the other proposal as securing his niece's future; and the remainder of the story is taken up with describing the

conflict of the man's will and the girl's, ending as such struggles mostly do. But the chief merit of the book consists in the character of Esau Runswick, the recluse, himself. Though Mrs. Macquoid is not one of the two or three women who can draw a man so as to satisfy the critical judgment of men, yet the pains she has spent on this portrait are far from wasted. She has very happily imagined the kind of life such a man would lead when once a shock like that he met had acted on a temper always secretive and morbid, with the suggestion of hereditary bias towards insanity just hinted at.

The appearance of the Afghan War medal as part of the design on the cover of *The Minister's Son* gives the key to the story. Ronald Bennett, son of a humbly born Scottish minister and of a mother of somewhat higher pedigree, herself the early friend of the wife of the laird, is the childish playmate of the laird's daughter, and forms a life-long attachment to her. Chafing against the austere rule of his father, a narrowly sincere man of gloomy creed, who desires to force him into the ministry, from which his half-Highland temperament is averse, and seeing besides the woman he loves won by another, he enlists in a regiment under orders for India, just before the outbreak of the Afghan War, through which he serves with sufficient distinction to obtain a commission, with other results further on. The story is brightly written, and, in its admixture of military and Scottish social and domestic life, belongs to the class of novel whose most successful examples are those of the late Col. Lockhart; nor can we give it higher praise than by saying that it is good enough to give pleasure to those who have enjoyed them.

Miss Bertha Thomas's new story does not belong to the school of *Barchester Towers*. It deals but incidentally with such caputular dignitaries as deans and canons, taking instead two vicars-choral to fill the principal male parts. The analysis of the character of one of these, a young fellow with a magnificent voice and fine musical instinct, but having also the worse side of the artistic temperament in sensitively morbid vanity, self-indulgence, and lack of perseverance, is the motive of the book, and it is very carefully and honestly worked out. The setting is also good—notably the description of Leonard Hathaway's old-fashioned parents, who are both excellent studies.

*Coals of Fire* is a collection of short stories, some, if not all, of which have already appeared in print, in Christmas numbers of serials and the like. They display considerable fertility in the invention of dramatic incidents and situations, not without occasional evidence of those higher literary qualities to which the author of *Joseph's Coat* has made good his claim. Every one of the items is readable; but we put the "Romance of Giovanni Calvotti" highest in point of merit, and "What Bessie saw on the Moor" last, chiefly because it is too suggestive of the less happy parts of *Alice in Wonderland*.

*A Fair Exchange* seems to be a first venture, and, though but a single volume, scarcely contains material enough to fill out

even that moderate bulk. There is just what would make one of the shortest stories in one of the lighter monthlies, and it would read all the better for compression within those limits. But, so far as it goes, it is chatty and fairly readable; nor is there anything visible which makes it a critic's duty to warn the adventurer off the fields of literature.

RICHARD F. LITLEDAL.

#### SOME HISTORICAL BOOKS.

*Collectanea Genealogica.* Vol. I. By Joseph Foster. (Privately Printed.) Mr. Foster has undertaken a vast work. It is no vain boasting on his part when he calls it a "new departure" in genealogical science. The rubbish that has been written by professional pedigree-makers and received with gaping credulity by their dupes has brought the study of genealogy into unmerited contempt. No one can have any other feelings than those of pity and shame for the vain and light persons who fancy they raise themselves several steps on the social ladder if they can impose on the world a false pedigree showing how their forefathers fought at Agincourt or came over from Normandy with Duke William. That there must be, or have been, a good many of these absurd people is made clear to us by the number of entirely false or "doctored" pedigrees which are to be found in several of our books of reference. The fact, however, patent as it is to all, that there is much genealogical rubbish in circulation should not blind us to the truth that the honest study of family history is a most important pursuit. No one who possesses the genuine historical instinct can doubt this. Apart from all other reasons, it is especially needed from the circumstance that modern history is unintelligible without it. And if general history is ever to be written in a scientific manner, not as a mere collection of amusing tales, it will become more and more apparent that it must be based, in a great measure, on what we know of individuals and their intricate family relationships. We need not stop to point out that to the anthropologist accurate pedigrees give information as to facts of physical relationship which cannot be gathered from any other kind of statistics. Mr. Foster has realised these things clearly, and has devoted himself to the issue of what will, in time, be a vast storehouse of genealogical lore for the English-speaking peoples. His collections, though, in the form we have received them, bound in one volume, are paged according to subjects, so that the possessors can make each part into a complete book. The portion which is of the most direct importance, as almost all the knowledge which it furnishes is new, is the list of admissions to Gray's Inn. At present we have it only down to the middle of the letter B, but in turning over these few leaves several noteworthy facts have occurred to us. Whatever views we may have of the history of the English Church, we must all concede that Bishop Lancelot Andrewes was a memorable person therein. How many of us knew that he had at one time studied law? His name occurs in the list for the year 1590. Francis Bacon, afterwards Viscount St. Albans, was admitted on June 27, 1576. Mr. Foster promises us similar lists for the other Inns. When they are complete, biographical students will be in a position to trace the home and parentage of many persons who now come before us without any proved antecedents. The register of marriages in the chapel of Gray's Inn is also given as a supplement to the list. Next in interest, perhaps, comes Musgrave's well-known Obituary, reduced to alphabetical order, with the whole of the entries in the Westminster Abbey registers

added from the late Col. Chester's annotated imprint of the same which was issued some years ago by the Harleian Society. A similar catalogue of marriages from 1655 to 1880, compiled by Miss Ada O. Gardner, is also given. This last must have been a work of immense labour. We have tested it in many places, and have not come upon a single instance of inaccuracy. In the early part of the volume, which may be called the *Collectanea Genealogica* proper, there are several original pedigrees of much interest given—among others, that of the late Earl of Beaconsfield and of the Poet Laureate. A work of this kind grows in importance with every successive number. We sincerely trust that Mr. Foster may meet with sufficient encouragement to enable him to carry out all the lists which he has begun to their completion, and to give us some of the many others which he has conditionally promised.

*Claimants to Royalty.* By John H. Ingram. (David Bogue.) Mr. Ingram has compiled an amusing book. It has no claims to be a serious contribution to historical science, for authorities are rarely quoted, and when they are it is commonly in such a vague way that the reference is almost useless. History may, however, be read for more than one purpose; it is entertaining as well as instructive. We believe all who read these pages will derive pleasure from them. The claimants to royal honours have been legion. Mr. Ingram does not notice nearly all of them, though he begins with the tale told by Herodotus about the false Smerdis, and ends with the Counts of Albany, the last of whom died only eighteen months ago. One cannot but wish that Mr. Caxton's "History of Human Error" were a reality, not the mere dream of a novelist, that we might have discussed at length the curious relations that exist between popular belief and mere hardened assertion. It has been affirmed that in the Middle Ages anything and everything that men told with a grave face was received without question. This is somewhat of a calumny, but it has a massive foundation of truth. Were the ages of faith, however, singular in this respect? Recent proceedings in our own law courts and the modern chapters of Mr. Ingram's book show that many of our contemporaries in all ranks of life are in the same intellectual condition as their forefathers who believed in the false Baldwin of Flanders, in Lambert Simnel, and in Perkin Warbeck. Education, though we are led to believe that its methods have improved of late, certainly does not impress on men and women the duty of rejecting such things as do not come before them with sufficient evidence, neither does it, except in rare cases, give any adequate means of distinguishing the false from the true. The foreign part of Mr. Ingram's book is more interesting than the English. This is due to the fact that we have, except in the reign of Henry VII., been but little troubled with these impostors. In any future editions, Mr. Ingram should give a place to the false Prince of Wales, Cornelius Erings, Evans, or Evins, who deluded the men of Sandwich in May 1648. He will find the details in Boys's History of that port and Carter's History of the Colchester Rising. About Whitsuntide this person arrived at the Bell Inn, in Sandwich, and, sending for the mayor and jurats, told them that he was the Prince. They seem to have believed him at once. One foolish gentleman gave him a good horse, another presented him with a hundred pounds. Many persons came daily to kiss his hands, and he was attended wherever he went with a guard of musketeers, and had trumpets sounding when he dined. A Scotch knight who denounced him as an impostor was at once thrown into prison "for his treason." It is probable that he might have raised a strong

party had he not been a man of drunken habits. This seems to have disgusted some of his believers. Perhaps they remonstrated. Somehow or other the fellow got alarmed, and fled into the Isle of Thanet, where he was captured by the Parliamentary authorities.

*Beverley's Roll of Honour:* being Sketches of the Worthies of Beverley. By Edmund Wigglesworth. (Beverley: Green.) Mr. Wigglesworth has compiled a little volume which will prove interesting to townsmen of Beverley and East Riding men generally. He does not pretend to have discovered new facts, but he has given us much of the old in a picturesque manner. These biographical sketches first appeared in the *Beverley Guardian*; and, judged from the standpoint of the provincial newspaper, they are praiseworthy. Of the earlier Lives in the book little need be said. All is known that ever can be made out as to St. John of Beverley, Archbishop Thurstan, and St. William of York. The sketches here given are very short. The life on which the greatest care seems to have been expended is that of Bishop (Cardinal) Fisher, who was the son of a Beverley mercer—a wealthy man, it would seem, whose sons were all provided with education. Mr. Wigglesworth seems to us to view the murdered bishop's character from the point of view of a sincere Roman Catholic; but Fisher's life, seen from any possible angle, stands out as a very noble one. We apprehend that, as long as the adjectives good and bad continue to have definite meanings, the imprisonment and execution of Fisher will be regarded by those who know the circumstances as highly criminal. There are some interesting notes on the lives of ministers ejected by the Bartholomew Act, but we believe they are all of them compiled from well-known Puritan sources. We do not wish to carp at a book which is calculated to give both amusement and instruction, but Mr. Wigglesworth should really be more careful in the statements he culls from his authorities. He must learn that all printed matter is not of equal worth. We cannot guess whence the statement comes, but it is, we assure him, pure nonsense to talk of St. John of Beverley, who was a pupil of St. Hilda of Whitby, studying at Oxford and graduating as M.A. and D.D. It is, perhaps, not quite so bad, but it shows an equal want of perception of the relations of things in past times, to speak of the majority of a chapter who elected a twelfth-century bishop as "his constituents." We certainly have no desire to join with Mr. Froude in praising Henry VIII., but Mr. Wigglesworth need not paint his character blacker than nature. Henry, whatever his secret thoughts may have been, was always desirous of appearing to the world as a God-fearing man. We are quite sure he never would have "boasted," as our author tells us he did, "that he never spared man in his anger or woman in his lust." This has often been said of him, by whom first we know not, but it is absolutely certain that he was far too politic to say it of himself. It is also a mistake to talk of Episcopalian clergy being expelled from their churches "by the *ipse dixit* of Oliver Cromwell." The thing is impossible. That much cruel injustice happened we do not doubt, but it is an assured fact of history that these sufferers were ejected by Parliamentary Commissioners specially appointed for the purpose of examining their lives and teaching.

*The Court of the Honour of Peverel in the Counties of Nottingham and Derby.* By John T. Godfrey. (Nottingham: Derry.) Mr. Godfrey has compiled a useful account of this very ancient feudal franchise, which seems to have existed from the Norman Conquest until it was abolished by Act of Parliament in 1849.

As it was provided by the Act of abolition that the records of the court should be placed under the custody of the Master of the Rolls, they are probably now in the Record Office; and it is to be regretted that they have not been used for the present work. As far as Mr. Godfrey goes, however, his work is thoroughly satisfactory. We have detected no errors, and have come upon several things that were new to us. Some people think that churches were never used for secular purposes before the Reformation. An instance to the contrary is given by Mr. Godfrey. It appears that previous to 1316 the courts of this honour were held in the Chapel of St. James at Nottingham. The pamphlet contains a list of the high stewards, among whom were several members of the family of Eland of Algarthorpe. Lord Goring, afterwards Earl of Norwich, filled this post during the civil war of the seventeenth century.

*History of the Present Deanery of Bicester, Oxon.* By J. O. Blomfield. (Parker.) This is a sketch of the geology and the early history of the district around Bicester, which Mr. Blomfield intends to continue by separate histories of the twenty-eight parishes included within the deanery. The Roman camp at Allchester, about two miles south of Bicester along the Roman road which runs to Dorchester on the Thame, is described and a plan given; but no new identification of the name is proposed, nor any attempt made to decide between the conflicting opinions of previous students. The author does not seem to be aware of the identification of this station with Lactodoro, in the second and sixth journeys in the Antonine Itinerary, lying as it does between Bannavenna and Magiovinio, which fit very well with Banbury and Aylesbury. The Domesday survey of the whole district is tabulated and discussed, and a list of all the churches given, with their styles of architecture. It is to be presumed that a detailed account of each church will follow under its respective parish. From a desire for conciseness, Mr. Blomfield is occasionally obscure, or appears so to those who are not so well informed as himself. Why is it plain that Chilgrove was distinguished as known to and occupied by the Romans, from the English giving it the same name as they gave to so many places of Roman occupation? It certainly is not plain, unless some connexion between the name Chilgrove and the Romans is made out. Again, Mr. Blomfield may be perfectly right to conclude that the fact of finding three skeletons in one barrow tells of three distinct periods of local history; but why should the reader not be informed of the exact circumstances, so as to draw his own conclusion?

*John Howard's Winter Journey.* By W. A. Guy. (De La Rue.) This short sketch of the public work of John Howard is not remarkable for excellence of arrangement, but Dr. Guy's enthusiasm for his subject would impart interest to a much inferior volume. Howard has often been reproached for the defects of his domestic life, and Dr. Guy endeavours to show that he has been blamed without sufficient reason. If he has not proved the existence of any sympathy between father and son, he has at all events shown that the philanthropist did not neglect his duties to his boy. A small Appendix contains some additional particulars on the son's weakness of intellect. On those points, black fever and gaol distemper, which Dr. Guy has especially studied, he supplies some interesting information. Perhaps the most attractive pages are those which describe the changes wrought by Howard in the Bedfordshire village of Cardington, and the appearance of its church and cottages at the present time. Dr. Guy has not yet learnt that it is undesirable, in discussing a question of sanitary science, to insert allusions to current politics; but the readers of his

treatise can easily avoid such passages. With one or two exceptions of this kind, the pamphlet contains nothing to offend and much to please.

*Essays on Various Subjects, chiefly Roman.* By Mgr. Seton, D.D. (New York: Catholic Publication Society.) Mgr. Seton is an American Ultramontane clergyman, but he is also a scholar and a man of refined instincts. These essays, we believe, were originally issued in an American newspaper. It speaks well for the press of the New World that scholarlike papers of this kind should find many readers. There is scarcely a passage in them that can reasonably give offence, and much that will instruct. We know far more of the history of Papal elections and of the office of cardinal than we did before reading Mgr. Seton's pages. The paper on Scanderbeg is excellently done. He was a great patriot and a supreme master of mountain warfare. When dwelling on the horrible atrocities of the Moslem, it would not have been out of place to point out that Scanderbeg's forces were not without reproach. There is an amusing love for rank, high birth, and the scenic display of mediaeval life which is characteristic of a certain tone of American thought.

A PRIVATELY printed work, just issued, entitled the *Genealogy of the Surname Yarker (from the Conquest to the Present Time)*, is a curiosity in pedigree literature. The author, apparently in all seriousness, has applied to the spirits, through the medium of "a good clairvoyant," for the decision or confirmation of knotty points in his family history. The chapter containing the "curious details" furnished by the clairvoyant are at least amusing, even if the information in connexion with early Yarkers may not be accepted by the sceptical.

#### NOTES AND NEWS.

WE hear that the volume of *Selections from Lancelotti*, which Mr. Sidney Colvin has been editing for Messrs. Macmillan's "Golden Treasury" series, is now through the press, and will be published almost immediately.

THE Earl of Crawford and Balcarres has lent Mr. Furnivall—for reproduction in the series of Charlemagne romances of the Early-English Text Society—his unique copy of Sir Johan Bouchier, Lord Berners's englisht "boke of Duke Huon of Burdeux," printed by Robert Redman about 1535. To M. Gaston Paris is due the suggestion that this Boke should be included in the series. It will be edited by Mr. Sidney S. Lee, of Balliol College, Oxford. Of the second edition no copy is known; but of the third there are two, in the Bodleian and British Museum. This third professes to have "the rude English corrected and amended," which means that in the first chapter Lord Berners's simple and manly style is quite spoilt by Elizabethan affectations; and, in later chapters, many of the old racy words are changed. The collation of these will show what terms the euphuist of the day thought "rude," and what "picked" and "spruce" enough—as Shakspeare's *Pedant* says—to take their place.

MR. JAMES GREENSTREET intends to publish, by subscription, an autotype facsimile of the important and little-known schedule of Lincolnshire landowners compiled in the reign of Henry I. This unique list of names is now preserved among the Cottonian MSS. in the British Museum. It furnishes a very fine example of the calligraphy of the period, one almost totally devoid of record evidence.

ON July 5 a sale will be held at the late D. G. Rossetti's house (16 Cheyne Walk) of the greater part of its contents. The pictures, sketches, &c., by Rossetti himself are alone

reserved for a special sale later in the year. A few of the books have, we understand, been already disposed of; but many still remain, as well as a large and curious collection of furniture and decorative objects. The house, we may add, is itself of historic interest, being the oldest in Cheyne Walk, and the one described by Thackeray in *Esmond*.

THE Earl of Beauchamp will receive the members of the Folk-Lore Society, of which he is president, at his residence, 13 Belgrave Square, on Friday next, June 30, at 4 p.m., after which (at 4.30 p.m.) the annual meeting of the society will be held.

THE Browning Society are glad to be able to announce that three or four professionals are kindly giving their services for the performance of the musical part of the programme arranged for Friday, June 30. Mr. John Bridson will sing the solos in the settings of "Cavalier Songs" by Mr. C. Stanford, organist of Trinity College, Cambridge.

WE hear that the Princesses Louise, Victoria, and Maud of Wales have enrolled themselves as members of the Humane Society which was established in connexion with *Little Folks* at the commencement of the present year, and now numbers nearly 12,000 officers and members.

THE Rev. T. Teignmouth Shore has in the press a volume entitled *St. George for England, and other Sermons to Children*, which will be published at the end of this month by Messrs. Cassell, Petter, Galpin and Co.

OUR readers will be especially interested in the forthcoming number of *Harper's Magazine* by a paper in which Miss Amelia B. Edwards gives a comprehensive account of the Egyptian "find" already described in her letters to the ACADEMY, aided by a great number of carefully drawn illustrations. The same number will also contain a paper on Emerson, by Mr. Julian Hawthorne, with full-page portrait; and an article, entitled "Glimpses of Great Britons, caught at Westminster," in which Mr. H. W. Lucy, of the *Daily News*, endeavours to explain to newspaper readers the intricacies of Parliamentary procedure. The illustrations to this paper include a portrait of Lord Beaconsfield on his last visit to the House of Commons, drawn by Mr. Harry Furniss.

MESSRS. HURST AND BLACKETT will shortly publish two new three-volume novels—*Daisy Beresford*, by Catherine Childar, author of *The Future Marquis*; and *The Merchant Prince*, by John Berwick Harwood, author of *Lady Flavia*, &c.

WE hear that the third divisional volume of the *Encyclopaedic Dictionary*, by Dr. Robert Hunter, will be published by Messrs. Cassell, Petter, Galpin and Co. in July.

AT the meeting of the Library Association of the United Kingdom on June 2, Count Ugo Balzani and Prof. Carl Dziatzko were elected honorary members.

AT the last meeting of the Royal Irish Academy, the president, Sir Samuel Ferguson, read a letter from the Earl of Charlemont, accompanying and explaining his gift to the Academy of twenty-three volumes of MSS. of his grandfather, the first Earl of Charlemont, and the first president of the Academy. Of these, seven are in folio, containing original literary works of the Earl—an autobiographical account of his political life, an essay towards the history of Italian poetry attempted in translated specimens, travels in Turkey, the Levant, and Greece, and verse translations from Italian, French, Latin, and Greek. Sixteen volumes are in quarto, consisting mostly of original letters. One, however, contains copies of two letters addressed by the Hon. Robert

Stewart (Lord Castlereagh) to his step-father, Lord Camden. They are dated from Spa and St-Germains in September and November 1791, and give the writer's views about the French Revolution, then only beginning. Their historic interest is great, and is enhanced by the fact that nearly all Lord Castlereagh's private papers were lost at sea in 1829.

FROM the report of the seventy-second annual meeting of the Swedenborg Society it appears that much activity is being shown in the translation and circulation of Swedenborgian literature. Grants of books have been made to several public libraries and societies in this country, to the ministers of the Dutch Reformed Church in South Africa, and to the University of Tokio. Copies of Mr. Pandurung's *Reflections* in the Marathi language are being widely circulated in India; and the price has been reduced of the Polish translations of the *Heaven and Hell* and the *Divine Providence*.

THE death is announced, at Turriff, in Aberdeenshire, of Mr. Alexander Leslie, the translator of Baron Nordenskiöld's *Voyage of the Vega*. Mr. Leslie had also made other translations from the Swedish; and in 1879 he published a volume describing the Arctic voyages of Nordenskiöld from 1838 to 1879. He died on June 14, at the age of about fifty-seven years.

MR. HENRY GRAY, of Manchester, has sent us his Catalogue of books, views, &c., relating to Essex, Lincolnshire, Norfolk, and Suffolk, which forms a bibliography of no little value for the Eastern counties. He promises a similar Catalogue for the Midland counties in July.

CORNELL UNIVERSITY now possesses a *Library Bulletin* similar to that at Harvard, consisting of a record of the principal accessions, with notes and bibliographical appendices. Among the latter, brief lists of books relating to the German civil services and to Petrarch, drawn up by the librarian, Prof. Willard Fiske, have already appeared.

THE May number of the *Magazine of American History* gives a portrait of the Chevalier de La Salle, the discoverer of the mouths of the Mississippi in the latter half of the seventeenth century. La Salle was a native of Rouen; and the accompanying article is written by M. Gabriel Gravier, of that city, honorary president of the Norman Geographical Society.

THE second volume of the correspondence of George Sand was issued in Paris this week (Calmann Lévy), covering the period from 1836 to 1847. Among the most interesting is one addressed to Lamennais in 1837, when she was publishing in his paper—the *Monde*—her "Lettres à Marcie." In it, while stating her own opinions upon the question of divorce, she leaves herself entirely in his hands. Later, are two letters describing her visit to Majorca, in company with Chopin, in December 1838; and also a very characteristic one to Mazzini.

THE two most recent additions to the popular class of French novels that treat of "actualities" are *Défroqué*, by M. Ernest Daudet (Plon), and *Dinah Samuel*, by M. Félicien Champsaur (Ollendorff). The former opens in the Tuileries under the Empire, and closes in a Sardinian monastery; the latter introduces several hundred people well known in the society of Paris.

THE Belgian Geographical Society has received authority to take the title "royal." Founded as recently as 1876, it now counts 1,100 members, of whom 475 belong to the army.

M. QUANTIN has just published a translation of the well-known Japanese tale of *The Forty Ronins*, by M. Gausseron, with numerous illustrations by Kei-Sai Yei-Sen, of Yedo.

WE learn from *Le Livre* that the immense collection of notes, historical and literary, left by Edouard Fournier will not be lost to learning. One portion of them, now in the Bibliothèque de l'Arsenal, have been classified and bound up in twenty volumes by M. Paul Lacroix. Another portion, dealing specially with the history of Paris, have been acquired for the city library, where they will form fifteen volumes, arranged by M. Jules Cusin. A third portion, relating to the history of ballads in all countries and at all times, had been reserved for the late Baron James de Rothschild, and they will now probably be placed in one of the public libraries. The collection of notes upon the history of signs will also find a home in the Bibliothèque de l'Arsenal as soon as Fournier's own posthumous work on the same subject shall have been published by M. Dentu.

THE University of Bern has 441 students and "Auskultanten" during the present summer semester, including thirty female students. They are divided among the different faculties as follows:—Evangelical theology, 39; Old Catholic theology, 10; law, 122; medicine, 158; philosophy, 79; veterinary science, 33.

AN extract of a letter written by Mr. Browning to Mr. W. G. Kingsland in 1868 on the charge of obscurity may interest our readers:

"I can have little doubt that my writing has been in the main too hard for many I should have been pleased to communicate with; but I never designedly tried to puzzle people, as some of my critics have supposed. On the other hand, I never pretended to offer such literature as should be a substitute for a cigar or game at dominoes to an idle man. So, perhaps, on the whole, I get my deserts and something over—not a crowd, but a few I value more."

#### GERMAN JOTTINGS.

DR. ALOIS BRANDL is writing a book on Coleridge, tracing the influence of Herder and other German authors on him, and his influence on the writers of his time and those who succeeded him. He has unearthed from the *Times* of 1811 its report of Coleridge's fourth lecture on Shakspeare, of which Mr. J. P. Collier had lost his notes when he published Coleridge's Shakspeare Lectures, and has collected a good many odds and ends new to most Coleridge readers.

DR. BERNHARD WEISS, professor at Berlin, has just published vol. i. of a new "Leben Jesu," which claims to be at once critical and in accordance with traditional views of the person of Christ. Dr. Weiss's article on "Recent Lives of Christ" in the *Contemporary Review* some years back will be in the memory of some readers, and his reputation as a textual critic and interpreter of the New Testament is assured among all critical students. He is also thoroughly at one with liberal critics on the necessity of a rigorous analysis of the sources, distinguishing between the more and less trustworthy traditions.

PROF. AD. MICHAELIS, pro-rector of the University of Strassburg, has printed (Strassburg: Trübner) the address which he delivered last month on the occasion of the tenth anniversary of the foundation of the Kaiser Wilhelm University. From it we gather that this youngest of the German universities now has 104 professors, 825 students (of whom 216 are natives of Alsace or Lorraine), and a library of 525,000 volumes.

HERR ERNEST BECKER, a pupil of Prof. W. Oncken, of Giessen, has issued, as the first part of a series of "Giessener Studien," an elaborate treatise upon Mary Queen of Scots,

Darnley, and Bothwell, in which he upholds strenuously the innocence of Mary.

THE *Altpreussische Monatsschrift* of Königsberg, edited by Reicke and Wichert, is now publishing in its monthly numbers a fragment of a work by Kant never before printed, entitled "Uebergang von den metaphysischen Anfangsgründen der Naturwissenschaft zur Physik." It is stated that there is no intention of issuing the work as a separate volume.

A NEW part of Grimm's Dictionary has just appeared, compiled by Dr. M. Lexer. It comprises the words from *Nachtigallstrauch* to *Narrenwerk*.

THE committee appointed in 1863, at Eisenach, for the revision of Luther's translation of the Bible has held its last meeting at Halle; and there is every prospect that the revised version will soon appear. Out of the thirty original revisers, sixteen have died since the work began. No alteration of Luther's translation has been admitted unless sanctioned by two-thirds of the committee. The next step will be the publication of the text, as now revised, in order to submit it to the judgment of the theological faculties in the universities and to the criticisms of scholars. After their remarks have been received and considered, the new version will be recommended for adoption to all Protestant churches in Germany.

THE number of periodicals in Germany devoted to the French language and literature has received yet another edition in the *Gallia* or "kritische Monatsschrift für französische Sprache und Literatur" (Leipzig: Ehrlich), which is edited by Dr. Ad. Kressner, of Cassel.

DR. WAGNER is preparing an edition of the Early-English Visions of Tundale.

#### ACKNOWLEDGMENTS.

WE have on our table the following new editions and reprints:—*The Bibliographer*, Vol. I., containing the numbers from December 1881 to May 1882 (Elliot Stock), which we have noticed from time to time on their appearance; *The Antiquarian Magazine and Bibliographer*, edited by Edward Walford, Vol. I., January to June 1882 (William Reeves and T. Fisher Unwin); *The Sunbeam Library*, Vol. I., containing Lady Brasse's "Voyage in the Sunbeam," Wood's "Strange Dwellings," and Hartwig's "Arctic Regions" (Longmans); *The Faiths of the World: a Concise History of the Great Religious Systems of the World*, being the second series of "St. Giles' Lectures" (Blackwood); *A Bibliography of Robert Browning, from 1833 to 1881*, compiled by Frederick J. Furnivall, second edition, enlarged, including Mr. Nettleship's Classification of Browning's Poems (Trübner); *Through America; or, Nine Months in the United States*, by W. G. Marshall, illustrated with photographs, new and cheaper edition (Sampson Low); *Specimens of Early English*, a new and revised edition, with Introduction, Notes, and Glossarial Index by Dr. R. Morris, Part I., from "Old-English Homilies" to "King Horn," A.D. 1150-1300 (Oxford: Clarendon Press); *Modern Physical Fatalism and the Doctrine of Evolution*, including an Examination of Mr. H. Spencer's "First Principles," by Prof. T. B. Birks, second edition, with a Preface in reply to the strictures of Mr. H. Spencer by Prof. O. Pritchard (Macmillan); *Handbook of Heraldry*, with instructions for tracing pedigrees and deciphering ancient MSS., rules for the appointment of liveries, &c., by John E. Cussans, third edition, with upwards of 400 illustrations (Chatto and Windus); *Fairy Legends and Traditions of the South of Ireland*, by T. Crofton Croker, a new and complete edition by T. Wright, with illustrations by

Maclise and Green (Sonnenschein); *Mitslav; or, the Conversion of Pomerania*, a true story of the shores of the Baltic in the twelfth century, by the late Bishop Milman, with map (S. P. C. K.); *Wholesome Houses: a Handbook of Domestic Sanitation and Ventilation*, by E. Gregson Banner, new and revised edition, with a chapter on ventilation of rooms and railway carriages, illustrated with numerous engravings (Stanford); *The Principles of Colliery Ventilation*, by Alan Bagot, second edition, greatly enlarged (Kegan Paul, Trench and Co.); *A Treatise on Mathematics as applied to the Constructive Arts*, by Francis Campin, second edition, revised and enlarged by the author (Crosby Lockwood); *Pupil-Teachers' Mensuration Questions*, by W. T. Lawrence (John Heywood); *A Class-Book of Physical Geography*, with Examination Questions, and also *An Elementary Class-Book of Modern Geography*, both by William Hughes, new edition, revised by J. Francon Williams (George Philip and Son); *Baedeker's Rhine*, eighth remodelled edition (Dulau); *Locke's Essay on Human Understanding*, Book III., "Of Words," with Introduction and Notes by F. Ryland (Sonnenschein); *The Commercial Restraints of Ireland*, by John Hely Hutchinson, re-edited, with a Sketch of the author's Life, Introduction, Notes, and Index, by W. G. Carroll (Dublin: Gill and Son); *The Book-Hunter, &c.*, by John Hill Burton (Philadelphia, U.S.: Robert A. Tripple); &c., &c.

#### ORIGINAL VERSE.

ANGELO RIBELLO.

(A Venetian Study.)

I.

WIDE lucid eyes in cavernous orbits set;  
Aflame like living opals or the sea;  
Vibrant with floods of electricity;  
The soul projected in each fiery jet;  
This thy fierce fascination haunts me yet;  
And I have dreamed all Venice into thee;  
Her domes of pearl, her heaven's immensity,  
And superhuman saints of Tintoret.  
Hoarse-voiced art thou as Tritons of her brine;  
Swift as man-snaring murderous ocean shark;  
White as foam-wreaths blown over Lido's line;  
Stealthy as bats that skim those waves at dark;  
Storm-browed with curls of thunder; leonine  
As the winged guardian war-beast of St. Mark.

II.

Rebellious Angel! Were it mine, the skill  
Of those first Titans, Titian, Veronese,  
Or him the master mightier-winged than these,  
Thy Tintoret who reigns o'er Venice still;  
I would compel thee, by art's crucible  
Severing the soul's ore from gross earthly lees,  
To re-assume amid heaven's hierarchies  
Thy station, purged, pure, and of perfect will.  
A warrior angel, thou with those should'st stand  
Who guard our Lady round her throne of light;  
And in thy puissant grasp a gleaming brand;  
And all about thy shoulders armour bright:  
But I would have thine eyes even as they are,  
Gazing from steel-clad brows, each orb a star.

J. A. SYMONDS.

#### A NORMAN-ENGLISH POEM OF THE THIRTEENTH CENTURY.

IN [the last number of *Romania* (No. xi.), M. Paul Meyer, of the Collège de France, gives his looked for "Notice et Extraits" of the old French poem of the thirteenth century discovered by him at Cheltenham last year, as noted in the ACADEMY at the time. It is of far greater interest for English scholars than most early French poems, for it contains the detailed biography of William Marshall Earl of Pembroke, and Regent of England during the first three years of the minority of Henry III. With that great baron and wise man as the

central figure, it opens with an account of his father, John Marshall, comprehending many particulars about this strong partisan of the Empress Mathilda that were hitherto unknown; about his two wives, about his doings at the sieges of Winchester in 1141 and Newbury in 1152. At the siege of Newbury the young boy William first appears on the scene, giving rise to a touching narration by the poet of King Stephen's behaviour. Through the highly varied events of a long life the poet follows his hero, the favourite knight of the younger Henry, the valiant defender of Henry II., the man trusted with high employ under Richard I. and John, finally the "rector regis et regni" of 1216. An actor in and passing through great scenes, their history was also his history; and in the narration of these (as, for instance, the circumstances attending the pathetic death of Henry II., or the close of his own life) fresh details and incidents are put before us by a poem which is independent of, and apparently owes nothing to, other Chronicles or Histories of the period. The work is placed very high in the ranks of early French literature, and, should further examination fulfil the promise of authority already given, it will prove a rare combination of literary and historical value. The poem itself furnishes data for its origin and composition which, while they may account for certain anachronisms, bear evidence to its general truth and accuracy. It was written by order of William, the eldest son of the Regent, the materials for a considerable part having been supplied by John of Erly (in Berkshire), a trusted friend, eye-witness of many of the events; his prose narration, supplemented by other information, was, in M. Meyer's opinion, put into verse by a skilled Court *trouvère*, accustomed to the pen, who very probably had himself witnessed much of what he described in the capacity of herald. The poet's name may be conjectured but not yet surely stated; that he was English in sympathy, though Norman-French by birth, is more certain; the date when the greater part of the poem was composed is limited by various events narrated to some time between the years 1223 and 1231. John of Erly is still living in the last lines; it is known, by an entry on the Fine Rolls, that he was dead by 1231.

The "Notice" does not profess to exhaust all points of critical examination and research, but it is evident that the work will be indispensable to the future historian for the twelfth century in England; and we trust that M. Meyer may be enabled to put his find into print *in extenso*, for the benefit alike of English and French scholars.

#### SUMIR AND ACCAD.

[The following letter, addressed by M. J. Halévy to a friend in England, has been sent to us for publication:—]

Paris: June 5, 1882.

I thank you for having sent me a copy of the ACADEMY for May 20, and for having drawn my attention to the article by Dr. Hommel headed "Sumir and Accad." You ask my opinion upon the facts there brought forward, and you invite me to explain them from my point of view—according to which the texts called Sumerian or Accadian do not represent a real language of non-Semitic origin, but only an artificial mode of writing based upon the Semitic Assyrian. I hasten to satisfy your natural curiosity, and I hope to prove to you that the Assyriologists have gone upon a wrong track in the interpretations they have hazarded of these texts.

But before I enter upon the main subject, allow me to show that the credit of having been the first to distinguish the different modes of writing in the Accadian texts belongs, of right,

to my learned friend Prof. Sayce. In several letters which he wrote to me in 1875 Prof. Sayce accurately pointed out these differences, with the object of establishing the linguistic position of Accadian. I then maintained, as I maintain still, that these differences were simply a matter of writing. Prof. Sayce has wisely dropped the subject. But it was taken up about three years later by M. Lenormant, who based upon the slight materials referred to the existence of two Accadian dialects, which correspond to the two ideographs read by him as *eme-ku* and *eme-sal*, and interpreted by him (in agreement with M. Oppert) as "the language of the nobles" and "the language of the women." I will point out to you presently the many mistakes involved in this theory. Finally, in 1880, Dr. Paul Haupt, after studying and classifying the various differences in question by the light of several unpublished tablets, thought he had discovered that the dialect known first ought to be called Accadian, and the new dialect Sumerian. And now Dr. Hommel comes forward to say that the former, the *eme-ku*, is the Sumerian, and the latter, the *eme-sal*, is the Accadian. Such is the part of each of the above-mentioned Assyriologists in this famous discovery—a discovery correct in itself, but which could not have been worse misinterpreted. That I am not exaggerating you shall read and judge for yourself.

The fundamental error consists of the assumption, admitted as an axiom by all these scholars, that the words "Sumir and Accad" designate two languages or dialects, whereas in fact they are a collective expression for the whole of Babylonia—a geographical and not a linguistic term. Sumir and Accad are simply two ancient cities which were the capitals of the earliest Babylonian dynasty; later, the names were applied to comprehend the entire country. The kings of Babylonia styled themselves "Kings of Sumir and Accad," just as the kings of Susiana styled themselves "of Ashan and Shushan" and the kings of Saba "of Saba and Raidan." In Hebrew, likewise, the name of Babylonia is Shinar, meaning "two cities" (*shent-ir*). To assign to "Sumir and Accad" the meaning of certain languages is like taking the Peiraus for a man. Besides, if these words did mean two nations and their two dialects of non-Semitic origin, what, then, was the name of the nation and its Semitic language which, even in the view of the Assyriologists, finally became supreme in Babylonia after the sixteenth century B.C.? I am surprised that these scholars have not met this difficulty before plunging into wild speculations.

The identification of the words *eme-ku* and *eme-sal* with Sumir and Accad equally involves numerous errors, of which I will mention the chief:—

1. *Eme-ku* and *eme-sal* have nothing whatever to do with Accad. They are both of them equivalents for Sumir, so that the theory of the Assyriologists results in this absurdity—that the Sumerian language is sometimes rendered "the language of the nobles," and sometimes "the language of the women and of the slaves."

2. The two words in question ought to be transliterated *ka-me-ku* and *ka-me-sal*, and not *eme-ku* and *eme-sal*. It is thus that they are always written in the cuneiform texts. The element *kame* is phonetic, as proved by the variant *kami* (*W. A. I. iv. 38, 35 b*). Here the element *ku* is read *tu*, so that the complete word would read *kamitu*, which is simply an Assyrian synonym for Sumir (*W. A. I. ii. 25, 51 e*). The form *kame-sal* may similarly be resolved into *kame* + the feminine suffix = *tu*; so here again we have *kamitu*. Therefore, to translate these words as "language of the nobles" and "language of the women" is a blunder from first to last.

You will now at once understand how idle it is to enquire whether Accad means the north of Babylonia and Sumir the south, or the reverse, the truth being that both Accad and Sumir are alike applicable to the whole of Babylonia. Indeed, Accad is often found by itself meaning Babylonia. A province called Sumir never existed, still less a Sumerian language. As I have said above, the hieratic mode of writing used by the Assyro-Babylonians, who were a Semitic people—and we know no other inhabitants of Babylonia—was able to express the same word in more than one way. For example, the city of Babylon is itself figured in various ways—as *tin-tir*, "life of the orchard;" *ka-dingir*, "gate of god;" *shu-an-na*, "divine region;" *e-ki*, "place of the canal"—all these groups being so many metaphors to express the true Semitic name *Babilu*.

The explanation of these variants is simple. Take the Assyrian word *nirgal*, "strong, powerful," corresponding to the Armenian *ragol* and the Hebrew *geber*. It may be written hieratically either as *ner-gal*, "great lord," or as *ner-ik* (= *gal*), "power that possesses," or as *sher-gal*, "great king," or, finally, as *sher-ma* (= *ga*)-*al*, likewise "great king." It is not a question of the pronunciation of different dialects, but merely of the employment of different signs (of similar sound or similar sense) to represent one and the same word. And this is proved by the fact that the change of *m* into *g*, and of *n* into *sh*, is not possible in any language. We find also *ba* as a variant for *da* or *ga*, *ga* for *da*, and *ta* for *na*. To admit that *b* could be changed now into *d* and now into *g* is absurd; and equally absurd to admit that the sounds *g* and *t* could become *d* and *n*. In fine, the question is one of a play upon words, and has nothing to do with the diversity of pronunciation in dialects.

Such, then, is the interpretation of what the Assyriologists have strangely confused through failing to recognise the true character of their so-called Accadian or Sumerian system. That one blunder leads to another is especially true in the case of "Accadism," which is sinking deeper and deeper into speculations that have passed all reason. The mischief is that these lucubrations discredit Assyriology in the minds of eminent Semitic scholars, such as MM. de Goeje, Nöldeke, J. Biting, and several others who, without any special acquaintance with Assyrian, possess a critical knowledge of the kindred languages. I do not undertake to open the eyes of those who won't see. I content myself with protesting against an unscientific method which prevails in one of the most interesting departments of Semitic epigraphy. All I can hope to do is to recommend caution to those liable to be misled by the consensus of Assyriologists. That consensus, fortunately, is no longer complete. For my part, I shall not cease to cry out *caveant consules*!

## CORRESPONDENCE.

WAS ROGER OF MONTGOMERY AT SENLAC?  
Derby House, Eccles: June 18, 1882.

A letter dated from Somerleaze is always attractive reading not merely from a certain breeziness which naturally pervades its phrases, but from the fact that it is sure to contain a good deal more than mere phrases. In your last number Mr. Freeman takes exception to some conclusions I advanced in the second of a series of papers written for the *Palatine Notebook* on the famous family of Montgomery, in which I am trying to trace the fortunes of that family from its earliest mention to the date when it ceases to have interest for Lancashire topographers.

I must in *limine* disclaim having been the originator of the notion to which Mr. Freeman objects. The credit of suggesting that Roger of Montgomery was not present at Hastings, if credit there be, is due to the late Mr. Planché. My only claim is to have reached the same conclusion by a different route, and perhaps to have stated the case more fully than he did. The difficulty which arrested my own attention may be briefly explained. After the Battle of Hastings the Conqueror rewarded Roger of Montgomery with a generosity that was natural, for he was not only one of his most powerful nobles, but also one of the most

faithful. The tale of his manors occupies, as is well known, a considerable space in Domesday. When we turn to his sons we find in that record that, among the tenants in capite, Hugh, the eldest, is merely mentioned as owning a house at Stafford; Robert is not named at all, nor are, I believe, the younger sons, Arnold, Philip, or Everard. The third son, Roger, on the other hand, occupies a most conspicuous position in the great Register. The number of his manors and the wide extent of his possessions, as there recorded, more than rival the list of his father's lands. He had estates not only in Yorkshire and Cheshire, but also in Derbyshire, Nottinghamshire, Lincolnshire, Norfolk, Suffolk, and Essex. The profuseness and bounty with which the Earl of Arundel's third son was thus rewarded in his father's lifetime are assuredly very puzzling indeed when we remember William the Conqueror's policy in such matters.

The Conqueror was essentially a man of business. The people he selected for generous rewards were either relatives who had close ties of blood with him, or those who had done him good service before the invasion or at the great battle. We shall search the chronicles in vain for any mention of Roger of Poitou having helped the Conqueror in any special difficulty. Under these circumstances, I was driven to the conclusion that he must have played his part bravely at Hastings and thus earned his reward. If he had shown special soldierly qualities there it would further account for his chief estate having been on one of the dangerous Marches where William generally planted his best men.

On turning to the authorities I found that the most important in every way, William of Poitiers, in describing the Battle of Hastings, never mentions Roger of Montgomery as being present, a fact which Mr. Freeman, with his characteristic fairness, allows is most significant. I then turned to Orderic Vital, whose narrative is so full of incident and curious information, and whose very close ties with Earl Roger (in whose service his father was, he himself having been a *protégé* of the family) make him the best of historians for the fortunes of his patrons. Not only does he not mention Earl Roger's presence at Hastings, but he distinctly tells us he was not there. The phrase "*dum ad bellum transmarinum proficisceretur cum sua conjuge dimiserat*" assuredly does more than *imply*, as Mr. Freeman puts it; it expressly states that *while* William set out on his war beyond the sea (which could be no other than the campaign of 1066) Roger was left at home with his wife Matilda. Again, it is very significant that Benoit de St. Maure—to whom Mr. Freeman does not refer in his note, and whose poem contains so much graphic detail about the battle—should omit any mention of Roger of Montgomery's presence there. Lastly, I quoted the lists of the Conqueror's companions as contained in the "*Battle Abbey Roll*," &c. Of course these lists are most corrupt and most sophisticated. If they had not been so they would be roll calls from which there could be no appeal. I quoted them, and surely with every reason, only as subordinate evidence of tradition and general reputation. The absence of such a conspicuous name as Roger de Montgomery from lists whose chief blot is not their scantiness, but their too great fullness, is *pro tanto* not unimportant evidence.

On turning to the other side we have an ambiguous sentence in the late and inaccurate continuation of William of Jumièges by the Abbot of Mont St. Michel; and we have the passages in Wace, whose delightful poem it would be presumption in me to praise either in regard to its vigour or its interest, but who is a late authority, a contemporary and rival of Benoit of St. Maure, and who himself uses both

William of Poitiers and Orderic Vital. Of his work such a good authority as the late Sir Thomas Hardy says: "Some of his additions, however, have very much the air of invention;" and, again,

"As it appears from his prologue that it was the ambition of the Norman nobles to have their exploits celebrated, it may be perhaps suspected that he has occasionally invented what he had no means of knowing, and hence the detail of exploits of William's followers" (*Cat. Brit. Hist.*, &c., ii. 433). Mr. Freeman candidly admits some of Wace's mistakes, and notably the very interesting mistake, *à propos* of this discussion, of his having confused Roger of Beaumont with his son Robert. Lastly, Wace's knowledge of England and English affairs was, in all probability, *entirely* at second hand, since his life was passed on the Continent.

When we remember all these facts and weigh them fairly, it seems to me that the balance preponderates very greatly in favour of the view, which I have tried to maintain, that Roger of Montgomery was not present at Hastings; while it may be—and I only urge this tentatively as a solution of another difficulty—that his son, Roger of Poitou, was there. Any conclusion on the subject must be tentative, as so much historical conclusion is, and notably in those Mongolian wastes where I have passed so many dreary days, and where definite tracks are not so frequent as in the pleasant pastures in illustrating which Mr. Freeman's name stands pre-eminent.

Mr. Freeman says that Roger of Montgomery's sons could not have reached manhood in 1066. I don't know how this conclusion is arrived at. Orderic tells us Roger of Montgomery died six years after the Conqueror, and refers to him as the aged lord. His wife's uncle William was Bishop of Seez as early as 1035; while Roger of Poitou was certainly a married man at the time of the Survey, since he derived his name of Pictavensis from his wife, and it is exceedingly probable that he was given his great estates directly after the suppression of the Northern outbreak in 1069. Their extent and situation preclude the notion that he was then anything but a grown man, for in those turbulent times, and in his father's lifetime, it is most improbable that such a trust would have been confided to a boy. All this is in favour of Roger of Poitou having been grown up at the date of the battle.

Having told my tale, may I point a moral? It is certainly a wonderful proof of the patient, exhaustive, and conscientious research and accuracy of Mr. Freeman that, on a mere sidelight of his work, dealing with a question of local and family rather than imperial history, he should be found armed *cap-à-pie* and ready to receive every lance and to give an immediate counter-thrust. May I express the wish, felt by other students than myself, that he will not, as he hinted in his two recent volumes, make them the term of his well-known History? It would be an infinite loss to our literature if one so deeply learned in the minute doings of the eleventh and twelfth centuries were to break off his story at such an inchoate point as the death of William Rufus. No one but himself can give adequate life to the very interesting reign of Henry I. or arrange for us the chaotic period covered by that of Stephen; and it is greatly to be wished that he will not hold his hand till he reaches the great turning-point marked by the accession of Henry II., when English history took an entirely new departure. If he should notice this letter it will be very reassuring if he will give us a promise to continue his big book to its natural conclusion. If he will do so I shall await with comparative composure any blows of Thor's hammer that may be in store for me.

HENRY H. HOWORTH.

## GABRIEL PEIGNOT'S WORKS.

Oxford: June 20, 1882.

It may interest some readers of the ACADEMY to learn that the library of the Taylor Institution, thanks to the persevering efforts of its curators, has now succeeded in collecting the greater part of the numerous and various writings of Gabriel Peignot, who is still regarded as one of the most learned and fertile bibliographers of this century. Owing to the very limited number of copies which appeared in print, his works, always scarce, are now of great rarity and value. Pierre Deschamps, who has devoted an elaborate, special "Notice biographique et bibliographique" to Gabriel Peignot (Paris, 1857) enumerates ninety-six different writings (comprising chiefly bibliography, philology, literature, biography, history, and archaeology), and adds a considerable list of unpublished works left in MS. Considering Peignot's great learning and modesty, his aptness to acknowledge the merits of others, his antiquarian spirit and the attractive way in which he knew how to popularise bibliographical science, Deschamps, in the above treatise, ranks him among "the last descendants of those great bibliographers who flourished during the seventeenth and eighteenth centuries."

H. KREBS.

## THE TITLE-PAGE OF WALTON'S "COMPLEAT ANGLER."

It is evident from the letters which appeared in the ACADEMY of last week that there are many slight variations in the word "church-yard" on the title-page of the different copies of the *Angler*. These variations are probably accidents arising from the bad printing of the imprint. In all the copies of the first edition I have compared the imprint is in a thick fuzzy type, and some of the letters are very indistinct; this is in strong contrast to the very beautiful title and design above it, which are printed from a plate, after or before the printing of the imprint, at a separate "working."

Mr. Halford's copy, from which the photographic reproduction in the ACADEMY of June 10 is taken, is a singularly clean and perfect one, and the letter *e* is even more distinct in it than in the facsimile. If this was not an *e* originally, as some of your correspondents affirm, but a twisted or broken hyphen, I can only remark that there is such an exact representation of the letter that no one looking at it can take it for anything else.

The matter is an insignificant one in itself; but, as it concerns the faithfulness of my facsimile, it seems needful to refer to it thus at length. I am not a partisan of the hyphen or of the *e*; but, when producing my facsimile, was concerned only to reproduce faithfully the copy Mr. Halford so courteously placed at my disposal.

ELLIOT STOCK.

## APPOINTMENTS FOR NEXT WEEK.

- MONDAY, June 26, 8.30 p.m. Geographical: "A Sketch Survey of the Ancoobra and Prince's Rivers, and of the Takwa Range, Gold Coast," by Commander V. L. Cameron; "The Kong Mountains," by Capt. R. F. Burton.
- TUESDAY, June 27, 8 p.m. Anthropological Institute: "Some Egyptian Antiquities," by Mr. Villiers Stuart; "Some Mexican Terra-cotta Figures," by Dr. Becher; "The Aboriginal Inhabitants of the Audaman Islands," III., by Mr. E. H. Man.
- WEDNESDAY, June 28, 4 p.m. Society of Arts: Annual General Meeting.
- 8 p.m. Society of Literature: "The History of Leonardo da Vinci's Cartoon of St. Anne and the Virgin, now in the Possession of the Royal Academy."
- THURSDAY, June 29, 8.30 p.m. Antiquaries.
- FRIDAY, June 30, 4.30 p.m. Folk-Lore: Annual Meeting.
- 8 p.m. Browning: Readings and Recitations from Browning; and the Singing of some of his Lyrics—"Cavalier Songs," set to music by Mr. C. Stanford.

## SCIENCE.

*Geological Sketches at Home and Abroad.*  
By Archibald Geikie. (Macmillan.)

It was formerly a reproach against men of science that with little Latin and less Greek they had but small mastery of their mother tongue. This, however, during the past quarter of a century at least, has been removed by several who have added to their scientific no inconsiderable literary distinctions. Of such Dr. A. Geikie is an excellent example. Lucid in statement and clear in exposition, he is also endowed with exceptional descriptive powers and felicity of expression. To him Nature is something more than a mere opportunity for science; the beauty of her face is noted almost with a lover's eye and depicted with a poet's sensibility. No one, for example, can read Dr. Geikie's book on the scenery and geology of Scotland—a book, we think, hardly as well known as it deserves to be—without perceiving that for him mountain and moor, stream and fjord, have a charm apart from science, and must often detain him for long to gaze on their loveliness while the hammer lies forgotten at his feet.

In the present volume Dr. A. Geikie has marked his advancement to the Director-Generalship of the Geological Survey by collecting and republishing a series of articles written at various periods during his upward progress to the highest position in his profession. As most of them were contributed to magazines or periodicals, they are popular in character, and are not intended to be exhaustive discussions, or to add very materially to the sum of scientific knowledge. Still, even the student will find all of them pleasant, and some of them suggestive, reading.

The first article is a personal reminiscence, entitled "My First Geological Excursion." In this Dr. Geikie narrates the story of a boyish excursion which proved the turning-point in his life. A visit to a great stone quarry, evidently in the Calciferous Sandstone series, in the Central valley of Scotland, in company with a band of playmates, inoculated him with a love for geology. "Thenceforward the rocks and their fossil treasures formed the chief subjects of my every-day thoughts. That day stamped my fate, and I became a geologist." He describes in amusing language the odd and incongruous fancies of himself and his companions, and his palaeontological guesses, which, no doubt, at the present epoch would shock any reader of his Primer; but he says—and it is worth remembering even in these days when children are more likely to suffer from a plethora than a lack of scientific teaching—

"the recollection of these early days has often since impressed me with a sense of the enormous advantage which a boy or girl may derive from any pursuit that stimulates the imagination. My boyish geology was absurdly, grotesquely erroneous. I should have failed ignominiously at an examination which would be thought easy enough at a modern elementary science class. But I had gained for myself what these science classes so seldom infuse into the pupils—an enthusiastic love of the subject, and a determination to get somehow at the living truth of which the rocks are the records. I

had learnt to treat fossils, not as mere dead mineral matter, or as mere curiosities valuable in proportion to their rarity or perfection of preservation, but as enduring records of former life; not as species to fill a place in a zoological system, or specimens to take up so much room in a museum, but as the remains of once living organisms, which formed part of a creation as real as that in which we ourselves pass our existence."

The next article describes the Old Man of Hoy—that gigantic column of rock, rising 600 feet above the sea, whose strange form is a record of the sculpturing force of the Northern waves, whose materials record three episodes in a far-off past; the column itself being a mass of yellow and red sandstone belonging to the upper part of the "Old Red" series, the plinth a fragment of a lava stream resting on a foundation of Caithness flags. Once a portion of the solid cliff, the Old Man has been hewn out from it during the interval that has elapsed since "the last lingering glacier melted away" from the upland valleys of Hoy.

The "Baron's Stone of Killochan" is the story of a huge boulder that has been transported by the agency of ice from the granite hills of Carrick, and now lies on the slopes near the Water of Girvan only a league away from the Firth of Clyde. The next article, "The Colliers of Carrick," has only an indirect connexion with geology, but is well worth republication as narrating an extraordinary story of a miner entombed "for twenty-three days" (as his epitaph states) "in utter seclusion from the world and without a particle of food" by the fall of the roof in Kilgrammie Coal Pit in October 1835. The well-known burial of Elizabeth Woodcock beneath a Cambridgeshire snowdrift is far outdone by this terrible imprisonment, except that she was exposed to a lower temperature. The incidents of the story, too long to be recited here, are singularly strange; the recklessness of the man himself, for his entombment happened from his insisting on returning—after the walls of the shaft had been crushed in and an old "day level" was the sole means of escape—to recover a new jacket; the strange superstitions of his fellow-miners; and the singular history of the long imprisonment, during which, in the later stages of his exhaustion, "the coal mine fungus had spread over the poor collier's body as it would have done over a rotting log. His beard had grown bristly during his confinement, and all through the hairs this white fungus had taken root." He rallied after being brought to the surface, and narrated a few incidents of his imprisonment, promising his comrades "when I win through this, I've a queer story to tell ye." This, however, was not to be; the strain, even on his iron constitution, had been too much; the expiring flame of life did but flicker up for a brief space, and on the third day after being laid on his own bed he expired. What was the view of his case among some of his comrades may be gathered from a question addressed by an old collier to a doctor who had taken part in the *post-mortem* examination, "Doctor, did ye fin' his feet?" They evidently expected that the cloven hoof would have betrayed the personage who had assumed, for his own purposes, their old friend's form.

"The Volcanoes of Central France" is the narrative of a vacation tour among the marvellous highlands of Auvergne. To those familiar with the classic work of the late Mr. Scrope and with the wonders of this land of burnt-out volcanoes, whose remains are exposed by the scalpel of Nature in every stage of dissection, this sketch is in some instances disappointingly slight. A few words only are devoted to the wonders of Mont Dore; the Pic de Saney, which commands the widest, and perhaps the most marvellous, view in the region, was left unclimbed; and the singular hills of the Roche Sanadoire and the Roche Tuillière are passed without a word of notice; but at the same time the article illustrates well Dr. Geikie's keen appreciation of natural beauty and his felicitous power of description. His eye, however, seems less keen for points of antiquarian interest; the singular castles and churches scattered all over the country receive but slight notice; the wonderful cathedral of Le Puy is not even named; that of Clermont is barely mentioned; and of its yet more remarkable church, Notre Dame du Port, the author seems to be ignorant, or he would hardly have written "In the town of Clermont itself there is not much of interest." "The Old Glaciers of Norway" is a pleasantly written narrative of another holiday excursion, in which, however, the sole exceptional feature was an excursion to the Jökuls glacier, said to be the only one in Norway which actually comes down to the sea, but which the author believes to be only a *glacier remanié*, and not a true ice-stream throughout its whole length. "A Fragment of Primæval Europe" gives a sketch of that district of North-western Scotland which has evidently long exercised a fascination upon the author, and is now more than ever a battle-field for geologists. To this strife Dr. Geikie contributes by advancing the hypothesis—a daring effort of scientific imagination, as it seems to us—that the ancient surface contours of the Hebridean gneiss are memorials of Archaean ice-work, and that even before the Torredon sandstone was deposited glaciers had left their mark on the mounds of primæval gneiss.

The next article, "Rock-weathering measured by the Decay of Tombstones," is the most severely scientific of the series, and we think Dr. Geikie has done well in disinterring it from the *Proceedings* of the Royal Society of Edinburgh, where it would be studied by only a limited circle of readers. It forms a very fitting complement to the other articles, in which the results of earth-sculpture on a grand scale are the dominant theme, by bringing into strong relief, through careful measurement and microscopic study, the "task of the least" in Nature's work, thus forcibly illustrating the process by means of which the greatest results are brought about. The tombstones observed were in the graveyards of Edinburgh, where, of course, the processes of disintegration would be quickened by the acid exhalations present in the atmosphere of a large city. In brief, the result of his observations was that in Edinburgh, even in exceptionally sheltered situations, slabs of white marble are entirely destroyed in less than a century. The more silicious sandstones have

resisted far better, one tombstone more than two centuries old only showing slight changes on the most exposed faces; but those with a soluble matrix, with marked lamination, or with a non-uniform concretionary structure, perish in some cases even more rapidly than marble. Granite, if polished, resists well, but, as the author says, the use of this has been too recent to allow of very satisfactory observations. His inferences, however, are confirmed by what we may observe among the relics of classic buildings in Italy and among the ice-worn surfaces of granite and gneiss in several parts of Europe. Two pleasantly written articles record the author's experience in some districts of rare geological interest, in the wilder parts of Idaho, which gave him an opportunity of illustrating, by comparison with phenomena on a far grander scale and under such different circumstances, geological difficulties nearer home. "The Lava-fields of North-western Europe" is, in fact, an attempt to apply the lesson thus learnt to the explanation of the great basalt sheets of the Western coast of North Britain. These Dr. Geikie is now disposed to explain by the fissure eruption theory of Richthofen. The countless dykes which traverse the subjacent rocks—as, for example, in the promontory of Strathaird, in Skye—lend support to this view; but it must not be forgotten that Prof. Judd (to whose labours in this district we are rather surprised to find no allusion) has pointed out that there are still the curious relics of four huge volcanoes on the West coast of Scotland which are clearly associated with the great basaltic outflows of the same region. It is not possible, we presume, that Dr. Geikie, who of late years has paid much attention to petrology, still clings to his early conjecture that the gabbros of the Cuchullen Hills might be metamorphic rock of Laurentian age.

This article is followed by one on the Scottish School of Geology, a subject appropriately selected for his inaugural lecture on commencing his duties as Professor of Geology in the University of Edinburgh in the year 1871. It gives an interesting sketch of the illustrious pioneers of the science north of the Tweed, and does no more than justice to the memories of Hutton, Playfair, and Hall. We think, however, that Macculloch deserved more than a passing mention of his name. To this day his work in the Western Islands of Scotland remains among those which every student must consult, and, like the "Geological Report on Cornwall and Devon" by our own Delabèche, puts to shame the lucubrations of more than one in a later generation. "Geological Evolution" deals with a subject too vast for the brief space of an evening's discourse, but nevertheless is a suggestive and well-written sketch, while the concluding article on "Geological Influences on British History" is of a still slighter character, though not without its value. It does not appear to have occurred to the Professor, or perhaps the subject was deemed dangerous, to seek for a connexion between geological formations and political principles, yet we think that a study of the results of the last general election would have shown the two to be not wholly dissociated.

T. G. BONNEY.

#### PALESTINE EXPLORATION FUND.

CAPT. CONDER AND LIEUT. MANTELL have returned from Palestine, bringing with them the first two sheets of the New Survey of Eastern Palestine, which cover about 500 square miles on the north and east of the Dead Sea, extending beyond Amman. These sheets are beautifully done, and the contour of the surface is most carefully represented by the hill-shading. Lieut. Mantell, who had charge of the photographic department, has brought a collection of photographs of the remains of the old cities, and of the "rude stone monuments," of which such numbers were found. Capt. Conder had the honour, along with Mr. Moore, the consul at Jerusalem, of accompanying the young Royal Princes during their recent tour in the Holy Land. One of the places which the party visited was Hebron, and they were allowed to enter the mosque over the Cave of Machpelah, concerning which Capt. Conder was able to carry off some important points of detail. They could look down the hole into the cave, and were able to see a door leading from one apartment into another. This hole, which communicates from the mosque through the floor to the cave, from its size seems to resemble the hole through the Sakhra to the cave beneath it at Jerusalem. This is a very valuable bit of information, as the purpose of the hole in the Sakhra has never been properly explained, and the Hebron example may perhaps throw light on the subject. Capt. Conder has undertaken to write a report of the visit of the Princes for the Prince of Wales, and its publication will give us all the details. Capt. Conder also accompanied the Princes up the Jordan as far as Baniyas, where he has discovered another important group of rude stone monuments, showing what a rich field the eastern side of the Jordan valley is for this class of remains. The plan followed in the Survey of Western Palestine of collecting all the names of places has been continued in the New Survey. The first person met on entering a village is asked the name of it; others, including the head-man, are asked the same question, and the answers are written down in English, and in Arabic by a native scribe, who hears what has been said. If a place chances to have more than one name they are likely to be caught by this process. The value of these names consists in their use for identifying places mentioned in Scripture. It will take Capt. Conder some months to work up the materials he has collected.

#### SCIENCE NOTES.

*French Anthropology.*—Dr. J. Beddoe, of Bristol, has presented to the Anthropological Society of Paris a valuable paper "Sur la Couleur des Cheveux et des Yeux dans la France du Nord et dans la France du Centre." His observations were made upon 4,750 individuals, whom he examined during four visits to France. The field of observation comprised the old provinces of Brittany, Normandy, Champagne, Berry, and Auvergne, and the departments of Haute Loire and Ardèche. It appears from Dr. Beddoe's statistics that the fewest persons with black hair are to be found in Normandy, while the proportion increases in the north-east of Brittany, Berry, and Ardèche, and culminates in western Brittany. The colour of the eyes does not run parallel with that of the hair. Thus, light eyes seem to be most common in the west of Brittany. Dark eyes prevail in the south; but it is shown that this cannot be attributed altogether to the increased sunshine. The association of light eyes with dark hair, which is sometimes regarded as characteristic of the insular Celts, is less frequent in France than in the British

Isles. Dr. Beddoe believes that his mode of making rapid observations on selected adults, though less precise than Broca's method, is of more value than the German system of studying the hair and eyes in school-children. The paper, with elaborate tables, is published in the society's last *Bulletin*; and Dr. Topinard, discussing the paper, calls attention to the fact that these interesting results in French anthropology are due to an English observer.

The council of the Society of Arts has awarded the Albert medal to M. Pasteur for "his researches in connexion with fermentation, the preservation of wines, and the propagation of zymotic diseases in silkworms and domestic animals, whereby the arts of wine-making, silk production, and agriculture have been greatly benefited."

Silver medals have also been awarded to the following, for papers read during the past session:—Prof. Sylvanus Thompson, Mr. J. Emerson Dowson, Col. G. F. Pearson, Prof. Barff, Mr. Spencer Walpole, Mr. George F. Deacon, Capt. Richard F. Burton, Mr. R. Warrington, Messrs. S. G. Thomas and Percy C. Gilchrist, Mr. Alexander M. Chance, and Mr. James Mylne.

THE Société nationale d'Acclimatation de France, at its recent annual meeting, presented a medal of the first class to Mr. J. E. Harting for his recent works on *Ostriches* and on *The Extinct Animals of Great Britain*.

WE have before us a synopsis of the work done in mathematics by the Johns Hopkins University, Baltimore, U.S., during the past session. The head of the department is Prof. J. J. Sylvester, who is also editor of the *American Journal of Mathematics*. He gave two courses of lectures—one on "The Theory of Numbers, and in especial an Extension of Tchebycheff's Theory concerning Prime Numbers;" and the other on "A New Theory of Universal Multiple Algebra." Prof. A. Cayley, of Cambridge, who was invited to America last December by the Johns Hopkins trustees, lectured on "Algebraical Geometry, in Connexion with the Abelian and Theta Functions." Lectures were also delivered by four other persons. The number of students was thirty-two, of whom twenty followed advanced or university courses, which are, at Johns Hopkins, opposed to collegiate courses.

THE new volume of the "International Scientific Series" will be *Diseases of Memory: an Essay in the Positive Psychology*, by M. Ribot, translated by Mr. William Huntington.

### PHILOLOGY NOTES.

THE Society for the Promotion of Hellenic Studies has given its support to a proposal to reproduce by photography the celebrated Laurentian codex of Sophocles at Florence. It is hoped to obtain 100 subscribers, among private individuals or public libraries, at £6 each.

MR. W. H. RYLANDS has done a great service to students by reproducing in the last number of the *Transactions* of the Society of Biblical Archaeology all the known Hittite inscriptions, or, as he prefers to call them, "the Inscribed Stones from Jerabis, Hamath, Aleppo, &c." Two of these reproductions are permanent photographs from the originals in the British Museum; the others have been drawn by Mr. Rylands himself either from the originals or from squeezes. Mr. Rylands, who ventures upon no decipherment of his own, has added a bibliography of the most important papers that have been published on the subject.

THE Rev. Dr. Wright, of the British and Foreign Bible Society, will contribute an article

to the July number of the *British Quarterly Review* on "The Hittites and the Bible." In 1872 Dr. Wright made plaster casts of the Hamath inscriptions, which were sent in duplicate to the British Museum and to the Palestine Exploration Fund, accompanied by an article identifying the Khita or Khatti of the Egyptian and Assyrian inscriptions with the Hittites of the Bible, and suggesting that the Hamath inscriptions were Hittite remains. Four years later the same view was taken up by Prof. Sayce, and it is now generally supported by Oriental scholars. In the forthcoming article Dr. Wright examines in detail the references to the Hittites in the Bible, in the light of the Egyptian and Assyrian inscriptions, and supports his theory that the Hamath inscriptions are Hittite.

WE have received a copy of an Italian translation of Mr. B. N. Cust's valuable little book on *The Religions and Languages of India*, revised by Prof. Angelo de Gubernatis (Milan: Hoepli). A translation into Spanish by the Sanskrit scholar F. G. Ayuso is, we hear, also in preparation.

MESSRS. GINN, HEATH AND CO., of Boston, U.S., announce *A True Key to Ancient Cosmology*, by William F. Warren, president of Boston University. The author claims to show that the earth of Homer was not flat, but a sphere; and that the Egyptians, the Assyrians, the Hindus, and other ancient peoples all entertained opinions on cosmology that were essentially identical and far more scientific than those usually ascribed to them. We believe that Mr. Warren's views, as printed in newspapers, &c., have already won serious support in this country.

MARTINUS NIJHOFF, of the Hague, announces the publication, in seventy-two parts, of a *Mid-nederlandsch Woordenboek*, by the late E. Verwijs and J. Verdam.

### MEETINGS OF SOCIETIES.

#### LIBRARY ASSOCIATION.—(Friday, June 2.)

B. R. WHEATLEY, Esq., V.-P., in the Chair.—Mr. Ernest C. Thomas read a paper on "Library Statistics of Europe." After referring to the development of interest in general library statistics within recent times, he described briefly the various attempts that had been made to deal with (1) the library statistics of particular countries; (2) general European and comparative statistics. The statistics of France, Italy, Switzerland, and Austria, in particular, had been more or less satisfactorily ascertained and published within the last twenty years—those of France, Italy, and Austria by their respective Governments, those of Switzerland and Germany generally by private effort. Not very much had been done, at all events, to publish general or comparative statistics since the attempts of Constantin in 1839, and the fuller enquiries of Mr. Edward Edwards, whose results were published by the Statistical Society in 1848. Enquiries were instituted in connexion with the Select Committees of the House of Commons on the British Museum and on Public Libraries, in 1836-37 and 1849-50 respectively. In the former case but little information was collected; in the latter case, returns were received from Continental Governments, describing, but describing rather generally, some 264 libraries. Meantime, Mr. Edwards had supplemented his former tables, and was enabled to furnish the committee with statistical accounts of 457 libraries (including those in the United Kingdom) of 10,000 volumes and upwards. Since that time very little had been done to present details, though summary comparisons on insufficient data had been made by the compilers of some of the Reports issued by particular Governments on their own libraries, especially in the Italian and Austrian Reports already mentioned. The treatment of this question in the United States Report is not one of the most satisfactory chapters in that valuable volume, occupying itself

too exclusively with Balbi, and not making full use of later authorities. Very recently a paper was published by Bratschevic in an Austrian official publication, the *Statistische Monatschrift*, in which an attempt was made to compare the library statistics of the chief European countries. Austria was patriotically brought out at the head of the list, as possessing the largest number of public libraries, and the largest per-centage of books in such libraries in proportion to its population. Next in number of libraries came France, Italy, Prussia, and then Great Britain, which was said to have only 200 libraries, with 2,871,493 printed volumes and 26,000 MSS. Austria was shown to possess 26.8 volumes per 100 inhabitants, while Great Britain had only 6 per 100. Mr. Thomas would not have attached so much importance to this article but for the fact that it had been quoted as authoritative in English journals. He went on to show the obvious incorrectness of the figures, as well as the incompleteness of the list appended by Bratschevic to his paper of the (154) European libraries of 25,000 volumes and upwards, and briefly summarised the results of an enquiry which Mr. Tedder and himself had recently been conducting, an account of which will shortly be published in the new volume of the *Encyclopædia Britannica*.

#### SOCIETY OF ANTIQUARIES.—(Thursday, June 15.)

THE EARL OF CARNARVON, President, in the Chair.—Mr. Milman gave an account of some early deeds relating to Burton Abbey exhibited by Mr. Henry Griffiths, one of which records a lost charter granted by Richard I. creating the borough of Burton.—Mr. G. Payne exhibited some pottery and glass found at Sittingbourne and drawings of mosaic pavement at Wingham, and Mr. Hodder E. Westropp a small bronze statuette of Apollo.

#### HELLENIC SOCIETY.—(Annual Meeting, Thursday, June 15.)

C. T. NEWTON, Esq., V.-P., in the Chair.—The Hon. Secretary read the Report of the Council. After reference to Mr. Ramsay's expedition in Phrygia, the council stated that a fund was about to be started to enable Mr. Ramsay to fulfil the conditions of a fellowship to which an Oxford college intended to appoint him with a view to his continuing his work in Asia Minor. This fund the council warmly recommended to members. Another project recommended was the reproduction by photography of the Laurentian MS. of Sophocles, for which it was proposed to invite 100 subscribers at £6 each. It was shown that about eighty members had been elected to the society during the past year, but twenty had been lost either by death or resignation, so that the increase was hardly so great as could be wished. Members were urged to do all they could to secure candidates for election, and to make the society known. The balance-sheet showed an income, with last year's balance, of £1,575 16s. 1d., and an expenditure of £522 14s. 5d. The life subscriptions, amounting to £388 10s., had been funded, leaving a balance in hand of £664 11s. 8d. £139 was due in unpaid subscriptions. On the whole, the society might be congratulated on the result of its three years' existence; but constant energy was needed on the part alike of the council and of private members to enable it to carry out satisfactorily all the objects for which it was created and which it had kept steadily in view.—The Report was unanimously adopted.—Messrs. J. Fergusson, W. Leaf, F. Pollock, P. Halli, W. G. Rutherford, and E. B. Tylor were elected to the vacancies on the council caused by the retirement of Mr. Bryce, Prof. A. Goodwin, the Dean of Christ Church, the Bishop of Lincoln, and Mr. Cotter Morison. Sir Charles Dilke was elected a vice-president in the place of Mr. Gennadius, who was made an honorary member of the society. Mr. J. B. Martin was appointed auditor in place of Mr. F. Pollock.—Certain changes having been agreed to in the rules, and a vote of thanks moved to the auditors, the Chairman made some remarks on the society's position. After dwelling on the value of Mr. Ramsay's memoirs in the *Journal of Hellenic Studies*, and the importance of enabling him to carry on his work with adequate equipment, Mr. Newton expressed the hope that so staunch an explorer would be heartily supported both by members of the

society and by the general public. England must not be distanced in the work of discovery by other nations. It was high time that, in view of the recent labours of the French at Delos, the Germans at Olympia and Pergamon, and the Americans at Assos, England should take the field. This society should do its utmost to stimulate public interest in such enterprises.

ROYAL HISTORICAL SOCIETY.—(Thursday, June 15)  
JAMES HEYWOOD, Esq., in the Chair.—The following papers were read:—"Periods of Intellectual Activity," by Prof. Guthrie; "Ancient Britain," by the Rev. G. Edwards.—Discussions followed, in which Ald. Hurst, Dr. Zerffi, and Messrs. Park Harrison and T. Pagliardini took part.—Votes of condolence were passed for the deaths of Col. Chester and Dr. Pauli.

PHILOLOGICAL SOCIETY.—(Friday, June 16.)  
DR. J. A. H. MURRAY, President, in the Chair.—The papers read were:—(1) "Some Latin Etymologies," by Prof. Postgate. *Lucoo* in the archaic sense of *holding a taper* has no connexion with *luceo*, "shine," but must be referred to *polluceo*, "offer," connected with *porricio*, German *reichen*, &c. *Lucuna*, "cake," is not a native Latin word, but is taken from the Greek *λακοῦς*, and is therefore a doublet of *placenta*. *Lucus* cannot possibly be connected with *luceo* (although this derivation has been revived by Prof. Skeat), as it always implies the ideas of darkness and shade, which points to a connexion with the Greek *λυγρή*, "darkness," Latin *lugeo*, &c. *Ludus* is probably derived from the root *diw*, "shine," "play," with the usual change of *d* to *l*.—In the discussion Mr. Martineau thought the derivation of *lucuna* forced and unnecessary, *-na* being a familiar Latin and Etruscan ending, and the dropping of initial *p* being a somewhat violent process.—(2) "On the Distribution of Celtic Place-names," by Mr. Walter R. Browne. The paper was illustrated by a list of the principal first elements of Celtic place-names (*aber*-, *ben*-, &c.), with numbers to show the relative frequency of their occurrence in Wales, the Lowlands and Highlands of Scotland, and in Ireland. The materials were drawn from the exhaustive list of Irish townlands given in the Census records, the Welsh and Scotch names being taken from MacCorquodale's *Gazetteer*; Mr. Skene's results for Scotland being also added. Mr. Browne said that the result of his tabulation was that it failed to show the existence of a Kymric language in Scotland at all; that the existence of a Kymric population in the Lowlands, although it may be true historically, has left no mark whatever on the place-names of the district. The table shows that, while many names are peculiar to a single one of the four districts (such as *Bettws* to Wales), while others are common only to two or three out of them, some, lastly, being common to all four, there is only one—viz., *pen*—which is common to Wales and the Lowlands of Scotland only. (The Highland *peas* are really corruptions of different words.) Even this example is open to doubt, for in the Lowlands *pen* appears to be mainly used in the sense of "hill," which is not the case with the Welsh *pen* = "head." The Lowland *pen* is probably a mere corruption of the Highland *ben*.—In the discussion Dr. Murray recapitulated the historical facts proving the existence of a Kymric population in the Lowlands. He said that statistics which went against such perfectly established facts must simply be incorrect. If Mr. Browne had included those names of natural features omitted in a gazetteer, his conclusions would have been simply reversed, for he would find undoubtedly Kymric names in abundance, especially in *pen*, whose connexion with the Welsh *pen* is quite certain. Dr. Murray also pointed out the possibility of North Kymric having differed dialectally from Welsh, approaching perhaps nearer to Kree.—Prince L.-L. Bonaparte complained of the absence of Manx names from the list.—Mr. Sweet remarked that such tabulations, to be of any value, must be on an historical basis, including only words which formed part of the parent Celtic name system. He asked what was the use of chronologizing the absence of the Welsh *Bettws* from the Lowlands, when this was simply the Old-English *gebethūs*, introduced long after the split up of the Kymric

race.—Other speakers criticised the separation of such forms as *lough* and *loch*, *inch* and *ynys*, in the list, which Mr. Browne said was done merely for convenience of reference.

ROYAL ASIATIC SOCIETY.—(Monday, June 19.)

SIR BARTLE FRERE, BART., President, in the Chair.—A paper was read by Mr. Holt on "The Importance of the Study of Chinese Literature, with Especial Reference to the Chinese Library of the Society, recently catalogued by him." In this paper he confined himself to those classes of works most likely to interest Western scholars, while drawing particular attention to the dynastic histories, encyclopaedias, and art-literature (superbly illustrated books on bronze vases, &c.), many of them of great antiquity, and most of them in the society's library. Many works, he added, were devoted to inscribed stone-tablets. Mr. Holt then showed that there was good evidence for a very early communication from near Martaban, or along the valley of the Irawaddy, to the North-west capital of China, then at Seng-an-foo or Honan-foo. He argued that the name of "China" was derived from the Indians, who first knew China, and was not due to the Tsin dynasty, but, more probably, came from the name of the compass, specimens of which were supplied to the early envoys, the Chinese being thus known in India as the "Compass people," just as the Seres, another Chinese population, derived their Western name from "Silk." That the knowledge of this fact was lost to both Indians and Chinese is clear from the use by Hiouen-Tsang and later writers of two symbols (see Morrison's *Dictionary*, Syllabic part, No. 8033) to designate the country, as these, while giving the sound "Che-ha," indicate that they are substitutes for original words of like sounds the true sense of which cannot now be recovered. Having shown that M. Reinaud's view of an intercourse between China and Egypt in the first century A.D. has no real foundation, Mr. Holt further stated that there was no evidence of an embassy from M. Aurelius having gone by sea to China in A.D. 166. In conclusion, he urged that, in his judgment, there was no proof whatever of any knowledge of a maritime way to China before the fourth century A.D., the voyage, even of Fabian, at that period, being open to serious criticism. He believes, therefore, with M. Gosselin, that the *Cattigara* of Ptolemy was probably not far from the present Martaban, and that India for a considerable period, up to the seventh century A.D., dominated over Cambodia.

## FINE ART.

### THE DUKE OF HAMILTON'S SALE.

THE principal Italian pictures from Hamilton Palace, including the famous Botticelli, will be sold at Christie's to-day; but the sale, which will engage public attention nearly to the end of July, began last week, and on Saturday last many notable works, and not a few spurious ones, were scattered under the hammer of the auctioneer. The better-informed organs of public opinion have thrown grave doubt over the authenticity of works attributed in the Catalogue to Holbein and Dürer; and, probably with not less reason, one or two of the Rubens pictures have been blown upon, and more than one professed Vandyck and Rembrandt seriously doubted. But though certain of the attributions of the Catalogue may have been rash, there remained, without question, a number of truly valuable paintings; and greatest of all among those sold on Saturday last was the majestic Rubens, the "Daniel in the Lion's Den," which fell to Mr. O. Beckett Denison's bid of 4,900 guineas. This was one of the few pictures of the sale at once enjoying an extended pedigree and justifying its pedigree by its own magnificence. It cannot but be regretted that it has fallen into private hands. A work of such capital importance by one of the acknowledged masters of painting should, by this time, have graced some national collection. Fortunately, however, though it will be in private hands, it will not

cross the seas. Another fate—that of transportation—awaits the great Hobbema, or has already befallen it. Purchased by Mr. Sedelmeyer for a little over 4,000 guineas, it goes to a foreign gallery. As far, however, as British public collections are concerned, there is nothing to particularly regret in this case. The noblest Hobbema of our London National Gallery—the "Avenue at Middelharnis"—is in its own way unrivalled.

The representation of Rubens in the Hamilton collection does not end with "Daniel in the Lion's Den." The so-called portrait of Elizabeth Brandt, Rubens's first wife, is assigned by some to De Vos, and these would gravely doubt whether the woman represented be Rubens's wife at all; but, on the other hand, the price paid for the picture under the hammer shows that there were a fair number of persons desirous to believe in it. It fetched 1,750 guineas. The "Loves of the Centaurs," again—which represented the gross and impulsive embrace of forms half human and half equine—had had some doubts thrown upon it; but these were comparatively slight, and the work sold, or was bought in, at the price of 2,000 guineas. There remained "The Birth of Venus"—a very exceptional and very magnificent Rubens indeed—a picture *en grisaille*, in which the painter, abandoning his revelry of colour, clung only to revelry of form, to ardent action, and ordered design. The work was sold for 1,600 guineas, a price no one can consider excessive for so triumphant an instance of a master's skill. The piece was oval—a design for a salver—conjectured to have been intended for Charles the First. The professed Holbeins and Dürers hardly claim notice, the highest price among them having been appropriately reached by a representation of King Edward the Sixth, which, on its appearance on Messrs. Christie's easel, was recognised by some as a Streeter. It was sold to Mr. Whitehead, the dealer, for 760 guineas. Mr. Agnew bought a good Weenix for 200 guineas; the great Van Huysum was sold to Mr. Martin Colnaghi for 1,170 guineas. It was admitted to be one of the finest of the many artificial assemblages of flowers which this much-desired Dutchman ever painted. Two companion pictures by Van Breda were knocked down to Mr. Agnew for something over a couple of hundred guineas. The sale of last Saturday included a particularly good Brauwer and a very fine Ostade. Brauwer and Ostade have both been described as delighting in gross themes and in ugliness. The reproach has doubtless some truth in it as concerns both of them, but Brauwer was the greater sinner of the two. He would seem, indeed, to have been curiously faithful to hideousness, and to have found it very dull to be tolerably decent. Ostade, on the other hand, though apparently quite insensible to the attractiveness of comely womanhood or undegraded childhood, was wont to perceive beauty in inanimate things, in the light foliage of the vine trailing by the window, in the passage of glowing sunlight over the embrowned wall. Five hundred guineas was paid for the Brauwer of the Duke of Hamilton's collection. It was finely grouped, strongly painted, and had been conceived without indelicacy. But the Ostade was still finer, since Ostade at his best is a greater master. Seventeen hundred and fifty guineas were paid for the admirable example of his art—a cottage interior, with the glow of sunlight on aged woodwork, and the animation of certain figures engaged in the centre of the design. A Fleming who is extremely little known, but by whom there was a fine work on Saturday, is De Bles, called "Ovitta." Though an artist of the North, he worked in Italy. The National Gallery is not without examples of him; but he is rare and of high merit, and Mr. Burton is no doubt to be

congratulated on the fact that the "St. Jerome in a Cavern" of this master is now to be lodged in Trafalgar Square.

On Tuesday the Hamilton sale included the dispersion of some magnificent pieces of highly decorative furniture. Some were of the period of Louis XIV.; but those which excited most interest were dated in the reign of Louis XVI.—hard upon its close—and were signed by the greatest artist in marqueterie of that day, Reisener, and ornamented as to their metal work by the designs of Gouthière, the greatest of the eighteenth-century artists in metal. The English criticism of twenty years ago, which was severe and ascetic, spoke boldly of the whole period as bad. Much ugly work, pompous and pretentious, was done in the eighteenth century, of course—and the ideals of such work were doubtless wrong—but in it also was accomplished much exquisite work of supreme and delicate luxury, which is the foundation of the repute which the whole labour of that century obtains to this day in France. Work like the Reisener and Gouthière secretaires and the dainty and elaborate little table designed for Marie-Antoinette—which sold on Tuesday for £6,000—can never cease to be held precious. Whether here or there, they are above the caprices of Fashion. The Sybarite cannot like them too much, nor can the ascetic hold them of no account.

#### SCANDINAVIAN ANTIQUITIES AT SOUTH KENSINGTON.

THIS very interesting collection consists chiefly of objects lent by the National Museums at Stockholm and Copenhagen. A good deal of the metal work is in electrotypic facsimile, so accurately copied that it is very difficult to distinguish the various reproductions from the originals.

The collection is especially rich in specimens of gold, silver, and bronze work of the fourth to the tenth centuries—a branch of art which was very largely practised in early times by the Scandinavian race. There is a magnificent set of gold drinking-vessels, nine in number, which were found in perfect preservation in a large bronze vase dug up not long ago in one of the Danish islands. These are round, with *repoussé* ornaments of dots and concentric circles, and have serpent-shaped handles. Some very fine bronze bucklers, swords, and trumpets are remarkable for their state of preservation, owing to their having been buried in soft, mossy ground. The style of ornament on most of these metal objects is very simple, and seems common to the primitive metal-work of many countries and ages. Very similar patterns formed of spirals, concentric circles, and dots appear on many of the gold ornaments discovered by Dr. Schliemann in the Peloponnese, and are even now employed by the half-savage metal-workers of the Soudan. It is curious, also, to note that many of the twisted silver bracelets and armillæ are identical in pattern with those still worn by the peasants of Upper Egypt. A magnificent gold spur and many fibulae and other ornaments bear witness to an amount of skill little inferior to that of the Etruscan jewellers, and the methods used in producing the delicate surface enrichment are the same. Intricate patterns are formed by soldering fine gold or silver wire on to the surface of the metal, which is further enriched by a powdering of almost microscopic gold dots. Some of the specimens of later Scandinavian jewellery, produced in the tenth and eleventh centuries, strongly resemble, in the intricacy of their interlaced patterns, the contemporary Irish gold-work, of which the "Tara brooch" and the case of St. Patrick's bell are, perhaps, the most remarkable existing examples.

There is a very good reproduction of the celebrated altar frontal in the church of Liebjerg, Jutland. This is made of copper, enamelled and gilt, and ornamented with figures of saints in panels and under arches, *repoussé* and chased. In date and style it resembles the gold altar front from Basle made in the beginning of the eleventh century; its general design is good, and the bands of interlaced ornaments are delicately worked, but the modelling of the figures is very rude.

Among the specimens of wood-work, the most interesting are a door from the church of Valthiofstad, in Iceland, ornamented by two large round reliefs of knights on horseback and grotesque monsters; and four seat-ends from a church in the Farøe Isles carved in relief with figures of saints, fifteenth-century work, very boldly executed. Having seen these last fine specimens of wood-carving only a few years ago in the church to which they belonged and for which they were made, I cannot but regret that they should have been torn from their places and sent to a museum where they necessarily lose half their interest. No ancient buildings will ever be safe from this sort of spoliation till Governments and museums refuse to become receivers of stolen goods.

This collection includes specimens of work in metal, wood, and woven stuffs down to the productions of the present century. It is interesting to notice the persistent survival of many of the earliest, even prehistoric, forms of ornament which appear on quite modern objects, especially those of wood carved in low relief, such as tankards and bowls. Many of the woven stuffs are very beautiful, and curious as being Scandinavian translations (so to speak) of fine old Persian designs.

J. HENRY MIDDLETON.

#### ARCHAEOLOGICAL NOTES ON THE TERRA D' OTRANTO.

VI.

(Conclusion.)

I MUST here break off my notes, which are only intended to deal with the remains of antiquity, without crossing the threshold of the mediæval period. Yet I cannot close without a passing mention of the important materials which the Terra d' Otranto still has in reserve for those whose studies are devoted to Byzantine art. The history of that art can only be written, to any profit, by one who has visited every portion of this province of Italy, and has carefully and minutely examined the numerous and highly important works of the mediæval Greek artists which it still preserves.

Examples of Byzantine sculpture are so rare that we may mention as of exceptional value the bas-relief, representing the Annunciation, which is inserted above the door in the eleventh-century *façade* of the church of Santa Maria della Strada at Taurisano. At Vaste, at San Pietro Mandurino, near Manduria, at Mottola, Palagiano and Grottaglie, in the neighbourhood of Tarentum, between Ostuni and the sea, as well as in the territory of Brindisi, close to the San Vito d' Otranto railway station, there exist, in a most remarkable state of preservation, some Byzantine *laurai*, once inhabited by hermits of the Greek rite, the majority of which have not yet been examined so carefully as they deserve. Those of the territory of Brindisi alone have been thoroughly explored and carefully described by Mgr. Tarantini. I was fortunate enough to visit them in his company and that of Sig. Nervegna, on whose property a part of them were discovered. Nothing can be more striking than the way in which such a visit carries you back at once into the midst of the lives of the Greek saints of Southern Italy, in the early Middle Ages, and enables you to

understand an infinite number of details otherwise incomprehensible.

The *laurai* I am now speaking of all consist of a series of cells scattered over a considerable area, all on the same plan and similarly arranged, pierced in the flank of the rocks in the ravines which cut so deeply into the strata of the calcareous tufa. In their formation use was often made of natural caverns, which merely required to be cut into regular shape. Each of these cells was intended to serve as the dwelling-place of a monk leading a hermit's life, and the whole of those which were grouped on one site were placed under the supervision of a *hegumenos*. Toward the centre of the space over which the cells, at greater or less distances from one another, extend is an underground chapel, hewn in the rock. This was the monastic church. The walls and ceiling of the interior are chiefly covered with paintings in a style of art unmistakably Greek, accompanied with Greek inscriptions in a state of preservation which is frequently astonishing, considering all the chances of destruction to which they have been exposed. The Grotta dell' Annunziata, which now forms the crypt of the parish church of Erchie, and is decorated throughout with Greek paintings, appears to have been originally a chapel of the same kind.

We thus have in the chapels of these *laurai* of the Terra d' Otranto a whole collection of Byzantine frescoes, which are of as much importance for art-history as those of Mount Athos, and which, indeed, possess over the latter the advantage of not having been restored or even touched for many centuries. And what adds yet more to their interest is that a considerable proportion of them are of one fixed period, and bear dates of the eleventh and twelfth centuries. For instance, those of the Cripta di San Biagio in the Masseria Giannuzzo, near Brindisi, which I visited, were painted in the year of the world 6705, according to the computation of the Greek Church—i.e., 1197 of the Christian era.

By the side of these purely Byzantine frescoes, with Greek inscriptions, in the chapels of the monasteries in the neighbourhood of Brindisi, are others in a different style, belonging to another tradition of art, and accompanied by Latin inscriptions. These appear to date as a rule from the thirteenth century, though it is possible to refer some to the twelfth, on the strength of certain details of ecclesiastical costume in a number of the figures of saints. The existence of an Italo-Latin school of painting, independent of the Greek school, and peculiar to the Puglie, or more especially to the county of Lecce, I hold to be henceforward an ascertained fact. This school begins to show signs of life in the thirteenth century, or perhaps in the twelfth. It is even possible that we may be obliged to refer its origin to the earlier part of the latter century, and to see its first manifestation in the large Latin mosaics of the pavement of the cathedral of Otranto, so grandly conceived in the savagery of their design and execution, and so perfectly independent of any Graeco-Byzantine influence. This school of painters of the Leccese, which lived apart from the rest of Italy, lasted into the fifteenth century, when it underwent the influence of Venice—thanks to the trade relations which were kept up between Venice and Lecce by way of the Adriatic. We may follow its history, progress, and development with the frescoes of the Tempio di San Giovanni at Patù, of the abbey of Cerate, near Lecce, and the picture of the Benedictine convent at Lecce, now transferred to the Provincial Museum. The last-mentioned picture, painted in distemper on panel, and representing, round the Virgin, a company of saints under arches in the *flamboyant* style, belongs to the middle of

the fifteenth century; and the influence of the early Venetians, such as Orivelli and Vivarini of Murano, is distinctly apparent.

There are, then, still remaining in the Terra d'Otranto interesting materials for the study of certain branches of the art of the Middle Ages. But it would be vain to seek for the architectural splendours with which the period of the Normans and of the House of Swabia covered the soil of Puglia. When we have mentioned the round church of San Giovanni at Brindisi, the church of the Campo Santo at Lecce, the cathedral of Otranto, the grand doorway of the church of Alessio, that of Santa Catarina at Galatina, and that of St. Peter's at Giuliano, and, lastly, the fine castle of Frederick II. at Oria, we have well-nigh exhausted the list of the buildings of any importance surviving in this province from the Middle Ages. What we meet with, unfortunately, in every part, what has replaced almost everything that went back to an earlier date, what pursues the traveller like a horrid nightmare into the remotest corners, is a bastard seventeenth-century style, the ornamentation of which, in its purposeless and ugly extravagance, far surpasses the most ridiculous fancies of Borromini. It seems as if the whole of Lecce and nine-tenths of the churches of the province had been rebuilt within a space of fifteen years at the end of the Spanish domination. It must be admitted that the province of Lecce has a taste of its own in architectural matters. But it is a deplorable one, and the other parts of Italy have done well not to copy it. The imagination and manual skill expended up to the present moment by the architects and decorative sculptors of the Leccese in the production of monstrosities are beyond belief. Lecce has been nicknamed "the Florence of the roccoco," for which might with advantage be substituted "of hideous and pretentious bad taste."

FRANÇOIS LENORMANT.

### THE SHIELD OF ACHILLES.

Rome.

I FEEL bound to write again respecting the marble fragment which is believed to represent the shield of Achilles, not only to correct my former letter (ACADEMY, No. 527, p. 422), but also because I am in possession of further information which may interest scholars. It seems that the marble was found near the Ministry of Finance, in the Via Venti Settembre—that is, in Region VI. of Ancient Rome. When the relic was found, it formed part of a mediæval wall. It has now come to my knowledge that another similar fragment was lately discovered in this city. But it certainly can be in no way connected with the shield now under consideration, and must have formed part of a much larger original. The fragment found by Sig. Rinaldi has been presented to the Municipality of Rome, and will shortly be exhibited beside the *tabula Iliaca* in the Museo Capitolino. I do not know whether the archaeological committee of the Municipality will issue a commentary on this find, or whether we shall have to wait for the publication of Father Garrucci's monograph. Meanwhile, I will now try to supplement the brief notice which I gave concerning this fragment in the ACADEMY of June 10.

The groups on the upper portion of the shield, although very minute and much damaged by rough usage, exactly follow the text of Homer. Just above the belt, which divides the shield into two equal parts, were perhaps figured the heavens, earth, sun, moon, and constellations, as described in the "Iliad" (xxiii., vv. 483-89). These, no doubt, were followed by the scenes of peace, consisting of weddings, dances, and feasts (vv. 490-96). The city itself is there, with its walls, towers,

and gate. Adjoining this scene is a portion of a group of which there only remains one figure of a speaker; possibly it depicted the suit between two citizens, and the judgment of the elders (vv. 497-508). Few of the scenes underneath the belt have been spared. Those which represented the city at war have been lost; only the figure of a soldier, who must have formed one of the besieging force, and who poises a spear, can be recognised. But there are many pastoral and agricultural subjects (vv. 541-49). On the lower portion of the shield are peasants ploughing, and beside them are oxen; then come vintagers, and in the centre a corn-field full of reapers gathering in the sheaves (vv. 550-60). Above the corn-field is a group of youths and maidens dancing the Cretan *choros kuklikós* (vv. 590-605). In short, as Prof. Gatti clearly pointed out in his address, we possess in this marble a pictured page of one of the most beautiful chapters in Homer's epic.

The legend on the belt has preserved more than the two words mentioned in my last letter; it runs, *ΑΧΙΛΛΕΥΣ ΑΧΙΑΛΛΗΟΣ ΘΕΟΔΑΡΠΙ* . . .; and, if we argue from the inscriptions on the reverse of the shield, the complete legend, no doubt, would read *ΑΧΙΛΛΕΥΣ ΑΧΙΑΛΛΗΟΣ ΘΕΟΔΑΡΠΗΟΣ ΚΑΘ ΟΜΗΡΩΝ*. On the reverse, this legend is scattered over a linear geometrical figure which has the shape of a crenellated tower, and is divided into 614 squares, and not 514 as stated in error in my last letter. Each square contains one letter. Starting with the letter A in the centre of l. 22, we find, whichever way we read, that the legend referred to is repeated. It is an alphabetical puzzle, as may be seen from a facsimile drawing which I owe to the courtesy of Prof. Gatti, who has restored the figure to its original integrity. The Professor remarked that a similar puzzle is presented by the fragment of the *tabula Iliaca* formerly in the Verona Museum, and now in the Cabinet des Médailles at Paris (Jahn, *Griech. Bilderchroniken*, tab. iii.), on which can be read *ΘΕΟΔΑΡΠΗΟΣ Η ΤΕΧΝΗ*. Prof. Gatti added that, according to Lehrs, the *tabula Iliaca* of the Museo Capitolino bears *θεοδάρπης μὲν τῶν ὀμήρων*, and stated it as his opinion that all these sculptures preserve the name of one Theodorus, who had specially busied himself with illustrating the poems of Homer. After quoting Franz (*C. I. Gr.* iii. 849) and Pliny (xxx. 144), he further advanced a conjecture that this Theodorus might be identified with the sculptor who depicted on the Porticus Philippi "bellum Iliacum plurimistabulis." But it was admitted that on this point Pliny's testimony is not of much account, as many commentators do not accept this reading.

Underneath the tower and on the lower part of the shield can be read . . . *ΠΕΙΔΙΑΕΠΕΙ* written in large characters. Prof. Gatti restores this as *ΠΕΙΔΙΑΕΠΕΙ*, taking care to place the letter A exactly in the centre, as he supposes it to be the key-word to the right reading of the whole enigma. Similarly, on the Verona marble, it is said, can be read *τῶν ἀρχῶν λάμβανειν οὐ ποτε βούλει*.

Prof. Gatti's address will shortly be published by the Pontifical Academy of Archaeology.

F. BARNABEI.

[We regret that we are unable to reproduce the facsimile of the alphabetical puzzle on the back of the shield which our correspondent has sent us.—ED. ACADEMY.]

### NOTES ON ART AND ARCHAEOLOGY.

WE are able to announce, not only that the forthcoming autumn exhibition of the Glasgow Institute of Fine Arts will be devoted to works in black and white, but that, over and above contemporary work, special care has been taken to secure, for the first time out of London,

a complete representation of the works of Méryon. This will be obtained by the exhibition of the possessions of one collector alone, for Mr. MacGeorge, of Glasgow, owns a series of Méryon's etchings such as has never before been got together by a single amateur. His cabinet consists in reality of a union of two collections—that of Mdlle. Niel, an amateur etcher, who was a pupil of Méryon's and a daughter of his first important patrons; and that of the Rev. J. J. Heywood, who began to accumulate the etchings of the artist in the finest states at a time when the attention of the public had been but little directed to them.

THE Browning Society has had a very successful photograph taken of Guercino's Angel in the chapel at Faro on the Adriatic, which served as theme for Mr. Browning's beautiful poem of "The Guardian Angel." The youthful angel stands with outspread wings, his left hand resting on the left shoulder of a child kneeling on a block of marble, while the angel's right hand lightly grasps the child's two hands lifted in prayer. "Both angel and child look heavenward, their gaze directed thither by the outstretched arm of the middle cherub of the group of three cherubim who are in the left upper corner of the picture.

THE New Shakspeare Society's first large photograph of Shakspeare's bust in Stratford Church has turned out so well that the committee will issue a platinotype copy of it, twenty inches by eleven, to all the society's members, as well as the chromo-lithograph of the bust.

ON Friday, June 16, the picture gallery at Stafford House was lit by electric light on the incandescent principle. So far as regards the illumination of the room and of the pictures generally, the experiment was eminently successful; but, where the light was thrown from a bracket at too near a distance, the result was to dazzle and prevent an equal view of the picture. This was specially the case with one of the two large Murillos, which form the most striking feature of the collection. The fine portraits by Vandyck and Moroni looked extremely well.

THE first exhibition of the Royal Cambrian Academy of Art was opened at Llandudno last Monday. It contains about 150 works in oil and water-colour by members of the Academy, of whom only two are born Welshmen. The Manchester school furnishes the most important contingent, being well represented by Messrs. William Meredith, Anderson Hague, E. Trevor, and Clarence Whaites. Mr. J. W. Southern, of Liverpool, sends a *replica* on a smaller scale of "A Summer Day," now to be seen at Burlington House.

WE have received a copy of Mr. T. H. Thomas's and Mr. Edwin Seward's Notes on the paintings in the Menelaus collection, bestowed, we understand, on the town of Cardiff, a place which in all that concerns Art is singularly in advance of its great neighbour, Bristol. Not having had an opportunity of seeing the collection, we cannot, of course, express any definite opinion of our own upon it; but the goodly pamphlet of Messrs. Thomas and Seward is an interesting contribution to a knowledge of it, as well as a most agreeable and readable criticism judged from the literary standpoint. It would appear that the chief treasures of the collection, which consists almost entirely of contemporary works, are an exceedingly fine Peter Graham—quite one of the strongest works by a painter of great inequality—a very fair Sidney Cooper, two engaging Alma Tademas, and a remarkable Tissot. Of these, as well as of many other pictures, a thoughtful and enlightening criticism is given.

## THE STAGE.

## "THE ROMANY RYE."

WHEN the public has lost its interest in well-constructed story and quickly following incident and in scenes enacted vividly, a play like "The Romany Rye" will cease to be worthy of attention from the student of the theatre. But until the arrival of that somewhat remote time, we must take leave to consider the production of a very strong melodrama, or drama of romance, as among the notable events of the stage. And as for Mr. Sims's drama in particular, its success in achieving its own limited aim is quite beyond question, for so early as the fourth night of its representation, when, judged by modern custom, a new play has hardly had time to establish itself in favour—to recover from the reaction which follows upon the somewhat artificial excitements of a first night's performance—an audience crowded in every part of the house, and enthusiastic even in the stalls, which I find generally sacred to *dilettante* indifference, gave unmistakeable welcome to the play and its interpreters. Many charges have been made against Mr. Sims's piece, but only to some of them need it in fairness plead guilty. It must plead guilty to the charge of not presenting us with anything approaching to a faultless *dramatis personae*. One idyllic damsel—an Angelica Kaufmann become interesting—it does indeed introduce us to. She is impersonated by Miss Eastlake with the highest measure of simplicity, refinement, and grace. We meet her gathering wild flowers in a woodland glade, and learn, with no little astonishment, that her habitual address is Queer Street, Seven Dials. But generally the drama steers clear of so unlikely a perfection. Generally its personages are faulty, but they are human. Of the incidents, many are profoundly improbable, or, rather, the improbability is in their too fortunate combination. We have again some not unfamiliar characters—the villainous solicitor, the rightful heir, the wronged maiden, and the chivalrous poor man. But we have also some new characters studied from the life, and others studied from Dickens, of whom it may be said what Ingres said of the Antique, "The Antique is Life"—Dickens is Life. The awful gray-haired hag who in the damp cellar by the river proposes to administer a drowsy-syrup to those whom it is desired to put out of the way may to some extent recal the creature who procured for the John Jasper of *Edwin Drood* his opium dream of ecstasy; and Gertie Heckitt, by her pleasant devotion to the old man, her grandfather, may suggest at moments Little Nell; but at all events Mr. Sims's combinations are new enough to pass muster, and they possess the supreme justification of being entirely effective. Some of the characters, moreover, are, as I hinted, novel and keenly observed. Boss Knivett is a creation of distinct humour. He is, unfortunately, a thief. He is even an habitual thief. But he is so excellent an habitual thief, he brings so much of admirable artistry into proceedings which are not strictly legal, his dirty jobs are performed in so clean a fashion, and his gratitude is so sincere towards the elderly sinner who "taught him all he knows" that we feel for

him something more than a sneaking sympathy; and we are moreover assured that if his lot in life had been cast in more regular ways, if he had associated a little with respectable people or had had the advantages of social influence, he would have risen to dignity, perhaps to eminence, in some profession in which success is more generally recognised and applauded than it is in that precarious one which circumstances compelled him to adopt.

A certain measure of improbability is inseparable from melodrama. A dozen times over in "The Romany Rye" people turn up when they are least expected but most desired. But in melodrama people *must* somehow manage to arrive *à propos* if they are to arrive at all, and few of the persons of the drama in question exhibit remissness in this respect. There have been days when plays of this nature, besides imposing a little on our credulity by their combinations of incidents, would have been written in execrable English, and would have been without a trace of wit. Mr. Sims's piece has abundant wit—there is one touch that should be valuable to the teetotallers—and it is written with terseness, with vigour, with poetical feeling. To sum up, as regards the play itself, it is a most favourable example of its class; and, if its class—which may fairly be represented on the stage; nay, which has as great a claim to be represented there as tragedy, or pastoral, or burlesque itself—is to find a home in Mr. Wilson Barrett's Princess's, then Mr. Wilson Barrett is fortunate in having secured the assistance of Mr. Sims.

But everything, all round, has been done for the success of the piece. Not only is the scenery admirable—it opens with a landscape that is practically a Linnell, and closes with a sea-scape that is practically a Stanfield—but, owing to the recent mechanical improvements, it is arranged with so much promptitude that the interest of the audience in the story has not time to abate. The crowds, too, which are many and various—in the wood, at Hampton Races, in St. Giles's, on Falmouth Quay—are generally picturesque and often natural. One fault, however, which the Rotterdam stage management would never have permitted is noticeable in the crowd of the town. It was noticeable in a similar crowd in "Lights o' London"—in the scene in the Borough on Saturday night. The people on the pavement of Queer Street outside the shop all go by not only with quite unanimated faces, but at precisely the same pace—a purposeless drawl. They have no real errands. And the illusion is lost. As regards the acting of the individual players, from Mr. Wilson Barrett and Miss Eastlake downwards, it is almost unexceptionable. I was told I was a little gushing when I wrote about the "Lights o' London;" but the fact is the improvement in the general cast of a romantic or realistic drama within the period during which I have more or less endeavoured to notice the theatre has been so great—has been, indeed, so immense—that, though one could easily be more piquant, one would inevitably be more untruthful if one took to much fault-finding. The fact is that in plays of this order—I am not speaking of the higher comedy, still less of tragedy—the stage of to-day is able to reach an excellence which the stage ten years

ago never attained in England. The day of good and complete casts—which disappeared how long since?—perhaps thirty years since—is seemingly coming back. There is really hardly a character in "The Romany Rye" which a reasonable person could wish to be acted in some different fashion from that in which it is now performed. The general level of excellence is more remarkable than any one performance. Mr. Wilson Barrett bears himself bravely as the "gipsy gentleman." His way is manly and his aspect picturesque, but when he finds himself tied up in the cellar by the river he does not exhibit any considerable variety of grief. Imagine Mr. Irving under similar circumstances. How vivid would have been the presentment—but how prolonged would have been his sufferings! To anyone who is waiting to see Miss Eastlake attempt Desdemona, it is a little irritating to see her only as the idyllic damsel in whom we cannot quite believe. Mr. Willard is an admirable villain of polite society. His spirit "shines through him" as Macbeth said of the hired murderer. When he represents a rogue, you feel that any appeal to the rogue's better sentiments would be an unjustifiable employment of good material. Mr. Speakman is sufficient as the grandfather of Gertie; Mr. George Barrett quite original and entertaining as Boss Knivett, the youthful expert in burglary. Even such a very small part as that of the Captain of the tug *Rescue*—who answers a question as he gets up from the chimney-corner in the seaboard inn—is played appropriately. Among the ladies hitherto unmentioned, Miss Ormsby and Mrs. Huntley alone demand notice. The former actress, with the gay scarfs of the East and the South, and her face painted with the brown hues of the Romany, is, to begin with, an enjoyable piece of colour. She is the realisation of Mr. Browning's *Fifine*. But she is more than that; she represents the gipsy-girl, full-blooded and passionate, ambitious yet faithful, with understanding and skill. In her selection for the part, and in Mrs. Huntley's selection for the part of Mother Shipton, the old hag by the river, one sees proof of just that good judgment which filled the women's parts in "Lights o' London" with precisely the actresses who would act them best. As for Mrs. Huntley's representation, it seems ungracious to say of anything so good, though so distinctly horrible, that it is in danger of being a little overrated. But we will nevertheless say so; and what we mean is this—that, as is the case in a smaller way with the Apothecary in "Romeo and Juliet," the imagination is so prepared to be impressed by her before ever she appears on the scene—the suggestion has already been so vivid and so weird, in her case by the mere action of the story as in the Apothecary's case by the Shaksperian descriptive writing—that it would require positively bad acting for there to be failure at all. In "The Romany Rye" other characters have led up to and worked up to the impression which it is Mrs. Huntley's privilege to create. She does her own part admirably, but it is worth while to remember that on the stage impressions are cumulative—others have helped her to her potent effect.

FREDERICK WEDMORE.

## MUSIC.

## "TRISTAN AND ISOLDE" AT DRURY LANE.

"TRISTAN AND ISOLDE" was commenced in 1857 and completed in 1859. Wagner refers in a letter to the perfect abandonment which he felt while working at this great music-drama; and his statement seems fully borne out by the spontaneity, intensity, and wonderful continuity of the music. Too much reflection is as bad as too little; and a composer is indeed fortunate when he can not only give utterance to his thoughts, but present them in finished shape when the pulse of his passions still beats high, and while his heart is aglow with the fire of inspiration. Hitherto many musicians have spoken with bated breath about "Tristan and Isolde." The operas of "Tannhäuser" and "Lohengrin" are now understood, appreciated, and, we may add, have become popular. These works have therefore been accepted, though under protest. To declare in favour of "Tristan and Isolde" has been considered equivalent to the rejection of Mozart, Weber, and even of Beethoven himself, to the abandonment of established forms, and to the introduction of a reign of disorder and musical lawlessness. A deeper study of the past will show that it is nothing of the kind. The new phase of art is an outcome, not a rejection, of Wagner's great predecessors; and it should be carefully studied, and judged, as far as possible, calmly, without prejudice and without passion.

The subject-matter of the poem first claims our notice. The ancient and romantic story of Tristan and Isolde appears to have originated in the East; in the course of time it travelled westwards, and we are probably indebted to British bards for the first written form of the legend. The prose romance of Lukas von Gast, of the twelfth century, published at Basle in 1490, and the epic poem of Gottfried von Strassburg (thirteenth century) give long accounts of Tristan's adventures, of Isolde the wife of Marke, of a second Isolde (of the White Hands), and of King Marke of Cornwall and his crafty and wicked ways. Wagner, however, has presented the tale of the unfortunate lovers in a concentrated and dramatic form. In a conversation between Isolde and her maid Brangäne only so much of the legend is given as was absolutely necessary to explain the action of the drama. In the first act, Isolde, daughter of the King of Ireland, is on board Tristan's ship, which is approaching the coast of Cornwall. Tristan has carried her away from Ireland, an unwilling bride to his uncle, King Marke. Tristan is in love with her, and she with Tristan. She summons him to her presence, reproaches him with his coldness and indifference, and offers him the "cup of atonement." Brangäne has been ordered to provide a death-drink; she gives them, instead, a love-potion. The lovers meet in fond embrace, and the act speedily concludes with the cries of the sailors announcing the arrival of the ship and the approach of the King. Mr. C. A. Barry, who has written a most interesting Preface to the music-drama (supplying elucidatory remarks for the benefit of those who, without previous preparation, go to hear it for the first time), gives an ingenious, if not altogether conclusive, explanation of the love-potion. It does not, he says, "actually bring about Tristan's and Isolde's love; it only does so metaphorically, by leading to the discovery that they have been foiled in their determination to end their woes by poison." In the second act we have the meeting of the lovers in King Marke's palace garden. Brangäne warns Isolde against Melot, Tristan's false friend, by whom a night hunt has been organised, ostensibly with a view to give the lovers an opportunity of meeting, but in reality to betray them. Isolde heeds not the maid's

warning; the torch is extinguished, the signal for Tristan to appear. A long and passionate love-duet follows. As day breaks, Brangäne in vain entreats the lovers to separate. King Marke suddenly arrives, and reproaches Tristan for his conduct. The latter has no explanation to give, but merely asks Isolde "if she will follow him to the land of gloom." Melot and Tristan fight. The latter allows himself to be wounded, Isolde faints, and the curtain falls. In the third act, Kurwenal is watching beside the couch of Tristan. The scene is laid in Kareol, Tristan's castle in Brittany. His faithful servant, Kurwenal, has sent for Isolde, "the best of leeches." Tristan, in his delirium, raves about the past; at the thought of seeing her again, he rouses himself to a pitch of unnatural excitement. Isolde comes in; Tristan falls dead at her feet. King Marke, Melot, and Brangäne also arrive. Kurwenal kills Melot, but is wounded himself, and dies. The King has learnt the story of the love-potion, and has come to forgive and wed the lovers. But it is too late; Isolde sings a last song, and sinks, as if transfigured, in Brangäne's arms upon Tristan's body.

It is extremely difficult to describe this wonderful music-drama, in which Wagner requires us to see with our eyes, hear with our ears, and understand with our heart. Weber, as we stated last week, was the first to propound the theory of the combination of the arts of music, poetry, painting, and the drama; and Wagner has sought to carry out this theory to its very last consequence in "Tristan and Isolde." We cannot expect musicians (to say nothing about the general public) to understand the work until they go to listen to it in the proper spirit. In spite of all that has been said and written about Wagner's art-theories, we still expect to hear the work described as dull, tedious, and extravagant, because it is judged as an opera, and, as such, it is no doubt disappointing. We do not intend to hold up "Tristan and Isolde" as a model for imitation; we do not think that Wagner is altogether wise in his choice of his subject, or absolutely perfect in the mode of its treatment; we do not see why, in rejecting the conventional chorus of the operatic stage, he has altogether discarded it in "Tristan," although there seem many fitting opportunities for its employment without any harm or injury to the dramatic situation; we think that the strain upon the nerves of the attentive listener is too great and too prolonged; but this ought not to prevent our acknowledging the extraordinary power of the work, nor keep us from studying it as a daring attempt to create something more real and more in accordance with our compound nature than anything which the genius of previous musicians has produced. Let critics and earnest students of art carefully examine, and find, if possible, any reasonable fault with, this work. Let them make any definite charges of shortcomings or of extravagance which they may deem just; but let there be an end to indiscriminating and thoughtless censure. "Tristan and Isolde" is the musical Sphinx of the day; but the riddle must be solved, not laughed at or set aside by flippant phrase. For our part, we consider the music-drama as one of the most stupendous efforts of human genius, and feel certain that a time is not far distant when it will occupy a place similar to that which Beethoven's Choral symphony now holds in the domain of musical art.

We have only spoken in general terms of this work, for it is impossible, with our limited space, to describe in detail the "endless melody" of the orchestra and the wonderful development of the dramatic action by means of most significant leading themes. The constant repetition of these *Leitmotive* would, under ordinary circumstances, become wearisome; but when treated with such commanding skill

and genius as Wagner has shown in this work—when, as if by a magic touch, the appropriate colour or form is given to these plastic elements of the music-drama—the effect, far from monotonous, becomes intensely powerful. We feel that the idea of representative melodies hinted at by the great classical masters, and still further developed by the romantic school of Weber and Berlioz, is indeed a wonderful invention, and aids in the development of the new form, determined in "Tristan," as Wagner says, by the plan of the poem itself. The first act engages our attention from the first note to the last. How wonderful is the opening of the second scene, with the death- and the love-motives. How striking the third scene with the narration of Isolde and the accompaniment derived from the very first motive of the prelude—the longing-motive; Brangäne's answer, with its fine display of counterpoint; and all the love-potion music. It is difficult to speak of the romantic spell pervading the whole of the second act, which is only broken by the entry of the offended and deceived King Marke. Much might be said about this scene. How, from a purely musical point of view, it spoils the effect of what has preceded, and how, even from a dramatic one, it does not appear altogether satisfactory, might be long and well argued. It appears, however, that the King is so overwhelmed with surprise and sorrow that he reasons and expostulates instead of lifting the sword against the man who has met in secret rendezvous his affianced bride. It must be carefully noticed that Wagner frees Isolde from the graver offence of infidelity; let not the composer's enemies therefore, lay this crime to his charge. The "cuts" in the second act, for which we presume Herr Richter is responsible, are to be regretted, especially the one which deprives us of the remarkable metamorphosis of the day-theme. The performance was concluded before twelve o'clock; and surely for a work of this importance the time of commencement might have been half-an-hour earlier, and thus some of the omissions spared. While on this question, let us notice that the poem with F. Corder's translation, published by Messrs. Novello and Co., omits the passages struck out for performance. This is done for the convenience of people visiting the theatre; but might not the whole of the *libretto* with the translation have been printed, and the omissions indicated by brackets? The third act is intensely dramatic. The combination of motives, even if dry and studied, would appear marvellous; but when, as is here the case, everything seems not only natural, but full of passionate vitality, the wonder is vastly increased. If anyone was disappointed with this act, it could surely only be for want of understanding it. Every perusal only increases our astonishment at the mental power which could conceive such a masterpiece.

We must in a very few words speak of the performance itself. Frau Sucher and Herr Winkelmann (Isolde and Tristan) gave magnificent renderings of their respective parts. Fräulein Marianne Brandt greatly distinguished herself in the rôle of Brangäne. She has a good style of singing, although her voice has lost its freshness; but her acting was most excellent. (In "Fidelio," on the following evening, she achieved a marked success, especially from a histrionic point of view.) Herr Gura as King Marke, Dr. Kraus as Kurwenal, and Herr Wolke as Melot added greatly to the general excellence of the performance. The playing of the orchestra was superb, and their task on this occasion was no easy one. All the *artistes* were called for at the close of the evening, and Herr Hans Richter had to come forward twice and acknowledge the special applause accorded to him.
